The departure of the Crusaders marks the end of a period of astonishing economic prosperity. Syrian commerce fell back into stagnation. Little by little, however, necessity forced the resumption of relations with Europe. The decline of Acre, Tyre and Tripoli, ruined by the Mamlūks, and the fall (748/1347) of the Little Armenian kingdom of Cilicia [see sfs], to which western merchants had first gone, were to the advantage of Beirut. For over a century this town became the principal port of Syria. Near Damascus and opposite Cyprus—the kingdom of the Lusignans and rendezvous of the European shipping—Beirut was every year visited by ships of the Venetians, Genoese, Catalans, Provençals and Rhodians. These various communities had henceforth consuls as their representatives, officially recognised by the Mamlūks and receiving a grant or *qīamakiyya*. On the other hand, the Cairo government regarded them as "hostages" (*rahīna*) (*Khalīl al-Zāhirī*); it held them responsible not only for those under their jurisdiction, but also for acts of hostility by corsairs. The consuls protected pilgrims and intervened if required on behalf of native Christians. Thus we already have the system of capitulations which was to be developed in succeeding centuries [see IMṬIYĀZĀT]. For trade during this period, see W. Heyd, *Histoire du commerce du Levant au Moyen-Âge*, Leipzig 1923, i, 129-426, ii, 23-64; E. Ashtor, *A social and economic history of the Near East in the Middle Ages*, London 1976, 202 ff., 285 ff.; idem, *Levant trade in the later Middle Ages*, Princeton 1983, esp. 64-102. For the specific connections of Mamlūk Egypt and Syria with the Italian trading cities, see J. Wansbrough, *A Mamluk ambassador to Venice in 913/1507*, in *BSOAS*, xxvi (1963), 503-30, idem, *Venice and Florence in the Mamluk commercial privileges*, in *BSOAS*, xxviii (1965), 483-523; idem, *A Mamlūk commercial treaty concluded with the Republic of Florence 894/1489*, in S.M. Stern (ed.), *Documents from Islamic chanceries*, Oxford 1966, 39-79; idem, *The safe-conduct in Muslim chancery practice*, in *BSOAS*, xxxiv (1971), 20-35.

Syria under the Ottomans. With the opening of the 10th/16th century the rule of the Mamlūks had begun to break up. Their exactions had exasperated the populace. The Ottoman sultan, Selīm I [*q.v.*], resolved to take advantage of the occasion to invade Syria. Taking the initiative, the Mamlūk sultan, Kānsūh al-Ḡhawrī [*q.v.*] mobilised his forces, and marched via Damascus and Aleppo towards Anatolia. The two armies met at Dābiḳ, a day's journey north of Aleppo. The Turkish artillery and the Janissary infantry scattered disorder through the Egyptian ranks. Kānsūh disappeared in the disaster of Dābiḳ (25 Raddi 922/24 August 1516 [see MARḌ DĀBIḲ]). Aleppo, Damascus and the towns of Syria opened their gates to the conqueror who went on to Egypt and put an end to Mamlūk rule. The Turks retained at first the territorial divisions or *niyāba*. The Mamlūk Ḡhazālī, *nā'ib* of Damascus, had gone over to the Ottoman camp after Dābiḳ. The renegade was in return given the administration of the country except the *niyāba* of Aleppo, which was reserved for a Turkish Pasha.

On the death of Selīm I (926/1520), Ḡhazālī had himself proclaimed sultan under the name of al-Malik al-Ashraf. He was defeated and killed at Kābūn at the gates of Damascus (927/1521). Before the end of the 10th/16th century, Syria had become divided into three great *pashaliks*: 1. Damascus, comprising ten *sandjaks* or prefectures, the chief of which were Jerusalem, Ḡhazza, Nābulus, Ṣaydā and Beirut; 2. Tripoli, including the *sandjaks* of Hims, Ḥamā, Salamiyya and Djabala; 3. Aleppo, including all North Syria, except 'Aynṭāb, which was included in the *pashalik* of Mar'ash. In the century following, the *pashalik* of Ṣaydā was created to include Lebanon. In its main outlines, this administrative division lasted till the middle of the 18th century, when the centre of government of Ṣaydā was moved to Acre.

The Imperial *Diwān* in Istanbul was only interested in Syria in so far as it enabled it to watch Egypt, and to levy upon its resources contributions to the expenses of the palace and for foreign wars. The taxes, which were put up to auction, went to the highest bidder, who became the *multazim* [see MÜLTĀZIM]. According to a Venetian Consular report, the *pashalik* was worth 80,000 to 100,000 ducats (probably the silver ducat, the Venetian *grosso*, whence *kirsh* pl. *kurush*, or piastre = 5 francs). The Pashas only administered directly the important towns and their immediate neighbourhood. The interior of the country was left to the old feudal lords, whose number and influence had increased since the Mamlūks: Bedouin *amīrs*, Turkomans, Mutawālīs, Druze and Nuṣayrīs. The Porte only asked them to pay the tribute, or *miri*, without worrying if it saw them fighting with its own representatives. Every year the Turkish Pasha, at the head of his artillery and Janissaries, set out to collect the taxes. The force lived on the country and laid it waste if the inhabitants resisted. It is not therefore remarkable that agriculture, the principal resource of Syria, declined, the population diminished, and the country districts emptied in favour of the Lebanon and mountainous districts, where the harassed people could find asylum.

The instability of their position increased the rapacity of the Turkish functionaries. Damascus saw 133 Pashas in 180 years. This period saw the rise of Fakhr al-Dīn Ma'n [*q.v.*], the champion of Syrian independence (1583-1635), the Mutawālī *amīrs*, the Banū Harfūsh, lords of Ba'labakk and the Bīkā', the Banū Maṣṣūr b. Furaykh, Bedouin *shaykhs*, who carved out for themselves an appanage in Palestine and in the

region of Nābulus. These feudal lords were fairly well-organised in spite of their cupidity, and they were able to defend their gains from the arbitrary Turk. By sending round the Cape the traffic of the Middle East, the Portuguese occupation of India adversely affected Syria. The harbour of Beirut remained empty. Tripoli at first, then—thanks to the initiative of Fakhr al-Dīn—Sidon attracted European ships, which came for cargoes of silk and cotton. Aleppo, thanks to its location between Mesopotamia, the sea, and the Anatolian provinces whose market it was, and the situation there of a factory of the English Levant Company, remained the principal depot on the direct route to the Persian Gulf and was for three centuries the chief commercial centre of Northern Syria.

The decay of the Ottoman administrative system in Syria, with its concomitant rapid turnover of governors in Damascus, had the effect of increasing the power of the Janissary garrison troops of the Ottomans there, and subsequently, by the end of the 17th century, in Aleppo also. The Janissaries came in fact to be divided into two groups, the older-established ones being designated *Yerliyya* (< Tkish. *yerli* "local"), whilst new contingents sent out from Istanbul were known by various local corruptions of the Turkish term *Kapı Kulları* "slaves of the Porte".

The governorship of Naṣūḥ Pasha (1708-14) was a turning point in the history of the Ottoman province of Damascus, in that his was the first of a series of longer tenures of office, giving the province a degree of stability which it had previously lacked. A powerful family, the 'Azms, then emerged in the 18th century, and extended its quasi-dynastic power from Damascus as far as Tripoli, Sidon and, at times, Aleppo. The rule in Damascus of As'ad al-'Azam (1743-57) was an unprecedentedly long governorship, later to be remembered by the people as one of justice and peace.

After the fall of As'ad in 1757, the power of the 'Azms had passed its peak, and the centre of political gravity in Syria shifted westwards to the coastlands, seen in the rise of Zāhir al-'Umar al-Zaydānī (Syrian pronunciation of the first name, Dāhir). Dāhir, a Bedouin *shaykh*, lord of the land of Ṣafad, extended his authority over Galilee, and settled at Acre, which he fortified and raised from its ruins. He resisted the Porte (1750-75) with assistance lent by the Egyptian Mamlūks 'Alī Bey and Muḥammad Bey Abu 'l-Dhahab and a Russian squadron cruising in Syrian waters. Besieged in Acre by the Turks, he died there in 1775. This marked the end of the autonomous state which he had created, but his benevolent rule had brought order and security and had favoured the revival of Acre, which now superseded Sidon as administrative centre of the *pashalik* or province of that name. It was here that Aḥmad al-Djazzār Pasha, a much more despotic and tyrannical figure than his predecessor, became governor after 1775, striving likewise to make it the centre of an autonomous power. He sought to diminish the authority of the revived 'Azms in Damascus, and intervened in Mount Lebanon to undermine the power there of Yūsuf Shihāb and his youthful successor Bashīr II [q.v.]. A new factor supervened, however, with the arrival of Bonaparte in Egypt in 1798, but al-Djazzār, with the aid of a British army under Sir Sidney Smith, withstood a French siege of Acre for three months (March-May 1799). The check proved fatal to French ambitions in the Near East. Al-Djazzār then retained power till his death in 1804 [see AL-DJAZZĀR PASHA, in Suppl.]. For the history of Syria during the 18th century, see P.M. Holt, *Egypt and the Fertile Crescent 1516-1922*,

Ithaca 1966, 102-33.

The years after 1804 saw a rise in the power of Bashīr II Shihāb, who pursued the aim of making himself an autocratic prince, with a strongly centralised government, like Muḥammad 'Alī Pasha in Egypt and the Ottoman Sultan Maḥmūd II [q.v.] in Turkey. His policies, naturally involving higher taxation, were in 1820 to cause a revolt amongst the common people (the first *'ammiyya*), compelling Bashīr to withdraw temporarily to the Hawrān. But in general, Bashīr's influence was felt widely in Syria. Even the great Turkish officials sought his intervention. Yūsuf, Pasha of Damascus (1807-10), implored his help against a threatened invasion of the Wāhhābīs. Bashīr presided in Damascus at the installation of Sulaymān, Pasha of Acre and successor-designate of Yūsuf Pasha. In the middle of the general confusion, however, Muḥammad 'Alī of Egypt was watching for an opportunity of adding Syria to his governorship of Egypt. 'Abd Allāh Pasha, who succeeded Sulaymān at Acre (1818), undertook to give it him. He refused to allow the extradition of Egyptian *jellāhīn* and the repayment of a million piastres. Summoned to contribute towards this sum by the Pasha of Acre, under whom was the Lebanon, the Christians of the Lebanon refused to pay. The rising of the Christians was a new feature in Syrian politics, but it was not to be the only one. Through contact with the Europeans, the Christians were becoming more assertive and enlightened, and they were learning their own strength. Taking as a pretext the refusals of 'Abd Allāh Pasha, Muḥammad 'Alī sent his son Ibrāhīm Pasha [q.v.] into Syria at the head of an army trained on European lines. Acre surrendered on 27 May 1832, after a siege of seven months. On 8 July at Hims, Ibrāhīm routed the Turks. A little later he forced the pass of Baylān and entered Anatolia. A treaty (May 1833) assured Egypt temporary possession of Syria.

The new rule proved in many ways enlightened and tolerant. It admitted Christians to the communal councils; it favoured the abolition of measures humiliating to non-Muslims. It endeavoured to reform the police and the tribunals. The reclamation of waste and devastated land was encouraged, and agriculture encouraged; a considerable number of trees, especially olive and mulberry, were planted. On the other hand, it provoked discontent by introducing forced labour and conscription, even in the semi-independent regions of the Lebanon. Rebellions broke out among the Druze of the Lebanon and of the Hawrān, among the Nuṣayrīs and in the never properly-subjected hill region of Nābulus. Ibrāhīm exhausted himself in suppressing these risings. The Ottomans thought the moment had come for the reconquest of Syria. They were completely defeated (27 June 1839) at Nizib, north of Aleppo. European diplomacy then intervened at the instigation of Great Britain, which was disturbed by the ambitions of Muḥammad 'Alī. British policy had at this time as its aims the maintenance of the Ottoman empire, the confinement of Muḥammad 'Alī to Egypt and the extension of its influence in Syria. France had since the 16th century a historic role as protector of the Maronites and Uniate Churches of the Eastern Christians, hence Britain could only try to exert a parallel influence amongst the Druze, a policy which was never, however, very successful. A further element in the Levant was Imperial Russia which, by stretching the provisions of the Russo-Turkish Treaty of Küçük Kaynardjī (1774) [q.v.], claimed a protectorate over Greek Orthodox Christians in the Ottoman empire in general, which in Syria meant aid to the Orthodox communities of

the Antioch and Jerusalem Patriarchates.

The European powers banded together. An allied fleet shelled Beirut (September 1840). Acre surrendered in November, and Ibrāhīm Pasha agreed to evacuate Syria, successfully withdrawing his army of 60-80,000 men to Ghazza by January 1841. Ibrāhīm's collaborator Bashīr II Shihāb fell from power at this point, being deposed and sent into exile. A period of some twenty years' internal conflict opened in Lebanon, involving *inter alios* the great Maronite landowners and their increasingly restive peasantry, and a growing tension between the Druze and Maronites who had migrated from Kisrawān in central Lebanon to the Druze areas of southern Lebanon. In 1858-9 there took place the third 'ammiyya, a Maronite peasant revolt against the landlords in Kisrawān.

From the reign of Mahmūd II [q.v.], the Porte had inaugurated a policy of administrative centralisation, and decreed the abolition of local autonomies and feudalities. After the departure of the Egyptians, it moved to Beirut, whose importance was steadily increasing, the administrative centres of the ancient *pashaliks* of Acre and Sidon, in order to prepare for the annexation of Lebanon. With the same object it declared the old line of princes of the Lebanon, the Shihāb Amirs, deposed. The only result was to perpetuate anarchy there. The Christians who had fought against the Egyptians claimed to be treated on terms of equality to the Druze. In the southern Lebanon, several had acquired the confiscated lands of the Druze chiefs banished by Ibrāhīm Pasha. The latter, coming back from exile, demanded a return to the *status quo* and the restoration of their ancient privileges. In taking their side, Turkey paved the way for new conflicts and sanguinary fighting. The Syrian Muslims showed no less animosity to the Christians, whom Egyptian rule had partly enfranchised. They took no account of the intellectual and material progress made by the Christians, nor of the political equality promised by the rescripts of the sultans as part of the *Tanzimat* [q.v.] reforms. The *khatt-i humāyūn* [q.v.] of Sultan 'Abd al-Medjīd [q.v.] communicated to the Congress of Paris (1856), and tacitly placed under the guarantee of the Powers, scandalised Muslim opinion, but inspired confidence among the Christians. At Damascus and in the large towns, they took advantage of the occasion to enrich themselves commercially. A secret agitation began to stir up the Druze and Muslims, and waited for the events of 1860 to burst forth.

The Druze of the Lebanon, combining with their co-religionists of the Wādī 'l-Taym and of the Hawrān, spread fire and death through the villages of the Maronites, who were at that moment in turmoil in the aftermath of the peasant 'ammiyya of the previous year (see above). The anti-Christian movement reached Damascus, which the Muslims pillaged and then set fire to the prosperous Christian quarter, after massacring its inhabitants. In this city, in the Lebanon, and in Beirut, the Turkish authorities intervened only to disarm the Christians, and their sympathies were clearly with the Muslim and Druze perpetrators of the massacres. Amongst the Muslims, the only effective protector of the Christians in Damascus was the exiled former leader of resistance to the French in Algeria, the Amīr 'Abd al-Kādir b. Muḥyī al-Dīn al-Ḥasanī [q.v.]. Inevitably, there was a reaction from the European powers. France landed troops at Beirut in September 1860, and the Porte sent its Foreign Minister, Fu'ād Pasha to Damascus with draconian powers to suppress disorder. Soon afterwards, an international commission began work in Beirut and then Istanbul; the aim of British and Ottoman diplomacy

was now to prevent a permanent extension of Napoleon III's influence in Syria and Lebanon. The outcome was an Organic Regulation/Réglement organique in 1861, which abolished the dual *kā'imma-kāmate* of Christians in northern Lebanon and Druze in the south and established an administration for Lebanon under a Christian *mutasarrif* directly responsible to the sultan. The system gave Lebanon peace for over half-a-century; for the subsequent history of the region, see LUBNĀN. In Syria, Fu'ād Pasha shot or hanged a considerable number of guilty soldiers and civilians, and a collective fine of £ 200,000 was levied on Damascus and another £ 160,000 on the province at large. After 1864 Syria was divided into two *wilāyets*: Aleppo and Damascus. In 1888 Beirut, the chief port, the centre of the commercial life of Syria, was made a separate *wilāyet*.

Syria now gradually began to enter the modern age. The ports of Beirut and Jaffa were improved; the main ports and cities were in the 1860s linked by telegraph with Istanbul and Europe; a postal system was introduced; carriage roads were constructed between Alexandretta and Aleppo, Beirut and Damascus, and Jaffa and Jerusalem. The improvement in communications made possible increased centralisation of the Ottoman administration, with curbs on Bedouin brigandage and increased security. Such measures as these, plus the opening in 1869 of the Suez Canal, contributed to an increase of commercial confidence and activity, although trade was temporarily affected by the American Civil War and the Austro-Prussian and Franco-Prussian Wars. Eventually, too, railways appeared; with the exception of the north Syrian section of the Berlin-Baghdād railway and the Pilgrimage line from Damascus to Medina, financed by the Sultan 'Abd al-Ḥamīd II and internal Ottoman contributions [see *ḤaḡḡĀZ RAILWAY*], these were largely constructed with French capital. Nevertheless, it was in the post-1860 period that emigration—mainly of Christians—above all from Lebanon, and from Syria, grew, a good proportion of it to the New World (for the Arabic literature of this diaspora, see *MAḤḡĠĀR*).

Lebanon and Syria also became the focuses of the Arabic literary revival known as the *Nahḍa* [q.v.]. Since the 17th century, the Christians of Syria had had presses for printing works in Arabic and, for the Eastern Churches, for printing religious and liturgical works in both Arabic and Syriac; a bilingual Psalter appeared in 1610 from the press at the monastery of St. Anthony at Kuḡhayya in Lebanon, and a Melkite press started up at Aleppo in 1706 [see *MAṬBA'Ā*. B. 2]. In the 19th century organised Protestant Christian missionary work came to Syria, with American Presbyterians working from Beirut and Anglicans from Jerusalem. The Americans organised their converts into the Syrian Evangelical Church, with an Arabic press at Beirut in 1843, and their activity culminated in the foundation in 1866 of the Syrian Protestant College, after 1923 the American University of Beirut. The Jesuits, for their part, set up the Imprimerie Catholique at Beirut in 1853 and founded the Université de St.-Joseph in 1875. Both Universities were to make distinguished contributions to the revival of Arabic studies and to the training of an Arab intellectual élite throughout the Near East. Towards the end of the century, when Roman Catholic and Protestant missionary efforts amongst the Christians of Syria seemed to be reducing the Orthodox representation there, Russians interested in the Near East and, especially, in Jerusalem, founded in 1882 the Imperial Orthodox Palestine Society, which functioned until the Russian Revolution of 1917. Its

work included the running of village and urban elementary schools in Christian areas and some colleges; the *Mahdjar* writer Mikhā'il Nu'ayma [q.v.] received his first education at the Russian school in his Lebanese home village of Biskinta, eventually going to study in Russia itself. See on this Russian religious and cultural interest in the Near East, D. Hopwood, *The Russian presence in Syria and Palestine 1843-1914. Church and politics in the Near East*, Oxford 1969.

Whereas the missions and schools in Syria and Lebanon aimed at making converts from the indigenous Eastern Christian Churches or at educating them, the Anglican Mission at Jerusalem aimed at converting the Jews of Palestine. The Jews of Syria did not, in fact, experience a national, cultural and educational revival as did the Greeks, Armenians and other indigenous Christian Churches of the Ottoman empire during the 19th century, and lost social and economic ground to these last. The emancipation of the Jews in Western and Central Europe did, however, lead to the appearance of protectors for the Oriental Jewish communities. Thus Sir Moses Montefiore visited Palestine several times, and intervened in 1840 to protect the Jews of Damascus after an accusation of ritual murder; and in 1860 the Alliance Israélite Universelle was formed with the aim of promoting Jewish education, primarily in the Islamic lands. Above all, in connection with the Jews, there began in the last two decades of the century the rise of Zionism and Zionist immigration into Palestine; and even though there were still only about 85,000 Jews in Palestine by 1914, their presence was to make itself felt. See N.A. Stillman, *The Jews of Arab lands in modern times*, Philadelphia and New York 1991, 3 ff., 80-91, 231-5.

With the conceding of the first Ottoman constitution in 1876 [see *DUSTÜR*. ii], Syria acquired representation in the newly-established assembly in Istanbul. In this first *Meclis-i 'Umūmī* it was represented by nine persons: three Muslim Arabs and one Armenian Christian from the province of Aleppo, two Muslim and two Christian Arabs from the province of Suriyya (the former province of Damascus), and one Muslim Arab from Jerusalem, all of them from leading families of Syria. Midhat Pasha [q.v.] was governor of Syria for some twenty months in 1878-80, and it was at this time that the first faint glimmerings of incipient, proto-nationalist Syrian Arab discontent against Ottoman Turkish rule became discernible, with hopes of some sort of autonomy for the region. A number of anonymous, handwritten placards appeared in the main cities of Syria at the end of Midhat's governorship, asserting some basic Arab rights. Such sentiments can nevertheless only have been those of a tiny minority, but were significant for the beginnings of Arab nationalism there, slow though this was to develop [see *KAWMIYYA*. i]. Not long afterwards, such views were temporarily submerged by Muslim Syrian enthusiasm for 'Abd al-Hamīd's promotion of Pan-Islamism [q.v.], a movement in which several Syrians were prominent, such as Shaykh Abu 'l-Hudā from Aleppo, who promoted the sultan's claim to the universal caliphate, and the sultan's second secretary, Ahmad 'Izzat Pasha al-'Abid, who became involved in the project of the Hijāz Railway. On the other hand, the Syrians 'Abd al-Rahmān al-Kawākibī [q.v.], from Aleppo, and Muḥammad Rashīd Riḍā [q.v.], from Tripoli, voiced from the safety of Cairo opposition to 'Abd al-Hamīd's religio-political claims. The Hamīdian censorship covered all literary output, including even the textbooks used in foreign mission schools, and caused a considerable emigration of writers to Egypt and elsewhere.

Agitation for the restoration of the 1876 constitution was of course primarily associated with the "Young Turks" and the Committee of Union and Progress [see *ITTİHĀD WE TERAKKĪ DİEM'İYYETİ*], but the Syrian Arabs hoped for equal rights in the empire with the Turks, some degree of administrative decentralisation which would give Syria a hand in its own affairs, and recognition of the Arabic language at the side of Turkish in education and administration. The Young Turk Revolution of 1908 brought about the deposition of 'Abd al-Hamīd. The reinstated constitution of 1876 and its parliament were greeted in Syria with enthusiasm as the dawn of a new era, and societies were formed there to promote the Arab course within the Ottoman empire, such as the Arab-Ottoman Brotherhood (*al-Ikhā'*).

This illusion was of short duration. The Young Turks, whom the Syrians had trusted, were not long in resuming once more the process of turkicising begun by 'Abd al-Hamīd. With more method and continuity, they declared war against all who were Arab by race or language. They insisted everywhere in Parliament and in the government offices on the employment of Turks only, and removed the Syrians from high offices and important military commands. This provocative policy brought together for the first time Muslims and Christians in Syria. It awakened amongst all the desire to come to an understanding in regard to a common policy, and to take joint action. Their demands were limited to reforms of a decentralising nature. They asked that, in the allotment of public offices, regard should be had to the progress which had been made by Syria, the most civilised province of the Empire, and that in the imposition and spending of taxes regard should be paid to the needs of their country. They thought the time had come to grant it a certain administrative autonomy. It was the obstinacy of the Young Turks in rejecting these moderate demands which opened the door to separatist ideas, and finally convinced the Syrian nationalists (the Muslims amongst whom for long had had a lingering sympathy for the Ottoman sultan, especially after the disasters to the Ottoman-Muslim cause of the loss of Tripolitania to the Italians in 1911 and the loss of almost all the Ottoman Balkan provinces after the Balkan Wars) that their aspirations were unlikely to be fulfilled within the Empire.

On 29 October 1914 Turkey entered the First World War on the side of the Central Powers. It began by suppressing the administrative autonomy of Lebanon, and imposing on it a Turkish governor. Djemāl Pasha took into his own hands the government of all Syria with discretionary powers. He at once proceeded to hang the principal patriots, whether Syrian Muslim or Christian. Hundreds of others went into exile. Soon afterwards, famine and disease decimated the population, principally of the Lebanon. Energetic but presumptuous, dreaming of the conquest of Egypt, Djemāl proceeded unsuccessfully to attack the Suez Canal (February 1915). He now gave more attention to Arab opposition in Syria, arresting and deporting to Anatolia many notables and publicly hanging eleven Muslim leaders in Beirut, until diplomatic pressure from Turkey's ally Germany brought a relenting in what might well have proved a counter-productive policy. Perhaps as a sop to Arab opinion, Djemāl in 1915 founded the Šalāhiyya College in Jerusalem under the Pan-Islamic enthusiast Shaykh 'Abd al-'Azīz Shāwīsh. But a second Turkish attack in August 1916 on Egypt failed, and British forces advanced into Ottoman territory as far as Ghazza, but were temporarily checked there. The Ottoman

forces in Palestine were now placed under the command of the German general Von Falkenhayn, but British forces under Allenby broke through at Beersheba.

By November 1917 the British, French and Italian forces of the Allies had become masters of the southern portion of Palestine, and on 11 December, they entered Jerusalem, which the Turks had evacuated. The latter defended themselves for a further nine months on a line extending to the north of Jaffa as far as the Jordan. The decisive action took place on 19 September 1918, on the plain of Sarona near Tulkarm. The forces of Allenby broke the Turkish front. It was a rout. At the end of the month the British forces, without meeting with any resistance, arrived in the neighbourhood of Damascus. The advance was delayed for a few days, in order to allow the Amīr Fayṣal, the son of the Sharīf Ḥusayn of Mecca, time to hasten from the remote end of Transjordan and to make on 1 October his entry into Damascus at the head of a body of Bedouins. On 31 October, the Turks signed an armistice. A week later, the last of their soldiers had repassed the Taurus.

(b) From the end of the First World War to the end of the Mandate.

The Sharīf Ḥusayn's son Fayṣal [see FAYṢAL I] hoped to establish an Arab kingdom in Greater Syria based on Damascus, on the basis of the exchange of correspondence in October 1915 between Ḥusayn and Sir Henry McMahon, the British High Commissioner

in Egypt, which had defined how far the British were prepared to go in conceding Arab independence. But this had in effect been superseded by the Sykes-Picot Agreement of 16 May 1916, dividing Greater Syria into British and French spheres of influence, with an internationalised Palestine. The publication of the Agreement by the triumphant Bolsheviks in 1917 had not surprisingly caused the Sharīf and other Arab leaders to doubt the sincerity of the British government's undertakings, and assurances had also to be given to Ḥusayn concerning the significance of the Balfour Declaration of November 1917.

With the end of the War, the whole of Greater Syria was occupied by Allied troops, with British troops throughout the area, a small French force on the Levant coast and the Arab army of the Sharīf (now King of the Ḥijāz) Ḥusayn in the interior. There were already grounds for conflict between the Arabs and the French government, since the latter regarded the whole of the northern half of Greater Syria as lying within its sphere of influence, as provided for in the Sykes-Picot Agreement, and did not consider itself bound by any British promises to its ally Ḥusayn. It was also influenced by the attitude of the Lebanese Christians, who had no desire to become part of an Arab kingdom under a Muslim monarch from the ruling family in the Ḥijāz. Fayṣal's position in Damascus was affected by the Anglo-French Agreement of September 1919, which provided for the withdrawal of British troops from Greater Syria excluding Palestine. The action of a congress of Syrian notables meeting at Damascus in March 1920 in offering the crown of Syria and Palestine to Fayṣal was repudiated by Britain and France in favour of a mandate [q.v.] of Britain over southern Greater Syria (i.e. Palestine) and of France over the northern part (i.e. Syria and Lebanon). French forces under General Gouraud marched on Damascus, defeated the Arabs at Maysalūn [q.v.] in the Anti-Lebanon and entered Damascus on 25 July 1920. Fayṣal left for exile and, eventually, a new throne in 'Irāk. The San Remo Conference duly allotted the mandates of Syria and Lebanon to France, confirmed by the League of Nations in July 1922.

In the early years of the French mandate, the frontiers of Syria were gradually delimited: those with 'Irāk, Palestine and Transjordan by two Anglo-French agreements, but the more contentious northern frontier with Turkey, with its mixed population of Arabs, Turks and Kurds, was not finally settled until 1930, and was to have a substantial modification in 1939 when the so-called Sanjak of Alexandretta [see İSKANDARŪN] was ceded to Turkey (see further, below).

Under the *de facto* control of the French High Commissioner Gouraud, Syria was officially proclaimed to be a "federation of Syrian states": the State of Aleppo, with its dependent Sanjak of Alexandretta; the State of Damascus; the "Territory of the 'Alawīs", sc. Nuṣayrīyās [see NUṢAYRĪYYA], centred on Latakia [see AL-LADHIKIYYA]; and a Druze state in the Djabal al-Durūz with its centre at Suwayda (1921-2). But the system never came to life, and from 1 January 1925 there was established a unitary state of Syria, which was, however, to exclude the 'Alawī and Druze territories and Greater Lebanon. Meanwhile, a preliminary census was instituted as a basis for the voting groups of the first general elections (to be conducted by indirect voting) planned by the new High Commissioner General Weygand in 1923. Excluding Greater Lebanon, the census revealed the following picture. The nomads in the district of Aleppo and of Damascus were not included in it. The state of Aleppo,

including the independent Sanjak of Alexandretta had 604,000 inhabitants. The number was made up as follows: 502,000 Sunnis, 30,000 'Alawis, 52,000 Christians of diverse denominations, 7,000 Jews and 3,000 foreigners. The state of Damascus contained 595,000 inhabitants, of which 447,000 were Sunnis, 8,000 Isma'ilis, 5,000 'Alawis, 4,000 Druze, 9,000 Mutawalis, 67,000 Christians of different denominations, 6,000 Jews and 49,000 foreigners. In the state of the 'Alawis, there were 60,000 Sunnis, 153,000 'Alawis, 3,000 Isma'ilis and 42,000 Christians of different denominations, in all 261,000 inhabitants. The state of the Djabal al-Duruz was remarkable for the homogeneity of its population. There were 43,000 Druze against 700 Sunnis, and about 7,000 Greek, Catholic or Orthodox Christians.

It is not easy to draw up a balance-sheet of the achievements and failures of the French mandatory power. On the positive side, there was the establishment of law and order; improvements in communications and harbour facilities; order was achieved in the public finances, with the budget generally balanced and, after 1933, the burden of the share of the Ottoman Public Debt which had fallen upon the mandated territories was at last paid off so that no public debt remained; some tentative steps towards land reform were made through the introduction of a modern system of land registration and a land survey, although the pattern of actual land ownership changed little and there was a very clear continuity in the high level of political and economic power of the Syrian landowning elite from late Ottoman times to the post-Second World War years. A system of state schools was created from almost nothing; the University of Damascus expanded and the Arab Academy in Damascus acquired a solid reputation throughout the Arab world. An Antiquities Service did sterling work in preserving both the ancient and the Islamic sites and monuments of Syria. In agriculture, there were moves to improve crops and produce, with substantial increases in cotton production and the export of citrus fruits. Irrigation works were undertaken, such as the completion of the first phase in 1938 of the Lake of Homs barrage, although achievements here lagged behind those of Iraq in the same period. The world depression of the 1930s reduced Syria's potential as an exporter; there was a slowing-down of Lebanese and Syrian emigration as overseas countries closed their doors to immigrants, and remittances home by existing emigrants decreased sharply.

On the debit side, in the early years of the Mandate at least, France ran Syria as a colonial possession, with commercial and financial policies which benefited the mandatory power. French companies, banks and individuals were favoured by the grant of industrial concessions and the provision of subsidies, and the League of Nations' mandatory system requirements of free trade and open competition for the provision of goods and services circumvented, annoying France's European and American trade competitors and frustrating the indigenous population which suffered from the lack of competition. Local Syrian industries were not given adequate protection by the High Commissioner, and French customs policy favoured the import of French goods and furthered the decline of local industry and handicrafts, causing, e.g. unemployment in the towns amongst handloom weavers and silk spinners.

The great failure of French rule—one which was probably inevitable, whatever the mandatory power could have done or not done—was to win the approval

of the bulk of the Syrian and Lebanese people. The nationalists, backbone of the movement for independence, were naturally intransigent, resenting what they saw as the encouragement of separatism and what they believed to be French financial dominance through the Banque de Syrie et du Grand Liban. Thus it was widely believed that the French deliberately drained the country of gold which it had possessed in Ottoman times. In 1925-6 there were local risings in northern Syria (under Ibrāhīm Ḥanānū) and in the Djabal al-Duruz (under Sulṭān al-Atrash), the latter spreading to the Druze areas of southern Lebanon and the district of Damascus as far as Ḥims. The mandatory power had to revise the constitutional arrangements for Syria, although martial law, censorship and the special tribunals were not abolished till 1928, when a general amnesty was issued. An indigenous Syrian government, more acceptable to public opinion, after 1928 under the moderate nationalist Shaykh Tādj al-Dīn al-Ḥasanī, was installed, with elections for a constituent assembly. The drafting of a constitution began, one on Western lines and with provision (as in Lebanon also) for the representation of minorities and a unicameral legislative assembly. Because of disagreements between the more moderate majority in the assembly and the more extremist nationalist bloc, *al-Kulla al-Waṭaniyya*, under Ḥanānū, a constitution for the State of Syria was finally refused by the High Commissioner Henri Ponsot.

It was also hoped to institute a Franco-Syrian Treaty, on the lines of the Anglo-Iraqi Treaty which had terminated the British mandate over Iraq, but the negotiations for this were likewise bedevilled by party disputes in the assembly, until in November 1934 the High Commissioner Comte Damien Charles de Martel adjourned the Chamber of Deputies *sine die*, with provision for rule by decree. As may be inferred from the turbulent politics of the period, there was a proliferation of political parties in Syria in the 1930s; see for these, *ḥizb*. i, at III, 522-3. Not until 1936, when there came to power in France a left-wing coalition, the Popular Front, slightly more favourably disposed to Syrian and Lebanese aspirations than the outgoing government, were Franco-Syrian and Franco-Lebanese Treaties achieved, defining what were to be the relations between France and the local Arab powers after the end of the mandate and, in the meantime, handing over certain administrative functions from the High Commissioner to the Syrian government. The National Bloc achieved an overwhelming majority in the 1936 elections. Soon afterwards, the 'Alawī and Druze regions were annexed to the Syrian State. But difficulties grew as Turkish claims to the Sanjak of Alexandretta were increasingly pressed; separatist movements grew (in the Djabal al-Duruz, 1937-9; in the 'Alawī region, 1939; and amongst the Kurds of the Djabāra, sc. in northeastern Syria, in 1937). The accession to power in France in 1938 of a less sympathetic government, which now feared for the long-term safety of the minorities in Syria, above all, of the Christians there, led to the failure of the French Parliament to ratify the 1936 Treaty. Within Syria, confidence in the National Bloc had ebbed, and political instability and insecurity in the country at large made it difficult to find a government acceptable to a broad spectrum of Syrian interests. Hence in July 1939 the High Commissioner Gabriel Puaux suspended the constitution and appointed a council of directors to rule by decree under his own guidance; at the same time, the separate administrations of the Druze and 'Alawī areas, abolished in 1936, were restored, and a separate

administration created for the restive Djazīra.

The outbreak of the Second World War on 3 September 1939 marks the beginning of the last period in which the French could hope to do more than hold their position in Syria. The fulfilment of any of their aims as the mandatory power had to be abandoned for a policy of survival as a weak outpost of a metropolitan power soon to be largely occupied by the German enemy. The surrender of France in June 1940 found the French Army of the Levant obeying the order from Vichy to cease hostilities. The adroit and circumspect Puaux was recalled from Syria because of his tepid attitude towards Vichy policy, and replaced by the respected but defeatist General Henri Dentz, whose tenure of the High Commissionship was to be uniformly unfortunate. Local Syrian nationalists could not but be affected by contemplation of the French débâcle; some of the more extreme elements, as in Iraq, began openly to look for an Axis victory as German propagandists proclaimed in Syria ostensibly pan-Arab and anti-Zionist policies. Economic hardship, involving food shortages and black market, price rises and unemployment contributed to popular discontent, with a general strike in Damascus and Aleppo and similar disorders in Lebanon in February 1941. A leader of the nationalist movement now emerged in the person of Shukrī al-Kuwwatli.

Meanwhile, the attitude of General Dentz, on orders from Vichy, was made clear to the British High Command in Cairo: that France would not regard the appearance of German forces or aeroplanes in Syria, en route as reinforcements for Rashīd 'Alī al-Gaylānī's [q.v.] pro-Axis régime in Baghdad, as a hostile act, whereas any British intervention would be opposed by force. No message could have been clearer. Britain reluctantly—because its Middle Eastern military resources were already highly stretched in opposing the Axis forces in North Africa and the eastern Mediterranean—decided to intervene, once it was clear that the French administration in Syria would not promise, as similar administrations in other parts of France's colonial empire had in fact promised, to remain neutral and to maintain a defensive stance (which would have been in accordance with the terms of the Franco-German Armistice). The Free French movement under General Charles de Gaulle had to be accommodated in any military measures, and forces under General Legentilhomme took part in the invasion of Syria which began on 8 June 1941 and was strenuously opposed by General Dentz's troops. Offers of help from the Germans and Italians were distasteful to Dentz and were refused by the Vichy government. He surrendered on 14 July, most of his troops being repatriated to France.

General Georges Catroux, de Gaulle's Délégué-Général in Cairo, had promised in leaflets dropped by air into Syria on 8 June that the mandate would be terminated and that the peoples there would become free and independent. In fact, it was going to be difficult to say when France's mandate ended; General Catroux did not transfer power to the Syrians till early 1944, and the obligations of the mandate could still be invoked by the French in the protracted negotiations leading to the final withdrawal of French troops in 1945-6 (see below). In these years, there were also to be tensions between the more adaptable Catroux and the intransigent de Gaulle, whose mind was closed to the new political and psychological realities of the Arab world, though both were to remain bitterly critical of what they regarded as British perfidy in encouraging Syrian national aspirations in an area regarded as a purely French responsibility. Britain

was regarded by de Gaulle as hopelessly Arabophile, and the French authorities in Syria fought a long-drawn out, but ultimately unsuccessful, battle to concede the minimum towards independence and to retain for France as many rights and privileges there as possible.

Meanwhile, within Syria, there was intense political activity among the parties, in which the Communists (though at this point professedly favourable to the nationalist cause and the war effort) were making their name heard in both Syria and Lebanon. The Druze and 'Alawī territories were in February 1942 re-transferred to Syrian authority, this time for good. Elections were held in the summer of 1943, entailing the decisive return of the National Bloc to power, and the Assembly elected Shukrī al-Kuwwatli as President of the Republic of Syria (17 August). From December 1943, the French authorities ceased to challenge any constitutional changes which the governments of Syria and Lebanon might make, and in January 1944 the Assembly members took the oath of allegiance to a constitution which ignored all mandatory ties. Even so, disputes between the two sides continued, especially over Catroux's refusal to cede control of the Syrian Legion, the *Troupes spéciales*, recruited largely from the minorities and from rural Sunni Muslims, and over the continued existence of French regular army garrisons. The despatch of Senegalese troops by de Gaulle to Beirut in May 1945 was regarded as an attempt to reinforce the French military presence, provoking a general strike, and demonstrations and armed clashes as far as Deir al-Zor, and entailing the French shelling and bombing of Damascus with hundreds of casualties. There followed a threat of British military intervention, since Britain was still at war with Japan and the Levant lay across supply lines to the East. Only in the summer did France begin at last to withdraw troops, a process not completed until April 1946. Inevitably, there was now no hope in the foreseeable future of any Franco-Syrian Treaty favourable to France. The Syrian government had announced its adherence to the League of Arab States [see AL-DJĀMI'Ā AL-'ARABIYYA, in Suppl.], formed in March 1945, and nominally declared war on Germany and Japan. But as events were to show in the post-War years, political stability was to elude the new, faction-ridden state.

#### (c) Independent Syria.

Syria in its contemporary borders, comprising the central parts of the historic *Bilād al-Shām*, was established under the French Mandate [see MANDATES]. It gained formal independence in 1943 and full sovereignty in 1946, when the last French soldiers left the country. According to its constitution, independent Syria was a parliamentary democracy. *De facto*, power was concentrated in the hands of the landlord and merchant class, and, increasingly, of the military establishment. The ruling élite made Syria stumble into the first Arab-Israeli war, and it largely failed to solve the country's domestic political and social problems.

From 1949, the country experienced a series of military takeovers and attempted coups. In the mid-1950s, Syria became the focus of a regional conflict concerning the establishment of a Western-oriented military alliance, the Baghdad Pact. Syria's neutralist stance made it subject to strong Western pressures. While failing to push Syria into the Pact, these pressures destabilised the country and contributed to its hasty and ill-prepared unification with Egypt in 1958. When the leadership of the so-established United Arab Republic (UAR) embarked on an outspokenly socialist course in 1961, launching a wave of nationalisations that included some of the largest Syrian establishments, a group of conservative Syrian officers assumed power in Damascus and terminated this first unification experiment in contemporary Arab history. Syria re-emerged as a sovereign state, with the political élite of the 1950s back in power for another year and a half.

On 8 March 1963, the *ancient régime* was overthrown by a group of young military officers with strong Arab nationalist and, in a large part, socialist convictions. The faction connected to the Arab Socialist Ba'ṭh Party (*ḥizb al-ba'ṭh al-'arabī al-iṣṭirākī*) soon asserted its power, and the Ba'ṭh party became the ruling party in a quasi-single-party system. The "revolution" of 1963, as it was henceforward called, was followed by an unstable period of army-and-party rule. The régime ventured to put the country on what was understood to be an Arab socialist development path, thereby trying to liquidate the economic basis of the old ruling élite which they had already removed from political power. Land reform, initially introduced under the UAR, was considerably speeded up. In 1964 and 1965, after a series of violent clashes between the régime and conservative oppositional forces, a large number of industrial and commercial establishments was nationalised. The radical social policies of the régime and a no less radical rhetoric confronting both the West and the conservative Arab states left it regionally and internationally largely isolated; only relations with the Soviet Union and the other then socialist countries were expanded.

At the same time, the political leadership was internally divided into different factions, each having their own basis in the army and the party. Internal frictions broke up along both political and sectarian lines. In February 1966, a radical wing of the party, led by officers of mainly middle class, rural and minority, particularly 'Alawī origin, gained the upper hand by military force. Caught in internal struggles, the régime had to face the 1967 war unprepared; Israeli forces were able to occupy the Golan heights [see DJAWLĀN] without major resistance.

In November 1970, after further years of open conflict within the power élite about internal and foreign policy directions, General Ḥāfiẓ al-Asad (born 1930), an 'Alawī Ba'ṭhist who had been Commander of the Air Force since 1964 and Minister of Defence since 1966, assumed power in another coup. In 1971, he was elected President of the Republic in an uncontested popular referendum. By the time of writing, he has been re-elected three times, last in 1991 for another seven-year term of office.

Only after Asad's takeover or "corrective movement" (*al-ḥaraka al-taṣḥīḥiyya* as it had since been called) did stable political structures emerge, enabling Syria to develop into a veritable regional power. Thus a parliament (*maḍlis al-sha'b*) was established in 1971; and the Progressive National Front (PNF) (*al-qabha al-waṭaniyya al-taḥaddumiyya*), an institutionalised coalition of the Ba'ṭh party with a group of tolerated,

smaller parties, was set up in 1972. In 1973 a new constitution was promulgated, largely tailored to suit the personal rule of President Asad, who also occupies the positions of Supreme Commander of the Armed Forces, President of the PNF, and Secretary-General of the ruling party. The parliament, elected once every four years, has to share its legislative functions with the President. Aside from the PNF parties, only individual candidates are allowed to stand for election; the Ba'ṭh party is guaranteed an absolute majority. Any constitutional amendment needs the approval of the president. The political system is authoritarian; no major policy decision, particularly in the fields of foreign policy and security, can be taken without the President's personal involvement and consent.

Under Asad's rule, the socialist orientation of the first Ba'ṭhist régimes, though maintained as a tenet in the rhetoric of the ruling party, has been gradually abandoned. The state was still supposed to lead economic development, but conditions for the private sector have been considerably improved from the early 1970s onwards. Rapid economic growth rather than social reform has become the main objective of development policies. Both the state economic sector and the bureaucracy, as well as the armed forces, have grown at unprecedented speed. The new régime has also re-arranged the foreign policy orientation of the country. Good relations with the socialist bloc were maintained, but the régime sought to improve its relations with the West and with the conservative Arab states and strengthened its ties with Egypt. In October 1973, Egypt and Syria launched a coordinated military attack against Israel. Though not resulting in a military victory, the October War (*ḥarb Yishrin*)—proving Arab military capabilities and their ability to coordinate military action with economic pressure, namely the imposition of an oil embargo against Israel's international allies—has generally been viewed as a political victory of the Arab States. Syria was able to regain parts of the occupied Golan heights in the course of the US-sponsored troop disengagement negotiations following the war.

The combination of internal stability, national success, and economic growth made Asad enjoy a high degree of popularity and legitimacy for several years. Only from the second half of the 1970s did the régime have to face veritable domestic threats. General disenchantment with the régime's regional policies, particularly its open military involvement, from 1976, in the Lebanese civil war [see LUBNĀN], the spread of corruption and nepotism, unrestrained behaviour of the security forces, the sectarian composition of the régime's core, and growing social inequalities, all contributed to an increase of tension. Oppositional forces were not able to organise themselves politically and were thus driven into violence. In the years 1979-82 Syria experienced a situation close to civil war. The anti-régime opposition was led by Islamist forces, particularly the Syrian branch of the Muslim Brotherhood (*al-Ikhwān al-Muslimūn* [q.v.]), who tried and partly succeeded in giving the conflict a sectarian (Sunnī majority against 'Alawī minority) character. The opposition was only crushed after a brutal crescendo in Ḥamāt, where in February 1982 government troops put down a rebellion by military force, destroying large parts of the city. In the summer of the same year, the Syrian army and air force suffered a heavy blow at the hands of Israeli forces in Lebanon. Though not driven out of Lebanon, the Syrian forces were unable to prevent Israel's laying siege on the Lebanese capital Beirut. In late 1983, President Asad suddenly suffered severe

health problems, and the country seemed to face an internal military struggle for his succession.

During the later part of the 1980s, the main threat to the régime and its legitimacy came from a deep economic crisis that revealed the flaws of the country's étatist development orientation. A gradual process of economic policy change began, giving form to a more market-oriented economy and reducing the relative weight of the state sector. A major liberalisation of the political system, as some domestic quarters had expected in the course of economic liberalisation, did not occur. Minor changes included the enhancement of the role of parliament and a relaxation of political repression.

By the mid-1990s (at the time of writing), the economic situation has improved, both as a result of the reform process and of increased oil production (by 1993, Syria's oil production ranged around 550,000 b/d). President Asad's régime no longer faces any domestic opposition worth mentioning. There has been some uneasiness, both domestically and internationally, concerning the eventual succession process and the prospects of a post-Asad Syria, but the régime itself is stable. Internationally, Syria has managed to cope with the loss of its main ally and arms supplier, the Soviet Union. It has considerably improved its relations with the USA both by participating in the US-led coalition against Iraq in 1991 and by joining the US-sponsored Middle East peace process. Syria has also asserted its regional position. Its hegemony over Lebanon has been internationally tacitly accepted, and Syria is generally perceived as the key Arab state to a peaceful settlement of the Arab-Israeli conflict. By entering into bilateral negotiations with Israel in 1991, Syria clearly stated its preparedness to peace, its main condition for a peace treaty being the full withdrawal of Israel from the occupied Golan heights.

### 3. The Arabic dialects of Syria.

The *Bilād al-Shām* does not constitute, from a linguistic point of view, a genuine unity. The history of the population of the region has been such that nomadic and sedentary dialects are adjacent there or are in contact there, as is demonstrated by reciprocal borrowings of lexical and grammatical elements. Thus in zones of close contact, sedentarisation, rural exodus and urbanisation have given rise at all times to a range of dialectal varieties, and it is not always easy to determine whether it is a case of "sedentarised" Bedouin dialects, or of "Bedouinised" sedentary dialects. Contacts with the major neighbouring dialectal groups (Egyptian, Arabian, Mesopotamian) are, at least on the external fringes of the domain, no less tight. Today, tourism and above all, the spectacular diffusion of radio and television, promote contacts of a different type, the effect of which is tangible. Finally, the region has experienced the presence of languages which, while they have not in general directly affected the majority of the population, have nevertheless, to decidedly differing degrees, exerted an

influence, on vocabulary at least: Turkish, in particular in the Ottoman period; and European languages, in the era of the Crusades (for a long time also through the specific intermediary of the *lingua franca*, at least on the shores of the Mediterranean) and more recently (French and English) during and after the colonial or mandatory period. Among others, these elements explain the wide dialectal diversity of the region; but its history and the emergence of the linguistic crucibles constituted by nation-states, and the augmented role of certain major metropolises, also confer on many Shāmī dialects, sedentary ones in particular, common elements, an intercomprehensibility which varies from mediocre to excellent, and a specificity in general immediately perceptible to those who speak them, as it is to speakers of dialects belonging to other groups.

Since pre-Christian times, and then stimulated by the Muslim conquests, "Arab" populations, admittedly most often linguistically Aramaicised, had been installed in the Fertile Crescent. It was probably from the 7th century onward that this presence became more significant; soon, apparently rapid Arabisation was definitively to establish Arabic as a majority language. Aramaic was to survive, however, in small enclaves, and is still in use today in three villages of the Anti-Lebanon: Ma'lūlā, Bakh'a and Džubb 'Adīn (Western Neo-Aramaic). If the influence of this substratum has sometimes been exaggerated, it is nevertheless real (see e.g. W. Arnold and P. Behnstedt, *Arabisch-Aramäische Sprachbeziehungen im Qalamūn (Syrien)*, Wiesbaden 1993; and see, for present-day Neo-Aramaic in Syria, MA'LŪLĀ).

The dominant position of Arabic should not obscure the existence of other languages, spoken by diverse communities, in some cases long-established in the region: Kurdish and Armenian in particular, Circassian and Turkish. For the populations concerned (in most cases, when they have preserved their own language, bilingual and even trilingual), the relation between this heteroglossia and the components, religious or ethnic, of their identity, is complex, and its configurations diverse and essentially variable. Finally, the presence of Israeli Hebrew has, over several decades, created an unprecedented situation for the Palestinians "of the interior", many of them being bilingual.

Conversely, Shāmī emigrés have transplanted their dialects, into North and South America in particular, where they have thriven to varying degrees [see AL-MAHJĀR]. A particular case is that, currently moribund, of Kormakiti in Cyprus, the last representative of the dialects imported by Maronite communities of Lebanon, in several waves, the most significant dating back to the end of the 12th century. In Turkey, while the majority of the Arabic dialects still spoken belong to the *kaltu* group of Anatolian dialects, some are to be associated with Syrian dialects (Adana, Antioch, Alexandretta).

Documentation concerning the dialects of the *Bilād al-Shām* in their ancient form is largely defective; it is possible to gain an impression of them through their traces, direct or indirect, in texts in "Middle Arabic" (see the studies of J. Blau, in particular, *A grammar of Christian Arabic, based mainly on South Palestinian texts from the first millennium*, Louvain 1966), also by means of documents of various kinds: correspondence, archives, etc., written in the same type of linguistic register, phrase-books, Turkish-Arabic for example, accounts of European travellers, manuals written by missionaries, etc. The ancient texts which have survived most often comprise a poetry of dialectal or dialectalising expression, as such composed in a dialect

tal *koiné* and in a literary register involving conventions and archaisms. While it is thus difficult to compile a history dialect by dialect, it is nevertheless possible to identify the major trends of their overall evolution (see, for the sedentary dialects, I. Garbell, *Remarks on the historical phonology of an East Mediterranean Arabic dialect*, in *Word*, xiv/2-3 (1958), 303-37).

Possibly in part as a result of the attraction exerted by the Holy Land, the Shāmī dialects are without doubt those for which documentation is most abundant. However, for the speech of some relatively important cities (Latakia, Homs, Tyre, Baalbek, 'Akkā, Nablus, etc.) and for the majority of the dialects of rural (and of mountainous) areas, it is practically non-existent. Among the works which have appeared since the composition of the article of H. Fleisch [see 'ARABĪYYA, iii, 2. *The Oriental dialects*], the following should be noted: for Syria, M. Cowell, *A reference grammar of Syrian Arabic based on the dialect of Damascus*, Washington D.C. 1964; H. Grotzfeld, *Syrisch-arabische Grammatik*, Wiesbaden 1965; A. Ambros, *Damascus Arabic*, Malibu, Calif. 1977; A. Sabuni, *Laut- und Formenlehre des arabischen Dialekts von Aleppo*, Frankfurt a.M. 1980; B. Lewin, *Arabische Texte im Dialekt von Hama*, Beirut 1966; idem, *Notes on Cabali. The Arabic dialect spoken by the Alawis of "Jebel Ansariyye"*, Göteborg 1969; for Lebanon, H. Fleisch, *Études d'arabe dialectal*, Beirut 1974; F. Abu-Haidar, *A study of the spoken Arabic of Baskinta*, Leiden 1979; M. Jiha, *Der arabisches Dialekt von Bishmizzin*, Beirut 1964; for Palestine and Jordan, H. Blanc, *The Arabic dialect of the Negev Bedouins*, in *Proc. of the Israel Academy of Sciences and Humanities*, iv/7, Jerusalem 1970; J. Rosenhouse, *The Bedouin Arabic dialects. General problems and a close analysis of North Israel Bedouin Dialects*, Wiesbaden 1984; H. Palva, *Lower Galilean Arabic*, Helsinki 1965 (= *Studia Orientalia*, xxxii); idem, *Balgāwi Arabic*, 1-3, in *Studia Orientalia*, xl/1-2 and xliii/1 (1969, 1970-1974); *Studies in the Arabic dialect of the semi-nomadic al-'Adjārma tribe (al-Balgā' District, Jordan)*, Göteborg 1976; *Narratives and poems from Hesbān. Arabic texts recorded among the semi-nomadic al-'Adjārma tribe*, Göteborg 1978; see also below, *Bibl.*

The problems of classification of the dialects of the region are far from being resolved. For the speech of sedentary populations, the division proposed by G. Bergsträsser in his *Sprachatlas von Syrien und Palästina*, in *ZDPV*, xxxviii (1915), 169-222, amended and supplemented on a number of points by later works, remains largely valid: three parallel bands from north to south (North Syria; Lebanon, Anti-Lebanon; and Palestine, Transjordan, Ḥawrān), with zones of transition of course (such as that of Galilee between the south of Lebanon and the rest of Palestine). J. Cantineau (*Remarques sur les parlers de sédentaires Syro-Libano-Palestiniens*, in *BSL*, xl [1939], 80-8) also identifies three groups, but different, since he takes as the sole criterion the realisation of the correspondent of *kāf*, *q*, *ʔ*, or *k*. He has also made the observation that, on the other hand, the dialects are distinguished thus:

	A	B
1st pers. sing.	bāktob	bāktob
3rd pers. masc. sing.	byāktob	bāktob

Type A is encountered essentially in the central zone, type B elsewhere, to the north (Aleppo) but most of all in Palestine and in Jordan, in urban speech (Jerusalem) but also rural and even Bedouin speech (Negev), if only to the extent that they have borrowed the "sedentary" pre-verbal particle *b(i)-*. This discriminant has validated to some extent the revived division of Bergsträsser, and the following groupings

are generally accepted (*Handbuch*, 28 [see *Bibl.*): northern Syria, Lebanon/central Syria, Palestine/Jordan.

Finally, J. Cantineau has also proposed a distinction between "differential" and "non-differential" dialects; in the first group, *a* in an unaccented open syllable is better preserved than the correspondents of *i* and *u*: *byiflāhu* ("they work") v. *byikāṭbu* ("they write") in the first case, but *byiflāhu* like *byikāṭbu* in the second (thus in the majority of Lebanese dialects of the centre-north).

But no typological feature has, any more than those mentioned above, an absolute discriminant value (especially so since, for each one, dialects can almost always be found which present a mixed system). Thus the diphthongs *aw* and *ay* are preserved in numerous Lebanese dialects but also, to the north of the Lebanese border, in a swathe of Syrian territory extending almost as far as Aleppo, or furthermore in a region of Ḳalamūn (Anti-Lebanon); mixed systems are common: diphthongs preserved only in open syllables (for example, *lān* "colour" v. *laumu* "his colour" in Tripoli, or 'anayyi "my eyes" v. 'aynēn "eyes" in z-Zayni, an 'Alawī mountain village); or only in slow utterance (*lento* forms v. *allegro* forms: *bāyt* v. *bat* (Ez-Zrēriyye, South Lebanon). *Imāla* of *ā* is widespread, its manifestations diverse and sometimes quite complex: the two principal types of conditioning—influence of the consonantic environment, and influence of a neighbouring *i* or *ī* in the word (sometimes present in the past and currently lost)—are not mutually exclusive; only certain morphological categories can be affected (*fāleb* "having asked", *fāleb* "a student"); the conditioning can also be lexical (leaving borrowings untouched), or prosodic, etc. The two realisations of *ā*, [ā], ([ē], [ī]) and [ā], ([ō], [ū]), usually in complementary distribution, can apparently in some cases be phonologised ('ām "he has risen", 'ām "he has removed"). The short *a* is also often subject to *imāla*, in particular in the "feminine" termination *-a(t)* of nouns (according to the phonetic nature of the last radical consonant in the absolute state, but often without conditioning of this type in the construct state) and of the 3rd pers. fem. sing. of the verb in the perfect tense. These two phenomena are very common, the first especially, even in dialects where *imāla* is otherwise unknown. Interdentals are present in all Bedouin dialects, but also in numerous sedentary, rural and mountain dialects (Palestine and Jordan, South Lebanon, Alawite Mountains). The phenomena of pause (known elsewhere, in particular in Yemen) are widespread. H. Fleisch has studied these in the case of Lebanese dialects, but they are found elsewhere, and their diffusion in ancient times was probably wider still. Their manifestations are diverse and their systems varied, since lengthening and shortening of vowels, diphthongisation (Zahle: *la 'ind zalamē 'indu x* "someone who owed x" v. *iẓa zzalamēy* "the man came") or reductions of diphthongs, changes of timbre, can be combined; the last syllable is not always the only one modified; in numerous dialects, the alternation between these forms "of pause" and "of context" is essentially a product of the rapidity of utterance (Ez-Zrēriyye: *meddīn sharshif w-'a-sh-sharshaf tabaliyye* "they (fem.) have spread out a cloth, on which a small table is placed") and such alternation can therefore be dictated by morphology or by syntax: masculine or feminine form, absolute or construct state, etc. ('addīm "before" vs. 'addām *bento* "before his daughter" (same dialect)). Short vocalic systems are of diverse types, depending on whether *a*, *i* and *u* are encountered in all positions (numerous Palestinian dialects, etc.) or *ai* and *au* are partially or generally coalesced (ə); this partial

coalescence can affect /a/ and /i/ (Kfar 'Abīda) and many mixed systems are attested. All of this has an effect on the radical vocalisation of verbs. For the perfect, one of the most widespread systems has two types: *katab*, *n(i)zil*, which can characterise semantico-syntactical categories which are more or less clearly demarcated; but sometimes observed is a tendency towards the generalisation of one of the two types, or towards interchangeability. Examples of a different system are *katab*, *sharib* (El-Karak). In the imperfect, the three vocalisations have relative distribution and frequency varying according to dialects; in some, consonantic environment or vocalic harmony have a determinant role (*yaf'al*, *yif'il*, *yuf'ul*). In morphology, the distinction of plural in the 2nd and 3rd persons of the verbal conjugation and of personal pronouns, general in Bedouin speech, is not uncommon in sedentary speech, at least in northern and central zones.

The examples, taken here primarily in the domain of phonology, could easily be multiplied and extended to morphology and to syntax. They would all show that a single discriminant—were it considered typically Shāmī—is always encountered at different points of the domain (even outside it). It is only by combining typological features (clusters of isoglosses) that it is possible, region by region, to determine relatively coherent, but never absolute classifications. It is thus that Fleisch proposed to classify, on a provisional basis, the Lebanese dialects into four groups (north, centre-north, centre-south, south), on the basis of some twelve features. For Palestine and Jordan, Palva has provided, on the basis of eleven features, the following classification (*A general classification for the Arabic Dialects spoken in Palestine and Transjordan*, in *Studia Orientalia*, iv [1984], 359-76): urban dialects (*bi'ūl*); rural dialects: (a) Galilee (*biqūl*), (b) central Palestine (*biḡūl*), (c) South Palestine, (d) north and central Transjordan and (e) south Transjordan (*biḡūl*); and Bedouin dialects: (a) Negev (*biḡūl*), (b) Arabia Petraea, (c) Syro-Mesopotamian sheep-rearing tribes and (d) North Arabian (*yigūl*). The rural dialects (c), (d) and (e) are distinguished among other ways through the realisation of *kāf*, *k* alone (e), *k* and *tsh* in phonetically conditioned complementary distribution (d: *ditsh*, pl. *dyūk*, "cock"), generalised *tsh* (c). This point also differentiates the Bedouin dialects: *k* (a and b); *k/tsh* (c); (d) has an alternation *k/ḡ*, and in parallel an alternation *g/dz* for *kāf*.

As regards the Bedouin dialects alone, these being present throughout the region, the situation is also complicated. Schematically, it may be stated that they belong to three groups of dialects: those of the major camel-riding nomads of Arabia (groups A and B in Cantineau's classification, *Études sur quelques parlers de nomades arabes d'Orient*, in *AIEO*, ii [1936], 1-116, ii [1937], 3-121); those of the Syro-Mesopotamian sheep-rearing nomads (Cantineau, group C), related to the *gilit* dialects of the Mesopotamian group (see 'IRĀK, iv (a) Arabic dialects (H. Blanc)); and those of a "North-West-Arabian" (sub-)group (Palva, in *Festgabe für H.R. Singer*, Frankfurt 1991, 151-66), at least some of which show characteristics in common with the Bedouin speech of Egypt and of the Maghrib.

If these classifications are so problematical, this is most of all the result, as has been stated above, of the constant contacts between dialects, between Bedouin and sedentary speech (cf. the presence in the Negev e.g. of the pre-verb *b(i)-*, a supremely "sedentary" feature) as within the confines of each of these two groups.

To this phenomenon, which has such important implications, two others should be added, also of a

socio-linguistic nature:

— "koinéisation". This appears, in particular, under the influence of the prestigious speech of regional or national metropolises, which explains e.g. the constant expansion of the following realisations: [ʔ] of *kāf* and [ʒ] (or [dʒ] according to cases) of *ḡim*, that of *shu* "what?", of *hallak* (and variants) "now", etc.

— "classicismation". The influence of the modern literary language applies to vocabulary and, through more or less modified borrowing, to some syntactical structures. Lexical borrowing, by "grafting" new nominal schemes into the dialects, supplies, through the creation of "doublets", a supplementary means of enriching vocabulary, and could lead to a recasting of the system of nominal derivation. In dialects where interdental spirants have coalesced with the corresponding occlusives, these borrowings have determined the integration of a new phoneme (/z/) as well as the creation of doublets of another type (*dahab* "gold", *zahāb* "going, departure"; *dahr* "back", *zāhir* "apparent"; *tūr* "bull", *sawra* "revolution", etc.).

It is nevertheless possible to give examples of regional features which can, to a certain extent, be considered as characteristic since they are present on a sufficiently large scale, even if some of them are found episodically in other dialectal groupings, or if their presence is not general in the region. It is also possible to regard as characteristic those features which are not encountered (in the current state of knowledge) in any other dialectal group. *Pronouns*. In the series of personal pronouns, to be noted are forms of the type *hamne(n)* (3rd pl.), *-kon* (2nd pl.) and *-hon* (3rd pl.), explanation of which by means of the Aramaic substratum is not to be ruled out; in that of demonstratives, mention should be made of *hayy* "this one" (fem.) (and sometimes "this one" (masc.) and/or "that (thing or fact)"), and it will be observed that demonstratives deprived of the \**ha-* element are very sparsely represented; in that of the interrogatives, (*'ish*) *shu* "what" already mentioned; a current form of the reflexive is *hāl-*. *Genitive particle*. *Taba'* (variable or invariable) seems to be peculiar to the region, but is not alone there (*ḡit*, *shūt*, etc.). *Pre-verb*. The pre-verb (durative, progressive, of concomitance) *'am(māl)* has numerous variants (probably of different etymologies): *'an*, *man*, *ma*,... (*'am yektob* "he is writing these days", "he is in the process of writing", etc.). *Active participle*. In certain dialects an embryonic form of conjugation is found in the three persons of the feminine singular (*kamshito* "she holds it" [Hawrān]; *shayyftiha* "you (fem.) have seen her" [Damascus]; *'ana māshattik* "I (fem.) have combed your hair" [Dfūn, Lebanon]). On the other hand, the form *fa'lān* is quite often used, not only for verbs of quality, where it is generally the only one possible, and can in certain cases alternate, either freely or in terms of semantic value, with *fa'el* (*sam'an-o* "I have heard it"). *Negation*. Alongside the forms *ma*, *ma ... sh(i)*, also found, although less known elsewhere, are *'a ... shi* and *o ... shi*. Among *conjunctions*, worth mentioning is *ta* (<\**hattā*) and its variant *tann-* + personal pronoun suffix "so that", "in such a way that", "that". *Auxiliaries and pseudo-auxiliaries*. Typical is *ba'idd-* + personal pronoun suffix "to wish" (*widd-* in its Bedouin version), also used for the expression of a type of future. *Hisin* "to be capable, in a position to" is an equivalent of *kidir*, as is *fi-* + personal pronoun suffix: *ma fina nrūh* "we cannot go there". Alongside *lissa-*, known elsewhere, also found is *ba'd* + personal pronoun suffix, "still, always" and other values (Lebanon). *Adverbs*. *Hallak* (and numerous variants) "now" is very widespread (it is also found, at the edge of the region, at certain points east of the

Nile Delta), and easily borrowed by Bedouin dialects (from which, conversely, *hassāʾ* and *hal-hīn* (same meaning) are borrowed). Also to be noted are *ʿala bukra* and *bakkīr* "early".

**Vocabulary.** This evidently varies in particular, as is to be expected, with the words which are most used. Thus according to the dialect: *rama*, *ḡaḡah*, *lakkah*, *ṭarah*, *zatt*, *ḡazwal*, *ḡaḡat*, *laḡaḡah*, *ṣhalah*, *ḡadaf*, "cast, throw". Among the words relatively characteristic of the region, it is possible to distinguish those which derive from the Arabic lexical stock but have become specialised, have phonological or morphological peculiarities, or are even canonical creations: *sammān* "grocer", *mis-wadda/sōdaye* "bottle", *ḡaʿif* "sick", *frāṭa* "small change (money)", *fāt* "to enter", *mākin* "solid", *ʿiḡīr* "foot, leg", *temm* "mouth", *dashṣhar* "to leave", *fardja* "to show", *maṣāri* "money" (< sing. *maṣriyye*, name of a coinage formerly in use in Egypt), etc., from those which derive, more or less directly, from the Aramaic (Syriac) substratum, or from borrowings from Turkish (and from Persian): *dafaṣṣh* "to push", *danak* "to die of cold", *zūm* "sauce, juice, soup", *ṣhawb* "heat (of the weather)", *sūs* (chick), *fūṣh* "to float", *lakkīs* "late [adj.]", *narbiṣh* (and variants) "pipe", *ʿandjak* "hardly", *ḡordāye* "curtain", *būza* "ice", *ṣharṣhaf* "cloth", *ʿaṣṣhi* "cook", *ḡāl* "lock", etc. The evolution of vocabulary often faithfully reflects social and political changes, for example: *koṣlok* -> *waynāt* -> *naddārāt* "spectacles".

**Writing dialects; dialectal literature.** There is no doubt that dialects have always been written down, as is confirmed by the dialectising or dialectal literary works which are available for study (in Arabic script or in the Syriac script known as *karṣūnī* [q.v.] which has long been in use in the Maronite community in particular) and the orthographical norms (still observed today) which have controlled their putting into writing, even though variations are noticed, according to which is the dominant influence: the classical norm and etymology or a closer adherence, deliberate or not, to dialectal linguistic realities.

In parallel with its measured and to some extent ornamental utilisation in the codified genres of dialectising poetry such as the *muwawṣṣḡahāt* (see, e.g. M. Raḡīm, *al-Muwawṣṣḡahāt fī Bilād al-Shām min naṣṣiʿatihā ḡattā nihāyat al-ḡam al-thāniya ʿaṣhara*, Beirut 1987), the dialectal language is, today as yesterday, the means of expression of an entire literature, "popular" and learned, and, more broadly, of an entire culture, the importance of which is partially disguised by the scant legitimacy accorded to it. Its manifestations are diverse: poetry of various types (*zaḡjal*, *muʿannā*, *mawwāl*/*mawālīya* and its divisions: *al-sabʿa funūn*, etc.), sometimes (*ʿalābā*) sung (S. Jargy, *La poésie populaire chantée au Proche-Orient arabe*, Paris-The Hague 1970). The poetry of Bedouin tradition has its own genres, and remains the repository and transmitter of the memory of its society (among recent works reference may be made, besides Palva, *Narratives and poems*, which has already been mentioned, to C. Bailey, *Bedouin poetry from Sinai and the Negev, mirror of a culture*, Oxford 1991). In sedentary circles, to take just one example, the Lebanese *zaḡjal* has a long and rich history (M.I. Wuhayba, *al-Zaḡjal—taʿrīḡuhū, adabuhū wa-aʿlāmuhū ḡadīm wa-ḡadīṡ*, Ḥarīṣa 1952; J. Abdel-Nour, *Étude sur la poésie dialectale au Liban*, Beirut 1957, <sup>2</sup>1966). Since the beginning of this century, freed from ancient forms and from certain traditional themes which are still practiced elsewhere—including on television—this poetry has taken on a new appearance. It is also a dialectal form of expression which is used for the composition and transmission of tales and proverbs, and today the majority of theatrical pieces and the

dialogues of films and serials on radio and television. The art of the song, very much alive, carries beyond the Bilād al-Shām the dialects of the region, sometimes in the texts of its best poets. Palestinians are carrying this on with militant songs. Until not long ago, dramas of the shadow-theatre with its hero Karakōz (*Nuṣṣ min ḡayāl al-zill*, ed. S. Ḳaṭāya, Damascus 1977; M. Kayyāl, *Muʿdjam bābāt masraḡ al-zill*, Beirut 1995; see also ḲHAYĀL AL-ZILL), and until more recently still the story-tellers (*ḡakawāṡis*), transmitters of the marathon tales which are the *ṣiras* [q.v.] of legendary heroes (Sayf b. Ḍḡīr Yazan, ʿAntar, Banū Hilāl, Baybars, etc.) perpetuated, before a generally exclusively male audience, the tradition of a living patrimony. The language of these legendary tales, some of which were partially in verse, could be dialectal or mixed. All these works were put into writing, at least in the form of *aides-mémoires* for the professionals of popular literature, also probably for the gratification of a public which had a particular liking for this kind of material. Today, the cassette and the video-cassette are the perfectly appropriate supports for this literature which is primarily oral and thus presupposes the presence of an audience. Dialectal poetry is published, however, in newspapers and magazines especially in Lebanon, sometimes in specialised journals. Since the 1960s, however, the press has only exceptionally accepted satirical columns in dialectal language, which were hitherto published in reasonable quantities. Literary prose as such in dialectal language has made little impact, in spite of a few isolated attempts in former times (*Ḳisṣat Finyānus* by Shukrī al-Ḳhūrī, São Paulo 1902, repr. Beirut [1929, etc., and 1952, with transcription and French tr. by E. Lator]; and *Rasāʿil Shmūne* by Hannā al-Ḳhūrī al-Feghālī, published in book-form by the *al-Dabbār* review) or more recently (Yūsuf al-Ḳhāl and Mūrīs ʿAwwād).

Finally, attention should be drawn to the isolated attempt on the part of the Lebanese poet (in classical and dialectal languages) Saʿīd ʿAḡl (b. Zaḡle, 1912) to devise a transcription (in Latin characters) of the dialect, in which he published, besides certain of his own *ḡiwāns*, translations of works of universal literature, including classical Arabic, and a newspaper (see H. Grotzfeld, in *Orientalia Suecana*, xxii [1973], 37-51).

**Bibliography:** Given in the article. See also *Handbuch* = W. Fischer and O. Jastrow (eds.), *Handbuch der arabischen Dialekte*, Wiesbaden 1980; M.H. Bakalla, *Arabic linguistics. An introduction and bibliography*, London 1983. Numerous articles in the major orientalist reviews and, since 1978, in the *Zeitschrift für Arabische Linguistik* (Wiesbaden). To the works mentioned dealing with one dialect in particular, the following may be added: for Ez-Zrēriyye, J. Aro, in *AO* (Copenhagen), xxxix (1978), 32-125, xl (1979), 27-71; for El-Karak, H. Palva, in *Studia ... H. Blanc dedicata*, ed. P. Wexler, Wiesbaden 1989, 225-51; for Gaza, E. Salonen (I. in *Studia Orientalia*, li/10 (1979) and II. in *Acta Acad. Sc. Fenn.*, B 213, Helsinki 1980); J. Rosenhouse and Y. Katz (eds.), *Texts in the dialects of Bedouins in Israel*, Univ. of Haifa 1980; P. Behnstedt, *Der arabische Dialekt von Soukhne* (Syrien), 3 vols. Wiesbaden 1994; a *Sprachatlas von Syrien* by this same author is forthcoming. For studies of syntax, besides the still useful *Syntaxe des parlers actuels du Liban* by Mgr. M. Feghali, Paris 1928, and the work of M. Cowell already mentioned (for Syrian Arabic), attention may be drawn to J. Blau, *Syntax des palästinensischen Bauerndialekts von Bir Zāʿ*, Walldorf-Hessen 1960, A. Bloch, *Die Hypotaxe im Damaszener-Arabischen*, Wiesbaden 1965, and M. Piamenta, *Studies in the*

syntax of Palestinian Arabic, Jerusalem 1966. The *Dictionnaire arabe-français. Dialectes de Syrie, Alep, Damas, Liban, Jérusalem* of A. Barthélemy, Paris 1935-69, is supplemented by the very useful *Dictionnaire des parlers arabes de Syrie, Liban et Palestine* compiled by C. Denizeau, Paris 1960. Bedouin type dialects are still awaiting their dictionaries. Dictionaries or catalogues of words and dialectal expressions are regularly published in the countries of the region, where there is often concern to show that this vocabulary is largely based on sound classical origins. Also published there are collections of proverbs, of anecdotes, *diwāns* of dialectal poetry, encyclopaedias of popular traditions often rich in information and in dialectal texts: the *Mawsū'at Halab al-mukārana* of M. Kh. al-Asadī (Univ. of Aleppo 1981-8), the *Mawsū'at al-fuklūr al-Filastīnī* of N. Sirhān ('Ammān 1977-81), the *Ma'lama li 'l-turūth al-urdunī* of R. Ibn Zā'id al-'Azīzī ('Ammān 1981-) are excellent examples. For dialectal literature, besides the older works by G. Dalman, *Palästinerische Dichtung*, Leipzig 1901, and E. Littmann, *Neuarabische Volkspoesie*, Berlin 1902, reference may be made to J. Lecerf, *Littérature dialectale et renaissance arabe moderne*, in *BEO*, ii (1932) and iii (1933), 47-175 (with a *Répertoire alphabétique des poètes dialectaux de Syrie* [= Syria and Lebanon]); M. 'Awwād, *al-Anṭilūjīya al-lubnāniyyi 'l-shi'r* ..., Beirut 1982. A collection of *zafjalīyyāt* of Ibn al-Kilā'ī (9th/15th century) has been edited by B. al-Djuma'yil, Beirut 1982. (J. LENTIN)

**SHĀMA** (A., pl. *shāmāt*) "naevus, skin blemish, mole".

This term seems originally to have denoted the coloured marks on a horse's body, above all, where they are disapproved of (*T* 4, viii, 362 ll. 12-13). It is applied to all marks of a colour different from the main body which they mark, and to all black marks on the body or on the ground (*ibid.*, ll. 304). But from what we know at present in our texts, there is no difference between *shāmāt* and *khilān* (sing. *khāl*) (the two terms are attested in Akkadian: cf. *hālu*, Bezold, *Babylonisch-Assyrisches Glossar*, Heidelberg 1926, 120, and *sāmūti*, Labat, *Traité accadien de diagnostics et pronostics médicaux*, Leiden 1951, 200 l. 7). These two terms denote the natural marks on a man's skin, on the face and the rest of the body, and the accidental marks, abscesses (*bulhūr*) or freckles caused by an illness and presaging death (see *R. fi 'l-kalām 'alā 'l-khilān*, ms. Bursa, Hüseyin Çelebi 882, fols. 61a-62b; *Kaḍāyā Bukrāt fi 'l-bulhūr*, ms. Köprülü 1601, fols. 245b-248a, used by Ps.-Djāhīz, *Bāb al-'irāfa wa 'l-zadīr wa 'l-firāsa 'alā madhhab al-Furs*, ed. K. Inostrancev, *Materials in Arabic sources for the history of culture in Sasanid Persia* [in Russian], in *ZVOIRAO*, xviii [1907], text 3-27, Russ. tr. and study 28-120, see 116 ff., in a section called *Mīn kalām Bukrāt fī dalā'il al-khilān wa 'l-shāmāt*).

Ibn al-Nadīm, *Fihrist*, 314), cites a *K. al-Khilān* and *K. al-Shāmāt*, written by a Byzantine (*Rūmī*) author called Mīn.s (Mīna/os?). The first title apparently corresponds in Greek to a work called Περὶ σπυλῶν, which is said to have treated the subject of beauty spots, and the second one, to a work called Περὶ ὧν which is said to have dealt with natural marks on the skin. We know nothing of this last, but the first is the title of one of the two chapters surviving of a treatise attributed to Melampus called Περὶ καλῶν and Περὶ ἐλαῶν (see the ed. J.G.Fr. Franz, in *Scriptores physiognomiae veteres*, Altenburg 1780, 501-9). If one concedes—as seems very likely—that Mīn.s is a corruption of Melampus, one of the two titles mentioned in the *Fihrist* must correspond to Περὶ καλῶν and be

translatable as *K. al-Ikhtilādī(t)* [see *IKHTILĀD*], the exact term for palmomancy.

In the Arabic sources, the information on the *ilm al-shāmāt wa 'l-khilān* which can be found in Fakhr al-Dīn al-Rāzī (see Y. Mourad, *La physiognomonie arabe et le Kitāb al-firāsa de Fakhr al-Dīn al-Rāzī*, diss. Paris 1939, 10) and in Ps.-Djāhīz (*op. cit.*, 7) is Greek in origin. Two texts, however, show that the Arabs knew this method of divination, which comes within the sphere of *firāsa* [q.v.]. The first is part of the ensemble of miraculous signs announcing the Prophet Muḥammad's coming (on these signs, see T. Fahd, *La divination arabe*, Paris 1987, 81-90). In the course of his first trip to Syria, at the age of 12, the monk Baḥrā [q.v.] is said to have recognised in him the signs of prophethood (see Ibn Sa'd, i/l, 99-100, and also 101, where it is said that, at the time of his second trip, aged 15, another monk named Nestor allegedly recognised in Muḥammad the same signs). These signs were physical ones (al-Ṭabarī, i, 1124) and concerned the eye, the face and above all, the "seal of prophethood" (*khātam al-nubuwwa*) like the impression of a cupper's scarifying instrument (*aṭhar al-mihdām*), according to Ibn Hishām, *Ṣira*, 116) or an "apple" (*tuffāha*, according to al-Ṭabarī, i, 1125). This legendary feature at least confirms the fact that the Arabs knew that the Byzantines practised drawing omens from skin marks.

The second seems to show that they practised it themselves. Mu'āwiya b. Abī Sufyān [q.v.] married a woman from the Banū Kalb, and he had her examined by his wife Maysūn, mother of Yazīd. Maysūn discovered a beauty spot below her navel, and she interpreted it as presaging the fact that the head of her husband would fall on to that place. Mu'āwiya divorced her; Ḥabīb b. Maslama married her, then divorced her; finally, al-Nu'mān b. Bashīr [q.v.], the later governor of Hims for Marwān b. al-Hakam, married her. When al-Nu'mān was beheaded for having joined the anti-caliph Ibn al-Zubayr, his head was set down in his wife's lap (*Aghānī*, xiv, 124).

**Bibliography** (in addition to references in the text): See Fahd, *La divination arabe*, from which the material for this article has essentially been taken. The art of drawing omens from skin marks (*umṣatu*), black beauty spots or moles (*hālu*), red birthmarks (*pandū*), warts, pimples, marks from jaundice, freckles, scars and even hairs which grew, was well known to the Assyrians and Babylonians (see F.R. Kraus, *Die physiognomischen Omina der Babylonier*, *MVAG* 40/2, Leipzig 1935). For the Byzantines, see *inter alia* the *Book of beauty spots* attributed to Leo the Wise, in J. Nicolaides, *Les livres de divination*, Paris 1889, 87-8. (T. FAHD)

**SHAM'Ā** (A.), candle.

As a literary topos, the candle is poetically described in many "ekphrastic" epigrams in Arabic, especially from the later 'Abbāsīd and post-'Abbāsīd periods; in pre- and early Arabic poetry the topos appears to be absent. Poems by al-Ma'mūnī, al-Sarī al-Raffā' and Kuṣhādjīm [q.v.] are among the earliest (see J.C. Bürgel, *Die ekphrastischen Epigramme des Abū Ṭālib al-Ma'mūnī*, Göttingen 1965, 254; Alma Giese, *Wasf bei Kuṣāḡīm*, Berlin 1981, 156, 263-5). A few other examples are found in al-Sharīshī's *Sharḥ makāmāt al-Harīrī* (repr. Beirut 1979, ii, 87-8); many later examples were collected by al-Nawādjī [q.v.] in the chapter on candles, lanterns, lamps etc. in his *Halbat al-kumayt* (Cairo 1938, 204-12 on the *sham'a* only; some passages in prose are included). Often the epigrams take the form of a riddle (see P. Smooren, *The weeping wax candle*, in *ZDMG*, cxxxviii [1988],

292, 299-301). A recurrent topos is the comparison of the candle to a lover, or *vice versa*: both are pale, thin, burning, shedding tears, being consumed, patiently and silently suffering, "awake" at night; occasionally the candle is likened to a slender girl or a bride, which alludes to the role played by candles at weddings. Several poems on the candle were made by Abu 'l-Faḍl al-Mikālī [see MĪKĀLĪs], see al-Ḥuṣrī, *Ẓahr al-ādāb*, repr. Beirut 1972, 747-8; he may have influenced his contemporary, the Persian poet Manūčihri [q.v.], who elaborately used the candle topos as the introduction of a well-known panegyric poem (see J.W. Clinton, *The dīwān of Manūčihri Dāmghānī: a critical study*, Minneapolis 1972, 31-43; Muḥammad Muḥammad Yūnus, *Ādāb al-sham'a bayna Manūčihri al-Dāmghānī wa-Abi 'l-Faḍl al-Mikālī*, in *Fuṣūl*, iii/3 [1983], 128-38).

Another topos involving the candle is that of the moth (Ar. *farāsha*, P. *parvāna*) seeking its light and immolating itself in its flame: here the lover is not the candle (which stands for the beloved) but the moth. The image, with a mystic interpretation in which the candle, the Beloved, stands for God/Truth/Reality, is found in Arabic already in al-Hallāj [q.v. see his *Kitāb al-Tawāsīn*, ed. Massignon, Paris 1913, 16-17, in rhyming prose, with "lamp", *miṣbāḥ*, instead of "candle"]. Although this topos of *baḳā* through *fanā* [see BAKĀ' WA-FANĀ'] persisted in Arabic (see Muḥammad Mansour Abahsain, *The supra-symbolic moth in Arabic religious poetry from the late Ottoman period*, in *JAL*, xxiv [1993], 21-7), it proved very popular especially in Persian and Turkish mystical verse (see e.g. Annemarie Schimmel, *As through a veil: mystical poetry in Islam*, New York 1982, index s.v. "moth & candle"; H. Ritter, *Das Meer der Seele*, Leiden 1955, index s.v. "Falter", "Kerze"). It was through Persian, it seems, that the topos reached Europe, as e.g. in Goethe's poem "Selige Sehnsucht" (*West-östlicher Dīwan*, ed. H.-J. Weitz, Frankfurt a.M. 1981, 21).

The candle appears in a few literary debates [see MUNĀZARA] in *makāma* [q.v.] form; for anonymous texts on wine *vs.* candle, see W. Ahlwardt, *Verzeichnis der arab. Handschr.*, vii, 554 (nos. 8592-3), Aḥmad al-Ḥaṣimī, *Ḥawāṣir al-adab*, Cairo 1319, 183-6. 'Abd al-Bakī b. 'Abd al-Majīd al-Makḥzūmī al-Yamānī (d. 743/1342, see Brockelmann, S II, 220, 237) wrote a similar debate between "aristocratic" candelabrum or candlestick (*sham'adān*) and humble lamp (*kindīl*); text in al-Nuwayrī, *Nihāyat al-arab*, Cairo 1929, i, 124-9, and in 'Izzat al-Aṭṭār (ed.), *Munāzarāt fi 'l-adab*, Cairo 1934, 30-6.

**SHAMĀKHA** [see SHĪRWĀN].

**SHAMAN.** In Persian poetry.

In Persian poetry, *shaman* is used as a synonym of *but-parast* "idolator"; quite often it occurs together with the word *šanam* "idol" (synonym of *but*) in one of the conventional poetic word pairs, or, less frequently, it is associated with *ātaš* "fire". In both cases, there is no specific reference to shamanistic practices; *shaman* denotes rather an unspecific type of non-Muslim religious person. *Shaman* and *šanam*, however, may occur as the two poles of a love relationship and then serve as an image of the lover and the beloved or the mystic and God. Instances of the usage of *shaman* can be traced back to the earliest years of New Persian poetry. Although not among the most frequently used poetic words, it does occur in many Persian poetic texts, such as the *Shāh-nāma*, the *dīwāns* of Anwarī

[q.v.], Kaṭrān [q.v.], the *Mathnawī*, ed. Nicholson, book 1, 829; *ibid.*, 2407, and *Dīwān-i Shams* of Rūmī [see DĪWĀN AL-DĪN], etc.

The following example is taken from Abū Ṣālik of Gurgān:

In this time there is no idol more beautiful than you,  
and for you there is no idolator more tenderly loving  
than your slave.

(G. Lazard, *Les premiers poètes persans*, Tehran-Paris 1964, French text, i, 61, Persian text, ii, 21).

**AL-SHAMARDAL** b. Sharīk al-Yarbū'ī, Arab poet of the middle Umayyad period, important for the history of hunting poetry [see ʿARDIYYA].

His life can be dated only approximately, an elegy on 'Umar b. Yazīd al-Usayyidī (killed 109/727-8) being the sole exact reference known so far (poem no. 2, ed. Seidensticker = no. 3, ed. al-Kaysī). His poems show that he was acquainted with several persons who played a minor political role, among them two prefects of police in Baṣra. As reported in the *akḥbār*, he also had a personal encounter with the famous poet al-Farazdaq (died no later than 112/730 in Baṣra [q.v.]). No *dīwān* of his poetry seems to have existed; 41 poems and fragments (about 430 lines) are preserved in various sources. The most important genres are *kaṣīdas*, *marāthī* and *ṭardiyyāt*. The *kaṣīdas*, five in number, vary in length from 21 to 66 lines. Besides several shorter *marāthī*, an elegy of 43 lines on his brother Wā'il has survived which was held in high esteem by some transmitters of his poetry. The handling of thematic and formulaic conventions in his hunting poems is reminiscent of similar episodes in the *fakḥ* of pre-Islamic *kaṣīdas* (Imru' al-Qays, Zuhayr, al-A'shā), but the *raḡīaz* metre is a new feature, as is the fact that the poems devote themselves exclusively to the one topic of hunting. The missing link between the pre-Islamic hunting episodes and the *raḡīaz ṭardiyyāt* of al-Shamardal and others in later times must be sought in *raḡīaz* poems like those of Abu 'l-Naḍīm al-'Idjīlī (died before 125/743 [q.v.]) in which a conventional *naṣīb* is followed by a hunting episode (cf. E. Wagner, *Grundzüge der klassischen arabischen Dichtung*, ii, Darmstadt 1988, 46-55).

**Bibliography:** T. Seidensticker, *Die Gedichte des Samardal Ibn Sharik. Neuedition, Übersetzung, Kommentar*, Wiesbaden 1983; N.H. al-Kaysī, *Shīr al-Shamardal b. Sharik al-Yarbū'ī*, in *RIMA*, xviii (1972), 263-330, also printed in idem, *Shu'arā' unawriyyūn*, ii, Baghdād 1976, 505-60 (unsatisfactory).

**SHAMDĪNĀN**, a mountainous district (*ilce*) in the present province of Hakkāri in south-eastern Turkey (previously in the Ottoman *wilāyet* of Vān). The name of the district and the district centre (old name: Nāwshār) is presently Turkicized as Şemdinli. The district is bounded on the north and northwest by the district of Yüsekova of the same province (comprising the previous districts of Gewar and Oramār), on the south and east by the 'Irāqī and Persian borders. Local tradition derives the name of Shamdīnān from that of a certain Shaykh Shams al-Dīn, the alleged ancestor of the Kurdish dynasty of the 'Abbāsī Begzāde, which exercised power in the district until the mid-19th century. Four major Kurdish tribes inhabit the district: the Khumārū (Humaro) in the north, Zarzā in the east, Herkī in the west, and Gerdī in the south. Other sections of the last three tribes are settled in isolated pockets in Persian and 'Irāqī Kurdistan. Until the First World War, there

was also a significant minority of Nestorian Christians living scattered among the Kurds here. In the late 19th century, Cuinet's sources estimated the population of Shamdīnān at 13,270 Kurds, 2,000 Ottoman Turks, 3,000 Nestorian Christians and 200 Jews; another source, the 1897 *sālnāma* for Vān, gives the figures of 14,547 Muslims and 2,034 non-Muslims. According to the 1990 census, the present population is just over 30,000.

In the course of the 19th century, the 'Abbāsī Begzāde family lost their paramount authority over the tribes to a family of religious leaders, who had settled in the village of Nehrī (present name: Baḡlar) near the district centre. This family, known as the Sādātē Nehrī, claimed descent from 'Abd al-Kādir al-Djilānī [q.v.] through the latter's son, 'Abd al-'Azīz, who lies buried in 'Akra, northeast of Mawṣil. The family was affiliated with the Kādiriyya *ṭarīqa*, until the sayyids 'Abd Allāh and Aḥmad took initiations in the Naḡshbandiyya from Mawlānā Khālīd and became his *khālifa* (ca. 1820). Like other Kurdish Naḡshbandī *shaykhs*, the Sādātē Nehrī increasingly acquired worldly power as well, extending their influence well beyond Shamdīnān to the Kurdish tribes further south and east. Sayyid Aḥmad's grandson, Shaykh 'Ubayd Allāh, in 1880 led a large tribal rebellion, temporarily occupying a vast stretch of Persian territory to the west of Lake Urmīya, and apparently intending to establish an independent Kurdish state. The Ottomans later arrested him and sent him into exile to Mecca. His son, Muḥammad Šiddīk, soon returned to Nehrī and took his father's place as the most influential man of central Kurdistān, successfully outwitting ambitious tribal chieftains as well as rival *shaykhs* (see Dickson; Nikitine and Soane). Another son, Sayyid 'Abd al-Kādir, settled in Istanbul after the Young Turk revolution and became the president of the first Kurdish association there as well as the president of the Shūrā-yi Dewlet. In 1925, following Shaykh Sa'īd's rebellion, the Kemālist authorities hanged him and his son Muḥammad. Muḥammad Šiddīk's son, Sayyid Tāhā, was more actively involved in Kurdish nationalist and anti-Turkish agitation, at one time cooperating with Simko in Persia and later joining the British in 'Irāk.

Relations between the local Muslims and Christians rapidly deteriorated during the First World War, especially following the *qihād* declaration. In 1916 Russian troops occupied Shamdīnān, overcoming Kurdish resistance coordinated by Sayyid Tāhā and his cousins 'Abd Allāh and Muḥammad, sons of Sayyid 'Abd al-Kādir. Local Nestorians, recruited and armed by the Russians as advance scouts, took part in the Russian offensive. After the October revolution and the withdrawal of Russian troops, the Nestorians were expelled and fled to Urmīya. Here the British enlisted their services against the final Ottoman eastward offensive and later brought them to northern 'Irāk. Following the Armistice (1918), a contest between the British and the Kemālists for control of the region continued. Sayyid Tāhā was invited to represent the region in the Kemālists' First National Assembly (1920) but declined, and two years later allied himself with the British authorities in 'Irāk, who made him governor of Rawāndiz [q.v.]. The tribes of Shamdīnān nevertheless remained opposed to the British infidels and deaf to Kurdish nationalist appeals. There was a brief rebellion in June 1925, in response to the execution of Sayyid 'Abd al-Kādir; his son 'Abd Allāh, aided by warriors of the Gerdī tribe, briefly occupied the district centre of Nāwshār and killed six Turkish officers. Then he too fled to British-controlled terri-

tory. At the final settlement of the border between 'Irāk and Turkey in 1926, Shamdīnān came to Turkey, and the neighbouring districts of Bārzān and Brādōst, with which it had always had close relations, to 'Irāk.

**SHĀMĪ, NIZĀM AL-DĪN** (or Nizām-i Shāmī), Persian littérateur and chronicler of the late 8th/14th-early 9th/15th centuries.

His *nisba* (Shāmī < Shanbī) suggests that he was born in Shanb-i Ghāzānī, a suburb of Tabriz. When on 20 Shawwāl 795/29 August 1393 Tīmūr-i Lang arrived before Baghdād, Shāmī tells us, he was the first of its inhabitants to come and submit to him (*Zafar-nāma*, i, 139). On his way to the Hidjāz not long before the conqueror's attack on Aleppo in 803/1400, Shāmī was detained by the authorities in Aleppo, who suspected him of spying on Tīmūr's behalf, and was thus an eye-witness of the siege (*ibid.*, i, 227, ii, 160). Brought before Tīmūr a second time following the city's capture, he appears to have remained in his entourage. In 804/1401-2 Tīmūr ordered him to compose a history of his conquests in a clear, unadorned style which would render it intelligible to all readers and not merely to a select few (*ibid.*, i, 10-11). The work was presented to Tīmūr around Shawwāl 806/April 1404. The title *Zafar-nāma* is not found in the original recension (Istanbul ms. Nuru Osmaniye 3267) utilised later in the compilations of Hāfiz-i Abrū [q.v.], but only in a second version dedicated to Tīmūr's grandson 'Umar Bahādur (British Library ms. Add. 23980). Shāmī, who after Tīmūr's death in 807/1405 had probably entered 'Umar's service, was dead, according to Hāfiz-i Abrū, by 814/1411-12 (*Dhayl*, 430). He enjoyed a high reputation among contemporaries for his literary skills: Sharaf al-Dīn 'Alī Yazdī, in his own *Zafar-nāma* (ii, 571), calls him one of the most accomplished writers of his age.

**SHĀMİL** (1212-87/1796-1871), Dāghistānī leader of the Muslim resistance to the Russian conquest of the Caucasus from 1250/1834 to 1276/1859.

*Shāmīl's biography and his ghazawāt*

Born in the village (*awul*) of Gimrah (Gimrī) to a family of an Avār freedman, Shāmīl was named 'Alī at birth. A sickly child, who was often ill, his original name, according to a local belief, was changed to Shāmūl (i.e. Samuel) to "repel" sickness. This was the name Shāmīl used in letters and official documents. Contemporary sources, however, styled him Shāmīl,

or *Shāmīl*—the name under which he became known in Russia and the West. Already in his youth he overcame his ailments and grew into an exceptionally strong, tall (over six feet) and athletic young man, famed for his fencing skills, bravery, and horsemanship. In addition, he had an acute interest in, and talent for, religious learning. By the age of 20 he had successfully completed an elementary course of Arabic grammar and rhetoric under the guidance of renowned Dāghistānī ‘*ulamā*’. He then proceeded to study Qur’ānic interpretation, *ḥadīth*, *fiqh*, and *kalām* with his friend and distant relative Ghāzī Muḥammad (Kāzī Magoma), who also introduced him to the Sūfī teachings of the Naḳshbandiyya-Khālidiyya *ṭarīqa*, which were propagated in Dāghistān by Muḥammad al-Yarāghī and Sayyid Djamāl al-Dīn al-Ghāzī Ghumukī. Unlike the otherworldly-oriented and quietist Djamāl al-Dīn, Ghāzī Muḥammad and his younger friend were anxious to enforce *sharī* norms actively among the mountaineers committed to their tribal customs (*‘ādāt*). Presenting themselves as religious reformers, they attacked such widespread vices as drunkenness, the use of tobacco, “indecent” intermingling of the sexes, merry pastimes with music and dancing, etc. With the Russian forces inexorably closing in on Dāghistān, Ghāzī Muḥammad, against the express wish of his *shaykh* Djamāl al-Dīn, added to this programme the call for *qīhād* [q.v.] against the infidel Russians. When in late 1829 several Avār communities proclaimed him the first *imām* of Dāghistān, Shāmīl became his trusted lieutenant. In 1832, after three years of fierce fighting, Ghāzī Muḥammad and his closest followers, known as *murīdūn* (Russ. *myuridi*), were surrounded and slaughtered in their stronghold at Gimrāh—an episode in which Shāmīl was one of only two survivors. Under the second *imām*, Hamza(t) Bek, Shāmīl continued to wage a pitiless struggle against the local nobility and their Russian backers. Following Hamza’s assassination in 1834 by the vengeful Avār notables, Shāmīl was unanimously recognised as the third *imām* of Dāghistān by Avār ‘*ulamā*’ and dignitaries at ‘Ashīlta. In 1834-6, despite the stiff resistance of the local ruling families and the continuing Russian intervention, he managed to establish firm control over most areas of Dāghistān. His inordinate military talents were recognised by the Russian commanders, who failed to subdue the territories under his sway and on several occasions had to sue for peace. As a result, his reputation as the successful leader of *qīhād* spread far and wide, making him “enemy number one” of the Russian military administration of the Caucasus. Apprehensive of Shāmīl’s growing influence on the warlike tribes of nearby Čečnyā, the Russians launched a massive military expedition against his headquarters at Akhulgoḥ. After a series of bloody engagements en route, the Russian expedition finally besieged Shāmīl and his men in their mountain fortress. When he refused to surrender after several weeks of fierce fighting, the irate Russians ruthlessly cut his garrison to pieces. Miraculously, Shāmīl again made an almost incredible escape down the lofty cliffs under the enemy’s very nose. Of the two wives with him during the siege, one was killed alongside his best men. Contrary to the Russians’ expectations, the *imām*’s spirit was far from broken. Moreover, he found new powerful allies among the Čečens who were disgusted at the continued Russian encroachment on their independence. In a matter of months, Shāmīl recovered and even expanded his power, whereupon he and his lieutenants delivered several shattering blows to the Russian forces in Čečnyā and Avāristān in 1840-2. Exasperated by these

reversals, Tsar Nicholas I ordered an all-out campaign to crush Shāmīl’s resistance in 1844. Organised and led by Prince Vorontsov, a 10,000-strong expedition against Shāmīl’s stronghold at Darghiyya was an almost total disaster. The *imām* had learned well the lessons of Akhulgoḥ and changed his strategy accordingly. With his prestige at its peak, Shāmīl endeavoured to extend his rule to Ghābartā (Kabarda) and to unify all the mountain tribes of the Caucasus against the Russians. His ambitious plans, however, were frustrated by the brilliant strategy of General Freytag, the ineptitude of his lieutenant Nūr ‘Alī, and the resultant failure of the Ghābartians to join his army. More importantly, this campaign demonstrated the vast disparity between Shāmīl’s resources and those of the Russian Empire—a disparity that would eventually lead to his undoing. About the same time, the Russians realised the futility of the “one-blow” strategy they had previously pursued, and resorted to a more methodical, if less offensive strategy, known as “the system of the axe.” It consisted in steadily encircling Shāmīl with a network of defensive lines and military posts aimed at cutting him off from Čečnyā, his major source of food supplies and manpower. From 1846 to 1849, the Russians erected fortifications in, and cut roads through, the impenetrable forests of Greater Čečnyā. Simultaneously, they “pacified” the population of the fertile Čečen plains, chasing those who refused to submit into the barren mountains. In the meantime, another Russian expeditionary force attempted to eradicate Shāmīl’s strongholds in central Dāghistān, a goal for which they paid an enormous price in money, ammunition, and human lives. Their successes, however, proved short-lived. Once the Russian troops had withdrawn, the *imām* quickly rebuilt his fortifications and invaded southern Dāghistān, whose free communities had asked for his assistance against the oppressive Russian rule. In a dramatic reversal of roles, Shāmīl invested several Russian fortresses, and was poised to achieve complete success if it had not been for the heroic stand of the small Russian garrison of Akhtī (Akhtī), which allowed the Russians to regroup and to repel Shāmīl’s levies. On the Čečen front, Shāmīl established a line of defence and deployed against the Russian troops his cherished regular infantry units built on the model of the Ottoman *nizām-i dīdīd* [q.v.]. The latter were soundly defeated on 11 March 1851 by Colonel Baryatinskiy, forcing Shāmīl to revert to guerilla tactics and thereby to relinquish any hope of defeating the Russian army in a pitched battle. Turning his attention to Dāghistān, Shāmīl sent his best military commander and lifelong rival Hādjīdjī Murād to Russian-controlled Kaytāk and Tabasarān in an attempt to rouse their “pacified” populations. This campaign yielded little result, but instead further aggravated the long-standing distrust between the *imām* and his chief lieutenant. Sentenced to death on Shāmīl’s instance, Hādjīdjī Murād defected to the Russians but was soon killed in an attempt to escape back to the mountains, relieving the *imām* of the onerous necessity to execute one of his commanders. In 1851-3, the hostilities, in which Shāmīl took part personally, were centred on Čečnyā with results generally favourable for the Russians. Throughout 1853, faced with the prospect of war with the Ottomans, the Russians were unable to capitalise on their earlier successes and diverted their attention and main forces to the Ottoman front, giving Shāmīl a much-needed respite, which he spent in his fortified headquarters at Vedān (Vedeno). Rumours about an impending Russo-Turkish conflict infused the *imām*

and his followers with determination to continue their struggle under the leadership of, and with help from, the Ottoman sultan. Shāmīl sent him several messages assuring him of the mountaineers' support and even promising to effect a junction with the Ottoman troops at Tiflis. Although somewhat offended by the tone of the sultan's replies, who treated the *imām* as his vassal, Shāmīl remained committed to the person whom he considered the supreme ruler of all Muslims. Before and during the war, he kept the Russians on their tiptoes by raiding the territories under their control. On 15 July 1854, the *imām's* forces led by his son Ghāzī Muḥammad swept in on the Alazān valley and Tsinandali, carrying off a rich booty and many prisoners, among whom were the grand-daughters of the late Kart'lo-Kakhet'i Tsar, George XII, the princesses Tchavtchvadze and Orbeliani. This raid, in which Shāmīl took no direct part, brought him great notoriety not only in Russia but in the West as well. On the positive side, he was able to exchange the princesses for his elder son Djamāl al-Dīn, surrendered to the Russians as a hostage during the desperate defence of Akhulgoh in 1839. In addition, he received a hefty ransom of 40,000 silver roubles. On the other hand, this episode proved to be extremely damaging to his reputation in Europe, where his treatment of the royal captives was perceived by many as an act of "a fanatic and a barbarian with whom it will be difficult for us, and even for the Porte, to entertain any credible or satisfactory relations." Offended by the insulting reprimands he received from the Ottomans and their European allies in the aftermath of this affair, Shāmīl relinquished any hope of obtaining their support in his struggle against the Russians. The result of the Crimean War, though by no means favourable to Russia, came as a shock to Shāmīl and his following, for they could now expect no Ottoman help and were left face-to-face with their formidable foe. The Russian command, on the other hand, could now focus its undivided attention on the Caucasus. In the spring of 1857, the Russians led by the newly-appointed viceroy of the Caucasus, Prince Baryatinskiy and several talented generals, started methodically to mop up Shāmīl's strongholds in Čečnyā. As a result, Shāmīl's power-base was drastically reduced, and the few Čečen warriors still loyal to him had to seek refuge in the mountains. The majority of the war-weary Čečens and many Dāghistānī communities abandoned him and submitted to Russian rule. Amidst the general despondency which overcame even his most committed followers, his pleas for help to the Ottomans, the British and the French were left without reply. With the rapid collapse of the mountaineers' resistance, the *imām* had no option but to retreat constantly in the face of a relentless Russian advance, abandoning one by one his fortified positions at New Darghiyya and Vedān. He made his last stand on top of Mt. Ghunīb surrounded by his family and 400 loyal *murīdūn*. In the face of inevitable destruction, he surrendered unconditionally to the Russians on 6 September (25 August Old Style) 1859.

In contrast to the earlier leaders of the anti-Russian *qīyah* in the Caucasus, e.g., Shaykh Maṣṣūr Ushurma and Ghāzī Muḥammad, Shāmīl received an unusually lenient treatment by the jubilant Tsar Alexander II and his subjects. With his "misdeeds" against the Russians all but forgotten, he was paraded through Moscow, St. Petersburg and many lesser Russian cities, repeatedly honoured by the Tsar, photographed, painted by artists, introduced to "high society", and praised in numerous books and articles. A "cultural hero" of sorts, he was everywhere greeted by admir-

ing crowds and an enthusiastic nobility. For many Russians, still reeling from the Crimean debacle, Shāmīl became an emblem for military and colonial victory which reaffirmed Russia's status as an enlightened, powerful and successful nation. Shāmīl, genuinely touched by the attention and hospitality accorded to him by his former foes, seems to have accepted his role and even volunteered to swear allegiance to the Tsar. He constantly marvelled at, and praised the technological and cultural achievements of Russian civilisation and wrote letters to his former supporters, urging them to stop their resistance and to recognise Russian sovereignty. Upon completing his triumphant tour of Russia, he was assigned to residence in Kaluga—a town about 120 miles south-west of Moscow. He lived there in a luxurious mansion with his two wives, three surviving sons, four daughters and their families. In 1866, he was permitted to move to Kiev and in 1869 his request to make a pilgrimage to Mecca was finally granted. En route, he visited the Ottoman sultan 'Abd al-'Azīz and the Egyptian *khudīw* Ismā'īl, both of whom gave him a cordial reception and showered him with gifts and money. He died and was buried in Medina in Dhu 'l-Hijja 1287/March 1871. Of his three surviving sons (Djamāl al-Dīn died three years after he had returned to his father from Russian captivity), the eldest, Ghāzī Muḥammad, entered the Ottoman service and fought against the Russians in the Russo-Ottoman war of 1877-8. He died in Mecca in 1903. Shāmīl's other son, Muḥammad Shāfi'ī, became a major-general in the Russian army and resided in Moscow and later in Kazan. His grandson by his youngest son Muḥammad Kāmīl, named Sa'īd Shāmīl, took an active part in the struggle for independence of Dāghistān from Soviet Russia in the 1920s.

#### *Shāmīl's state, army and administration*

The military-theocratic state in which Shāmīl was the supreme temporal and religious authority was geared to one overriding goal: uniting the mountaineers in their struggle against the "infidel" Russians and their local cohorts. Based on the institutions and precedents established by the first two *imāms* of Avāristān, Ghāzī Muḥammad and Ḥamza, the mountaineers' state grew much more complex and efficient under Shāmīl's able leadership. The dual title *imām* and *amīr al-mu'minīn*, which featured in his letters and decrees, accurately reflected his functions as the principal interpreter and enforcer of the *sharī'a* on the one hand, and as the political and military leader on the other. In addition, Shāmīl was his own legislator. His instructions and ordinances on matters not explicitly covered by the *sharī'a* formed the so-called *nizām*, an administrative and military code similar to, and possibly modelled on, the Ottoman *kānūn* [q.v.]. Finally, Shāmīl was also the chief justiciar and administrator of his state. In executing all these political, religious, legislative, administrative and judicial functions, Shāmīl was assisted by a privy council, a *diwān*, established around 1842. Stacked with his closest followers and confidants, the *diwān* was convened for emergency consultations, but also relieved him of routine decision-making on matters of minor significance. Executive and judicial power in the areas under Shāmīl's control rested with his deputies (*nā'ibs*), whose numbers grew from four in 1840 to about thirty in 1856. The *nā'ibs* were nominated personally by Shāmīl and were responsible for law and order, tax collection, and enforcement of verdicts passed by local *kuḍāt*. During military campaigns, they served as field commanders and were responsible to Shāmīl for fielding the required number of warriors and for general readiness for war.

The *nā'ib's* status varied according to the military importance of the area under his jurisdiction. In the late 1840s, Shāmil introduced the post of *mudīr*, i.e. the senior *nā'ib*, who, apart from running his own domain, supervised and coordinated the activities of lesser *nā'ibs* in neighbouring regions. Normally, the *nā'ib* led up to 500 warriors into battle. Both the *mudīrs* and the ordinary *nā'ibs* were closely watched by the *imām's* "secret agents" (*muhtasibs*), who were answerable directly to Shāmil and reported to him on the activities, especially misdeeds, of his lieutenants. The *nā'ibships* were divided into smaller units administered by the *nā'ib's* subordinates, the *dibīrs*, or *mā'zūms* (Russ. *mazun*). These officials, in turn, had under their command village elders, elected by their respective communities. To enforce the *imām's* orders, each *nā'ib* relied on a standing force of 20 to 50 (or occasionally up to 100) loyal guards called *nā'ib murīds* as opposed to *ṭarīka murīds*, who were considered "men of God" and normally did not participate in fighting. On the level of the *mā'zūm*, the *nā'ib murīds* were paralleled by the mounted "retainers" (*murtazika*), supported by their communities.

While the executive and administrative powers were vested in the *nā'ibs*, they were not allowed to interpret the *sharī'a* or dispense *sharī'i* justice. For this they had *muftīs* and *kudāt* attached to them. In addition, these religious officials, whom the sources generally describe as '*ulamā'*', were responsible for maintaining the mosques, leading the prayers, delivering the Friday sermons, and for implementing the *sharī'i* precepts in their *nā'ibships*. They also provided religious instruction, usually at the mosques, to the young. Being at least partially independent of their *nā'ibs*, the '*ulamā'*' provided a much-needed check on the broad discretionary power given to their temporal counterparts.

The core of Shāmil's army consisted of the *nā'ib murīds*, the career fighters who had sworn an oath of personal allegiance to the *imām* and his cause and regarded themselves as his personal disciples. Fearless and loyal, the *murīdūn* were, in a sense, "warrior monks" who were always ready for martyrdom "in the path of God" and provided example and leadership for the less organised and often lukewarm local levies. According to different calculations, they numbered 400 to 500 men, of which 120 served as Shāmil's personal bodyguards, while the others were assigned to his *nā'ibs* or sent on special missions. The *murīdūn* were supported directly from the treasury of the *imām* or his deputies. This small élite corps was supplemented by the regular cavalymen called *murtazika*. Under Shāmil's orders, every ten households in the territory under his control had to furnish one fully-equipped horseman, whose personal needs as well as those of his wife and children were provided for by the other nine families. The *murīdūn* and the *murtazika* constituted the backbone of Shāmil's army. The peasant irregulars who joined them during large-scale campaigns were poorly trained, far less reliable and therefore served primarily as auxiliaries. Finally, in imitation of the Ottoman *nizām-i djedid* [q.v.], Shāmil attempted to create a modern infantry corps, which, however, proved ineffectual and inferior to its Russian counterpart. In an attempt to achieve logistical independence, Shāmil established three gunpowder factories, which produced not only powder but mines, gunshells, and bombs. Shāmil's army also manufactured its own cannon, albeit of a rather low quality, to supplement the Russian artillery captured on the battlefield. Shāmil's regular troops donned special uniforms and were awarded special marks of distinction for courage. Cowards and deserters, on the other hand, were

obliged to wear "marks of disgrace" until they "erased" them by military feats or loyal service.

To sustain this complex administrative and military machinery, Shāmil collected from his subjects a *zakāt* of approximately 5% to 7% in money and kind. In anticipation of a military campaign, an extraordinary tax in kind could be imposed on specific communities to meet the needs of the army on the march. Another source of state income was one-fifth of war booty, sometimes quite substantial, which under the *sharī'a* was set aside for the ruler. All fines, popularly known as *bayt al-māl*, along with escheatable or forfeited property went to Shāmil's treasury. The same holds true for the income derived from *awḳāf*. The lion's share of the income was spent on the military, on the upkeep of '*ulamā'*' and mosques as well as on the support of Muslim emigrants who had fled from territories under Russian control (*muḥājirūn*) and settled in Shāmil's *sharī'i* state.

#### Shāmil and "Myuridism"

The issue of whether or not Shāmil's *ghazawāt* were related to, or motivated by, his Šūfī background has not yet found a satisfactory solution. As mentioned, Shāmil, like the other *imāms* of Dāghistān Ghāzī Muḥammad and Hamza(t) Bek, sought to establish a theocratic state that would unite the anarchic Caucasian mountaineers against the common enemy, the Russian Empire. Apart from being military leaders and religious reformers, all three *imāms* were also affiliated with the Khālidi branch of the Naqshbandiyya [q.v.]. Their initiatic line stretched back to the Kurdish Shaykh Diyā' al-Dīn Khālīd al-Shahrāzūrī (d. 1243/1827), who, in turn, belonged to the influential Muḍjaddidī subdivision of the Naqshbandiyya *ṭarīka*, founded by the Indian Shaykh Aḥmad Sirhindī (d. 1034/1624 [q.v.]). One of Khālīd's disciples, Shaykh Ismā'il al-Kūrdumīrī, propagated his teaching in the Khānate of Shīrwān [q.v.] in the late 1810s. His local deputy Shaykh Khāṣṣ Muḥammad al-Shīrwānī introduced the Khālidi *ṭarīka* into Dāghistān, where it found an enthusiastic following. Around 1823, his *khālifa* [q.v., section III] Muḥammad al-Yarāghī (Mulla Magomet) called on Dāghistānī Muslims to observe the *sunna* and the *sharī'a* strictly, to avoid *bid'a* (i.e. the '*ādāt*'), to fight against the enemies of Islam, and, if defeated, to emigrate to Islamic lands. All these precepts were in full accord with the central tenets of the Khālidiyya, although it is not clear whether or not Muḥammad al-Yarāghī actually called his audience to *djihād* against the Russians. Plainly, his chief concern was to extirpate the "un-Islamic" customs and beliefs of the mountaineers and to replace them with the *sharī'a*. Paradoxically, it was not the militant Muḥammad al-Yarāghī, but his reclusive disciple, Sayyid Djamāl al-Dīn, who initiated Ghāzī Muḥammad and young Shāmil into the Naqshbandiyya-Khālidiyya (Hamza Bek was a disciple of Ghāzī Muḥammad). Shāmil's emphasis on meticulous adherence to the *sharī'a*, his open hostility toward "the cursed Christians and the despicable Persians [i.e. the Šar'a of Iran]," his political activism and unswerving loyalty to the Ottoman sultan, seem to be in line with the Khālidi teaching as expounded by its founder and his Turkish followers. Yet, as Sayyid Djamāl al-Dīn's opposition to *ghazawāt* and insistence on inward self-perfection well shows, Shāmil's interpretation of the Khālidi tenets was not the only possible one. In the early stages of his career, Shāmil acted primarily as a religious reformer, first under Ghāzī Muḥammad, then in his own right, intent on making the *sharī'a* the only legal and moral code. His reformist activities inevitably set him on a collision course with the conservative Avār

nobility and, eventually, with the Russians, who, not unlike the contemporary French colonial administrators of Algeria, gave precedence to customary law over the *shari'a*, deeming it to be more "manageable." Hence the Russians were suspicious of the Dāghistānī *'ulamā'* and were unwilling to accommodate them, relying instead on the corrupt and discredited nobility. The inflexibility of the Russian colonial officials was further aggravated by the Russian political and economic expansion in the Caucasus, which disrupted the traditional life-style and economy of the region, bringing about dislocation, and concomitant resentment, among the mountaineers. Under these circumstances, the *shari'*-oriented, sober tenets of the Nakshbandiyya-Khālidiyya, combined with the viable institutional structure of *ṭarīqa* Sūfism, provided a compelling solution to the mountaineers' problems. Although formally he was neither head of a *ṭarīqa* nor even the supreme Sūfī master of Dāghistān (both titles were better applicable to Sayyid Djamāl al-Dīn, whose ascendancy in Sūfī matters the *imām* humbly acknowledged), Shāmīl commanded the practically unconditional loyalty of his followers, the most devoted of whom viewed him as their personal *murshid* [q.v.]. In a sense, Shāmīl's whole state was an extended *ṭarīqa*, complete with such trappings of a Sūfī community as the collective *dhikr* [q.v.] chanted by his *murīdūn* on the move and in battle, the periodical *khawās* [q.v.] practiced by the *imām* and his disciples, the miracles (*karāmāt* [q.v.]) ascribed to him by the followers, the supererogatory prayers (up to 20 times a day, according to some testimonies) he assigned to the *murīdūn*, the constant spiritual link (*rābi'a* [q.v.]) which Shāmīl maintained with his closest disciples, and, finally, his communications with the spirit of the Prophet to solicit the latter's advice. All this, however, is true only of Shāmīl's retinue in Darghiyya and Vedān. Outside this immediate circle of followers, and for the overwhelming majority of his subjects, Shāmīl was a venerated, and often fearsome, sovereign and military leader who ruled with an iron fist over a host of diverse and recalcitrant tribal communities, traditionally opposed to any state control. It is in his ability to weld the mountaineers together for a common goal, rather than in his activities as a Sūfī master (for which he had little time anyway) that one should look for his major achievement. Therefore, the Russian and Western historians who described Shāmīl's movement as "myuridism" were to some extent justified in setting it apart from ordinary Sūfism. In many respects, his *ghazawāt* bear striking resemblance to the other contemporary Sūfī-based movements, notably the Kādīriyya [q.v.] of Algeria and Sudan and the Sanūsiyya [q.v.] of Cyrenaica. For each of these movements, Sūfism provided a handy organisational vehicle, rather than their true motivation, which should be sought elsewhere.

#### Shāmīl's legacy

Already in his lifetime, Shāmīl became a great media event, which generated a vast corpus of scholarly discourse and Romantic literature. From 1854 to 1859, 38 full-size books (not to mention innumerable articles, poems and news accounts) dealing with Shāmīl were published in the West alone. In Russia, the volume of writings on Shāmīl and his movement was, of course, much greater. In line with the fashion of the day, this literature depicted Shāmīl as a "noble savage" and a typical hero of European Romanticism. As time went on, the public interest in him began to subside, giving way to a more balanced academic evaluation of his personality and of the Caucasian wars as a whole. During the Soviet period, Shāmīl once again

became an object of intense study and of heated debate over the nature of his movement. In accordance with the Marxian concept of class struggle, the Soviet historians of the 1920s and 1930s portrayed him as a hero of revolutionary struggle, a fearless fighter against the colonisation of the Caucasus by Tsarist Russia. In the 1950s, however, the Communist Party of the Soviet Union launched a campaign against so-called "bourgeois-nationalism", as a result of which Shāmīl's role underwent a radical revision. In a remarkable *volte-face*, Soviet historians condemned him as the leader of a "reactionary and nationalistic movement in the service of English capitalism and the Turkish sultan." They argued that by fighting against the Russians, Shāmīl became a hindrance to progress, in so far as the incorporation of the "backward" and "feudal" Caucasus into a technologically-advanced Russian Empire was an "objective historical necessity" and the only way to develop its culture and economy. The debate over Shāmīl's role reached its peak in 1956-7, whereupon it was forcibly suppressed by the official condemnation of the *imām* as a thoroughgoing reactionary and a religious fanatic. The official viewpoint, however, was not to everyone's liking, and a covert campaign to rehabilitate Shāmīl, spearheaded by some Dāghistānī scholars, continued for several decades. With the advent of *perestroika* and *glasnost* in 1986, Shāmīl's contribution to the history of the Caucasus was again drastically revised. Today, Shāmīl is totally rehabilitated and is celebrated by most of the Dāghistānīs and the Čečens as their greatest national hero. Symbols and slogans associated with the *imām*'s resistance to the Russian domination took on a new life during the Russo-Čečen conflict of 1994-5, when they were appropriated and re-defined by the supporters of President Džohar (Djavar) Dudayev.

**Bibliography:** For Shāmīl's own view of himself and his movement, see A. Runovskiy, *Zapiski o Shamile*, St. Petersburg 1860, repr. Moscow 1989. His biography, written in Arabic by his son-in-law, was published as *Khronika Mukhammeda Takhira al-Karakhi o dagestanskikh voynakh v period Shamila*, ed. A.M. Barabanov under the general editorship of I.Yu. Kračkovskiy, Moscow and Leningrad 1946 (a Russian translation of this work with the same title was published in Moscow and Leningrad in 1941); cf. Kračkovskiy, *Izbrannye sočineniya*, vi, Moscow and Leningrad 1960, 551-622. Many of Shāmīl's letters and rescripts were edited by A. Runovskiy in *Voenniy Sbornik* (St. Petersburg), ii (1862), 327-86, and in *Russkiy Vestnik* (St. Petersburg), xii (1862), 642-85. The most comprehensive collection of historical documents related to Shāmīl and his movement is *Dviženie gortsev severo-vostochnogo Kavkaza v 20-50kh gg. XIX veka: Sbornik dokumentov*, Makhāčkala 1959; cf. also the editions of Shāmīl's letters and his *nizām* by R. Sharafutdinova in *Pis'mennye pamyatniki Vostoka* (Moscow), iii (1970), iv (1971); v (1972), viii (1975).

A helpful list of studies on Shāmīl is M. Gammer, *Shamil and the Murid movement, 1830-1859. An attempt at a comprehensive bibliography*, in *Central Asian Survey* (London), x/1-2 (1991), 189-247; see also idem, *Shamil in Soviet historiography*, in *MEJ*, xxviii/4 (Oct. 1992), 729-77, and *Narodno-osvoboditel'noe dvizhenie gortsev Dagestana i Čečeni v 20-50kh godakh XIX v. Vsesoyuznaya nauchnaya Konferentsiya*, Makhāčkala 1989. For Shāmīl's literary image in 19th-century Russia and the West, see T.M. Barret, *The remaking of the Lion of Dagestan*, in *The Russian Review* (Ohio), liii/3 (July 1994), 353-6.

For Shāmīl's predecessors at the head of the anti-Russian struggle in the Caucasus, see: A. Benningsen,

*Un mouvement populaire au Caucase au XVIII<sup>e</sup> siècle*, in *Cahiers du Monde Russe et Soviétique* (Paris), v/2 (April-June 1964), 159-205; M. Gammer, *The beginnings of the Naqshbandiyya in Dagestan and the Russian conquest of the Caucasus*, in *WI*, xxxiv (1994), 204-17.

Of the general histories of Shāmīl's movement, J. Baddeley's *The Russian conquest of the Caucasus*, London 1908, and F. Bodenstedt's *Die Völker des Kaukasus und ihre Freiheitskämpfe gegen die Russen*, Frankfurt 1848, remain standard works in the field, at least as far as the military operations are concerned. A typical Soviet view of Shāmīl's *ghaza-wāt*, based on 19th-century Russian sources, is given in N.A. Smirnov, *Myuridizm na Kavkaze*, Moscow 1961, cf. A. Yandarov, *Sufizm i ideologiya natsional'no-osvoboditel'nogo dvizheniya*, Alma-Ata 1975. An illuminating, if somewhat idealised account of Shāmīl and his movement, which was extensively used in the present article, is M. Gammer, *Muslim resistance to the Tsar. Shamīl and the conquest of Chechnia and Dagestan*, London 1994. See also ČEČENS, AL-KABK, and DAGESTĀN.

(A. KNYSH)  
**SHAMMĀ'** (A.), candlemaker (synonymous with *sham'i*). The usage of the latter term as a *nisha* is illustrated by al-Sam'ānī citing names of some candlemakers who were also counted among transmitters of Traditions during the 4th/10th and 5th/11th centuries. The early *hisba* manuals did not include a chapter on the candlemakers, who were only briefly cited by Ibn al-Ukhuwwa (d. 729/1329 [q.v.]). He noted the dishonest practice of the *shammā'ūn*, who mixed beeswax with vegetable oil and other substances, thereby lowering the quality of their product.

While discussing the *shammā'*, some Arab writers bring forth two names among the *Ṣahāba*, namely, 'Uthmān (b. 'Affān) and Tamīm al-Dārī, the former in connection with candlemakers and the latter as the pioneer who brought a lamp (*kandīl*) from Syria and lighted it in the Prophet's mosque in Medina during the life of Muḥammad. This is cited as the origin of the practice of lighting lamps and candles in mosques since early Islamic history. Legends aside, the Umayyad caliph al-Walīd II (125-6/741-2) was credited with using candle illumination at the Umayyad court of Damascus. The common people of the 'Abbāsīd period used oil lamps (*kindīl*), while the rich and powerful could afford expensive candles. Al-Ma'mūn (d. 218/833) spent a lot of money on candle illumination during his marriage with Būrān bt. al-Ḥasan b. Sahl, and al-Mutawakkil (d. 247/861) spent a fabulous sum of 1.2 million *dirhams* for candles in royal palaces *per annum*. During the 'Abbāsīd and Fāṭimid periods, candles were made mainly from beeswax, which was sometimes imported from long distances, e.g. from Tunis to Egypt.

There were guilds of candlemakers in the Ṣafawīd capital city of Iṣfahān in the 10th/16th and 11th/17th centuries. The members of the guild of candlemakers (*shammā'i* in Persian), were classified as workers of low position in society, comparable to the lowly status of barbers, bath-keepers, fortune-tellers, bricklayers, corpse-washers, porters, muleteers and so forth. Nevertheless, a modern *shammā'* of North Africa attained upward social mobility by writing a history of the Ḥafṣīd dynasty (cf. Shaykh Abu 'l-'Abbās al-Shammā', *al-Adillat al-bayyina al-nūrāniyya 'alā maṣākhīr al-dawla al-Ḥafṣiyya*, Tunis 1327/1909). The candlemakers' work was in high demand in early modern Syria, where it was customary to light candles in marriage ceremonies by all strata of people: a candle used to cost 2 *liras* in early 20th-century Syria.

**AL-SHAMMĀKH** b. ʿĪRĀR, true name Ma'kīl b. ʿĪrār, of the Tha'laba b. Sa'd of the Banū Dhubyān (Ghaṭafān), a *muḥaddram* poet and, according to some sources, a Companion after his conversion in 9/630 (Ibn 'Abd al-Barr, *Isṭāb*, i, 324; *Aghānī*, viii, 98; *Iṣāba*, iii, 210). This information is to be treated with caution: according to Ibn Sayyid al-Nās [q.v.], the author of a work on the poets of the Prophet, it was his brother al-Muzarrīd who met him and composed a poem in his honour (*Minah al-midah*, Damascus 1407/1987, 310-11). Al-Shammākh must have been too young at this time.

Reliable information concerning him is extremely sparse; details relating to him have been inextricably mingled with those relating to his older brother al-Muzarrīd b. ʿĪrār. He was allegedly ugly, one-eyed (al-Safādī, *al-Shu'ūr bi 'l-'ūr*, 206; al-Baghdādī, *Khizāna*, ed. Hārūn, iv, 257), ruddy and of small stature. Certain traditions have associated his unprepossessing appearance with his misogynistic tendencies (al-Balādhurī, *Ansāb al-aṣhrāf*, ms. fols. 1090b-1091a), the traces of which, clearly visible, survive in his poetry (*Dīwān*, 104-8, 219-23, 287-95).

After the death of the Prophet, he took part in the battle of al-Qādisiyya (al-Tabarī, i, 2232, 2292), in the conquest of Armenia (*ibid.*, i, 2667) and in that of Āḍharbaydjān (al-Balādhurī, *Futūḥ*, 329, *idem*, *Ansāb*, fol. 1090b). It is today generally accepted that he was martyred in Mūkān ca. 30/650 (al-Hādī, 157). However, al-Balādhurī (*Ansāb*, fol. 1090b) insists that he was not involved in that episode (*wa-lam yaḥḍur Mūkānā*); he mentions a lament which he is said to have composed for the occasion. It is therefore appropriate to place his death at a later date.

Al-Shammākh belonged to a family of poets. His brothers al-Muzarrīd and ʿĪjaz' practised the art of the *nazm*; under the name of the former a *dīwān* has survived in a recension by Ibn al-Sikkīt (publ. Baghdād 1962); as regards ʿĪjaz', al-Djumaḥī attributes to him a dirge composed after the assassination of 'Umar b. al-Khaṭṭāb (*Tabakāt*, 133; Abū Tammām, *Hamāsa*, i, 453-4). Similarly, the two sons of al-Muzarrīd, Ḥasan and Kuthayyir (al-Hādī, 89), and the son of ʿĪjaz', Djabbār, were poets; the latter composed a lament on the death of al-Shammākh. Our poet owes his cognomen "the Proud", to the superb quality of his poems (Sāmī Makkī al-'Anī, *Mu'djam al-kāb al-shu'arā'*, Baghdād 1971, 127). Examination of his verses confirms this beyond doubt; first of all, the most eminent transmitters discussed them in their *maḥlis*; among those who collected his written poems were Ibn Ḥabīb in the 2nd/8th century (Yāqūt, *Udaba'*, xviii, 116-17) and al-Sukkarī a century later (Yāqūt, viii, 98; Ibn al-Nadīm, *al-Fihrist*, Cairo n.d., 230). For his part, al-Djumaḥī places him in the third category of the *fuhūl* alongside al-Nābigha al-Dja'dī and Abū Dhū'ayb (*Tabakāt*, 123). In more specifically literary terms, numerous critics have expressed admiration for his treatment of poetic themes (Ibn Kutayba, *Shu'arā'*,

al-Djawālikī, *Sharḥ adab al-kātib*, 328, 372).

From a thematic point of view, the poetry of al-Shammākh is unconcerned with the tribal aspect; similarly, total silence surrounds his participation in the great conquests of nascent Islam. The poetry of circumstance, the principal concern of pre-Islamic poetry, does not seem to have tempted him unduly. He takes pleasure, on the contrary, in more genuinely artistic composition, in the description of animals, which he pursues to a degree that has seldom been equalled. In the sections relating to camels, whilst comparing his camel to a wild ass, he develops an episode combining description with narration; the wild ass, after a joyous period in which he indulges in amorous frolics, is killed as a result of thirst. He leads his entire herd to the water, where a well-armed hunter waits, accompanied by hunting dogs. Within this context, the poet innovates. According to him, the animal sees himself as endowed with sentiments such as jealousy, the preoccupation of the male responsible for a whole herd and terror in the face of imminent death; the hunter, the dogs and the natural order are presented here in prominent relief (*Dīwān*, i, ii, vi, vii, viii, x, xi, xii, xvi, xviii, *mulhak*, iv, xxiii, xxiv, xxxiv). In this connection, the *zā'iyā* (*Dīwān*, 173-202) merits special mention; in this poem of 56 verses, the poet relates the episode of the bow. In a broad expanse of 20 verses, he evokes at length the process of its fabrication and the birth of an emotional correspondence between the craftsman and his work; the Bedouin is attached to his creation and refuses to be parted from it. Tempted by a buyer, he sells his bow, but deep regrets beset him. Such human resonances are rarely attested in the poetry of the period. Ancient critics aware of it (Ibn Kutayba, *Shu'arā'*, 178; al-Shimshātī, *al-Anwār wa-mahāsin al-ash'ār*, Baghdad 1987, 30). Modern scholars speak of it as a masterpiece (Bräu, *Die Bogen-Qasidah von al-Sammākh*, in *WKZM*, xxxi (1926), 174-95; Mahmūd Shākīr, *Kawṣ al-Shammākh* or *al-Kawṣ al-adhrā'*, in *al-Kutāb*, xi [1952], 151-78; al-Hādī, 195-201; Yahyā al-Djubbūrī, *al-Furūsiyya fi 'l-shi'r al-djāhili*, Baghdad 1384, 169, 184-5).

A second aspect of his poetic talent deserves to be stressed. Al-Shammākh seems to have been an excellent composer of *raḡaz*; his *Dīwān* contains 9 *urḡūzas* (section on *arāḡiz al-dīwān*, 353-422), in some of which he is indebted to Khayr b. Ẹjaz', Ẹjundub and al-Ẹjulayh. The poet submits this poetic form to a new treatment, which recalls that reserved for the *kaṣida*, with an opening *nasīb* based on the memory and the episode of the savage bull (Ullmann, 27).

However, the poetic language of al-Shammākh is discouraging: his language, suffused with archaisms and rare terms and remains difficult of access (al-Ẹjāhiz, *Bayān*, ed. Hārūn, iii, 251). As early as the 2nd/8th century, al-Ẹjumāhī was stressing the stiffness of his style (*kaṣāza*) and his extremely vigorous language (*shadīd mutūn al-shi'r*), implying that it was complex. It is for this reason that his poetry is considerably more difficult than that of Labīd (*Ṭabaḡāt*, 132; Ibn Sayyid al-Nās, *op. cit.*, 234-5), which is itself extremely complicated. Modern research has been concerned with giving him the status that he deserves; his rehabilitation, instigated by Blachère, seems today to be progressing successfully, and Thomas Bauer considers him one of the best representatives of classical poetry (Bauer, 259, esp. 273).

(A. ARAZI)

**SHAMMĀKHA**, *Shammākhī*, *Shammākhīyya*, the mediaeval Islamic names for a town in the former region of Shīrwān in eastern Caucasia, from ca. the 4th/10th century capital of the local Yazidī dynasty of Shīrwān Shāhs, by whom it was temporarily re-named Yazidīyya. For its pre-modern role and then for its post-1917 one, first within the Azerbaijan Republic of the former Soviet Union and now in the independent Republic of Azerbaijan, under its present name of Shemakha, see SHIRWĀN and SHIRWĀN SHĀHS.

(Ed.)

**AL-SHAMMĀKHĪ AL-İFRANĪ**, the name of two Ibādī [see IBĀḡIYYA] scholars and jurisconsults from the Ẹjabal Nafūsa [q.v.] in Tripolitania.

1. Abū 'L-'ABBĀS AHMAD B. ABĪ 'UTHMĀN SA'ĪD B. 'Abd al-Wāḡid, especially famed as a biographer, died in Ẹjumādā 928/April-May 1522 in one of the villages of the oasis of the Ifren of the Ẹjabal Nafūsa, in Tripolitania. Among his pupils was Abū Yahyā Zakariyyā' b. Ibrāḡīm al-Hawwārī.

He was the author of the following works: 1. A commentary on the *'Akīda*, a short treatise on theology by Abū Ḥafṣ 'Umar b. Ẹjamī' al-Nafūṣī; 2. A commentary on his synopsis of the *K. al-'Adl wa 'l-inṣāf* on the sources of law by Abū Ya'qūb Yūsuf b. Ibrāḡīm al-Sadrātī; 3. *K. al-Siyar*, a biographical collection, spiced with anecdotes and a few historical events, of the principal Ibādī personages. A few extracts translated into French have been published by E. Masqueray in his *Chronique d'Abou Zakaria*, Algiers 1879, 325 ff.; the Arabic text was lithographed at Cairo in 1301/1884.

**Bibliography:** A.C. de Motylinski, *Bibliographie du Mzab*, in *Bull. de Correspond. afric.* (1885), i, ii, 47-70; idem, *Le Djebel Nefousa*, Paris 1899, 90, n. 1; Shammākhī, *K. al-Siyar*, 562; Abū Ishāḡ Ibrāḡīm al-Yūsuf Atfiyash al-Ẹjazā'irī, *al-ḡāya ilā ṣabīl al-mu'minīn*, Cairo 1342/1923, 28, n. 1; T. Lewicki, *Une chronique Ibādite "Kutāb as-Siyar" d'Abū 'L-'Abbās Ahmad aṣ-Sammākhī, avec quelques remarques sur l'origine et l'histoire de la famille des Sammākhīs*, in *REI*, viii (1934),

59-78; Brockelmann; II<sup>2</sup>, 312, S II, 339; Ziriklī, *Al-lām*<sup>2</sup>, i, 126.

2. ABŪ SĀKIN 'ĀMIR b. 'ALĪ b. 'Āmir b. Isfāw, d. at an advanced age in 792/1390 in one of the villages of the Ifren in the *Djabal Nafūsa*.

After studying with Abū Mūsā 'Isā b. 'Isā al-Shammākhī, he attached himself to Abū 'Azīz b. Ibrāhīm b. Abī Yahyā. On the conclusion of his studies he settled at Metiwen, where he devoted himself to teaching for thirteen years. He then settled in the oasis of Ifren in 756/1355. His pupils were his son Abū 'Imrān Mūsā, his grandson Sulaymān, Abū 'l-Kāsim b. Ibrāhīm al-Barrādī, Abū Ya'qūb Yūsuf b. Miṣbāh, etc.

He composed the following works: 1. a *Dīwān*, which remained unfinished, in four great volumes but which has become the fundamental lawbook of the people of the *Djabal Nafūsa*; 2. *al-Akīda*, a theological treatise dedicated to Nūḥ b. Ḥāzim; 3. *al-Kaṣīda fī 'l-azmīna*.

**SHAMMAR**, a nomadic tribal confederation currently found in Saudi Arabia, Syria and 'Irāk. Their oral tradition states that they are Yemenis of *Ḳaṣṭānī* origin. Their myth of descent links their ancestry to Shimmār Ibn al-'Amluḳ, a Yemeni king of ancient times. The date of their migration northward is not clear. Neither historical sources nor their oral tradition provides accurate documentation concerning their migration to *Djabal Shammar*, previously known as *Djabalā Tayyi'*. Their oral narratives claim that they established themselves in *Djabal Shammar* in the 16th century after pushing away a local leader by the name of Bahidj.

While the majority of the tribe remained in *Djabal Shammar*, some sections migrated to the area between the Tigris and Euphrates in the 18th century in search of pasture and under pressure from local tribes such as the 'Anaza and the Su'ūdī dynasty. These sections are referred to as northern Shammar or Shammar of Mesopotamia. They consist of a number of tribal lineages the most known of which are the *Djarba*, *Toḳah* and *Zakarit*. In Mesopotamia, the Shammar combined pastoral nomadism with agriculture. Some became *Shr'i* under the influence of the *Shr'i* communities of the region, especially in 'Irāk. The tribe developed a history distinct from their brothers in the south.

Those who remained in *Djabal Shammar* are known as southern Shammar. This group attracted the attention of a number of 19th-century European travellers among whom are Wallin, Doughty, Blunt, and Guarnani. In the 20th century, the accounts of Musil and Montagne are prominent. One of the reasons behind their preoccupation with the Shammar stemmed from the fact that this nomadic tribe was at the height of its power, as it succeeded in establishing a centralised authority over most of central Arabia.

Estimates of their number vary in the 19th and early 20th centuries. The *Handbook of Arabia* gives a figure of 4,000 tents and a total of 150,000-200,000 individuals. This excludes those who were settled in the oases of *Djabal Shammar*, *Hā'il*, *Muḳak*, *Sab'an*, *Mustajjida*, *Ghazala* and *Rawḍa*, estimated by Montagne at 20,000 individuals.

The southern Shammar are divided into four tribal sections; 'Abda, *Sindjāra*, *Aslam* and *Tūmān*. In the 19th century, the 'Abda assumed leadership of the whole tribe. Unlike other nomadic tribes in the area,

the Shammar combined their nomadism with control over an oasis settlement, *Hā'il* [*q.v.*]. From there, their chiefs, the *Al Rashīd* [*q.v.*], expanded into al-*Qasīm* and southern *Nadjd*. Musil claimed that *Rashīdī* expansion reached the borders of Aleppo, Damascus, Baṣra, 'Umān and 'Asīr by the end of the last century. However, their power base remained strongest in *Djabal Shammar* and the Great *Nafūd*, the core of their tribal *dīra*.

The Shammar dynasty developed a complex political organisation. The *Rashīdī amīrs*, resident in *Hā'il*, co-existed with the Shammar *shaykhs* who were drawn from the chiefly families of the tribal sections. The latter participated in the *amīrs'* raids in return for a share of the booty. They attended the *maḡlis* in *Hā'il* where they regularly received gifts and subsidies from the *Rashīdī amīrs*. These subsidies, together with a network of marriages with the oasis *amīrs* ensured interdependence and loyalty at least until the beginning of the 20th century.

The Shammar dynasty rested on a multi-resource economy. The Shammar pastoral economy was supplemented by control over trade and pilgrimage caravans. Their tribal territory included important trade routes which linked Mesopotamia and the Gulf ports to the holy cities of the *Hidjāz*. *Wahhābī* fanaticism in the 18th and 19th centuries led to the diversion of trade routes in favour of *Hā'il*, which was then outside their control. Trading and pilgrim caravans were usually accompanied by a caravan leader and a group of armed men who were responsible for its security, and this leader was appointed by the *Hā'il amīr* who expected him to levy a toll from the caravan after keeping a sum for himself. In return for this toll, the *Hā'il amīrs* guaranteed the safety of merchants and pilgrims, especially *Shr'i*s from Persia and 'Irāk, regarded as heretics by the *Wahhābī* Su'ūdī dynasty in southern *Nadjd*. Taxes levied from these sources ensured a surplus in the hands of the *amīrs*, and *Hā'il* developed into an important transit station where traders, craftsmen and agriculturalists coexisted and flourished.

Its prosperity was maintained as a result of an extended period of peace and security. The *amīrs* were able to raise a "police force", drawn from among their slaves and the sedentary population, mainly the *Banū Tamīm* of *Hā'il*, in charge of keeping order in the oasis. Also an army consisting of a mixture of tribal people, mercenaries, sedentary groups and, above all, slaves was often sent to distant areas to pacify any rebellious Bedouin and enforce *Rashīdī* hegemony in other oases and towns.

Towards the end of the 19th century, *Rashīdī* expansion led to the collapse of Su'ūdī domination in al-Riyāḍ, and for a brief period the *Rashīdīs* under the banner of Muḥammad Ibn *Rashīd* became the undisputed rulers of central Arabia. The Ottoman empire recognised them there and maintained good relations with them through the *wālī* of Baṣra. They supplied the *amīrs* with irregular subsidies and weapons to cement a fragile alliance which cost the Shammar nothing but a vague recognition of nominal Ottoman suzerainty, manifested in the mentioning of the sultan's name during the Friday prayers in *Hā'il*. This alliance eventually led to the collapse of their dynasty with the defeat of the Ottoman empire in the First World War.

*Rashīdī* supremacy in Arabia began to be eroded with the return of Ibn Su'ūd from his exile in Kuwait in 1902 to recapture his ancestral capital from the *Rashīdīs*. Having secured the support of Britain during the First World War, he drove them out of *Hā'il* in

1921, thus putting an end to their leadership and role in Arabian politics. The Rashīdī ruling group was taken hostage to his capital, al-Riyāḍ, where some members of the family are still resident. Ibn Suʿūd confiscated their belongings and prohibited them from returning to their land, and through a series of marriages with Rashīdī and Shammārī women, incorporated them into his wide network of affinities.

After a series of fierce battles, some Shammār sections refused to become subjects of Ibn Suʿūd, but fled to Mesopotamia to join their tribal brothers in the north at a time when Britain was establishing a protectorate in Iraq. The latter, being on good terms with Ibn Suʿūd, guaranteed that the Shammār remained there without being able to launch a counter-attack on him. However, the majority of the Shammār were pacified and reluctantly accepted the loss of their supremacy in Arabia, with some of them adopting Wahhābism and accepting settlement among the *ḥijāz* [q.v.] of the *Ikhwān*.

With the establishment of the Suʿūdī state, the Shammār lost their tribal autonomy and, above all, their exclusive rights to pasture and water in their traditional tribal *dira*. In 1925, Ibn Suʿūd abolished tribal territories, which became the property of the state. Later, in 1968, the Land Redistribution Act allocated special areas to particular tribes and *shaykhly* lineages within each tribe. These measures widened economic differentiation within groups and altered the nature of available resources. Forced sedentarisation was imposed on the Shammār, with the aim of confining them to special areas where they could be closely controlled and, above all, their independence and *ʿasabiyya* eroded. The history of enmity between the Shammār and the Suʿūdīs precludes the former from taking advantage of the new economic opportunities created by the state, such as employment in the National Guard, a para-military organisation consisting mainly of tribal peoples, and endowed with the function of protecting the Suʿūdī royal family.

(M. AL-RASHEED)

**SHAMS** (A.), the sun (f.).

1. In Pre-Islamic Arab lore.

This was a divinity worshipped in the Semitic world, especially in Assyria-Babylonia (cf. its attributes in K. Tallqvist, *Akkadische Götterepitheta*, Helsinki 1938, 453 ff.) and in South Arabia, where the plurals *shams* (for *shumūs*) given by Yāqūt (ed. Beirut, iii, 362) for this *šanam* or idol, *ʿshms* and the dual *shmsy* (G. Ryckmans, *Les noms propres sud-sémitiques*, Louvain 1934-5, i, 33; A. Jamme, *Le panthéon sud-arabe préislamique d'après les sources épigraphiques*, in *Muséon*, lx [1947], 101 ff.)

denote the titular divinities of a certain individual or ethnic group or clan or territory. For Yāqūt, it was "an idol of the Banū Tamīm; it had a sanctuary and was worshipped by all the sections of the Banū Udd (sc. the grandfather of Tamīm), sc. Dabba, Taym, Adī, Thawr and Ukl. Its custodians (*sādins* [q.v.]) were the Banū Aws b. Mukhāshin ... It was destroyed by Hind b. Abī Hāla and Sufyān b. Usayyid ...".

But this idol is not mentioned in Ibn al-Kalbī's *Book of Idols*, although the *TʿA*, citing the *Āmūs*, states the contrary, saying "It was an ancient idol mentioned by Ibn al-Kalbī". It is very likely that this deity did not belong in the pantheon of Central Arabia and that mention of it, rare in the sources, is just a contamination from its cult by the South Arabs. This seems especially likely in that the theophoric name 'Abd Shams, only known in a section of Quraysh (*TʿA*, iv, 172 ll. 32-3), is found in the Tamīm in the syncopated form 'Abshams (*ibid.*, 173 l. 1), which is attested in Sabaeen (Ryckmans, *op. cit.*, i, 241). The same applies to the theophoric name 'Abd al-Shārik, known amongst the Djuhayna, which Arab authors render by 'Abd al-Shams, giving to al-Shārik, recognised as the name of an idol, the sense of *karn al-shams* "the rising sun" (al-Tibrīzī, in *Hamāsa*, 218; Ibn Durayd, cited in *TʿA*, vi, 392 ll. 26 ff.).

Moreover, the Qurʾān attributes the cult of the Sun to Saba' (XXVII, 24), whilst it attributes the cult of Venus, the Moon and the Sun to Mesopotamia, the homeland of Abraham (VI, 74, cf. XXXVII, 86). The exhortation, only found occasionally (XLVII, 37), not to worship the Sun and Moon, two signs created by God, is certainly an allusion to these two instances. "For nowhere in Qurʾānic polemics is there any emphasis on the stellar cult" (Fahd, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 151).

Theophoric names including the element *Shams* are numerous amongst the Greek inscriptions of the Hawrān (see D. Sourdel, *Les cultes du Hawrān à l'époque romaine*, Paris 1952, 53 ff.), showing that the Arabs who had migrated northwards had come under the Hellenistic cult of Helios, which Strabo makes the main deity of the Nabataeans (see his *Geographica*, ed. C. Müller, 784; Wellhausen, *Reste*<sup>2</sup>, 60-1; Sourdel, *op. cit.*, 53 n. 1).

For the interpretation of the term al-Ilāha "the goddess" (applied in certain sources to the Sun), mentioned in an elegy pronounced by Āmina bt. 'Utayba ca. A.D. 621 on her father fallen in battle at the Yawm Khaww, between the Banū Asad and the Yarbū' (*TʿA*, ix, 375), cf. Fahd, *op. cit.*, 152-3.

**Bibliography:** This article is essentially based on Fahd, *Le panthéon*, 150-3.

(T. FAHD)

2. In astronomy.

In the Aristotelian view accepted by most Muslim astronomers, the sun was a ball-shaped solid body (according to early doctrines made of fire), which moved around the earth in the solar sphere. This sphere was made of crystalline or ether and occupied a central position between the spheres of Venus and Mars [see FALAK].

In the geocentric representation of the heavens, which the Muslim astronomers adopted from Ptolemy [see BAṬLAMİYŪS], the earth is assumed to be fixed in the centre of the universe. The sun moves on the ecliptic in the direction of the zodiacal signs, i.e. from west to east, and its longitude is measured from the vernal point [see MINṬAKAT AL-BURŪĠ]. The period of return of the sun to the vernal point is the tropical year; the period of return to a fixed star, the sidereal year. The precession of the equinoxes is the difference between the tropical and the sidereal solar motion.

In order to predict the solar position on the ecliptic, most Muslim astronomers used the Ptolemaic eccentric model or the equivalent simple epicycle model. These models were adopted by Ptolemy from his predecessor Hipparchus (Rhodes, 2nd century B.C.) and were based on the observed differences in length between the seasons.

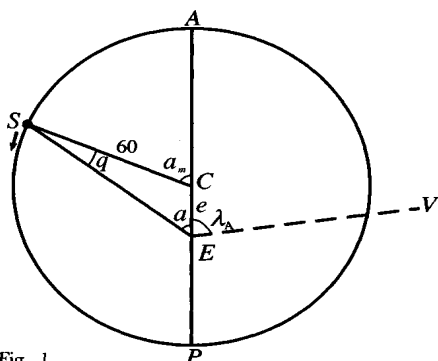

Fig. 1

In the eccentric model (see Fig. 1) the sun  $S$  moves at a constant speed on the circle  $ASP$ , whose radius is taken equal to 60. The centre  $C$  of this circle is removed from the earth  $E$  by a distance  $e$ , the solar eccentricity (*mā bayn al-markazayn*). The sun reaches its largest distance from the earth at the apogee  $A$  (*awḍī*), its smallest distance at the perigee  $P$  (*ḥaḍīd*). The vernal point is indicated by  $V$ ; the longitude of the apogee, angle  $VEA$ , by  $\lambda_A$ .

Since the sun moves uniformly on the eccentric circle, the mean solar anomaly  $a_m$  (*khāṣṣat al-shams*), angle  $ACS$ , increases linearly as a function of time. In order to determine the non-linear true solar anomaly  $a$ , the angle  $AES$  between the apogee and the sun as seen from the earth, a correction  $q$ , called the solar equation (*ta'dīl al-shams*), must be subtracted from or added to the mean solar anomaly. This correction, equal to angle  $ESC$  in Fig. 1, can be calculated as a function of the true anomaly by applying the sine rule to the triangle  $ESC$ . In this way we obtain

$$q(a) = \arcsin\left(\frac{e}{60} \sin a\right).$$

In order to determine the solar equation as a function of the mean solar anomaly  $a_m$ , we can extend triangle  $ESC$  to a right-angled triangle  $ESX$ , in which  $\angle SXE = 90^\circ$  and hence  $EX = e \cdot \sin a_m$  and  $CX = e \cdot \cos a_m$ . From this we find

$$q(a_m) = \arcsin\left(\frac{e \cdot \sin a_m}{\sqrt{(e \cdot \sin a_m)^2 + (60 + e \cdot \cos a_m)^2}}\right)$$

or the equivalent

$$q(a_m) = \arctan\left(\frac{e \cdot \sin a_m}{60 + e \cdot \cos a_m}\right).$$

Using these modern formulae we have  $a = a_m - q$  for every value of the mean or true solar anomaly. The true solar longitude  $\lambda$  (*mawḍi' al-shams*), angle  $VES$ , can be obtained by adding the longitude of the apogee to the true anomaly:  $\lambda = a + \lambda_A$ . Instead

of the mean solar anomaly, ancient and mediaeval astronomers usually based their calculations on another linear function of time, namely the mean solar longitude  $\lambda_m$  (*wasat al-shams*), defined by  $\lambda_m = a_m + \lambda_A$ . Using the formulae for the solar equation given above (with  $a$  replaced by  $\lambda - \lambda_A$  and  $a_m$  by  $\lambda_m - \lambda_A$ ), we have  $\lambda = \lambda_m - q$  for all values of  $\lambda$  and  $\lambda_m$ .

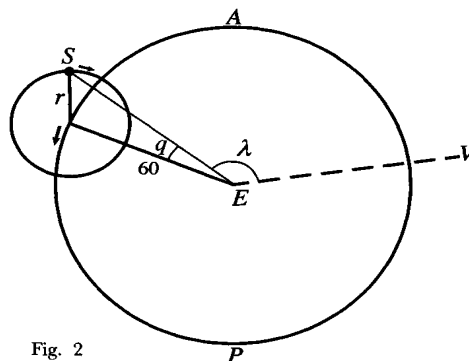

Fig. 2

In the simple epicycle model (see Fig. 2) the sun  $S$  moves clockwise on a small circle, called the epicycle (*ḥalak al-tadwīr*), whose radius  $r$  is equal to the eccentricity  $e$  of the eccentric model. The centre of the epicycle rotates in the direction of the zodiacal signs on a circle around the earth with radius 60, the deferent (*al-ḥalak al-hāmil*). If the angular velocities of the sun and the epicycle centre are equal to the angular velocity of the sun in the eccentric model, the two models are equivalent. In that case the sun reaches its largest distance from the earth whenever the epicycle centre passes through  $A$ , its smallest distance whenever the epicycle centre passes through  $P$ . (For more information about the Ptolemaic solar model, see O. Pedersen, *A survey of the Almagest*, Odense 1974, ch. 5.)

In early Islamic astronomical sources we find non-Ptolemaic planetary equations based on Persian and Indian methods (for the transmission of Persian and Indian astronomy to the Islamic world, see 'ILM AL-HAY'Ā). For instance, al-Khwarizmī [*q.v.*] calculated the solar equation according to the so-called "method of declinations":

$$q(\lambda_m) = q_{\max} \cdot \frac{\delta(\lambda_m)}{\varepsilon},$$

where  $q_{\max}$  denotes the maximum solar equation ( $q_{\max} = \arcsin(e/60)$ ),  $\delta$  the solar declination [see MAYL], and  $\varepsilon$  the obliquity of the ecliptic [see MINṬAQAT AL-BURŪJ]. A treatise by al-Bīrūnī [*q.v.*] describing the method of declinations and many other methods of calculating the solar equation was discussed in E.S. Kennedy and A. Muruwwa, *Bīrūnī on the solar equation*, in *JNES*, xvii (1958), 112-21\*.

The Muslim astronomers significantly improved upon the solar parameter values used by both Hipparchus and Ptolemy. The values of the length of the solar year, the solar eccentricity, and the position and motion of the solar apogee were repeatedly updated on the basis of fresh observations [see MARṢAD]. The length of the solar year was generally determined from solar observations at equinoxes or solstices made over periods of many centuries. For this purpose, Muslim astronomers combined the data of Ptolemy

and Hipparchus with their own results. As early as the 3rd/9th century Muslim astronomers improved the method of determining the eccentricity and the longitude of the apogee from the lengths of the seasons by measuring the periods between the midpoints of the seasons (*fuṣūl*).

The motion of the solar apogee, approximately  $1^\circ$  per 70 years in the direction of the zodiacal signs, had not been recognised by Ptolemy. Many Muslim astronomers made it equal to the precession of the equinoxes. The 5th/11th-century Andalusian astronomer al-Zarqālī [q.v.] was the first to discover that the two motions are different; he estimated the sidereal motion of the solar apogee to be  $1^\circ$  per 279 Julian years in the direction of the signs ( $12^\circ 54''$  per year; the modern value is  $11^\circ 46''$ ) (see G.J. Toomer, *The solar theory of az-Zarqālī*, in *Centaurus*, xiv [1969], 306-36).

Extensive accounts of solar observations can be found, in particular, in al-Bīrūnī's work (see *al-Kānūn al-Mas'ūdī*, Haydarābād 1954-6, ii, 636 ff., and J. Ali, *The determination of the coordinates of cities*, Beirut 1967). Parameter values used by Hipparchus/Ptolemy and the authors of various important Islamic astronomical handbooks [see *zīdī*] are presented in Table 1.

In order to perform practical computations of the solar longitude in a convenient way, practically all *zīdīs* contained the following tables:

- A table for the mean solar motion (*qīadwāl wasat al-shams*), which gave the mean motion in various periods depending on the calendar used [see *ṭarīkhī*]: groups of years (*al-sinūn al-maḍmū'ā*), single years (*al-sinūn al-mabsū'ā*), months, days, and hours. By adding the mean motion to the given mean solar longitude at a certain fixed point in time, the epoch, the mean longitude  $\lambda_m$  at any time could be calculated.
- A similar table for the determination of the longitude of the solar apogee  $\lambda_A$ . This table was usually headed *ḥarakat al-awḍī*, or also *ḥarakat al-kawākib al-thābi'a* (cf. above). The mean anomaly  $a_m$  was

found by subtracting  $\lambda_A$  from  $\lambda_m$ .

- A table for the solar equation (*u'dāl al-shams*) as a function of the mean anomaly. Since no negative numbers were used, the values in the solar equation table had to be subtracted from the mean solar longitude in order to obtain the true solar longitude if the anomaly was smaller than  $180^\circ$ ; otherwise, they had to be added.

In various Islamic astronomical handbooks the calculation of the solar position using the tables listed above was replaced by tables giving the true solar longitude directly as a function of the date [see *ṭarīkhī*]. Some of these ephemerides could be used only during one particular year, others included yearly corrections which made them suitable for long-term use. Examples can be found in the almanac of al-Zarqālī (see J.M. Millás Vallicrosa, *Estudios sobre Azarquiel*, Madrid/Granada 1943-50, 158-65); in a treatise on astronomical instruments by al-Marrākushī [q.v.]; (see J.J. Sédillot, *Traité des instruments astronomiques des arabes*, Paris 1834 (reprint Frankfurt 1984), 134-7); and in an 8th/14th-century Damascene corpus of tables for time-keeping by al-Khalīlī (Paris Bibliothèque Nationale ms. arabe 2558, fols. 8<sup>v</sup>-9<sup>r</sup>).

Only incidental attempts were made by Muslim astronomers to improve or modify the Ptolemaic solar model. Some of these attempts aimed at an explanation of the striking variation in the solar parameters during the centuries, others at a better correspondence with cosmological principles. In the model of al-Zarqālī the centre of the eccentric solar orbit moved slowly on a small circle around the average eccentric. As a result the eccentricity varied between 1;51 and Ptolemy's 2;29,30 (expressed sexagesimally; see *ṭarīkhī* AL-HISĀB). Al-Zarqālī ignored the variation of the longitude of the solar apogee also induced by his modification (see Toomer's article referred to above and J. Samsó and E. Millás, *Ibn al-Bannā', Ibn Ishāq and Ibn al-Zarqālī's solar theory*, in Samsó, *Islamic astronomy in medieval Spain*, Aldershot 1994).

In the 6th/12th century various Andalusian

Name	Place	Year	Maximum equation	Longitude of the apogee	Daily motion of the apogee	length of the solar year
Ptolemy	Alexandria	140 A.D.	2;23	65;30	-*	365;14,48

Table 1: Value of the maximum solar equation (in degrees), the longitude of the solar apogee (in degrees), the daily motion of the apogee (in sexagesimal thirds), and the length of the tropical year (in days), as used by Ptolemy and Muslim astronomers in their tables for the solar motion. All values are given in sexagesimal notation.

\* Different from the precession of the equinoxes.

\* Sidereal.

<sup>1</sup> Close to  $1^\circ$  in 66 Byzantine years.

<sup>2</sup> Equal to  $1^\circ$  in  $70\frac{1}{4}$  Persian years.

<sup>3</sup> Al-Zarqālī's maximum equation fluctuates between  $1^\circ 46'$  and  $2^\circ 23'$  with a period of 3343 Julian years.

<sup>4</sup> Equal to  $1^\circ$  in 279 Julian years.

<sup>5</sup> Equal to  $1^\circ$  in 70 Persian years.

<sup>6</sup> Close to  $1^\circ$  in 60 Persian years.

astronomers tried to make the Ptolemaic planetary models conform more closely to the Aristotelian physical principles. In the solar model of al-Bīrūnī [q.v.], the pole of the solar orbit moved on a small circle around the pole of the equator. Its motion was uniform with respect to a point slightly removed from that pole, thus accounting for the different lengths of the seasons in a way similar to the Ptolemaic eccentric model (see B.R. Goldstein, *Al-Bīrūnī: On the principles of astronomy*, New Haven 1971).

In his popular *Tadhkira fī 'ilm al-hay'a*, the 7th/13th-century Persian astronomer Naṣīr al-Dīn al-Tūsī [q.v.] attempted to give a physically more realistic representation of the Ptolemaic planetary models and to find solutions for the purported "difficulties" (*ishkālāt*) with these models: non-uniform motion and incomplete rotation. Thus he made his models mathematically equivalent to those of Ptolemy, but used solid spheres bounded by two parallel spherical surfaces instead of circles (see F.J. Ragep, *Naṣīr al-Dīn al-Tūsī's memoir on astronomy*, New York 1993, esp. i, 46-53, 144-9).

The 8th/14th-century Damascene astronomer Ibn al-Shāṭir [q.v.] made some of the most elaborate modifications to Ptolemy's models. He made the sun rotate on an epicycle, whose centre rotated on a larger epicycle moving uniformly around the earth (see V. Roberts, *The solar and lunar theory of Ibn al-Shāṭir. A pre-Copernican Copernical model*, in *Isis*, xlviii [1957], 428-32).

The sun played a crucial role in many types of observations and astronomical calculations. In particular, the time of the day and the divisions of the (solar) year were defined on the basis of the solar motion. Although the Islamic religious calendar is a lunar one, solar calendars were used intensively for agricultural and administrative purposes [see TA'RĪKH]. In folk astronomy, simple arithmetical schemes for the length of the shadow cast by a man were used to determine the approximate time of the day and the prayer times (see D.A. King, *A survey of medieval Islamic shadow schemes for simple time-reckoning*, in *Oriens*, xxxii [1990], 191-249; sunrise and sunset at the equinoxes and solstices were used to establish the direction of Mecca [see MAKKA. 4. and MAṬLA']. In mathematical astronomy, extensive tables of spherical astronomical functions were used to determine the time of the day from the solar altitude and to design sophisticated sundials [see MĪḤĀT. 2. and MIZWALA].

The equation of time (*ta'dīl al-ayyām bi-layālīhā* or *ta'dīl al-zamān*), a correction required to convert the time found from observations of the sun into mean time, was explained and tabulated in most Islamic astronomical handbooks (see ZAMĀN and E.S. Kennedy, *Two medieval approaches to the equation of time*, in *Centaurus*, xxxi [1988], 1-8). Likewise, we find extensive tables for the prediction for solar and lunar eclipses [see KUSŪF]. In connection with such predictions, Muslim astronomers used Ptolemy's method to find the angular diameter of the sun and the solar distance from the earth from observations of eclipses. Like Ptolemy, they found a solar distance around 1,000 earth radii, more than ten times too small (see N.M. Swerdlow, *Al-Battānī's determination of the solar distance*, in *Centaurus*, xvii [1973], 97-105). Finally, the solar position on the ecliptic was required to predict the first visibility of the lunar crescent after new moon [see RU'YAT AL-HILĀL].

In astrology [see NUDJŪM (AḤKĀM AL-)], the sun had a large influence on the well-being of humans, animals, political affairs, etc. The characteristics attached to the sun were listed by al-Bīrūnī (see

R.R. Wright, *The book of instruction in the elements of the art of astrology*, London 1934, 240-54). The sun was assumed to change the characteristics of the moon and the planets if these were within certain small distances from the sun (*ibid.*, 296-302). The astrological lots [see SAHM] were calculated using the solar position on the ecliptic (*ibid.*, 279-95). Certain astrological periods were defined in terms of the solar year (see D. Pingree, *The Thousands of Abū Ma'shar*, London 1968, 59-64).

**Bibliography:** Entries with an asterisk were reprinted in E.S. Kennedy *et alii*, *Studies in the Islamic exact sciences*, Beirut 1983. For all astronomers mentioned, see also the respective articles in the *Dictionary of Scientific Biography*, 14 vols. plus 2 suppl. vols., New York 1970-80.

3. In art.  
In the first centuries of Islam, the sun was mainly depicted in symbolic forms such as the sun wheel, spiral whorl, swastika, rosette and five- or six-point star. The tentative interpretation of these motifs as

solar symbols is based on their traditional meaning in the ancient Near East. At this early stage, the most important were the stylised floral devices called *shamsa* in Qurʾān illumination, which marked the head of a sūra and the fifth or tenth *āya*. These decorative forms developed from "tree of life" motifs, which in antiquity were closely associated with sun gods and which reached Islam in Sāsānid and Coptic textiles.

Beginning in the 12th century A.D., however, the interest of Turkish dynasties in astrological prognostication introduced astral iconography into architecture, metalwork, ceramics and book illustrations. The sun was depicted as a disk surrounded by rays, often with a human face in the centre, or as an enthroned and haloed ruler. Surrounded by an inner circle of the six planets and an outer circle of the twelve zodiac signs, the sun represents the centre of heavenly motion. Alternatively, as one of the revolving planets, it appears mounted on the back of Leo, the sign of its house, or occasionally on Aries, the sign of its exaltation. From 6th/12th-century stone reliefs of a bridge in Djazīrat Ibn ʿUmar, the sun-lion combination persisted in innumerable examples of minor arts and paintings up to the Shīr-Dūr (1020/1611) *madrasa* in Samarkand and to the flag of Pahlavi Iran.

As a royal symbol, the sun appears adjoining the sultan's name in 7th/13th Saljuqid coins from Anatolia. It is depicted alone, with a lion, or between two lions. In the same spirit, royal shields of many periods were fashioned with a sun or some solar symbol in the centre, occasionally with the zodiacal signs around, as in a shield of the Mughal sultan Akbar. The sun formed a part of a halo in portraits of the Mughals and was depicted in the centre of their royal canopies. On the yearly pilgrimage to Mecca, other dynasties sent palanquins (*mahmal* [q.v.]) decorated with solar designs that symbolised their political status. A similar princely iconography underlies the composition of many metal vessels, on which an enthroned ruler replaces the sun in its cosmic setting. In other examples, mainly Mamlūk, only the ruler's name remains, with the long letters forming a rayed disk. In architecture, the artistic evolution resulted in the unusual dome of the congregational mosque of Malatya. In the interior of this dome, a whorl of bricks creates, in the summit, a hexagram made up of the name Muhammad. This solar symbol denotes a divine context rather than a princely one, the Muslim version of a cosmic dome, which in Christian monuments would have the Pantocrator in the summit.

In religious painting, especially during the 10th/16th century, the sun is sometimes shown reflected in a mirror or in a pool of water, symbolising the reflection of the Divine Light in the heart of the perfect Man—a prophet or a mystic lover. In other paintings, mostly profane, the sun in the upper corner serves mainly as an involved witness to dramatic events. In most instances, however, the image of the sun is confined to cosmological or astrological texts. In its astrological role it figures also in daily objects of talismanic or prophylactic nature, such as amulets, divination bowls, magical shirts and all sorts of jewelry.

**SHAMS AL-DAWLA**, ABŪ ṬĀHIR b. Fakhr al-Dawla Ḥasan, Būyid prince and ruler in Hamadhān [q.v.] 387-412/997-1021. After the death of Fakhr al-Dawla [q.v.], the *amīrs* proclaimed as his successor in Rayy his four-year-old son Maḥdī al-Dawla [q.v.] under the guardianship of his mother Sayyida and gave the governorship of Hamadhān and Kirmānshāhān to Shams al-Dawla, who was also a minor. When Maḥdī al-Dawla grew up, he sought to overthrow his mother and with this object made an arrangement with the vizier al-Khaṭīr Abū ʿAlī b. ʿAlī b. al-Kāsim in 397/1006-7. But when they sought assistance from the Kurdish chief Badr b. Ḥasanawayh, the latter set out for Rayy with Shams al-Dawla and took Maḥdī al-Dawla prisoner. The government was then given to Shams al-Dawla, and a coin of his, minted at Rayy in 397/1006-7, is extant (G.C. Miles, *The numismatic history of Rayy*, New York 1938, 180). But as he was not so pliant as Maḥdī al-Dawla, the latter was released from his prison after a year and again proclaimed ruler, while Shams al-Dawla returned to Hamadhān. After Badr had been murdered by the soldiers in 405/1014-15, Shams al-Dawla seized a portion of his territory and when the grandson of the dead man, Ṭāhir b. Hilāl b. Badr, wished to dispute the possession of it, he was defeated and thrown into prison. His father Hilāl b. Badr had already been imprisoned by Sulṭān al-Dawla [q.v.]; but the latter released him and sent him with an army to regain the lands occupied by Shams al-Dawla. In Dhū ʿl-Kaʿda 405/April-May 1015, he came upon the enemy but the battle resulted in Hilāl's defeat and death. After this victory, Shams al-Dawla seized the town of Rayy; Maḥdī al-Dawla and his mother took to flight, but when Shams al-Dawla wished to pursue them, his troops mutinied and forced him to return to Hamadhān, whereupon Maḥdī al-Dawla and his mother returned to Rayy. In 411/1020-1, the Turkish troops rose in Hamadhān; Shams al-Dawla appealed to Abū Djaʿfar b. Kākawayh, governor of Iṣfahān, and with his help succeeded in driving the mutinous element out of the town. In 412/1021-2, Shams al-Dawla died and was succeeded by his son Samāʾ al-Dawla, but within two years (414/1023-4), Hamadhān fell into the hands of the Kākūyids [q.v.].

One of Shams al-Dawla's claims to fame is his connection with the great physician and philosopher Ibn Sīnā [q.v.], who treated the Amīr medically at Hamadhān in ca. 406/1015-16 and then became his vizier until Shams al-Dawla's death, when he transferred to the service of the Kākūyid ʿAlāʾ al-Dawla in Iṣfahān.

(K.V. ZETTERSTÉEN\*)

**SHAMS AL-DĪN** [see AL-DIMASHQĪ; DJUWAYNĪ; ILDENİZ; AL-ŞAYDĀWĪ; SHAMS-I TABRİZ(T)].

**SHAMS AL-DĪN MUḤAMMAD**, the first post-Alamūt Nizārī Ismāʿīlī imām. Born in the late 640s/1240s, he was the sole surviving son of Rukn al-Dīn Khurshāh [q.v.], the last lord of Alamūt. The youthful Shams al-Dīn was taken into hiding during the final months of the Nizārī state, shortly before

the surrender of Alamūt to the Mongols in Dhu 'l-Ka'da 654/December 1256. He succeeded to the Nizārī imāmate on the death of his father in the late spring of 655/1257.

Shams al-Dīn reportedly lived his life clandestinely in Ādharbāyджān as an embroiderer, whence his nickname of Zardūz. Certain allusions in the still unpublished versified *Safar-nāma* of Nizārī Kuhistānī [q.v.], a contemporary Nizārī poet from Bīrdjand, indicate that he evidently saw Shams al-Dīn, named by him as Shams-i Dīn Shāh Nīmruz 'Alī and Shāh Shams, in Ādharbāyджān, possibly in Tabriz, in 679/1280 (see his *Diwān*, ed. M. Muṣaffā, Tehran 1371 Sh./1992, 105, 109; Ch.G. Baiburdi, *Zhizn' i tvorčestvo Nizārī Persidskogo poeta*, Moscow 1966, 158, 162). In legendary accounts, and in some oral traditions of the Ismā'īlīs, Shams al-Dīn has been identified with Shams-i Tabrizī, the spiritual guide of Mawlānā Djalāl al-Dīn Rūmī [q.v.].

Shams al-Dīn MuḤammad's long imāmate coincided with a difficult and obscure period in the post-Alamūt history of the Nizārī community. It was during his imāmate that the Persian Nizārīs, especially in Rūdbār, reorganised themselves to some extent and temporarily reoccupied the fortress of Alamūt, while the Syrian Nizārīs became subjugated by the Mamlūks. Shams al-Dīn MuḤammad died around 710/1310-11. His succession was disputed by his sons, leading to the MuḤammad Shāhī-Kāsim Shāhī schism in the Nizārī Ismā'īlī imāmate and community.

**SHAMS AL-DĪN AL-SAMATRĀNĪ**, religious scholar of the court of Atjeh [q.v.] in northern Sumatra, now in Indonesia, b. before 1575, d. 12 Radjab 1039/25 February 1630. The *nisba* al-Samatrānī indicates that Shams al-Dīn was associated with Samatrā < Samudra, a region in north Sumatra. Little is known of his early life, but from the first decade of the 17th century on, he played a prominent role at the court of Sultan Iskandar Muda (Makuta 'Alam 1607-36), most powerful of the Achehnese sultans, with the title *Shaykh al-Islām*, serving as leading authority in religious matters, as Sūfī *murshīd* to the sulṭān, whom he inducted into the Nakshbandiyya *ṭarīqa*, as his vicegerent on a number of occasions, and as his negotiator with foreign emissaries such as the Englishman Sir James Lancaster in 1602.

On the death of Iskandar Muda in 1636 and the accession of Iskandar II in 1637, al-Rānīrī [q.v.], an Indo-Arab religious scholar, gained court patronage. Possibly motivated by his espousal of Sirhindī's (d. 1624 [q.v.]) concept of *waḥdat al-shuhūd*, as opposed to Shams al-Dīn's *waḥdat al-wuḍūd*, he had the latter's writings burnt, a number of his followers executed, and wrote polemics condemning what he alleged to be the implications of his teaching.

Shams al-Dīn was an outstanding scholar. He was the first Djāwī known to have left significant works written in Arabic alongside a number of prose writings in Malay, among them *Mir'āt al-mu'minīn*, a treatise

on dogmatics—not all of which, thanks to al-Rānīrī, are extant. Of his Arabic works, the most important is *Djawhar al-ḥakā'ik* edited by van Nieuwenhuijze, whose dissertation (see *Bibl.*) is the basic work for any further study of this author, and includes a representative selection of his work alongside a penetrating analysis of their intellectual structure. The work is in the Ibn 'Arabī tradition. It breathes a spirit of intense religious devotion and presents a wide range of Sūfī learning, including what may be the earliest citation of the poetry of Ibn al-Fāriḍ (lines 355-6 from *al-Tā'īyya al-kubrā*, see van Nieuwenhuijze ed. 265) in Southeast Asian writing. Its structure is based on *al-Tuhfa al-mursala ilā ruh al-nabī* (ed. Johns, see *Bibl.*), an Arabic work by the North Indian author MuḤammad b. Faḍl Allāh al-Burhānpūrī (d. 1590 [q.v.]), which summates the complex theosophy of Ibn 'Arabī in a convenient "portfolio" of seven grades of being. Shams al-Dīn played a major role in popularising this "portfolio" in Sumatra, Java and in the Indonesian region generally, one which replaced the more complex theosophical system used by the earlier Achehnese mystic Ḥamza Faṣṣūrī [q.v.], whose work shows an affiliation to an 'Irāqī-Persian transmission of the Ibn 'Arabī tradition as mediated by al-Djīlī.

In the literature, he is frequently referred to as an exponent of a so-called heterodox tradition of pantheistic mysticism, many scholars taking at face-value the partisan denunciation of him and his followers by al-Rānīrī, who accused him of teaching the doctrine of *waḥdat al-wuḍūd* in an absolute sense, without taking into account the concept of the grades of being as understood by adherents of the *waḥdat al-shuhūd* doctrine. In view of a deeper understanding of Ibn 'Arabī's ideas both in themselves and in the wider context of Islamic thought, terms such as "heterodox" and "pantheistic" no longer have a place in an historical assessment of his learning, teachings and spirituality.

**SHAMS AL-DĪN-I SIRĀDJ 'AFĪF**, historian of the Dīhlī Sultanate in mediaeval Muslim India whose exact dates of birth and death are unknown but who may have been born around 751/1350-1; he certainly flourished during the later 8th/14th century.

He stemmed from a family with long traditions of service to the ruling dynasty of sultans. His father and uncle held the office of oversight of the royal *kār-khānas* or stores and workshops during the reign of Firūz Shāh Tughluq (752-90/1351-88 [q.v.]), and in his youth, Shams al-Dīn accompanied the sultan on hunting trips. His fame arises from his history, the *Tārīkh-i Firūz Shāhī*, composed at a time when there was quite a florescence of historical writing within the Sultanate, seen in Diyā' al-Dīn Baranī's [q.v.] history

of the same name, which covers the first six years of the sultan's reign, whilst Mawlānā 'Abd al-'Azīz of Dihlī is reported to have composed a further history with the same name. There is also the anonymous, florid and eulogistic *Sirat-i Firūz Shāhī*, written in 772/1370-1 (see Storey, i, 509), which reads like an official history. The sultan himself had his achievements inscribed on stone and affixed to the walls of the Friday Mosque of his new capital Firūzābād.

Shams al-Dīn 'Afīf undertook the task of writing separate volumes on the Tughlūkids from Ghiyāth al-Dīn Tughlūk Shāh to Muḥammad b. Firūz Shāh, recounting their virtues or *manāḳib* [q.v.]. Only that volume on Firūz Shāh is extant, perhaps originally entitled *Manāḳib-i Firūz Shāhī*, and must have been written, from an internal reference, after Timūr's invasion of the Sultanate in 801/1398, perhaps when the historian had returned to Dihlī after Nāṣir al-Dīn Maḥmūd Shāh, Firūz Shāh's last descendant, had re-occupied the capital at the beginning of the 15th century A.D. It has five sections (*kism*), each divided into eighteen chapters (*muḳaddima*) of unequal length. The last three chapters of the fifth *kism* seem to have been lost, since they do not appear in any extant ms.

Writing as he apparently did when the capital Dihlī had been devastated and the Tughlūkid Sultanate was dissolving, Shams al-Dīn 'Afīf expresses in his book a clear nostalgia for the glories of the Sultanate. He praises Firūz Shāh as the special recipient of divine grace in terms which echo the style of the eulogy of Sūfī saints in the *tadhkira* literature. He also provides much useful information on social and economic life of the time. The foundation of new cities, like Firūzābād, and the construction of canals, water reservoirs and the encouragement of agriculture are recorded. From his own background, he was especially interested in taxation and financial topics and their interlocking with agricultural policy, and he did not fail to mention abuses which had crept into administration and army affairs. His aim seems, in fact, to have been to portray the sultan as a saintly ruler, conformable to the demands of the literary genre of Sūfī hagiography, and his reign as a golden age.

**Bibliography:** The surviving part of 'Afīf's history was edited in the Bibl. Indica series, Calcutta 1888-91; tr. of extracts in Elliott and Dowson, *History of India*, iii, 269-373. **SHAMS AL-MA'ĀLĪ** [see KĀBŪS B. WUḤMAGĪR B. ZIYĀR].

**SHAMS-I FAKHRĪ** [see FAKHRĪ].

**SHAMS-I KAYS**, the familiar form of the name of Shams al-Dīn Muḥammad b. Kays Rāzī, author of the oldest Persian work on poetics, *al-Mu'jam fi ma'āyir ash'ār al-'adām*, which covers the full range of traditional literary scholarship. Facts about his life are only to be found in his own statements, mostly in the introduction to his sole surviving work (*Mu'jam*, 2-24). His native town was Rayy, where he must have been born around the beginning of the last quarter of the 12th century. For many years he lived in Transoxania, Khwārazm and Khurāsān. He relates an incident situated in Bukhārā and dated 601/1204-5 (*Mu'jam*, 456). In 614/1217-18 he was living at Marw, where he wrote the first draft of his textbook in Arabic. When in the same year the Khwārazm Shāh 'Alā' al-Dīn Muḥammad (596-617/1200-20) marched to the west against the caliph al-

Nāṣir [q.v.], he joined the sultan's retinue. In 617/1220, during a battle with the Mongols near the fortress of Farzīn (between Isfahān and Hamadān), he lost all his books, but was able to retrieve some parts of the manuscript of his textbook from the local peasants. About 623/1226, he took refuge in Shīrāz with Sa'd b. Zangī, the Salghurid Atabeg of Fārs (599-628/1202-31), who admitted him to his court as a companion (*muḳarrah*). He retained this position under Sa'd's successor Abū Bakr (628-58/1231-60).

In these secure surroundings, he was able to resume the writing of his work on poetics, which had been frustrated by his constant travels and the turbulent events of the Mongol invasion. The version which he now produced was an extensive Arabic work on Arabic and Persian poetry together. However, the literati (*zurafā*) and poets of Shīrāz did not approve of his approach because they considered a critical discussion of Persian poetry in Arabic not very useful. Giving in to this, Shams-i Kays then dealt with the two poetical traditions separately, each in its own language. Of these two books, only the Persian one has survived.

The *Mu'jam* (sometimes erroneously vocalised *Mu'adḡjam*) consists of two parts and a *khātima*. The first part contains the oldest treatment of Persian metrics still extant. The ten fundamental patterns current in Persian poetry are arranged in four circles in accordance with the system of 'arūd [q.v.] as it had been established by al-Khalīl (89 ff.; cf. Elwell-Sutton, 77-9). Remarkable, moreover, is the discussion of the metre of the *rubā'ī* [q.v.], which Shams-i Kays regarded as a Persian invention, tentatively attributed to Rūdakī [q.v.]; it is treated as a derivative of the *hazaj* pattern. The more miscellaneous contents of the second part include, first, the theory of rhyme (*'ilm-i kāfiyat*), which entails a discussion of Persian grammar as far as it is concerned with the definition of rhyming letters (204 ff., *hurūf-i kāfiyat*); attention is also given to the use of *radīf* and *wāḡib*, respectively the repetition of a word after or before the rhyming letter in each line, which are special features of Persian poetry (258-61). This is followed by a chapter on the embellishment of poetry (328 ff., *maḥāsīn-i shīr*), a list of rhetorical figures in the tradition of the textbooks of *badī'* [q.v.]. In this section, the influence of Rashīd al-Dīn [q.v.] Waṭwāt is evident, but a number of Shams's figures do not appear earlier in Persian textbooks; some can be traced back to Kudāma b. Dja'far [q.v.] (cf. S.A. Bonebakker, *The Kitāb Naqd al-shīr*, Leiden 1956, Introd. 59). The treatment of poetical genres (*adḡnās-i shīr*), which concludes this part, pays only scant attention to specifically Persian features. The *khātima* is devoted to the practice of poetry (*shā'irī*) and plagiarism (*sarikāt-i shīr*). The prescription for the composition of a poem at the beginning of this appendix is a translation from Ibn Ṭabāṭabā's *Ṭayār al-shīr* (ed. Cairo 1956, 4 ff.).

Shams-i Kays saw his work in the first place as a tool for literary criticism providing measures (*ma'āyir*) for the distinction between good and bad poetry (3, *bar naqd-i nik va bad-i kalām-i manzūm*) to prose writers and poets alike. In his view, poetical technique was a creation of the Arabs, and Persian poets were merely following their example (69). Nevertheless, the *Mu'jam* stands out as the most important contribution to Persian literary theory, both on account of its wide scope and the quality of its discussion of detail. Among the poets dealt with, by far the most often cited is Anwarī [q.v.], who flourished in the first half of the 6th/12th century. Although the book never achieved the popularity of Rashīd al-Dīn Waṭwāt's textbook,

its influence can be found with a number of later writers on literary theory, and a few abridgements were made (see the Introd. by Mudarris-i Raḍawī, pp. xviii-xx).

**Bibliography:** The first critical edition of the *Mu'djam* was published by Mīrzā Muḥammad Kaẓwīnī, London 1909 (*GMS*, x), with an English introd. by E.G. Browne; revised ed. Muḥammad Mudarris-i Raḍawī, Tehran 1314 *sh.*/1935-6, 2<sup>nd</sup> Tehran 1338 *sh.*/1959 (referred to in this article). **SHAMS-I TABRĪZ** (ī), the name given to a rather enigmatic dervish who deeply influenced and transformed Djalāl al-Dīn Rūmī [*q.v.*], and whose real name was, according to Djamī, *Nafahāt al-uns*, ed. Nassau Lees, 535, *Shams al-Dīn Muḥammad b. 'Alī b. Malik-dād-i Tabrīzī*.

His prose writings, *Maḳālāt*, as well as the notes by Rūmī's elder son Sulṭān Walad [*q.v.*], reveal him as a man of overwhelming spiritual power. He must have been in his forties or fifties when he reached Konya on 26 Djumādā II 642/23 October 1244, but next to nothing about his spiritual pedigree is known. He writes that he was a disciple of Abū Bakr Sallabāf, a basket maker, which may point to a relation with the *futuwa* [*q.v.*] (thus Gölpınarlı). A Kubrawī *silṣila* is sometimes mentioned, and the frequent, very positive use of the term *kalandar* in Rūmī's poetry might indicate that *Shams* was close to the *kalandars*. In his search for someone to understand him, *Shams* wandered through the world, always staying in caravansarays, not in religious establishments. In Irāk he met Awhād al-Dīn-i Kirmānī, whose claim to see the reflection of the moon in a lake when looking at unbearded youths, incited him to the well-known remark, "If you haven't got a boil on your neck, why don't you look at the sky?" For some time, *Shams* stayed in Syria, where he met Ibn 'Arabī [*q.v.*], whom he did not like, as he "did not follow the *Sharī'a*" although he found "something useful" in him. But his later comparison of Ibn 'Arabī with Rūmī reveals his feeling; Ibn 'Arabī was, for him, a "pebble, Djalāl al-Dīn, a pearl". For some time, *Shams* was a teacher in Erzerum; but nowhere could he find someone who could bear his company, for his sharp tongue did not spare anyone, and he was quick in punishing students (although he never accepted a *murīd*). Finally, he was guided by dreams to Konya, where he met Rūmī, who "understood him". Djalāl al-Dīn left his teaching to spend weeks in solitude with *Shams* (who did not, however, believe in the necessity of the forty days' seclusion). Sensing the increasing enmity of the people of Konya, *Shams* left secretly on 21 Shawwāl 643/15 February 1246, and in longing for him Rūmī turned poet, touched like a flute by the friend's breath. *Shams* was finally found in Damascus, and brought back by Sulṭān Walad, who describes the reunion of his father with *Shams*, when "nobody knew who was the lover and who the beloved" (1 Muḥarram 645/8 May 1247).

For some months he stayed in Rūmī's house, married to a girl from the household, who died a few days before he disappeared (5 *Shā'ban* 645/5 December 1247). Most likely he was murdered with the connivance of Rūmī's younger son; his body was thrown into a nearby well besides which the *makām-i Shams* was later built. Rūmī probably sensed what had happened, yet did not believe in the death of the "eternally radiant Sun" and went to Syria to search for him until he realised that *Shams* lived in him; and he signed his poetry with his name. His later friends, Ṣalāḥ al-Dīn Zarkūb and Ḥusām al-Dīn Ćelebi were nothing but "reflections" of "the Sun". His *na't-i sharīf* shows the close connection between *Shams* and the Prophet, from whom he claimed to have received "the cloak of companionship". His love for the Prophet to the exclusion of all learned books, and his aversion from philosophy, is echoed in Rūmī's poetry.

*Shams* claimed to have reached the highest possible rank, that of the third degree of the beloved ones, *ma'shūk*, or "the *kuṭb* of the beloved ones", and Rūmī's descriptions of *Shams* are sometimes close to his "deification".

Claims have been made that *Shams* was an Ismā'īlī, all the more as a mausoleum of *Shams-i Tabrīzī* is found in Multān. This (Indian) *Shams* was a contemporary of the Suhrawardī master Bahā' al-Dīn Zakariyyā (d. 1267), and the miracles ascribed to him are as outspoken and as scaring displays of tremendous power as those of Mawlānā Rūmī's *Shams*; however, it is likely that the Multānī *Shams* may be identical with an Ismā'īlī *pīr* (cf. *SHAMS AL-DĪN MUḤAMMAD*).

But whoever *Shams-i Tabrīz* may have been (and that he was a real person is proven by his enormous derwish hat in the museum in Konya), the world owes to his inspiration the collection of the most fiery mystical love lyrics, the *Diwān-i Shams-i Tabrīz* by Rūmī, and without his influence Rūmī's *Mathnawī* would not have been composed either, for he was the inspiring power behind every word that Rūmī wrote.

(ANNEMARIE SCHIMMEL)

**SHAMSA**, a jewel used by the 'Abbāsīd and Fāṭimid [*q.v.*] caliphs as one of the insignia of kingship. According to the description of the Fāṭimid *shamsa*, given by Ibn Zūlāk (quoted by al-Maḳrīzī, *Itti'āz al-hunafā'*, i, 140-2), it was not a sunshade, as has been guessed (de Goeje, in al-Ṭabarī, *Glossarium*, p. cccxvi), but a kind of suspended crown, made out of gold or silver, studded with pearls and precious stones, and hoisted up by the aid of a chain. The *shamsa*, therefore, is not to be confounded with the *mizalla* [*q.v.*] or sunshade which belonged also to the royal insignia. The model of the *shamsa* was probably the crown suspended above the head of the Sāsānid king (al-Ṭabarī, i, 946). It served for the 'Abbāsīd caliphs as a symbol of legitimate rule (al-Ṭabarī, iii, 1553-4) and represented the authority of the absent caliph during the Pilgrimage to Mecca, where it was suspended in front of the Ka'ba during the *ḥajj*.

ceremonies. The 'Abbāsid *shamsa* was endowed by the caliph al-Mutawakkil (232-47/847-61) and studded with precious stones by al-Mu'taḍid (279-89/892-902); in 311/924 it was taken by force by the Carmathian leader Abū Ṭāhir al-Djannābī (al-Azraqī, *Akhbār Makka*, ed. Wüstenfeld, 156; 'Arīb al-Kurtubī, 16-17, 119). The Egyptian one was made by order of the regent Kāfir for the young Ikhshīdīd prince Unūdīr (334-49/946-61). After the Fātimid conquest it was replaced by a greater one on the order of the general Djawhar for the caliph al-Mu'izz; this new *shamsa* was for the first time hoisted above the great hall (*iwān*) of the palace of Cairo at the day of 'Arafa in Dhu 'l-Hijja, 362/973 (al-Makrīzī, *loc. cit.*). Djawhar's *shamsa* was carried away during the plunder of the Fātimid treasure houses in 461/1068, together with a yet unfinished new one. On this occasion we learn that Djawhar's *shamsa* was made out of 30,000 *mithkāl*s (132.42 kg) of gold, 20,000 dirhams (61.6 kg) of silver and 3,600 precious stones (al-Makrīzī, *op. cit.*, ii, 294).

*Bibliography:* H. Halm, *Al-Shamsa. Hängekronen als Herrschaftszeichen der Abbasiden und Fatimiden*, in *Orientalia Lovaniensia Periodica*, forthcoming.

(H. HALM)

**SHAMSIYYA**, a mystical brotherhood derived from the Khalwatiyya [*q.v.*], which came into existence and developed in the Ottoman Empire from the end of the 10th/16th century.

Its founding saint, Abū 'l-Thanā' Shams al-Dīn Aḥmad b. Abī 'l-Barakāt Muḥammad b. 'Arif Hasan al-Zilī al-Siwāsī—more commonly known as Kara Aḥmad Shams al-Dīn Siwāsī—was born in the small town of Zile, in eastern Anatolia, in 926/1520, and was initiated by two Khalwatī *shaykh*s practising in this region: the *shaykh* Muṣliḥ al-Dīn of Djum'a Pazari, and then the *shaykh* 'Abd al-Madīd Shirwānī (d. 972/1565) of Tokat. At the request of Hasan Paṣha, *wālī* of Sivas, he undertook the supervision of a *zāwiya*, constructed at the latter's instigation in the precincts of a mosque in the town of Sivas. He taught there until the end of his life, which took place in 1006/1597, and he was buried in the vicinity of his *zāwiya*.

Three elements were influential in the inception of the mystical way on which Kara Aḥmad Shams al-Dīn left his distinguishing mark: the significant literary corpus of this individual; the number and the widespread diffusion of his *khalīfas*; and his participation in the campaign of Eger in Hungary. A number of works are in fact attributed to him, in verse and in prose, in Turkish and in Arabic, of which the most important are entitled: *Kitāb al-Hiyād min ṣawab al-ghamām al-fayyād*, *Mewlid*, *Menākib-i cāhār yār-i guzīn*, *Manāzil al-'arīfīn*, *Gulshan-ābād*, *ẓubdat al-asrār fī sharḥ mukhtasar al-Manār*, *Sulaymān-nāme*, *Ṭibret-nāme*, etc. (a number of these were published in Turkey from the end of the 19th century; cf. A. Gölpınarlı, *IA*, art. *Şemsīye*). Under the *makhlas* of Shamsī, he also left many poems and songs of a mystical inspiration. As for his *khalīfas*, there were some thirty of them, who spread his teachings in eastern and central Anatolia—especially in the towns of Zile, Sivas, Merzifon, Turhal, Samsun, Divriği, Kırşehir, Ankara and Kayseri—but also in Cyprus, in Istanbul and in Cairo. As to his participation in the campaign of Eger in 1596 (in the company of several of his disciples), this marked the establishment of contact between the nucleus of the nascent brotherhood and the Ottoman authorities. In fact, the sultan Meḥmed III invited Shams al-Dīn to take up residence in the capital, as a reward for his support in the victorious campaign; but the *shaykh* declined the invitation on account of his advanced age. The Ottoman sovereign extended the same offer,

some years later, to his nephew and successor 'Abd al-Madīd Siwāsī (d. 1049/1639-40), and the latter accepted it.

The centre of the network of the Shamsiyya was then shifted to Istanbul, where the brotherhood tended partially to supplant other branches of the Khalwatiyya. It was this grouping which henceforward enjoyed the goodwill of the sultan and of senior functionaries of the Empire, and occupied, throughout the first half of the 11th/17th century, the centre of the religious stage. In fact, Khalwatī-Shamsī *shaykh*s were in numerous cases appointed to serve as preachers (*wā'iz*), particularly in the most prestigious mosques. 'Abd al-Madīd Siwāsī and his disciples were the leading protagonists in the struggle against the heterodoxy of the Ḥamzawī *shaykh*s, whom they denounced publicly. They also acted as spokesmen for the Ṣūfīs in the bitter conflict between the latter and the *Kādirzāde*, representatives of the conservative and fundamentalist tendency led by Meḥmed Kādirzāde (d. 1635).

This preponderance of the successors of Kara Aḥmad Shams al-Dīn in the Ottoman capital—particularly in the scholarly circles from which the majority of them emerged—favoured the expansion of the network of the Shamsiyya. This was consolidated in Anatolia (on the eastern side, the cradle of the brotherhood, but also on the western side—Aḫşehir, Manisa, Mytilene and Chios—as well as in central Anatolia (especially at Konya and Safranbolu), and in the Middle East (Damascus, Cyprus, Jerusalem, Cairo and Mecca). But it also extended into the provinces of Thrace and Macedonia (especially in the eastern region—in particular, in Gelibolu, Gülmüçine/Komotine, Havsā, Edirne, Yambol, Filibe/Plovdiv, Lofça/Loveč, Varna, Silistre/Silistra, Dobrič/Tolbuhin and Kefe—as well as in Buda and the Hungarian frontier zones) and as far as the Crimea. In Istanbul itself, the establishments directed by *shaykh*s of the Shamsiyya flourished, in particular during the period of the nephew and successor of 'Abd al-Madīd Siwāsī, 'Abd al-Aḥad Nūrī Siwāsī (d. 1061/1651), who contributed so energetically to the progress of this branch of the Khalwatiyya that it became known by the name of Shamsiyya-Siwāsīyya or simply Siwāsīyya. At that time, the diffusion of the brotherhood generally proceeded according to the following pattern: arrival in Istanbul of a young student intent on pursuing his studies in the major metropolitan *madrāsas*, affiliation to the *ṭarīqa*, and return to his native land with the object of propagating the latter. Despite its rapid expansion, the network remained relatively centralised, its heart being the *tekke* of Shaykh Yawsī—renamed Siwāsī Tekkesi—situated close to the Selimiyye mosque in Istanbul, and administered by the descendants of the *shaykh* 'Abd al-Madīd.

From the beginning of the 18th century, the brotherhood went into decline, to disappear almost totally in the 19th century, often, it seems, to the advantage of other branches of the Khalwatiyya, such as the Sunbuliyya and the Sha'bāniyya [*q.v.*]. In Istanbul, during the final decades of the Ottoman Empire, there were still representatives of the Shamsiyya administering a *tekke* in the Taşkassap quarter. According to Dhākir Shükri, the *tekke* of Zibin-i sherīf had as its *shaykh* a certain Meḥmed Kāsim al-Dāghistānī al-Khalwatī al-Shamsī (d. 1328/1910), who was succeeded by his son, Yūsuf Dīyā' al-Dīn. But S. Vicdanī makes it clear that, although these *shaykh*s possessed a *silsila* linking them to 'Abd al-Aḥad Nūrī Siwāsī, the *tekke* in question functioned as an establishment of the Nakshbandiyya. Today, this branch of the Khalwatiyya seems to have disappeared.

As regards the doctrine and the practices of the Shamsiyya-Siwāsiyya, they were shared by the majority of the *Khalwatīs*; the practice of spiritual retreat (*khalwa* [q.v.]) and the initiation of the seven names (*al-asmā' al-sab'a*) being two central elements. The Shamsī-Sīwāsī *dhikr* was a *dhikr devrān*, with a rotating movement in a circle formed by the dervishes. 'Abd al-Aḥad Nūrī is the author of a treatise defending this practice, entitled *Risāle fī dhikr devrānī 'l-shūfiyye*. As for the adoption of the doctrine of the oneness of being (*waḥdat al-wuḍūd*), cf. O. Türer, *Türk mutasavvıf ve şairi Muhammed Nazmî*, which also provides further details regarding the teaching of one *shaykh* of the brotherhood. The characteristic *tāqī* of the Shamsī-Sīwāsī *shaykh*s—comprising forty separate pieces, as with the majority of the *Khalwatīs*—was made of yellow fabric, half of it embroidered with Kufic script, surmounted by a red button and encircled by a green turban.

**SHAMSŪN**, the Biblical Samson of Judges, xii-xvi (12th century B.C. according to Biblical chronology), unmentioned in the Qur'ān. Al-Ṭabarī, i, 793-5, locates him historically in the Christian era, just before St. George (Djurdjīs); al-Tha'labī, *Arā'is al-maḡālis*, Cairo n.d., 392-3, situates him just after St. George and understands him to have been a Christian. The chronology is probably the result of the use of Christian sources for the story. The story of Samson was very popular in Christian circles, with Samson proclaimed an exemplar of victorious faith in Hebr. xi, 32, and, later, an allegorical figure of Christ. Samson's status as a Nazirite (in Aramaic, *naḏhīrā* or *n'dhīrā* [see NADHİR]) may also have suggested a Christian connection to some Muslims because of the similarity of the name of Samson's vow (see Num. vi, 2-8) and the name Nazareth (*al-Nāṣirā*), the home town of Jesus, and *Naṣārā* [q.v.], the Qur'ānic term for Christians (the linking of the names was also a tendency in Christian allegorical interpretation of the story).

The individuality of Samson (contrary to the general Biblical picture of judges who lead the community into battle) becomes the focus of the Muslim development of the prophetic model in Samson. According to al-Ṭabarī's information, Samson was born into a community of unbelievers but dedicated his life to God, ever fighting the idolators. He was aided by God, specifically by being given water during battles (see Judges xv, 19). His opponents realised that they would only overcome him through his wife whom they then bribed. She tested his strength twice and subsequently nagged him until he finally revealed that he could only be subdued by his uncut hair. She

bound him with his hair while he was sleeping and, when he awoke, his enemies came, mutilated his body and took him away, powerless, to be paraded in front of the local minaret. There, Samson pulled the supports down, killing all the people (including his wife, according to al-Tha'labī, but perhaps not himself).

The purified presentation of Samson is in keeping with the Christian understanding rather than the Biblical story: Samson was a great fighter and man of faith who was betrayed by his wife. There is no lust, no prostitution, and no self-destruction within the story.

(A. RIPPIN)

**SHAMWĪL** (also *ASHAMWĪL*/ASHMAWĪL, *SHAM'ŪN*, *SAM'ŪN*), the Samuel of Biblical history (I Sam. i-xxviii), perhaps referred to in Qur'ān, II, 246-7, in connection with the appointment of Saul [see ṬĀLŪT] as king over Israel (although some exegetes see the reference to be to Joshua (Yūsha'), the "prophet after Moses"). The form of the name *Shamwīl* is closer than *Sham'ūn* to the Hebrew *Sh'mu'el*; *Sham'ūn* may be the result of some confusion between the names Simeon (Hebrew *Shim'on*; see Gen. xxix, 33, etc.) and Samuel, but that is unclear and confused further by attempts to incorporate etymologies of the names into the narratives. Al-Ṭabarī, i, 547-54, interchanges the spelling of the name throughout his account. Abū Rifā'a al-Fārisī, *Bad' al-khalk wa-kīṣ al-anbiyā'*, in R.G. Khoury (ed.), *Les légendes prophétiques dans l'Islam*, Wiesbaden 1978, 80-4, however, recounts separate stories of *Sham'ūn* and *Ashamwīl* (with the story of 'Aylūk—probably Eli, who is called 'Alī, 'Aylī and 'Aylā in al-Ṭabarī—being placed in between the two; cf. I Sam. i); H. Schwarzbaum, *Biblical and extra-biblical legends in Islamic folk-literature*, Beiträge zur Sprach- und Kulturgeschichte des Orients, Bd. 30, Walldorf-Hessen 1982, 64, suggests that *Sham'ūn* here should be understood as *Shamsūn* [q.v.], i.e. Samson, but the story is barely recognisable as speaking of him. Al-Kisā'ī, *Kīṣ al-anbiyā'*, ed. Eisenberg, Leiden 1923, 250-1, and al-Tha'labī, *Arā'is al-maḡālis*, Cairo n.d., 232-9, use the name *Shamwīl* consistently.

The stories of Samuel transmitted in the Islamic context concentrate on his birth and his selection of Saul; other elements of his nomination and career as a prophet are elaborated so as to fit within the common pattern of Muslim prophet stories, especially in his struggles with the unbelievers. Samuel is remembered today at his tomb at al-Nabī Samwīl near Jerusalem, where there has been a mosque since the 18th century.

Brinner (tr.), *The history of al-Ṭabarī*. iii. *The children of Israel*, Albany, N.Y. 1991, 129-35, esp. the notes. (A. RIPPIN)

**SHANDĪ**, a town in the Republic of the Sudan, on the east bank of the Nile, about 160 km/100 miles north-east of Khartūm. Population, in 1956, 11,500; in 1980, 24,000; and in 1995 probably more than 30,000. The origins and early history of *Shandī* are unknown. It is situated in the central area of the ancient Kingdom of Meroë. Modern *Shandī* has been one of the main towns of the *Dja'aliyyūn* [q.v.], who since at least the 16th century until 1821 maintained a small kingdom in the area. However, the town of *Shandī* does not appear in the historical sources before the 18th century, and then as the seat of the king (*makkī*) and as an important trading centre.

Major caravan routes have crossed the area of Shandī since ancient times, and trade was an important factor in its foundation. Between 1770 and 1820 the town witnessed a remarkable growth which was only broken by the Egyptian invasion in 1820-1, under the command of Ismāʿīl Pasha [q.v.], the son of Muḥammad ʿAlī Pasha [q.v.]. Its population was then estimated at about 5-7,000 people living in 8-900 houses. A revolt against the invaders following the murder in Shandī of Ismāʿīl Pasha in the autumn of 1822, caused the town to be destroyed and a large part of its population to be dispersed. Subsequently, the Egyptians moved the district administration across the Nile to the sister-town of al-Matamma [q.v.], and Shandī did not recover its former prosperity before the present century. In the spring of 1884 the people of Shandī joined the Mahdist revolt against the Egyptians [see AL-MAHDIYYA]. By that time, the population numbered about 2,000, a figure which was reduced to about 500 at the turn of the century.

During the Anglo-Egyptian Condominium (1899-1956) and thereafter, Shandī grew into a prosperous town. Its location in a rich agricultural area, its position on the north-south railway, and its relative proximity to Khartūm, are all factors which have stimulated the town's growth. Agricultural expansion in the area based on pump irrigation started early in this century, and local produce like grain, vegetables and fruits is exported through Shandī. Local trades consist of carpentry, tailoring, basketry, and cotton weaving. Today, it is also an administrative and educational centre, and the seat of a military garrison.

AL-SHANFARĀ "he who has large lips", is the nickname, perhaps even the name (al-Zamakhsharī, introd., 8; Sharīf, 15), of one of the most famous pre-Islamic *ṣuʿlūk* poets. A great deal of confusion surrounds the man and his work; for this reason it is appropriate to handle the information concerning him with the greatest caution.

#### 1. Life.

Details relating to the life of al-Shanfarā are sparse, contradictory and marked by an anecdotal quality much more pronounced than is the case with all the other pre-Islamic poets. His name is reportedly Thābit (ʿAmr) b. Mālik, of al-Iwās b. al-Ḥaḍir (al-Ḥawth) b. al-Aws, a clan of the al-Ḥārith b. Rabʿa, a sub-tribe of the al-Hinw (ʿAzd) (Ibn Ḥabīb, *Asmāʾ al-muḡhtalīn*, in *Nawādir al-maḥḥūṭāt*, ii, 231). This genealogy is problematical, since it renders implausible

the biography of the poet as it is currently accepted.

(1) According to a tradition related by al-Muʿarrrij al-Sadūsī and retained by Abū ʿAmr al-Shaybānī, al-Shanfarā was allegedly captured at a very early age by the Banū Shabāba b. Fahm b. ʿAmr of the ʿKays b. ʿAylān; he remained in a state of semi-captivity until his liberation following an exchange of prisoners between the Shabāba and the Salāmān b. Mufridj b. Mālik b. Zahrān, a tribe of which the eponym was said to be Naṣr b. al-Azd. He was adopted by a member of the latter tribe; according to some sources, he quarrelled with the daughter of the master of the house; according to another version, he fell in love with the girl, al-Kuʿsūs (*Dīwān*, 53), who rejected him as unworthy of her on account of his humble ancestry (*al-Mufaḍḍaliyyāt*, ed. Lyall, 195-6; *Ḥamāsa*, Bonn 1828, 244). Offended, al-Shanfarā abandoned his adoptive clan, returned to the Banū Shabāba, his erstwhile captors, and swore to avenge himself on the Salāmān by killing a hundred of them. This account is invalidated by a number of implausibilities: (a) the efforts of the Salāmān in seeking to liberate a man whose blood-links with them were distant and weak, if not non-existent; (b) the genealogical reservations of the young Salāmāniyya woman: al-Hinw b. al-Azd (eponymous ancestor of al-Shanfarā) was in no way inferior in terms of eminence to his brother Naṣr b. al-Azd (eponymous ancestor of the Salāmān); (c) resentment as justification for the return of a captive to his former jailers. However, it is precisely this tradition which was subsequently taken up by the other sources as well as by modern research (F. Gabrieli, *Taʾabbata Sharran, Shanfarā, Khalf al-Aḥmar*, in *Atti della Accademia Nazionale dei Lincei*, cccxliii (1946), 1, 41-2; Sharīf, 16; Yūsuf Khalīf, 332; Safadī and Ḥawī, *Mawsūʿat al-shiʿr al-ʿArabī*, i, al-Shiʿr al-dīhīlī, Beirut 1974, 61; Brockelmann, S I, 52-3; GAS, ii, 133-4; Hifnī, 112).

(2) A genealogical text of Ibn Ḥazm (d. 456/1064) permits the presentation of a biography of the poet which corresponds more closely to reality; it is stated there: "To the Mālik b. Zahrān belong the Banū Salāmān b. Mufridj b. Mālik b. Zahrān, a tribe (*baṭn*) to which the outlaw al-Shanfarā belonged; he attacked his own kinsmen incessantly, because a fellow-tribesman of theirs had murdered his father and they refused to apply in his case the law of retaliation; he allied himself with the Banū [Shabāba b.] Fahm b. ʿAmr b. ʿKays b. ʿAylān b. Muḍar who were his maternal uncles" (Ibn Ḥazm, *Dīḡharat ansāb al-ʿArab*, Cairo 1971, 386).

This text, with its wealth of information, is supported by traditions which circulated in the 2nd/8th century (*al-Mufaḍḍaliyyāt*, 196, § 1; *Aghānī*, xxi, 137-8), and throws new light on them, in particular on another tradition of al-Shaybānī in this version, the mother of al-Shanfarā returns to her own people, accompanied by her two young sons, after the assassination of her husband and the refusal of the tribe to avenge the blood which has been shed; the younger of the two sons dies soon afterwards. The poet grows up among his maternal uncles, the Shabāba b. Fahm. On coming of age, he exacts vengeance by killing Salāmānīs, including the murderer of his father, Ḥarām b. Djabir al-Salāmānī, although he is in a state of *iḥrām* at Minā (*Aghānī*, xxi, Leiden 1888, 137).

He then becomes a *ṣuʿlūk*, on amicable terms with his maternal uncle, Taʾabbata Sharran and with ʿAmr b. Barrāk (Hifnī, 112). In dangerous circumstances, he shows great courage; his prowess as a runner is proverbial (Ibn Saʿīd al-Andalusī, *Nashwat al-tarab fi taʾrīkh dīhīliyyat al-ʿArab*, ʿAmmān 1962, i, 434; al-Rāghib al-Isfahānī, *Maḍmaʿ al-balāgha*, ʿAmmān 1406/

1986, 630; al-Baghdādī, *Khizāna*, iii, 344); on account of his dark skin, he is included in the group of the *aghribat al-Arab* ('Abduh Badawī, *al-Shu'arā' al-sūd wa-khaṣā'ishum fi 'l-shi'r al-arabi*, Cairo 1973, 23-7, denies any negroid element in the poet's ancestry). It is related that he met his death in an ambush set by the Banū Ghāmid in the mountainous region to the south of Mecca, a zone controlled at this time by the Azd (Ibn Hāib, 231-2).

## 2. His poetry.

The *Dīwān*, such as it has survived, presents enormous problems: the 191 verses which it comprises do not constitute in any way a classic recension; the Cairo manuscript (Dār al-Kutub, 6676, *adab*) is a photocopy of the work in Molla Husrev Paşa 149, used in 1936 by al-Maymanī to establish his edition of the *Dīwān*; it includes three long pieces, the *Lāmiyya*, the *Tā'iyya* (*al-Mufaddaliyyāt*, xx, 194-207) and the *Fā'iyya*, better known by the name *al-Marḳaba* (*Dīwān*, 32-5), three bravura fragments which derive from a clearly pursued artistic project. They possess, in this respect, a richness of expression, a thematic variety, and a profundity which is totally absent from all the rest, in other words, the brief fragments belonging to the poetry of circumstance (17 fragments comprising 73 verses), collected by the modern editor from various secondary sources.

### (a) The *Lāmiyyat al-Arab*

This poem, the most accomplished specimen of the poetry of the *ṣa'ālīk*, has aroused great interest from the first decades of the 3rd/9th century to the present day, as is shown by the numerous *sharḥs* which have been devoted to it. However, the philologists of the Baṣra school expressed serious doubts as to its authenticity: if Yāqūt is to be believed, Abū 'Ubayda (d. 210/825) declared that the poem had been erroneously attributed to al-Shanfarā (*Mu'djam al-udabā'*, Beirut 1993, 1255). The entirely identical view of Ibn Durayd, relayed by al-Kālī, has been mentioned by all those who have studied the poet.

Is it appropriate to see in this attitude a supplementary echo of the rivalry between the schools of Baṣra and of Kūfa? It should not be forgotten that the poetry of al-Shanfarā was collected by Küftī *rāwiyas* (Blachère, *loc. cit.*). Opinions are divided among modern scholars. In 1864 Nöldeke expressed serious doubts as to its authenticity, noting that the ancient transmitters were unaware of its existence; furthermore, the philologists of the 3rd/9th century make no mention of it whatsoever (*Beiträge zur Kenntnis der Poesie der alten Araber*, Hanover 1864, 201). Krenkow (*al-Shanfarā*, in *EF*), F. Gabrieli (*Sull'autenticità della Lāmiyyat al-Arab*, in *RSO*, xv [1935], 361), and Blachère (*HLA*, ii, 410) essentially reproduce Nöldeke's arguments, adding others relating especially to poetic style and language. Only G. Jacob, *Schanfarā-Studien*, i, *passim*; and idem, *Aus Schanfarās Dīwān*, Berlin 1914, introd., and Brockelmann were convinced of its authenticity, basing their conclusions on the results of internal analysis, such as the use of Yemeni terms, the mention of cows, which do not figure at all in archaic poetry, and symbolic description. S. Stetkevych, 125-6, reckons that the poem is marked by a series of signs and symbols which render incontrovertible its attribution to al-Shanfarā: the relations of the poet with his own people, the Azd, constitute an antidote to the normal affiliation of a tribesman to his tribe. In other words, this ode constitutes the typical process of regret for the past, an essential characteristic of the poetry of al-Shanfarā.

The publication of a section of the *K. al-Manthūr wa 'l-manẓūm* in 1977 has cast a new light on this

problem. This work makes it possible to ratify, historically and on the basis of an ancient source, the arguments of the partisans of the authenticity of the *Lāmiyya*. The author of the work, Ibn Abī Ṭāhir Ṭayfūr (d. 280/893), is a chronicler and an anthologist of exemplary integrity. Under the heading of "unique and incomparable *kaṣīdas* (*al-kaṣā'id al-mufradāt allatī lā mathīl lahā*)", he quotes in full the *Lāmiyya* of al-Shanfarā (*al-Manthūr wa 'l-manẓūm*, Beirut 1977, 69; the *Lāmiyya* in its entirety, 69-79) which was recited to him by Abū 'l-Minhāl 'Uyayna b. 'Abd al-Rahmān al-Muhallabī, a transmitter considered reliable (*Fihrist*, 157; Yāqūt, *Udabā'*, 250-1) and a contemporary of Khalaf al-Aḥmar, the presumed author of the poem in the view of those who deny paternity to the Azdī poet. It may thus be affirmed that in the 2nd/8th century, in the lifetime of Khalaf, the transmitters were well acquainted with the *kaṣīda* and attributed it to al-Shanfarā.

This ode, which has the rhythm of a beating drum, turns its back on the poetic conventions of the *Qāhiliyya*. It reflects a purely individual register and constitutes, thereby, a negation of tribal values (vv. 1-5). The self stresses its primacy in each verse by means of incessant use of pronouns and verbs in the first person singular (more than 30 instances in the first 50 verses); in parallel, an absolute rejection of the tribe is attested here, accompanied by an affirmation of its superiority over the clan as such. In fact, mutual relations are conceived in a multi-dimensional approach. The disowned tribe (v. 1) reacts; the disruptive element must be removed; the latter, feeling under threat of elimination, engages in conflict which ends in the triumph of the individual. He reigns over the desert dominating the maleficent creatures of the night, defeating the wolf (vv. 27-35) and the sand grouse which he overtakes in the race for water (vv. 36-41). But this is a short-lived triumph; the poet has a very clear vision of this, and knows that in the end *Umm Kaṣāl* (death) will claim him; and he asks not to be buried at all. Finally, what is observed is a total disintegration of the individual and a re-unification of the tribe. In the context of form, al-Shanfarā also departs from convention; he addresses his themes directly, leaving aside the *nasīb* and the camel-driving section.

### (b) The *Tā'iyya*

The *Tā'iyya* begins with a *ghazal*, a genuine love poem which has aroused the admiration of scholars (see *Bibl.*, Stetkevych, 136). This love takes on a double aspect: the feminine personality, the departure which is equivalent to a rejection of this love by al-Shanfarā and leads to its loss. These two overlapping aspects are presented simultaneously; they are identified with one another by means of persistent recourse to the third person singular (*istakallatī, tawallatī, azallatī, wallatī*; for the overlapping, see vv. 10-12); the love of which the poet speaks is certainly complete. For the second aspect, it is the female companion who is praised for her moral qualities and not the female lover, as is the more frequent case. However, it is destructive vengeance which triumphs. Total pessimism is the overwhelming sense; in fact, no possibility of reconciliation is envisaged here.

### (c) The *Fā'iyya*

The *Fā'iyya* describes a night of vigil spent by a warrior preparing himself for a razzia. As a precaution, he has established himself on a *marḳaba* (hill-top). Scrutinising the darkness, with ears wide open, he examines his bow and his arrows and proceeds, in the same vein, to give a quite detailed description of his weapons; clearly revealed are intent interest, pride

and sympathy on the part of the warrior towards his companions. It is appropriate to note, in this connection, that al-Shanfarā exploits a tendency of the poetry of the *ṣulūks* in describing weapons in lavish detail, thus setting himself apart from the poetry of war; in the latter, substantive adjectives are used to denote weapons (Ibn Sallām, *K. al-Silāh*, Beirut 1408/1988, where this tendency is clearly visible); according to a regular pattern, and with little variation, the poet confines himself to mentioning arms, rather than describing them. The only descriptions worthy of the name in pre-Islamic poetry are found among the *ṣulūks*; al-Shanfarā stands apart on account of his description of contemporary weapons for shooting.

**Bibliography:** al-Shanfarā, *Diwān al-ṣāʾitik*, Beirut 1413/1992, 11-54 (currently the least unsatisfactory edition); Masʿūdī, *Murūj*, iii, 310 = § 1190; Zamakhsharī, *Aʿdjab al-ʿadjab fī sharḥ Lāmīyyat al-ʿArab*, Damascus 1408/1987; ʿUkbarī, *Sharḥ Lāmīyyat al-ʿArab*, Beirut 1403/1983; Yāqūt, *Udabāʾ*, Beirut 1993, 330, 1255, 2409, 2601; poetic tr. of the *Lāmīyya* in M. Sells, *Desert tracings*, Middletown, Conn. 1989, 21-31; Ibn al-Shadjarī, *Mukhtārāt al-shuʿarāʾ al-ʿArab*, Cairo 1399/1979, 92-125; Baghdādī, *Khizāna*, Cairo 1406/1986, index; F. Gabrieli, *Storia della letteratura araba*, Rome 1951, 60-2; Blachère, *HLA*, index; Sezgin, *GAS*, ii, 133-7, ix, 267; Suzanne Pinckney Stetkevych, *The mute immortals speak. Pre-Islamic poetry and the poetics of ritual*, Ithaca and London 1993, § 4, 119-57 (an excellent study based on the theory of the “abortive passage” of the ethnologist Van Gennep and offering a new reading of the *Tāʾiyya*); Nāṣir al-Dīn al-Asad, *Maṣādir al-shiʿr al-ḡāhili*, Cairo 1956, 173, 452-61; Yūsuf Khalīf, *al-Shuʿarāʾ al-ṣāʾitik*, Cairo 1959, index, see especially 328-36 (very interesting biography); Nūrī Hammūdī al-Kaysī, *al-Furūsiyya fī ʿl-shiʿr al-ḡāhili*, Baghdād 1384/1964, 139, 169, 179, 185; Muḥammad Badīʿ Sharīf, *Lāmīyyat al-ʿArab aw naṣḥid al-ṣahrāʾ*, Beirut 1964; ʿAbd al-Ḥalīm Hifnī, *Shiʿr al-ṣāʾitik, manḥadjuhu wa-khasāʾisuhu*, Cairo 1987, 51, 69, 112, 161, 162-72, 179-81, 185, 187-92, 203. (A. ARAZI)

**SHĀNĪ-ZĀDE MEHMET ‘AṬĀ’ ALLĀH Efendi** (1769? or 1771?-1826), Ottoman physician, historian and polymath. Son of the *kādī* Shānī-zāde Ṣādiḥ Mehmed Efendi, he pursued a religious career together with a medical education. In 1793-4 Shānī-zāde attained the rank of *müderis*, in 1814-15 that of *kādī* of Eyüp, and in October 1821 that of Mollā of Mecca and inspector of *evkāf*. Shānī-zāde suffered from the jealousy of the *ḥekīm-bāshī* Behdjet Efendi [see **BAHDJAT MUṢṬAFĀ EFENDİ**] and never himself became chief physician. Meanwhile, after the *wakʿa-nüvīs* ʿĀṣim [q.v.] died, Shānī-zāde was appointed official historiographer (November-December 1819). As a leader in the *Beshiktash* Scientific Society, Shānī-zāde was suspected of Bektāshī connections and, when the Janissaries were suppressed, banished to Tire (Aydıń). He died two months later in September 1826, and is buried in Tire.

The encyclopaedic Shānī-zāde was knowledgeable in medicine, mathematics, physics, astronomy, military science and painting. He composed poetry, and was a watchmaker. He was at home in Arabic, Persian, French and, probably, Italian and Latin. His experiments with cows proved that effective smallpox vaccine could be produced, and he advised Maḥmūd II to institute a vaccination campaign in Istanbul. He contributed much to modern Turkish medical terminology, especially to anatomical terms. His five-part series on anatomy, physiology, pathology, surgery, and pharmacology, written in plain Turkish, included

translations from western works. The anatomy, *Mirʾātu ʿl-ebdān fī teshrīḥ-i aʿdāʾ-i ʿl-insān*, the first medical work printed in Turkish (Istanbul 1820), contained Turkey’s first accurate anatomical illustrations, often modelled after those in Diderot’s *Encyclopédie*. Shānī-zāde’s *Taʾrīkh*, running from Maḥmūd II’s accession to 1820-1, exhibited cautious westernising leanings, mentioning such topics as parliaments, insurance and quarantine.

**SHANSI** (Shan-hsi, Shan-xi), a province of north Central China watered by the Huang ho (Yellow River) and its tributaries. Of the total population of Shansi which numbers 32,882,403, Muslims (*Hui-min*, *Hui-tsu*) number about 130,000 (in 1990). Densely-populated places of Shansi Muslims are: Hsi-an (pop. 53,753), Hsien-yang, Ta-li (Tʿung-chou), Wei-nan, Pao-chi, An-kʿang (Hsing-an), Nan-cheng (Han-chung) and other villages along the Wei River. The Muslim population of Shansi before 1862 is estimated at about 1,500,000-2,000,000, but about 1,000,000 of them were reportedly slaughtered by Han Chinese during the Muslim Rebellion of 1862-78; others fled to neighbouring Kansu [q.v.] province for safety.

As to the origin of Shansi Muslims, there were some Muslims in Shansi under the Tʿang dynasty (8th-9th centuries), while many Arab and Persian Muslims emigrated from West Asia to Shansi under the Mongol Yüan dynasty in the 13th-14th centuries. In 1280 Naṣr al-Dīn, son of a Muslim general and governor of Yünnan province, Shams al-Dīn Sayyid-i Adjall ʿUmar (1211-79), came to Shansi as local minister, and Muslims there increased. In the late 13th century, Prince Ananda, Yüan viceroy of Shansi and Tangut, was stationed at Kinjānfū (Hsi-an) with an army of 150,000. He was a believer in Islam from early childhood, and it is reported that a great number of the troops were converted to Islam (Rashīd al-Dīn). Under the Ming dynasty which overthrew the Yüan, Shansi Muslims were naturalised as Chinese Muslims (*Hui-min*). In April 1862, when a group of Taiping rebels invaded southern Shansi from Sichuan, the Chʿing authorities who tried to attack them happened to mishandle local Muslims, between whom and the local Chinese in Shansi there had long been antagonism. At first, Muslims at Hua-chou broke out against local Chinese inhabitants, and Muslim rebellion spread over various places along the Wei River, extending to Kansu province. The Chʿing authorities managed to suppress those Muslim rebels, and even massacred a great mass of Shansi Muslims. Consequently, they were dispersed and their population considerably decreased up to the early 20th century.

Shansi Muslims mostly belong to the Hanafī rite like other Chinese Muslims. Originally, they had about 300 mosques in Shansi but they have now 118 mosques, large and small, the most prestigious and

archaic one being *Hsi Ta-ssü* (West Large Mosque) at Hsi-an. Shansi Muslims have been and are engaged in retail trade, restaurant and inn-keeping, cattle-breeding, fur-trading, farming and transport. Hsi-an has been historically a centre of Chinese Muslim culture and learning in Shansi since Ming times. Shansi Muslims now co-exist with Han Chinese under the minority peoples' policy of Communist China, as is the case with other provinces.

**SHANT MĀNKASH**, the modern Simancas, a village of the Spanish province of Valladolid, some 10 km/6 miles from that town, on the Douro, known above all for its castle, in which the state archives of Castile, mainly for the 16th and 17th centuries, are preserved.

The site, situated on a bluff commanding a ford over the Douro, was occupied in Roman and Visigothic times, and "repopulated" by Alfonso III, King of León, together with other towns along the line of that River (Zamora, Toro and Dueñas), probably in the last years of the 9th century, when the Christians were able to profit from the feeble state into which the amirate of Cordova had been plunged. After the accession of 'Abd al-Rahmān III and the "restoration" of the Umayyad caliphate, the state of al-Andalus sought to regain the lost territory to the north of the Meseta.

In 327/939 the caliph personally led an expedition, the *ghazwa al-kudra*, especially aimed at the town of Sammūra/Zamora. But on 11-12 Shawwāl/8-9 August he suffered a check before Simancas, followed by another defeat, in the course of his withdrawal, that of al-Khandak/Alhándega. This defeat was apparently to be explained by the treachery of certain officers in the caliphal army, marked by the crucifixion of 300 of them after the return to Cordova. There has been much discussion on how *al-khandak* ("the trench", or a place thus named) should be understood and on the place in question, and consequently whether there were two successive battles (Simancas and Alhándega) or just one (Simancas, finishing in the trench). Dozy's theory, on the slender basis of the opinion of Spanish authors of the 16th century (cf. his *Recherches*<sup>3</sup>, i, 161), placed al-Khandak to the west of Simancas, near Salamanca, towards the river Alhándega, an affluent of the Tormés, but this was opposed by M. Gómez Moreno, who placed it in the opposite direction, at Albendiego, in the modern province of Guadalajara, on the Roman road from Osma to Sigüenza, and by Lévi-Provençal who, after having followed Dozy in his *ET* art. *Simancas*, in 1950 thought, relying on the texts of Ibn al-Khaṭīb and al-Himyarī which he had published, that the reference was to the trench into which Ramiro II's troops hurled down troops of 'Abd al-Rahmān al-Nāṣir at the end of the battle of Simancas.

But doubts seem to have been raised since the publication of vol. v of Ibn Hayyān's *Muktabis*, reproducing the narrative of 'Isā al-Rāzī, which agrees on this point with the most ancient Christian source,

the *Anales Castellanos Primeros*, and since P. Chalmeta's article *Simancas y Alhándega*, in *Hispania*, xxxvi/133 (1976), 359-444. There could well have been two distinct battles, separated by some fifteen days, with the second one to be situated towards the east, in the confused, mountainous zone separating the upper valley of the Douro from that of the Henares, even if a completely satisfying solution of its exact localisation has not yet been found. There is a similar divergence regarding the seriousness, and the long-term significance, of the caliphal defeat. Chalmeta reduces the event's significance, *pace* the Spanish historical tradition. It is nevertheless true that 'Abd al-Rahmān III led personally no more expeditions into Christian territory after this one, in which he was almost captured, and that the military reforms of al-Manṣūr, with long-term effects in the period of the fall of the caliphate, responded, at least in part, to the lack of confidence which could be accorded to the officers of the *qjund*, as appeared on the Simancas battlefield.

The abortive attempt of 'Abd al-Rahmān III towards the Meseta del Norte was taken up later, with greater tenacity, by Ibn Abī 'Āmir al-Manṣūr. In particular, in his eighteenth campaign (373/983), he captured and destroyed Simancas. But if the *hāqīb* envisaged a policy of reconquest, and not merely one of devastation, in these regions, and had the intention to hold at least the line of the Douro, with a garrison and a governor at Sammūra/Zamora, this policy collapsed with the crisis of the caliphate of Cordova in 399/1009.

(J.-P. MOLÉNAT)

**SHANT YĀQUB**, the Arabic form of the place name St. James of Compostella, Span. Santiago de Compostela, at the present time in the province

of La Coruña, in Galicia.

The "discovery" in the first half of the 9th century of the grave of the Apostle St. James the Greater, who had allegedly come to evangelise the Iberian Peninsula, and whose remains were said to have been brought, after his death in Jerusalem, to Galicia, was the origin of the town's development and of the pilgrimage thither, its church being described by Ibn 'Idhārī as the equivalent, for the Christians, of the Ka'ba for the Muslims.

In 387/997 Ibn Abī 'Āmir al-Manṣūr led against the shrine his 48th campaign, the most famous one, for which Ibn 'Idhārī has transmitted a fairly detailed account, probably stemming from an official bulletin announcing the victory. The expedition left Cordova, passed through Coria and then through the north of modern Portugal, reaching its destination after crossing difficult mountainous regions. It was supported by a fleet which had left the great arsenal of Kaṣr Abī Dānis (Alcacer do Sal), and by the rallying to it of some at least of the military and civil chiefs, the counts, of the lands through which it passed. Having arrived at Santiago on 2 Sha'bān/10 August, it found the town abandoned by its inhabitants; the army then destroyed it completely in the course of the following week, including the shrine, but not the tomb itself, respected on al-Manṣūr's express orders. Part of the army pushed on northwards to the outskirts of La Coruña, but the mass of troops beat a retreat and returned to Cordova, after having once more devastated the lands of the king of León but not those of the counts allied to the Muslims. According to the Christian sources, the Muslim army is said to have suffered from dysentery on its retreat.

The character of this expedition, more a demonstration of force to impress and humiliate the Christian enemy, but also to show them the possibility of a rally of forces, than a real operation for conquest, is further illustrated by the episode of the gates and bells of the shrine, brought to Cordova on the backs of captured Christians, to be placed in the roof or to serve as lamps in the Great Mosque there, an episode recounted by other sources, Muslim as well as Christian (Ibn Khaldūn, al-Maḳḳarī, Jiménez de Rada and Lucas of Tuy).

It nevertheless seems that the 'Āmirid sacking only momentarily slowed up the growth of Santiago de Compostela; Bermudo II, king of León (d. 999) immediately began rebuilding it. The building of the Romanesque basilica began in 1075.

(J.-P. MOLÉNAT)

**SHANTABARIYYA**, a place name of mediæval al-Andalus (the two component elements *shanta* and *bariyya* may be written separately or as one), the Arabic transcription of Spanish Santaver, ancient Sontebria (Centobriga).

It denoted both the province and its chef-lieu. The *kūra* (*balad*, *bilād*, *'amal*, see Ibn Ḥayyān, *Muḳtabis*, ed. Makkī, Beirut 1973, 330, ed. Chalmeta et alii, Madrid 1979, v, 136, 245) "province" of Shantabariyya lay on high ground not far from the confluence of the Guadiela and the Tagus to the south-east of Guadalajara (Wādī 'l-Hidjāra) (Lévi-Provençal, *Hist. Esp. mus.*, i, 112 n. 3). It was a fertile region famed for its pasture and arable land, and its valleys grew hazel nuts and walnuts (Yākūt, *Buldān*, ed. Beirut, iii, 366; Lévi-Provençal, *La "Description de l'Espagne d'Ahmad al-Rāzī"*, in *And.*, xviii [1953], 80). The difficulty of access of much of its mountainous areas, and the disinclination of its inhabitants (largely Berber) to submit to the central authority in Cordova, made Shantabariyya the focus of more than one revolt. The most serious was that launched by the celebrated Fāṭimid *dā'ī* or missionary, the Berber Shākayā b. 'Abd al-Wāḥid, at the head of his fellow-countrymen in 151/768. Several expeditions, some led by 'Abd al-Rahmān I in person, were needed before it was finally and definitively suppressed in 160/776-7.

The important strategic position of Shantabariyya led the most powerful of the Berber families of al-Andalus, the Banū Mūsā b. Dhī 'l-Nūn (Dozy, *Hist. des Mus. d'Espagne*, Leiden 1932, i, 86; DHU 'L-NŪNIDS), to make it their inaccessible and easily defensible residence (*iktā'adūhā dār man'at<sup>m</sup>*). Al-Faṭḥ and Muṭarrif, Mūsā's two sons, brought together their forces, rebelled against the authority of Cordova and became masters of Shantabariyya. They built there fortresses and fortifications, and founded new villages, and under their rule, the population grew and the region enjoyed prosperity and security (Ibn Ḥayyān, ed. Antuña, Paris 1937, iii, 17). In particular, al-Faṭḥ constructed the town of Uklīsh (Uclès) at the end of the 9th century, which became the chef-lieu of the region (al-Ḥimyarī, *Rawd*, ed. 'Abbās, Beirut 1984, 61). It was not until 312/924 that it abandoned all tendency towards independence. In that year, 'Abd al-Rahmān III, on his return from his victorious expedition to Pamplona, (the *ghazwat Banbalūna*) against the Christians, passed through the district of Shantabariyya, where he

received the submission of two of the Berber **Dhu** 'l-Nūnids, Yahyā b. Mūsā and his nephew Yahyā b. al-Fath b. Mūsā.

At the present time, there still exists a fortress some 60 km/35 miles to the east of Guadlaja and ca. 70 km/40 miles to the north-west of Cuenca, called Castro de Santaver (Ibn Ḥayyān, ed. Makkī, 341 n. 560). However, we have no information which might allow us to acknowledge or to deny any link between this citadel and our Shantabariyya.

**Bibliography:** In addition to references in the text, see the *EL* arts. 'ABD AL-RAḤMĀN. 3. and AL-ANDALUS, at vol. I, 490. (OMAR BENCHEIKH) AL-SHANTAMARĪ, ABU 'L-ḤADĪDĪ YUSUF b. Sulaymān al-Andalusī al-Nahwī, Spanish Muslim grammarian and philologist, known as al-A'lam al-Shantamarī (the first epithet from his hare-lip; it became a family name, and his eldest son, *kādī* at Shantamariyya, became known as Ibn al-A'lam), born at Shantamariyyat al-Gharb [q.v.] (modern Faro, on the southern coast of Portugal) in 410/1019, died at Seville in 476/1083. In 433/1041 he moved from his home town to Cordova, where he studied, and became, in his turn, a famed master in the fields of grammar, lexicography and classical Arabic poetry, fields which enjoyed a great florescence in the Andalus of his time. In the years before his death, he became blind.

He was a prolific author (see Ibn Khayr, *Fahrasta*, 315, 388-9, 422, 432, and 'Iyād, *Ghunya*, 178, 229), and part of his output has survived till today. Amongst his grammatical works were his *Djuz' fihi al-farḥ bayn al-mushib wa 'l-mushab wa 'l-ma'sala al-zanburiyya* (given in al-Makkārī, *Nafḥ*, iv, 77-9); *Djuz' fihi ma'rifat hurūf al-mu'jam*; *K. al-Ma'sala al-raḥīd*; *al-Mukhtār fi 'l-nahw*; *K. al-Nukat fi Kitāb Sibawayh* (ed. Z. 'A. Sultān, Kuwayt 1987); and *Sharḥ al-Djūmal li 'l-Zadīdjādī* (GAS, ix, 90 no. 10). His most famous work is probably the *Sharḥ dawāwīn al-shu'arā' al-sitta al-qāhiliyyīn* (authors of the *Mu'allakāt* except al-Hārith b. Ḥilliza) (GAS, ii, 109, 112, 122, ix, 265-6; the most recent editions are those of M. 'Abd al-Mun'im Khafādjā, 1954, and of Beirut 1992; and there are separate editions of each of the six commentaries). Al-Shantamarī wrote other commentaries on the works of Abū Tammām (*Sharḥ K. al-Ḥamāsa li-Abī Tammām*, ed. 'Alī Mufaḍḍal Ḥammūdān, Beirut-Damascus 1992; and *Sharḥ shi'r Ḥabīb* = Abū Tammām), as well on verses gathered together in grammatical works (*Sharḥ abyāt al-Djūmal li 'l-Zadīdjādī*, GAS, ix, 90 no. 11; and *K. 'Uyūn al-dhahab fi sharḥ Kitāb Sibawayh*, GAS, ix, 60 no. 43, ed. with Sibawayh's *Kitāb*, Cairo 1316-17/1889-90). He also compiled a *Fahrasta* and an opusculum called *Ma'rifat al-anwā'* (résumé in *Djuz' fihi mukhtaṣar al-anwā'*). For his transmissions of grammar and poetry, see Ibn Khayr, 305, 321, 324-5, 328-30, 333, 338, 340, 346-7, 389, 392, 398, 402-3.

(MARIBEL FIERRO and MANUELA MARÍN)

**SHANTAMARIYYAT AL-GHARB**, a town of

mediaeval al-Andalus, the modern Faro, capital of the Algarve province [see **GHARB AL-ANDALUS**] of southern Portugal.

It passed under Arab control in Shawwāl 94/June 713 after the capture of Seville. Both the town and the region took on the name of Roman antiquity, Ossónoba, in the form *Ukshūnuba* or better, *Ukshūnuba*. Then from the 4th/10th century there appears the name Shantamariyya or Shanta Mārīlat al-Gharb, and, in the next century, Sh. Ḥārūn, the name of one of the masters of the town at that time. These two qualificatives enable the town to be distinguished from the town Shantamariyyat al-Razīn or Sh. al-Sharḥ [q.v.], sc. Albarracín. It was the Christians who, in 1233, corrupted Ḥārūn into Faaron or Faaram, soon afterwards yielding Faro.

The Arabic sources are hazy about the town and its district until the 4th/10th century, describing it then as relatively prosperous (E. Lévi-Provençal, *La description de l'Espagne d'Ahmad al-Rāzī*, in *al-And.*, viii [1953], 91; Ibn Ḥawqāl, ed. Kramers, 115). But these same sources show that towards the end of the 3rd/9th century and the opening of the next one, a dynasty of *muwallad* origin, the Banū Bakr b. Zatlafa, restored the town, which became the capital of a sort of small, autonomous state during the amirate of 'Abd Allāh and the beginning of that of 'Abd al-Raḥmān III (Ibn 'Idhārī, *Bayān*, ed. Dozy, re-ed. G.S. Colin and Lévi-Provençal, Leiden 1948-51, ii, 137) until 317/929. Shantamariyya lost its position as the first town of the Algarve to Silves [see **SILVES**] in the course of the 4th/10th century, though it remained the seat of a *kādī* (J.D. Domingues, *Ossónoba na época árabe*, in *Anais do Municipio de Faro*, Faro 1972, 37-8). It again became the capital of a petty state in the period of the *Mulūk al-Tawā'if* [q.v.] under the rule of Sa'īd b. Ḥārūn (417-33/1026-42) and then of his son Muḥammad until 443/1052, when Shantamariyya, like all the region, passed under the rule of the 'Abbāids [q.v.] of Seville. It is mentioned under ensuing dynasties, such as the Almoravids and the next period of Taifas—for a brief while under the authority of the Šūfī Ibn Kaṣī of Silves—and then the Almohades. It was one of the last towns of the Algarve to fall, in 647/1249, to Alfonso III of Portugal.

The town remained one of the centres of the Yaḥsubī Arabs who came there at the time of the conquest, but several bloody defeats at the hands of 'Abd al-Raḥmān I and the latter's killing of the chief of the Abu 'l-Ṣabbāḥ al-Yamanī clan in 163/779-80 weakened this group, which fell back on Niebla and Silves. The seizure of power, in the 880s, by the Banū Bakr b. Zatlafa marked the ascendancy, as a local power, of the *muwalladūn*, who "transformed the town into a fortress" (*ḥiṣn*) (Ibn 'Idhārī, *loc. cit.*). This reconstruction was part of a general movement of expansion and prosperity in the Algarve during 'Abd Allāh's amirate inspired by local forces (Ibn Ḥayyān, *Mukhtab*, ed. 1979, 96). The seizure of power by other *muwalladūn* during the 5th/11th century was based on the growing popularity of the pilgrimage to the Virgin Mary mentioned by al-Kazwīnī (*Āthār*, ed. Wüstenfeld, 394) and al-Himyarī (ed. and tr. Lévi-Provençal, *La Péninsule ibérique au Moyen Age d'après le "Kitāb Rawd al-Mi'ār"*, Leiden 1938, text 115, tr. 140), which was to last till the Christian reconquest (Alfonso X, *Cantigas de Santa Maria*, ed. W. Mettmann, Coimbra 1959, no. 183) and in which both Christians and Muslims, probably *muwalladūn*, took part. Arabic authors like al-Idrīsī evoke the florescence of the Muslim community, shown by at least a congregational mosque, a mosque of the quarter and a sort of assembly

(*ḡamā'a*). For intellectual life, we know of the names of some well-known poets and writers from there, such as Ibn Ṣāliḥ al-Shantamarī in the 7th/13th century, some famous *kādīs* there and the importance of the town and its district for Ṣūfism. The town also flourished economically through its position as a port, with al-Himyārī (*loc. cit.*) mentioning that the port was frequented by ships and had a dockyard for naval construction (*dār al-ṣinā'a*). Maritime activity increased in the 6th/12th century through the efforts of the Banū Hārūn, who, like other Taifas of the coastlands, had fleets and dockyards supplied by the plantations of pines on the islands and in the hinterland of the town. Its site along a lagoon favoured fishing, an activity stimulated by the pilgrimage, and the cultivation of figs and grapes and production of oil had a commercial orientation towards al-Andalus, the Maghrib and Egypt.

The town itself faced both landwards and seawards, being "built on the shores of the ocean, with its walls bathed by the waves of the high tide" (al-Idrīsī, *Opus geographicum*, Naples-Rome 1975, text 543, tr. Dozy and de Goeje, *Description de l'Afrique et de l'Espagne*, repr. Leiden 1968, 217). The mediaeval walls, largely rebuilt by the Christians in the 13th century, have retained, to the north-west of the town, traces of a gate topped by a Norman arch, leading one to think that the internal area of about 9.5 ha corresponds to the Islamic *madīna* (B. Pavon Maldonado, *Ciudades y fortalezas lusomusulmanas. Crónicas de viajes por el sur de Portugal*, in *Cuadernos de Arte y Arqueología*, v [Madrid 1993], 71-9). The sites of the cathedral, built two years after the reconquest of the town, and the fortress, protecting access to the seashore, correspond respectively to the sites of the Great Mosque and the Muslim *kašaba*.

In 1252 the town was placed under the protection of Alfonso X of Castile, protector of the Muslim ruler Ibn Maḥfūz. Once it returned to Portuguese hands in 1266, endowed with charters, it speedily resumed its maritime role.

**SHANTAMARIYYAT AL-SHARK**, a name often confused in the sources with *Shantabariyya*, which corresponds to the depopulated modern place name Santaver in Cuenca province. *Sh. al-Shark* (thus to distinguish it from *Sh. al-Gharb*) corresponds to modern Albarracín, a small town 45 km/28 miles from Teruel, in the province of the same name in Aragon. The town derives its present name from the Hawwāra Berber family of the Banū Razīn [*q.v.*], who were established at an unknown date in the Sahla, the fertile district around Albarracín. The supposed ancestor Razīn al-Burnusī is said to have come with the conqueror Ṭārik b. Ziyād, and was then given land at Cordova. His alleged descendants (since Ibn Ḥazm seems to deny the connection) governed the

Sahla with more or less loyalty to the Umayyads. After a revolt of the Sahla in 346/957-8 headed by Marwān b. Hudhayl b. Razīn, the family submitted to 'Abd al-Raḥmān III. In 361/972 Yahyā b. Hudhayl and his sons, and Marwān's four sons, obtained from al-Ḥakam II a grant, in favour of the latter, of the *'amal* of their father, and three years later, the nine sons of Yahyā likewise obtained a grant of their father's heritage.

During the crisis of the caliphate, in 403/1012-13 a member of the family, Abū Muḥammad Hudhayl b. 'Abd al-Malik, called Ibn al-Aṣḡa', proclaimed his independence as *hādīb*, with the titles 'Izz al-Dawla and *Dhu 'l-Maḡdayn*. Sulaymān al-Musta'in, the "caliph of the Berbers", confirmed him in his lands, but also reproached him, probably for not being able to intervene in his favour. From the next year onwards, Hudhayl built, or rebuilt, his little capital, *Shantamariyya*, whose name, hitherto unknown, since only Sahla is found, suggests the presence, otherwise imperfectly known, of a Mozarab community. Hudhayl maintained himself, staying apart from the wars of the Taifas, and fending off al-Mundhir of Saragossa, who coveted his territories. The sources praise his good qualities and the prosperity he brought to his principality.

When in 436/1044-5 he died after a reign of over 30 years, his son 'Abd al-Malik, called in his father's life time Ḥusām al-Dawla and then subsequently *Djabr al-Dawla*, al-*Hādīb Dhu 'l-Riyāsatayn*, succeeded him, with an even longer reign of 58 solar years. The sources regard him harshly, but the times were certainly now less propitious. He may possibly early have suffered attacks from Castile, though the notice of Ibn al-Kardabūs that Ferdinand (1037-65) is said to have taken *Shantamariyya*, *balad Ibn Razīn*, is unconfirmed elsewhere. After the capture of Toledo by Alfonso VI (478/1085), he had to accept with a good grace the insults of the Christian king, who sent him a monkey in exchange for his presents. His vacillating policy reveals the feebleness of his miniature principality.

After Zallāka (479/1086), he ceased paying tribute to Castile-León, but three years later had to accord it to the Cid. In 1092 he annexed Murviedo (Sagonta), and concluded a treaty of friendly neutrality with the Cid. When the latter besieged Valencia, 'Abd al-Malik tried to ally, early in 1093, with the king of Aragon in order to help him occupy the town. But the Cid, warned by the Aragonese, invaded 'Abd al-Malik's lands, and forced him to help in the siege of Valencia, which fell in June 1094. He then allied with the Almoravids who came to besiege Valencia (487/autumn 1094), and took part in the battle of Cuarte, from which he fled. When 'Abd al-Malik died in 496/1103, his son Ḥusām al-Dawla Yahyā succeeded him. But with Valencia now in the hands of the Almoravids, the governor Abū 'Abd Allāh Ibn Fātima deposed Yahyā and annexed his state (497/1104).

Ca. 1170 Albarracín passed into Christian control, either, according to the traditional account, handed over by Ibn Mardaniṣh [*q.v.*] Lobo or Lope to the lord of Navarre, Pedro Ruiz de Azagra, or, according to J.M. Lacarra, by a Navarrese conquest. In 1172 the bishopric of Albarracín was set up, but—reflecting the lack of knowledge of the old ecclesiastical divisions and the probable disappearance by now of the Mozarabs of the district—the bishop was first given the title of the ancient bishopric of Arcavica (*Arcavicense*), before this was corrected to that of Segobriga (*Segobricense*). Henceforth, the region formed a petty independent state, under Christian lords, the Azagras

and then the Laras, until Pedro III of Aragon's conquest of 1284, though Albarracín was not definitely incorporated under the Aragonese crown till 1370. During this period, the presence of Mudéjars is as hypothetical as that of Mozarabs in the preceding one. It would appear, rather, that the region's Muslim population had been evacuated for strategic reasons, to the proximity of Valencia, under Muslim control until 1238, and that the Mudéjar presence attested at the end of the mediaeval period results, as at Teruel, from the establishment there of Muslims from other Christian zones and former captives, settled for economic reasons.

**SHANTARĪN**, SANTARÉM, a town in Portugal and chef-lieu of a district, held by the Muslims until the mid-6th/12th century. It is situated on a plateau with escarpments 100 m/340 feet high, on the shore of the right bank of the Tagus, a little distance before it empties into the Atlantic. It is in the midst of a fertile district, sprinkled with *lezírias* (< Ar. *al-qazira*) fertilised by the alluvium of the river. It was already well-known to the Arabic geographers under its name,

of Latin origin, of al-Balāṭa (> Port. Valada, Alvalade), and had always held a strategic role in the communications between the north and south of the country.

Its main Arabic name stems from the name in Low Latin, connected with a saint, \**Santaren* (Costa, *Santa Iria*), which superseded the Roman name Scallabis, being the site of an important *conventus* of the Iberian province of Lusitania. In Islamic times, it kept its status as the capital of a district (*kūra*), whose fate was linked, in different ways, with those of Coimbra (Ḳulumriya [q.v.]) to the north and Lisbon (al-Uḡhbūna [q.v.]) to the south.

The town must have been conquered by the Arabs at some time in 95-6/714-15, at the same time as all the far west of the Iberian peninsula. According to the lost chronicle of Ibn Muza'ayn (Silvès and Seville, 5th/11th century), preserved in a Moroccan source of the 11th/17th century (Dozy, *Recherches*<sup>3</sup>, i, 73-4 and p. IV of Appx.), Santarém is said to have benefited, together with Coimbra, from a treaty of capitulation which guaranteed a considerable autonomy, probably analogous to the well-known concession to the Visigothic duke Theodomir/Tudmir for the territories which he controlled at the other side of the peninsula, Murcia/Mursiya. This treaty was a determining factor from the viewpoint of population patterns, given that there were not, to the north of the Tagus, in the territory now within Portugal, Arab colonists established like those in the southern districts of Beja/Bādja [q.v.] and Osonoba/Ukshūnuba [q.v.]. Consequently, Islamisation was on a much reduced scale, and the Arabisation of the indigenous people, who became Mozarabs [q.v.], was the result of economic and administrative factors and the influence of the vigorous civilisation of al-Andalus rather than from the presence of Muslim colonists from outside.

At the same time, the politico-military history of all the territory between the Tagus and the Douro was characterised by a constant confrontation between the Muslims in the south and the Christians in the north, and even by alternations of power, whilst the local population remained passive onlookers. The sources mention no participation by this region in the many movements for autonomy and challenge to the central government in Cordova which punctuated the history of the regions to the south of the great river. The definitive conquest of Shantarīn by the Christians in Shawwāl 541/March 1147 was to be decisive for their advance southwards and the stabilisation of the frontier along the line of the Tagus. The last major siege of the town, led by the Almohad caliph Abū Ya'qūb Yūsuf [q.v.] in 580/1184, cost him his life (Dozy, *op. cit.*, ii, 443-80; Huici, *Almohades*).

Despite the feeble Arab and Muslim presence there, Shantarīn produced several litterateurs during the literary and intellectual *belle époque* of the Aftasids [q.v.] of Badajoz and in the wake, probably, of the politico-judicial authority exercised by the celebrated *kādī* and *adīb* Abū 'Umar Ibn 'Abd al-Barr [q.v.]. Thus poets included the younger son of the latter, Abū 'Abd Allāh Muḥammad, Abū 'Umar Yūsuf b. Kawthar and Ibn Sāra (d. 517/1124). Above all, there was Ibn Bassām al-Shantarīnī (d. 542/1147 [q.v.]), the jewel in the crown of the town's literary men. Since the appearance of the article on him in this *Encyclopaedia*, one may mention four large-scale works on him and on his *Dhakhira*, not counting the excellent complete edition of Iḥsān 'Abbās, 8 vols., Beirut 1979: Ḥ.Y.Ḥ. Kharyūsh, *Ibn Bassām...*, 'Ammān 1984; two doctoral theses, by 'A.A.M. Ḍjamāl al-Dīn, Madrid Univ. 1977 (cf. *Awraq*, ii [Madrid 1979]), and Kh.L. Bakir,

Glasgow 1993 (cf. *JAL*, xii [1994]); plus a master's dissertation by E. Kapyrina-Koroleva, Moscow 1994. Whilst the first two works concentrate mainly on the abundant historical sources of the *Dhakhira*, the remaining two deal directly with the intrinsic literary value of the famous anthology.

During the period of Christian domination, the Muslim *Mudjares* [q.v.] were by no means concentrated exclusively within the *mourarias* of Santarém, and they devoted themselves to the general economic activities of the *mouros* of the Kingdom of Portugal.

Combining the Arabic geographical texts and the mediaeval Christian sources, the configuration of the town in Islamic times can be approximately reconstituted. There was a strongly defended fortress (*hiṣn*, *kaṭa*), with ramparts and towers, perched on an inaccessible rocky spur. The *madīna* was there, as also the congregational mosque (very likely built by al-Hakam I, 180-206/796-822), later turned into the church dedicated to the Virgin Mary in the heart of the Christian Alcáçova (< *al-kaṣaba*). At the foot of the mountain, on the banks of the river, there was a suburb attested at least since the middle of the 4th/10th century; this is the modern Ribeira quarter, formerly also called *Sesserigo* and the location of one of the two Muslim quarters. Certain traces could possibly reveal the existence of another urban nucleus *extra muros*, in the eastern part, around the Marvila quarter, which was the heart of the Christian town and to the north-west of which was located the second and more lasting *mouraria*. The modest suburb called Alfange (< *al-hanash* "serpent"), which grew up, like the Ribeira suburb, on the banks of the river but on the other side of the projecting elevation, to the south, does not necessarily date from the Islamic period. As elsewhere in al-Andalus, this place-name could refer to a simple gate giving on to the ravine and the tortuous pathway leading up to it (*Bāb al-hanash*). Moreover, the *Ermida da N.S. do Monte*, from its strategic position, its dominating role and its ancientness, could well represent the later evolution of a little *rābīta* or *zāwiya*.

(A. SIDARUS)

**SHĀPŪR** (P.), the NP form of MP *Shāhpūr* "king's

son", usually Arabised as *Shābūr*, *Sābūr*, Syriac *Shābhōr*, Greek Σαπόρης or Σαβουρ (see Justi, *Iranisches Namenbuch*, 284 ff.), the name of various monarchs of the Sāsānid dynasty in pre-Islamic Persia. For the detailed history of their reigns, see *SĀSĀNIDS*. Here, only such aspects as impinged on the Arabs will be noted.

**Shāpūr I**, son of Ardāshīr Pāpakān (r. 239 or 241 to 270 or 273) is known in Arabic sources as *Shāpūr al-Djunūd* "Sh. of the armies" (e.g. in al-Ṭabarī, i, 824, tr. Nöldeke, *Gesch. der Perser und Araber*, 28). In the Arabic sources, he is particularly connected with the capture from the Romans and the sack of the Arab city-state of northern Irāk, Hatra (Ar. al-Ḥaṭr), which had been under Parthian cultural and political influence. Around this event was woven a romantic story (found in the *Khudāy-i nāma* transmitted by Ibn al-Muḳaffa' [q.v.] and in an Arabic tradition by Ibn al-Kalbī) that the city was betrayed to the Persians by the local ruler's daughter, who had become enamoured of *Shāpūr* (for details, see AL-ḤAṬR, and C.E. Bosworth, ch. *Iran and the Arabs*, in *Camb. hist. Iran*, iii/1, 595-6). This *Shāpūr* is also credited by the Arabic geographers and historians with the foundation of various cities and towns of Persia, with compound names which included his own, such as *Djundīshāpūr* [see *GONDESHĀPŪR*] (these are listed in *ET* art. *SHĀPŪR*, at IV, 314a).

**Shāpūr II**, son of Hormizd II (r. 309-79), was one of the greatest of the Sāsānid emperors, and had considerable contacts with the Arabs in his endeavours to protect the fringes of his Mesopotamian provinces from desert Arab marauders. According to Arabic authorities (including Ibn Kutayba, al-Ṭabarī, al-Mas'ūdī, al-Tha'alibī, etc.), he led a punitive expedition into eastern Arabia against such tribes as the 'Abd al-Qays and the Iyād, although the story that he penetrated as far as Medina must be fictitious. Arab captives had their shoulders pierced or dislocated, whence *Shāpūr*'s nickname in the Arabic sources of *Dhū 'l-Aktāf* "the man of the shoulder-blades". He is likewise described as constructing a line of defensive forts, walls and trenches (the *khandak Sābūr*) in Irāk, along the desert borders, and as garrisoning them, in the fashion of the Romans and their *limitanei*, with Arabs against the other Arabs within the desert (cf. also the role there of buffer-states like that of the Lakhmids of Ḥīra [q.v.]). Again, the building of various cities and towns, where Roman captives were settled, is attributed to him (see *ET* art. *SHĀPŪR*, at IV, 314b-316a).

**Shāpūr III**, son of *Shāpūr II* (r. 383-8), figures little in the Arabic sources, and what details are ascribed to him are probably due to confusion with the preceding *Shāpūrs*.

**Bibliography:** In addition to references given in the article and in *SĀSĀNIDS*, see R.N. Frye, ch. *The political history of Iran under the Sasanians*, in *Camb. hist. Iran*, iii/1, 116-80. (C.E. BOSWORTH)

**SHĀPŪR**, the name of a river of Fārs in southern Persia and also of the mediaeval Islamic town of Fārs which was the chef-lieu of the district of *Shāpūr Khūra*.

1. The river.

This is also called the *Bishāwur* (in Thévenot, *Suite du Voyage de Levant*, Paris 1674, 295: Bouschavir; 296: Boschavir), and river of Tawwadj. It must be identical with the antique Granis, mentioned by Arrian, *Indica*, 39; Pliny, *Nat. hist.*, vi, 99. The lower course, the proper river of Tawwadj, is formed by the junction of two streams, the *Shāpūr* and the *Dalakī Rūd*, rising both in the southwestern border mountains of the

Persian plateau, which extend along the Persian Gulf. The upper course is called by the Arab geographers Nahr Ratīn: this name is, very likely, found in Pliny, *Nat. hist.*, vi, 111, where *Dratinus* (with var. *Ratinus*) must, however, mean the river down to its mouth. This statement must be due to another source than Iuba, on whose authority the Granis was mentioned in vi, 99. In his *Nuzhat al-kulūb*, Mustawfī al-Ḳazwīnī seems to indicate that the Ratīn, whose source is, according to him as well as to al-Iṣṭakhṛī, in the Upper Humāyīdjān (al-Iṣṭakhṛī: *Khūmāyīdjān*) district, is a tributary of the Shāpūr Rūd (tr. Le Strange, 217: "It is a great stream, and it flows into the Shāpūr river, its length, till it joins the Shāpūr river being 10 leagues". By this way of putting things, he can only mean that the river of Tawwādjī originates from two different streams, one of which is the Ratīn. This, then, must be the older name for either the Shāpūr or the Dalakī Rūd. Al-Iṣṭakhṛī (120) represents these facts in the same manner; there it is said that the Ratīn flows through the district of al-Zīriyān (with var.) before joining the Shāpūr.

The other rivers of the system are the Djirra (or *Djarshīk*), which joins the Shāpūr on the left, below *Khishī*, and the *Ikhshīn*. The name of the latter ("blue") may have originated from the colouring property of its waters, mentioned by the mediaeval geographers. *Djarshīk* is the older name of the Djirra river, although in the *Nuzha* *Djarshīk* and *Djirra* are erroneously described as two different streams. The account which the latter work gives of the Djirra is for the most part copied from Ibn al-Balkhī's *Fārs-nāma*. This states (ed. Le Strange, 151) that the Nahr Djirra, rising in the Māṣaram district, waters the lands of Musdjan and Djirra, and part of *Ghundidjān*, after which it joins the Shāpūr. In addition, al-Iṣṭakhṛī mentions the bridge of Sabūk, under which the river *Djarshīk* flows before entering the *rustāk* of *Khurra* (Ibn al-Balkhī's Djirra); after *Khurra*, the stream passes into Dādhīn, where it unites with the *Ikhshīn*. The *Nuzha* makes the Djirra join the Shāpūr and the *Djarshīk* the *Ikhshīn*; as its author erroneously splits up the one river *Djarshīk*-Djirra into two, his account is here worthless.

The *Ikhshīn*, according to al-Iṣṭakhṛī and Mustawfī, rises in the Dādhīn hills, and unites with the Shāpūr at al-Djūnkān. The *Nuzha* calls it a great stream; at present, it is identified with a little water course to the south-west of the lake of Kāzarūn. There appears, then, to be a difference as to the question, whether the *Djarshīk* and the *Ikhshīn* first join each other, and then unite with the river of Tawwādjī, or flow into that stream each apart.

Concerning the Shāpūr itself, the *Fārs-nāma* (152) says that it rises in the mountain region (*kuhistān*) of the Bishāpūr district, which it waters, as also *Khishī* and Dīh Mālik. It flows in the sea (Persian Gulf) between *Djanābī* and Māndistān. This account is repeated in the *Nuzha*. In *Fārs-nāma*, 142, the Bishāpūr district is said to have its water from "a great river, called Rūd-i Bishāpūr". Owing to rice-plantations being there, its water is unwholesome (*wakhīm u nāguwār*). A short description of the river in modern times is given in J. Morier's *Second Journey through Persia ... between the years 1810 and 1816*, London 1818, 49: "a river which ... having pierced into the plain of the Dashtistan, at length falls into the sea at Robilla. It takes its source near the site of Shapour, and when it begins to flow is fresh. But when it reaches the mountains it passes through a salt soil, and then its waters ... become brackish. A lesser stream of the same river branches off before it reaches the salt soil,

and flows pure to the sea".

The mouth of the river is a short distance to the north of Bushīr, near the frontier of the district of Arradjān. Opposite to it lies the island of *Khārik*, on the shipping route from Baṣra to India. The name Māndistān in the Persian geographers is connected by Tomaschek (*Topographische Erläuterung der Küstenfahrt Nearchs*, in *SB Ak. Wien*, cxxi, 65) with the *Deximontani* in Pliny, *Nat. hist.*, vi, 99. According to Pliny, the river (Granis) is navigable for small vessels. Nowadays, the principal mouth presents difficulties to navigation because of its shallows; two minor mouths can be navigated up to some distance. On the present conditions, the delta, and the bitumen wells on the left bank of the river, south of Dalakī, see Tomaschek, *op. cit.*

In Antiquity, there was on the Granis a royal residence, Taoke, 200 stadia from the sea. This must be the same as the mediaeval Tawwādjī (or Tawwaz), from which place the Shāpūr is named river of Tawwādjī. In early Islamic times it was an important trade city, which also had a considerable textile industry; the stuffs named *tawwazīyya* were well-known (see R.B. Sergeant, *Islamic textiles*, Beirut 1972, 52-3). This town belonged to the district of Ardashīr *Khurra* (Ibn al-Balkhī, *Fārs-nāma*, 114). During the 6th/12th century, the place had already declined; in Mustawfī's time (8th/14th century) it was totally ruined. Its site can not exactly be determined; nowadays the coast district of the Shāpūr river is called Tawwādjī. Le Strange thought that the site of the town could be identified with the present Dih Kuhna, "the chief town of the (modern) Shabānkāra sub-district of the Dashtistān district".

On another Shāpūr or Shāwūr, a tributary of the Dizfūl Rūd, see *KĀRŪN*, at IV, 675a.

## 2. The town.

This was the ancient capital of the district Shāpūr *Khurra* of Fārs. According to al-Mukaddasī, it was also called *Shahrastān*; its older name is *Bishāpūr* (from Pahlawī *Wēh-Shāhpūhr*). A naive etymology is found in the *Nuzha*, whose author, Mustawfī, says, that the word *Bishāpūr* is a contraction of *binā-i Shāpūr* "building of Shāpūr". Ibn al-Balkhī, on the other hand, states that the first syllable of the original *Bishāpūr* (with a long *i*) may disappear by way of *takhfīf*.

Shāpūr *Khurra*, the area watered by the system of the Shāpūr-Ratīn, the smallest of the five provinces of Fārs, contained besides the town of Shāpūr some other important localities, e.g. Kāzarūn [*q.v.*], which was regarded as its chief town after Shāpūr had fallen into ruins, in addition to Nawbandadjān and Djirra.

The old town of Shāpūr was situated on the Shāpūr Rūd, at the road from Shīrāz to the sea, to the north of Kāzarūn. Mustawfī gives its situation as long. 86° 15', lat. 20°. Its climate belonged to the *garmsīr* or hot region, but its atmosphere was considered not to be healthy because the territory of the city was shut in by the mountains from the northern side. The environs were fruitful; they produced, besides many kinds of fruits and flowers also silk, the mulberry tree being frequent in that region. Honey and wax also came from its territory. The town was founded by the Sāsānid emperor Shāpūr I. It was one of the three cities where he settled his captives of war. It has been supposed, with much reason, that the emperor made use of the skill of these Roman captives in the construction of his buildings and also in the execution of his famous reliefs that have been found in the ruins. These reliefs relate to the campaigns of Shāpūr against the Romans. Three later rulers, Bahram

II, Narseh and Khusraw II also added each a relief of themselves.

These works of art, already described in detail by Morier, have also been noticed by the mediaeval Islamic geographers; at least, they mention a great statue, standing in a cavern, which European travellers were able to identify.

Local authorities constructed a mythical history of the city from before the times of its Sāsānid founder. It was, according to these traditions, originally built by Tahmūrath, at a time when there existed in Fārs no other town besides Ištakhīr. Later on, it was laid waste by Alexander, to be only renovated by Shāpūr I. The name of Tahmūrath's foundation had been *D.y.n D.lā* (Ibn al-Balkhī, *Fārs-nāma*, 63, 142).

The Muslims subdued Shāpūr Khurra in 16/637, after the conquest of Tawwadj and the battle of Rīshahr. Bishāpūr is mentioned on the occasion of the disturbances which ensued at the beginning of the caliphate of 'Uthmān b. 'Affān; the insurrection in Fārs (25/645-6) against the Arabs seems to have been directed for some time from Bishāpūr by a brother of Shahrak, the governor of Fārs, who had fallen in the battle of Rīshahr. After the submission of the rebels, the inhabitants of Bishāpūr once more broke the treaty; hence it was reduced by Abu 'l-Mūsā al-Ash'arī and 'Uthmān b. Abi 'l-'Ās.

In the time of the al-Muqaddasī (end of the 4th/10th century), the town of Shahrastān or Shāpūr was already decaying, its outskirts being ruined; the environs, however, were well cultivated. He noted the four city gates and the ditch, also the *masjīd al-djāmi'* outside the city. Perhaps this may be the *masjīd-i djamī'* mentioned by Ibn al-Balkhī, whose words seem to imply that it still existed when he wrote (beginning of the 6th/12th century). At the end of the Būyīd rule, the Shabānkāra chieftain Abū Sa'd b. Muḥammad b. Mamā destroyed Shāpūr, but, as Ibn al-Balkhī remarks, in his time the (Saldjūk) government tried to restore the damage. These endeavours may have had an effect as regards the district as a whole, but the city of Shāpūr never rose from its ruins. When Morier visited the site (1809), he found only a poor village, Darīs, in the neighbourhood of the remains. The opinion of this traveller, that the town may have existed till the 16th century of the Christian era because its name occurs in a table of latitudes and longitudes in the *A'in-i Akbarī*, carries no weight, for such a table may have been composed from older sources.

On the other foundations of Shāpūr I, which were called after his name, see the article SHĀPŪR, in addition to which it may be remarked that the town of Shāpūr Khāst, according to the *Fārs-nāma* (63), was situated in Khūzistān, near al-Ashtar.

**SHĀR**, a title of rulers in Central Asia and what is now Afghānistān during the early Islamic period

and, presumably, in pre-Islamic times also. The form *shār* must be an attempt to render in Arabic orthography the MP and NP form *shēr/shīr* (< OP *khshathriya* "ruler", and not from *shēr* "lion"; see Marquart, *Erānshahr*, 79).

The title appears in early Islamic texts on the geography and history of the eastern Iranian fringes. Thus the *Hudūd al-'ālam*, tr. Minorsky 105, comm. 327-8, gives *Shār* as the title of the ruler of the district of Gharchistān in northern Afghānistān [see GHARCHISTĀN], and al-Istakhri, 271, and Ibn Hawkal, ed. Kramers, 443-4, had already spoken of the district as Gharchi al-Shār "the mountainous region of the Shār"; these rulers were vassals of first the Sāmānids and then of the Ghaznawids (see M. Nāzim, *The life and times of Sultān Mahmud of Ghazna*, Cambridge 1931, 60-2).

The title was also borne by the local rulers of Bāmiyān in eastern Afghānistān, with the *Hudūd al-'ālam*, tr. 109, comm. 341, giving it in the form *Shīr* [see BĀMIYĀN].

Finally, the rulers of the branch of the petty dynasty of Abū Dāwūdids or Banīdjūrids [q.v. in Suppl.] which ruled in Khuttal, to the north of the upper Oxus [see KHUTTALĀN], bore the title *Shīr-i Khuttalān*, according to Ibn Khurradādhbih, 40, cf. Marquart, *Erānshahr*, 301.

(C.E. BOSWORTH)

**SHA'R** (A.) "hair, pelt".

1. General.

The Arab poets, pre-Islamic as well as post-Islamic, often describe the hair of the women with whom they have fallen in love (al-'Askarī, *Diwān al-ma'ānī*, ii, 229; al-Raffā', *al-Muḥibb wa 'l-mahbūb*, i, 16-58; al-Nuwayrī, *Nihāya, fann 2, kism 1, bāb 2*; J. Sadan, *Maiden's hair and starry skies*, in *IOS*, xi [1991], 57-88). The context in which these descriptions are found shows a fairly clear situation: the hair of the heads of beautiful women is observed by lovers away from the house, in the open air, on the public road, etc. Sometimes the belles let their hair run down to their feet, sometimes they hide their identity and that of their lover by unbraiding and letting flow their hair around their own bodies and those of their lovers. This comes from their fear of being seen with their lovers by passers-by and calumniators. This poetic reality, which reflects a residue of ancient motifs rather than scenes of everyday life, is given real shape by iconography, above all, that of the Fātimid period (a woman with long hair flowing down to, or almost to the ground, in four clearly-distinguished tresses; D.S. Rice, *A drawing of the Fātimid period*, in *BSOAS*, xxi [1958], 31-9). Moreover, this iconography shows diverse manners of coiffure, like curls of hair in the form of hooks (either the letter *jā'* or *wāw*, *grosso modo*, or other letters, or "scorpions", in the language of the poet Abū Nuwās; see J. Bencheikh, *Poésies bacchiques*, in *BEO*, xviii [1963-4], 60-1) over the temples, a style which began at the court of al-Amīn (d. 198/813; see al-Mas'ūdī, ed. Pellat, § 3451: *aṣḍāgh*). In most of these cases, it is a question of slave girls in interiors.

Nevertheless, one of the duties of a woman faithful to the Islamic law is to cover her hair and the nape of her neck whenever she goes outside [see HUDJĀB]. This question has become one of the symbols of the struggles of contemporary Islamic fundamentalist circles for the piety and purity of the family. This symbol is strongly opposed by those circles who do not consider these teachings about female shame as an integral and rigorous part of the authentic religious tradition. Now, the restrictions imposed by Islam, such

as the prohibition for women of adding wigs or hairpieces to their natural covering of hair, are very clear, and can only develop into a fascinating clash between the ancient religious traditions and Western tastes and concepts of beauty care (see Wensinck, *Concordance*, s.v. *w-s-l*; M. 'A. 'A. 'Amr, *al-Libās wa 'l-zīna fi 'l-sharī'a al-Islāmiyya*, Beirut 1985, 403-7; 'U. 'A.M. al-Tayyibī, *Hukm al-Islām fi 'l-kuwāfir* [= coiffeur] *wa-hallāk al-nisā'*, Cairo 1992; a *fatwā* by al-Kardāwī against the use of wigs in his collected *Fatāwā*, Cairo 1990, 426-8).

In mediaeval times, the jurists permitted dyeing (*khidāb*) of men's hair. The licitness of this usage has become almost unanimous; now, in order to distance the biography of the Prophet Muḥammad from all controversy of this type, one group of jurists stresses the traditions which suggest that virtually all the Prophet's hair remained black up to his death. These traditions attach great importance, not only to the hair of this great personality who serves as a model for all Muslims (the number of his locks, *ḍafā'ir*, *ghada'ir*, generally given as four, the length of his hair, which fell as far as his ears and his shoulders, the methods of combing, laying out, putting oil on the hair, etc.), but also to the hair on his chest, as far as the beginning of the stomach or *masraba* (al-Tirmidhī, *Awṣāf al-nabī*, Beirut 1989, 37-47; Abu 'l-Shaykh, *Akhḥāk al-nabī*, Cairo 1993, 184; Ibn al-Djawzī, *al-Wafā'*, Beirut 1988, 398-402; al-Baghawī, *al-Anwār*, Beirut 1989, i, 148-52; see also Muḥammad b. 'Abd Allāh b. 'Abd al-'Azīz, *Khalk al-nabī wa-khulkuhu*, ms. Leiden Or. 437).

The Muslims limited the size of their moustaches (*ihfā'*, *qīazz*; even a partial tonsure), but they allowed their beards to grow (*ifā'*), except for certain ephes who, by depilation (*naḥf*) of their cheeks, "prolonged" their youth for a few weeks (M. al-Hamīd, *Hukm al-lihya fi 'l-Islām*, Cairo, Dār al-Djihad n.d.; 'A. 'Abd al-Hamīd, *Hukm al-dīn fi 'l-lihya wa 'l-tadkhīn*, Cairo 1984; F. al-Hindawī (ed.), *Wuḍūb ifā'* *al-lihya*, Cairo 1987; 'Umar al-Ashkar, *Thalāth shā'a'ir: al-akika, al-adhiya, al-lihya*, 'Ammān 1991; a *fatwā* by 'A.-H. Kishk forbidding the trimming of beards in his collected *Fatāwā*, vi, Cairo 1988, 103-4). However, it is allowable to pluck the hair under the armpits (*naḥf al-ibṭ*), and the hair on the more intimate parts of the body may be removed by using a razor (*istihdād* or *halk*) or by applying *nūra*, a depilatory paste (see *Concordance*, s.v. *h-d-d*, *h-l-k*, *n-t-f*; al-Djāhiz, *Rasā'il*, ed. Hārūn, i, 388-9; Usāma b. Munkidh, *al-Ftibār*, ed. Hitti, 136-7; al-Suyūṭī, *al-Akhbār al-ma'thūra fi 'l-ittilā' bi 'l-nūra* (= epistle on the usage of depilatories), in his *al-Hawā' fi 'l-fatāwā*, Cairo 1959, i, 524-31; al-Kāsimī, *Kāmus al-sinā'at al-shāmiyya*, i, 37, 103-5, 107-8, ii, 435-6; Lane, *Manners and customs*, end of ch. XVI, since care of the hair and depilation often took place in public baths, and cf. al-'Askarī, *op. cit.*, 152-64, describing grey hair and the dyeing of hair; al-Nuwayrī, *loc. cit.* See also the treatises on public baths: al-Munāwī, *al-Nuzha al-zahīyya*, Cairo 1987, 18, 35-8, 78; al-Kawkabānī, *Hadā'ik al-nammām fi 'l-kalām 'alā mā yata'allak bi 'l-hammām*, Beirut 1986, 48-53, 144-50).

The term *shā'r* also has the sense of "skin, pelt" (human and animal). The wool of sheep is called *sūf* [q.v.], whilst the hair of camels and dromedaries is usually called *shā'r* and occasionally *wabar*; the nomads are called *ahl al-wabar*. This hair or wool can be woven, whence the term *buyūt al-shā'r* for the nomads' tents. Animal pelts are also used to stuff mattresses and valued cushions (Sadan, *Le mobilier*, Leiden 1976, 102).

## 2. Legal aspects regarding human hair.

The dressing of hair is, like many other items of hygiene and ornament, addressed in the works of *sharī'a*. The discussion of its rules has no fixed location in these works, which may indicate that the topic came only lately to be a concern of the jurists. Discussions of hair and its treatment, in addition to the part it plays in *'akika*, *ḥaḍḍaj* [q.v.], and gender distinctions (through requirements to cover the hair), can be found in sections on *wuḍū'* [q.v.], and *albiṣa/libāsāt* [see *LIBĀS*] *mustahsanāt* or *makrūhāt*.

In these works, there is a lingering sense of hair as a sacral substance, an occasion of vulnerability (see Leach, *Magical hair*; Morgenstern, *Rites of birth*). The *locus classicus* for the rules of hair care is the *ḥadīth* specifying the five, or ten, *fiṭra* practices, here understood to mean practices common to all the prophets, or practices that are part of the general *sunna*, or of religion (*dīn*) (see al-Nawawī, *Sharḥ*, iii, 147). These five or ten are practices of elementary hygiene, from cleansing the knuckles and clipping the nails, to circumcision [see *KHITĀN*]. Men and women are enjoined to pluck, shave, or depilate their pubic regions and armpits. Men are to cut (*kaṣṣ*) the moustache and let the beard grow (*ifā'*), and to cut, not shave, their hair. Women may cut their hair. Grey hairs may be dyed.

Characteristically, the *sharī'* rules are meticulous, and are also occasions of discussion and controversy. How best to accomplish these aims is discussed in some detail. The pubis (*al-āna*) is best shaved with a razor (a practice called *istihdād*), as is a portion of the buttocks (*halkat al-dubur*). The armpits (*ibṭ*) are best plucked (*naḥf*), but if that is too painful one may shave, or depilate them (with lime, *nūra*). The beard is to be left full, contrary to the custom of the Persians. It may be dyed, but not black, which would be deceptive. One may dye it black in war, so as to deceive the enemy (Juynboll, *Dying the hair and beard*). It is reprehensible for men to pluck or shave the beard when it first appears, so as to maintain a comely youthful appearance. Women may clip facial hairs, or depilate them, but not pluck them. Preferred dyes for the beard and hair, especially when grey, are yellow or red. Adding to hair by weaving into it other hair (*wasl*), of whatever kind, is not permitted. Hair for men should be worn between the earlobes and shoulders; it should be dressed and parted. The nape (*al-kaft*) of the neck should not be shaved, unless for cupping (*ḥiḍjāma*). Hair of the head should be cut, depending on its length, though some sources suggest every 40 days (al-Nawawī, *Sharḥ*, iii, 148-9); other hair should be cut when it becomes excessive and disgusting (*Mughnī*, i, 72). Hair removed from the head should be buried (*ibid.*).

### 3. In Arabic and Persian poetry.

The ancient Arab poets were interested in two aspects of human hair, namely, women's black splendour of thick, soft and fragrant hair (*far'*) falling over the shoulders in light waves (*dhū'aba*), plaited or worn up and serving as a symbol of beauty, and men's greying and whitening hair (*shayb*), pointing to old age and death and stimulating contemplative meditations.

Due to later urbanism, the ideal of beauty also deals with other hair styles, such as the seductive love locks (*sudgh*), the fore locks (*turra*), the shoulder locks (*limma*) and—mainly under Persian influence—the young man's down.

Originally, comparison between hair styles was rather underdeveloped, probably because most of the terms were of metonymical or metaphorical origin. The Bedouin poets occasionally compared women's exuberant hair (*wahf*) with bunches of dates (Imru' al-Qays b. Hudjr, *Mu'allaka*, 32/35) and al-A'shā's description of his beloved as "a garden whose grapes (= hair) dangle down upon me" was seen as a very uncommon verse (according to Bashshār b. Burd, see al-'Askarī, *Ma'ānī*, i, 244, 6). A more elaborate terminology for hair came into being in the 'Abbāsid period, again, in particular, for the love locks, which are compared sometimes with links of a chain and with annalids (*zurfīn*), sometimes with curved objects such as a scorpion or a polo-stick or the letters *nūn* and *lām* (al-'Askarī, *op. cit.*, i, 245, 247; Ibn al-Mu'tazz, *Diwān*, ed. Khayyāt, 91, 1).

But the incentive for a poetical description of the hair is usually found in a complementary or contrastive reality. In the case of greying hair, there is the visible distinction between black and white, which refers to the internal one between youth and old age. Antithetic metaphors are day and night, darkness and light and, linguistically speaking, there is the alliteration of *shabāb* (youth) and *shayb* (see al-Farazdaq [q.v.], *Diwān*, ed. Beirut 1983, 148 v. 32, and Kushādīm, in *Nihāya*, ii, 23, 15-16). Abū Tammām speaks of the dazzlingly white exterior and the raven-black interior (*ibid.*, 25, 17), and for Rūdākī, dyeing the hair black is not feigning youth but applying colour of mourning about the loss of youth (Sa'īd Nafīsī, *Ahwāl u agh'ār-i ... Rūdākī*, Tehran 1319/1940, vv. 396-7).

In the field of the beauty of the youth of both sexes, contrasts and mental pyrotechnics are stimulated by the opposition between dark hair and white skin. Al-A'shā still compares the black hair which falls over the naked body of his beloved with his *khamīsa* (black garment with edging) lying on glittering gold, but to a poet of the 4th/10th century the down of a beautiful youth appears "as the black of misfortune, which creeps over the white of happiness" (al-Tha'ālibī, *Yatīma*, ed. 'Abd al-Ḥamīd, Cairo 1956, i, 420, 3).

And so the field of fantasy is reached. For Ibn al-Mu'tazz, the polo-stick of the lock drives the ball of the birth-mark (*Diwān*, ed. Lewin, iii, 55, 5), and the scorpion of the lock stops short when he comes too close to the fire of the cheek (*Diwān*, ed. Khayyāt, Beirut 1332/1914, 88, 4); for al-Wa'wā', the "lightning

of the teeth", and for Ibn Ḥamdīs the "light of the forehead", become the leader when they go astray in the night of the hair (*Yatīma*, i, 291, 3, and *Diwān Ibn Ḥamdīs*, ed. 'Abbās, Beirut 1960, 72, 4 from below).

In Persian poetry, hair is completely integrated in the general symmetry of comparison between human and botanical forms of beauty. Lock/down and violet/hyacinth are opposed here, like in Arabic poetry, cheek = rose or eye = narcissus. It may be that this is a heritage of the lyrics of the minstrels (cf. M. Boyce, *The Parthian gōsan and Iranian minstrel tradition*, in *JRAS* [1957], 36). In any case, a play is made later with the corresponding ambivalence of the indications of flowers, like for instance Kamāl al-Dīn Ismā'īl (d. 635/1237) in the first part of the verse (*Diwān*, ed. Baḥr al-'ulūmī, 343, v. 5810):

In the rose-garden (the face), the violets grabbed the hem of the jasmine (the fair skin):

Your field of down countered with a most sweet chin (= "over-trumping").

Already in the most ancient material, the love locks (*zulf*) and the down (*idhār*, also *khaṭf*) dominate the field of the Persian descriptions of hair. Later, they are supplemented by the combination "the arrows of the eyelashes on the bow of the eyebrows" (Anwarī, *Diwān*, ed. Raḍawī, Tehran 1959, i, 34, 3). Sometimes the length of the love lock is emphasised, sometimes its untidiness and its tousled nature. It drags on in interminable windings, curves and knots, 'ayn in 'ayn, as Ma'rūfī says in a comparison with letters (Lazard, *Les premiers poètes persans*, Paris-Tehran 1964, ii, 134, v. 18). It remains the "chain" of Arabic poetry, but becomes also a "trap", a "snare" and a "lasso" (*dām*, *kamand*) and, from the time of Rūdākī (d. 329/1040-1), connected with the image that the hearts of the amorous have to languish in its bonds (Nafīsī, *Ahwāl*, 1038, v. 469).

The swartheness of the hair remains, incidentally, an inexhaustible source for the invention of images in Persian poetry. Reference is made to all that is literally or figuratively black: musk, a Hindu, Ahirman, infidelity, etc. Even in the theosophical visions of 'Ayn al-Kuḍāt Hamadhānī [q.v.], the "black light" of Iblīs appears as a forelock on the luminous head of God (*Tamhīdāt*, ed. 'Usayran, Tehran 1341/1970, 118, ll. 8-9; cf. van Ess, *Theologie und Gesellschaft*, i, Berlin 1991, 345-6).

**Bibliography** (in addition to references in the article): Specific chapters devoted to the theme of poetical treatment of hair are found in *Taḥbībāt* works, like that of Kattānī, ed. 'Abbās, Beirut 1966, 124-31; in collections of motifs, such as that by Abū Hilāl al-'Askarī, *Diwān al-ma'ānī*, Cairo 1352/1933-4, i, 244-50; and in encyclopaedic *adab* works such as Nuwayrī's *Nihāyat al-arab*, Cairo 1923 ff., ii, 16-31. Individual verses on the theme of hair can be met on almost all places where erotic poetry is written, collected or quoted.

(B. REINERT)

**SHARĀB** [see **MASHRUBĀT**].

**SHARAF** (A.), a verbal noun from the root *sh-r-f* indicating elevation, nobility, pre-eminence in the physical and the moral senses. Hence the *sharīf* [q.v.] is a person who is placed above those who surround him on account of his prestigious and noble origin. In pre-Islamic Arabia and in early Islam, *sharaf* and *maḥd* both denote "illustriousness on account of birth", while *hasab*, "individual quality, merit" (as opposed to *nasab*) and *karam* denote "illustriousness acquired by oneself" (*LA*, s.vv. and see **ḤASAB WA-NASAB**).

According to the historians of Islam, those among the Arabs who could claim this innate glory, this

nobility of birth, were the descendants of Quraysh in the *Djāhiliyya* and in Islam, comprising Hāshim, Umayya, Nawfal, 'Abd al-Dār, Asad, Taym, Makhzūm, 'Adī, Djumah and Sahm, in all, ten families (*raḥl*), the offspring of ten wombs (*batn*) (cf. Ibn 'Abd Rabbih, *al-'Ikd al-farīd*, ed. Šādir, Beirut, fasc. xii, 8).

But this list was to be much reduced in the course of the first century of Islam, nobility of birth being concentrated in the family of the Prophet. The Prophet himself was reckoned to embody all the nobility of the Arabs, since it was said of him that he was the best of creatures, being the offspring of the best part (of the world), the best tribe, the best family and the best genealogy (*op. cit.*, fasc. xvii, 9 ff.).

But the Arabs had had other definitions of glory before Islam. In fact, *sharaf* and *maǧīd* belonged to the kings of Kinda [*q.v.*], who attempted to unify the nomadic Arab tribes under a single banner, ca. A.D. 480. This was an ephemeral glory, since this experiment collapsed in 529, following the victory of al-Mundhir III b. Ma' al-Samā', king of al-Hīra, over al-Hārith V b. 'Amr, the last great king of Kinda, who had succeeded in extending his power over al-Hīra between 524 and 528, as a result of a misunderstanding between the Sāsānid emperor Kawādh I (488-531) and al-Mundhir III (512-54). The support of the successor to Kawādh I, Khusrāw I Anūshirwān (531-79) [*q.v.*], enabled the king of al-Hīra to regain his kingdom, to expel al-Hārith, to have forty-eight members of his family executed by his loyal retainers, and to have the man himself assassinated by his allies the Banū Kalb. Such was the end of the glory of the Kinda, lamented by a grandson of al-Hārith, Imru' al-Qays, one of the greatest poets of pre-Islamic Arabia.

This glory was retrieved by the Lakhmids and the Ghassānids, both originating from Yemen (while the Kinda came from Ḥaḍramawt). But they, too, left no recognised lineage and no acknowledged nobility. All of this was based on a rivalry, the memories of which are not yet extinct, between Qaysis (Arabs of the North) and Yamanis (Arabs of the South).

There remains prophetic nobility (*sharaf bayt al-nabī*). It is immortalised by the *sharīfs* of Mecca (whose heir is the King of Jordan) and the *Shorfa* [see *SHURAFĀ'*] of Morocco (Idrisids, Sa'dids, etc.). The Umayyads tried in vain to revive the glories of Quraysh. Only poetry has retained its memory.

**Bibliography:** The most important sources for the subject are: Abū 'Abd Allāh Muṣ'ab al-Zubayrī, *K. Nasab Quraysh*, ed. E. Lévi-Provençal, Cairo 1953; Balādhurī, *Ansāb al-ašraf*, an immense historical and genealogical encyclopaedia (the Cairo ms. comprises 12 vols.), of which the following vols. have been published:

- i. ed. Muḥammad Ḥamīdullāh Ḥaydarābādī, Cairo 1938; iii. ed. 'Abd al-'Azīz al-Dūrī, Wiesbaden 1978 (*Bibliotheca Islamica*, 28c); iv/1. ed. Iḥsān 'Abbās, Wiesbaden 1979 (*Bibliotheca Islamica*, 28d); iv/1-2. ed. M. Schlössinger, Jerusalem 1938 and 1971; v. ed. S.D.F. Goitein, Jerusalem 1936; xi. ed. W. Ahlwardt, Greifswald 1883.

The third important source is Ibn Ḥazm, *Djamaḥat ansāb al-'Arab*, ed. Lévi-Provençal, Cairo 1948.

For a sociological analysis of the notion of honour (*ʿird*) among the pre-Islamic Arabs, see Edouard (in the thesis) or Bišr (in the article) Farès, *L'honneur chez les Arabes. Étude de sociologie*, Paris 1932, and his art. 'IRD' above. (T. FAHD)

**AL-SHARAF** (Yemen) [see Suppl.].

**SHARAF AL-DAWLA**, Abū 'l-Fawāris Shīrdhīl, Būyid ruler (350-79/961-89), the eldest son of 'Aḍud

al-Dawla [*q.v.*].

His mother was, like his paternal grandmother, a Turkish slave woman. In 357/967-8, at the age of six or seven, he was given Kirmān as an appanage by his father, then ruling in Fārs. He accompanied his father on his campaign to conquer Baghdād in 366/977, but was sent back to Kirmān to remove him from the court not long before 'Aḍud al-Dawla's death in 372/983. Since the latter had failed to make final arrangements for the succession, a power struggle ensued for the supreme position among the Būyid princes. In Baghdād, Sharaf al-Dawla's younger brother Šamsām al-Dawla [*q.v.*] was recognised by the caliph al-Tā'ī. Sharaf al-Dawla responded by seizing the Būyid power base of Fārs. He killed 'Aḍud al-Dawla's vizier there and relied on the backing of commanders who had been imprisoned by his father. He recognised, however, the overlordship of his uncle Mu'ayyid al-Dawla ruling in Rayy. The latter died in 373/984 and was succeeded by his brother Fakhr al-Dawla [*q.v.*], who backed Šamsām al-Dawla's claim to supremacy among 'Aḍud al-Dawla's sons, while himself assuming the title *Shāhānshāh*.

Sharaf al-Dawla refused to acknowledge his overlordship, and took the offensive against Šamsām al-Dawla. He seized al-Ahwāz and Baṣra, where two further brothers of his had been ruling. Šamsām al-Dawla was forced to sue for peace, and formally agreed to obey Sharaf al-Dawla as his overlord. The caliph confirmed the agreement by conferring the titles Sharaf al-Dawla wa-Tādj al-Milla on the elder brother. The latter had, however, decided to proceed with the conquest of 'Irāk, ignoring the agreement. Šamsām al-Dawla surrendered to him in Wāsiṭ and was soon sent to prison in Fārs. Sharaf al-Dawla entered Baghdād in 376/987 and was greeted by the caliph. He now aspired to supremacy over his uncle Fakhr al-Dawla, and assumed the title *Shāhānshāh*. However, an army which he sent against the Kurd Badr b. Ḥasanūya in western Dījāl to punish him for his support of Fakhr al-Dawla was defeated. Before the conflict for supremacy was settled, Sharaf al-Dawla died of dropsy in 379/989 aged 28. He was buried at Kūfa next to his father.

Sharaf al-Dawla was a patron of astronomical research and built an observatory in the garden of his palace in Baghdād, where Abū Sahl al-Kūhī and other renowned astronomers carried out observations of planetary movements. 'Abd al-Rahmān al-Šūfī dedicated to him a treatise on making astrolabes.

**SHARAF AL-DĪN** [see *SHUFURWA'*].

**SHARAF AL-DĪN**, 'ABD AL-ḤUSAYN B. AL-SAYYID YŪSUF, AL-MUSAWĪ AL-'ĀMILĪ, famous Imāmī Shī'ī muǧtahid [*q.v.*], one of the promoters of what has been called the "Shī'ī awakening" in modern Lebanon [see *MUTAWĀLĪ*]. According to his autobiography, he was born in 1290/1873 at al-Kāzimayn [*q.v.*], where his father had emigrated to, for the purpose of studying, from Sh(u)hūr, a village near Tyre in the Djabal 'Amil [see *'AMILA*].

Having received his primary education, mainly in

southern Lebanon, 'Abd al-Husayn came back to 'Irāk in 1892, and he pursued his studies in Najaf until May 1904, when he returned to his home village. About three years later he settled in Tyre to become the spiritual leader of the local Imāmī Shī'ī community. Apart from a period of exile after World War I (see below) and a number of journeys abroad, he lived in Tyre until his death on 30 December, 1957, being then buried in Najaf.

Supported, *inter alia*, by Lebanese Shī'ī communities in West Africa, Sharaf al-Dīn was over the years able to establish a number of religious, educational and social institutions in Tyre, such as a *Husayniyya*, a Friday mosque, schools (including one for girls), a charitable society and an orphanage. Moreover, new mosques were erected or old ones rebuilt on his initiative in a number of adjacent villages. As far as his political activities are concerned, he has been praised by many authors for his stand against the French Mandate over Lebanon [see LUBNĀN], and notably for a speech he delivered at a meeting of political and religious leaders at Wādī 'l-Hudjāyir in April 1920, but he has also been criticised by a few others who have interpreted his attitude at that time and in the following years somewhat differently. However, as a result of his agitation against the mandatory power, he was forced to leave southern Lebanon. First he went to Damascus, after the battle of Maysalūn [q.v.] to Egypt, and finally to Palestine, from where he was allowed to return to Tyre in June 1921 (for a book written wholly in defence of Sharaf al-Dīn's political role, see Muḥammad al-Kūrānī, *al-Djūdḥūr al-ta'rikhiyya li 'l-mukāwama al-islāmiyya fi Djabal 'Amil*, Beirut 1993).

During the last years of his life, Sharaf al-Dīn himself seems to have paved the way for his relative Sayyid Mūsā al-Ṣadr [q.v. in Suppl.] to become his successor as leader of the Shī'ī community in Tyre and its vicinity.

As a religious scholar, Sayyid 'Abd al-Husayn was known for his erudition in both Shī'ī and Sunnī *Ḥadīth*, for his apologetical fervour as well as for his conservative standpoint on a number of issues raised by Shī'ī modernists, such as the corpse traffic to the *Atabāt* [q.v. in Suppl.] and its paraphernalia (see Y. Nakash, *The Shī'is of Iraq*, Princeton 1994, 184-201, esp. 193-7) and certain features of the *tā'ziya* processions (see W. Ende, *The flagellations of Muḥarrām*, in *Isl.*, lv [1978], 19-36, esp. 31-2).

As far as his works are concerned, a history of his own family as well as of the Āl Ṣadr, who are closely linked to the Āl Sharaf al-Dīn by intermarriage, was published only posthumously by one of his sons, Sayyid 'Abd Allāh, with extensive additions, i.e. *Bughyat al-rāghibīn fi silsilat Al Sharaf al-Dīn*, Beirut 1991 (with 'Abd al-Husayn's autobiography in ii, 63-254).

Of special fame in Shī'ī circles is his book *al-Murādja'āt*, a work on doctrinal questions purporting to contain his correspondence with an Egyptian Sunnī scholar, Salīm al-Bishrī (d. 1917), who was Shaykh al-Azhar when Sharaf al-Dīn came to Cairo in 1911. The first edition was published only in 1936 in Sidon, while the 10th appeared in 1972 in Beirut; since then there have been several reprints (as well as translations into other languages). Many Shī'īs consider this work (i.e. Sharaf al-Dīn's answers to al-Bishrī's questions) as one of the most convincing expositions of the Twelver Shī'ī doctrine of the *imāma* [q.v.] that has ever been written (for a discussion of its rather uncertain genesis, see Brunner, *Annäherung*).

The last of his books published in his lifetime is *al-Naṣṣ wa 'l-idṭihād*, <sup>1</sup>Najaf 1956, <sup>10</sup>Beirut 1988, a

work on early Islam and the role of the Companions of the Prophet in the development of the *Shari'a*.

For lists of Sharaf al-Dīn's many works, see e.g. Kubaysī, 53-69; Ṣadr, 28-32; Āl Yāsīn, 20-3; 'Abbās 'Alī, 113-14, 146-8; Faḍl Allāh, 55-70; all these authors also mention unpublished writings of his lost when soldiers plundered his houses in Shihūr and Tyre during the disturbances of 1920. See further K. 'Awwād, *Mu'djam al-mu'allifin*, ii, Baghdād 1969, 228-9; Y.A. Dāghir, *Maṣādir al-dirāsa al-adabiyya*, iii/1, Beirut 1972, 626-9.

**Bibliography:** In addition to the titles given in the text, see Murtaḍā Āl Yāsīn, *Ḥayāt al-mu'allif*, dated 1946, in the introduction to *al-Murādja'āt* (see above), e.g. <sup>10</sup>Beirut 1972, 9-29; Aghā Buzurg al-Tihirānī, *Tabakāt al'am al-shī'a*, i/3 (*Nukabā' al-bashar*), Najaf 1962, 1080-8; Muḥammad Ṣādiq al-Ṣadr, *Kabas min ḥayāt al-sayyid al-mu'allif*, in the introd. to *al-Naṣṣ wa 'l-idṭihād* (see above), <sup>3</sup>Najaf 1964, 7-44 (as well as in later editions); 'Abbās 'Alī, *al-Imām Sharaf al-Dīn, ḥuzmat daw' 'alā tariq al-fikr al-imāmī*, Najaf 1968; Aḥmad Kubaysī, *Ḥayāt al-imām Sharaf al-Dīn fi suṭūr*, ed. Brunner, *Annäherung und Distanz ...*, diss. Univ. of Freiburg-im-Breisgau (forthcoming). (W. ENDE)

**SHARAF AL-DĪN 'ALĪ YAZDĪ**, Persian historian and poet of the Tīmūrid period, born at Yazd, died in 858/1454.

He was a favourite of the Tīmūrid ruler Shāh Rukh [q.v.] and of his son Mīrzā Abu 'l-Faṭḥ Ibrāhīm Sulṭān, governor of Fārs, and in 832/1429 became tutor to the captured young Čingizid Yūnus Khān, to whom he dedicated many poems. He was then in the service of the Tīmūrid prince Mīrzā Sulṭān Muḥammad in 'Irāk 'Adjamī or western Persia, and narrowly escaped death when that prince rebelled in 850/1447. After Shāh Rukh's death he retired to Yazd and settled in the nearby village of Taft, where he died, being buried in the Sharafīyya madrasa which he had founded.

Yazdī had a high reputation as a littérateur and poet. In addition to his poetry, written under the *takhallus* of Sharaf, he wrote a commentary on the *Burda* ode of al-Būṣīrī [q.v. in Suppl.], a work on magic squares and a work on riddles (*mu'ammā*); he compiled an anthology of Arabic and Persian poetry; and he left behind a collection of *inshā'*. His main fame, however, stems from his *Ẓafar-nāma*, a florid and euphuistic, hence much admired at the time (with the result that a large number of mss. survive), history in Persian of Tīmūr and his grandson Khalīl Sulṭān. This was compiled from other histories of the great conqueror and from eyewitness accounts, and completed in 828/1425; further planned sections on Shāh Rukh and Ibrāhīm Sulṭān were never completed.

The most recent eds. of the *Ẓafar-nāma* include that of M. 'Abbāsī, Tehran 1336/1957, and facs. ed. A. Uranbaev, Tashkent 1972.

(C.E. BOSWORTH)

**SHARAF AL-DĪN, ḤASAN RĀMĪ** [see RĀMĪ TABRĪZĪ].

AL-SHA'RĀNĪ, 'Abd al-Wahhāb b. Aḥmad (897-973/1492-1565), Egyptian Ṣūfī, scholar, historian of Ṣūfism, and a prolific writer about many religious subjects during a period otherwise poor in distinguished figures of learning and piety in the Arab lands.

Sources. The main sources for al-Sha'rānī's life are his own writings, which must, of course, be used with caution. This is especially true of *Latā'if al-minan*, his lengthy account of the graces bestowed upon him by God, a work that beside recounting miraculous events, also includes many autobiographical elements. Paradoxically, al-Sha'rānī's voluminous literary output obscures our view of him, because most of his biographers, such as his disciple 'Abd al-Ra'ūf al-Munāwī [q.v.], drew heavily on his works, adding little new information. An important biography, *al-Manāḥib al-kubrā*, was written in 1109/1697 by Muḥammad Muḥyī 'l-Dīn al-Malḍījī, an affiliate of the al-Sha'rānī order (Cairo 1350/1932).

Origins and life. According to al-Sha'rānī, his ancestor five generations back was Mūsā Abū 'Imrān, son of the sultan of Tlemcen in North Africa. Mūsā was a follower of Shaykh Abū Madyan Shu'ayb (d. 594/1197), the founder of the Shādhilī Ṣūfī tradition, who sent him to Egypt. Finally, the family settled in the village of Sākiyat Abū Sha'ra in the Minūfiyya province, hence the *nisba*. Al-Sha'rānī came to Cairo at the age of twelve and settled in the Bāb al-Sha'riyya quarter and was raised in a Ṣūfī milieu. He became a student of Cairo's best-known 'ulamā' of all the *madhāhib*, not only his own Shāfi'ī one, and a follower of distinguished orthodox Ṣūfīs. Yet his spiritual director was an illiterate palm-leaf plaister (hence, his *laqab*), named 'Alī al-Khawwās al-Burullustī (d. 939/1532-3). Al-Sha'rānī became a successful and wealthy man and a popular writer thanks to his attractive personality, erudition and readable style. Inevitably, his popularity made him many enemies and rivals, the most prominent of whom was Muḥammad b. Aḥmad b. Karīm al-Dīn (d. 985/1578), the leader of the (then) unorthodox Kḥalwatī *ṭarīqa*, but he claimed to have had personal contacts with members of the ruling class, from the pashas, the Ottoman governors of Egypt, down. He died on 12 Djumādā I 973/5 December 1565, and was buried in the *zāwiya*, which had been built for him. His son 'Abd al-Raḥīm (d. 1011/1608) succeeded as the head of the *zāwiya* and the *ṭarīqa*, although he did not have his father's personality and ability. Yet the *ṭarīqa* survived into the 19th century. Ewliya Çelebi mentions al-Sha'rānī's *mawlid* in the second half of the 11th/17th century. The *ṭarīqa* is mentioned by al-Djabartī and by E.W. Lane, but not by 'Alī Bāshā Mubārak, whose *al-Khiṭaṭ al-tawfiḳiyya al-djādida* is a major source for Egyptian Ṣūfism in the late 19th century, nor by 20th-century sources and authorities on the subject.

His Ṣūfism. Al-Sha'rānī represents the orthodox, middle-of-the-road, only moderately ascetic, and non-political brand of Egyptian Ṣūfism. He was influenced by Shādhilī ethics and literature, but did not identify with that *ṭarīqa*, since he considered it too aristocratic. Socially, he was associated with the Aḥmadiyya or Badawiyya, the *ṭarīqa* of Sīdī Aḥmad al-Badawī (d. 675/1276) [q.v.], whom he venerated, but he fiercely attacked the antinomian and vulgar Aḥmadīs and other similar orders for their "excesses", their disregard of the *Shari'a* and lack of respect for the 'ulamā'. Likewise, al-Sha'rānī criticises the Kḥalwatiyya [q.v.], popular at that time among the Turkish soldiers, attacking its principle of *kḥalwa*, solitary retreat of the adherents, as causing hallucinations and not true

religious experience. He never states his own *ṭarīqa* affiliation, and identifies generally with the *ṭarīq al-kaum*, i.e. the orthodox way of al-Djunayd. His initiation into 26 *ṭarīqas* seems to have been merely ceremonial or for the sake of obtaining *baraka*.

As a historian of Ṣūfism (he compiled collections of *ṭabaqāt* containing lives and sayings of Ṣūfīs) and an apologist for it, al-Sha'rānī insists that genuine Ṣūfīs have never contravened the *Shari'a* in word or deed, and if it seems otherwise, it is only because of a misunderstanding, misinterpretation, ignorance of the Ṣūfī terminology, or interpolation by enemies. In this way, al-Sha'rānī chose to defend the orthodoxy of the great mystic Muḥyī 'l-Dīn Ibn al-'Arabī [q.v.], whose ideas he epitomises in his *al-Tawāḳūt wa 'l-ḡawāḥir*, rendering the mystic's complicated theories in a simplified way.

His *fiqh*. In his *al-Mizān al-Kubrā*, al-Sha'rānī expounds a theory based on Ṣūfī assumptions that aims at the unification of the four *madhāhib*, or at least their equality and the need to narrow the gaps between them. He believed that there were no real differences between the founders of the *madhāhib*, in contradistinction to the opinions held by their narrow-minded imitators (*mukallidūn*). The founders were *awliyā'* and thus had access to the Source of the Law (*'ayn al-Shari'a*) whence they derived the precepts of religion. According to him, there is only one *Shari'a*, and it has two standards—strict (*'azīma*) for those who are resolute in their religion, and lenient (*rukhsa*) for those who are weak. Generally, al-Sha'rānī criticised the *fukahā'* for troubling the common people with the finer points of jurisprudence, of little relevance to the essentials of Islam.

His social ideas. His weaknesses and inconsistencies notwithstanding, al-Sha'rānī had a feeling for the essentials in religion. He also had a genuine empathy for the weak and underprivileged elements of society, such as fellaheen, labourers, and women. He paid particular attention to the relations of Ṣūfīs with members of the ruling class and wrote a treatise advising 'ulamā' and *fakīrs* how to get along with *amīrs*. His criticism of the rulers' injustice in general and the Ottoman rulers of Egypt in particular, is typically circumspect, but he hints at the date 923/1517, the year of the Ottoman conquest, as a turning point for the worse, and elsewhere makes a hostile remark about the *kānūn*, the Ottoman administrative law.

SHARARĀT (A.), a camel-herding group of northwestern Arabia.

In Burckhardt's time, the Shararāt were known for their camel herds, which they exchanged in the Hawrān and at Gaza for wheat. They regarded Ma'ān, Djawf and Madā'in Šālih as their former properties; Doughty suggested that they came from the Banī Hilāl and Peake that they came from the Kalb. Unable to protect their property, they paid protection money to the Rwala and the Banī Šakhr, at the same time themselves taking *khuwra* [q.v.] from Djawf and, at an earlier date, from the Huwaytāt and the Banī 'Aṭiyya. The Rwala and Šakhr did not intermarry

with them because the *Shararāt* paid for protection. The *Shararāt* were subject, in Doughty's time, to the *amīr* of the *Āl Rashīd* [q.v.] in *Hāyil*, like most tribes. Both Doughty and Musil emphasised the excellence of *Shararāt*-bred camels.

The increasing drawing of northern Arabia into tribal and then state politics probably accounts for the politically-weak *Shararāt*'s initial impoverishment, accelerated by the declining market for camels, which had virtually disappeared by the 1940s. Many *Shararāt* are now in the National Guard, army and police of Saudi Arabia or involved in local government, whilst their camel herds supply an urban market for their milk and flesh.

(W. and FIDELITY LANCASTER)

**AL-SHĀRĀT**, from the Latin *sera* through the Spanish *sierra*, is the term applied by certain geographers of Muslim Spain to the mountains which stretch from east to west in the centre of the Iberian Peninsula. The best definition is given by Ibn Faḍl Allāh al-ʿUmārī. According to this author, the mountain range called al-*Shārāt* stretches from the country behind Madīnat Sālim (Medinaceli) to Coimbra. This term therefore describes the mountains now known under the names of Sierra de Guadarrama (Ar. Wādī ʿl-Ramlā?), Sierra de Gredos and Sierra de Gata in Spain and Serra de Estrella in Portugal. In the time of al-Idrīsī, however, it was applied only to the Sierra de Guadarrama, to the north of Madrid. The geographer Abu ʿl-Fidāʾ, quoting Ibn Saʿīd, described the mountain system of the centre of al-Andalus under the name of *Djabal al-Shāra*. According to him, it divided the peninsula into two well marked divisions, the north and the south.

Al-Idrīsī, in his description of al-Andalus, gives the name of al-*Shārāt* to one of the twenty-six "climes" of this country, the twenty-second in his classification; this region, which embraced all the Sierra de Guadarrama, included the towns of Talavera de la Reina, Toledo, Madrid, al-Fahmīn, Guadalajara, Uclès and Huete.

(E. LÉVI-PROVENÇAL)

**AL-SHĀRĠJA** [see **AL-SHĀRIKA**].

**SHARĤ** (A.), pl. *shurūḥ*, denotes in Arabic a commentary on a text of greater or lesser length, but this term by itself does not cover the entire semantic domain of "commentary". Lexically, it refers to notions of opening, expansion, explanation and finally of commentary.

Sixty-seven *sharḥs* appear in the *Fihrist*: language (29, of which two have a title; two *Sharḥ abyāt Sibawayh*; a *Sharḥ abyāt al-Idāh*; two *Sharḥ shawāhid Sibawayh*; *Sharḥ Maḥṣūrāt Ibn Durayd* by Abū Saʿīd al-Sīrāfi,

commentary on a didactic poem; two *sharḥ al-maʿānī*, philosophy and sciences (16), concerning the *Djābirian corpus* (4), *Hanafi fikh* (5), *Shāfiʿī* (4), *Mālikī* (3), *Zāhirī* (1), theology (2), *ḥadīth* (2) and miscellaneous (2).

Also found there are ninety-six *tafsīrs*: *Qurʾān* (40), philosophy and sciences, whether these are translated works—they are the majority—or commentaries written directly in Arabic (25; the instances where the expression *fassarahu* is used have not been counted; the same applies to *sharḥahu*), poetry (8), Old Testament (7), Gospels (1), language (4), language and theology (1), *fikh* (1), *ḥadīth* (1) and miscellaneous (8).

In the course of time, the number of commentaries becomes impressive, to the point where this emerges as one of the characteristics of Arabic literary production. Many of them are veritable museums, as if their authors feared the loss of whole sections of the patrimony.

#### I. Grammar and philology.

Among the works which were the object of commentaries at a very early stage, particular distinction belongs to the *Kiṭāb* of Sibawayh (d. 180/796 *et alt. an.*; 19 titles in Sezgin, ix; 32 names of commentators or glossators in *Hādījī Khalifa*, ii, 1427-8). It is difficult to conclude whether the terminology to denote these works is contemporary; it varies between *taʿlīkāt*, *tafsīr*, *tafsīr*, *nukat*, *sharḥ* (or *ikhrāḍī*) *nukat* and *sharḥ* (Sezgin, ix, 58-63). Besides al-Akhfash al-Awsaʿ [q.v.], the disciple of Sibawayh, the following works are listed here: Abū ʿUmar al-Djarmī (d. 225/839), *Tafsīr gharīb Sibawayh*; al-Māzinī (d. 248/862), *K. Tafsīr K. Sibawayh*; Abū Yaʿlā b. Zurʿa (d. 257/871), *Nukat ʿalā K. Sibawayh*; al-Mubarrad (d. 285/898), *Tafsīr mā aghḥala istikhṣāʾ al-ḥudūdja fihī*. Of the various commentaries and glosses on the *Kiṭāb* which have been edited, worth mentioning are: the *Sharḥ* of Abū Saʿīd al-Sīrāfi (d. 368/979; *MIDEO*, xviii, no. 9, xix, no. 18), that and of al-Rummānī (*MIDEO*, xxi, no. 20), *Taʿlīka al-Taʿlīk ʿalā K. Sibawayh* by Abū ʿAlī al-Fārisī [q.v.] (*MIDEO*, xxi, no. 19).

*Sharḥ* does not invariably denote a commentary on a work; it also refers to explanations given regarding a subject within a book, especially regarding verses (*abyāt*) or probative quotations (*shawāhid*). The monumental *Khizānat al-adab* of ʿAbd al-Kādir al-Baghḍādī [q.v.] constitutes the crowning achievement of this type of literature.

Later treatises on grammar or grammatical didactic poems were also the object of commentary, sometimes to an even greater extent. These include *al-Mufaṣṣal* of al-Zamakhsharī (d. 538/1144, 24 according to Brockelmann, I<sup>2</sup>, 347, S I, 509-10; 18 in *Hādījī Khalifa*, ii, 1774-5), *al-Durra al-alfiyya* of Ibn Muʿtī (d. 628/1261, *MIDEO*, xxi, no. 24); *al-Kāfiya* of Ibn Hādījib (51 entries in Brockelmann, I<sup>2</sup>, 367-70, S I, 531-5; *MIDEO*, xix no. 9: *Sharḥ* of Ibn Djamaʿa: cf. Makram, 61-2); *al-Shāfiya* (23 principal entries in Brockelmann, I<sup>2</sup>, 370-1, S I, 535-7; cf. Makram, 66) of Ibn Hādījib (d. 646/1249); and especially *al-Khulāsa al-alfiyya* (45 entries in Brockelmann, I<sup>2</sup>, 359-62, S I, 522-6; *MIDEO*, x, no. 2, for the commentary of Ibn ʿAqīl; *MIDEO*, xix, no. 8: ten; cf. Makram, 176) of Ibn Mālik (d. 672/1274). Some of these commentaries were in their turn the object of commentaries or glosses, among others *Awḍaḥ al-masālik* of Ibn Hishām (d. 762/1361; 11 entries in Brockelmann, S I, 523). Numerous unedited commentaries pose a problem on account of the similarity between the titles of the works to which they refer; this applies in the case of those on the *K. al-Djurnal* of al-Zadjdjadī and that of ʿAbd al-Kādir al-Djurdjānī (*MIDEO*, xxi, no. 22). There is less ambiguity with regard to that of Ibn al-

Sarrādj (d. 316/928), with commentary by one of his disciples, al-Rummānī (Sezgin, ix, 84).

In lexicography, the *K. al-Ayn* of al-Khalīl b. Aḥmad [q.v.] has been less the object of commentaries than of *addenda et emendanda* (Sezgin, viii, 54-6). The same applies to the *Ḡharīb al-muṣannaf* of Abū 'Ubayd (d. 224/838), except that it was also the object of commentary *strictu sensu*, in particular by Ibn Sīduh (d. 458/1066) and by Abū 'l-Abbās al-Mursī (d. ca. 460/1068; twelve diverse entries in Sezgin, viii, 83-4; *MIDEO*, xx, no. 6). His *K. al-Amṭhāl* received the same treatment (six in Sezgin, viii, 84-5). The same applied to *al-Djamhara fi 'l-lughā* of Ibn Durayd (d. 321/933) (six entries for summaries, additions, etc.; Sezgin, viii, 103). But no work of this period has received as much attention on the part of lexicographers as the *K. al-Faṣṥh* of the Kūfan Tha'lab (d. 291/904) (42 entries, including 20 commentaries, in Sezgin, viii, 142-4; *MIDEO*, xix, no. 5). Major lexicographical works or dictionaries have seldom been subjected to commentary. However, the emendations, alterations, additions, elucidations, additions, glosses, corrections and even "summaries" (*taḥdhīb*, *muḥṭaṣar*, *takmila*, *bayān wa-taḥrīb*, *hawāshī*, *taṣṥīḥ*) of which they have been the object belong more or less to the domain of "commentary". Furthermore, the more recent of them are in a relationship of "commentaries" to "texts" with regard to the earlier (see Kraemer; Sezgin, viii; introd. by 'A.S.A. Farādj to *T'4*, ed. Kuwait; *EL*, art. ẖĀMŪS).

## II. Poetry, *adab* and stylistics.

It is hardly surprising that Ibn al-Nadīm does not name a single *sharḥ* of collections of poetry, seeing that he mentions only twenty-eight *diwāns*. Al-Āmidī (d. 371/981) refers to 59 (R. Jacobi, in *GA*, ii, 11). Moreover, collections of poetry were at first called *shīr* or even *khābar* (Sezgin, ii, 36-46). It should, however, be recognised that "commentaries" on poetry are not absent from the *Fihrist*, although this is only through the intermediary of the *sharḥs* *abyāt/shawāhid* or the *sharḥs ma'ānī al-Bāhīlī* of Lughda/Lughdha al-Iṣfahānī, contemporary of Ibn Kutayba, and of Bundār b. 'Abd al-Ḥamīd b. Lurra (first half of 3rd/9th century). On the other hand, Ibn al-Nadīm mentions three *tafsīrs* of poetry by Ibn Durustawayh (d. 347/958; Sezgin, viii, 106-8): of *al-Mufaḍḍaliyyāt* (incomplete), of *al-Sab' [al-Mu'allakāt]* and of the *Ḳaṣīda* of Shubayl b. 'Azra. He also adds here the *Tafsīr al-sab' al-ḡhaliyyāt wa-ḡharībihā*, of al-'Umarī, judge of Takrīt, and the *Tafsīr al-Ḥamāsa* of Abū Tammām [q.v.] by al-Dīmarrī (flor. ca. 364/975; Sezgin, ii, 68).

Among the commentators on the *Mu'allakāt* (29 entries in Sezgin, ii, 50-3; cf. Blachère, *HLA*, i, 143-8), worth mentioning are: Abū Sa'īd al-Ḍarīr (d. 282/895), Ibn Kaysān (d. 299/911), Abū Bakr Ibn al-Anbārī (d. 328/940; in fact a revision of his father's commentary), Ibn al-Nahḥās [q.v.], al-Zawzānī (d. 486/1093), Abū Bakr al-Baṭalyawsi (d. 494/1100) and Abū Zakariyyā' al-Tibrīzī (d. 502/1109). The *Ḥamāsa* of Abū Tammām was no less the object of commentaries (36 entries in Sezgin, ii, 69-72). The greatest success in these terms belongs, however, to the *Bānat Su'ād* of Ka'b b. Zuhayr [q.v.] (48 in Sezgin, ii, 231-34).

Some authors distinguished themselves in the elucidation of various collections of poetry. These include Abū Sa'īd al-Sukkārī (d. 275/888); Ibn al-Anbārī, disciple of Tha'lab: commentaries on *al-Mufaḍḍaliyyāt* (Sezgin, ii, 54; Blachère, *HLA*, i, 148-50); Abū Bakr al-Ṣulī (d. 335/946): commentaries on the *Ḥamāsa* of Abū Tammām (Sezgin, ii, 68); al-Ma'arrī [q.v.], commentator especially on al-Mutannabī (*MIDEO*, xx, no. 66); Abū 'Alī al-Kālī (d. 356/967); Ibn Khālawayh (d. 370/980); Ibn Dīnī (d. 392/1002); al-Marzūqī

(d. 421/1030); Abū 'l-Ḥasan al-Wāhidī (d. 468/1075); al-A'lam al-Shantamarī (d. 476/1083): commentaries on the seven *Mu'allakāt*; al-Tibrīzī: commentaries on the *Ḥamāsa* (Sezgin, ii, 71, no. 24), on the *Lāmiyyat al-'Arab* of Ṣanfarā (Sezgin, ii, 135); Mawḥūb al-Djawālīkī (d. 540/1145); Ibn Hishām al-Anṣārī (d. 761/1360).

Among works of *adab*, the *Adab al-kātib* of Ibn Kutayba has drawn the attention of commentators (eleven in G. Lecomte, *Ibn Qutayba*, 104-5).

An interesting case in the domain of stylistics is that of the *Miftāḥ al-'ulūm* of al-Sakkākī (626/1229; Hādjīdjī Khalīfa, ii, 1762-8) which was the object of a comprehensive commentary (*explicit* 742/1341) by Ḥusām al-Dīn al-Kh'ārazmī. But it was especially the third part of this work, on stylistics, which was commented on and glossed, then summarised (see A. Arazī and H. Ben Shammai, art. *MUKHTAṢAR*, at Vol. VII, 537a), the summaries in their turn being commented on and glossed. The ideas of the author were evidently modified by the commentators and glossators (Brockelmann, I<sup>2</sup>, 352-6, S I, 515-19; A. Maṭlūb, *al-Kazwīnī wa-shurūḥ al-Talkhīs*, Baghdad 1967; R. Sellheim, i, 299-317; W. Heinrichs, in *GA*, ii, 184).

## III. Religious sciences.

It is probable that the first "commentaries" or explanations in this area were applied to the *ḡharīb* [q.v.] of the Qur'ān and of *ḥadīth* in the form of oral explanations, of pamphlets, then of books. These were therefore not "commentaries" on a work, but explanations of a term, of a verse, or of a tradition. In fact, they most often bear the title of *ḡharīb/Tafsīr al-ḥadīth* or *al-Kur'ān*, or even *Sharḥ ḡharīb al-ḥadīth* (Abū 'Ubayda, d. 207/822, whose *Maḡāz al-Kur'ān* is also called *al-Maḡāz fi ḡharīb al-Kur'ān*). For commentaries on the Qur'ān, the accepted term is *tafsīr* [q.v.]. However, the Mu'tazilī Abū Muslim al-Iṣfahānī (d. 322/934) is the author of a commentary sometimes called *Sharḥ ta'wīl al-Kur'ān wa-tafsīr ma'ānīhi* (E. Kohlberg, *A medieval Muslim scholar at work*, Leiden 1992, 330). For the explanation of isolated passages of the Qur'ān, *sharḥ* is sometimes applied to a few pages (*ḡuz'*), in the form: *Sharḥ kawlihi ta'ālā* (four in the list of works of Makkī b. Abī Ṭālib, in Kifī, *Inbāh*, iii, 317-8) or *Sharḥ āyat* ..., or even *Sharḥ/Tafsīr sūrat* ..., *Sharḥ al-Basmala*, *Sharḥ kalimatay al-shahāda*. *Al-Kaṣhshāf* by al-Zamakhsharī (d. 538/1144), unusually for a commentary on the Qur'ān, was frequently the object of commentaries and glosses (Brockelmann, I<sup>2</sup>, 345-6, S I, 507-9). The "commentaries on the divine names" also contain interpretations of the terms according to various theological orientations. They may bear various titles: *Sharḥ al-asma' al-ḡusnā* (31 in Hādjīdjī Khalīfa, ii, 1031-5), but also *Tafsīr*, *Kitāb*, etc. (D. Gimaret, *Les noms divins en Islam*, Paris 1988, 16-29).

In the context of *ḥadīth*, *sharḥ* is used for the commentary on a single tradition. Some traditions have been subjected to extensive commentary, in particular *Sharḥ ḥadīth Umm Zayd*: al-Ṭabarī (Gilliot, *EL* [see *Bibl.*], 67), al-Kādī 'Iyād (*ibid.*, no. 8); *Sharḥ ḡharīb ḥadīth Umm Zayd* by Ibn al-Anbārī (Sezgin, viii, 154) and Ibn al-Khallāl (flor. ca. 1000/1591). The major collections of prophetic traditions, in particular the "six books", have been the object of an impressive number of commentaries, the majority of which are supplied with titles: 27 for *al-Muwatta'a*, all recensions combined (sometimes also *Tafsīr al-Muwatta'a*, M. Muranyi, *Ein altes Fragment medinensischer Jurisprudenz aus Qairawan*, Wiesbaden 1985, 12); 56 for al-Bukhārī, 27 for Muslim (Sezgin, i, 115 ff.), etc. In the genre of the "Forty

Prophetic Traditions", the collection of al-Nawawī (d. 676/1277), *al-Arbaʿūn al-naʿawawīyya*, has been the object of some forty commentaries, including one by the author himself (L. Pouzet, *Une Herméneutique de la tradition islamique...*, Beirut 1982, 55-7). In the terminology of *ḥadīth*, pride of place probably belongs to the *Mukaddima* of Ibn al-Ṣalāḥ [q.v.], which was commented on, glossed and summarised (Brockelmann, I<sup>2</sup>, 441-2, S I, 610-12; *MIDEO*, xix, no. 43; xxi, no. 121).

The energy of the commentators in Muslim law is no less impressive (Spies, 238-69; Sezgin, i, 409-524). In Ḥanafī law (Spies, 238-47; Sezgin, i, 409-57), at least fifteen commentaries are known to have been made on one of the oldest Ḥanafī compilations of *furūʾ*, *al-Djāmīʾ al-kabīr* of al-Shaybānī (d. 189/805), including those by al-Ṭahāwī (d. 321/933) and al-Djassās [q.v.], who also wrote the earliest commentary on *al-Mukhtaṣar* of al-Ṭahāwī. The judicial epitome of this school, *al-Mabsūṭ fi ʾl-furūʾ* by al-Sarakhsī (d. 490/1097 [q.v.]), is a commentary on *al-Kāfi* of Muḥammad al-Marwazī (d. 334/945). The *Bidayat al-mubtadiʾ*, a compendium by al-Farghānī al-Marghīnānī (d. 593/1197), was also the object of numerous commentaries; the same applied to the *Manār al-anwār*, a manual of Abu ʾl-Barakāt al-Nasafī (d. 710/1310). As for the *Mukhtaṣar* of al-Kudūrī (d. 428/1037 [q.v.]), which is called *al-Kūb* by the Ḥanafīs, Ḥādījī Khalīfa, ii, 1631-2, lists twelve commentaries on it. The same author also wrote a commentary on the *Mukhtaṣar* of al-Karkhī (d. 340/951; Ḥādījī Khalīfa, ii, 1634-5; Brockelmann, S I, 295).

In Mālikī law (Spies, 254-60; Sezgin, i, 457-84; Murānī, in *Gap*, ii, particularly for the commentaries on the *Mudawwana*), as elsewhere, some of the older manuals were displaced by more recent ones. Such was the case of the *Mukhtaṣars*, *al-kabīr* and *al-saghir*, of Ibn ʾAbd al-Ḥakam (d. 214/829); both were subjected to commentary by al-Abharī (d. 375/985); the second by Abū Bakr Muḥammad b. al-Djāhm (d. 282/895) (*Fihrist*, 200, 201). They were superseded, to some extent, by *al-Risāla* of Ibn Abī Zayd al-Kayrawānī (d. 386/996, 15 entries in Sezgin) and by *al-Mukhtaṣar* of Khalīf b. Ishāq (d. 767/1365; Brockelmann, II<sup>2</sup>, 102-3, S II, 96-9), on which one of the most recent commentaries is that of al-Dardīr (d. 1201/1786; *MIDEO*, xxi, no. 174). The didactic poem of Ibn ʾĀsim (d. 829/1426), was also the object of frequent commentary.

In Shāfiʿī law (Spies, 284-54; Sezgin, i, 484-502), the *Mukhtaṣar* of al-Muzanī (d. 264/877) also attracted the interest of commentators (six in Sezgin, i, 493); but the compendium of Abū Shudjāʿ (d. 593/116; Brockelmann, S I, 676-7) was no less the object of explanations and glosses; the same applied to the *Minḥādī al-ṭalībīn* of al-Nawawī [q.v.].

In Ḥanbalī law, the basic compendium is *al-Mukhtaṣar* of al-Khirakī (d. 334/945). It was commented on by Abū Yaʿlā Ibn al-Farrāʾ (d. 458/1065), but especially by Muwaffaq al-Dīn Ibn Kudāma (d. 620/1233 [q.v.]) under the title *al-Mughnī*. The latter's *al-Muknī* was the object of commentary by ʾAbd al-Raḥmān b. Muḥammad b. Kudāma (d. 682/1283; *MIDEO*, xxi, no. 180).

Commentators did not always belong to the same school of law; thus the ʿUmda of the Ḥanbalī ʾAbd al-Qhanī al-Makdisī (d. 600/1203) was the object of commentary by the Shāfiʿī Ibn Daḳīq al-ʿId (d. 625/1128 [q.v. in Suppl.]) in *Sharḥ ʿUmdat al-aḥkām*, which was glossed by the Zaydī al-ʿAmīr al-Ṣanʿānī (d. 1099/1688) in *al-Udda* (*MIDEO*, xxi, no. 184).

The major compilations of Shīʿī traditions and law

were also subjected to commentary, especially "the four books" (Spies, 263-5; Sezgin, i, 540-2, 545-9).

Dialectical and scholastic theology was no less prolific, generating numerous catechisms, creeds, professions of faith and treatises on theology (*uṣūl al-dīn*, *kalām*). The various treatises and "testaments" of Abū Ḥanīfa were commented on abundantly from the 5th/11th century onward (Sezgin, i, 412-8). *Al-Akāʾid* of Abū Ḥafṣ al-Nasafī (d. 537/1142) was certainly one of the most commented on and glossed texts in Islam (*MIDEO*, xix, no. 48); one of its best known commentaries is that by al-Taftazānī (d. 791/1388). At the present day, the manual of Ashʿarī theology *al-Mawākif fi ʿilm al-kalām* of al-Idjī [q.v.] is studied with the commentary of al-Sharīf al-Djurdjānī and the glosses of the Indian ʾAbd al-Ḥakīm al-Siyālkūtī (d. 1067/1657) and of Ḥasan ʿĀlebi al-Fanārī (d. 886/1641) (W. Madelung, in *Gap*, ii, 333). As in law, there were occasions when theologians of different trends commented on one another. Thus the *Muḥaṣṣal al-aḥkār* of the Ashʿarī Fakhr al-Dīn al-Rāzī was the object of commentary by a Shīʿī of Muʿtazilī persuasion, Nāṣir al-Dīn al-Ṭūsī. The latter's *Tadwīd al-ʾakāʾid*, with its long introduction dealing with logic and ontology, was commented on by the Shāfiʿī-Ashʿarī Mahmūd al-Isfahānī (d. 749/1349) under the title *Tasdīd al-kawāʾid* ("al-*Sharḥ al-ḥadīm*"), then by the Sunnī astronomer and philosopher al-Kūshdjī (d. 879/1474 [see ʾALĪ AL-KŪSHDJĪ] ("al-*Sharḥ al-ḥadīm*")). These two commentators were in their turn the object of commentaries and glosses by Shīʿī and Sunnī authors (Brockelmann, I<sup>2</sup>, 670-2, S I, 925-7; W. Madelung, in *Gap*, ii, 333).

In mysticism, numerous texts were the objects of commentary, beginning with the *K. al-Taʾarruf* of al-Kalābādhī (d. 380/990 [q.v.]), in particular by ʾAlī al-Kūnawī (d. 712/1326; Sezgin, i, 669), the *Risāla* of al-Kūshayrī (d. 465/1072) by Zakariyyāʾ al-Anṣārī (d. 926/1520; Brockelmann, I<sup>2</sup>, 556, S I, 771-2). The same applied to *Manāzil al-sāʾirīn* of al-Anṣārī al-Harawī [q.v.]; cf. the introduction to the edition and translation of S. Laugier de Beaurecueil, *Les étapes des itinérants vers Dieu*, Cairo 1962, 15-21; idem, in *MIDEO*, xi (1972), 80-91. Numerous writings of Shihāb al-Dīn al-Suhrawardī (d. 587/1191; Brockelmann, I<sup>2</sup>, 565-6) also received the attentions of commentators. Many works of Ibn ʾArabī [q.v.] were commented on, but pride of place belongs to *Fuṣūṣ al-ḥikam*; see O. Yahia, *Histoire et classification de l'œuvre d'Ibn ʾArabī*, Damascus 1964, 241-57.

Certain religious texts, such as the *Burda*, a panegyric of the Prophet by al-Būṣīrī (d. 694/1294 [q.v. in Suppl.]), were the object of particular attention: 74 commentaries in Brockelmann, I<sup>2</sup>, 308-13, S I, 467-70; *MIDEO*, xxi, nos. 45, 96.

Many commentaries are veritable encyclopaedias, the text under discussion often serving as a pretext for recording entire documents or quotations from works of which many have since been lost; such is the case with the commentary on the *Nahdī al-balāgha* [q.v.] by Ibn Abī ʾl-Ḥadīd [q.v.] or that on the *Iḥyāʾ ʿulūm al-dīn* by al-Zabīdī [q.v.].

#### IV. Philosophy.

It is in this region that research is most advanced in relation to the terminology of the "commentary". Reference should be made to the art. *MUKHTAṢAR*, section on philosophy, to be complemented by Endress and Gutas.

The translators of the ancient sources were the first Arab exegetes. In fact, transference into Arabic required an interpretation. This is why they included in their works paraphrases, definitions and glosses

which derived in part from the scholia of their base texts or from the commentaries which were at their disposal. Numerous terms need to be taken into consideration, especially in the domain of logic, even if it is not always easy to tell them apart.

*Tafsīr* is a generic term which signifies literally "to bring to light, reveal" something which is hidden, and consequently "to interpret, elucidate, explain", and sometimes even to interpret in the sense of translating. This generic sense appears under the rubric of *De interpretatione*, in *Fihrist*, 249, where the authors of writings called "synopses" or "epitomes" (*summaria*, *ḡawāmiḡ*), "abridgments" (*mukhtaṣars*, *talkhīṣāt*) or "commentaries" (*sharḥs*), are defined as exegetes (*al-mufasssīrūn*).

*Sharḥ* is "the commentary on a text which is not an interpretative abridgment, but which may nevertheless be of variable length" (Gutas, 35). This can be a developed commentary, *ad litteram* ('alā 'l-lafẓ), or an interpretation according to the sense ('alā 'l-ma'nā) in the form of a paraphrase (e.g. *Talkhīṣ Safsafa*, *Exposition or Paraphrase of the Sophistici elenchi* by Ibn Rushd). It can also have the appearance of notes on the text (e.g. *Sharḥ K. Bārimīniyās 'alā ḡihat al-ta'lik of al-Fārābī*); for a full analysis, see Endress, in *GaP*, ii, 461-73, iii, 19-20; Gutas, 31-43.

V. Other elements of the semantic field of "commentary".

It is appropriate to include other terms here e.g. *tahrīr* (revision of a text, or even "edition"), a term which refers to the elements of a text or a commentary which have been chosen for comment, clarification or correction, such as the *Tahrīr of al-Djawaynī* on the lost commentary by al-Bākillānī on the *K. al-Lum'a* of al-Ash'arī (Madelung, in *GaP*, ii, 332); or furthermore the commentaries on scientific compendia of the ancients such as those of Euclid, of Menelaos, etc., revised by Nāṣir al-Dīn al-Ṭūsī (Endress, in *GaP*, ii, 463). It is also necessary to take into account works which bear the title *tahrīr*, a term which refers to remarks on a text.

Other types of work belong to a greater or lesser extent to the genre of "commentary" or contain interpretative elements; for this reason it would be necessary, in a monograph on the subject which is yet to be written, to consider the following genres also: in certain cases, the *addenda* and *corrigenda*, complements and supplements, especially in philology: *Istidrāk* (two in the *Fihrist*, bearing on the *K. al-Ayn*), *al-istidrāk limā aghfalahu*, *mā aghfalahu*, *ḡā'it*, *ziyādāt*, *istikhrāḡ*, *ikhṛāḡ* *nukat*, *takmila*, *ghalaṭ* and *taṣḥīḥ*, sometimes even "refutations": *radd*, *naqd* and *intisār*. Numerous works which bear the title *tahdhib* belong to the category of "commentary", thus for example *The emendation of traditions (Tahdhib al-āthār of al-Ṭabarī)* (see *Elt*, 58-60; arts. HĀSHIYA, MATN, etc.; cf. A.F.L. Beeston, in *CHAL*, i. *Arabic literature to the end of the Umayyad Period*, Cambridge 1983, 24).

**SHĀRĪ** (A., pl. *shawārī*), "clearly-defined way, main road, highway"; "situated on a main road, at the side of the road (e.g. a house)".

Compared with other terms having similar urban denotations, such as *darb* and *zuḡāk*, the uses of *shārī* as a common noun are not the most numerous in the pre-modern texts. Thus there is no chapter in al-Makrīzī's *Khīṭaṭ* devoted to this term; the treatise devoted to it at the end of the 9th/15th century, the *K. al-Fawā'id al-naḡisa al-bāhira fī bayān hukm shawārī al-Ḳāhira* (ms. Istanbul, Süleymaniye 1176) is an exception.

*Shārī* is often used as an adjective and as an active participle, "giving on to a street" (of a house, see L'A), "opening out on to"; or, preceded by a particle, it forms (like *ṭarīk*) a phrase meaning "at the opening out of...", "on the road of..." (see S. Denoix, *Décrite Le Caire. Fustāt-Miṣr d'après Ibn Duqmāq et Maqrīzī*, Cairo 1993, 143). But it also becomes a genuine toponym. In the geographer Ibn Rusta [q.v.], the *shārī* divides Ṣan'a' into two halves (see R.B. Serjeant and R. Lewcock, *Ṣan'a', an Arabian Islamic city*, London 1983, 146). "It is the Street called Straight, the main street of Damascus" in Ibn 'Asākir (N. Elisséeff, *La description de Damas d'Ibn 'Asākir*, Damascus 1959, 85 n. 10) (but in Ottoman times, the three main traffic arteries were called *ṭarīk sultānī*). *Al-shārī* 'al-a'zam denoted the main axis, the central avenue, of 'Abbāsīd Sāmarrā' or the *ḡasaba* of the Cairo of al-Makrīzī.

In the course of their long history, the names for traffic routes did not necessarily express differences in width, length, form or function. Nor, with the exception of *shārī*, did they indicate the open and freely-circulated nature or, on the contrary, the closed nature of what they designated. To define the status of a way, legal language resorted to a single criterion, *nāḡidh* or *sālik* "through way" and *ghayr nāḡidh/sālik* "closed way, cul-de-sac". A *shārī* was *nāḡidh*, "it denotes a road properly open at both ends... a public road where everyone has the right to circulate" (R. Brunschvig, *Etudes d'Islamologie*, Paris 1976, ii, 11), and a road along which clear passage must be maintained.

At the time when cities and towns were being transformed and the vocabulary of urban patterning evolved, *shārī* became a key element in the new terminology, as is seen in the *Khīṭaṭ al-tawfiḡiyya al-ḡadīda* of 'Alī Mubārak Pasha. *Shārī* was henceforth used for any road of some importance, corresponding to a "street" or to Fr. *boulevard* or *avenue*, as in Cairo, in the quarters built up since the end of the 19th century. Or it could be used only for the main arterial roads, whilst for the secondary ones, other terms, which were part of the local tradition, would be used. This was still the case in Cairo, where, in the historic centre, *shārī* co-exists with *sikka*, *hāra*, *darb*, *aṭfa* and *zuḡāk*, in accordance with a terminology laid down by the city administration at the end of the last century. Similarly in Tunis, where the term co-exists with *nahḡ* and *zanḡa*, which are by no means exclusive to the *madīna*.

**SHĀRĪ'A** (A.), derived from the root *shara'a*, having a primary range of meaning in relation to religion and religious law; also **SHAR'**, frequently synonymous. The word *sharī'a* is common to the Arabic-speaking peoples of the Middle East and designates a prophetic religion in its totality, generating such phrases as *sharī'at Mūsā*, *sharī'at al-Masīh* (the law/religion of Moses or the Messiah), *sharī'at al-Madīyūs* (the Zoroastrian religion) or *sharī'at-nā* (meaning our religion and referring to any of the monotheist faiths). Within Muslim discourse, *sharī'a* designates the rules and regulations governing the lives of Muslims, derived in principal from the Qur'ān and *hadīth*. In this sense, the word is closely associated with *fiqh* [q.v.], which signifies academic discussion of divine law. The root *shara'a* has a wide range of secular usage explored and analysed in the Arabic lexicographical tradition (see 5. below).

1. *Sharī'a* in Qur'ān and *hadīth*
2. *Sharī'a* in Jewish and Christian literature
3. *Sharī'a* in Muslim literature
4. *Sharī'a* and *fiqh*
5. *Sharī'a* in the lexicographical tradition

#### 1. *Sharī'a* in Qur'ān and *hadīth*.

1.1. *Sharī'a* occurs once in the Qur'ān, at XLV, 18 ("We have set you on a *sharī'a* of command, so follow it"), where it designates a way or path, divinely appointed. The cognate *shir'a* is also used once, at V, 48, in parallel to *minhādī*, meaning way or path ("To each we have appointed a *shir'a* and a *minhādī*"). The verb *shara'a* occurs twice, once with God as subject (*shara'a la-kum min al-dīn* ...), "He has laid down for you as religion that which he appointed also for Noah", XLII, 13; and once in relation to rebels (*shara'u lahum min al-dīn* ...), "Or do they have companions who have laid down for them as religion that which God did not permit?" VII, 163).

1.2. In the corpus of *hadīth* surveyed by Wensinck *et al.*, *sharī'a* occurs once in the singular, in a *hadīth* in the *Musnad* of Ibn Ḥanbal: "the community shall remain on the *sharī'a* (path/way) as long as there does not occur in it three things ..." The plural form occurs not more than a dozen times, mostly in locutions like *sharā'i' al-islām*, *sharā'i' al-imān*, once in a string of terms indicating rules: *inna li-'l-imān farā'id wa-sharā'i' wa-hudūd wa-sunan*. The word *shar'* does not occur with the connotation of religion or law, and the verbal form *shara'a* occurs only once with these connotations, in a set of variations of the same *hadīth*: "God has laid down for his (var. your) Prophet the rules of guidance" (*shara'a li-nabi-hi sunan al-hudā*). The noun *shar'*, the verb *shara'a* and derivatives occur frequently with secular meanings, corresponding to those discussed in 5. below.

This paucity of usage and connotation make it unlikely that these sources constitute the beginning of the development of this term in Islam or in the other monotheist faiths.

#### 2. *Sharī'a* in Jewish and Christian literature.

2.1. The Jewish tradition. The translation of the Old Testament into Arabic attributed to Sa'īd b. Yūsuf al-Fayyūmī, known as Sa'adya Gaon (d. A.D. 933 [q.v.]), demonstrates that *sharī'a* had become a

central component of the religious vocabulary of the Arabic-speaking Jewish community. The most commonly used term for translating Hebrew *torah* is Arabic *sharī'a* or its plural. When the Hebrew word clearly designates a single rule, or set of rules, the favoured terms are *sharī'a* and *sharāyi'*. The same is true when the Hebrew term designates the law as a totality, the law delivered to Moses. There are many instances, especially in Deuteronomy, where the Hebrew word is retained in an Arabic form, *al-tawrah*. The use of *sharī'a* to designate a single rule is most obvious in a group of verses in Leviticus, e.g. Lev. vi, 8, "This is the law of the burnt offering" (*hādhihi sharī'at* ...); cf. vi, 14; vi, 25; vii, 1; vii, 7 etc. The plural form is found at Exod. xviii, 20, "And thou shalt teach them ordinances and laws" (*al-nusūm wa 'l-sharāyi'*); cf. xviii, 16. The more general sense, where the word *torah* means the whole of the law, is exemplified at Exod. xiii, 9, "And it shall be a sign unto thee [Moses] ... that the Lord's law may be in thy mouth" (*li-takūn sharī'at Allāh fi fi-ka*). The plural form is found at Exod. xvi, 4, "That I may prove them whether they will walk in my law or not" (*fi sharāyi' am lā*); cf. Exod. xxiv, 12. A majority of references to *torah* in Deuteronomy elicit the Arabic form *al-tawrah*, perhaps because the referent is understood to be the Pentateuch; but cf. Deut. iv, 44, "And this is the law which Moses set before the children of Israel" (*wa-hādhihi al-sharī'a allāh* ...).

*Sharī'a* is thus the most common word expressing rule and system of rules in Sa'adya's Arabic version of the Hebrew Bible. It is occasionally used to translate Hebrew *misvah*, e.g. Deut. vi, 25; xvii, 20. It functions frequently as one of a cluster of words designating God's commands, often together with *wasāyā*, *nusūm*, *ahkām*, etc., e.g. Deut. xxvi, 5; xxvi, 17. This translation, even if managed and completed by Sa'adya, should be understood as a reflection of a pre-existing Arabic targum tradition (Blau).

A similar reliance on the nouns *sharī'a* and *shar'*, and the verb *shara'a*, for reference to God's law-making activities, is found in Sa'adya's theological (polemical) work, *K. al-Amānāt wa 'l-ḥikādat*. This book, though it reflects Sa'adya's participation in the Rabbanite-Karaite [see KARAITES] struggle, may be accepted as a reflection of the general religious vocabulary used in polemical contexts by those who shared the monotheist traditions of the Middle East. *Sharī'a* and its plural designate individual laws (141, 175) and also systems of law revealed by God through prophets (113). Rational laws are distinguished from revealed laws (*al-sharāyi' al-'akliyya wa 'l-sam'iyya*, 115-8). *Shar'* is used synonymously with *sharī'a*; and the verb, *shara'a* with God as subject, meaning to lay down a law (128-9). A context which generates multiple reference to the law (religious system promulgated by a prophet) is abrogation (*naskh*), the question whether the law of a later can abrogate that of an earlier prophet (131). Arabic *tawrah* is used to designate the Pentateuch: *shar' al-tawrah*, *sharāyi' al-tawrah* (139).

2.2. The Christian tradition. A similar use of this vocabulary can be found in Christian writers, discussion of abrogation being particularly likely to generate systematic reference to *sharī'a*. A characteristic example, from the 4th/10th century, may be found in a polemical tract directed against the Jews, by the Jacobite 'Isā b. Ishāk Ibn Zur'a [q.v.]. *Sharī'a* refers to a system of laws brought by a prophet and subject (perhaps) to abrogation by later prophets. The word *sunna* (pl. *sunan*) [q.v.] covers the same semantic field. Both terms are extended to carry distinctions

between natural, rational and revealed laws. The Christian religion, the Law of the Messiah, is referred to as *sunna al-Masih* (34) and *sharīʿat al-Masih* (35).

The question of when this cluster of Arabic terms emerged as part of the self-expression of Jews and Christians is unclear. But, whatever model is adopted for the emergence and early development of Islam, it is necessary to acknowledge the co-existence or prior existence of Arabic-speaking Jewish and Christian communities. The development of an Arabic vocabulary for the expression of concepts and ideas integral to the prophetic religions of the Middle East is perhaps best understood as the common achievement of several communities engaged in polemical encounter throughout the 7th to the 9th centuries A.D. The most radical and stimulating account of this encounter is that of J. Wansbrough (1977, 1978).

### 3. *Sharīʿa* in Muslim literature.

*Sharīʿa* and its cognates appear, in Islamic religious literature, reflecting the same range and type of reference as in Jewish and Christian literature. *Sharīʿa* (pl. *sharāʿiʿ*) designates a rule of law, or a system of laws, or the totality of the message of a particular prophet. In so far as it designates a system of laws it is synonymous with the word *sharʿ*, which is probably the more common word in juristic literature for divine law. The verb *sharaʿa* may appear with God as subject (following Qurʾānic usage). More frequently, the process of demonstrating the law is a prophetic activity, and the word *shārīʿ* (law-giver) refers characteristically to Muḥammad in his function as model and exemplar of the law. In a rare extension of meaning, the word *shārīʿ* is transferred to the jurists, thereby highlighting the creative aspect of their interpretative activity (al-Shāṭibī, iv, 245). These patterns of usage may be found in all the major genres of religious literature.

3.1. *Kalām*. Theological literature is likely to generate reference to *sharīʿa* wherever the message bearing activity of a prophet becomes the focus of discussion. Al-Bāḳillānī (d. 403/1013 [q.v.]), in a discussion of prophets as bearers of the divine message (*risāla*), raised the question whether they confirm or abrogate the *sharīʿa* of an earlier prophet, *sharīʿat ghayri-hi min al-rusul*. He uses the adjective *sharʿī* to indicate revealed laws (*al-ʿibādāt al-sharʿiyya*) perhaps distinguished them from rational laws (*al-kadāyā al-ʿakliyya*) (38-40). The category of moral rules accessible to the intellect was denied by Sunnīs, but the concept was forced upon them by their Muʿtazilī opponents. Al-Ghazālī (d. 505/1111 [q.v.]), in his *K. al-Arbaʿīn*, describes Muḥammad as sent with a message (*risāla*) such that he abrogated with his law earlier laws, *nasakha bi-sharʿi-hi al-sharāʿiʿ*. Here *sharāʿiʿ* functions perhaps as a plural for *sharʿ* (20). In the Muʿtazilī tradition, the words *sharʿ*, *sharīʿa*, etc., kept their general sense, meaning the totality of a prophetic religion, but were also used systematically to distinguish rational from revealed laws. The Shīʿī (Muʿtazilī) scholar al-ʿAllāma al-Hillī (d. 726/1325 [q.v.]) accounts it a benefit of prophecy that the prophet brings rules which are not accessible to the intellect; he refers to these as *sharāʿiʿ* or *ʿibādāt wa-sharāʿiʿ*. He thinks there is no period of time exempt from a prophetic law (*sharʿu nabī*) (271-3, 278). Heresiographical literature continues to use the word *sharīʿa* and its derivatives to refer to Islam and to other religions, including *sharīʿat al-Madʿūs* for Zoroastrianism (W. Cantwell Smith).

3.2. *Tafsīr*. Works of Qurʾānic commentary draw on the conceptual structures of *kalām* while developing some arguments specific to Qurʾānic usage. The

word *sharīʿa* is usually declared to be synonymous with *sharīʿa*. Comparison of Qurʾān, V, 48 (“To each [community] we have appointed a *sharīʿa*”) and XLII, 13 (“He has laid down—*sharaʿa*—for you as religion—*dīn*—that which he had laid down also for Noah”) prompted a systematic distinction between *sharīʿa*, meaning law, and different for different prophets, and *dīn*, implying recognition of the one God, and the same for all prophets. From al-Ṭabarī, citing Ḳatāda, *ad* V, 48: the Torah, the Gospels and the Qurʾān have each their own *sharīʿa*... but *dīn* is one, meaning *tauhīd* and *ikhḷāṣ li-llāh*, and brought by all prophets.

3.3. Juristic literature. In so far as juristic literature gives an account of or a statement of rules, it need not generate self-referring locations. When it does so, there was a considerable number of technical terms meaning rule: *sunna/sunan*, *ḥukm/ahkām*, *farīda/farāʿid*, *ḥadd/hudūd*, *sharīʿa/sharāʿiʿ*. The latter does not dominate in the earliest texts. Even later, general reference to the law is more likely to elicit the word *sharʿ* than *sharīʿa*. Systematic distinction between ordinary linguistic usage and technical juristic usage depends on the contrast *ḥuḡḡat<sup>an</sup>:sharʿ<sup>an</sup>*. Hermeneutical literature (works of *uṣūl al-fikḥ*) generated an increasing quantity of reference to the law, the law-giver etc., but the earliest work of this kind, the *Risāla* of al-Shāfiʿī, makes little use of the word *sharīʿa* or *sharʿ*. Later works generated numerous references. A characteristic context relates to the question whether Muslims and/or Muḥammad were subject to the laws of earlier prophets. Al-Ghazālī, in his *Mustasfā*, phrased the question in relation to *sharʿu-nā* and *sharʿu man kablanā*, our law and the law of those before us. He asked whether Muḥammad was bound by the law (*sharʿ*) of earlier prophets, and whether he abrogated the *sharīʿa* (*siq*) of Moses and Jesus. The rapid transition from *sharʿ* to *sharīʿa* suggests no distinction between these terms in this context. Espousing one of the views current in juristic circles, al-Ghazālī affirmed that the *Sharīʿa* of our Prophet (*sharīʿat rasūli-nā*) abrogated previous systems; for, if Muḥammad had been bound by any other *sharʿ*, he would not deserve the title of law-giver (*shārīʿ*).

Most of the problems attendant on the word *sharīʿa* were perspicuous to the tradition and capable of being explained. The Ḥanafī jurist Ibn ʿĀbidīn (Muḥammad Amīn b. ʿUmar, d. 1252/1836) explained it as having the meaning of a passive participle of the verb *sharaʿa*, meaning that which is laid down, or decreed. When the Prophet is identified as the law-giver, the *shārīʿ*, this is metaphoric usage (*maḡjāz<sup>an</sup>*); in truth (*ḥaḳīkat<sup>an</sup>*), it is God who is *shārīʿ*. *Sharīʿa* means the same as *milla* and *dīn* (i.e. the totality of religious beliefs), but it may be applied absolutely to the rules (*ahkām*) governing human actions. Both *sharīʿa* and *dīn* may be ascribed (in a genitive construction) to God, the Prophet and the community: God’s law, the Prophet’s and the community’s law. (Ibn ʿĀbidīn, i, 11)

### 4. *Sharīʿa* and *fikḥ*.

The academic discipline whereby scholars described and explored the *Sharīʿa* is called *fikḥ*. The word designates a human activity, and cannot be ascribed to God or (usually) the Prophet. It frequently occurs in a genitive construction with the name of a scholar: the *fikḥ* of Mālik, the *fikḥ* of Ibn ʿĀbidīn. The *Sharīʿa*, contained in God’s revelation (Qurʾān and *ḥadīth*), is explained and elaborated by the interpretative activity of scholars, masters of *fikḥ*, the *fuḳahāʾ*. Since this is in practice the only access to the law, the two words are sometimes used synonymously, though *sharīʿa* retains the connotation of divine, and *fikḥ* that of

human. Since the late 19th century, the linguistic calque *al-kānūn al-islāmī* (Islamic law, borrowed from European usage) has become a part of Muslim discourse and carries with it connotations of legal system, as in modern states [see *kānūn*]. Western studies of *fiqh* are still dominated by the work of Joseph Schacht, who produced the articles *fiqh* and *sharīʿa* for *EI*, the former lightly edited for *EL*.

4.1. The origins of Islamic law. The earliest large-scale and systematic expressions of the law are found in a bundle of texts attributed to scholars of the late 2nd/8th and early 3rd/9th centuries, notably Mālik b. Anas (d. 179/795), al-Shāfiʿī (d. 204/820), al-Shaybānī (d. 189/805) and Abū Yūsuf (d. 182/798 [q.v.]). The last two are pupils of Abū Ḥanīfa (d. 150/767 [q.v.]), who, together with Mālik, al-Shāfiʿī and, later, Ahmad b. Ḥanbal (d. 241/855 [q.v.]) gave his name to a broad tradition or school (*madhhab*) of juristic thinking. These four schools dominated the Sunnī community. The Imāmī Shīʿa developed an independent tradition of their own (finding literary form only in the 4th/10th century). And there were a number of minor traditions, e.g. those of the Zaydīs and Khāridjīs (both alleged to be early) and the Zāhirīs (or Literalists), followers of Dāwūd al-Zāhirī (d. 269/882 [q.v.]). The emergence of the dominant traditions is presented inside Islam as the result of a process, described in historical terms, but perhaps a narrative expression of a theological conviction. The Prophet, by virtue of his ideal practice or *sunna*, was exemplar and model for his followers, whose duty it was to conform to his *sunna*. To this end, his words and deeds were preserved by his Companions in the form of discrete narratives or *ḥadīth* which were passed on from generation to generation, giving rise to discussion, debate and finally to formal juristic thinking, or *fiqh*. The eponymous founders of the schools, by virtue of their piety and commitment to Qurʾān and *ḥadīth*, together with their learning and capacity for systematic thought, derived from this inheritance structures of rules which were adopted by subsequent generations, and preserved and developed in an ongoing tradition of commitment and loyalty. The actual and historically successful juristic traditions in Islam were thus traced back to the Prophet through the decisive intervention of great jurists.

As an account of history, this sequence of events was challenged already by Ignaz Goldziher (*Muh. Stud.*, 1888-90). Building on his work, Schacht offered, in his *Origins*, a coherent account of early Muslim jurisprudence. He proposed that the earliest works were reflections of a "living tradition" which had grown up locally in diverse cities (Kūfa, Baṣra, Damascus, Mecca, Medina). The systematic structures that emerged reflected local (and Imperial, Umayyad) practice, and the ongoing thought of local scholars. They were not dependent on Prophetic *ḥadīth*, perhaps not even on the legal aspects of the Qurʾān. Increasing polemical encounter, in the early ʿAbbāsīd period, led to a search for justification of the law and this took the form of appeal to Prophetic practice expressed in the form of *ḥadīth*. The first scholar to argue systematically that law was necessarily related to Prophetic *ḥadīth* was al-Shāfiʿī, who emerges, for Schacht, as the master architect of Islamic law. Eventually all the schools succumbed to al-Shāfiʿī's argumentation and developed a common hermeneutical approach to the law, presenting it as derived, by a systematic act of interpretation, from Qurʾān and *ḥadīth*. According to Schacht, the demand for Prophetic *ḥadīth*, even before al-Shāfiʿī, and certainly after him, ensured that they

were produced (created) in numbers appropriate to the need. Schacht derived his theory primarily from the study of al-Shāfiʿī's *Umm* and *Risāla*, works which not only exemplify (in marked contrast to other early works) the principle of Prophetic authority for the law but systematically criticise the early local schools for their failure to adhere to this principle.

All subsequent scholarship in this field has responded to Schacht, whether to refute, to qualify, or to confirm and extend his findings. Several Muslim scholars (e.g. M.M. Azmi) have denied them. Both Muslim and secular scholars have searched for qualifications and refinements whereby to discover the antiquity and/or authenticity of at least some Prophetic *ḥadīth* (G.H.A. Juynboll, D.S. Powers). J. Wansbrough has developed Schacht's methodology, arguing that the Qurʾān too must be recognised as the end product of two centuries of community experience (1977). N. Calder argues that the major early works of Islamic law are not authored, but organic, texts, reflecting generations of thinking about the law, expressed through successive redactions of school material (1993). F. Rahman initiated a Muslim theological response to Schacht's ideas (1965).

4.2. The literature of the law. There are a number of genres of juristic literature, of which the two most important are *furūʿ al-fiqh* (a literature of rules) and *uṣūl al-fiqh* (a literature that identifies the sources of law and the methodology for deriving rules from revelation). It is possible to identify a number of minor genres, but many of these can be classified as monographic developments of topics that are proper to *furūʿ* (e.g. special studies of the rules relating to government, or judicial practice) or *uṣūl* (special studies of analogy or consensus, etc.). Collections of *fatāwā* (sing. *fatwā* [q.v.]) and studies on the authority of *muftīs* (section 4.3, below) may be recognised as independent genres, the first having some affiliation to works of *furūʿ*, the second to works of *uṣūl*.

*Furūʿ*. The genre of *furūʿ* is continuous from the 3rd/9th to the 13th/19th century. All the major works of the genre have the same basic structure. They offer a network of rules roughly grouped into topics. The major topics of the law are, first, purity, prayer, alms, fasting and pilgrimage. These, together, sometimes, with *djihad*, are the major *ʿibādāt* (acts of worship). Their importance is signalled by their being positioned at the beginning of a work of *furūʿ*. More loosely ordered are the remaining topics of the law, the *muʿāmalāt* (interpersonal acts). These include family law (marriage, divorce, inheritance, testamentary bequest, slavery, etc.), mercantile law (contracts of sale, debt, hire, loan, gift, partnership, etc.), laws relating to agency, land ownership, compensation for injury, killing and the usurpation of goods, penalties (restricted to the divinely specified penalties for adultery, false accusation of adultery, theft, wine-drinking and highway robbery), judicial procedure and other topics. Though various attempts were made to devise more analytical approaches to the topics of the law, a sequential approach based on loose groupings, and subject to considerable variation, prevailed. Since the topics of the law cover all the major categories of a pious, and a social, life, and since, further, the tendency of the jurists was to hold on to the concrete and to elaborate precise and distinct "cases" for analysis, a work of *furūʿ*, formally at least, constituted a literary depiction of social reality in normative form. As works of literature, books of this kind were subject to the usual tendencies of literary formalism, sufficiently indicated in the notions of linguistic

structural and conceptual virtuosity, of imaginative exploration, of realism transformed into artifice, etc. At the same time, in so far as they were intended to control and guide social life, they display also qualities of practical concern and hard-headed realism. The interplay of literary and imaginative qualities with practical and mundane ends was not predictable and varied immensely both within a work and across works and schools. The four major schools of law, and the Shīʿī tradition, show a broadly similar approach to the genre and a broadly similar exploration of its possibilities.

To the casuistic and exploratory aspects of a work of *furūʿ* were added patterns of justificatory argument. These had two major forms. First, the interpretative relationship between school tradition (*madhhab*) and revelation (Qurʾān and Sunna) was re-expressed from generation to generation, constituting a major part of the ongoing task of jurists. At the same time, loyalty and commitment to tradition were expressed through demonstration that later articulations of the law were derived from and were justifiable in terms of earlier articulations within the school. Works of *furūʿ* had thus a dual hermeneutical aspect: an interpretative relationship to the school tradition and a further interpretative relationship to Qurʾān and Sunna. It is the former which dominates. Jurists did not act as independent interpreters of revelation, they submitted to the authority of the school and the eponymous founder. They were committed, by a prior act of loyalty (usually determined by birth or geography), to a discursive, hermeneutical, engagement with their past. The creative aspect of their work was termed *ijtihād*, the duty of submission *taklīd* [q.v.]. The original act of *ijtihād* characteristic of the eponymous founders was absolute and independent, that of succeeding jurists qualified and limited.

The various components of a work of *furūʿ* can then be summarised with reference to topics and concepts, rules and “cases”, and justificatory argument related to Qurʾān and Sunna, and to school tradition, the whole capable of being drawn towards an exploratory and hypothetical pole or towards a pragmatic and practical pole. The literary tradition as a whole suggests possibilities of expansion and exuberance which point (perhaps not accidentally) towards an infinite concern with detail. This tendency naturally engendered the opposite need, namely that of synthesis, control and concision. The play of expansion and concision is reflected in two literary types within the genre, *mukhtaṣar* and *mabsūṭ*. A *mukhtaṣar* or epitome is a concise exposition of the law, often expressed in a self-consciously elegant and syntactically compressed language. One of the most famous, and aesthetically and intellectually challenging, works of this kind is the *Mukhtaṣar* of al-Khalīl b. Ishāq (d. 776/1374). A *mabsūṭ* by contrast tends to multiply detail and argument, with only loose structural control. The relationship between *mukhtaṣar* and *mabsūṭ* is repeated in that between *matn* and *sharḥ* (text and commentary), it being a mark of the continuity of a tradition that what was summarised was the tradition to date, and what was expanded was an earlier and briefer expression of the tradition. The processes of summary and commentary, of paraphrase and citation, of preservation and re-use of prior articulations were all symbolic of loyalty and of a mode of hermeneutical development which camouflaged the reality of change. Change, in this context, means not only the accommodation of rules to social reality but also the management of a literary structure to serve

the needs (educational, literary, aesthetic, theological, and strictly legal) of a developing community.

*Uṣūl*. Works of *uṣūl*, like works of *furūʿ*, have a stability of form and content which, marking them as a continuous genre, lasted till the 13th/19th century (and in some areas beyond). These works emerged, in numbers, in the early 5th/11th century, the most sophisticated of the early works emerging only towards the end of that century. Particularly significant was the synthesising and ordering work of a group of Shāfiʿī scholars living under the Saldjūks, notably Ibrāhīm b. ʿAlī al-Shīrāzī, the Imām al-Haramayn al-Djawaynī, and al-Ghazālī. The *Mustaṣfa* of al-Ghazālī was a well-organised work which, capturing and ordering all the topics of the discipline, in a masterpiece of structure and expository detail, decisively influenced the subsequent development of the genre. The *Risāla* of al-Shāfiʿī constitutes an apparently isolated early work which has most of the characteristics and covers many of the topics of a work of *uṣūl*, but it has been judged by contemporary scholars to be either a late school work (Calder, 1993), or a work of limited achievement whose implications took time to discover (Hallaq, 1993).

Works of *uṣūl* usually contain four broad areas of discussion: the categories of the law; the sources of the law; the hermeneutical rules that permit extrapolation of norms from sources; and an elaboration of the theory of *ijtihād*. The categories comprise at least the familiar five *ahkām* (sing. *ḥukm*), viz. mandatory, preferred, permitted, disliked and forbidden, and the distinctions between valid, defective and null (*ṣaḥīḥ*, *fāsid*, *bāṭil*). The sources always include Qurʾān, *ḥadīth* and consensus (*ijmāʿ* [q.v.]), and might include intellect (limited for the Sunnīs to a presumption of continuity, *istishāb al-ḥāl*), the law of earlier prophets, the opinions of the Companions, juristic preference (*istiḥsān* [q.v.]), and public welfare (*maṣlaḥa* [q.v.]). The hermeneutical principles relate first to language and rhetoric (usually presented in a set of antithetical pairs: ambiguous and clarifying, the evident and the inferred, commands and prohibitions, general and particular, etc.) and secondly to the operation of analogy (*kiyās* [q.v.]). All of these items were contained in an open-ended and exploratory pattern of discourse.

The body of hermeneutical principles leads to conflicting possibilities (*taʿarud*) and to the exercise of preference (*tarjīḥ*), the methodology of which is explained under the heading *ijtihād*. *Ijtihād* literally means effort. Technically, it means the exertion of the utmost possible effort by a trained jurist, taking into account all the relevant texts and principles of interpretation, to discover, for a particular human situation, a rule of law. Underlying this definition there is an important epistemological message. It concedes that most of the details of the law are not known for certain but are a matter of skilled and pious deduction, leading, however, only to opinion. Final certainty on the details of the law is not accessible, but the duty of searching for and justifying opinion by argument is absolute. Committed in this respect to argument and debate, the jurists (in this context *mudjtahids*, those who undertake *ijtihād*) also acknowledged a need for final decisions in particular cases. This was provided by asserting that the result of an act of *ijtihād* was binding both on the *mudjtahid* and, where relevant, on those who were not trained in the law. The latter (the *ʿammīs*) were required to submit to the *mudjtahids*, becoming thereby *mukallids* (lit. followers or imitators). In so far as a *mudjtahid* responded directly to a particular question, he was acting as a *muftī* and his decision was

a *fatwā*. This network of topics was a part of the hermeneutical thinking of the Sunnī and Shī'ī traditions, and it was capable of varied and sometimes highly individual development.

4.3. *Sharī'a* and practice. The literature and intellectual structures which were the highest expression of *sharī'a* had their most important social realisation in the Islamic educational system. With the emergence of *madrasas* [q.v.] in the 5th/11th century, *fikh* was recognised as the chief end of education, and retained this position until the decline of the traditional system in the 19th and 20th centuries. Common to all Islamic lands, and taught almost exclusively in Arabic, the curriculum provided cultural homogeneity and fostered the emergence of a pan-Islamic cultural élite. The discipline of *fikh* became a powerful and flexible intellectual tool, adapted to various social needs, aesthetic, imaginative and theological as well as strictly legal. The training in this discipline was usually found practical in respect of the needs of the mercantile classes and the governing bureaucracies, as well as the religious hierarchy.

The topics and concepts of the law were closely allied to life experience or could be made so by systematic exploratory thought. But a work of *furū'* was never a set of rules governing practice in the way that regulations and statutes do. In a given city, at one time, different jurists produced different works, reflecting different concerns; intended to influence certainly, but also to provoke thought and to delight. The actual realisation of the law depended always on personal and local factors: the customs of a family or a quarter, the traditions of a city or a region, the specific rules and practices of a judge, a governor, or a sultan. The pluralist and exploratory aspects of the law had a varied and unpredictable relationship to the necessarily single and pragmatic actuality. This relationship itself became a part of the subject matter of *furū'*. The interplay of legal theory and reality has become increasingly an object of scholarly study, exemplified in Heyd (1973) and Johansen (1988).

Some areas of the law were systematically transformed into administrative structures. Central amongst these was the office of judge (*kādī* [q.v.]). His competence covered many aspects of family law (marriage, divorce, inheritance etc.), the administration of charitable endowments (*wakf*) and the property of orphans, and the adjudication of civil disputes. His appointment and terms of office were controlled by political authority. His efficiency was often thought to be limited by the stringency of *sharī'i* rules and this led to the emergence of parallel judicial structures (called *mazālim* [q.v.] in early 'Abbāsid times) which had a more pragmatic attitude to the law and were closely related to government. In Ottoman times the integration of the *kādī* into the structures of government was nearly complete. (Tyan, 1960)

Mediating between the law as theory (object of study and subject of literary endeavour) and law in practice was the *muftī*. The *muftī* was a jurist, preferably highly qualified, who made himself available to give specific answers to specific questions of the law. In many areas and periods, and notably under the Ottomans, the higher ranks of *muftīs* were controlled and salaried by the government (Heyd, 1969). The responsa of *muftīs* were called *fatāwā*, and, in the case of intellectually outstanding, or politically important *muftīs*, might be preserved either as individual items or in collections. These have been recognised as important to our understanding of the law in practice (Masud *et al.*, 1995). Theoretical accounts of the

authority and ranks of *muftīs* stimulated some of the most instructive general theories of Islamic law.

4.4. Modern developments. From the mid-19th century, three major factors affected the history of the *Sharī'a*, all of them, at least in part, a result of Western influence. First, there was the gradual emergence of secular educational systems, aimed initially at the needs of the military, then of the administrative and mercantile classes. This development reduced the numbers of students in the traditional system, deprived them of a career structure, undermined their social alliances, and marginalised the subject matter of the curriculum. In the Shī'ī world, where the jurists had greater access to independent finance, the major centres of juristic education survived better, but even there, there was a decline in provincial centres and some loss of status. Secondly, with the emergence of modern, independent nation states, there was a rapid development of law-codes, constitutions, and statute law. In some respects, these are continuous with the procedures of government by decree that characterised older systems. But the enactment of the *Maḡalla* [see MEDJELLE] (a partial codification of Ḥanafī law for practical ends), in 1876, by the Ottoman authorities, initiated a long history of (selective) codification of traditional law that continued through the 20th century. The reformist ideas of theoreticians (like Muḥammad 'Abduh, d. 1905 [q.v.], in Egypt) brought increased flexibility based on a renewal of *idjtiḥād*, an abandonment (or curtailment) of school loyalties, and a patchwork approach to the juristic tradition as a whole (*taḥfīk* [q.v.]). Jurists and the religious-minded found it possible to accommodate themselves to the idea of constitutions. A majority even of the Shī'ī jurists supported the Persian Constitution in 1906. Throughout the 20th century all modern Muslim states have acquired legal systems, suited to modern nation states, in an astonishing act of creative system building, in which the *Sharī'a* has always been one influence (Western legal systems being another, often a dominant, influence). The actual role of the *Sharī'a*, meaning the tradition of *fikh*, has varied both in terms of its symbolic foregrounding and in terms of its real input (always greatest in the area of family law) (Anderson, Coulson).

A third area of development relates to political opposition. The ideology of political opposition in the Muslim world has been influenced by Western thought (by French revolutionary, or socialist and communist ideologies, etc.), but is nearly always accompanied by appeal to the *Sharī'a* as an ideal of social justice. In these contexts, the word is characteristically deprived of detail, of complexity, and of association with the intellectual tradition of *fikh*. It functions instead as a constitutive element in a demand for loyalty, unity, and commitment; it represents an ideal (unreal) governmental system. With this pattern of connotation, it permeates the ideological statements of the Muslim Brothers and of more recent fundamentalist groups. It is sometimes closely associated with the name of the scholar-hero Ibn Taymiyya [q.v.] (exploited for his arguments in favour of a renewed *idjtiḥād*, based on a return to the earliest generations—the *salaf* [see AL-SALAF WA 'L-KHALAF; SALAFIYYA]); or with selected items of the law which take on the disproportionate ideological burden (e.g. the *ḥadd* penalties for fornication).

Neither the practical aspects of the history of the *Sharī'a* in the 20th century, nor its ideological aspects, take up or draw on the complex of cultural, philosophical and theological messages that are embedded in the tradition. In so far as these messages can be

recovered and translated into idioms appropriate to the 21st century, it seems likely to be the task of modern universities in the Muslim world, these being now the dominant institutions that preserve the cultural inheritance of traditional Islam.

#### 5. *Sharīʿa* in the lexicographical tradition.

The lexicographical tradition recognises two major (and a number of minor) areas of use which are without religious connotation. In a corpus of poetry and of *ḥadīth* evoking a pastoral and Bedouin environment, the verb *sharaʿa* and its derivatives relate to watering animals at a permanent water-hole. The verb implies lapping at, or drinking, water, and has animals as its subject (*sharaʿat al-dawābb*). *Sharīʿa* designates the area round a water-hole, or the point of entry to it, the place at which the animals drink, a place and not a road—*maṣṣad*, *maṣṣad*. *Sharāʿa*, *sharraʿa*, possibly *ashraʿa*, all mean to drive (or lead) animals to water. Adjectival usage indicates animals en route to or lapping at water (*dawābb shurūʿ*). *Sharīʿa* also signifies the seashore, again with special reference to animals which come there. Various aspects of this semantic cluster are claimed to constitute the origin of religious use. The second major semantic field relates to the notions of stretched, extended, and lengthy. A *shirʿa* is a fine string, as stretched on a bow, or a lute. *Ashraʿu ʿl-unfi* is long-nosed. A *sharaʿa* (pl. *ashruʿ*) means a projecting, covered area (syn. *sakīfa*). The *shirʿa* of a ship is its sail, stretched above it to catch the wind. This word is applied also to the neck of a camel; hence also *shurāʿiyya*, a long-necked camel (*Lisān al-ʿArab*, s.v. *sharaʿa*; see also Lane, *Lexicon*). This field of use is cognate with Biblical and Talmudic Hebrew *saraʿ* meaning to stretch/be stretched and is likely to be the origin of *sharīʿ* and *sharīʿa* meaning way, path, road, highway. It is from here that the specialist religious use emerged.

In South-East Asia.

Islam is found primarily in the modern states of Indonesia and Malaysia [*q.v.*], with a presence also in Burma, Thailand and the Southern Philippines. The language of Islam is primarily Malay and Indonesian and cognate languages. Islam dates from the late 14th century and from that time the *Sharīʿa* has been expressed in a number of different forms. In general, we can distinguish three such forms.

#### (I) *The pre-modern texts.*

These are in Malay, Javanese and Arabic, and extant mss. date mostly from the 18th and 19th centuries.

The texts in Malay most usually, consist of elements of *fiqh* as well as localised provisions (*adat*) [see ʿADA]. Commonly, these two elements are distinct and separate parts, and may easily be distinguished. However, it is not uncommon in some texts (e.g. Malacca laws, the Undang-undang Minangkabau) for explanations to be given as to different functions for each source of law. One (*adat*), expresses the practice of mankind, the other, *fiqh*, the will of God. Differences are always reconcilable in the texts. The Java-Muslim texts, on the other hand, are written in an Indian-adapted form (*ubaya*, *pepakem*, *jayasong*) in which the Islamic element is confined to references to promulgation by a Muslim ruler and to *Hukum*, the law of God. There is little or no substantive *fiqh*. One has Javanese laws administered under the aegis of a Muslim sovereign. Whether this was always the case in Java is uncertain because of the Dutch practice (18th-19th centuries) of revising or improving ("verbeterd") existing mss. for administrative use.

The major Arabic texts of the *Sharīʿa* circulated widely in South-East Asia. The standard works of al-Shāfiʿī, al-Anṣārī, al-Nawawī and al-Haythamī were either imported from the Middle East or were available in locally produced reprints. They were, and still are, the standard works for use by *kathī* and *imam* and in the *pesantren* [*q.v.*]. It was common practice for interlinear translation and/or glosses to be added. There was a considerable industry in the translation of these verses, especially into Malay. In the 18th and 19th centuries, elements of each of these pre-modern laws appeared in European (Dutch and British) rationalisations of Muslim law(s). The practice was to take selected portions of the *Sharīʿa* and incorporate them into administrative manuals for colonial use. There are many examples (see below).

To sum up: there is a vast mss. source which shows the adaptation and incorporation of the *Sharīʿa* into South-East Asian laws. The forms vary widely and, so far as context is concerned, the *Sharīʿa* is reproduced in part, re-defined and re-stated and (in some cases) exactly translated. However, by the mid-19th century, one can say that there was a definite trend toward the more classically-exact Arabic language prescription. This was a consequence of greater access to the Middle East centres of learning, brought about ironically enough by the colonial powers themselves.

but it was a trend interrupted by the imposition of colonial rule.

(II) *Sharī'a in the colonial period (18th-20th centuries).*

In the pre-European Muslim lands, Islam was central to kingship, rule, sovereignty and morality. With European dominance from the 18th century onwards, Islam lost this function. Its status was reduced to that of a private religion and its political function was reduced to but a pale shadow, if that, of its former position. The *Sharī'a*, likewise, was similarly limited in its scope and narrowly limited in its implementation.

(a) The Netherlands East Indies.

Islam was always an ideology of resistance to Dutch rule in the Indies and this intensified in the 19th century when V.O.C. rule was replaced by direct Netherlands State Government (1800). From this time, the N.E.I. Government adopted a consistent long-term policy toward the *Sharī'a* in its legal administration.

N.E.I. legal policy was to introduce separate legal régimes for the various population groups. Thus for Europeans or persons assimilated to that status, the law was the law of the Netherlands. For the native population(s) it was *adat* (custom). There were about nineteen named *adat* law areas ("adatrechtskring"). The *Sharī'a*, as such, had no place in this system. Islam was a religion only and not one which necessarily had legal consequences. This policy of separate law régimes became ever more complex throughout the 19th-20th centuries and ultimately proved unworkable. For example, special provisions had to be made for Native Christians, provisions had to be made for assimilation, i.e. change from one group to another, there were serious difficulties in inter-racial family law as well as in commercial law, and a complex intra-racial law of conflicts of laws had to be developed.

For the *Sharī'a*, it was realised by 1882 that Islam could not be excluded from the legal régime, whatever its status in politics might be. In that year a "Priests' Court" (*Priesterraad*) was instituted for Java and later extended. Its competence was severely limited, mainly to family law but excluding inheritance, and its decisions had to be approved by the secular courts. Substantial revisions were made in 1937 which extended jurisdiction and also extended this competence of the courts (now the "Penghulu Courts") to Borneo. At the same time, the 1937 law withdrew jurisdiction in specified forms of property which were also in dispute in the civil (*Landraad*) courts. In short, the *Sharī'a* was subject to very restrictive laws and its pre-colonial trend toward a more exact implementation was halted. On the other hand, it received a new form; now it was expressed in regulations and in bureaucratic practice. These are characteristics which persist into the post-colonial period (below). It is the politics of laws, rather than the *Sharī'a* itself which determines the status of *fiqh*.

(b) The British Territories.

These comprised the following:

(1) British Burma (1826-1947). The Islamic presence in Burma was an accident of imperial expansion. Muslims were immigrants, and the history of *Sharī'a* is the history of *Sharī'a* in Bengal. The only exception is some precedent on persons of mixed race ("Zerbadi"), one of whom was Muslim (see references).

(2) Second, the Straits Settlements and Malay States (1786-1957). It was British policy to recognise and give effect to the "manners, religions and customs" of the subject peoples. In effect, this meant the legal recognition of religious laws in the areas of family law and land ownership. To this extent, the *Sharī'a* had recognition in purely family and religious (e.g.

mosque administration, *wakf*) matters. However, there are some special features which should be noted. First, references were taken from the pre-modern texts, but only in relation to land, and not to religion as such. Second, the *Sharī'a* administered in the courts was taken from local experts not from the standard text books. It was only in the 1930s that standard texts from British India were commonly consulted. Third, *Sharī'a* was never permitted to influence inheritance where land was involved; this was always a matter governed by *adat*.

From the late 1880s, the *Sharī'a* gradually came to be organised in legislation and in the creation of a *Sharī'a* court system, together with the necessary bureaucracy. Various "Muslims' Ordinances" or legislation with a similar name were promulgated. The purpose of the legislation was to regulate marriage (by registration), define the duties of the *kādī*, and regulate property matters as between husband and wife. The legislation was many times amended. The point is that *Sharī'a*, while recognised in a limited way, was a "local" law or a "personal" law for a defined group. The *Sharī'a* was dependent on recognition by the colonial authority. It had no existence outside of its colonial dependence, and it was never the law of the country.

(3) British Borneo comprised Sarawak (1841-1963) and British North Borneo (1888-1963). In both cases, the *Sharī'a* was only one of a number of "native laws". There was no attempt to apply it; instead, there was a *mélange* of custom (*adat*) with some rather eclectic, mostly inaccurate, selections of *fiqh*. This composite was not imposed by the British authority. Instead, by taking evidence from the local Muslim populations it grew and took on a life of its own. The most striking example is the Undang-undang Mahkamah Melayu Sarawak "Laws of the Sarawak Malay Court" (1915).

(c) French Indo-China and the American Philippines.

These can be dealt with rather shortly. In the Indo-China territories, the minority Cham [see *ĉam*] of western Vietnam and eastern Cambodia were Muslim. There were historical links to Java. The only reliable information dates from 1941 (see *Bibl.*) and shows a sort of "Customary Islam". For the Philippines [*q.v.*], the main Muslim population is in the southern islands. Here, the *Sharī'a* was only one element in an *adat*-Islam complex of prescriptions. While in respect of the Cham the French did manage a classification, that of *asiatique assimilé*, in terms of private international law, the Americans attempted nothing of the sort. Islam was considered only in political terms; the *Sharī'a/adat* was ignored.

(III) *Sharī'a since the Second World War.*

The end of the war saw the effective end of the colonial presence in South-East Asia. For Islam, this had two important consequences. First, Islam could now have an open and legitimate political presence in what became Indonesia and Malaysia. The result was that the *Sharī'a* immediately attained a status of something more than a personal law. Indeed, even in the transition periods, new provisions were already being made.

(a) Indonesia.

The Republic Indonesia has had a complex history since 1945, and the history of Islam has been similarly complex. The colonial courts system (now renamed Pengadilan Agama) has been retained and extended to all of Indonesia. In addition, a Department of Religious Affairs has been established for the whole

Republic. The jurisdiction of the courts has been extended somewhat, though not to the extent asked for by Islamic activists. However, the latter have been successful in preserving the position of *Shari'a* in the contemporary reforming legislation, such as family law. There is no Muslim or Islamic Code of law as such in Indonesia. Various drafts have been proposed and are still under discussion.

(b) Singapore and Malaysia.

The 1950s saw a considerable activity in the regulation of *Shari'a*. Singapore and all the states of Malaysia now have enactments (The Administration of Islamic [or Muslim] Law) in force. Generally speaking, the legislation provides mechanisms for (i) the determination of *Shari'a* entrusted to a Council (Majlis) of scholars; (ii) a system of Muslim courts; and (iii) statements of substantive principles of law, including family law, trusts and offences against religion. In Malaysia, though not in Singapore, constitutional amendments in 1988 have re-enforced the *Shari'a*. Since the 1980s also, the various states in Malaysia have considerably extended the scope of *Shari'a*.

(c) The Philippines.

After many years of neglect under the Spanish, American, and Republic of the Philippines' governments, the *Shari'a* received formal recognition in 1977 with the proclamation of the "Code of Muslim Personal Laws of the Philippines". It is in five books and covers persons and family relations, succession, disputes, legal opinions penal provisions and transition provisions. In short, the Code recognises the separateness of Islamic principle and provides for its administration in the Philippines for the first time. Data are lacking on its success or otherwise at the moment.

(d) General.

The *Shari'a* has been much re-defined in South-East Asia. We can trace adaptations to local form and culture as in the pre-modern texts, and its colonial redefinitions into European form. These have been continued into the post-War years. More recently, however, there has been a consistent trend toward reintroducing the rules of *Shari'a* in a more classically accurate formulation. If this progression is even partly implemented, it will result, for the first time, in the application of a "classical" *Shari'a* to South-East Asia. The legal history of Islam in the area will thus have come full circle; from its introduction in the Arabic, through its re-definition in Malay, and now back again to the Arabic sources. However, the *Shari'a* is dependent on the authority of the State, which is secular. Its existence is unlikely to escape from this constitutionally imposed status.

(M.B. HOOKER)

**SHARĪ'ATĪ, 'ALĪ**, influential Iranian intellectual (1933-77).

He was born at Mazinān (Khurāsān), as the son of Muḥammad Takī Sharī'atī, a preacher. His secondary education he received in Mashhad and in 1951 he qualified as teacher. His first publications and

translations, as well as his involvement in politics, date from this period. In 1956 he enrolled as a student at the Faculty of Letters in Mashhad. Receiving his bachelor's degree in 1959, he was rewarded with a scholarship. A year later he went to Paris where he studied religious history and sociology, but his thesis, under G. Lazard, was in the field of Persian philology. In his Parisian period he actively supported the Algerian and other liberation movements. His principal sources of inspiration were Louis Massignon, with whom he studied the figure of the Prophet's daughter Fāṭima, and Frantz Fanon, whose book *The wretched of the earth* he translated and with whom he corresponded. Upon his return to Iran, in 1964, he was arrested for importing banned books and jailed for several months. After his release he taught, first in a village and then in a high school in Mashhad, and he was employed at the university of Mashhad to teach sociology and history of religion. In 1970 he was dismissed and two years later he went to Tehran, where he soon became the key figure of the Husayniyya-yi Irshād, a centre for the study of Islam, established in 1965. At the end of 1973 the centre, renowned particularly for the well-attended public lectures it organised, was shut down by the government and Sharī'atī went into hiding, but after some time he gave himself up in order to secure the release of his father, who was held hostage. After 18 months of solitary confinement, he was allowed, in March 1975, to return to Mazinān where he was kept under constant police surveillance. In the spring of 1977 he managed to go to London, but shortly after his arrival there, he died of a heart attack on June 19.

His ideas centred around the reconstruction of true Islam, which he equated with the original Shī'ī Islam, i.e. the Islam of 'Alī and his family and their partisans, as opposed to the highly institutionalised and clerical (post-)Safawid Shī'ism. In this original Islam, *tawhid* is central not only in its theological, but also in its social and political implications, since it favours a classless society and a revolutionary ethos. Therefore, Abū Dharr [q.v.], a "God-worshipping socialist", and Fāṭima [q.v.] are presented as role-models for modern Muslim men and women. Sharī'atī's sometimes revolutionary approach to Islam made him popular with many young Iranians, university students in particular, as well as with some more reform-minded members of the Shī'ī clergy. In the eyes of the traditional segments of this clergy, however, he lacked the necessary qualifications to be an authoritative spokesman on Islamic affairs. Sharī'atī is often considered to be one of the most important ideologues of the process culminating in the Islamic Revolution in Iran. However, there is no real congruence between his ideas and the theoretical foundations, let alone the policy, of the ensuing Islamic Republic of Iran. Nevertheless, it is not to be denied, that his ideas have played and still play an important part in the discussions on the role and significance of Islam, both in Iran and, through the translation of several of his writings, in many other countries of the Islamic world.

**Bibliography:** In the absence of a comprehensive and thorough study on Sharī'atī, information on his life and ideas are to be found in S. Akhavi, *Religion and politics in contemporary Iran. Clergy-state relations in the Pahlavi period*, Albany 1980, 143-50; H. Dabashi, *Theology of discontent. The ideological foundation of the Islamic Revolution in Iran*, New York and London 1992, 102-47; N.R. Keddie, *Roots of revolution. **SHARĪ'ATMADĀRĪ**, ĀYATULLĀH SAYYID MUḤAMMAD KĀZIM, a high-ranking and influential Iranian cleric (d. 1986).

He was born in 1905 in Tabriz where he started his theological studies. In 1924 he continued his studies in Kum, and in 1935 he went to Najaf. His return to Tabriz was the starting-point of a career as a teacher, first in his native city and subsequently in Kum, where he had moved toward the end of the forties, at the invitation of Āyatullāh Burūjdīrī [q.v. in Suppl.]. Here he became one of the most respected leaders of the Shī'ī community and in his capacity as *Mardja'-i Taklīd* [q.v.] he drew his support mainly from the Ādhari-speaking part of the population. In the 1960s he started an institute for Islamic education and propaganda, called Dār al-Tabligh. From the educational point of view, the programme offered by the institute to boys and later on also, albeit separately, to girls, stood midway between the curriculum of a modern school and the traditional *madrassa* system. The propaganda activities of the institute included the publication of books and journals. Three of the journals were in Persian, *Maktab-i Islām* ("School of Islam"), *Nasl-i Naw* ("New Generation") and *Payām-i Shādi* ("Glad Tidings") for adults, for adolescents and children respectively, and one in Arabic, *al-Hādī*. The Dār al-Tabligh also provided for the training of preachers, and finally it served as an oracle for many Shī'īs outside Iran, who consulted the institute on religious questions. The only book which Sharī'atmadārī appears to have published, was his version of the thesis that traditionally confirms a cleric's position as *mudjtahid*, *Tawdīh al-masā'il*.

His ideas, which he mainly expressed in interviews, can overall be characterised as the ideas of highly traditional Shī'ī cleric. And so, during the Islamic Revolution, he strongly supported the view that the clergy must not be directly involved in politics. He was one of those who favoured the model incorporated in the Iranian Constitution of 1906-7, that accorded to the clergy, or, to be precise, to a committee of five *mudjtahids*, the right to monitor the legislative process and to veto any legislation that they judged was incompatible with Islamic laws and regulations. His name and ideas were claimed by the predominantly Ādharbāydzānī Muslim Republican People's Party, although he himself carefully avoided direct association with the party, as he equally carefully avoided accepting any official posts. In the discussions concerning the constitution of the Islamic Republic, Sharī'atmadārī protested against the fact that the draft constitution had not been submitted to a constituent assembly. A compromise was reached, to the effect that an Assembly of Experts, consisting of 73 elected members, was given the power to amend the draft. But when the new draft was presented and about to be submitted to a referendum, Sharī'atmadārī expressed his disagreement with the leading principle of the intended constitution, viz. the *wilāyat al-fakīh*, that was to give the clergy a direct and even ultimate say in politics. He even threatened that he would abstain from voting. Thereupon his house was attacked and there was even an attempt on his life (on 5 December 1979), which provoked a general strike and demonstration in his home town Tabriz.

But Kḥumaynī and those who shared his view proved too strong for Sharī'atmadārī and his partisans. In a referendum the overwhelming majority of the Iranian people voted in favour of the draft that bore almost exclusively the stamp of Kḥumaynī's ideas. The Muslim Republican People's Party was forced to dissolve itself, and two years later, Sharī'atmadārī himself was silenced rather drastically. In April 1982, after his son-in-law, accused of being an accomplice of Sādiq Ḳutbzāda (who had been shortly before executed), had been sentenced to prison, an orchestrated effort was made to discredit Sharī'atmadārī. Forged documents circulated that denounced him as a traitor. Members of Parliament and clerics accused him of having made common cause with the enemy of the Islamic Republic. His Dār al-Tabligh was shut down and he was placed under house arrest. His opponents even managed, through the influential Society of Teachers of Seminaries in Kum, to have him demoted and stripped of his title as *Mardja'-i Taklīd* or source of emulation. Virtually no protests were heard against this, and four years later, in April 1986, he died.

(J.G.J. TER HAAR)

**SHARĪF** (A.; loanword in P. and T.) (pl., *ashraf*, *shurafa'* [in the Maghrib, *shurfā'*, q.v.], *sharaf* [seldom]) "noble", "exalted", "eminent" [in religious or worldly esteem], derives from the root *sh-r-f*, which expresses the idea of exaltedness and prominence. Its pre-Islamic as well as its most basic use in Islamic cultures is to denote a free man who can claim a distinguished rank because of his descent from illustrious ancestors (L4, xi, 70-1); that is, a person possessed of nobility (*sharaf*; or, less frequently, *shurfa*; both also used in P.; in T., *sheref*, *sherafet*), whether conferred by inherited or personally acquired glory and honourable conduct or, preferably, both. Possession of *sharaf* is expressed often by the phrase "*dhu 'l-hasab wa 'l-nasab*", "possessing great honour [lit. 'estimation'] and unblemished ancestry" [see ḤASAB WA-NASAB; NASAB]. Early in Islamic times, kinship or even "companionship" [see ṢAḤĀBA] with the Prophet became a new and special form of *sharaf*. To be a *sharīf* meant having a claim to: (i) most commonly, some type of Hāshimīd descent—from the family or clan of the Prophet, the Banū Hāshim (after the Prophet's great-grandfather, Hāshim b. 'Abd Manāf [q.v.]); or, (ii) more specifically, 'Alid—normally Hasanid or Husaynid—descent (from Muḥammad's cousin and son-in-law 'Alī and his daughter Fātima, through either of their two sons, al-Ḥasan and al-Ḥusayn, or one of their daughters, or one of 'Alī's children by other wives); or, (iii) still more narrowly, Hasanid descent only—the term *sayyid* "lord", being used to denote Husaynid descent. The last two usages reflect the fact that al-Ḥasan and al-Ḥusayn were widely regarded as the noblest of the noble by birth (see al-Tha'alibi, *Laṭā'if al-ma'ārif*, ed. P. de Jong, Leiden 1867, 51 ff., tr. C.E. Bosworth, *The Book of curious and entertaining information*, Edinburgh 1968, 79).

realpatidar.com

(1) Generic (pre-Islamic and Islamic) meanings of the term.

Traditionally in the Arab, and also in the wider Islamic world, as in most cultures, it has been assumed that the meritorious qualities of forebears are transmitted to their descendants. Thus it is typically the possession of illustrious ancestors, or estimable "house" (*bayt*, pl. *buyūtāt*; Ibn Khaldūn, *Muqaddima*, i, 243; cf. Ibn Durayd, *Ishṭikāk*, ed. Wüstenfeld, Göttingen 1854, 174; see also AHL AL-BUYŪTĀT), which is requisite for a *sharaf* (or *hasab*) *ḥakīm*, a "substantial/great nobility" (I. Goldziher, *Muh. St.*, i, 41-2; H. Lammens, *Le berceau de l'Islam*, Rome 1914, 289-90). Although in Islam there did develop the doctrine of the equality of all Muslims—based on Qurʾān, XLIX, 13, *inna akramakum ʿind Allāh atḥakum*, "Truly the noblest among you in God's eyes is he who is most Godfearing" (cf. Goldziher, *op. cit.*, i, 50-3, 69-76), it never quite displaced the old Arab reverence for a distinguished genealogy. An oft-reported *ḥadīth* of the Prophet underscores that "the most noble (*akram*) people are the most pious (*atḥakum*), but adds that "the best (*khayr*) of them in the *Djāhiliyya* [q.v.] are the best in Islām, if they have understanding [in religious matters] (*idhā fakihū*)" (Muslim, *Ṣaḥīh*, ed. ʿAbd al-Bāḳī, Beirut 1955-6, 43 [*Faḍāʾil*], trad. 168; 44 [*Faḍāʾil al-ṣaḥāba*], trad. 199; al-Bukhārī, *Ṣaḥīh*, ed. Al-Nawāwī, Ibrāhīm and Khafādjī, Cairo 1378/1958, 60 [*Anbiyāʾ*], 8.5,14, 19.1; 61 [*Manāḳib*], 1.5,6).

Among the Arabs before and after the advent of Islam, the *ashraf* were either persons from noble tribes or specifically the heads of prominent families—those who over time had gained recognised status vis-à-vis others and were entrusted with administering the affairs of the tribe or alliance of tribes or towns: e.g. *min ashraf al-kaum*, Ibn Hishām, *Sira*, ed. al-Sakkāʾ, al-Abyārī and Shalabī, Cairo 1355, repr. Beirut 1391/1971, i, 386,17 = ed. Wüstenfeld, 237; the *ashraf* of Muḥammad's *kaum* [i.e. Kuraysh], al-Ṭabarī, i, 1191,1; the *ashraf* of al-Hira, *ibid.*, i, 2017; the *ashraf al-ḥabāʾil*, *ibid.*, ii, 541,17; the *ashraf* in Kūfa, *ibid.*, ii, 631 ff. *passim*; the *ashraf* of Khurasān, *ibid.*, iii, 714,1; the *ashraf al-ʿaḍīm*, al-Yaʿkūbī, ii, 176,8. The *ashraf* regarded themselves as the aristocrats (*ahl al-faḍl*) in contrast to the rude and untutored masses (*arāḍiḥ*, *sufahāʾ*, *akhṣāʾ*) and lesser tribes or families (al-Ṭabarī, ii, 631,7; cf. the boast of a Tamīmī leader about his tribe's noble persons, *kirām*, in Ibn Hishām, *op. cit.*, iv, 308 = ed. Wüstenfeld, 935). In Islamic times as before, *sharif* also meant a person strong in noble pedigree, character, and importance, in contrast to one who is "weak" (*daʿīf*, also *waḍīʿ*), especially in his or her *nasab* (al-Bukhārī, *op. cit.*, i [Badʿ al-waḥy], 6; 86 [*Hudūd*], 11,12; Muslim, *op. cit.*, 33 [*Imāra*], trad. 16). *Sharif* and *daʿīf* could also refer specifically to those able to bear arms and those "unarmed", respectively—the right to bear arms being an important social distinction in Islamic as in many other societies (B. Lewis, *The political language of Islam*, Chicago 1988, 67-8).

A *sharif* as a person of importance, in contrast to one of lower status, has been an enduring social distinction in most of the Islamic world. It occurs frequently in this sense in the older Islamic sources of the 3rd-5th/9th-10th centuries, as in the title of the genealogical work of al-Balādhurī, *Ansāb al-ashraf*, and in chapter headings such as *Afʿāl min afʿāl al-sāda waʾl-ashraf*, in Ibn Kutayba, *ʿUyūn al-akhbār*, Cairo 1343/1924-5, i, 332; *Marāthi ʾl-ashraf*, *Ashraf kutāb al-nabī*, *Naṣṣa ʾl-ashraf*; *Man ḥudda min al-ashraf*, in Ibn ʿAbd Rabbihi, *al-ʾIkd al-farīd*, Bulāḳ 1293/1876, ii, 29, 207,

and iii, 311, 406, respectively; and *Sināʾat al-ashraf*, in al-Thaʿalibī, *op. cit.*, 77, tr. 102. In such examples, the meaning is not always precise: the use of *al-ashraf* to indicate something like *al-khāssa* (the élite, notables), or a subgroup within this category (as opposed to *al-ʾamma*, the common folk, masses), seems to have continued under Islam, even while simultaneously *al-ashraf* in the stricter genealogical sense (whether designating persons ennobled by prophetic or by other socially exalted blood lines) has been used for persons of noble lineage whatever their social, economic, or political status (see AL-KHĀSSA WA ʾL-ʾAMMA and, on the complexity of mediaeval Muslim societal attitudes about rank and status generally, R. Mottahedeh, *Loyalty and leadership in an early Islamic society*, Princeton 1980, esp. 97-174).

The possible meanings of *sharif/ashraf* have varied both geographically and chronologically. In the Arabian peninsula, alongside prophetic lineage, other standards of *sharaf* not directly linked to Islam have remained remarkably strong: Arab tribal groups have prided themselves on purity of descent from the ancient patriarchs of the southern and northern Arabs, Kaḥṭān and ʿAdnān, respectively [q.v.], and many clans or families still claim to be *ashraf* because of their pure and illustrious Arab lineage [see AL-ʾARAB, DJAZIRAT, vi. Ethnography, esp. at I, 546a]. By contrast, in South Asia, *ashraf* has had a very different meaning. Here it has been used to designate a major social-status group within the overall Muslim community, namely all Muslims of foreign ancestry (as opposed to higher and lower indigenous Indian Muslim lineages, the *atrāf*, or *adilāf*, and the *ardhāl*, respectively). Thus the *ashraf* comprise *sayyids* (descendants of ʿAlī and Fāṭima) and *shaykhs* (descendants of Quraysh or of Muḥammad's Companions), as well as *mughals* and *pathāns* (two ethnic descent groups of "foreign" origin): see I. Ahmad (ed.), *Caste and social stratification among the Muslims*, Delhi 1973, 21-2 (P. Aggarwal, ch. *The Meos of Rajasthan and Haryana*), 92-5 (Z. Bhaty, ch. *Status and power in a Muslim-dominated village of Uttar Pradesh*), 113-19 (Bhattacharya, ch. *Concept and ideology of caste among the Muslims of rural West Bengal*), 159-70 (I. Ahmad, ch. *Endogamy and status mobility among the Siddique Sheikhs of Allahabad*); L. Dumont, *Homo hierarchicus*, Eng. tr. Sainsbury, Chicago 1970, 206-8; J. Sharif, *Islam in India or the Qānūn-i-Islām*, tr. Herklotz, rev. ed. Crooke, London 1921, 9-13 (see also HIND, ii. Ethnography, at III, 411a; and on the use of these categories also in Nepal, M. Gaborieau, *Muslim minorities in Nepal*, in R. Israeli, *The Crescent in the East*, London 1982, esp. 85-90). Similarly, in many other regions today, e.g. Turkey and Persia, *sharif* is used primarily to designate social or economic "nobility" status without reference to Prophetic descent, which is signalled by the specific use of *sayyid* (see below), not *sharif*. One should note also the presence in Islamic societies alongside (as well as among) the blooded *ashraf* and/or *sāda* (pl. of *sayyid* [q.v.]) of what has been effectively a "noblesse de la robe", to use Tyan's phrase (*Histoire de l'organisation judiciaire en pays d'Islam* [Paris 1938], <sup>2</sup>Leiden 1960, 552, n. 1), namely the religious scholars (*ulamāʾ*).

(2) The Islamic meanings of the term.

The broadest specifically Islamic meaning of *sharif* has been "descendant of the Prophet". Early on, the ability to show kinship with the Prophet was an important claim to *sharaf* (cf. al-Bayhaḳī [*fl. ca. 300/912*], *al-Mahāsīn waʾl-masāwī*, ed. F. Schwally, Giessen 1902, 95 ff.), and under the influence of Shīʿī views and the increasing veneration of the Prophet generally,

membership in the "house of Muḥammad" became a mark of special distinction in Islamic societies. There was, however, considerable variation in how such membership was defined.

The expression *ahl al-bayt* [q.v.], "People of the House", is from Qur'an, XXXIII, 33b, "God will remove the stains from you, O people of the House, and purify you completely". Although this verse may well have referred to Muslims as people of the Ka'ba (cf. R. Paret, in *Orientalistische Studien Enno Littmann überreicht*, Leiden 1935, 127-30), it was interpreted frequently among Sunnīs, but especially among the Shī'īs (as early as al-Kumayt [q.v.], who died in 126/743, 38, 11 ff.; cf. 92, 9 ff., and R. Strothmann, *Das Staatsrecht der Zaiditen*, Strasbourg 1912, 19-20), as referring to Muḥammad, his daughter Fāṭima, his son-in-law and cousin 'Alī, and his grandsons al-Ḥasan and al-Ḥusayn. The key proof text for this is the well known "mantle ḥadīth" (*ḥadīth al-kisā'*/'*abā'*, from which these five are also known, above all among Shī'īs, as the "People of the Cloak", *ahl al-kisā'* [q.v.]; and cf. MUBĀHALA, at VII, 276b), or *ahl al-'abā'*). This ḥadīth recounts how Muḥammad one day brought the other four under his cloak (*kisā'*, '*abā'*'[a], *mirt*, or *ṭhawb*) and called them *ahl al-bayt*, or simply "my family", *ahlī* (Muslim, *op. cit.*, 44 [*Faḍā'il al-ṣaḥāba*], trad. 61 [cf. trad. 32]; al-Tirmidhī, *Suman*, ed. Shākir, 'Abd al-Bāqī, and 'Iwād, Cairo 1319-46/1937-65, 48 [*Tafsīr*], 34.7 and 50 [*Manāḳib*], 32.2, 61.5; Ṭabarī, *Tafsīr*, Cairo 1968, xxii, 6-8 [10 versions]; al-Ṣabbān, 105-6; cf. M. Ayoub, *Redemptive suffering in Islam*, The Hague 1978, 37 n. 49).

More in keeping with the Qur'anic context of XXXIII, 33b (despite the absence of the feminine plural pronoun, *kunna*, in v. 33: see al-Nabhānī, 15-16, 21-2, 30-1) is the interpretation given the *ahl al-bayt* of XXXIII, 33, in a ḥadīth from Ibn 'Abbās, Muḳāṭil, and/or 'Ikrima, namely that it refers to the Prophet's wives, the "women" of his household addressed explicitly in XXXIII, 28-34. Other versions cite Umm Salama as being included specifically by the Prophet, along with the *ahl al-kisā'*, in the *ahl al-bayt* (al-Tirmidhī, 48 [*Tafsīr*], 34.7; Ibn Ḥanbal, *Musnad*, Cairo 1313/1895-6, vi, 292, 296; al-Ṭabarī, *Tafsīr*, xxii, 8; al-Makrīzī, 26-33; cf. al-Ṣabbān, 106-7).

The survey by al-Nabhānī (10-34) of the various reports and exegetical opinions on who is included in *ahl al-bayt* reinforces the evidence that the scope of the term varied with time and circumstances. The ḥadīth that glosses it simply as "the family of the Prophet", '*īrat al-nabī*' (Ibn Ḥanbal, iii, 14, 17; al-Tirmidhī, 50 [*Manāḳib*], 32.1; further references in A.J. Wensinck, *Concordance de la tradition musulmane*, 120a, s.v. "ītra"; cf. Lane, 1946b) left the door open to further interpretation. It appears that, while descent in the direct bloodline of the *ahl al-kisā'*, i.e. from 'Alī and Fāṭima through their two sons [see 'ALIDS], came later to distinguish above all the Shī'ī Imāms [q.v.] and their descendants as *ahl al-bayt*, or to define (among Sunnīs or Shī'īs) the true *aṣhrāf*, initially for Muslims descent from 'Alī specifically as Muḥammad's male cousin or from other agnates of the Prophet was a more important link to the "house" of Muḥammad than direct descent from him via the line of Fāṭima and 'Alī. In general, the use of *ahl al-bayt* has been more rather than less inclusive in the wider tradition (some reports even portray the Prophet as including the Companion Salmān al-Fārisī [q.v.] among the *ahl al-bayt*: Ibn 'Arabī, *Futūḥāt*, ed. Yaḥyā, Cairo 1394/1974, 230-3; al-Makrīzī, 43; al-Nabhānī, 23-6). Two common Sunnī views that developed were: (i) the harmonising opinion according to which *ahl al-bayt* include the five key

members of Muḥammad's family plus his wives (and hence their descendants), and (ii) the position that the term encompasses both the Ṭālibids and 'Abbāsids, historically the most important families of the Banū Hāshim. This latter view was one that the 'Abbāsīd caliphs espoused to bolster their own legitimacy and prestige. Shī'īs also have stressed Ṭālibid as well as 'Alid descent (see AHL AL-BAYT; on the genealogy of the Ṭālibids, see Ibn 'Inaba, '*Umdat al-ṭālib*'; cf. Naḍīm al-Dīn 'Alī al-'Umārī, Ibn al-Sūfī (d. ca. 466/1074), *al-Maḥḍī fī ansāb al-ṭālibīn*, ed. Mahdawī Dāmghānī, Kum 1409/1988-9).

The identification of the two main Hāshimī lineages with the *ahl al-bayt* was based chiefly upon one version of the so-called *ḥadīth al-ṭhākalayn* (in which *ṭhākalānī* refers to the two sources of guidance that Muḥammad says he is leaving behind for the Muslims: Scripture, sc. *al-Kūb*, and the *ahl al-bayt*). In this version, the *ahl al-bayt* are identified as those to whom, as members of the Prophet's family, the sharing in *ṣadaka* [q.v.] is forbidden; specifically mentioned are the Āl 'Alī, the Āl 'Aḳīl, the Āl Dja'far (i.e. descendants of Abū Ṭālib's sons), and the Āl al-Abbās (Muslim, *op. cit.*, 44 [*Faḍā'il al-ṣaḥāba*], trad. 32 [cf. trad. 33]; al-Tirmidhī, 50 [*Manāḳib*], 32.3 Ibn Ḥanbal, ii, 409-10, iv, 367; al-Nabhānī, 35-54, 68-74; al-Makrīzī, 30-1, 33; Ibn Ḥadjar al-Haytamī, '*Ṣawā'ik*', 147; Lamens, *Fāṭima*, Rome 1912, 95-100 [for references to still other groups counted as *ahl al-bayt*, see esp. 99, n. 4]; C. van Arendonk, *De Opkomst van het Zaiditische Imamaat in Yemen*, Leiden 1919, 65 ff.; see also ĀL; on *ṭahrīm al-ṣadaka*, cf., e.g. al-Ṣabbān, 108, 110, 117, 121).

The tendency to equate the main Hāshimī lineages with the *aṣhrāf* of the *ahl al-bayt* appeared as early as the 2nd/8th century. The special status of the Banū Hāshim was trumpeted already by al-Kumayt, *op. cit.*; just as he lauds effusively the noble blood of the Prophet (14,5-15,12), he praises the Banū Hāshim as "the highest of creatures" (2,9) and "the peaks of splendid nobility (*ḥasab*)" (5,8), who are granted "a pre-eminence among all humankind" (58,8), and he celebrates them as *aṣhrāf* and *sāda* (10,4, 56,2). The editors of the Prophet's *Ṣira* especially bolstered the prestige of the Banū Hāshim by putting forward the idea that God, after a gradual process of elimination of others, deliberately chose the Hāshimids as the family to produce the Prophet. A tradition which occurs in several versions has the Apostle of God say: "God chose Ismā'īl from the sons of Ibrāhīm, and from the sons of Ismā'īl the Banū Kināna, and from the Banū Kināna the Quraysh, and from the Quraysh the Banū Hāshim" (Ibn Sa'd, i, 2,2; cf. Ibn Hishām, iv, 205 = ed. Wüstenfeld, 933; al-Nabhānī, 76-7, 172; cf. *ibid.*, 78-9; al-Ṣabbān, 120; cf. al-Husaynī, *Faḍā'il*, 57-148). One version concludes with the Prophet's words, "consequently I am the best of you as regards family and the best of you as regards genealogy" (Ibn 'Abd Rabbihi, *op. cit.*, ii, 247. Cf. also al-Khaḍḍājī (d. 1069/1659), *Nasīm al-riyād fī sharḥ shīf* al-Kāḍī 'Iyād, Cairo 1325-7/1907-9, i, 429 ff., ch. on the *sharaf* of the Prophet).

According to al-Suyūṭī, *R. al-Sulāla al-zaynabiyya*, fols. 4a-b (cited in al-Ṣabbān, 121; al-Nabhānī, 82), *al-sharīf* designated in the earlier period (*al-sadr al-awwal*) anyone who belonged to the *ahl al-bayt*, whether Ḥasanī or Ḥusaynī, 'Alawī (a descendant of any of 'Alī's sons, esp. Ḥasan, Ḥusayn, or Muḥammad b. al-Ḥanafiyya), Dja'farī or 'Aḳīlī (a descendant of one of 'Alī's brothers), or 'Abbāsī (a descendant of the Prophet's uncle al-Abbās). He also points out that in the *Tar'rikh* of al-Dhahabī [q.v.], who died in 748/

1348, we often meet with titles like *al-sharīf al-abbāsī*, *al-sharīf al-akīlī*, *al-sharīf al-djāfarī*, *al-sharīf al-zaynabī* (which, however, proves very little for the older period).

There are indications that in 'Abbāsīd times, no later than the mid-4th/10th century and probably earlier, *al-sharīf*, which is said to have been also a *laqab* of 'Alī b. Abī Ṭālib (Muḥibb al-Dīn al-Ṭabarī, iii, 137,6), was reserved especially for the descendants of al-'Abbās and Abū Ṭālib. Al-Saffāh's (r. 132-6/750-4) naming of the first official 'Abbāsīd administrative capital *al-Ḥashimiyya* likely reflected to some degree (even if it also referred to the dynasty's roots in the so-called Ḥashimiyya [q.v.] movement) the 'Abbāsīds' desire to identify, in contrast to the Umayyad "usurpers" before them, with the Ḥashimī legitimacy of the *ahl al-bayt* (J. Lassner, *The shaping of Abbasid rule*, Princeton 1980, 151-2). We know that the Ḥusaynid Abū Aḥmad al-Ḥusayn b. Mūsā (d. ca. 400/1009-10) and his two famous sons, al-Sharīf al-Raḍī (d. 406/1016) and al-Sharīf al-Murtaḍā (d. 436/1044), all served terms as *nakīb* (see below) of the Ṭālibid *ashrāf* in Baghdād (cf. H. Halm, *Die Schia*, Darmstadt 1988, 64-5; AL-MURTADĀ; AL-RĀDĪ; Brockelmann, S I, 131, 704-6). Muslim historians first used the term *sharīf* for such descendants in the 4th/10th century, as the 'Abbāsīd empire was dissolving, with 'Alids rebelling everywhere and attaining power in Ṭabaristān and Arabia (Snouck Hurgronje, *Mekka*, i, 56-7), but not all references to the *ashrāf* are clear: al-Ṭabarī (d. 311/923), writing of an event in 178/794-5 (iii, 635,6), mentions *al-ashrāf* as one group of (Arab? 'Alid?) notables alongside the Banū Ḥāshim.

With time, the title *sharīf* came commonly to be restricted to the 'Alids alone. Al-Suyūṭī (*ibid.*) observes that the Fātimids (who had strong reasons to reject 'Abbāsīd claims to legitimacy) restricted the title *al-sharīf* to the descendants of al-Ḥasan and al-Ḥusayn and that this had remained the custom in Egypt down to his own time (end of 9th/15th century). He cites, however, the *Kutāb al-Aḥkām* of Ibn Ḥaǧǧar al-'Askalānī to note that *al-sharīf* was used in Baghdād as a *laqab* of every 'Abbāsī and in Egypt of every 'Alawī. We may assume that at least in the Fātimid sphere, the term in the strict sense was applied only to a Ḥasanī or Ḥusaynī, for, as al-Suyūṭī notes in another connection (fol. 6a-b; in al-Ṣabbān, 207-8; cf. Ibn Ḥaǧǧar al-Haytamī, *Fatāwā*, 144), a *wakf* [q.v.] or a testamentary deposition in favour of the *ashrāf* is only awarded to the descendants of al-Ḥasan and al-Ḥusayn, for such depositions are decided by local usage (*urf*), and according to the usage in Egypt, dating from Fātimid times, *ashrāf* applied only to Ḥasanids and Ḥusaynids (that this usage persisted even in Mamlūk and Ottoman times indicates how firmly established it had become under the Fātimids: M. Winter, 17, n. 2). In conclusion, al-Suyūṭī observes that according to the linguistic usage of Egypt, noble blood (*sharaf*) was divided into different classes, namely a grade that included the whole of the *ahl al-bayt*, another that contained only the *Dhurriyya*, i.e. the descendants of 'Alī, which included the Zaynabīs, the descendants of Zaynab bt. 'Alī or any other of 'Alī's daughters, and finally a still smaller class, the *sharaf al-nisba*, which only admitted the descendants of al-Ḥasan and al-Ḥusayn.

### (3) Sayyid and Sharīf.

The case of *sayyid* or "lord" [q.v.] was similar to that of *sharīf*. *Sayyid* means the master in contrast to the slave (e.g. al-Bukhārī, *op. cit.*, 93 [aḥkām], 1.2, etc.), and the husband vis-à-vis the wife (e.g. Kur'an, XII, 25). *Sayyid* was also the usual name for the head of a tribe or clan (cf. Kur'an, XXXIII, 67; Ibn

Hishām, ii, 83,10-1 = ed. Wüstenfeld, 295,17) whose authority was based mainly on personal qualities like discretion (*ḥilm* [q.v.]), liberality, and command of language (cf. Ibn Kūṭayba, *op. cit.*, i, 223 ff.; G. Jacob, *Altarabisches Beduinenleben*, Berlin 1897, 223; Lammens, *Berceau*, 206-10). The Kur'an, III, 39, praises the prophet Yaḥyā or John (the Baptist) as a *sayyid*. Certain physical qualities are also said to mark a person as a *sayyid* (Ibn Kūṭayba, *loc. cit.*; Mez, *Renaissance*, 144). Contemporary Arabic usage has reduced the term to a synonym for "mister" (and *sayyida* to "madam") in much of the Arab world and thus reduced or effaced its association with special socio-religious status.

The term may have come into use particularly as a title for 'Alids or Ṭālibids at about the same time as *sharīf*. This development was probably aided by traditions that describe al-Ḥasan and al-Ḥusayn and their parents as *sayyid(a)*. The Prophet is reported to have said of al-Ḥasan, "this my [grand]son is a *sayyid*, and perhaps God will bring about reconciliation between the two parties of Muslims through him" (al-Bukhārī, 92 [Fitan], 20,1; 62 [Fadā'il al-sahāba], 22,1). Al-Ḥusayn appears in the Ḥadīth as *sayyid shabāb ahl al-Djanna*, "Lord of the young men of the people of Paradise" (al-Nabhānī, 130-1; al-Ṣabbān, 185), just as he and his brother are celebrated as *sayyidā shabāb ahl al-Djanna* "the two lords of the young men [etc.]" (al-Tirmidhī, 50 [Manāḳib], 31,1, 14; al-Nasā'ī, 117, 118, 123, 124; al-Ṣabbān, 115; al-Nabhānī, 143; A. Amīn *Duḥā 'l-Islām*, iii, Cairo 1362/1943, 287), while their mother Fāṭima is lauded by the Prophet as "mistress of the women of this community/my community" or "mistress of the women of the worlds" (*sayyidat nīsā' ḥādhihi 'l-umma/ummah, sayyidat nīsā' al-'ālamīn*) (Ibn Sa'd, viii, 17,17; al-Nasā'ī, 116-20, *passim*), and as "mistress of the women of the people of Paradise (*ahl al-djanna*)" (al-Bukhārī, *op. cit.*, 61 [Manāḳib] 24,44; 62 [Fadā'il ashāb al-nabī], 29; al-Tirmidhī, 50 [Manāḳib], 30,15; Ibn Ḥaǧǧar al-Haytamī, *Fatāwā*, 142,18; al-Nasā'ī, 117; Amīn, *op. cit.*, 286). The Prophet is said to have called 'Alī *sayyid al-'Arab* and *sayyid al-muslimīn* (Muḥibb al-Dīn al-Ṭabarī, iii, 176,9,20, 177, 2-3) and to have once said to him, "You are a *sayyid* in this world and a *sayyid* in the next" (*ibid.*, 177,7). In a verse in al-Bayḥaqī (*Maḥāsīn*, 96,10), 'Alī is described as *sayyid al-nās*, but as a rule such expressions are only applied to the Prophet (*sayyid wuld Adam*, Ibn Sa'd, i, 1,18, 3,15, and Muḥibb al-Dīn al-Ṭabarī, iii, 176,9; *sayyid al-bashar*, Ibn 'Abd Rabbihi, *op. cit.*, ii, 246,17).

In the beginning, the term *sayyid* may have been first applied to those who possessed some authority in their own sphere. In the genealogical work of the Ḥasanid Ibn 'Inaba, *Umdat al-ṭālib*, individual 'Alids are often described as *sayyid(a)* (e.g. 81,6,9,12, 87,8, 88,12, 91,8, 92,5, 94,20, 163,16,19, 169,5,15). Al-Dhahabī, *Ta'rikh al-Islām*, ms. Leiden 1721, fol. 65a, gives this title to the Twelver Imām 'Alī b. Muḥammad. We also find the combination *al-sayyid al-sharīf* or vice-versa (al-Nuwayrī, *Nihāyat al-arab*, Cairo 1342/1923-4, ii, 277,12; al-Khazraǧī, *al-Ukūd al-lu'lu'yya*, i, Leiden and London 1913, 314,11). The word *sayyid* also came to be applied to Ṣūfī masters, saints and notable theologians, e.g. *al-sāda al-ṣūfiyya*, *al-sādāt al-awliyyā'* (al-Shardī, *Ṭabaḳāt al-khawāṣṣ ahl al-ṣiḍk wa 'l-iḥklās*, Cairo 1321/1903, 2,9, 3,1, 195,3; cf. M. Winter, 18); *al-sāda al-a'lām* (Ibn Ḥaǧǧar al-Haytamī, *Fatāwā*, 141,34). Found widely in Arabic as the term used by a slave to address his/her master, the term *sayyid* or *sīdā* (frequently in al-Sha'rānī) became very popular in a still more general applica-

tion to persons regarded as holy, especially mystical masters of particular *ṭarīqas* or *zāwiyas* [q.v.] or Sūfīs in general. This can be seen in the many Muslim shrines dedicated to saintly persons addressed as *sīdī*, e.g. the tomb of “Sīdī Maḥyi ‘l-Dīn” (Muḥyi ‘l-Dīn Ibn al-Arabī) in Damascus, the *Haram* of “Sīdnā ‘Alī b. ‘Alī” (a descendant of ‘Umar b. al-Khaṭṭāb) in Israel/Palestine (L. Mayer and J. Pinkerfeld, *Some principal Muslim religious buildings in Israel*, Jerusalem 1950, 36-9), or the shrine of “Sīdī Muḥammad Sharīf” (also a descendant of ‘Umar and key figure of the *Sharkāwī* order) in Būdjad, Morocco (D. Eickelman, *Moroccan Islam*, Austin 1976, 183-210).

It is also the case that such Sūfīs or other saintly figures have often also claimed Prophetic descent, so that the title “sayyid” is doubly earned. This is above all the case in Morocco, on which, see *SHURFĀ*; cf. E. Gellner, *Saints of the Atlas*, Chicago 1969, 70-80. Sayyid Aḥmad b. ‘Isā al-Muḥādjir, the Husaynid forefather of the prestigious Ḥaḍramī *sāda* and the greatest saint of the Ḥaḍramawt, is venerated by pilgrims performing *ziyāra* [q.v.] to his tomb in Kaydūn (D. van der Meulen, *Aden to the Hadhramaut*, London 1947, 185-6; see also *ḤAḌRAMAWT*, in Suppl.). Sayyid Sālār Mas‘ūd Ghāzī, whose tomb shrine is in Bahrā‘īc, in eastern Uttar Pradesh, India, is said to trace his Tālibid pedigree to ‘Alī through ‘Alī’s son by Khawla of the Banū Haniḥa, Muḥammad b. al-Ḥanafiyya [q.v.] (T. Mahmood, in C. Troll (ed.), *Muslim shrines in India*, Delhi 1989, 24-30).

*Sayyid* is the standard term used (instead of, or in preference to, *sharīf*) for all direct descendants of Muḥammad in many Muslim societies; in these contexts, *sharīf* has typically retained its older, more general sense of simply a person of patrician social status (e.g. Persia, Turkey). *Sayyid*, and even *emīr* (A. *amīr*), or *mīr* [q.v.], were and are used in Persia, Turkey, Central Asia, and India as names for a descendant of the Prophet (J. Chardin, *Voyages*, ed. Langlès, Paris 1811, v, 290; H. Gibb and H. Bowen, *Islamic society and the West*, i/2, London 1957, 93, n. 1; M. d’Ohsson, *Tableau général de l’empire ottoman*, Paris 1786-1820, i, 211, cf. 111; J. Hammer-Purgstall, *Des osmanischen Reichs Staatsverfassung und Staatsverwaltung*, Vienna 1815, ii, 398-401; *Sharīf*, *op. cit.*, 9-10, 26-8). In Ḥaḍramawt, the usual title for a Prophetic descendant, whether Ḥasanid or Ḥusaynid, is *sayyid* (Snouck Hurgronje, *Verspr. Geschr.*, iii, 163; van der Meulen, 70, 185-6). According to Amīn al Rayḥānī (*Mulūk al-‘Arab*, Beirut 1924, i, 92, n. 1), the same was true in the Yaman in the early part of the present century, although, to judge from al-Khazraḍī (e.g. i, 314, 11, 315, 3, 317, 10, 13, 318, 7, 11), who died in 812/1409, *sharīf* was in his day the usual name used there. Ibn Tūlūn al-Dimashqī (d. 953/1546) reports that among the chiefs of the young men’s *zu‘ar* [q.v.] of Damascus, *kuraysh* was used alongside *sayyid* and *sharīf* as a name signalling Prophetic descent (cited in I. Lapidus, *Muslim cities in the later middle ages*, Cambridge, Mass. 1967, 155). In the Malay archipelago at the end of the last century, along with the title *sayyid* usual for Prophetic descendants we find also traditional in Aceh the honorific *ḥabīb* (beloved), which was used similarly in Arabia (Snouck Hurgronje, *The Achehnese*, Eng. tr. O’Sullivan, Leiden 1906, i, 155).

In other instances, Muslims have distinguished *sharīf* and *sayyid* as referring specifically to Ḥasanī and Ḥusaynī descent, respectively. In the Hidjāz, it was for centuries the custom to call *sharīf* only those Ḥasanids whose ancestors had lived in Mecca and to designate as *sayyid* only the Ḥusaynids (cf. Gibb and Bowen, *loc. cit.*). From the beginning of their rule in

the late 4th/10th century to its end in 1924, the Ḥasanid *amīrs* of Mecca (who began as Zaydis, but by the mid-8th/14th century had become Sunnī adherents of the Shāfi‘ī school) used the title *sharīf*, as did also, however, the ruling Ḥusaynids of Medina (see the Meccan *amīr* list in al-Batanūnī, *al-Rihla al-hidjāziyya*, Cairo 1329/1911, 82-6). At the turn of the last century, the title *sharīf* was reserved for Ḥasanids alone, but the Meccans addressed the Ḥasanid *Amīr* of Mecca, or so-called “Grand *Sharīf*” (a European usage), as *sayyidunā*, and he likewise gave his Ḥasanid kin the title *sayyid* (Admiralty War Staff, Intelligence Div., *A handbook of Arabia*, i, London 1916, 109; Snouck Hurgronje, *Mekka*, i, 57 n. 1; idem, *Verspr. Geschr.*, iii, 163, v, 31, 40; cf. al-Nabhānī, 82-3).

(4) The *Naḳīb al-Ashraf* and *Niḳābat al-Ashraf*.

In the ‘Abbāsīd period, the *ashraf*, both ‘Abbāsīds and Tālibīds, were usually under the authority of a *naḳīb al-ashraf* or “marshal of the nobility” (also *naḳīb al-sādāt*, or *ra‘īs al-sādāt*) chosen by them. The history of this office remains largely uninvestigated (with the notable exception of M. Winter’s study of the Egyptian case; see also the monograph by al-Husaynī, *al-Ithāf*, which is a compendium of *nukabā’* in various cities; on both, see *Bibl.* below). That the *niḳāba* already existed under the Umayyads, as von Kremer (*Culturgeschichte des Orients unter den Chalifen*, Vienna 1875, i, 449, n. 1) supposed (supported by Tyan, *op. cit.*, 552, n. 4), based upon Ibn Khaldūn, *Ibar*, Bulāḳ 1284/1867-8, iii, 134, is very doubtful, as the passage at issue is probably corrupt (cf. al-Tabarī, ii, 16, *ult.*-17, 1). The two branches of the Banū Hāshim were from the first probably under a marshal, as was the case about 301/913-14 (‘Arīb al-Kurtubī, *Ṣilat ta’rikh al-Ṭabarī*, ed. de Goeje, Leiden 1897, 47, 10); yet we find mention in al-Tabarī, iii, 1516, 5, of an administrator of the affairs of the Tālibīds (*yatawallā amr al-Tālibiyyīn*), in the year 250/864, during al-Mutawakkil’s reign, one ‘Umar b. Faraj (al-Rukhkhajī), who was apparently not a Hāshimī. The ‘Alid ‘Alī b. Muḥammad b. Ja‘far al-Ḥimmānī (d. 260/873-4) was *naḳīb* in Kūfa (al-Mas‘ūdī, *Murūj*, vii, 338 = § 3029). By this date there were apparently marshals of the local nobles who answered to a single grand marshal (*naḳīb* or *sayyid al-nukabā’*): in the late 3rd/9th century, Abu ‘l-Ḥasan ‘Alī b. Dja‘far Ibn al-Ridā was *sayyid al-nukabā’* in Baghdad (al-Marwazī, *al-Fakhri fī ansāb al-Tālibiyyīn*, ed. Raḡjā‘ī, Qum 1408/1988-9, 9; Fakhr al-Dīn al-Rāzī, *al-Shaḍiḡa al-mubāraka*, Qum 1409/1989, 79-80), and in Nishāpūr in the same era, the *sayyid* al-Adjall al-Zabbāra was an influential *naḳīb* of the ‘Alids and *ra‘īs* of the town, as was his son also after him in the reign of the Sāmānīd *amīr* Abu ‘l-Ḥasan Naṣr b. Aḥmad (301-31/914-43) (Ibn Funduk, *Ta’rikh-i Bayhak*, Tehran 1317/1938, tr. in C.E. Bosworth, *The Ghaznavids*, Edinburgh 1963, 196). In Fāṭimid Egypt, there was a *naḳīb al-tālibiyyīn* or *al-alawīyyīn*, who (as under the ‘Abbāsīds) belonged to the political-military rather than the religious or administrative leadership; in Mamlūk Egypt this figure was known as *naḳīb al-ashraf* and, not being of the ruling Turkish military élite, was considered a religious functionary, or *‘alim* (Winter, 31; cf. Tyan, 550-4).

In general theory, it was the duty of the *naḳīb*, who had to possess a good knowledge of genealogical matters, to keep a register of nobility, to enter births and deaths in it and to examine the validity of alleged ‘Alid genealogies (on which see al-Kurtubī, 49-50, 167). He had to keep a watch on the behaviour of the *ashraf*, to restrain them from excesses, and

to remind them to do their duty and avoid anything that might injure their prestige. He had also to urge their claims, especially those on the treasury, to endeavour to prevent the women of noble blood from making mésalliances, and to see that the *wakf* trusts on the *ashraf* were properly administered. He had to participate in, and to be responsible for participation of the *ashraf* in special religious ceremonies. The chief *nakīb* had also other special duties, including specific and sometimes important judicial powers, which varied from era to era and region to region. See al-Mawardi, 164-71; Tyan, 550-8; von Kremer, i, 448-49; L. Massignon, *Cadis et nagibs bagdadiens*, in *WZKM*, li (1948), 106-15; Winter, 32-3; H. Bodman, *Political factions in Aleppo, 1760-1826*, Chapel Hill 1963, 79-102; Mez, *op. cit.*, 145; al-Damurdāshī, *Kitāb al-Durra al-musāna*, tr. D. Crecelius and 'A. Bakr as *al-Damurdashī's chronicle of Egypt, 1688-1755*, 43, n. 108; H. Halm, *op. cit.*, 60-1, 64-5; A. Laroui, *Les origines sociales et culturelles du nationalisme marocain*, Paris 1977, 93-4; and NAKĪB (esp. the *Bibl.*).

If the case of Egypt (Winter, 34-9) is indicative, the social and even the religious importance of the *nakāba* institution has waned in most areas, especially in the past two centuries, and most sharply in the present one; this goes along with the fact that today the *ashraf* rarely represent the distinctive and cohesive, often élite social class that they did several centuries ago in most Islamic societies. Nor do they today typically enjoy the special tax status or other special favours they once did.

#### (5) Marks of *Sharīf* status.

Traditionally, the most common public mark of a *sharīf* has been the green turban that became usual for male *sharīfs* and *sayyids* to wear, especially in Egypt and Persia. Its origin may lie in a 773/1371-2 edict of the Mamlūk sultan al-Ashraf Sha'bān b. Ḥasan (764-78/1363-77) that the male *ashraf* should wear a green badge (*shuṭfa*) fastened to their turbans to distinguish them from other people and as an honour for their rank ('Alī Dadah, *Muḥādarat al-awā'il wa-musamarat al-awākhir*, Būlāḳ 1300/1883, 85; al-Kattānī, 95, 97; Ibn Iyās, *Badā'i' al-zuhūr*, Cairo 1311/1893-4, i, 227; Ibn Taghribirdī, *al-Nuḍjūm al-zāhira*, Cairo n.d., xi, 56-7; Dozy, *Dict. des noms des vêtements chez les arabes*, Amsterdam 1845, 308; Mez, 59; H. Algar, art. *Amāma*, in *ELr*, i, 920a). According to the Ḥasanid Muḥammad al-Kattānī (d. 1345/1927), in his treatise on the turban (97-8), this Mamlūk edict, which is commemorated by the poets of the time, recalls that of the caliph al-Ma'mūn in Ramaḍān 201/817, which replaced the black colour of the 'Abbāsīd house with green at the time when he designated the Ḥusaynid 'Alī b. Mūsā al-Riḍā as his successor (cf. al-Ṭabarī, iii, 1012-13). Al-Kattānī opines that the descendants of 'Alī and Fāṭima henceforth retained green as their colour, but confined themselves in practice to wearing a piece of green material on the turban. This, he thinks, fell in time into disuse until Sultan Sha'bān revived it by his edict. According to the *Durar al-aṣḍāf*, which al-Kattānī quotes (98), the wearing of an entirely green turban dates from an edict of the late 16th-century Ottoman Pasha governing Egypt, al-Sayyid Muḥammad al-Sharīf (cf. Muḥammad al-Ishāḳī, *Akhbār al-uwal fi-man taṣarrafā fi Miṣr min arbāb al-duwal*, Cairo 1311/1893-4, 164) in 1004/1596; when he had the *kisua* [q.v.] for the Ka'ba exhibited, he ordered the *ashraf* to come before him, each wearing a green turban.

Al-Suyūṭī observes that the wearing of this badge is a permissible innovation (*bid'a mubāha*) that no one,

whether a *sharīf* or not, can be prevented from following, if he or she wishes to do so, and one that cannot be forced upon anyone who wishes to omit it, since it cannot be deduced legally. However, Ibn Ḥadjar al-'Asḳalānī tells of a *sharīf*, Fakhr al-Dīn, who lost his post of *nakīb* because he was said to take bribes and to have let non-*sharīfs* wear green badges (*Inbā' al-ghumr*, i, Ḥaydarābād 1387/1967, 39). At most, it can be said that the badge was introduced as a distinction for the *ashraf*; it is therefore equally permissible to limit it to the Ḥasanids or Ḥusaynids or to allow it also to the Zaynabiyya and the still wider circles of the remaining 'Alids or even Ṭalibids. An endeavour is made to connect this custom with Qur'an XXXIII, 59, in which some scholars see a suggestion that learned men should be distinguished by their dress, e.g. by long sleeves or the winding of the *tay-lasān*, so that they may be readily recognised and honoured for the sake of learning (al-Suyūṭī, fols. 5a-6a; in al-Ṣabbān, 206-7, abbreviated in Ibn Ḥadjar al-Haytamī, *Fatāwā*, 144,23-4, and al-Nabhānī, 84-5; cf. al-Kattānī, 98-9). With regard to the aforementioned Qur'anic verse, according to al-Ṣabbān it should be taken to imply that wearing the green badge or turban is recommended for the *ashraf* and blame-worthy for others than they, because the latter by wearing it would be claiming a genealogy that is not theirs, which is not permitted (206). On this account, according to al-Kattānī, even the Mālikī authorities considered the wearing of a green turban as forbidden to a non-*sharīf*. With regard to a tradition transmitted by Ibn Ḥanbal, according to which, on the Day of Resurrection the Prophet will be clothed by his Lord in a green turban, Shāfi'ī teachers are said to incline to the view that this headgear is desirable for the *ashraf* (al-Kattānī, 98-9; cf. 95). Other authorities note that green is the colour of the garments of the dwellers in Paradise (idem, 96; cf. Qur'an, XVIII, 30, LXXXVI, 21), and that it was the Prophet's favourite colour (idem, 95-6, with references to Hadīth).

The green turban has been frequently adopted, but never became the general headgear of the *ashraf* throughout the Islamic world. Although in Egypt still in the 19th century it was a mark of a *sayyid/sharīf*, many entitled to wear it, especially the more learned, often chose to wear instead the white turban of a *shaykh* or 'ālim (E.W. Lane, *Manners and customs of the modern Egyptians* [1836], New York 1973, 31, 132; Winter, 22; in Arabia several decades later (as today), *sayyids* rarely wore other than white turbans (Snouck Hurgronje, *Verspr. Geschr.*, iv/i, 63). The green colour was preferred in Morocco at the turn of this century (Westermarck, ii, 21) and, according to J. Chardin (*loc. cit.*) and also in late-18th-century Persia, although in this last country, according to Algar, in *op. cit.*, i, 921a, the black turban (as opposed to white) has long been the standard sign of a *sayyid*. However, Iranian contemporaries report consistently that black is worn instead of green rarely by *sayyids*; normally, black turbans are used only by the most venerable scholars or most elderly *sayyids*; most *sayyids* wear green. In India *sayyids* traditionally have worn green; they were therefore occasionally called *sabẓ-pūsh* "green-robed" (Sharīf, 303). According to al-Nabhānī (d. 1932), 85-6, the green turban was not in his time a mark of noble blood in Istanbul. It was worn there not only by learned men and students but also by artisans and street merchants, especially in winter, as it did not show dirt so quickly. On this account, many *ashraf* there were even said to avoid the colour green.

(6) Other marks and special treatment of the *Ashraf*.

Those of the Prophet's blood are also distinguished in other ways according to common Sunnī views. For example, the sharing in the *ṣadaqa* [q.v.; and see ZAKĀT; cf. al-Husaynī, *Faḍā'il*, 208-21] is forbidden them. The Prophet is recorded to have said of the *ṣadaqa*, "It is the filth of men (cf. Qur'ān, IX, 104) and permitted neither to Muḥammad nor to the family (*āl*) of Muḥammad". The legal authorities differ on the question as to whether this rule applies not only to the Banū Hāshim but also to the Banū 'l-Muṭṭalib and the clients of these families, and whether also free-will offerings (*ṣadaqat al-nafl/al-taṭawwuf*) are included under it (al-Nabhānī, 67 ff.; cf. Ibn Ḥajjar al-Haytamī, *Ṣawā'ik*, 142-3). Over against this ban, special *wakfs* were established and state allowances or pensions typically set aside for the *ashraf*, and until the 19th or even 20th century they were largely exempted from regular taxation (see e.g. Tyan, 556; Winter, 26-7, 33, 35, 38; Laroui, 96; E. Burke, *The Moroccan Ulama, 1860-1912*, in N. Keddie (ed.), *Scholars, saints, and Sufis*, Berkeley 1972, 98, 124).

The sons of Fāṭima have the privilege of being called "sons of the Prophet of God" and thus having their lineage traced directly to the Prophet. Such a one is therefore frequently addressed as *Ibn Rasūl Allāh*. Justification of this is found in sayings of the Prophet, such as, "All the sons of one mother trace themselves back to an agnate, except the sons of Fāṭima, for I am their nearest relative and their agnate (*walayyuhum wa-ʿasabatuhum*)" (Ibn Ḥajjar al-Haytamī, *Fatāwā*, 144,1,10-11; al-Nabhānī, 97).

Because of the belief that the *ahl al-bayt* are the noblest in descent, the female members of the family have no one equal in birth (*kuf*) to them [see KAFĀʾA]. According to al-Suyūṭī (fols. 3a-b; cf. al-Ṣabbān, 201; see also Ibn Ḥajjar al-Haytamī, *Fatāwā*, 144,12-3), it is a very old opinion that the son of the marriage of a *sharīfa* (fem. of *sharīf*) with a non-*sharīf* is not a *sharīf*. However, as al-Ṣabbān, 209, points out, there are many authorities who consider him a *sharīf*. In practice marriage of a *sayyid*'s daughter with a man not her equal is extremely rare (Snouck Hurgronje, *Achehnese*, i, 158; idem, *Verspr. Geschr.*, iv/i, 297 ff.; "Mrs. Meer Hassan Ali", *Observations on the Mussulmans of India*, London 1832, 8-9; cf. Jacob, 222-3). While a *sharīf* may legally marry a non-*sharīfa* and have their offspring counted as *ashraf*, marriage of a *sharīfa* to a non-*sharīf* has historically been taboo in most Muslim societies, e.g. among the Arabs (see C. Doughty, *Travels in Arabia deserta* [1888], London 1926, ii, 522-3). As late as 1932, a governor of Baghdad was murdered by a man of the Sa'dūn for trying to marry the daughter of the 'Irākī Prime Minister, who was of Sharīfian lineage, see H.R.P. Dickson, *The Arab of the desert* [1949], rev. ed. Wilson and Freeth, London 1983, 22, 99). This prohibition was also traditional in South Asia (J. Oman, *Brahmans, theists and muslims of India*, 2<sup>nd</sup> Delhi 1973, 62); and in Indonesia (Snouck Hurgronje, *Achehnese*, 158; cf. the sharply-worded refutation of a Singapore jurist's *fatwā* against such marriages by Rashīd Riḍā, see *Fatāwā 'l-Imām Muḥammad Rashīd Riḍā*, ed. Khoury, i, Beirut 1970, 385-94, cf. 340-1). One may only enter into matrimony with a *sharīfa* if he knows he is in a position to afford her all that is due her, will obey her pleasure and consider himself her slave. Al-Sha'rānī (according to al-Nabhānī, 185-9) does not consider it seemly to marry the widow or divorced wife of a *sharīf*.

A weak prophetic *ḥadīth* has Muḥammad say: "The stars are a security (*amān*) for those who dwell in the heavens and my *ahl al-bayt* are a security for those who dwell on earth [or: 'for my community']" (al-Ṣabbān, 129-30, al-Nabhānī, 54; cf. 58-9). According to the commentators, by *ahl al-bayt* are here meant the children of Fāṭima. Their existence on the earth is a security for its inhabitants in general and for the community of the Prophet in particular against punishment or "temptations/acts of sedition" (*fitan*). It is not the pious among them that are specially meant here; this distinction is solely based on their descent from the Prophet (*al-unṣur al-nabawī*), apart from any qualities, meritorious or otherwise, which they happen to possess as individuals. An allusion to this opinion is held to exist in Qur'ān, VIII, 33 (al-Nabhānī, 59-60; cf. Ibn Ḥajjar al-Haytamī, *Ṣawā'ik*, 150-1, *Fatāwā*, 142,20-2). The *baraka* [q.v.] of a descendant of the Prophet is widely recognised, especially in the Maghrib (see e.g. V. Crapanzano, *The Ḥamadsha*, Berkeley 1981, 108).

One tradition of the Prophet has been taken as referring particularly to the *ahl al-bayt*: "Every bond of relationship and consanguinity (*sabab wa-nasab*) will be severed on the Day of Resurrection except mine" (al-Ṣabbān, 125-6; al-Nabhānī, 45, 80-1, cf. 54, 61-2, 94). They are therefore the only ones whose relationship can help them at the final Reckoning (al-Nabhānī, 60, 79-82; cf. al-Shubrāwī, 7,20-3). According to traditional wisdom, none of the *ahl al-bayt* will suffer the punishment of Hell (al-Makrīzī, 50-2; al-Nabhānī, 44-5, 90), and 'Alī, al-Hasan and al-Husayn, with their families, will be the first to enter Paradise along with the Prophet (*ibid.*, 96-7).

The "sons of the Prophet of God" may be certain of divine forgiveness, and any wrong inflicted by them must be accepted like a dispensation of God, if possible with gratitude. Ibn al-'Arabī, who connects the verse of purification (see above) and its reference to the *ahl al-bayt* with Qur'ān, XLVIII, 2, in which the Prophet is promised pardon for his sin, observes, *inter alia*: "It behoves every Muslim who has faith in God and in what He has revealed to recognise the truth of the word of God, 'God will remove the stain from you, O people of the House, and purify you completely', so that he may be convinced with respect to everything the *ahl al-bayt* have done for which God has given them pardon. It is therefore not fitting for a Muslim to criticise them, neither for what is not in keeping with the honour of those of whom God has testified that he has purified them and removed the stain from them, nor for pious works or good deeds they have performed, but always to remember God's watchful care for them" (*al-Futūḥāt al-makkiyya*, Cairo 1329/1911, ch. 29, i, 196,17-8,25, esp. 196,31 ff., cf. 197,14 ff.; cited also in al-Makrīzī, 44; cf. al-Nabhānī, 23-4, 155-6). In a similar vein, Ibn Ḥajjar al-Haytamī notes that a *sharīf* who has received *ḥadd* [q.v.] punishment for fornication, taking intoxicants or theft may be compared with an *amīr* or *sulṭān* whose feet have become soiled but are wiped clean by one of his servants. He is also likened to a refractory son who is not, however, deprived of his inheritance (*Fatāwā*, 142,26-9; al-Nabhānī, 92).

The duty of love for the *ahl al-bayt* is based on Qur'ān, XLII, 23, "Say, 'I ask of you [all] no reward except love for the kinsfolk (*kurbā*)', where *kurbā* is taken as kin of the Prophet (al-Ṣabbān, 104-5; al-Nabhānī, 154 ff.; Ibn Bīṭrīk al-Hillī, *Khaṣā'is*, 51 ff.; idem, *Umda*, 23 ff.; al-Makrīzī, 78; al-Shubrāwī, 4,30-5,8; Ibn Ḥajjar al-Haytamī, *Ṣawā'ik*, 167-9). It is

further pointed out that the conclusion of the *tashahhud* contains a prayer for the Āl Muḥammad (*ibid.*, 145-6; al-Nabhānī, 155). A saying attributed to al-Shāfiʿī [q.v.] is as follows: "O members of the house of the Prophet, love for you is a duty to God that He has revealed in the Qurʾān. It is a great honour for you that anyone who does not say the *tasliya* over you has not performed the *ṣalāt* [q.v.]" (*ibid.*, 184). There are further a large number of traditions that urge this affection, represent it as a proof of faith or a defence against Hellfire, promise in return for it the *shafaʿa* of the Prophet on the Day of Resurrection and a reward in the next world, and forbid signs of hatred towards the *ahl al-bayt*, even describing such animosity as infidelity (al-Shubrāwī, 3, 7-8 ff.; al-Nabhānī, 171 ff.; Ibn Ḥajar al-Haytamī, *Ṣawāʾik*, 153-4; al-Ḥusaynī, *Fadāʾil*, 230-40).

According to al-Shubrāwī, an 18th-century Rector of al-Azhar, reverence and respect ought therefore always to be shown to the *ashrāf*, especially to the pious and learned among them; this is a natural result of reverence for the Prophet. One should be humble in their presence; the man who injures them should be an object of hatred. Unjust treatment from them should be patiently borne, their evil returned with good; and they should be assisted when necessary. One should refrain from mentioning their faults; on the other hand, their virtues should be lauded abroad. One should try to come nearer to God and His Prophet through the prayers of the devout among them (*lthāf*, 7, 17 ff.). Such attitudes did not, to be sure, keep all *ashrāf* from evil deeds, or from punishment for those deeds. In the year 842/1438-9, Shāhrukh b. Timūr, for example, had a *sayyid* who had publicly cursed Abū Bakr and ʿUmar scourged and removed from Mashhad to Harāt (ʿAbd al-Razzāk Samarkandī, *Maṭlaʾ al-saʿdayn*, ed. M. Shafīʿ, Lahore 1360-8/1941-9, ii/2, 711).

According to al-Shāʿrānī, one should treat a *sharīf* with the same distinction as a governor or *kādi al-ʿaskar*; one should not take a seat if a *sharīf* is without one. Special reverence should be paid to the *sharīfa*; one dare hardly look at her. Anyone who really loves the children of the Prophet will present them with anything they wish to buy. Whoever has a daughter or sister to give in marriage with a rich dowry should not refuse her hand to a *sharīf*, even if he has no more than the bridal gift for her and can only live from hand to mouth. If one meets a *sharīf* or *sharīfa* on the street and he or she asks for a gift, one should give him or her what one can (al-Nabhānī, 185-9). Ibn Baṭṭūṭa (d. 779/1377) presents a good example from East Africa of such an attitude toward the Prophet's progeny in his remarks on the sultan of Kilwa, Abū Muẓaffar Ḥasan: his *kunya* was Abū Mawāhib ("father of gifts") because of his largesse to any *sharīf* who approached him, even one from abroad (*Rihla*, ii, 193-4, Eng. tr. Hamdun and King, *Ibn Battuta in Black Africa*, London 1975, 19-20).

One should not refuse marks of respect even to a *sharīf* who is a sinner (*fāsiq*) in the eyes of the law, because one knows his sin will be forgiven him. This high esteem is his due on account of his pure origin (*al-ʿunṣur al-tāhir*) and *fisk* does not affect his genealogy (*ibid.*, 91). As Doughty reported on the Hijāz of the 1880s, "these persons of the seed of Mohammad 'are not to be spoken against', and have a privilege, in the public opinion, above the common lot of mankind" (ii, 487, cf. 533). If it is doubtful whether a man is a *sharīf*, but there is nothing to object to in his genealogy from the legal point of view, he

should be treated with the proper respect. Even if his pedigree is not legally established, one should not assume he is lying without being absolutely certain on the point (Ibn Ḥajar al-Haytamī, *Fatāwā*, 142, 33 ff.; al-Nabhānī, 92-3). There are a number of anecdotes in which an individual who has been neglectful of respect to, or who has irritated, a *sharīf* has been corrected in a dream by the Prophet or by Fāṭima (al-Makrīzī, 81-6; al-Nabhānī, 91).

The *sayyid* who distinguishes himself by a pious life readily becomes revered as a saint. His blessing is expected to bring good fortune, while his wrath brings misfortune. By vows and gifts, it is hoped to secure his auspicious intercession (*shafaʿa* [q.v.]), and his tomb (*kubba*, *kabr*, *mashhad* [q.v.]) becomes a place of pilgrimage [see *ziyāra*]. On the much-visited tombs of *sayyids* and *sayyidas* in Cairo, for example, cf. al-Shablandjī's work cited below, and J.W. McPherson, *The Moulids of Egypt*, Cairo 1941, 31-3. In the Yemen, as in Ḥaḍramawt, the *sayyid*, who is distinguished there from the armed *sharīf* carrying a staff and rosary, acts as intermediary between two disputing parties. He also drives away the locusts and his prayer puts an end to infertility, while his curse makes it continue. Many *sayyids* are also visited for their healing powers, and reverence for them is frequently expressed in gifts of land (H. Jacoby, *Perfumes of Araby*, London 1915, 45, 173). On the visitation of *sayyids'* shrines in South Asia, see Troll, *Muslim shrines in India*, esp. 24-43 (on the shrine of Sayyid Sālār Masʿūd Ghāzī). For a fuller description of the *sharīfs* and *sayyids* and the reverence paid them in the Hijāz, see Snouck Hurgronje, *Mekka*, i, 32 ff., 7 ff.; for Aceh and the Indonesian Archipelago on the 19th century, see *idem*, *Achehnese*, i, 153-64; for Khūrasān, see Bosworth, 194, n. 77 (citing al-Mukaddasī); for Morocco, Westermarck, i, 169-71.

(7) Social and political roles of the *Ashrāf*.

*Sayyids* and *sharīfs* have been and are represented in large numbers throughout the entire Islamic world. Historically, several dynasties of Prophetic lineage have ruled in various regions for longer or shorter periods, e.g. in Egypt and North Africa [see *FĀTIMIDS*]; in Persia in general [see *SAFAWIDS*]; in Tabaristān (Māzandarān), Daylam, and Gīlān (see e.g. MARʿASHIS; AL-ZAYDIYYA; B. Manz, *The rise and rule of Tamerlane*, Cambridge 1989, 92-5; W. Madelung, art. *Alids*, in *ELr*, i, 881-6, H.R. di Borgomale, *Les dynasties locales du Gīlān et du Daylam*, in *JĀ*, ccxxxvii [1949], 301-50); in western Arabia (see Snouck Hurgronje, *Mekka*, i; Admiralty War Staff, *Handbook of Arabia*, 107-11; cf. the articles HĀSHIMIDS at III, 262b; MAKKA, at VI, 148a ff.); in the Yemen [q.v.; see also AL-ZAYDIYYA]; in modern Jordan [see HĀSHIMIDS at III, 263 ff.]; and in Morocco [see SHURFĀ; IDRĪSIDS; ḤASANĪ; ʿALAWĪS; TĀFĪLĀLT; AL-MAGHRIB at V, 1191-2]. The Maghribī case is especially striking, for religio-political claims have been tied strongly to Sharīfian blood lineage, and such lineage has been commonly a key qualification for temporal leadership (see M. Kably, *Musāham fi taʾrīkh al-tamhīd li-zuhūr dawlat al-saʿdiyyīn*, in *Madjallat Kulīyyat al-Adāb ... (Djāmiʿat Muḥammad al-Khāmis)*, xliii [1978], 7-59; M. Combs-Schilling, *Sacred performances*, New York 1989; M. Garcia-Arenal, *Mahdī, murābiṭ, sharīf: l'avènement de la dynastie saʿdiyyenne*, in *SI*, lxxi [1990], 84 ff.).

Families of *ashrāf* have also exercised local influence even without holding overt political power, as evidenced especially in mediaeval sources by frequent, recurring references to *sāda* or *ashrāf* as one class of the local social, political, or intellectual elite (*ayan*

[*q.v.*] gathered on a given occasion alongside 'ulamā', *shuyūkh*, *kuḍāt*, *fukahā'*, *akābir*, *uḍḍūh al-balad*, etc. (see e.g. al-Damurdāshī, 66-7, 91, 224, 326, 331, 342, 380; Ibn Baṭṭūṭa, ii, 188-90, tr. Gibb, ii, 377-8; J. Aubin, *Matériaux pour la biographie de Shah Nīmatullah Wali Ker-mani*, Paris-Tehran 1956, 174; R. Mottahedeh, *Consultation and the political process*, in C. Mallat (ed.), *Islam and public law*, London 1993, 20 (citing Miskawayh), 23 (citing Bayhaḳī). Thus in many places the *ashraf* were an influential local or regional élite—"a blood aristocracy without peer" (R.W. Bulliet, *The patricians of Nishapur*, Cambridge, Mass. 1972, 234)—with considerable political as well as social, power: e.g. Nīshāpūr (see *ibid.*, 234-45; Bosworth, 195, 197-9, 263-4), Harāt (cf. 'Abd Allāh Wā'iz, *Maksad al-ikbāl-i sultāniyya*, ed. M. Harawī, Tehran 1351/1932-3, 18, 73, 87), Bam (cf. Aubin, *Deux sayyids de Bam au XV<sup>e</sup> siècle*, in *Akad. d. Wiss. u. d. Lit., Geistes- u. Sozialwiss. Kl.* [Wiesbaden 1956], no. 2, 86-473), Egypt (see Winter, 22-30; al-Damurdāshī, 66), and Morocco (see SHURFĀ'; Kably, *Société, pouvoir et religion au Maroc à la fin du "moyen-âge"*, Paris 1986, 291-302 and *passim*; Laroui, 92-7). However, for all their prestige historically, the great majority of *ashraf*, given their constantly increasing numbers, have probably lived and still live in poor circumstances (see e.g. Snouck Hurgronje, *ibid.*, i, 71; Burke, 98).

The genuineness of an 'Alid pedigree has historically often been open to question, despite efforts at regulation and authentication such as the institution of the *nikāba* discussed above. See, e.g. SHURFĀ', and Westermarck, i, 37, on the difficulty of distinguishing between genuine and assumed Sharīfian descent in Morocco; M. Zilfi, *The politics of piety*, Minneapolis 1988, 95, for an example of 17th-century fraud in some two thousand false claims to *sayyid* tax exemptions uncovered by Ottoman officials in a single town (citing Na'imā, Ta'rikh, Istanbul 1280/1863-4, vi, 402-5, and Kātib Čelebi, *Fedhileke*, Istanbul 1286/1870, ii, 142-7); Z. Bhatti, 94, concerning false claims of Uttar Pradesh *shaykhs* to be *sayyids*; A. Roy, *Islamic syncretistic tradition in Bengal*, Princeton 1983, 61-9, esp. 61 n. 10 (with bibl.), on Bengali Muslims' striving for *ashraf* status; Faṣīḥ Kh"āfi, *Muḍmal-i faṣīḥi*, ed. Farrukh, Maṣḥad 1339/1960-1, 157-8, on the evil deeds of one so-called "Sayyid Kalā Kush" (Hasan Kh"ārazmī Gūsh Burīda) in Zāwa whose false claim to Prophetic descent and title was uncovered in an investigation in 807/1404-5, under Shāhrukh; and Snouck Hurgronje, *Achehnese*, i, 155, on successful but false claims to Prophetic ancestry in Acheh in the late 19th century.

The general trend in the past century seems to have been towards some diminution of *sharīfī* prestige and power in most parts of the Islamic world (see e.g. Winter, 28-30), yet the *ashraf* still almost everywhere enjoy special social, and often popular religious status. Their prestige remains presumably greatest in Shī'ī communities and in the Maghrib. The genealogical tradition has survived in its greatest purity in western Arabia and Ḥaḍramawt. The family of 'Alawīs in Ḥaḍramawt, which has produced many notable jurists, theologians, and mystics, regard only the West Arabian *sharīfs* as their equals in birth (see ḤAḌRAMAWT, in Suppl.). On the *sayyids* of Ḥaḍramawt, who are also strongly represented in the Malay Archipelago, and to whom belong the founders of the sultanates of Siak and Pontianak, see Snouck Hurgronje, *Verspr. Geschr.*, iii, 162 ff., and *Achehnese*, i, 153 ff.; cf. W. Ende, *Schittische Tendenzen bei sunnistischen Sayyids aus Hadramaut: Muhammad b. 'Aqīl al-'Alawī* (1863-1931), in *Isl.*, 1 (1973), 82-97. On the history of the Sharīfian

dynasties of Mecca and the Ḥijāz and on the *sharīfs* of Morocco, see the refs. given above and also the sketch in al-Batanūnī, 73-81. Somewhat dated information on the families of *ashraf* in Arabia is given in the Admiralty War Staff's *Handbook of Arabia*, see index.

(C. VAN ARENDONK-[W.A. GRAHAM])  
**SHARĪF**, the pen-name of several Persian poets of various periods, among them the author of the *Sa'adat-nāma*, a collection of moral precepts in some 300 verses, wrongly ascribed, in mss. and in the printed editions, to the famous 5th/11th-century Ismā'īlī poet Nāṣir-i Khusraw [*q.v.*]. This poem was first published by E. Fagnan, together with a (rather inadequate) French translation, from a Paris manuscript in *ZDMG*, xxxiv (1880), 643-74, reprinted (from Fagnan, with some emendations) in the appendix to the edition of Nāṣir's *Safar-nāma* published in Berlin, Kavian Press 1341/1922-3, and then (from the Berlin edition, but collated with a manuscript in the editor's possession) in N. Takāwī's edition of Nāṣir's *diwān*, Tehran 1307 *Sh.*/1928, 545-61. There is also an annotated English translation by G.M. Wickens in *IQ*, ii (1955), 117-32, 206-21. In Takāwī's manuscript the text ends with a verse in which the author tells his readers to heed "the words of Sharīf", evidently his poetic signature; there is no mention in this recension of the name Nāṣir. In some other copies "Sharīf" is replaced by "Nāṣir-i Khusraw", while the manuscript

published by Fagnan retains the verse mentioning “Sharīf” (three lines from the end) but adds a final verse giving the author’s name as “Nāṣir b. Khusrāw”. It is quite obvious that (except in the version represented by Takawī’s ms.) the text has been tampered with. The poem is clearly not by Nāṣir-i Khusrāw, whose pen-name was “Hudjdjāt”, not “Sharīf”, and whose style is quite unlike that of the *Sa’adat-nāma*; moreover, the latter poem contains no trace of Ismā’īlī doctrines. Nothing else is known of our Sharīf, except that he must have lived before the middle of the 9th/15th century, the date of the earliest manuscripts, though he could very well have been a good deal earlier.

The modern Persian scholar M.T. Bahār (in his *Sabk-shināsi*, iii, Tehran 1321 Sh./1942, 188) identified the author of the *Sa’adat-nāma* as one Nāṣir al-Dīn b. Khusrāw Isfahānī, who supposedly died in 735/1334-5, but in fact this person is totally fictitious. Bahār merely misconstrued the entry on the *Sa’adat-nāma* in the *Kashf al-zunūn* of Hādjdjī Khalīfa, who, following Dawlatshāh (61-4), wrongly makes Nāṣir-i Khusrāw a native of Isfahān (see ed. Flügel, iii, 598, ed. Yaltkaya/Bilge, ii, 990; the date “735” is evidently a misprint in the oriental edition used by Bahār).

A striking feature of the poem is the vehemence with which the author denounces the “great ones” and his insistence that, after the prophets and saints, the best of mankind are the peasants, and then the artisans.

*Bibliography:* Given in the article.

(F.C. DE BLOIS)

**AL-SHARĪF ABŪ MUḤAMMAD IDRĪS** b. ‘ALĪ, called ‘Imād al-Dīn, a Ḥasanī sharīf of Yemen. Belonging also to the Zaydī Ḥamzas, he is usually given the *nisba* al-Ḥamzī. He was a Ṣan‘ānī, was born in 673/1274 and died in 714/1314. Idriṣ had a strict Zaydī background and his early days were spent under the eye of his father, Djamāl al-Dīn ‘Alī, who played a prominent military part on the side of the Zaydīs in the Zaydī-Rasūlid struggles of the late 7th/13th century. By the time his father died in 699/1299, he had made his peace with the Rasūlids and Idriṣ was left in charge of the Ḥamzī *ashrāf* in the Yemen. From 700/1300 onwards relations between Idriṣ and the Rasūlid sultan al-Mu‘ayyad Dāwūd became progressively closer. The Rasūlid granted him as fiefs (*ikhtā’āt*) al-Kaḥma and Mawza‘ in Tihāma and the administrative and military experience which he gained during more than fifteen years of service with the Rasūlids was considerable.

Idriṣ was also renowned for his learning, particularly in the fields of *fiqh*, poetry and history, and there is mention of numerous books composed by him. But it was in the latter discipline that he was in particular famous. Alone extant among other historical works is his *Kanz al-akhbār fi ma’rifat al-siyar wa ‘l-akhbār*, the Yemenite part of which has recently appeared in print (Kuwait 1992), edited by ‘Abd al-Muḥsin al-Mad‘adj. The work begins as an abridgement (*ikhtisār*) of Ibn al-Athīr’s [q.v.] *Kāmil*, tracing the history of Islam from the time of the Prophet. Additional material is provided, however, on the history of ‘Irāq, Egypt and Syria. Of great value is the final section of the third part and the whole of the fourth and final part of the work which concern the history of Yemen down to the year 714/1314, i.e. the date of the author’s death.

The Yemenite section also begins with the period of the Prophet. The chief town, Ṣan‘ā’ [q.v.], is given fairly detailed treatment, its foundation and early de-

velopment, its most important early buildings like the Great Mosque and the castle of Ghumdān [q.v.]. On the early history, the *Kanz* is an extremely useful source for the governors of the Yemen during the period of the Prophet, the Orthodox caliphs, the Umayyads and ‘Abbāsids down to the year 204/819, when the author turns his attention to the earliest dynasty in Islamic times in the Yemen, the Ziyādids [q.v.] and thereafter to the various dynasties which ruled over different parts of the Yemen in early Islam. As we might expect, he does not neglect the history of the Zaydī imāms and chronicles too the appearance in the Yemen of the Ismā’īlī *da’wa* in the late 3rd/9th-early 4th/10th century. The work is also of value as an important source of the Rasūlids in the Yemen, and from fol. 191a of the British Library ms. Or. 4581 (ed. Mad‘adj, 111), the author speaks as an eyewitness of the events which played out around him. The *Kanz* was itself the subject of a further abridgement, *Nuzhat al-abyār fi ikhtisār Kanz al-akhbār*, composed by the Rasūlid sultan al-Afdal ‘Abbās (d. 787/1385).

*Bibliography:* The Kuwait 1992 ed. by al-Mad‘adj, entitled *Ta’rikh al-Yaman*, is a timely and competent piece of work, edited from the B.L. ms. only, with an excellent editorial introd. (7-22); Ayman Fu‘ad Sayyid, *Maṣādir ta’rikh al-Yaman fi al-‘asr al-Islāmī*, Cairo 1974, 138-9, lists two other mss., one in Lucknow and another in a private library in Ṣan‘ā’; Ḥusayn ‘Abd Allāh al-‘Amrī, *Maṣādir al-turāth al-Yamanī fi al-Mathaf al-Birṭānī*, Damascus 1980, 54-5, gives a comprehensive list of Yemeni primary sources for the author and his work, among which are ‘Alī b. al-Ḥasan al-Khazradjī, *The Pearl-strings; a history of the Resūliyy dynasty of Yemen*, ed. and tr. J.W. Redhouse, esp. i, Leiden-London 1906, 315-17, 318, 324-6 etc.; Muḥammad b. ‘Alī al-Shawkānī, *al-Badr al-tālī bi-maḥāsīn man ba’d al-kam al-sābi‘*, ii, Beirut n.d., appendix, 52-3. (G.R. SMITH)

**AL-SHARĪF AL-‘AKĪLĪ**, ABU ‘L-ḤASAN ‘ALĪ b. AL-ḤUSAYN b. Ḥaydara b. Muḥammad b. ‘Abd Allāh b. Muḥammad, from the genealogical line of ‘Akīl b. Abī Tālib [q.v.]. Since ‘Akīl was a half-brother of ‘Alī (the Prophet’s nephew), al-‘Akīlī was seen to belong to the Sharīfian nobility, and therefore was entitled to a regular income. As a poet of independent means, al-‘Akīlī lived ca. 350-450/960-1060 in the old town of al-Fustāt, next to the then newly-founded city of al-Kāhira (Cairo).

Apart from a short poem in praise of a chancellor who was in the service of the Fātimid al-Ḥākim bi-amr Allāh, and a few poems dedicated to al-Ḥusayn and Dja‘far, respectively son and grandson of Djaḥwar, the general who had conquered Egypt on behalf of his Fātimid masters, he did not write poems in praise of state officials. Usually, al-‘Akīlī composed his poems in order to describe his personal pleasures, together with his intimate friends who used to frequent his literary salon. Thus the poet’s quiet lifestyle might have been the reason why details concerning his life came to be neglected by later generations. His poetry, however, was highly valued by Ibn Sa‘īd al-Maghribī, who in his *Mughrib* (see *Bibl.*) gave extensive quotations.

The poet’s *Diwān* itself, edited on the basis of several manuscripts, shows al-‘Akīlī’s versatility in various genres: we find *khāmriyyāt*, wherein the poet shows himself an admirer of Abū Nuwās’s style; his *ghazals* chiefly consist of small poetical pieces, often with a highly rhetorical play on words. In his invective poetry, *hujā’*, he attacks—sometimes with obscene vulgarity—a whole range of individuals, such as fellow poets, a

grammarian and a singer whose performance he did not appreciate, and corrupt officials. Another of his genres consists of *rawḍiyyāt*, i.e. descriptions of gardens, flowers, ponds and fountains. Interesting are his poems describing inanimate objects, such as a painted screen or a curtain. The poet also composed some brief ascetic poems, resembling the *zuhdiyyāt*, a few of which he regularly placed at the end of every one of the alphabetical sections within his *Dīwān* (i.e. sections of the rhyme letters *alif*, *bāʾ*, *tāʾ*, ... etc.).

His long poem on "Rejection of wine in the evening and praise of wine in the morning" (*Muzdawijja fī dhamm al-ghabūḡ wa-madh al-ṣabūḡ*, in *Dīwān*, 301-7) was intended both as an imitation and contradiction [see *NAKĀʾID*] of an earlier poem by Ibn al-Muʿtazz, on "Rejection of wine in the morning" (*Urḍūza fī dhamm al-ṣabūḡ*). In general, al-ʿAḲĪLĪ proved himself a late supporter of the new style which Ibn al-Muʿtazz [q.v.] had begun to advocate some one hundred years before.

**Bibliography:** *Dīwān al-Sharīf al-ʿAḲĪLĪ*, ed. Zakī al-Maḥāsīnī, n.d. but not before 1953; Ibn Saʿīd, *al-Mughrib fī ḥulāʾ ʾl-Maghrib*, *Kitāb al-ighṭibāʾ fī ḥulāʾ madīnat al-Fustāt* (= section on al-Fustāt), ed. Zakī Muḥammad Ḥasan, Shawkī Dayf and Sayyida Kāshif, Cairo 1953, 205-49; Brockelmann, S I, 465 no. 10; Muḥammad ʿAbd al-Ghanī Ḥasan, *Miṣr al-shaʿira fī ʾl-ʿaṣr al-Fāṭimī*, Cairo 1983.

(P. SMOOR)

**SHARĪF ʾAMULĪ**, a Mughal noble of the 10th/16th century. Persian by birth, he spent some time at Balkh in the *khānakāh* of the Ṣūfī Muḥammad Zāhid, but allegedly because of his heretic views was driven away from there and forced to go to the Deccan. But there, too, his heresies drew upon him the unfavourable attention of the local rulers, leading to his flight to Mālwa, then in Akbar's empire (984/1576-7). He was acclaimed as a great scholar by the Persian notables, and was granted audience by Akbar, whom he introduced to the doctrines of the Nukṭawī sect founded by Maḥmūd Paṣīkhānī [see *NUKṬAWIYYA*]. Henceforth, he became one of Akbar's advisors in religious and legal matters. Official appointments followed: *amin* and *ṣadr* of Kābul (993/1585), *amin* and *ṣadr* of Bihār and Bengal (1000/1591-2); and governor of Aḡmēr with the *pargana* of Mohan near Lucknow in *djāgīr* (1007/1598-9). In 1004/1595 he had the rank of 900 *dhāt*. His status remained high under Djahāngīr, who, while recording impressions of nobles immediately after his accession (114/1605-6), praises him highly in his memoirs, and says he raised his *mansab* from 2000 to 2500 *dhāt*. The date of his death is not recorded.

Sharīf ʾAmulī seems to have been possessed of exceptional learning and eloquence, and is said to have written a book called *Tarashshuh-i zuhūr*, though neither this nor any other work from his pen has survived. He earned the bitter enmity of theologians like ʿAbd al-Kādir Badāʾūnī [q.v.], the famous historian, who mentions his arrival in India in order to insert a diatribe against him and his heretical views. The author of the *Tabakāt-i Akbarī*, however, acclaimed him as "a monotheist (*muwahhid*) of the time, having a true expertise in mysticism".

**Bibliography:** Nizām al-Dīn Aḥmad, *Tabakāt-i Akbarī*, ed. B. De, Calcutta 1931, ii, 451; Badāʾūnī, *Muntakhab al-tawārīkh*, ed. ʿAlī Muḥammad and Nassau Lees, Bibl. Ind. Calcutta 1864-9, ii, 245-8; Djahāngīr, *Tūzūk*, ed. Sayyid Aḥmad Khān, Ghāzīpur and ʿAligarh 1864, 222; Shāh Nawāz Khān, *Maʾāthir al-umaraʾ*, ed. (M. ATHAR ALI)

**AL-SHARĪF AL-DJURDĪĀNĪ** [see *AL-DJURDĪĀNĪ*]. **AL-SHARĪF AL-GHARNĀTĪ**, Muḥammad b. Aḥmad ... b. al-Ḥasan b. ʿAlī b. Abī Ṭālib al-Sabtī, Abū ʿAbd Allāh and Abū ʾl-Kāsim (697-760/1297-1359), philologist, grammarian and poet of Muslim Spain.

He was born at Sabta (Ceuta) and deeply educated in Arabic language and the law. At an unknown date he went to Granada and worked in the *dīwān al-inṣhāʾ* of the Nasrid Muḥammad IV (725-37/1325-37), and became friendly with the eminent poet Ibn al-Djāyṣ [q.v.]. He then embarked on a legal career and in 737/1336 became *kādī* of Malaga and then six years later followed Ibn Burtāl as *kādī ʾl-dīamāʾa* of Granada. He lost his post in 747/1346 because of corruption charges (of which Ibn al-Khaṭīb considered him innocent), and took up teaching and study until he returned to his previous job two years later at the command of Yūsuf I. He died in Granada aged 63 after a long illness which inspired the physician Muḥammad al-Shakūrī to write his *Tuhfat al-mutaṣṣil wa-rāḥat al-mutaʾammil*.

The sources stress his wide knowledge of language and literature. His poetic *dīwān*, dedicated to his pupil Ibn al-Khaṭīb, is lost, but fragments have been preserved by the latter and by al-Nubāhī and al-Maḥḳarī. He also made a résumé of the *dīwān* of his friend and successor as *kādī ʾl-dīamāʾa*, Abu ʾl-Barakāt al-Balafīkī called *al-Luʾluʾ wa ʾl-marḡiān*, and a *Sharḥ al-Kaṣida al-khazraḍiyya* (see Brockelmann, I<sup>2</sup>, 380, and art. *AL-KHAZRADJĪ*). In the field of Arabic grammar, he wrote a *sharḥ* and a *takyīd* on the *Tashīl al-fawāʾid* of Ibn Mālik. He further made a *takyīd* on Ibn al-Abbār's [q.v.] *Durar al-simṭ fī khabar al-Sibt*, and was the author of a legal work, *Ḥaṣr maṭḥarāt al-ḳudāt bi ʾl-adilla* (Brockelmann, S II, 346). But al-Sharīf's most famous work was his *Rafʾ al-ḥudūd al-mastūra ʿan maḥāsīn al-Maṣūra li ʾl-Qarṭājīnnī*, considered as a model of the genre, analysing each verse of the poem, with a grammatical commentary, al-Qarṭājīnnī's sources, poetic citations on the same subject, analysis of the rhetorical figures used, and historical and biographical details. The work is extant in several mss., and was published, together with the *Maṣūra*, at Cairo 1344/1925.

The names of two of al-Sharīf's sons are known, Aḥmad and Muḥammad. The first followed the career of his father as a *kātib* and a *kādī*, whilst the second devoted himself to Ṣūfism and frequented numerous *zawāyā* in the region of Granada before becoming likewise *kādī ʾl-dīamāʾa* in the Nasrid capital.

**Bibliography:** Ibn al-Khaṭīb, *Iḥāṭa*, ii, 181-7; Nubāhī, *Markaba*, 171-7; Ibn Farḥūn, *Dībāḡī*, ii, 267; Suyūṭī, *Bughya*, i, 39 no. 64; Ibn Ḥadjar, *Durar al-kāmina*, iii, 443 no. 3452; Ibn al-Kāḍī, *Djadhwat al-iktibās*, i, 306 no. 314; Brockelmann, II<sup>2</sup>, 318, S II 346; Ziriklī, v, 327; Kaḥḥāla, viii, 252, 317. There is a very detailed biography of al-Sharīf in I. Calero Secall, *Una familia ceutí en la Granada de los siglos XIV y XV: los Banū l-Sharīf al-Ḥasanī*, in *Al-Qantara*, vii (1986), 85-105. AL-SHARĪF AL-IDRĪSĪ [see AL-IDRĪSĪ].

AL-SHARĪF AL-MURTAḌĀ [see AL-MURTAḌĀ].

**SHARĪF PASHA**, Muḥammad (1823-87), Egyptian statesman in the reigns of the Khedives Ismāʿīl and Tawfīk. He was of Turkish origin and was born in Cairo, where his father was then acting as *kādī* 'l-*kudāt* sent by the sultan. When some ten years later the family was again temporarily in Cairo, Muḥammad 'Alī [q.v.] had the boy sent to the military school recently founded by him. Henceforth, his whole career was to be spent in the Egyptian service. Sharīf was a member of the "Egyptian mission" sent to Paris for higher education which included the future Khedives Saʿīd Pasha and Ismāʿīl Pasha and the statesman 'Alī Mubārak Pasha. He then took a military course at St. Cyr (1843-5), and served for some time in the French army until the mission was recalled by 'Abbās I in 1849. For the next four years he acted as secretary to Prince Ḥalīm, then took up military duties again in 1853 and attained the rank of general under Saʿīd Pasha. During this period, he was much associated with the commander-in-chief of the Egyptian army, Sulaymān Pasha (de Sèves [see SULAYMĀN PASHA, AL-FRANSAWĪ]), whose daughter he married.

In 1857 Sharīf Pasha began his political career as Minister of Foreign Affairs and he acted as deputy for the Khedive Ismāʿīl [see ISMĀʿĪL PASHA] when the latter went to Istanbul in 1865. He later filled in succession all the high offices of state. It was he who in 1866 drew up the plans for the new *Maḍīlis al-nuwwāb* [see MAḌĪLIS. xvi].

After the inauguration of constitutional government in Egypt in 1878, three cabinets were formed by Sharīf Pasha. When in February 1879 Nubār Pasha's [q.v.] cabinet (which included two Europeans) had been overthrown by the nationalist parliament, a constitutionalist movement was begun under Muḥammad Sharīf Pasha, the leader of which in Parliament was 'Abd al-Salām al-Muwayliḥī. This party drew up a plan of financial reforms, which was laid before the Khedive, who in April 1879 entrusted Sharīf Pasha with the formation of a cabinet composed of purely Egyptian elements. This new cabinet instituted a Conseil d'État and had a new organic law passed by the Chamber (promulgated on 14 June 1879). After the accession of the Khedive Tawfīk Pasha [q.v.], Sharīf Pasha's cabinet was remodelled, but the new government was not so nationalist in complexion as the preceding. In August of the same year, the new Khedive refused to approve the constitution drawn up by the Prime Minister, hence on 18 August Sharīf Pasha resigned and was succeeded by Muḥammad Riḡād Pasha. Sharīf Pasha then took part in the formation of the "National Society" or "Party" at Ḥulwān, which published a manifesto against Riḡād Pasha on 4 November.

During the two years or so of mounting tension between the Khedive and the rising influence in the state of the nationalist elements of the army led by Aḥmad 'Urābī Bey [q.v.], Muḥammad Sharīf Pasha endeavoured to put forward the idea of constitutional reform in order to forestall an attempted putsch by 'Urābī elements. He became Prime Minister in September 1881, but had to resign in January 1882 in favour of Maḥmūd Sāmī Pasha al-Bārūdī [q.v.]. Yet in the late summer of that year, when the Khedive had been restored to power in Cairo by British force of arms and the 'Urābī revolt crushed, Muḥammad

Sharīf Pasha again became Prime Minister (August 1882). He held office during the beginning of the British occupation, but in the end came in conflict with the British government and its Consul-General in Egypt, Sir Evelyn Baring (the later Lord Cromer), when the government required the evacuation of Egyptian forces from the Sūdān in face of the rising power there of the Mahdī [see MAHDĪYYA], and resigned in January 1884. He then retired from political life, suffered ill health and died at Graz, being buried at Cairo in April 1887.

By birth, Muḥammad Sharīf Pasha stemmed from the Turco-Egyptian ruling class, so that his attitudes were bound to be more Khedivist than nationalist, but he managed to establish a reputation for sincerity with the nationalists, who recognised his genuine desire to make Egypt a constitutional state under Muḥammad 'Alī's house.

(J.H. KRAMERS-[C.E. BOSWORTH])

AL-SHARĪF AL-RADĪ, ABU 'L-ḤASAN MUḤAMMAD b. Abī Aḥmad al-Ḥusayn b. Mūsā, was born in Baghdad in 359/970, of an illustrious and highly sophisticated 'Alid family, and died in 406/1016. His lineage dated back to al-Ḥusayn b. 'Alī, through Mūsā al-Kāẓim [q.v.], the seventh Shīʿī Imām, whence his *nisbas* al-Mūsawī al-'Alawī.

His father Abū Aḥmad al-Tāhir (not Abū Tāhir, as Krenkow writes in *ET*, vol. IV, 329), Dhu 'l-Manāḡib ("the pure man of noble qualities") as the Būyid *amīrs* dubbed him, was born in 304/916-17. He was a distinguished man who was extremely influential, both in the caliphal court and among the populace, on account of his noble ancestry and his cultural eminence. In 354/965 he was appointed *naḡīb* or marshal of the 'Alids, and given responsibility for the *maẓālīm* and for the Pilgrimage. His career was interrupted in 369/979-80, in which year he was imprisoned by the Būyid 'Aḡud al-Dawla [q.v.], with his brother 'Abd Allāh and numerous other dignitaries, in a fortress in Shīrāz. He had been accused—on the basis of falsified documents—of revealing state secrets and of abuse of trust (Ibn al-Djāwzī, *Muntazam*, vii, 98). The real charge against him seems to have been the mounting prestige which he enjoyed, prestige which exceeded, if Ibn Taghribirdī is to be believed (*Nuḡūm*, iv, 223), that of the caliph himself. If to this is added the enormous wealth possessed by Abū Aḥmad and coveted by the Būyids, the true reasons behind his detention are easily deduced. It was not until 376/986 that he was freed, following the death of 'Aḡud al-Dawla and the accession of his son Sharaf al-Dawla [q.v.]. Rehabilitated, he was reinstated in his official functions and all his property was restored to him.

In the political domain, Abū Aḥmad played an important role. He was entrusted with numerous missions of mediation, all of which he accomplished successfully, through his wisdom and his diplomatic skills. Such was the case, for example, when serious conflict erupted between Sunnīs and Shīʿīs at al-Karkh in 380/990. The consequences could have been very grave had it not been for the intervention of the *naḡīb*, who succeeded in soothing passions and putting

an end to this confrontation (see H.F. Amedroz, *Three years of Buwaihīd rule in Baghdad*, in *JRAS* [1901], 619 ff.). Towards the end of his life, Abū Ahmad suffered poor health and lost his sight. In 400/1009-10 he died, at the age of 97 years (*Dīwān*, ii, 293).

The mother of al-Radī, Fāṭima bt. al-Ḥusayn (d. 385/996), was also of 'Alid descent, more precisely from al-Ḥasan b. 'Alī. Her grandfather al-Nāṣir li 'l-Ḥaḳḳ, poet and man of letters, was the ruler of Daylam. Al-Radī apparently had two sisters, Khadīja and Zaynab, as well as two brothers, al-Aṭṭar, mentioned by the poet al-Ma'arrī (d. 449/1057) in his ode to Abū Ahmad (*Sikṭ al-zand*, Beirut 1957, 35), and al-Sharīf al-Murtaḍā (355-493/967-1044 [q.v.]), renowned as a writer, poet, theologian, polemicist and leading defender of Imāmism. While the two brothers al-Radī and al-Murtaḍā are often mentioned conjointly, their contemporaries seem to have preferred the former, in particular for his poetic gifts and for his personal qualities (cf. Ibn Abi 'l-Ḥadīd, *Sharḥ Nahḍi*, 39-40).

As regards al-Radī's own immediate family, little is known. He apparently had a son, Ahmad 'Adnān, known like his grandfather by the cognomen of al-Ṭāhir *Dhu* 'l-Manāḳib. He followed the example of his ancestors in occupying the post of *naṣīb*. Furthermore, after his death, a second son was born, Abū Ahmad al-Mūsawī (Ibn 'Inaba, *Umda*, 211).

#### Intellectual formation.

Al-Radī had an education worthy of his rank. While he was still at an early age, and during the absence of his imprisoned father, his mother entrusted him, with his brother al-Murtaḍā, to the eminent Imāmī scholar al-Shaykh al-Mufīd (d. 413/1022 [q.v.]), who taught them Shī'ī theology (*op. cit.*, 41). Al-Radī continued his studies under the tutelage of other scholars who were among the most distinguished of the time, such as the grammarian Abū 'Alī al-Fārisī (d. 377/987), the writer Abū 'Abd Allāh al-Marzubānī (d. 384/994), the Mālikī Abū Ishāḳ al-Ṭabarī al-Mukri' (d. 393/995), the Mu'tazilī al-Kāḍī 'Abd al-Djabbār (d. 415/1024) and the philologist and grammarian Ibn Djinnī (d. 399/1002), among others. Al-Radī was very much attached to the last-named, in particular. It was, in fact, Ibn al-Djinnī who encouraged him to pursue his career as a poet. In token of admiration and friendship, the master contributed, at a very early stage, a commentary to his renowned *ra'yya*, an elegy dedicated to the Ḥamdānīd Abū Ṭāhir b. Nāṣir al-Dawla (d. 382/992) (*Dīwān*, i, 490-4), and later, to three other poems (cf. *Ḥaḳā'ik*, v, 87).

Thus our poet obtained a rich, diverse and profound cultural training. His exemplary friendship and loyalty towards the Sabian Abū Ishāḳ Ibrāhīm (d. 384/994), who was his senior by more than forty years, testifies eloquently to his tolerant spirit and his freedom of thought.

Considered precocious, he composed his first poem at the age of ten years. However, he did not study the *Kur'ān* until after the age of thirty (al-Tha'ālibī, *Ta'āma*, iii, 131).

The portrait provided by his biographers, corroborated furthermore by his poems, is that of a man of honesty, sensitivity, sincerity and finesse, a staunch and loyal friend. He was also immensely proud and conscious of his dignity; he accepted no gift from anyone. On the contrary, he was generous and well-disposed towards scholarship and scholars. He had founded a school, the *Dār al-ilm* ("house of knowledge"), where the students were lodged and provided for (Ibn 'Inaba, *op. cit.*, 209).

A committed Imāmī, but without excess or fanati-

cism, al-Radī was open to all tendencies. He showed some sympathy for Shāfi'ism and for Mu'tazilism (cf. Ibn 'Abbās, *al-Sharīf*, 46-7). He made his own convictions clear in declaring (*Ḥaḳā'ik*, v, 17) that he had been drawn, in early life, towards Murdji'ism, but that he had later opted for the dogma of the *wa'd* and *wa'id* (promises and threats in the life beyond), one of the five fundamental principles dear to the Mu'tazilis (cf. *Dīwān*, ii, 270).

#### Political activity.

His biographers, led by Ibn Abi 'l-Ḥadīd (*op. cit.*, i, 34), state that, from an early age, he harboured political ambitions and even aspired to the highest authority in the state, the caliphate itself; some of his verses express this unequivocally (*Dīwān*, i, 358, 536, ii, 167, 408-12). It seems that his friend Abū Ishāḳ al-Sābī encouraged him and built up his hopes (*Dīwān*, ii, 89-90; cf. Ibn Abi 'l-Ḥadīd, *op. cit.*, 26). This idea, which he cherished throughout his youth, came to nothing, and many of his poems convey a sense of disappointment, of deep dejection and of acute pessimism. He was finally obliged to come to terms with reality and to be content with the honours lavished on him by the Būyids, Bahā' al-Dawla [q.v. in Suppl.] in particular. In fact, in 380/990, at 24 years old, he was entrusted with his father's responsibilities (the *niḳāba* of the 'Alids, the *mazālim* and the Pilgrimage), when the latter's state of health prevented him from performing these duties himself. Sometimes, it was the two brothers together who assumed the responsibility. He was probably not officially appointed *naṣīb* until 403/1013. Furthermore, Bahā' al-Dawla persisted in showering him with honorific titles: *al-Sharīf al-Djālīl* ("the venerable noble one") (388/998), *al-Radī* ("the well-pleasing") (398/1007), *al-Sharīf al-Aḳḳāl* ("the most venerable noble one") (401/1011), *Dhu* 'l-*Hasabayn* ("of the two nobilities") and *Dhu* 'l-*Manḳabatayn* ("of two virtues"). To this writer's knowledge, in the entire history of Islam no one has ever surpassed al-Radī in terms of official honours and distinctions.

#### Poetic activity.

A writer and scholar versed in various disciplines (*Kur'ān*, *Ḥadīth*, language and literature), he was most appreciated in his role as a poet. His contemporary al-Tha'ālibī (*op. cit.*) asserts that he was considered, in terms of quality as well as quantity, the best poet of the Ṭālibīs, indeed of *Kuraysh* in general. Whatever the case, one thing is certain: al-Radī was passionate about his poetry. He was proud and jealous where it was concerned. He never permitted himself to utilise it for material ends, nor to obtain presents and benefits, as was the practice of innumerable poets of his time. He sought only honour and prestige as rewards for his poetry. His panegyric poems were devoted mostly to his relatives and friends; the others were addressed to certain public figures, those whom he genuinely trusted. Among the latter, worthy of mention is the caliph al-Ṭā'ī' (d. 393/1003 [q.v.]), to whom he dedicated numerous laudatory poems revealing sincere affection and respect for the man. One of his most moving poems is that in which he recounts the deposition of the caliph in 381/991 by Bahā' al-Dawla (*Dīwān*, ii, 444-8). He continued to dedicate poems to him until the former caliph's death twelve years later in 393/1003 (*Dīwān*, 197-201). But his relations with al-Kāḍir (d. 422/1031 [q.v.]), successor to al-Ṭā'ī', were not so favourable. Indeed, he wrote some eulogies addressed to him, but without much conviction. On the contrary, he composed a number of audacious, impertinent and provocative poems which sometimes roused the ire of the caliph, such as that

in which he compares himself to the latter, declaring in his presence (*Diwān*, ii, 42):

"Alas, *Amīr* of the Believers! We are equal, at the summit of glory ...

Only the caliphate, of which you hold the reins, separates us."

Bahā' al-Dawla was one of the few *amīrs* to enjoy eulogies on the part of this poet, in the guise of appreciation for all the privileges which he had accorded him (*Diwān*, i, 13-18, 53-64, 277-8, 413-18 and *passim*). But the poems in which al-Radī displays innovation and skill of the highest order are those devoted to praise of his father. There are some forty of these, and no other Arab poet has ever produced anything comparable. He treated his father, whose personality fascinated him, as though he were a caliph. On the occasion of every festival, he presented him with a poem. Furthermore, it was the arrest of his father, in 369/979, which gave the first impetus to his poetic genius. He composed one of his very first poems, of unprecedented power (78 verses), full of grief, melancholy and wisdom, when he was barely ten years old (*Diwān*, i, 305-10). Other poems were addressed to friends or to men of letters, such as al-Ṣābī, the Ṣāhib Ibn 'Abbād, Ibn Dīnnī, etc. He lauded their merits and especially—something virtually unique in Arabic literature—their art of the pen and their eloquence (*Diwān*, i, 280-4, 285-9, ii, 199-68 and *passim*).

Besides panegyric, his *Diwān* covers all poetic genres: descriptive, satirical, amorous and elegiac. But this poet excelled particularly in the last two (*ghazal* and *riḥā'*). His *Huḍāziyyāt*, some forty poems in which he sang of love and celebrated the beauty of the fine ladies who were performing the Pilgrimage, made him one of the most renowned Arab poets of all time. Neither his official function as organiser of processions of pilgrims, nor the holy places of Islam, nor his social and religious position, hindered him from expressing tender feelings of love. Admittedly, he was careful not to go too far in this respect and he confined himself to declaring his admiration of feminine beauty in delicate, elegant, restrained and measured terms, in a Bedouin style which recalls Djamīl Buthayna (d. 82/701), 'Umar b. Abī Rabi'a (d. 93/712) or Kuthayyir 'Azza (d. 105/723), far from the libertine exhibitionism of an Abū Nuwās (d. 197/812) or of an Ibn Sukkara (d. 385/995). It is quite simply a case of innocent, platonic (*udhrī*) love, as he says himself (*Diwān*, i, 175):

"I have loved but, as God knows,

I have only needed to see, to enjoy it ..."

His elegiac poetry is a model of sincerity and sensibility, full of wisdom, of meditation on man, life and death. Among his most moving elegies, notable are those dedicated to al-Husayn b. 'Alī, to his mother, to his father, to his friend al-Ṣābī and to his master Ibn Dīnnī (*Diwān*, i, 26-30, 44-8, 187-90, 381-6, ii, 63-7, 75-6, 290-6 and *passim*). His last poem of the genre was the elegy addressed to his friend, the writer and poet Ahmad al-Battī, at the time of his death in Sha'bān 405/1015 (*Diwān*, i, 170-1). In this poem, al-Radī seems to have a sense of his own impending demise, as he declares (*op. cit.*, 170):

"After you have hurt the one whom you love, Misfortunes will never spare you!"

In fact, a few months later, his own death supervened. He expired on Sunday, 6 Muḥarram 406/26 June 1016, at 47 years old. He was buried first in his home town, al-Karkh, in the precincts of the mosque of the Anbāriyyīn, in the absence of his

brother al-Murtaḍā, who was, it is said, too distressed to attend the ceremony. It was the *wazīr* Fakhr al-Mulk who conducted the funeral prayers. According to Ibn 'Inaba (*op. cit.*, 210-11), the remains of al-Radī were said to have been later transferred to Karbalā', to the mausoleum of al-Husayn, near the tomb of his father. Numerous poets paid their respects to him, in particular, his brother al-Murtaḍā, Abū 'l-Kāsim al-Maghribī (d. 418/1027) and his disciple Mihyār al-Daylamī (d. 428/1037).

#### Works.

Despite his relatively early death, and in spite of his weighty official responsibilities, al-Radī had the time to compose numerous works, reflecting his extensive and varied culture. His contemporary al-Nadīshī (*Riḍā'*, 283) has listed some fifty of them. Particularly worthy of mention are the following: (1) His *Diwān*, of 10,000 verses, the poems in which are often dated (374-405/985-1015), was assembled by several compilers, his son Ahmad and Abū Ḥakīm al-Khabrī (d. 476/1083) among others (ed. Bombay and Baghdad 1889, Beirut 1890, 1893, and more recently ed. Dār Ṣādir, n.d.). (2) *Khaṣā'is al-Imām 'Alī* ("Special characteristics of the Imām 'Alī") (ed. Nadjaf 1949 and Mashhad 1986): written in 383/994, this work was in fact the draft of a more ambitious project. The author intended at the outset to deal with the characteristic virtues of the twelve Shī'ī Imāms (*Khaṣā'is al-A'imma*). He began with 'Alī: his biography, his qualities and some extracts from his speeches and his wise aphorisms; this gave him the idea of devoting a second work exclusively to the sayings of 'Alī, with the object of illustrating his oratorical gifts. With the study of the other Imāms still unfinished, he turned immediately to this new enterprise which culminated in the celebrated *Nahḍ al-balāgha* (cf. *Nahḍ*, 1-3). (3) *Nahḍ al-balāgha* ("The way of eloquence") [*q.v.*] (ed. Beirut 1885, Cairo 1905, 1910, 1925 and ed. M.M. 'Abd al-Ḥamīd, n.d. and Beirut 1983): this is the anthology of the speeches, homilies and letters traditionally attributed to 'Alī, which al-Radī compiled in 400/1010 (see on this subject M. Djebli, *Encore à propos de l'authenticité du Nahḍ al-balāgha*, in *SI*, lxxii [1992], 36-52). (4) *Ḥakā'ik al-ta'wīl fī mulashābih al-tanzīl* ("Interpretation of Qur'anic images"), sometimes mentioned under the title of *Ma'ānī al-Kur'ān al-kabīr* ("Obscure meanings in the Qur'ān"): this was a monumental work, considered one of the most important exegeses of the Qur'ān. Unfortunately, only the 5th volume has survived (ed. Nadjaf 1936). (5) *Talkhīs al-bayān fī madjāzāt al-Kur'ān* ("Summary of metaphors in the Qur'ān") (ed. Cairo 1964, Baghdad 1955): begun on Thursday, 20 Sha'bān 401/1011 and completed on Sunday, 13 Shawwāl of the same year, this book is probably a summary of the preceding work (cf. *Talkhīs*, 288). (6) *al-Madjāzāt al-nabawiyya* ("Metaphors in the *Ḥadīth*") (ed. Baghdad 1911, Cairo 1971). As a talented writer and an admirer of literature, the author wanted to seek out eloquence, rhetoric and metaphor in the three principal sources of the Arabic language, these being the Qur'ān, the *Ḥadīth* and the sayings of 'Alī. It was in this spirit that he composed these last four works. (7) *Rasā'il al-Ṣābī wa 'l-Sharīf al-Radī* ("Correspondence with al-Ṣābī"). If al-Ṣafādī is to be believed (*Wāfi*, ii, 374), this correspondence, in prose and in poetry, constituted three volumes. But unfortunately, only an infinitesimal part of it has survived, in a ms. belonging to the Tunisian scholar H.H. 'Abd al-Wahhāb (ed. Kuwait 1961).

Other works, apparently no longer in existence, deserve mention, in particular: (1) *Sirat wāliḍih Abī*

*Aḥmad* (biography of his father), composed in his youth, in 379/990. (2) *al-Ḥasan min shi'r al-Ḥusayn* ("The fine [poetry] of his friend al-Ḥusayn [b. al-Ḥajjājī]). (3) *al-Mukhtār min shi'r Abi Tammām* ("Anthology of the poems of Abū Tammām"). (4) *Mukhtār shi'r Abi Ishāk* ("Anthology of the poems of al-Ṣābī"). (5) *Akhbār kuḍāt Baghdād* ("Biographies of Baghdādī kādīs"). (6) *Talīk fī 'l-Idāh* ("Glosses on the *Idāh*", sc. on the grammatical work of Abū 'Alī al-Fārisī), etc...

**Bibliography:** 1. Works of al-Radī. These are already cited in the text.

(MOKTAR DJEBLI)

**AL-SHARĪF AL-TALĪK**, the name by which the Andalusī poet, active in Cordova, Abū 'Abd al-Malik Marwān b. 'Abd al-Raḥmān b. Marwān b. 'Abd al-Raḥmān al-Nāṣir (b. 347/958, d. by 395/1005), is known. A great-grandson of the caliph 'Abd al-Raḥmān III, he was imprisoned in Madīnat al-

Zahrā' [q.v.] when he was 16 for killing his father out of jealousy over a girl. Among his fellow prisoners were several literary figures, including Abū 'Abd Allāh b. Mas'ūd al-Baḍjdjānī, who wrote at first love poetry and later *hiḍā'* on the handsome youth. Among these men, al-Talīk developed his skill at poetry, most of which was written in prison. Al-Manṣūr ordered his release in or before 379/989-90, either because of a dream-vision of the Prophet or thanks to the intervention of al-Manṣūr's pet ostrich; the supposedly supernatural cause of his release is said to have given rise to his cognomen, which in one source is said to be Talīk al-na'āma, "released by the ostrich".

Although he is reported to have been a prolific poet, little of his work is extant, and that only in fragmentary quotations. His friend, Ibn Ḥazm calls him the greatest Andalusian poet of his time and compares his rank among the poets of the Andalusian Umayyads to that of Ibn al-Mu'tazz among the 'Abbāsids because of the "gracefulness of his poetry and the beauty of his similes." Particularly appreciated was his *kāf'iyya* beginning:

*ghuṣun<sup>um</sup> yahtazzu fī dī'si nakā*

*yaḍṭanī minhu fu'ādī ḥurakā*

("A bough, quivering on a sandy hillock/from which my heart harvests burning!"); but only 41 verses, probably not the entire poem, are extant. The extant fragments deal mostly with wine and flowers.

**AL-SHARĪF AL-TILIMSĀNĪ**, the name given to a dynasty of scholars of Tlemcen.

1. MUḤAMMAD B. AḤMAD, Abū Ṭalīb

(a) Life

This scholar (*ālīm*) of Tlemcen, who was born in 710/1310 and died in 771/1369 or 1370, is the renowned ancestor (*maṣḥūr*) of a family which has produced several generations of jurisconsults (*fuḳahā'*), and more specifically of "philosopher-jurisconsults" (Abū Bakr Ibn Shu'ayb) or philosophers of law, also known as "theoreticians of law" (W.B. Hallaq), particularly distinguished among whom are his two sons. He was nicknamed al-'Alawī, being the native of a village situated a day's journey from Tlemcen and called al-'Alawīyyīn.

He studied under masters of repute, including Abū Zayd (d. 743/1342) and Abū Mūsā (d. 749/1348), with whom he studied science of law (*fikh*), sources of law (*uṣūl al-fikh*) and dogmatic theology (*ilm al-kalām*). He also studied under the teacher of 'Abd al-Raḥmān and Yahyā Ibn Khaldūn, Abū 'Abd Allāh al-Ābilī (d. 757/1356), a citizen of Tlemcen of Andalusian origin (from Avila), later a resident of Fās, where he became the disciple of the mathematician Ibn al-Bannā' (d. 721/1321). Among his other distinguished teachers were the savant and mystic 'Abd Allāh b. Ibrāhīm al-Maḍjāsī, nicknamed "the Weeper" (*al-Bakkā'*, *Bustān*, 121, tr. 132), the *kādī* Muḥammad al-Tamīmī (who was appointed governor of Biḍjāya, where he died in 756/1355), Abū Mūsā 'Imrān al-Maḥaddālī (a native of the region of Biḍjāya, d. 745/1344).

1344-5), the *kādi* Ibn 'Abd al-Nūr (Abū 'Abd Allāh Muhammad, d. 748/1337-8), Ibn al-Ḥasan (Abū 'l-Abbās Aḥmad, d. 767/1366), and the astronomer and mathematician Abū 'Abd Allāh Muḥammad Ibn al-Nadīdār (d. 749/1348-9).

In 740/1339 he set out for Tunis, where he attended courses given by the *kādi* Muḥammad Ibn 'Abd al-Salām (675-749-1277-1348), the commentator on Ibn al-Ḥaǧīb (d. 646/1249), studying in particular the chapter concerning Ṣūfism (*faṣl al-taṣawwuf*) in the *Kuṭāb al-Shifā'* of Ibn Sīnā, and the shorter and middle-sized commentaries on Aristotle by Ibn Ruṣḥd, which correspond to the *Organon* and which illustrate the methods of the Greek thinker (the work always begins with the analysis and detailed criticism of the ideas of his predecessors) and his style of discourse.

Al-Sharīf also engaged in the study of mathematics, of astronomy and of the science of the division of inheritances (*al-farā'id*). He escaped the "Black Death" of 749/1348, which originated in the Orient and spread throughout the West, decimating the intellectual élite of North Africa. On his return to Tlemcen, and until the capture of this town in 753/1352 by the Marīnid sultan Abū 'Inān, he gave courses which were well attended, among others by students from neighbouring countries.

Abū 'Inān appointed him as a member of his academic council (*al-maǧlis al-'ilmī*) and introduced him to his court in Fās. There he gave instruction to the royal family, to the children of the nobility and to eminent individuals of the court (*awlad al-shurafā' wa 'l-uzamā'*, *Bustān*, 117). Some of his pupils were to become renowned, such as the notary and astronomer (*muwaqqit*) attached to the mosque of al-Karawīyīn Abū Zayd 'Abd al-Raḥmān al-Madyūnī (al-Kādirī, b. 777/1375-6) and the traditionist scholar Abū Zakariyyā 'Yahyā al-Sarrāǧī (d. 805/1402-3). On the death in 759-1358 of Abū 'Inān and with the consent of the Marīnid *wazīr* 'Umar b. 'Abd Allāh, al-Sharīf al-Tilimsānī accepted an invitation from the sultan of Tlemcen, Abū Ḥammū II (723-91/1323-89) who appointed him an advisor, being impressed by his superb intellectual qualities (*andjabuhum 'akl'*, *Bustān*, 170, tr. 190), his expertise in the theology and law of the Mālikī *madhhab* and his pre-eminence in the science of divergences (*al-khilāfiyyāt* or comparative law, which analyses the different schools of Muslim law).

Abū Ḥammū II asked for the hand of the scholar's daughter in marriage, then appointed him director of the Ya'kūbiyya *madrasa*, specially founded for the scholar and richly endowed with *ḥubus*. Subsequently, it seems that his descendants had the use of a site where the *kādi* 'Abd al-Wāḥid al-Waṣṣarī, assassinated during a period of instability in Fās, was buried in 957/1550 (al-Maḳḳarī, *Nafḥ al-ṭib*, v, 280). The precincts of the mosque and the *madrasa* became a royal cemetery; in later times, only the mosque and the *ḥubba* remained, taking the name of the saint Sīdī Brāḥīm al-Maṣmūdī (d. 804/1401), also buried in the same cemetery.

The life of al-Sharīf is informative on the climate of religious rivalry between the Maghribī powers, in particular the Marīnid and Zayyānid or 'Abd al-Wāḥid dynasties. Anxious for legitimacy, both sought to rely on the prestige of the descendants of the Prophet's family, the *Shurafā'* [q.v.]. In fact, the 'Abd al-Wāḥids claimed, as is asserted by Ibn Khaldūn (*Muḳaddima*), descent from al-Kāsim b. Idrīs and had themselves called, in the Berber dialect of the Zanāta, Ayt al-Kāsim. Furthermore, the arrival of the scholar at the invitation of the sultan of Tlemcen was indicative not

only of a strategy of alliance destined to enhance the intellectual and cultural prestige of the capital of the central Maghrib, but also of a Sharīfian power-policy, of which one of the most visible aspects was the festival surrounding the celebration of the *Mawlid*.

Al-Sharīf al-Tilimsānī appears to be a key-individual, an intermediary between the political and the religious, between power and the people, who did not hesitate to defend the *faḳīh*, the marabout or the destitute. Of pleasing physical appearance, he dressed with elegance. He was generous and enjoyed giving advice to people. He was kind-hearted and tolerant towards others, and used his ablutions as a diversion when his irritation was aroused. The prestige which he enjoyed among the dignitaries of the kingdom was supplemented by his popularity and his reputation as a man of piety, capable of producing miracles (*karāmāt*). If he wrote little, this was because when he was not engaged in diplomatic missions (764/1362, 765/1363, 767/1366), most of his efforts were devoted to teaching.

The courses given by al-Sharīf were characterised by his methodical analyses and the clarity of his language which rendered him a proficient orator. His daily routine began with interpretation of the Qur'ān, in which he showed himself an incomparable exegete over a period of twenty-five years. He captivated his audience with his favourite reading, the *Mudawwana al-kubrā* of Saḥnūn (d. 240/854 [q.v.]). His commentary on the *Djumal* of al-Khūnadjī (author of the *Kuṭāb al-Umda*, d. 649/1249) was also a component of his courses. He was an accomplished philologist, skilled in the knowledge of the proper use of words, their etymology and their grammatical forms—useful arts in the study of the abundant judicial literature of the different Mālikī schools (Qayrawān, Cordova, Baghdad, Cairo, etc.), especially in regard to the Qur'ān: its grammatical analysis (*naḥw*), its readings (*kirā'āt*) and its variants (*ikhtilāf*). Furthermore, the art of poetry, ancient history of the Arabs ("Days of the Arabs", *ayyām al-'Arab*, and "Days of God," *ayyām Allāh*) and Ṣūfism were subjects in which he excelled. In addition to his mastery of the rational and traditional sciences (*al-ma'kūl wa 'l-mankūl*), and sound judgment (*salāmat al-aḳl*), he was also endowed with profound mystical knowledge which he sought to share with his pupils, initiating them especially into the rejection of material goods.

What emerges from his personality is the image of a sincere Muslim whom affluence did not deflect from the defence of the spiritual, moral and humanist values contributing to the cohesion and dynamism of the city. Among his pupils, many acquired renown: in the first place his own sons, 'Abd Allāh and 'Abd al-Raḥmān, the *imām* al-Shātibī, Ibn Zamrak, 'Abd al-Raḥmān Ibn Khaldūn, Ibn al-Sakkāk (Abū Yahyā Muḥammad, d. 816/1413), the *faḳīh* Muḥammad b. 'Alī al-Madyūnī, the saint and preacher Ibrāḥīm al-Maṣmūdī (d. 804 or 805/1401 or 1402), and the jurist Abū 'Abd Allāh b. 'Arafā al-Warḡamī (716-803/1316-1400).

Al-Sharīf al-Tilimsānī is a representative of that class of Maghribī scholars who were employed by the successors to the Almohads in the training of royal functionaries responsible for the sultan's secretariat and for military, religious or judicial administration, in the context of the official teaching of the *madrasas*. Furthermore, the need for such functionaries was augmented by the prosperity of Tlemcen and the development of the diplomatic and commercial relations of the kingdom.

His work is situated in the movement whereby insti-

tutions were re-adapted to Mālikism after the Almohad period. For Ibn Marzūq al-Khaṭīb, he revealed a high degree of expertise in the interpretation of the Mālikī doctrine (*Bustān*, 166, tr. 185). According to Ibn Maryam, "he was the last of the great masters of *idjāhād*" seen by this period (*kāna ākhīr al-a'imma al-muḍṭahādīn al-rāsikhīn*, *Bustān*, 167, tr. 185). He was responsible for the revival of orthodoxy (*ibid.*, 169, tr. 185), he resuscitated religious law and dispelled heresy (*ibid.*, 167, tr. 185).

In reaction to the Almohad doctrine, illustrated in particular by the *Mahdī* Ibn Tūmart, the scholar equally versed in the sources (*uṣūl*) of law, permitting the deduction of laws from their principles, and in the applications (*furū'*) of law, exerted his critical sense while applying himself to the original texts. Two methods were combined: *idjāhād*, personal interpretation as a means of rectifying or completing passages in the Mālikī treatises, and *taklīd*, using the model of the opinions of Mālikī scholars expressed in the treatises on *furū'*, the mystical sense (*bāṭin*) taking on an ever-increasing importance in the interpretation of sources.

With al-Sharīf al-Tilimsānī, the development of the judicial sciences is characterised by an attempt at reconciling these *furū'* with the *uṣūl*, as well as by the more profound study of theology, these various elements forming part of the education dispensed especially in *madrasas*. As with the Hafsīd dynasty, the function of *muftī*, initially private and independent, tends to be given official status, becoming an institution designed to bolster the authority of the Banū 'Abd al-Wād. Thus in connection with the school of Biḡjāya, and under influences deriving from al-Andalus, from Tunis and from Fās, a judicial practice (*'amal*) is constituted, belonging specifically to Tlemcen and its region, which has left its mark in collections of particular cases (*navāzīl*), where the position of the Divine Law is expressed by an authorised religious scholar (*muftī*), in answer to a question put to him by the jurist (*fakīh*, *mustaṭṭir*).

The *fatwā* related by Ibn Maryam (*Bustān*, 178-84) is not so much an example of a judicial decision, an opinion on a point of law delivered by an expert, as a concise survey of the principal issues debated in the 8th/14th century at Tlemcen in the field of *uṣūl al-fikh*. More specifically, this *fatwā* reflects the pedagogical concern of al-Sharīf, revealing his characteristic method of addressing the problem from different angles (*bi-wuḍūh al-nazar*, *ibid.*, 178). It gives an insight into his way of contemplating the rules of interpretation of the sources of law from which are derived the legal statutes (*ahkām*) which should govern the judicial problems (*navāzīl*) which are presented.

The doctrine of al-Sharīf is characterised here by:

- Insistence on the authority of the Prophet as representative of the Supreme Legislator, God;

- His concern to reconcile rules which appear to be contradictory, e.g. by linking the particular to the general case;

- The resolution of conflicts through the rule of abrogation (*naskh*), which can concern an explicit text (*naṣṣ*) or a judicial decision or rule (*hukm*);

- A technique close to that of such Ash'arīs as al-Ash'arī himself, al-Djawaynī, al-Ghazālī and al-Rāzī and to that of mediaeval Christian scholarship (the technique of division and of classification, reference to religious authority, the hypotheses envisaged being most often expressed in the form of the syllogism, the use of copious evidence in argumentation, refutation of the opponent through his own arguments or through *argumentum ad hominem*, *al-ilzām*). Directly, the accent is

placed on the delimitation of the question, the demarcation of the controversial points, and then the reduction of divergencies by the elimination of faulty interpretations giving approbation (*taṣḍīk*) to the erroneous, then turning in the direction of probable certainty, of equitable solutions;

- A rigorous exegesis aided by an analytic logic bordering on an apodeictic logic which does not impute to the texts more than they show, proceeding through the observation of singular principles which resemble one another to the deduction and detachment of the universal rule (e.g. the Aristotelian concept revised by Ibn Sīnā). Simple allegation (*kawf*) needs to be confirmed (*yuhakkiku*, *ibid.*, 183). His procedure for validation between the valid and the non-valid is close to that of the philosopher (e.g. Ibn Rushd), between the true and the false: simple notions (*ma'ānī mufrada*) are all conceivable, it is their composition (*tarkīb*), which gives the concept (*taṣawwur*) which permits affirmation and negation (*al-idjāb wa'l-salb*), and especially, truth and falsehood (*al-sidk wa'l-kadhīb*);

- A cautious use of analogy (*al-kiyās*). This is a means of avoiding, on the one hand, assimilation by analogy which brings about an interpretation far removed from the basic case (*aṣl*), by stressing the resemblance to the assimilated case (*far'*); and on the other, personal opinion (*ra'y*), especially in the absence of a clear expression of legal rules in the texts (*'ibārāt al-naṣṣ*). The arguments used are non-analogical, arguments *a fortiori* (*fahwa 'l-khūb*), where the themes are to be found more decisively present in the assimilated case than in the basic case), starting with the implicit meaning of the typical text (*a maiore ad minus* or *a minore ad maius*, *maḥmū al-khūb* or *dalālat al-naṣṣ*, and *reductio ad absurdum*, *kiyās al-'aks*);

- Utilisation of logic, in the general structure, as in the different developments of the reasoning, which adds richness to the text and clarity as well, giving it persuasive force and avoiding ambiguity. However, its presence is diffuse and takes the form in the course of the text, after the manner of Ibn Ḥazm, of stylistic features apparently not designed or intended (for example, the non-categorical syllogism, or, according to Arabic classification, of, e.g. al-Fārābī, disjunctive conditional syllogism);

The predominance of *idjāhād*, here in the sense of judicial effort (Abū Bakr b. Shu'ayb) where faith and knowledge are partners, and which is tied to the notion of action, will, knowledge, truth, while servile imitation (*taklīd*) is the symbol of immobilism, of passivity, or ignorance and of falsehood (*al-ghalat*). But the definition of *idjāhād* is fairly broad as applied by al-Sharīf, who acknowledges absolute *idjāhād* in the case of the independent interpreter, who decides without reference to any doctrine, whereas for al-Ghazālī, for example, the independence of this judgment is only valid within the parameters of the school to which the jurisconsult belongs.

It is the concern for just equilibrium (*i'ṭidāl*), and the feeling that the certainty obtained is only a probable certainty, which leads the jurist, a devout Muslim, subject to the omnipotence of the Legislator (God), to an attitude of moderation (*hay'at al-tawassut*) and of wisdom (*al-hikma*). Thus the judge becomes the arbiter, or finds his role in arbitration (since *kaḍā* is to settle a dispute, to arbitrate), as is shown by Aristotle's definition of equity (*aequitas*): "Equity seems to be justice which goes beyond the written law" (*Rhetoric*, i, 1374a).

(b) Works

A book on donations (*al-mu'āṭāt* or *al-mu'āwāḍāt*, exchanges); *Sharḥ Djumal al-Khūnādī—Mukhtaṣar fī 'l-uṣūl*

(or *K. al-Miftāh fī uṣūl al-fīkh* or *Miftāh al-uṣūl fī binā' al-furū'* 'alā 'l-uṣūl'), dedicated to the Marīnid sultan Abū 'Inān (749-59/1347-58); a work on predestination and the immutable decrees of God (*Fī 'l-qaḍā' wa 'l-kadar*); poems (*kaṣā'id*) composed at the time of the *Mawlid*; *fatwās* conveyed in the works of al-Maghīlī al-Māzūnī (d. 883/1478) and of al-Wanṣharīsī, with those of his sons 'Abd Allāh and 'Abd al-Raḥmān, as well as in *al-Bustān*.

2. 'ABD ALLĀH B. MUḤAMMAD, sometimes called Ibn al-Imām, b. 748/1347-8, the elder son of the preceding, who was allegedly informed in a dream that his son would become a scholar. Arriving with his father in Fās, at an early age, he embarked on a multifarious programme of studies which included the *Kur'ān*, as well as the treatise on grammar and logic *al-Djūmal* by al-Zadjdjadīr and the *Alfiyya* by Ibn Mālik, under the tutorship of Abū 'Abd Allāh Muḥammad b. Zayd, among numerous other classical works. He read the *Mudawwana* of Saḥnūn with Abū 'Imrān Mūsā al-'Abdūsī. With Abū l-'Abbās Aḥmad al-Kabbāb (d. 777/1375) he studied *al-Talkīn* by 'Abd al-Wahhāb (d. 422/1030), the *Risāla* of Ibn Abī Zayd al-Ḳayrawānī and the *Kāfiya* of Ibn al-Hāḍib. With Abū l-'Abbās Aḥmad Ibn al-Shammā', he read Ibn al-Hāḍib (*al-Mukhtaṣar fī 'l-furū'* or *al-Mukhtaṣar al-farī*). With the *kāḍī* Abū l-'Abbās Aḥmad b. al-Ḥasan, whose courses had been attended by his father, he perfected his knowledge of jurisprudence through reading the *Muwatta'*, *al-Tahdhib* by the jurist of Ḳayrawān Abū Sa'īd al-Barādhī, and further works by Ibn al-Hāḍib.

Then, with his father, he studied philosophy in *Makāsid al-falāsifa* by al-Ghazālī, and dogmatic theology in the latter's *al-Ikṣād fī 'l-ittikād*, and in *al-Muḥaṣṣal* by al-Rāzī, the sciences in Ibn Sīnā (*al-Naḍīāt*), then, for the principles of law, al-Ghazālī (*Shifā' al-ghālīl*) and Ibn al-Hāḍib; in rhetoric, the *Talkhīs* and *Idāh* of al-Ḳazwīnī; in dialectic (*ḳāḍal*), *al-Mukhtarāh* by al-Barawā'ī (517-67/1124-72); in geometry, Euclid; in logic, *al-Djūmal* by al-Khūnādī, previously studied in depth by his father who had written a commentary on it, and for Sūfism, al-Ghazālī again. He also studied the *Risāla* of Ibn Abī Zayd al-Ḳayrawānī and was soon perceived to be superior to his father in scholarship. He then taught at the Great Mosque of Tlemcen, giving instruction especially in the *Kur'ān*, in 'Abd al-Haḳḳ (*al-Aḥkām al-ṣuḡrā*) and in Ibn al-Hāḍib (*al-Mukhtaṣar al-farī*), in the presence of numerous students, the majority of them from Fās. He received a salary from the Marīnid sultan Abū Fāris 'Abd al-'Azīz (767-74/1365-72) until the restoration of the Banū 'Abd al-Wād. On the death of his father, he was appointed his successor as teacher at the Ya'kūbiyya *madrasa* by sultan Abū Hammū II. One of his more notable pupils was Ibn Marzūk al-Halīd (766-842/1364-1438). When Abū 'Abd Allāh fell ill in 784/1382, his place in the classroom was taken by his brother 'Abd al-Raḥmān. Abū 'Abd Allāh lived for some time in Ḡamāṭa, where he was one of the tutors of the great *kāḍī* Ibn 'Āṣim, author of the *Tuhfa*. He perished in a shipwreck between Mālaḳa and Tilimsān in 792/1390.

3. ABŪ YAḤYĀ 'ABD AL-RAḤMĀN B. MUḤAMMAD, born in 757/1356, brother of the preceding. His name

as regards the *ism* and the *kunya*, appears to be a combination of that of 'Abd al-Rahmān Ibn Khaldūn and that of Abū Yahyā b. al-Sakkāk (*kādī* of Fās, d. 816/1413), both present on the night of his birth, in his father's house. After apprenticeship with the Qur'an, he studied in particular, with his father, the fundamentals of law and the *Muwatta'*, then with his brother 'Abd Allāh, nine years his senior, whose diligent disciple he became. He also undertook study of Ibn al-Hādīj, of the *Ḍumal* of al-Khūnādī and of the *Idāh* of al-Fārisī, as a pupil of Abū 'Uthmān Sa'īd al-'Ukbānī (*kādī* of Bidjāya, then of Tilimsān, 720-811/1320-1408). Like his brother, he had Muḥammad b. Ḥayātī al-Ḥarnāfī for a tutor in the study of the *Ḍumal* of al-Zaḍḍājī and the *Mukarrib* of Ibn 'Uṣfūr. With the Andalusian Abu 'l-Kāsim b. Riḍwān, he studied the *Ṣaḥīḥ* of Muslim and the *Shifā'* of 'Iyād. During his brother's illness, in 784/1382, he taught in his place, before leaving to give a series of lectures in Fās. Renowned for his skill at exegesis and the analysis of the apparent and hidden (*al-zāhir wa 'l-bāṭin*) meaning of texts, he educated numerous students including the writer and poet Abū 'Abd Allāh Muḥammad b. Yūsuf al-Thaghīrī, secretary of Abū Hammū II, as well as Abu 'l-'Abbās Aḥmad Ibn Zāghū (782-845/1380-1441), himself an eminent jurist and teacher of the *kādī* of Māzūnā, al-Maghīlī (d. 883/1478) and of Abu 'l-Ḥasan 'Alī al-Kalāsādī (d. 891-1486), an Andalusian and a resident of Tlemcen who was himself the teacher, in arithmetic and the law of succession of the theologian Muḥammad al-Sanūsī (838 or 839-894/1435-1490). He died in 826/1423.

His works comprise a book on the forgiveness of sins (*Ta'rif 'alā 'l-maghfirah*); *Sharḥ al-asrār al-akīyya* (of al-Muktarah, d. 612/1215-16); and *Sharḥ al-Irshād* (of al-Djuwaynī);

4. ABU 'L-ABBĀS AḤMAD B. ABĪ YAHYĀ b. Muḥammad, sometimes called Abū Dja'far, senior *kādī* (*kādī 'l-djama'a*) of Granada, grandson of Muḥammad al-Sharīf al-Tilimsānī. With his brother Abu 'l-Faradj, he attended courses given by Marzūk al-Hafīd at al-'Ubbād (Sidi Bou-Medein). He died at Tlemcen in 895/1490. He seems to correspond to the *fakīh*, the *imām* Abu 'l-'Abbās Aḥmad b. Sayyidī Yahyā al-Sharīf in the *Mi'yār* of al-Wansharīf.

5. ABU 'L-FARADJ B. ABĪ YAHYĀ b. Muḥammad, brother of Abu 'l-'Abbās essentially followed courses given by Ibn Marzūk al-Hafīd at al-'Ubbād. The details of this education with its different gradations, were typical of Maliki instruction. On the occasion of the presentation of the *idjāza*, he was dressed by

his master in the robe of the Ṣūfīs (*albasahu khirkat al-taṣawwuf*) in which Ibn Marzūk had himself been clad by his father and his maternal uncle. He died in Tlemcen in 868/1463.

*The al-Sharīf al-Tilimsānī family in the cultural life of their time.*

The abundant biographical material concerning the al-Sharīf al-Tilimsānī family gives a clear impression of the dynamism of intellectual life and of the institutions which formed its environment, in particular the elaborate system of education in Algeria in the 8th/14th century. The instructive evidence conveyed in the biographical notices show a social promotion of scholars, who are above all jurists, which was owed to their personal merit (*ḥasab*) rather than to their genealogy (*nasab*). The traditional sciences play a significant role in the initial training of a jurist in this period, the sources being the Qur'an and the Sunna. Judicial logic flourished, as did the theological logic manifested in dogmatic theology (*kalām*), and there seems to have been, in this context, a scholastic tradition at Tlemcen, which is seen, in the following century, in al-Sanūsī, with an original synthesis between theology, logic and Ṣūfism, as well as the jurist, logician and historian al-Ṭanāsī (d. 899/1494). As in Christian Europe, the work of Ibn Sīnā is one of the central pillars of education, with the huge encyclopaedia constituted by the *K. al-Shifā'* (known and annotated in Latin under the title of *Sufficiencia*) as a universal work of reference for the age.

This system of education was developed not only at the instigation and under the control of royal power but also in response to a prodigious appetite for knowledge and to the enthusiasm aroused by new ideas and by the growing social prestige of masters. The attraction of the allowances paid to the students admitted to courses (*al-murattab*, *Bustān*, 170) and the social utility of studies, success in which brought privileges (*intifā'*), honours and the guarantee of public careers in the administration or even in the diplomatic service, or confidential occupations (such as that of notary)—all these factors contributed to an increase in the numbers of students (*talaba*), which created problems of accommodation and catering. The hierarchical ranking of disciplines led to the consolidation of the lucrative scholarship of the time, that of law. However, grammar did not fall into disfavour, as it did in Europe, and the epistolary art (*dictamen* or *ars dictaminis*, corresponding to the art of inditing, *inṣhā'*, which is one of the *'ulūm al-adab*) in association with the practice of rhetoric, enjoyed a revival on account of the development of commercial and diplomatic relations in the Mediterranean region, which necessitated the composition of more numerous and more complex official documents.

**SHĀRĪH ŪL-MENĀR-ZĀDE**, Ahmed (?-1067/1657), Ottoman historian.

The son of the Ottoman 'ālim 'Abd ūl-Halīm (d. 1051/1641-2), he was born probably in Amasya and himself followed an 'ulemā career, rising to be a middle-ranking *müderis* in Istanbul. His father being the author of an Ottoman commentary on an Arabic work on jurisprudence, *Manār al-anwār*, the son became generally known by the *lakab* Shāriḥ ūl-Menār-zāde. He died in Istanbul in Sha'bān 1067/May-June 1657 (H.J. Kissling (ed.), *'Uṣāqē-zāde's Lebensbeschreibungen berühmter Gelehrter und Gottesmänner des Osmanischen Reiches im 17. Jahrhundert (Zeyl-i Şagā'iq)*, Wiesbaden 1965, 221-2; Mehmed Şeykhī Ef., *Wekā' i' al-fudalā'*, ms. Süleymaniye, Beşir Ağa 479, fol. 197a; Babinger, *GOW*, 190-1; L.V. Thomas, *A study of Naima*, New York 1972, 136-8).

Shāriḥ ūl-Menār-zāde compiled a world history from the creation to the year 1065/1655 which remained in draft form at his death (Kissling, *op. cit.*). This draft was subsequently presented to the Grand Vizier 'Amūdjā-zāde Husayn [Köprülü] Paşa [q.v.], who commissioned Na'imā [q.v.] to write a new Ottoman history based upon it. The earliest references by Na'imā to Shāriḥ ūl-Menār-zāde's original are to 1018/1609 in the reign of Ahmed I and the latest to Mehmed Köprülü Paşa [q.v.] in 1065/1655 (Muṣṭafā Na'imā, *Ta'riḥ*, Istanbul 1281/1864, i, 10; Thomas, *op. cit.*, 138). It is thought that for the intervening period Shāriḥ ūl-Menār-zāde's work was incorporated almost entirely into Na'imā's history and that the latter's text is therefore heavily dependent upon it (*Ta'riḥ*, i, 10-11, and *passim*; Thomas, 138-9). Shāriḥ ūl-Menār-zāde's history was never published separately; the manuscript is presumed lost.

Shāriḥ ūl-Menār-zāde's own sources appear to have been (i) for the late 16th-early 17th centuries, a written history now thought lost but possibly closely related to the chronicle of Hasan Bey-zāde [q.v.]; (ii) the history by his contemporary Kara Celebi-zāde [q.v.]; (iii) his own notes and information from oral informants. According to 'Ushāḳī-zāde, Shāriḥ ūl-Menār-zāde was an avid participant in social and official gatherings and was thus well-informed; Na'imā regarded him as a shrewd and reliable observer of events (Kissling, *'Uṣāqī-zāde*, 221-2; Na'imā, *Ta'riḥ*, i, 10).

*Bibliography*: Given in the text.

(CHRISTINE WOODHEAD)

**SHARIKA**, *SHIRKA* (A.), nouns with a basic meaning of "partnership, association" (see Lane, *Lexicon*, s.v.) hence from the same root as the theological term *shirk* [q.v.] "associating other gods with God", hence polytheism, and *sharik*, pl. *sharakā'* "partner associated in divinity", both frequent in the Qur'ān.

As a term of Islamic law, it takes different forms according to the contents and conditions. According to al-Azharī, it signifies the mixing (*khalṭ*) of two or more assets (*māl*) together with the permission of each partner that the other can trade with it. *Sharika* is principally divided into partnership by property (*milki*), and by contract (*'akd*). The former originates when two "persons" become owners of one property without a contract. This can occur by choice, when they "accept" the subject through someone's gift. Alternatively, it may be brought about without choice; this is the case in inheritance [see *MIRĀTH*]. In both cases, it is not lawful for either partner to

perform any act with the other partner's share without his permission.

A partnership contract is controlled by the principle of proposal and consent (*ījāb wa-kabūl*). The classification of companies seems to be incompatible between the various schools of *fiqh*, the incompatibility probably arising from the varying recognition of authentic sources, as well as from the question of what constitutes a valid partnership. The Hanafi school, which permits all kinds of partnerships, appears to have the most consistent and logical classification. One can observe that they divided it from a "liability" point of view into:

(1) Partnership in traffic (*sharikat 'inān*); this is contracted when each party contributes capital. Each partner would accordingly become an agent of the other but not his bail. Equality in capital, responsibility or profit need not result.

(2) The *muṣṭawada* [q.v.] or equal partnership, is contracted between two persons of equivalent property, privilege and religious persuasion.

From a "subject" point of view, partnership for the Hanafis can be divided into:

(1) Partnership in crafts or trades (*sharikat ṣanā'ī'*). This is contracted between two craftsmen in a similar trade, such as cobblers or tailors; they agree to work together and share the profit produced. The condition that Mālik makes for *sharikat al-ṣanā'ī'* to be valid is that the partners should be in the same or related trades. The Hanbalīs permit this kind of partnership, while the Shāfi'īs and Imāmī Shī'īs totally reject it on the grounds that it can only take place in regard to capital and not in regard to work.

(2) Partnership of capital (*sharikat amwāl*). This is contracted when two partners put their capital in one project and agree on certain conditions for administration, profit and loss.

(3) Partnership of personal credit (*sharikat wuḍūḥ*). This is contracted when two well-known persons (*wuḍjāhā'*) ask others to sell to them goods without payment on the basis of their reputation, and then sell the goods for cash. This use of personal credit is rejected by scholars, including al-Shāfi'ī and Mālik, on the basis that it involves work and money that are not actually present, and that it also involves uncertainty and risk (*gharar*) in the traded subject.

The Hanbalīs do not seem to identify "liability" as an element of classification when they place both *muṣṭawada* and *'inān* on equal footing with other divisions based on the subject element.

The *muḍāraba* [q.v.], also called by the Hijāzīs *kirād* [q.v.], is another early Islamic form of *sharika* which has been focused upon by modern Muslim writers in Islamic banking. The main difference between the two forms lies in the instruments that each utilises. *Sharika* uses similar "assets", whereas in *muḍāraba* the owner of various "forms" of assets can be partners, in return for a share of the profits, in accordance with their agreement. The risk for the capitalist is his capital, while for the manager, it is his time and effort.

*Sharika*, together with profit-sharing, *muḍāraba*, are seen by scholars of Islamic banking as the main legal structures for Interest-Free Banking. The idea of IFB has gradually evolved over the last forty years into a fairly comprehensive, though controversial, model of banking. Partnership arrangements (*mushāraka*), according to John Presley, represent a total of 7%-10% of the total financing package of IFB.

**AL-SHĀRIKA**, a shaykhdom of the Gulf, named after its capital city, since 1971 one of the seven United Arab Emirates, third in importance and wealth after Abū Ḥabī and Dubayy [q.v.]. The capital is located 14 km/8 miles north of the latter city, on the western side of the Musandam Peninsula in the lower Persian Gulf. Commonly rendered in English as Sharjah, reflecting the dialectical pronunciation al-Shārdja, the town is mentioned as early as the 15th century. The 1985 census counted 268,723 inhabitants, 75% of whom lived in the capital. With a total surface of 2,590 km<sup>2</sup>, it has the most fragmented territory of any of the seven emirates. The main body stretches inland from the capital on the coast; in addition, there is an area around Khawr Fakkān, and the immediate surroundings of the town of Kalbā—both on the Bāṭina coast along the Gulf of Oman—and three further small enclaves around the Kalbā area. The precise borders are the result of boundary-drawing exercises by British officials in the 1960s, based on surveys of local loyalties to the various rulers. The Emirate also claims the island of Abū Mūsā in the Persian Gulf—jointly administered with Persia since 1971, but forcibly occupied by the latter in 1992.

Since 1972, the Emirate has been ruled by Shaykh Sulṭān b. Muḥammad al-Kāsimī, who was agreed upon by the UAE's Federal Supreme Council as the successor to his brother Khālid. The latter was slain in an attempted coup by his predecessor Ṣaqr b. Sulṭān, who had himself been deposed in 1965 under British pressure for sympathising with Egyptian and Arab nationalist influence. British control over al-Shārika, which was officially ended in 1971, dated back to the 19th century, as part of Britain's determination to control the Gulf region as a whole [see BAHR FĀRIS], in the course of which the sea power of the Kāsimī (pl. Kawāsim [q.v.]) ruling family of al-Shārika and Ra's al-Khayma [q.v.] was sharply reduced by military means, and which was formalised under a number of agreements culminating in the "Exclusive Agreement" of 1892. Until the early 20th century, the Emirate officially included all the territory north of a line between al-Shārika town and Kalbā, except for the coastal shaykhdoms of 'Adjmān and Umm al-Kaywayn, and the north-easternmost part of the Musandam peninsula. Effective control always fluctuated along with the strength of central power and shifting alliances, however, and rule was decentralised at best. Ra's al-Khayma, after several periods of virtual independence under rival members of the family, was recognised by Britain as an independent shaykhdom in 1921. Kalbā, recognised by Britain as independent in 1936 (in connection with the establishment of an emergency airstrip) was reincorporated into al-Shārika in 1952. The same year, however, al-Fudjayra was recognised as an independent shaykhdom, under the shaykh of the Sharqiyyīn tribe who had always made up the majority of this area's population. Al-Shārika, once pre-eminent among the Trucial States on the basis of its sea-going power and trade, lost this status to the Banī Yās [q.v.] of Abū Ḥabī and Dubayy,

as British naval control increased the importance of the latter's land-based power. A revival came with the establishment of the main British airfield in the Gulf (on the route to India) in al-Shārika in 1932. Yet the commercial growth of Dubayy, as al-Shārika's creek began to silt up, had reversed the situation again by the 1950s. A major dispute with Dubayy was solved in 1985, but a number of others (e.g. with al-Fudjayra) remained outstanding in 1995.

Since independence and integration into the UAE, al-Shārika has remained a sovereign emirate, although some powers (including, since 1976, defence) have been transferred to the federal level. The Amīr rules by decree, but informal consultation plays an important role. The Emirate distinguishes itself from the others by its relatively greater achievement in education (the first modern school in any of the emirates was established here in 1953, and the Amīr himself holds a doctorate from Exeter University), by a relatively outspoken press, and by the fact that alcohol was banned in 1985. Development has taken off on the basis of oil revenues, initially mainly through aid from al-Kuwayt and Abū Ḥabī, but since 1974 also from al-Shārika's own small oil and gas exports. Crude oil output since 1988 has totalled some 40,000 b/d. Some light industry has developed, and agriculture and fishing retain a diminishing part of the labour force, yet their contribution to GDP has been small by comparison to hydrocarbons, construction and services. The development boom since the 1970s has also resulted in large-scale labour immigration, as in the other emirates. The foreign population exceeds the number of nationals, although its proportion is probably somewhat lower than the 80-90% which has been estimated for the UAE as a whole since the 1980s.

**SHARĪSH**, the Spanish Arabic place name corresponding to the modern Jerez de la Frontera, in the north of the province of Cadiz. The original Islamic core of the town appeared on the site of the ancient Hasta Regia, 2 km/1.2 miles from modern Jerez. In the middle of the 6th/12th century, the population was apparently moved to a new site, where the town became firmly fixed. The anonymous author of the *Dhikr bilād al-Andalus* (8th-9th/14th-15th centuries) merely states that Sharīsh "was built in Islamic times".

Documentary evidence shows that Sharīsh at an early date fell within the *kūra* or province of Shadūna [q.v.], whose chef-lieu it was, according to some Islamic historian (e.g. al-Rāzī and Ibn Ghālib), but it does not seem to have played any notable role in the period of the Umayyad caliphate, and we do not even have a list of governors. In the time of the Taifas, it came under the authority of the Banū Djizrūn, Berbers who rebelled in Kalsāna during the time of *fitna* and who also controlled Arcos and al-Djāzira, the latter probably corresponding to Cadiz, according

to M.J. Viguera. They held power from 402/1011 to 461/1069, when the 'Abbādid al-Mu'taḍid [q.v.] of Seville attacked them, toppled them from power and absorbed their territory into his own Taifa. This situation seems to have lasted until the arrival of the Almoravids in al-Andalus. Later, Sharīsh was one of the towns which rose against this North African dynasty; it was there that Abu 'l-Kamar Ibn 'Azzūn, who controlled this region as well as Ronda, proclaimed his independence. With other local rebels, he was one of the original members of the "second wave" of Taifas. Ibn 'Azzūn remained in charge of the administration of this region until the establishment of the Almohads in al-Andalus, to whom he remained faithful. It was under these last rulers that the defences of the town were strengthened and that its walls were built, described by al-Idrīsī; they contained an area of ca. 50 ha and sheltered some 16,000 inhabitants.

Towards 1176, the lands of Sharīsh and Arcos were attacked by Ferdinand II, and reached by Ibn Hūd [see HŪDIDS] in the course of his expansionist plans; it was in fact at Jerez that he was defeated by the Castilians in 1230. The Islamic history of the town gradually recedes after the Castilian conquest of Seville in 1248, and it was in vassalage to Ferdinand III. After the Mudéjar revolt of 1264, the population of Jerez, Arcos, Medina Sidonia, Vejer, Sanlúcar, etc. was subdued by Alfonso X. From this time onwards, this region formed the political frontier with the Nasrid kingdom of Granada [see NAŠRIDS].

Concerning the natural resources of Sharīsh, al-Rāzī (4th/10th century) states that the region was rich in all the products of land and sea, and al-Idrīsī mentions the vines and olive and fig trees of its fertile agriculture, placing the town at two days' good journey along the road from Seville. The author of the *Dhikr* describes its pastures and vales, indicating that it was also good for stock-rearing. A famous son of the town was the famed commentator on the *Makāmāt* of al-Harīrī, Abu 'l-'Abbās Aḥmad b. 'Abd al-Mu'min al-Sharīshī (d. 619/1222 [q.v.]).

Finally, one should note, to avoid possible confusion, that Sharīsha appears in the Arabic sources as a place-name corresponding to Jerez de los Caballeros, in the modern Spanish province of Badajoz.

**AL-SHARĪSHĪ**, ABU 'L-'ABBĀS KAMĀL AL-DĪN AḤMAD b. 'Abd al-Mu'min al-Qaysī, grammarian, philologist and littérateur of Muslim Spain (557-619/1181-1222), born at Sharīsh [q.v.] (modern Jerez de la Frontera) in the province of Cadiz and died in his natal town.

He functioned mainly as a teacher of Arabic language, but like many of his compatriots, went to the East, probably to make the Pilgrimage to Mecca and probably search of knowledge (*fī ṭalab al-'ilm*). The biographies of him cite a piece of verse which he composed when resident in Egypt in which he expresses his regrets at ever having left Syria and his admiration for the land's beauty (*Naḥḥ al-ṭīb*, ii, 116, 392).

Al-Sharīshī wrote a commentary on the *Idāh* of al-Fārīsī and another on the *Djūmal* of al-Zadjdjādī, as well as treatises on metrics, an anthology of Arabic poetry and a résumé of the *Navādir* of Abū 'Alī al-Qālī [q.v.]. But he is above all known as author of a commentary on the *Makāmāt* of al-Harīrī [q.v.], which soon became known in Spain and, from the opening of the 6th/12th century, formed part of the programme of studies for Andalusian scholars (see al-Ru'aynī, *Barnāmaḍī*, Damascus 1962, 32-3, 44, 51, 60, 79). Al-Sharīshī produced three commentaries on the *Makāmāt*: a large one, literary; a middle-sized one, philological; and a small one, a résumé. The first was printed at Būlāk 1284/1867, 1300/1883, and at Cairo 1306/1889. The second exists in ms. at Leiden, no. 415. Amongst some twenty commentaries produced, al-Sharīshī's is undoubtedly the most complete and the most famous; thus the *Makāmāt* found their most productive commentator in Spain. In his *Sharḥ*'s preface, i, 8-9, al-Sharīshī states, in highly respectful terms, that his work is dedicated to the Almohad rulers Abū 'Abd Allāh al-Nāṣir (595-60/1198-1213) and his son and heir presumptive Abū Ya'qūb al-Mustanṣir (610-20/1213-23).

The biographer Ibn al-Abbār, i, 136-7 no. 281, mentions having met the author in ca. 616/1219 at Valencia, at the house of his master Abū 'l-Ḥasan b. Ḥarīḥ, to whom al-Sharīshī then submitted his commentary on al-Harīrī. Al-Ru'aynī likewise states that he met al-Sharīshī in 615/1218, followed his courses and obtained his authorisation (*idāza* [q.v.]) to transmit the whole of his works (see *Barnāmaḍī*, 90-1).

In his *Shadharāt*, v, 392, Ibn al-'Imād confuses Aḥmad with Muḥammad al-Sharīshī (d. 685/1286) and erroneously attributes to this latter person a commentary on al-Harīrī which is the work of the former. Al-Makkārī, *Naḥḥ*, ii, 131-2, in fact draws attention to this confusion.

**SHĀRIYA**, one of the renowned female singers at the 'Abbāsid court, was born ca. 200/815 in Baṣra as a *muwallada* of an Arab father and a non-Arab mother. She died after 256/870, probably in Sāmarrā.

While still a young girl, she was acquired by Ibrāhīm b. al-Mahdī [q.v.], who refined her musical education and made her a competent transmitter of his own compositions. After the death of her master in 224/839, she first served al-Mu'taṣim, and she reached the zenith of her career under the caliph and musician al-Wāthiq. Under al-Mutawakkil, an open competition broke out between Shāriya as a representative of the "romantic" school of Ibrāhīm b. al-Mahdī, and the famous 'Arīb, who stood for the "classical" style of Ishāk al-Mawṣilī [q.v.] and his school. Their violent rivalry split the public of Sāmarrā into two camps. Shāriya was still active under al-Mu'tazz, who wrote her biography and assembled her song texts in a book entitled *Akhbār Shāriya*. It was handed down by Kuraṣ al-Mughannī (d. 324/936) to Abū 'l-Faraj al-Isfahānī, who used it in his *Kitāb al-Aghānī al-kabīr*. Al-Mu'tamid was the last caliph to admire her talents, including her skill at cooking. In her songs she showed a predilec-

tion for the "light" (*khafīf*) form of the metre called *ramal* [q.v.].

**SHARK AL-ANDALUS**, an expression which denotes, in the mediaeval Arabic texts and also in contemporary historical usage, the eastern region, adjacent to the Mediterranean, of Muslim Spain. In both cases, the term has a geographical and not an administrative application, and it is difficult to demonstrate *a priori* which regions of the peninsula are being referred to.

The centre of the *Shark al-Andalus* is the region of Valencia (*Balansiya* [q.v.]), but the expression probably has a wider sense than the modern one of *Levante*. The unfavourable attitude of the Valencians to this last term, which they consider "Castilcentric" and pejorative, seems to have favoured, in contemporary historiography, the use of *Shark al-Andalus*, which spills over into, in ancient times as now, in a somewhat vague fashion, the surrounding regions.

These last are as follows. To the west, the mountain zones stretching between the region of Valencia and Toledo. They correspond, in their western part (modern province of Cuenca) to the *kūra* or region called that of *Shantabariyya* [q.v.] (Santaver), but the neighbouring regions of *Balansiya* (Teruel, Albarracín, called *Shantamariyat al-Shark* [q.v.]), and above all *Alpuente* (al-Būnt) are incontestably part of the *Shark*. In the north, the zone ventred on the Ebro valley is generally called *al-Thaḡhr al-a'lā* "Upper march", but the eastern part (the region of Tortosa) is also called *al-Thaḡhr al-sharkī*, and is easily included in the *Shark al-Andalus*. In the south, the modern region of Murcia traditionally has the name of *Tudmīr*. This last includes a good part of the province of Alicante, with the town of the same name, Elche and Orihuela, as far as the mountains of the Alcoy massif which separate the *kūras* of *Tudmīr* and *Balansiya*. The journal of the Arabists of Alicante, devoted in the first place to the history of eastern al-Andalus, has however been given the name *Sharq al-Andalus*. Finally, the Balearics (al-Djazzā'ir al-Sharkīyya) are more or less part of the *Shark*, considered in a large sense.

It is, rather, recent historiographical considerations—polemics concerning the history of this region—than historical consistency over a geographical-historical entity, which can justify an article *Shark al-Andalus* in this Encyclopaedia. For, from a historical perspective, it is not very easy to establish the specific nature of the *Shark*. In the age of the Umayyads of Cordova, the eastern part of al-Andalus, urbanised to only a small degree, is little mentioned in the sources, and it would seem to be, rather, this negative and "backwards" character which ought to be brought out. The break with Antiquity in regard to urban life is very

striking. The town of Valencia had very little importance between the 6th and 10th centuries. It was, from a regional point of view, on a level with Játiva (*Shāṭiba* [q.v.]), which is no longer today a considerable centre. The Balearics were only attached politically to Cordova in the first half of the 10th century, and *Madīnat Mayūrka* only assumed a certain importance at the end of this period. Tortosa was a frontier town which only slowly came to life. Murcia, founded for military and administrative reasons in 216/831, only became an important centre in the 11th-13th centuries.

This impression of torpor only changes perceptibly with the crisis of the Umayyad caliphate (399-422/1009-31), and very likely marks an evolution already in train: the progressive commercial reawakening of the western Mediterranean in the course of the 10th century probably favoured the development of urban centres along the coasts. Taifas of *Šakālība* [q.v.], sc. military and administrative elements of servile origin, grew up at Tortosa, Valencia and Denia (as also further south at Almería, which had enjoyed a considerable development in the 4th/10th century) between 400-3/1010-12. It is likely that these elements in the region were reinforced after the beginning of the crisis of the caliphate by the expulsion from Cordova of further *Šakālība* of high rank by the caliph Muḥammad II al-Mahdī, who had been embroiled with them. The most active and long-lasting of these Taifas was that of *Mudjāhid* [q.v.] of Denia [see *DĀNĪYA*], who reigned there from 403/1012-13 till his death in 436/1044-5. He seized control of the Balearics, and tried—without success—to conquer Sardinia. His son 'Alī reigned for a further thirty years after him. The other *Šaklābī* Taifas were less durable, except for the one which took shape in the Balearics after the end of the independent power of Denia, absorbed by the more powerful Taifa kingdom of Saragossa in 468/1075-6. Two successive *Šaklābī amīrs* retained power in the "eastern islands" until the devastating attack on the islands by a naval expedition of Pisans and Catalans in 507/1114.

At the end of the 11th century, the greater part of the *Shark* fell under the control of the Cid [see *AL-SĪD*], who seized power at Valencia in 1087. The Almoravid conquest of the region was put back by a decade or so compared with the rest of al-Andalus, and only took place after the death (in 1099) of the Castilian chief, sc. in 495/1102. During the crisis of the years 540-2/1145-7, which ended Almoravid power in al-Andalus, the eastern region had, like the rest of the country, a disturbed history, with the formation of local, autonomous powers at Valencia and Murcia, both by now amongst the most important economic, political and intellectual centres of Muslim Spain. Whilst Almohad authority was being progressively extended over the rest of al-Andalus, this region became organised into an independent amirate under a military chief formerly of the Almoravid forces, but originally from the north of the region of Valencia, Muḥammad b. Sa'd b. Mardanīsh [see *IBN MARDANĪSH*]. From his capital of Murcia he exercised power over all the Mediterranean side of al-Andalus (apart from Tortosa, conquered by the Christians in 1148). Despite Almohad military pressure, this independent principality, the only Muslim power to have controlled the whole of the *Shark* (except for the islands), maintained itself all through Ibn Mardanīsh's reign (542-67/1147-72). Strongly anti-Almohad, he recognised in principle the 'Abbāsīd caliphate in Baghdad, and welcomed the *fukahā'* who had fled from the Almohads,

in part probably for ideological reasons. But immediately after his death, his sons submitted to the Almohads. During the same period, and until 1102, the Balearics, ruled by a power carrying on the Almoravid tradition, that of the Banū Ghāniya [q.v.], also escaped Almohad domination.

After the fall of Almohad power in the peninsula in 625/1228, distinct powers arose in Murcia and Valencia, whilst an Almohad governor remained in Majorca. Certain texts, mainly a collection of politico-literary letters called the *K. Zawāhir al-fikar*, studied by E. Molina López (*Murcia y el Levante español en el siglo XIII (1224-1266) a través de la correspondencia oficial, personal y diplomática*, résumé of his Univ. of Granada doctoral thesis, Granada 1978), nevertheless testify to a movement of élites and ideas in the eastern region as a whole during this troubled period which preceded the occupation of the capital cities of the SharḲ by the Aragonese (Majorca in 1229, Valencia in 1238) and by the Castilians (Murcia in 1243). From the standpoint of intellectual and religious life, there seems to have been a fairly different atmosphere at Valencia, more traditional and marked by the dominance of the study of *ḥadīth*, whereas at Murcia mystical currents were very strong (Ibn 'Arabī and Ibn Sab'īn were natives of the city).

The historiography of the SharḲ has been favoured, in relation to other regions of al-Andalus, by certain factors. One should probably note here the relative abundance of Arabic sources and contemporary documents on the Reconquest on the one hand, and on the other, some peculiarities in the history of eastern Muslim Spain (it was the Cid's main theatre of action; it seems especially marked by certain traditions going back to the Islamic period, such as in irrigation; and it continued to have an important Mudéjar community after the Reconquest). The main outlines of regional history began to be traced quite early. For the Balearics, by Alvaro Campaner y Fuertes (*Bosquejo histórico de la dominación islámica en las Islas Baleares*, Palma 1888), and for Murcia by Mariano Gaspar Remiro (*Historia de Murcia musulmana*, Saragossa 1905). In the first quarter of the 20th century, Valencia was the subject of several works by the Arabist Julian Ribera y Tarragó (collected together in his *Disertaciones y opúsculos*, Madrid 1928, but it was quite a long time later that another Valencian Arabist, Ambrosio Huici Miranda, wrote a satisfactory general history of the region (*Historia musulmana de Valencia y su región*, Valencia 1970). This latter work is in part a "rounded" rejoinder to the "Castilocentric" nature of the great work by Ramón Menéndez Pidal (*La España del Cid*, Madrid 1929) and its exaltation of the personage of the Cid.

The somewhat polemical character which this historiography of the SharḲ al-Andalus assumed in regard to Valencia was accentuated in the 1980s. The idea put forward by Pierre Guichard of an early "Berberisation" of the eastern region (*Le peuplement de la région de Valence aux deux premiers siècles de la domination musulmane*, in *Mélanges de la Casa de Valázquez*, v [1969]), aroused increasingly clear opposition from several Arabists, principally Mikel de Epalza (*Los beréberes y la arabización del País Valenciano*, in *Miscellanea Sanchis Guarner*, Valencia 1984), María Jesús Rubiera (*Toponimia arabigo-valentina: falsos atropónimos beréberes*, in *ibid.*), Carmen Barceló (*Galgos o podencos? Sobre la supuesta berberización del país valenciano en los siglos VIII y IX*, in *Al-Qantara*, xi [1990]).

The works of Miquel Barceló and his disciples at the Autonomous University of Barcelona—which have tried to emphasise, above all from the abundant place-

name evidence with its clan and tribal aspects (see also Guichard, in his *Al-Andalus. Estructura antropológica de una sociedad islámica en Occidente*, Barcelona 1976), the segmentary aspect of Muslim society in the eastern regions of the peninsula on the eve of the Reconquest—have given rise of refutations of the same kind (Epalza, *Precisiones sobre instituciones musulmanas de las Baleares*, in *Les illes orientals d'al-Andalus, V Jornades d'estudis historics locals*, Palma, Majorca 1987). From the archaeological point of view, the "non-feudal" characteristics of Muslim rural fortifications in eastern Spain adduced as evidence by A. Bazzana, P. Cressier and Guichard (*Châteaux ruraux d'al-Andalus. Histoire et archéologie des husūn du Sud-est de l'Espagne*, Madrid 1988) have also stimulated polemics. Up to a certain point, these debates, which touch on the nature of society in Muslim Spain, may be considered as marking fresh stages and a prolongation of (whilst fairly well removing them from the centre stage) the controversies between Américo Castro and C. Sánchez Albornoz on the impact of the Arab conquest and the "orientalisation" of the peninsula in mediaeval times.

(P. GUICHARD)

**SHARḲĀWA** or **SHERḲĀWA**, the common ethnic designation of a Marabout group in central Morocco, belonging to the Shādhilī-Djazzūlī brotherhood through the intermediary of the mystic Abū Fāris 'Abd al-'Azīz al-Tabbā' [q.v.]. The singular is *SharḲāwī*, synonym of *sharḲī* (*sharḲī*, pl. *sharḲā*), a geographical ethnic name (cf. on the other hand *Tādilī*, ethnic from Tādilā confined to the *shurafā'* of this name, while the geographical ethnic is *Tādilāwī*). The principal *zāwiya* of the SharḲāwa is in the town

of Abu 'l-Djā'd (modern form, Boujad), in the Tādla, between the Middle Atlas and the Atlantic coast. It attained importance at the end of the 11th/17th century and henceforth became one of the most frequented sanctuaries in Morocco.

Among the more notable of this Marabout family may be mentioned: 1. the founder of the *zāwiya* of Abu 'l-Djā'd, MAHAMMAD b. ABI 'L-KĀSIM AL-SHARKĪ AL-SUMAYRĪ AL-ZA'RĪ AL-DJABIRĪ, d. 1. Muḥarram 1010/2 July 1601; a monograph was devoted to him by one of his descendants, Abū Muḥammad 'Abd al-Khalīk b. Muḥammad al-'Arūsī al-Tādilī al-Sharkāwī, entitled *al-Murakkī fī dhikr ba'd manāḳib al-kuṭb sayyidi M. al-Sharkī*; 2. the latter's son, MUHAMMAD AL-MU'TĀ, d. Rabī' II 1092/April-May 1681; 3. his son MUHAMMAD AL-ṢĀLIḤ, who was the patron of the historian al-Ifrānī [q.v.] (or al-Wafrānī): a monograph entitled *al-Rawḍ al-yamī' al-fā'ih fī manāḳib al-shaykh Abī 'Abd Allāh Muḥammad al-Ṣāliḥ*, was devoted to him by a scholar of Fās who was *kādī* of Meknes (Miknāsāt al-Zaytūn) in the reign of the 'Alawid sultan Mawlay Ismā'il, sc. by Abū 'Alī al-Ḥasan b. Raḥḥāl al-Ma'dānī al-Tādilī, d. 1140/1728; 4. the son of the preceding, MUHAMMAD AL-MU'TĀ, who restored the *zāwiya* and wrote a collection of prayers in no fewer than 40 volumes entitled *Dhakhīrat al-ghānī wa 'l-muḥtādī fī ṣāhib al-liwā wa 'l-tāḍī* (there is one volume in the Bibliothèque Générale de Rabat, no. 100, cf. E. Lévi-Provençal, *Les manuscrits arabes de Rabat*, i, 36); he died in Muḥarram 1180/June 1766. A monograph was devoted to him by his secretary Muḥammad b. 'Abd al-Karīm al-'Abdūnī, d. 1189/1775-6, entitled *Yatīmat al-'uḳūd al-uṣṣā fī manāḳib al-shaykh al-Mu'tā*.

**AL-SHARKĀWĪ**, 'ABD AL-RAḤMĀN, modern Egyptian poet, story-teller and dramatist, was born in Shībīn al-Kūm, Lower Egypt, on 10 November 1920. He practised law from 1943 to 1945, and was subsequently employed in the Ministry of Education until 1956, but was also active in journalism from 1945, rising to the directorship of the Rūz al-Yūsuf Foundation 1971-7. He was Secretary-General of the Supreme Council for Arts, Literature and Social Sciences 1977-9. He died on 10 November 1987.

Two slim volumes record his extant poetry, which is mostly from the 1940s. It is decidedly romantic on personal themes, ironic and vehement on political ones. His anti-establishment stance in this and in early short stories and sketches brought him into conflict with the censors, and he had a taste of imprisonment in 1946 and 1947. His *al-Ard* "The Earth" first published in 1954, portraying villagers rising in revolt against grasping landowners and corrupt authorities,

was the first of four novels of the same temper, the social realism aimed at being reduced to a conflict between virtue and villainy. Between 1962 and 1981, he wrote nine plays in verse on resistance to foreign oppressors in modern Algeria and Palestine, and on heroes of the past from al-Ḥusayn b. 'Alī to 'Urābī, all represented as champions of social justice. After a book on the Prophet revealingly entitled *Muḥammad Rasūl al-Ḥurriyya* "Muḥammad the Apostle of Freedom" (1962) and another on aspects of Islamic thought (1972), he produced between 1980 and 1987 five books retelling in prose the stories of early Muslim leaders, stressing their humanism and their resistance to social and political pressures that might have compromised their probity.

**SHARKĪ** (*sharkī*), (A., T.) literally "oriental, eastern", with the non-technical meanings in Turkish of (a) song; (b) almost any type of song belonging to Turkish art music, especially as opposed to the folk-song, designates as a technical term: (1) in music a certain form of classical Turkish song; (2) in literature a genre of Turkish strophic poem composed on literary lines with the aim or ultimate result of being set to music.

The genre of lyric called *sharkī* is composed in accordance with the rules of the Arabo-Persian metrical system ('*arūd* [q.v.]), in contradistinction to the popular lyric as represented by the folk-song, which is composed according to the original Turkic method of versification (*parmak hisābī*, wherein the verses are based not on quantity as in '*arūd* but on the number and stress of the syllables). Common to both types of lyric is the strophic composition.

These formal characteristics place the *sharkī* in the group of *musammat* [q.v.], the strophic forms of *diwān* poetry. The majority of the *sharkīs* have stanzas of four lines. When the *sharkī* made its appearance in the 17th century, the *murabba'*, a *musammat* with four-line stanzas, had already been in existence for centuries and it was the *murabba'* that was often set to music prior to the emergence of the *sharkī*. The rhyme schemes of the *sharkī* and the *murabba'* are not only almost identical but the rhyme schemes considered to be typical for the *sharkī* were used in the *murabba'* not only after the *sharkī* acquired a place in literature, but also, albeit very rarely, before. As to the *sharkī*, it always made use of the typical *murabba'* rhyme schemes, too.

The sole difference between the typical *murabba'* and the typical *sharkī* rhyme schemes lies in the first stanza; in the *murabba'* it is *aaaa* (followed by *bbba*, *ccca*, etc.) or *aaaA* (followed by *bbba*, *ccca*, etc.); the capital letter stands for a refrain, in the *sharkī* it is *abab* (followed by *cccb*, *dddb*, etc.) or *aAaA* (followed by *bbba*, *ccca*, etc.) or *aBaB* (followed by *cccb*, *dddb*, etc.). Other variations in rhyme schemes are negligible in number.

Yet the *sharkī* is not formally restricted to the fourline stanza, as there are—although much fewer in number and of later provenance—*sharkīs* with stanzas of five or six lines. These generally have the rhyme schemes of the *mukhammes-i mütekerrir* and the *müsed-des-i mütekerrir* (*aaaaA*, *bbbbbA*, *ccccA* etc.; *aaaAA*, *bbbaA*, *cccaA*, etc.; *aaaaaA*, *bbbbbA*, *ccccA*, etc.; *aaaaAA*, *bbbaAA*, *cccaAA*, etc.; respectively). As in all *diwān* poetry, the rules of rhyming are strictly observed in the *sharkī*, in contradistinction to the folk-song where they are not observed as strictly.

The third line of each stanza of the *sharkī* is called *miyān* or *miyān-khāne* ("the middle" and "mid-house" respectively) and is generally the most effective line of the stanza. If repeated as a refrain, the ultimate line or the ultimate and penultimate lines of each stanza are called *naḳarāt* "refrain", literally "peckings". (Both of these terms are also used for the description of *sharkīs* set to music.)

The *sharkīs* are generally rather short, comprising 3-5 stanzas (whereas the other types of *musammat* are often longer). The poet states his *makhlaṣ* (pen-name) in the last stanza (as is the case with the other types of *musammat*), though there are exceptions to this rule.

No restrictions with regard to the metres of *arūd* used in composing *sharkīs* are known; the preferred metres are *remel* and *hezeḍi*.

The *sharkī* is generally about the various aspects of love (and to a lesser degree, about the pleasures of life); the tone is light. The *murabbaʿ* shows much more variety with respect to subject matter. The language of the *sharkī* is not too intricate, which makes it convenient to be sung. It is simpler than that of the *ghazal*, and generally, but not always, even simpler than that of the *murabbaʿ*, yet still elevated and free from dialectal forms. Here, too, it differs from the folk-song, which is quite free from restrictions as regards subject matter, imagery, and phraseology.

These characteristics oblige us to consider the *sharkī* not as a truly independent structure of versification but as a genre of lyric that is undeniably closely related to the *murabbaʿ*. The emergence of the *sharkī* can be dated—based on the appearance of examples both bearing the title *sharkī* and having the rhyme schemes in the first stanza that are considered typical of the *sharkī*—towards the end of the 11th/17th century. The first known examples are 11 *sharkīs* by Nāʾil-yi Qadīm (d. 1077/1666-7), followed by 9 *sharkīs* by Yahyā Naẓīm (d. 1139/1727), who himself set his *sharkīs* to music. It is Nedīm (d. 1143/1730 [q.v.]) who is regarded as the greatest master of the *sharkī* and who had a lasting influence. The 27 *sharkīs* in his *diwān* have all been set to music and are considered to be among the outstanding examples of Turkish classical music. After Nedīm, the popularity of the *sharkī* increased, even the Mewlewī *shaykh* and master of allegorical poetry Sheykh Ghālib (d. 1213/1799) wrote 11 *sharkīs*, and we find a considerable number of *sharkīs* by various poets in the 19th century. One of these, Sheref Khanīm (d. 1861), wrote as many as 41. However, the greatest number of *sharkīs* was composed by Enderūnlu Wāṣif (d. 1240/1824-5); 211 poems are to be found in the *sharkīyyāt* section of his *diwān* entitled *Gülshen-i efkār*.

Yahyā Kemāl (d. 1958) was the last great master of this type of lyric, though *sharkī* recitals continue to enjoy considerable popularity in our time.

**AL-SHARKĪ B. AL-KUTĀMĪ** (d. ca. 150/767, according to Sezgin, *GAS*, viii, 115; ca. 155/772, according to al-Ziriklī, *Aʿlām*<sup>3</sup>, ix, 139), transmitter of ancient Arabic poetry and *akḥbār*, quoted also for lexicographical, genealogical, geographical, and historical data. There is some fluctuation in the sources between al-Sharkī and Sharkī as well as between al-

Kutāmī and Kuṭāmī; in addition, there is some discussion whether Kaṭāmī is the correct reading. The form given here has the best authority. Both names are *lakabs*, his real name being al-Walid b. al-Ḥuṣayn, with the *kunya* Abu ʿl-Muthannā. In his tribal affiliation he was a Kalbī, and he hailed from Kūfa (*Taʾrīkh Baghdad*, ix, 278).

Like his student Ibn al-Kalbī [q.v.], he is best characterised as an antiquarian of the Arab past. Due to his wide knowledge in the Arab "humanities", he was called to Baghdad by al-Manṣūr and entrusted with the instruction of the future caliph al-Mahdī [q.v.] (*ibid.* and Ibn al-Anbārī, *Nuzḥa*, 22, cf. also al-Masʿūdī, *Murūqī*, vi, 251-6 = §§ 2458-63).

Being an *akḥbārī*, he is frowned upon by the strict traditionists (e.g. Ibn Ḥajjar, *Lisān*, iii, 142-3); but this is due to the fact that, with early scholars, the two branches of knowledge have not yet been rigorously separated; in other words, he should not have been regarded as a *muḥaddith*, at all (see the pertinent remarks on al-Sharkī and similar figures in S. Leder, *Korpus*, 309-10). He is credited by Ibn Ḥajjar with only ten *ḥadīths* anyway, most of them *manākīr*.

No titles of books by al-Sharkī are given in the sources. Ibn al-Nadīm credits him with a *ḥaṣida* on *gharīb* "rare words" (*Fihrist*, 90 and 170 [the latter a list of such *ḥaṣāʾid*]). Most of the extant *akḥbār* and other text units are found in al-Djāhiz, *al-Bayān wa ʿl-tabyīn* and *al-Ḥayawān*, al-Ṭabarī, *Taʾrīkh*, and al-Masʿūdī, *Murūqī*, see the respective indices. A field in which his authority is often invoked is the aetiologies of proverbs (Sellheim, *Sprichwörter*, 30-1, 99, 117, 136, 140, 149). In a number of cases his stories, always well told, deviate from other explanations of the same proverb.

This leads us to another aspect of his personality: he is also characterised as a story-teller (*sāhib samar*, in *Taʾrīkh Baghdad*, ix, 279, and cf. al-Djāhiz, *al-Ḥayawān*, v, 302-3, where one of al-Sharkī's stories is characterised as "women's talk" [*min aḥādīth al-nisāʾ*]). Fittingly, Ibn al-Nadīm lists him among the compilers of love-stories (*Fihrist*, 306). Some of his transmissions are, therefore, likely to be creative "transmissions". This phenomenon, typical of early *akḥbārīs*, has been analysed and evaluated by Leder (*Korpus*, 308-14) with regard to al-Haytham b. ʿAdī (d. 207/822 [q.v.]), one of the scholars who transmitted from al-Sharkī. It is not meaningful to call al-Sharkī an impostor (Blachère, *HLA*, i, 126).

Although he is said to have been a transmitter of poetry, he is not mentioned in connection with any specific *diwāns*, as his absence from the relevant discussions in Sezgin, *GAS*, ii, Blachère, *HLA*, and Naṣir al-Dīn al-Asad, *Maṣādir al-ḥiṣr al-djāhili*<sup>2</sup>, Cairo 1962, shows. This might mean that his poetry transmission occurred only within the framework of his *akḥbār*.

**SHARKĪS**, an Indian dynasty established in the closing years of the 8th/14th century with *Djawnpur*, [*q.v.*] as its capital. It had a life span of about one hundred years (796-901/1394-1495) during which six rulers—Malik Sarwar *Khāḍja* *Djahān* (796-802/1394-99), Malik Mubārak *Shāh* *Karanfal* (802-4/1399-1401), *Shams al-Dīn* *Ibrāhīm* *Shāh* (804-44/1401-40), *Mahmūd* *Shāh* (844-62/1440-67), *Muḥammad* *Shāh* (862-3/1457-8) and *Husayn* *Shāh* (863-901/1458-95)—exercised authority.

The founder of the *Sharkī* kingdom, Malik Sarwar [*q.v.*], was a eunuch in the service of *Frūz* *Shāh* *Tughluq* [*q.v.*]. He was custodian of the royal jewellery and *shahna-yi shahr* (City Superintendent). Sultan *Muḥammad* *Shāh* entrusted the eastern districts to him and conferred the title of *Malik al-Shark* (Lord of the East) on him. Disturbed conditions helped him in extending his territory. He brought all the rich districts of Uttar Pradesh under his control, and his authority stretched to Tihut in north Bihār and touched the boundary of Nepal. In the west, *Kannawdj*, *Bhodjpur* and *Udjdayn* were under him. Rulers of *Djadjnagar* and Bengal were his feudatories. Malik Sarwar died suddenly in Rabi' I 801/November 1399 after a brief reign of five years and six months, but he had firmly planted his dynasty. His administrative talent and political realism were extraordinary. His patronage of scholars made *Djawnpur* a veritable centre of culture and learning.

Malik Mubārak *Shāh* *Karanfal*, who succeeded Malik Sarwar, was his adopted son. According to *Yahyā* *Sirhindī*, he was a nephew of *Khidr* *Khān*, the founder of the Sayyid dynasty [*q.v.*], but some scholars have attributed negroid origin to him. Soon after his accession, he had to face an invasion of *Mallū* *Ikbāl* [*q.v.*], but he successfully pushed him back. Sometime later both *Sultān* *Mahmūd* *Shāh* *Tughluq* and *Mallū* *Ikbāl* marched against *Djawnpur*. Mubārak set out to face the invaders but died suddenly on the way.

Mubārak's younger brother, *Ibrāhīm*, who succeeded him, had also to face a joint attack of *Mallū* *Ikbāl* and *Sultān* *Mahmūd* *Shāh*. *Mahmūd* occupied the city of *Kannawdj* [*q.v.*]. *Ibrāhīm*'s efforts to retrieve the fort having failed, he made peace with *Mahmūd*. The Hindu ruler of Tihut was a tributary of the *Sharkīs*. In 1402 Malik Arslan attacked and killed its *Rādja*, *Ganeśvara*. *Ibrāhīm* installed his son *Kirti* *Singh* on the throne. Later, when *Kirti*'s son *Shiv* *Singh* turned hostile, *Ibrāhīm* annexed Tihut. In *Djumādā* I 809/October 1406, *Ibrāhīm* marched against *Kannawdj* and conquered it, which immensely enhanced his prestige. Next year, in *Djumādā* I 810/October 1407, *Ibrāhīm* marched against *Dihlī*, but when he reached the banks of the *Djumnā* he heard that *Sultān* *Muzaffar* of *Gudjarāt* was moving towards *Djawnpur*. He hastily turned back. In *Muharram* 817/April 1414, he attacked *Kalpī* [*q.v.*]. After a feigned retreat he reappeared and captured *Mahoba* and *Ruth*. *Iraḍj* was then conquered. *Ibrāhīm* next attacked the fort of *Shaykhpur* with naphtha-hurling engines and catapults. The garrison became nervous and appealed for mercy. *Kādir* *Khān* was allowed to rule over *Kalpī* on accepting the suzerainty of *Djawnpur*, but he later gave up this allegiance and conquered *Iraḍj*.

In 817/1414 *Ibrāhīm* was invited by *Shaykh* *Nūr* *Kuṭb-i 'Ālam*, a distinguished *Čishtī* saint of Bengal

[see *ČISHTIYYA*] to march against *Rādja* *Ganesh* [*q.v.*] of *Dinādjpur*, who had established himself in Bengal and was oppressing the Muslims (*Maktūbāt-i Nūr Kuṭb-i 'Ālam*, ms. author's personal collection). *Ibrāhīm* set out with a strong army. *Ganesh* approached *Shaykh* *Nūr* *Kuṭb-i 'Ālam* with the request to intercede. The saint agreed to his request, provided that his younger son accepted Islam and that *Ganesh* promised not to harass the Muslims. *Ganesh*'s son *Djuda* later ascended the throne as *Djalāl* *al-Dīn*.

In 840/1437 *Ibrāhīm* marched against the Sayyid *Muḥammad* *Shāh* of *Dihlī*. The latter sued for peace and arranged a matrimonial alliance, giving his daughter, *Bībī* *Rādji*, in marriage to *Ibrāhīm*'s son *Mahmūd*. *Ibrāhīm* *Sharkī* ruled for forty years until his son ascended the throne in 844/1440, with the title of *Mahmūd* *Shāh*. He organised an attack on Bengal ('*Abd al-Razzāk*, *Matla' al-sa'dayn*, ii, 782-3), but when the *Timūrid* *Shāh* *Rukh* [*q.v.*] of *Harāt* sent a message urging him to refrain from this attack, he gave up the idea.

In 847/1443 *Mahmūd* *Sharkī* marched against *Naṣir* *Khān* of *Kalpī*. The latter abandoned *Mahmūdābād* and fled to *Čandēri* and sought the help of the *Khaldjī* ruler of *Mālwa*, who marched (3 *Sha'bān* 848/8 January 1444) towards *Mahmūdābād* at the head of a huge army. Several indecisive encounters took place between the two armies, but eventually peace was concluded and the *Khaldjī* ruler returned to *Mālwa*.

*Mahmūd* *Shāh* was deeply interested in the political affairs of *Dihlī*, as the Sayyid sultan '*Alā*' *al-Dīn* '*Ālam* *Shāh* of *Dihlī* was his wife's brother. Harassed by his nobles, '*Alā*' *al-Dīn* invited *Bahlūl* *Lōdī* [see *LōDīs*] from *Sirhind*. But when *Bahlūl* himself assumed royal authority, *Mahmūd* *Sharkī*'s wife prevailed upon her husband to attack *Dihlī* and dislodge *Bahlūl*. In 856/1452 he accordingly marched against *Dihlī*. But after a fierce battle at *Narela*, some 17 miles from *Dihlī*, *Mahmūd* had to retreat. In 858/1454, however, he did capture *Dawa*, the capital of *Udjdayn*.

In 859/1455 a non-intervention treaty was reached between the *Lōdī* and the *Sharkī* sultans, but hardly a year had passed before hostilities started again. *Mahmūd*'s sudden death in 862/1458 was a serious setback to *Sharkī* power. *Bībī* *Rādji* raised his eldest son to the throne under the title of *Sultān* *Muḥammad*. *Muḥammad* endeavoured to patch up differences with *Dihlī*, but without any lasting effect, and he fell fighting at *Dalmaw*. His successor *Sultān* *Husayn* entered into a four-year truce with *Bahlūl*. He strengthened his hold over *Tihut*, *Orissa* and *Gwāliyar*, and in 872/1468 planned an attack on *Dihlī*. The battle fought at *Čandwar* being indecisive, *Husayn* *Shāh* sought the support of *Bayna* and *Mewāt*. In 873/1469 he again marched against *Dihlī*, but was forced to take to flight, leaving behind even his *harem*. In 875/1471 for the third time he led an army against *Dihlī* consisting of one lakh of horsemen and a thousand elephants. Through the mediation of *Khān-i* *Djahān* *Lōdī* [*q.v.*], peace was arranged and *Husayn* returned to *Ētāwa*. Ignoring his pledged word, he led his armies against *Dihlī* several more times. In the fifth campaign he was initially successful, but *Bahlūl*'s army made a surprise attack which turned his victory into complete rout. Driven to extremes, *Husayn* turned round and gave battle to *Bahlūl* at *Rādjhohar*, sixteen miles from *Farrukhābād*. Ultimately, peace was concluded and both sides agreed to keep to their old boundaries. But in 885/1480 he marched against *Dihlī*.

a sixth time. In 888/1483-84 Bahlūl captured Ḍjawnpur, but out of generosity to a fallen enemy, allowed Ḥusayn to retain a small tract in Ḍunar which had once constituted his family *ḍjāgīr* [q.v.]. In 897/1492. Ḥusayn fought against Sikandar Lōdī, at Kathgarh, but was defeated and had to flee to Bihār. In 1494 the forces of Sikandar and Ḥusayn fought a fierce battle at Benares, in which Ḥusayn was completely defeated. He fled to Colgong, a dependency of Lakhnawtī [q.v.] in Bengal. The ruler of Lakhnawtī received him cordially and assigned the *pargana* of Colgong to him and permitted him to issue his own currency. Sikandar Lōdī stayed in Ḍjawnpur for six months and destroyed all the Sharḳī buildings. Sultan Ḥusayn died in 911/1505, and with him the last vestiges of the Sharḳī dynasty disappeared. Though he did not succeed in achieving his objectives, his tenacity of purpose and mobilisation of resources were remarkable. He never took any defeat as final but carried on his struggle against the Lōdīs till the last moment. Popular support and regional loyalties helped him in his prolonged struggle. He was also a cultured prince, interested in the fine arts, poetry and music.

Under the Sharḳīs, Ḍjawnpur became a renowned centre of culture and a rendezvous of scholars. Timūr's invasion drove many 'ulamā' and divines to seek shelter in Ḍjawnpur, which came to be looked upon as a *dār al-amān* (Abode of Security). Among the distinguished scholars of Ḍjawnpur were included Shihāb al-Dīn Dawlatābādī [q.v.], Mawlāna Ilāh Dād, Kh'ādja Abu 'l-Fath and others. The Cīsthī saints of Ḍjawnpur, Mānikpur, Kičawā, Kalpī, Kintur and Irādī played an important role in the cultural life of the region. The Ḳalandariyya, the Madāriyya and the Shaḡḡariyya *silsilas* also flourished there, and Mahdawī *dā'iras* [see MAHDAWĪS] came to be established there.

The architectural achievements of the Sharḳīs were characterised by a synthesis of Muslim, Ḍjawn and Hindu traditions. Malik Sarwar repaired and redesigned the old palace of Viḍjaya Candra and named it *Badr' Manzil* (the Wonderful House). He enlarged the city of Ḍjawnpur and named it *Dār al-Surūr* (the Abode of Bliss). New bazaars were added, old forts were repaired, and bridges, gardens, wells and tanks were laid out by the Sharḳī rulers. Bībī Rāḍī also took a keen interest in building activity.

Construction of mosques on a large scale as a symbol of Sharḳī hegemony and political prestige, was a distinct feature of Sharḳī policy. When Sikandar Lōdī thought of destroying these mosques, his real intention must have been to destroy all signs of Sharḳī prestige. The 'ulamā' prevented him from going that far. Percy Brown has rightly observed, "Had not ... Sikandar Lodi shown his implacable enmity towards the last of the Sharḳī kings ... by ruthlessly destroying or mutilating the monuments of that dynasty, its buildings would have provided a provincial manifestation of Indo-Islamic architecture ..." (*op. cit.* in *Bibl.*, 42). The most outstanding mosque was the Atala mosque which was built on the site of the temple of Atala Devi, and concerning it Brown remarks, "in the design of its façade the Jaunpur architects have combined artistic skill with remarkable originality" (*ibid.*, 43).

(K.A. NIZAMI)

**AL-SHARḲĪYYA**, a traditional name for the eastern area of the Sultanate of Oman [see 'UMĀN], now the official Eastern Region of the Sultanate, which lies in the inland region of Eastern Hadjar, north-west of Ḍja'lān and north of the Wahiba Sands (see Wilkinson, *Water*, 14, Fig. 5). The main towns of the region are Ibrā, the largest, and Samād, al-Muḍaybī, Sināw and al-Ḳābil. The whole area is a sandy plain interspersed with wadis.

Today, the official, extended region of al-Sharḳiyya is made up of thirteen provinces (*wilāyāt*), including Ibrā, Bid(d)iyya, al-Ḳābil and al-Muḍaybī and also Ḍja'lān Banī Bū Ḥasan, Ḍja'lān Banī Bū 'Alī and the port and centre of ship-building, Šūr, plus even the island of al-Mašīra [q.v.].

Ibrā is reckoned to have 23 villages and a population of 30,000. It contains the regional government offices and has a thriving commercial life. Al-Ḳābil has 16 villages and a total population of about 30,000. It is famed for its religious learning and horsemanship. Apart from its ship-building, Šūr, with its approximately 70,000 inhabitants, is famed for its woodcarving and the manufacture of doors, as well as daggers, jewellery and woven fabrics. The whole region, as in all regions of northern 'Umān, is scattered with large and impressive strongholds and fortresses.

**Bibliography:** For the traditional area of al-Sharḳiyya, see J.C. Wilkinson, *Water and tribal settlement in south-east Arabia*, Oxford 1977, 14, Fig. 5. The map also shows the extended region with the additional areas mentioned above. See also idem, *The Imamate tradition of Oman*, Cambridge etc. 1987, especially 262 ff. (G.R. SMITH)

**AL-SHARḲĪYYA**, the name of a *kūra* and of a province (formerly, 'amal, now *mudiriyya*) in Egypt.

1. The *kūra* of al-Sharḳiyya which replaced the Byzantine pagarchy of Aphroditopolis, was one of the few districts which received an Arabic name; the latter is explained by its situation on the eastern bank of the Nile.

It is difficult to estimate the extent of its territory, which lay immediately south of the capital of the country, al-Fuṣṭāt. The first capital of the *kūra*, situated on the right bank of the river, was Anṣinā (Antinöe), but the small number (17) of villages in the *kūra* of al-Sharḳiyya allows us to suppose that the next

*kūra*, Dallās (Nilopolis) or at least al-Ḳays (Kynopolis) lay on both sides of the Nile. The capital of the *kūra* was very probably Atfīh, since one of the censuses quoted by al-Maḳrīzī gives it in addition the name of Atfīhiyya.

In the Fātimid division into provinces, there was a province of al-Atfīhiyya, larger than the old *kūra* (50 villages at the time of Ibn al-Djī'ān).

In the time of the governors of the caliphs, the *kūra* of al-Sharkīyya enjoyed at times a certain prosperity. On account of an epidemic of plague, 'Abd al-Azīz b. Marwān transferred the government offices to Hulwān; a little later and for the same reason another governor transferred them to Askur (or Sukur) towards the south. To the north of the *kūra* lie the quarries of Turā.

**Bibliography:** See the art. ATFĪH; Kindī, ed. Guest, index, 643; J. Maspéro and G. Wiet, *Matériaux pour servir à la géogr. de l'Égypte*, in MIFAO, xxxvi, 22, 112, 173, 175, 177, 180-2, 184, 185; Maḳrīzī, *Khīṭat*, ed. MIFAO, iv, 18, v, ch. xi, § 2.

2. The Eastern province of the Delta of Egypt, situated to the east of the province of al-Daḳahliyya and bordered towards its south-west point by that of Ḳalyūbiyya.

The present area of the *muḍiriyya* of al-Sharkīyya corresponds roughly to the following pagarchies of the Byzantine epoch, divisions retained by the Arabs under the name of *kūra*; Bubaste (Baṣṭa), Arabia (Ṭarābiya) and Pharbaithos (Farbayt). The Delta was at this time divided into three large divisions, not administrative in character, which are mentioned by the historians: the Hawf al-Ḡharbī situated to the west of the Rosetta arm, whilst the Baḡn al-Rif applied to the territory lying between this arm and that of Damietta. All the land which extended to the east of the latter district was called the Hawf al-Sharkī and it is probably this name which gave rise to that of al-Sharkīyya. The Hawf al-Sharkī included 11 or 12 *kūras* and 529 villages.

At the time of the division into provinces under the Fātimids the Hawf al-Sharkī included those of al-Sharkīyya, of al-Murtāhiyya, of al-Daḳahliyya and of al-Abwāniyya. Thus delimited, the province of al-Sharkīyya, which extended farther than at the present time in the direction of Cairo, still included 452 towns and villages (the three other provinces together accounted for 165). It brought annually to the treasury 694,121 dīnārs. The southern part of al-Sharkīyya was separated from it in 715/1315 at the time of the survey of al-Malik al-Nāṣir Muḥammad, and received the name of al-Ḳalyūbiyya. From this time, the province of Sharkīyya must have shown little variation. Thus reduced it contained, according to Ibn al-Djī'ān, 380 towns and villages and the taxes were valued at 1,411,875 dīnārs. The capital was Bilbays in the Middle Ages, and it was also in this town that the Turkish *Kāshif* resided. It was only during the 19th century that Zakāzīk supplanted Bilbays.

Through the province of al-Sharkīyya passed Trajan's canal (*Traianus potamos*) which connected the Nile with the Red Sea via Lake Timsāh and the Bitter Lakes. In order to supply the Holy Cities of the Ḥidjāz with Egyptian cereals, the canal was renovated in 23/643-4 by 'Amr b. al-'Āṣ during the reign of the caliph 'Umar; whence its name of Canal of the Commander of the Faithful (*khālīdī amīr al-mu'minīn*). Having been silted up, the canal was reopened by the Fātimid caliph al-Ḥākim (al-*khālīdī al-hākīmī*). In al-Maḳrīzī's time it had almost disappeared (*Khīṭat*, i, 302 f.).

In Mamlūk times, many of the villages of the Sharkīyya province were granted as *iktā's* to Bedouin

chiefs; the settlement of Bedouins is reflected up to this day by the local dialects (cf. *Tübinger Atlas des Vorderen Orients*, TAVO, maps A, viii, 12, B, vii, 13, and B, viii, 13). The modern province (*muḍiriyya*) of al-Sharkīyya (capital, Zakāzīk) covers 4,702 km<sup>2</sup>; the number of inhabitants was in 1897, 749,130; in 1960, 1,820,000; and in 1966, 2,125,000.

**AL-SHARRĀṬ** ("the manufacturer of string from palm-fibre", *sharrīṭ*), ABŪ 'ABD ALLĀH MUḤAMMAD B. MUḤAMMAD B. 'AYSHŪN, son of a *muḍjāhid*, slain in battle which the Spaniards at al-Ma'mūra (al-Mahdiyya = San Miguel de Ultramar) was born at Fās in 1035/1625-6 and died there in 1109/1697 after having adopted Sūfism. He is credited with the authorship of a hagiographical collection, but this has sometimes been disputed by his compatriots; this is *al-Rawḍ al-ʿatir al-anfās bi-akhbār al-sāliḥīn min ahl Fās*. According to al-Kattānī, it was really the work of Muḥammad al-'Arabī al-Ḳādirī. In it among the biographies is a synopsis of the *manāḳib* of 99 saints of Fās dating for the most part from the 10th-11th/16th-17th centuries. They are all included again in the *Salwat al-anfās*. There is a manuscript of this work dated 1203/1788 in the Bibliothèque Générale of Rabat, no. 389.

**Bibliography:** Ḳādirī, *Nashr al-mathānī*, lith. Fās 1310, ii, 161; Kattānī, *Salwat al-anfās*, lith. Fās 1316, i, 8 and ii, 347; R. Basset, *Recherches bibliographiques*, 32, no. 86; E. Lévi-Provençal, *Les historiens des Chorfā*, Paris 1922, 280-3.

(E. LÉVI-PROVENÇAL)

**SHARSHAL**, conventional French form Cherchell, a town of Algeria, the chef-lieu of an arrondissement in the department of al-Aṣnām (formerly Orléansville). It is situated on the edge of the Miliana massif, 95 km/60 miles to the west of Algiers, in long. 2° 29' E., lat. 36° 37' N. The estimated population in 1994 was 22,000 (in 1930, ca. 5,500, including 1,500 Europeans). The town is built on a plateau a kilometre broad lying between the sea on the north and wooded hills, the outer buttresses of the massif of the Banū Manāṣir, in the south. The calcareous rocks of the plateau provide excellent building materials, the fertility of the soil and humidity of the climate are conducive to the growth of all kinds of produce. The surrounding country is covered with gardens and vineyards. The harbour, sheltered from the west winds by a little island and from the east winds by Cape Tizirine is small but safe.

**History.** The advantages of the site of Sharshal were remarked in very early times. The Phoenicians had a trading station here called Iol, which later passed to the Carthaginians. After the Second Punic War, Iol became the capital of the kings of Mauretania. Placed on the throne of Mauretania in 25 B.C. by Augustus, King Juba II gave the town the name of Caesarea and adorned it with monuments and works of art. When, after the death of Ptolemy, successor of Juba, Mauretania had been annexed to the empire the town was raised to the rank of a Roman colony (Colonia Claudia Caesarea) and was the capital

of the province of Mauretania. It was considerably extended and in the second century A.D. had perhaps 40,000 inhabitants (Leveau and Pellet, 1984). Its walls were about 5 miles round. Having previously lost its importance by the partition of the two Mauretaniae in the time of Diocletian, it was burned during the rebellion of Firmus (371) and at the beginning of the next century was sacked by the Vandals.

The Byzantines reoccupied it in 585 but never restored to it its past prosperity; at a date which is not accurately known, but probably in the early years of the 8th century A.D., Caesarea fell into the hands of the Arabs. The harbour still existed in the time of Ibn Hawqal (*Description de l'Afrique*, tr. de Slane, in *Jā* [1842], 184). In the time of al-Bakrī (*Masālik*, tr. de Slane, Algiers 1913, 165) it was in ruins. According to this author there was nothing left at Sharshal but an "anchorage commanded by an enormous town of ancient buildings and still inhabited". Al-Bakrī, however, mentions the existence of several *ribāṭs* where a large crowd of people assembled every year. Al-Idrīsī describes Sharshal as a town of small extent but well populated (tr. Dozy and de Goeje, 103). The surrounding country was occupied by Bedouin families who devoted themselves to cattle-rearing, to growing vines and figs, and they harvested more wheat and barley than they could consume. These circumstances explain the raid made on the town by the Normans of Sicily in 1144. According to Leo Africanus, *Description de l'Afrique*, Bk. iv, ed. Schefer, iii, 52, the town was continuously inhabited during the five centuries that followed the Arab conquest.

During this period, Sharshal was held in turn by the various dynasties which disputed the possession of central Maghrib. After the disruption of the Almohad empire, it fell to the 'Abd al-Wāḍids of Tlemcen, was taken from them by the Marinids in 700/1300, became a part of the ephemeral kingdom founded about 750/1350 by the Awlād Mandil and ultimately recognised the authority of the Zayyanids in the reign of Abū Thābit. In the 9th/15th century, fugitive Moors from Spain settled here in large numbers and built 2,000 houses (according to Leo Africanus, *loc. cit.*). The newcomers devoted themselves to agriculture and industry, especially to silk growing, and commerce, but also to piracy. In the first years of the 10th/16th century a Turkish corsair named Kara Hasan settled at Sharshal but was put to death by Arūdj [q.v.], who made himself master of the town and placed a garrison in it. Temporarily liberated from the authority of the Turks as a result of the defeat of Khayr al-Dīn [q.v.] by the Kabyles, the people of Sharshal had again to recognise the Turkish government and this time, definitively, in 934/1528. An attempt made by the Spanish to seize the town and make it a base of operations against Algiers failed in 1531.

During the Turkish period, Sharshal simply stagnated. The population never exceeded 2,500-3,000 inhabitants, occupying a limited part of the old town. The depredations wrought by the corsairs who sallied out from it led to its bombardment by Duquesne in 1682. Turkish authority was represented by a *kā'id*, aided in the administration of local affairs by a council of six notables and supported by a garrison established some distance south on the Wādī al-Hashim. The mainstay of Turkish power, however, was the Marabout family of the Ghubrinī, whose ancestors had come from Morocco at the end of the 10th/16th century and who had acquired considerable influence throughout this region. At the beginning of the 19th

century, the Turks quarrelled with them. Al-Hādjī b. 'Awda al-Ghubrinī was put to death by order of the Dey, and his relatives had to take refuge in al-Dahra.

The disappearance of Turkish government in 1830 enabled the Ghubrinīs to return to Sharshal and become masters of the province. But they found their influence assailed by that of another Marabout family, that of the Brākna who lived among the Banū Manāṣir. Finally, 'Abd al-Kādir who had established a *khalīfa* at Milyāna, forced the people of Sharshal to submit to him. He tried to use the harbour for an attempt to revive piracy. An attack by a Sharshal corsair on a French warship decided the Governor-General Valée to occupy the town in 1840 and to establish there a colony of a hundred European families. The new settlement prospered rapidly, and by 1850 had over a thousand inhabitants. They began the development of the countryside around and this has been steadily continued.

Sharshal has lived through difficult times, but not without handing on to posterity authentic traditions and typically urban values. The eclipses of its prosperity have always been aggravated by the distance and the eccentric positions of the successive capitals of the central Maghrib, from Tāhart to Tlemcen, putting up with the ephemeral 'Ashir [q.v.] or the inaccessible Kal'at Banī Hammād [q.v.], and even Bidjāya or Bougie. The present capital, Algiers, has not favoured upheavals.

The long-lastingness of the town's traditions, and also the stability of its population, are well-underlined by the role of the Ghubrinīs and Brākna, out of whom have arisen the present-day élite, such as the two Bélarbi physician brothers, one of whom was in the service of the Bey of Tunis at the end of the 19th century (Sari, 1988, 225). From 1943 to 1945, Sharshal was the seat of the École Spéciale Militaire Française of St. Cyr.

The present wave of urbanisation has given rise to an unprecedented population increase, reaching 22,000 in 1993 as against 2,287 in 1954.

**SHART** (pls. *shurūt*, *sharā'it*), literally, "condition".

1. In Islamic law. Here, it has the sense of "condition, term, stipulation". The term has two major connotations. Generally, it denotes that which does not partake in the quiddity of a thing but upon which the existence of that thing hinges. Ritual cleansing (*ṭahāra*), for instance, is not a constitutive part of prayer (*ṣalāt*) but it is a condition for its validity. In legal theory (*uṣūl al-fikḥ*), *shart* signifies a condition in verifying the *ratio legis*, the 'illa. *Shart* requires the ruling (*ḥukm*) to be non-existent when this condition does not obtain, and it does not necessitate the presence of the ruling when this condition is present; for if there is a relationship of entailment between the condition and the ruling, then the condition is deemed to be its *ratio legis*, which it is not. Since ritual cleansing is a prerequisite (= condition) for the validity of prayer, prayer would be invalid when cleans-

ing does not obtain. Conversely, ritual cleansing may be valid when prayer may not.

The same distinction between the constitutive elements of a thing and that upon which the thing and its validity depend is likewise maintained in the area of substantive law (*furū'*). Here, *shart* denotes the general prerequisites for the validity of a legal act, as opposed to its essential elements (*arkān*, sing. *rukn*). Witnessing, for instance, is a condition for concluding matrimonial contracts, but it is not a constitutive part of it, as is offer and acceptance (*ījāb* and *qabūl*).

In contracts, the term has another specialised meaning, namely, term, condition or reservation. The insertion of these in agreements may be necessary for the agreement to be valid, as we have seen. If they contradict the established law, they render the agreement void. A contractual term that nullifies an agreement is any term that runs counter to the otherwise established conditions of the agreement and that intends to benefit one of the parties to the agreement to the exception of the other(s). A well-known option in contracts is *khiyār al-shart*, which is the agreement of the contracting parties to bestow on one or both of them the right to rescind the contract within a certain period of time. The majority opinion allows for three days, whereas the minority one allows four.

In its plural form, the term is normatively used to denote legal formularies. *Shurūt* thus refers to a wide variety of prescribed model documents used in legal transactions including sales, securities, agency, partnership, loans, bankruptcy, preemption, rent, agricultural leases, *wakf*, bequests, inheritance, custody, oaths, acquittances, interdiction, dowry, marriage, divorce, religious conversion, homicide and penal injuries. A specialised genre eventually developed for the purpose of providing jurists with legally watertight formulae. The authors and compilers of these formularies became known as the *shurūṭiyyūn* (mainly in the Ḥanafī and Shāfi'ī schools), *al-muwaththiqūn* (in the Mālikī school), and *kuttāb*. The Ḥanafī scholars seem to have played a special role in the creation of *shurūt* literature in the early period. Later on, the Shāfi'ī and Mālikī contribution to the further development of the genre was no less significant. The Ḥanbalī legists, on the other hand, do not appear to have devoted much energy to this literature.

Although the Qur'ān and the Sunna enjoin the writing down of transactions, the Muslim jurists generally did not consider written documents to be necessary for the validity of a transaction. In fact, the written instrument needs only to be duly attested by witnesses in order for it to be valid. Conversely, without a written document, an oral contract attested by witnesses is deemed both sufficient and valid. Nonetheless, in practical terms, the writing down of transactions was highly recommended, for it constituted a safeguard against distortion, misrepresentation and forgetfulness, all of which were causes for litigation.

In the light of the controversy about the correspondence, or lack of it, between doctrine and practice in Islamic law, modern scholarship draws a distinction between model formularies and those which were used in practice. The former appear in the *shurūt* manuals, compiled in a more or less formal fashion by the jurists, often with commentaries and annotation. The latter are found in archives and documentary collections. While these contain details of social and economic significance, including specific information about the objects being sold, rented, bequeathed or otherwise, as well as about the individuals who were parties to them, model documents appear as

abstracted formulas, dissociated from any specific context and having little more than strictly legal significance. Their seemingly idealistic nature may lead one to think that a gap separated them from the realities of judicial practice. However, ample evidence suggests that the relationship between model documents and documents used in judicial practice was dialectical: the former were ultimately drawn from the latter, no doubt with some alterations and improvements, including the omission of real names and objects involved in the transaction. The purpose behind the changes made in the actual documents was not only to make them legally watertight but also to provide the notary and the public with ready-made formularies to serve in legal transactions. Thus documents in judicial practice were appropriated from model documents, and these in turn were drawn from the world of practice.

(WAEEL B. HALLAQ)

2. In philosophy. Here, it has the sense of the logical term "hypothesis, condition". In Arabic logic, the term is firmly bound up with propositional thought, and, with *sharīfa*, constitutes an equivalent to the Aristotelian Greek ὑπόθεσις. Of course, the unique Qur'ānic usage of the root has no connotations of formal Greek logic, referring rather to "signs" or "tokens" (*ashrātuhā*) of the Last Day (*al-Sā'a*) (XLVII, 18) in a single verse. Furthermore, Lane (s.v. *sharaṭa*) shows very clearly that one of the earliest secular senses of the Arabic root lay in commerce rather than philosophy or logic. However, by the time of al-Fārābī [q.v.], the Arabic term *shart* and its cognates had developed considerably in logical sophistication. The interest which had developed in conditional syllogisms constituted a legacy from Stoic thought. Rescher has stressed the considerable attention paid by the Baghdād School to the syllogism in its commentaries on Aristotle's logical works; noteworthy here were the treatises of Abū Bishr Mattā and al-Fārābī himself. The latter's preferred term for "syllogism" was *kiyās*, which came to be the standard rendering of the Aristotelian *sylogismos*. Al-Fārābī made a distinction between the "attributive" or "predicative" syllogism (*kiyās ḥamlī*), and the "conditional" or "hypothetical" syllogism (*kiyās shartī*). The latter was further divided into "conjunctive" and "disjunctive" (*al-kiyās al-shartī al-muttaṣil* and *al-kiyās al-shartī al-munfaṣil*). Ibn Sinā followed al-Fārābī's terminology in distinguishing between *ḥamlī*

and *sharṭi* propositions, and also identified two basic kinds of conditional proposition as “conjunctive” (*mut-tasila*) and “disjunctive” (*munfasila*). It is clear that the conditional syllogism was of considerable interest to mediaeval Muslim logicians in the Islamic West as well; as R. Arnaldez reminds us (*EF*<sup>2</sup> art. *Manṭik*), the Ṣāḥirī Ibn Ḥazm devoted some space to this topic, although the Arabic terminology which he employed to divide up conditional propositions, as adumbrated by Arnaldez, differed somewhat from that of al-Fārābī and Ibn Sīnā outlined above.

**Bibliography** (in addition to references given in the *EF*<sup>1</sup> art. *Sharṭ* and the *EF*<sup>2</sup> art. *Manṭik*): Soheil M. Afnan, *A philosophical lexicon in Persian and Arabic*, Beirut 1969 (esp. s.v. *qiyās*); Fārābī, *Risālat al-Kiyās*; J. Lameer, *Al-Fārābī and Aristotelian syllogistics: Greek theory and Islamic practice*, Leiden 1994; N. Rescher, *The development of Arabic logic*, Pittsburgh 1964; idem, *Al-Fārābī's short commentary on Aristotle's "Prior Analytics"*, Pittsburgh 1963; idem, *Studies in the history of Arabic logic*, Pittsburgh 1963; F.W. Zimmermann, *Al-Fārābī's commentary and short treatise on Aristotle's De Interpretatione*, London 1981. (I.R. NETTON)

3. In Arabic grammar. Here, *sharṭ* denotes the protasis of a conditional sentence. The apodosis is variously referred to as *ḥawāb* “response”, *ḥazā'* or *muḥjāzāt* “requit”. Both *ḥazā'* and *muḥjāzāt* may denote the conditional structure as such, for which the merismus *sharṭ u-wa-ḥawāb* is also commonly used, while *ḥawāb* is applied to several other kinds of clause, though never to the whole conditional sentence.

The rules state that the protasis of real (possible) conditions is introduced by the particle *in*, with *law* reserved for unreal (impossible) conditions and *idhā* only being conditional to the extent that it indicates the time of occurrence of the apodosis (cf. Sībawayhi, *Kūṭab*, Bulāḡ, ii, 311/Derenbourg, ii, 338: *idhā* denotes “future time with a conditional sense”). Hence *sa-azūruka idhā ḥmarra al-busru* “I shall visit you when the grapes redden” is correct but not \**in ḥmarra 'l-busru* “if the grapes redden”. On the other hand in *ṭalā'at il-shamsu* “if the sun rises” is permitted because the exact time of sunrise may not be known if obscured by cloud. In practice, the three particles are often confused, and likewise the accompanying verb forms, which ought to be the same in each clause, either both perfect, *māḍī* + *māḍī* or both imperfect, *muḍāri'* + *muḍāri'* (apocopated *maḍjūm* with *in* and independent *marfū'* with *law*). The canonical patterns and their many variations are reviewed by Peled, *Conditional structures*, where the contrast with the simplified prescriptions of pedagogical grammars becomes dramatically visible.

Other elements unanimously accepted as having conditional force are the nouns *mā*, *mahmā* “whatever”, *man*, *ayyu(mā)* “whoever”, and the particles *aynamā* “wherever”, *matā mā* “whenever” (always spelt as two words), *idhymā* “whenever”, *immā* (< *in mā*) and *haythumā* “however”. The conditional functions of *kayfa(mā)* “however” and *kullamā* “every time” are disputed. On the other hand *ammā*, whose second clause is always introduced by *fa-*, is often interpreted as a true conditional particle, hence paraphrased by Sībawayhi (*Kūṭab*, i, 418/i, 469) as *mahmā yakun min shay'in*.

Among the theoretical issues which attracted the attention of the Arab grammarians are the following.

The operator (*āmīl*) on the two clauses is discussed in the same terms as the equational sentence, i.e. either the conditional particle itself operates on both clauses or only on the first and the whole protasis then operates on the apodosis. Other, dissenting views are advanced, however.

Pseudo-conditionals were extensively analysed, both those in which the protasis is not a true condition, e.g. *itini ukrimka* “come to me [and if you do] I will treat you generously”, and those in which the apodosis is not the immediate consequence of the condition, e.g. *in alāka zaydun fa-akrimhu* “if Z. comes to you [then] treat him generously”, with an obligatory *fa-* before the apodosis.

The structural relationship between conditionals and interrogatives was recognised (cf. *ḥawāb* for apodosis), which led to a disagreement about the conditional status of *kayfa*.

Whether *law* intrinsically denotes impossibility (*imtinā'*) is much debated in later grammar, though Sībawayhi defines *law* simply as “indicating something which would have happened when [or because] something else happened” (*harf li-mā kāna sa-yakū'u li-wukū'i ghayrihi*, *Kūṭab*, ii, 306/ii, 334). The theological implication of being impossible even to God was not overlooked, cf. I. Goldziher, in *ZDMG*, lvii (1903), 401, *apud* Reckendorf, *Arabische Syntax*, 494 n. 1.

Inversion of protasis and apodosis is generally disallowed. Such constructions as *anā zālimun in fa'altu* “I would be wrong if I did this” are explained as elliptical, viz. [*in fa'altu fa*]-*anā zālimun in fa'altu* “[if I did this] I would be wrong if I did this”.

Serial conditions have legal implications, e.g. *in akaltu in sharibti anti ṭāḥim* “if you eat, if you drink you are divorced” only effects a divorce if the woman first drinks and then eats, though a converse interpretation is also maintained.

In conclusion it should be noted that the situation in contemporary written Arabic is rather fluid; both *law* and *idhā* appear to be encroaching on the functions of *in*, which is becoming correspondingly less frequent in occurrence.

**Bibliography**: The topic can conveniently be explored in Zamakhshari, *K. al-Mufaṣṣal*, ed. C. Broch, Christianiae 1879, §§ 32, 204, 207, 419-27, 585-94 (same paragraphs in Howell and Ibn Ya'ish). For Sībawayhi, see A.S. Hārūn (ed.), *Kūṭab Sībawayhi*, Cairo 1968-77, v (Index). The important discussion of the various particles by Ibn Hishām is easily located in his *Mughnī 'l-labīb*, Cairo n.d., and cf. A.J. Gully, *Grammar and semantics in medieval Arabic. A study of Ibn Hishām's Mughnī 'l-Labīb*, London 1995, 42-3, 157-8, 179-83, 229-30; Yishai Peled, *Conditional structures in Classical Arabic*, Wiesbaden 1992, 166-70, has a bibl. of secondary sources, to which may be added Kinga Dévényi, *The treatment of Arabic conditional sentences by the medieval Arabic grammarians (stability and change in the history of Arabic grammar)*, in *The Arabist* (= Budapest Studies in Arabic), i (1988), 11-42; C.H.M. [Kees] Versteegh, *Two conceptions of irreality in Arabic grammar: Ibn Hishām and Ibn al-Hāḡib on the particle law*, in *BEO*, xliii (1991), 77-92.

#### SHĀSH [see TASHKENT].

**SHASHMAḲOM** (“six modes”, the Tadzhiik form of a compound of the standard Persian numeral *shash* and the Arabic term *maḳām* [q.v.]), a term designating the modal and formal concept of art music played in the urban centres of Uzbekistan. It developed in Bukhārā from elements of the local *maḳām* tradition and the *naṭwa* [q.v.] “suite” of Tīmūrid and Shaybānīd court music. The earliest known song text collections are said to date back to the middle of the 18th century. Up to the beginning of the 20th century, the *shashmaḳom* flourished in the Emirate of Bukhārā and the Khanate of Khīwa. It consequently had to suffer from Socialist cultural policy. Modern

tendencies develop since the middle of the 20th century. Local differences exist between the ("Uzbek-Tadzhik") Bukhārā and the ("Uzbek") Khārazm versions. The terminology of modes, metres and genres as well as the bulk of the song texts are Persian-Tadzhik; Uzbek song texts are a rather recent novelty.

The six *makom* cycles are called *buzruk*, *rost*, *nawo*, *dugokh*, *segokh* and *irok*. They bear the names of four of the former twelve main modes (*rāst*, *irāk*, *buzurg*, *nawā*), and of two former "derived" (*shu'ba*) modes (*dogāh*, *segāh*). In contrast to the earlier "*nawba* of the masters" that consisted of four or five vocal pieces composed by individual musicians, the actual *makom* is characterised by separate cycles of basically five instrumental parts and a varying number of vocal pieces that are transmitted anonymously as a part of a canonical repertoire. The performance of a complete *makom* lasts about two hours.

A large part of the Khārazmian version was written down at the end of the 19th century in tabulatures developed for the *tanbūr* [q.v.] and the *duṭār*. For editions of both versions in staff notation, see A. Jung, *Quellen*.

**SHATĀ**, a place in Egypt celebrated in the Middle Ages, situated a few miles from Damietta, on the Western shore of the Lake of Tinnīs, now called Lake Manzala.

This town existed before the Arab period, since it is mentioned as the see of a bishop (Σάτα). There is no reason for giving credence to the romantic story of the pseudo-al-Wāqidī, which gives as the founder of this town a certain Shatā b. al-Hāmūk (var. al-Hāmīrak), a relative of the famous Muḥawḳīs [q.v.]. This Shatā is presented to us as a deserter from the garrison of Damietta who helped to secure the possession of Burullus, Damīra and Ashmūn Ṭanāḥ for the Muslim army and who was killed at the capture of Tinnīs, on 15 Sha'bān 21/19 July 642. Every year at this date, it is the custom to celebrate the anniversary of his death, and to this origin the writers attribute the pilgrimage which still took place at Shatā in the time of Ibn Baṭṭūta.

To guard against the maritime attacks of the Greeks, the Arabs stationed regiments of troops on certain parts on the coast, and Shatā was amongst the number. This port became in the Middle Ages a very active industrial centre, in this region sharing with Damietta, Dabīk and Tinnīs, the manufacture of valuable textiles. Each of these towns probably manufactured a special article since the materials which they exported bore a name indicative of their place of origin. Travellers and geographers never tire of praising the goods of Shatā called *shatawī*. Very probably there was at this place, in addition to the private industry, a government workshop, a *Dār al-Ṭirāz*, analogous to those of Alexandria and Tinnīs. The historian of Mecca, al-Fākihī, has preserved the text of an inscription embroidered on a cover intended for the Ka'ba.

It was the caliph Hārūn al-Rashīd who ordered it to be made in the year 191/807 at the *ṭirāz* of Shatā.

We do not know the part which Shatā played in the two occupations of Damietta by the Franks. Certain writers have tried to place at the spot the site of the encampment of Jean de Brienne, but this view has been disputed. Between the two Crusades, Tinnīs had been razed to the ground by order of al-Malik al-Kāmil in the year 624/1227, and as military reasons had probably induced this destruction, Shatā perhaps suffered the same fate.

But while the ruins of the former have survived under the name of Tell Tinnīs, a small town now bears the name of Shaykh Shatā. In its centre there is the mosque in which the relics of the hero of the Arab conquest, who became the Shaykh Shatā, are venerated.

**SHATH** or *shathīyya* (a., pl. *shatahāt* or *shathīyyāt*), a technical term in Sūfism meaning "ecstatic expression", commonly used for mystical sayings that are frequently outrageous in character.

The root *sh-t-h* has the literal meaning of movement, shaking, or agitation, and carries the sense of overflowing or outpouring caused by agitation; thus *miṣṭāḥ* is a place where flour is sifted by shaking. In the first available discussion of the term, Abū Naṣr al-Sarrādj (d. 378/988) defines *shath* as "a strange-seeming expression describing an ecstasy that overflows because of its power" (*Kitāb al-Lumā'*, ed. R.A. Nicholson, London 1914, 375).

There is no evidence to support the suggestion of Massignon that early ecstatic sayings circulated in the guise of divine sayings reported by the Prophet Muḥammad, or *ḥadīth kudsī* [q.v.]; the latter have as good a documentation as any early *ḥadīth* collection and are not separately attributed to Šūfīs (W. Graham, *Divine word and prophetic word in early Islam*, The Hague 1977, 70). Nonetheless, the early stratum of *ḥadīth kudsī* contains similar materials, such as the important *ḥadīth al-nawāfil* (Graham, 173), which anticipates *shath* by proposing the possibility of a union with God through love that leads to divinely-inspired speech and action. By the 4th/10th century, authors such as al-Sarrādj had applied the term above all to utterances such as Abū Yazīd al-Bisṭāmī's "Glory be to me, how great is my majesty" (*subhānī mā 'āzama shānī* [for *shā'nī*]), and al-Ḥusayn b. Maṣṣūr al-Ḥallādj's "I am the (divine) truth" (*anā al-ḥakk*); for a general survey, see C. Ernst, *Words of ecstasy in Sufism*, Albany 1985).

Among Šūfī authors, the chief responses to *shathīyyāt* (sometimes held simultaneously by the same individual) were (1) to explain them away, either as misquotations, or as the results of immaturity, madness, or intoxication (*sukr*); (2) to regard them as authentic expressions of spiritual states, which should nonetheless be concealed from the unworthy; and (3) to view them as expressions of the profoundest experience of divine realities. Many Šūfī authors briefly address the question of *shath*, showing a strong ambivalence about apparently blasphemous claims to divinity, mixed with admiration for the spiritual status of their authors, whose words are often quoted anonymously; al-Ḡhazālī notably belongs to this category. Among those who took these sayings seriously was Ḍjunayd [q.v.], who

composed a commentary (*tafsīr*) on the sayings of Abū Yazīd, partially transmitted by al-Sarrādj with his own additions (*Luma'*, 375-408). This may be compared with the collection of Abū Yazīd's sayings transmitted by al-Sahlakī (d. 476/1083) under the title *Kūāb al-Nūr min kalimāt Abi Tayfur* (ed. 'Abd al-Rahmān Badawī, *Shatahāt al-Ṣūfiyya*, Cairo 1949, tr. Abdelwahab Meddeb, *Les Dits de Bistami: Shatahāt*, Paris 1989).

The most extensive exposition of *shath* was provided by Rūzbihān al-Baklī [*q.v.*]; see now also Ernst, *Rūzbihān Baqlī: mysticism experience and the rhetoric of sainthood in Persian Sufism*, London 1995). His Arabic *Manṭik al-asār* (ed. P. Ballanfat and Ernst, forthcoming), translated into Persian by the author in 570/1174 as *Sharh-i shathīyyāt* (ed. H. Corbin, Tehran 1966), presents nearly 200 commented examples from 45 different authors (with emphasis on Abū Yazīd, al-Wāsiṭī, al-Ḥuṣrī, al-Shiblī, and al-Hallāj, including all of the latter's *Kūāb al-Taṭawwīn*). Rūzbihān's distinctly apologetic commentary typifies the most positive Ṣūfī attitude toward *shathīyyāt*. Many of the sayings take the form of "I am" sayings, identifying with God or the divine attributes. The principal Ṣūfī interpretation of this variety of sayings rested on the concept of mystical annihilation of the individual ego (*fanā'*), followed by the subsistence of God in its place (*bakā'*); this made it possible for God to speak through the individual. Other sayings question the ultimate significance of Islamic rituals and the afterlife. Rhetorically, the audacious style of *shath* partook of the form of the pre-Islamic Arab boasting contest (*mufākhara* [*q.v.*]); among early Ṣūfīs, many recorded conversations and sayings show the tendency to exceed the claims of others and discredit them by hyperbole.

Because of the lack of any clear legal definition of blasphemy in Islamic law, *shathīyyāt* were treated inconsistently by legal authorities; some regarded them as beyond the jurisdiction of the *shari'a*, especially when subjected to interpretation, while others (e.g. Ibn al-Djawzī [*q.v.*]) viewed them as tantamount to the heresies of incarnation, libertinism, and unification (*ḥulūl, ibāha, utihād*) and fully deserving of punishment in terms of apostasy. In practice, the reduction of apostasy to the category of *zandaqa* [*q.v.*], the Zoroastrian concept of heresy as political crime, meant that *shathīyyāt* were only prosecuted when political authorities found it desirable to do so. The prosecution of Ṣūfīs such as Nūrī, the executions of al-Hallāj and 'Ayn al-Quḍāt Hamadānī [*q.v.*], or the posthumous trial of the poet Ibn al-Fāriḍ [*q.v.*], are explicable in terms of their political context (*Words of ecstasy*, 97-116; Th.E. Homerin, *From Arab poet to Muslim saint: Ibn al-Fāriḍ, his verse, and his shrine*, Columbia, S.C. 1994, 63).

Non-Ṣūfī intellectuals regarded *shathīyyāt* with sceptical interest; Ibn Khaldūn regarded them as unintentional products of unconscious ecstasy, which are pardonable except (as in the case of al-Hallāj) when they are spoken deliberately (*Muḥaddima*, ed. 'Abd al-Wāhid Wāfi, Cairo 1379/1960, 1079-80). The philosopher Ibn Tufayl [*q.v.*] found the sayings of Abū Yazīd and al-Hallāj to lack intellectual rigour (*Ḥayy ibn Yaqzān*, ed. L. Gautier, Beirut 1936, 4), while his Jewish commentator Moses of Narbonne reinterpreted them to harmonise with Hebrew scripture (G. Vajda, *Comment le philosophe Juif Moïse de Narbonne, commentateur d'Ibn Tufayl, comprenait-il les paroles extatiques (shatahāt) des Soufis?*, in *Actas del primer congreso de estudios arabes e islamicos*, Córdoba, 1962, Madrid 1964, 129-35).

Among later Ṣūfīs, Ibn 'Arabī [*q.v.*] continued the ambivalent attitude toward *shathīyyāt*, regarding them

as a sign of lack of mental control together with an egotistical claim (*al-Futūḥāt al-Makkiyya*, Beirut ed., ii, 387.8-388.26, tr. W. Chittick, in *Les Illuminations de la Mecque*, ed. M. Chodkiewicz, Paris 1988, 265-74). He only admitted as legitimate sources of doctrine those sayings (like his own) that are spoken by divine command, without any boasting, although his classification of particular *shathīyyāt* is remarkably elastic, depending on the context of his argument (Ernst, *The man without attributes: Ibn 'Arabī's interpretation of Abū Yazīd al-Bisṭāmī*, in *Journal of the Muhyiddin Ibn 'Arabī Society*, xiii [1993], 1-18). The most elaborate response to Rūzbihān's collection of *shathīyyāt* was supplied by Dārā Shukūh [*q.v.*] in 1062/1650 in his *Ḥasanāt al-ʿarīfīn* (ed. M. Rahīn, Tehran 1973), an abridgement of the *Sharh-i shathīyyāt* with additional excerpts from later Indian Ṣūfīs. The term *shath* has been applied to later mystical sayings of Ṣūfīs in Java (Badawī, 148-58), India, Turkey, Egypt, and North Africa until the present day, with the same mixture of responses as in earlier times, while the sayings of Abū Yazīd and al-Hallāj still retain the power to shock their readers.

(C. ERNST)

**SHĀṬIBA**, the modern Xàtiva or Játiva, a town of the Sharḡ al-Andalus [*q.v.*], to the south of Valencia. The ancient Roman town (Saetabis) was situated on the Via Augusta; the Arab town saw a shift to the slope of the mountain, which was crowned by a powerful fortress. The surrounding region, irrigated by several rivers, was devoted to agriculture. Shāṭiba is described by the Arab geographers as a commercial centre which had trading links with North Africa and with Ghāna; its location in the network of communications of the Sharḡ al-Andalus no doubt favoured this mercantile activity, and also the development of a specialised industry, that of paper. The superior quality of its defences and its strategic position strongly influenced the history of Shāṭiba, a place of refuge and also the bridgehead for attacks on Valencia and other towns of the Sharḡ. It appears that in the early stages the town was included in the district of Tudmīr, but, at least from the 4th/10th century onward, it belonged to the *kūra* of Valencia. In the first half of this century, Shāṭiba sometimes had a governor appointed exclusively for the town, which was also under the general jurisdiction of the authorities in Valencia.

Information regarding Shāṭiba in the period of the Arab conquest and under the Umayyads is very sparse in the historical chronicles. To the local population there should be added, as elsewhere, Arab or Berber elements such as the Banū Mufawwiz (Ma'āfirids) or the Banū 'Amīra (Nafzids). However, the date of these arrivals is unknown, as is the significance of this influx in relation to the indigenous population. Later, in the

5th/11th century, the Banū Miḥān, Nafzids originally from Huelva, moved to Shāṭiba. The Banū Mufawwiz, according to Ibn Ḥazm, settled close to the town, in the hamlet of Yānuba (Énova). At least a part of this clan became urbanised, producing an important sequence of functionaries and scholars which is documented until the very end of the Islamic history of the town.

At the beginning of the 4th/10th century, Shāṭiba and Djazīrat Shukar (Alcira) were under the control of 'Amir b. Abī Djawshan, who was one of the Hawwāra Berber rulers of Shantamariyya or Santaver. From 312/924 onward, he resisted attacks by the armies of Cordova, sent by 'Abd al-Rahmān III. Finally, in 317/929, 'Amir surrendered the town under favourable conditions which allowed him to settle his affairs at Santaver before making his way with his family to Cordova.

After the fall of the caliphate, Shāṭiba acquired a new importance in the struggles for power in the eastern region of the Peninsula. 'Amirid Ṣakāliba [q.v.], expelled from Cordova, appropriated a piece of territory for themselves in which they sought to establish a nucleus of political legitimacy, recognising Umayyad or 'Amirid princes. In 408/1018, one of these Ṣakāliba, Khayrān, proclaimed in Shāṭiba a descendant of al-Nāṣir, 'Abd al-Rahmān, who took the title of al-Murtadā. This attempt at Umayyad restoration was of short duration and the Ṣakāliba proclaimed, again in Shāṭiba, a grandson of their former patron (al-Manṣūr), 'Abd al-'Azīz b. 'Abd al-Rahmān al-Mu'taman, who thus became ruler of Valencia. Furthermore, these Ṣakāliba were beset by internal rivalries, fighting among themselves to extend their territories. Muḍjahid of Dāniya (Denia), in particular, sought to dominate the region and supported the rebellion of Shāṭiba and other towns against 'Abd al-'Azīz in 433/1041. The town was recaptured by 'Abd al-'Azīz, but as a result of this war, he lost a major portion of his territory. Both 'Abd al-'Azīz and his son and successor 'Abd al-Malik found themselves confronted by mounting problems and were obliged to appeal to Christians, Aragonese or Castilian, for aid. The latter, led by King Ferdinand I, began an assault on the Shark; the ruler of Toledo al-Ma'mūn intervened, deposed 'Abd al-Malik and took possession of Shāṭiba and Valencia. After the death of al-Ma'mūn, these territories were taken under the control of the ruler of Saragossa, al-Muqtadir, and Shāṭiba ultimately became subject to his son Mundhir, King of Lārida (Lérida), Ṭurtūsha (Tortosa) and Dāniya. The last years of the 5th/11th century saw the Almoravids and the Christians in confrontation around Valencia and Shāṭiba. Power at Shāṭiba was in the hands of a certain Ibn Munkidh when the Almoravid army, under the command of Ibn 'Ā'isha, captured the town in 485/1092. Henceforward, the Almoravids resisted the threat posed by the Cid [SEE AL-SĪD] to Valencia, but a new army mustered at Shāṭiba, which included many volunteers, was unable to prevent the fall of the capital of the Shark. From Valencia, the Cid led persistent attacks on Shāṭiba and other towns with Almoravid garrisons, and succeeded in routing the Muslim army which was compelled to take refuge in Shāṭiba. A new general, 'Alī b. al-Ḥājjidj, was appointed to coordinate, from this town, the efforts of the Almoravids against Valencia, efforts which were not to bear fruit for some years. After the conquest of Valencia by the Almoravids, Shāṭiba entered a new phase in its history, perhaps the most splendid. The amir Abū Ishāk Ibrāhīm b. Yūsuf b. Tāshufin estab-

lished himself there as governor of the Shark and had the town's defences renovated in 510/1117.

A period of stability began but it was to be disrupted, some thirty years later, by rebellions which threatened the declining Almoravid power. The dignitaries of Valencia offered authority to the *qādī* Abū 'Abd al-Malik Marwān b. 'Abd Allāh Ibn 'Abd al-'Azīz, while the Almoravid governor, 'Abd Allāh b. Muḥammad b. Ghāniya, took refuge with his family in Shāṭiba. Almoravids fleeing Valencia rallied to Ibn Ghāniya. Protected by its imposing fortress, they made forays into the surrounding countryside, destroying houses and abducting women and children. Ibn 'Abd al-'Azīz was then obliged to besiege them, aided by the armies of Lerida and of Murcia, and succeeded in expelling them from Shāṭiba in 540/1145. The same year, however, the *qund* rebelled against Ibn 'Abd al-'Azīz and recognised the authority of Ibn Mardaniṣh [q.v.], the new ruler of the Shark who resisted the progress of the Almohads in the Peninsula for many years. The latter did not take Shāṭiba and towns such as Denia and Valencia until after the death of Ibn Mardaniṣh in 567/1171-2.

Again, a period of stability began for the town, the defences of which were repaired; the architectural and artistic remains which have survived date mostly from this period. The Almohads installed tribal contingents (Ṣanhādja and Haskūra) in Shāṭiba, as was the case with other cities of the Shark and of the remainder of al-Andalus. But after the defeat of al-'Ikāb (Las Navas de Tolosa) in 609/1212, their power disintegrated. In the dynastic struggles of the Almohads, Shāṭiba took the side of the caliph of Marrākush against al-'Ādil, who had himself proclaimed in Murcia. The town was then governed by the *sayyid* Abū Zayd (grandson of the caliph 'Abd al-Mu'min) who also controlled Valencia, Denia and Alcira. Abū Zayd later recognised the authority of the caliph al-Ma'mūn, but he was unable to resist the rebellions of Ibn Hūd and of Zayyān b. Mardaniṣh. Ibn Hūd, recognised by the people of Shāṭiba as *amir*, first appointed as governor of the town Yahyā b. Ṭāhir, then Abū 'l-Ḥusayn Yahyā b. Aḥmad b. 'Isā al-Khazradjī, from a distinguished family of Denia. Yahyā held his position for six years until his death in 634/1237. His son Abū Bakr Muḥammad, who was the *kā'id* of the fortress, succeeded him as governor. During this time, the threat posed by the Aragonese intensified, and in 636/1238 King James I took possession of Valencia. The following year, he besieged Shāṭiba and took Alcira. In the face of the Christian advance, sections of the population began to flee the town, making their way with migrants from Valencia and Alcira to the Maghrib, where the caliph al-Rashīd received them. In 642/1244, James I again attacked Shāṭiba. The siege was concluded with an agreement according to which the Aragonese king took possession of part of the fortifications (the *castell menor*), with a promise on the part of the Muslims to hand over the rest of the fortress after a delay of two years. The conditions also stipulated respect on the part of the Christians for the lives, property, customs and laws of the inhabitants of the town. The Christians, however, seized the castle shortly before the end of the specified interval and the population was finally expelled from the town in 645/1248. The emigration was mainly directed towards the southern regions of the Peninsula and towards North Africa.

The intellectual life of Shāṭiba developed especially from the 5th/11th century onward, a period which saw a significant increase in the number of scholars

originating from the town. At the same time, it was visited by some eminent persons, such as Ibn Hazm (who wrote there his *Tawq al-hamāma*) or Ibn al-Barr, who settled in the town and died there. But it was especially in the 6th/12th century that Shāṭiba experienced a golden age for the Islamic sciences (the biographical dictionaries give notices of 121 scholars, originating from or born in the town, who died during the course of this century). In this context, the most illustrious son of Shāṭiba was without doubt al-Kāsim b. Firruḥ al-Shāṭibī (d. 590/1194 [q.v.]), who was born in the town and studied there, but spent most of his life in Egypt. An expert in Qur'anic readings, he is best known for a didactic poem (*al-Shāṭibiyya*), based on the work of 'Uthmān b. Sa'īd al-Dānī (*al-Taysīr*) on this subject. The *nisba* al-Shāṭibī continued to be born by scholars long after the Christian conquest, especially at Granada. The best known example is that of Abū Ishāk Ibrāhīm b. Mūsā al-Shāṭibī (d. 790/1388), the author of the *K. al-Fiṣām*.

In addition to part of the fortifications, still *in situ*, the Museum of Játiva preserves the artistic and architectural relics of its Islamic past: Qur'anic and funerary inscriptions, the arches of a bath-house and the remains of a hall once located in the palace of Pinohermoso. The most interesting item, without doubt, is the famous "wash-basin", which has given rise to various interpretations and which is usually dated from the 5th/11th century.

**AL-SHĀṬIBĪ**, ABŪ ISHĀK IBRĀHĪM B. MŪSĀ B. MUHAMMAD AL-LAKHMĪ AL-SHĀṬIBĪ AL-GHARNĀTĪ (d. 790/1388), a Mālikī *uṣūlī* scholar from al-Andalus.

Although al-Shāṭibī is known by the *nisba* of his family's place of origin, Játiva (conquered by the Christians in 645/1247), he was born and died in Granada. In that town he studied with scholars; of special importance were Abū 'Alī Maṣṣūr al-Zawāwī and al-Maḳḳarī al-Djadd (d. 759/1357), both transmitters of Ibn al-Hādhib's *Mukhtaṣar al-Muntahā* (based upon Fakhr al-Dīn al-Rāzī's *Maḥṣūl*), who instilled in

al-Shāṭibī an interest for *uṣūl al-fikḥ* and *kalām*; the latter seems also to have introduced al-Shāṭibī to *taṣawwuf* through a special *silsila*. Abū 'Abd Allāh al-Sharīf al-Tilimsānī (d. 771/1369), author of *Miftāḥ al-uṣūl ilā binā' al-furū' 'alā 'l-uṣūl* and an expert on *'ulūm 'akliyya*, was also al-Shāṭibī's teacher.

Al-Shāṭibī wrote on grammar (*Sharḥ Alfyyat Ibn Mālik*, of which there are mss., and *K. Uṣūl al-naḥw*). He also wrote *K. 'Unwān al-ittifāḥ fi 'lbn al-iṣṭikāḥ*, *K. al-Maḳjālīs* (commentary of the chapter on *buyū'* in al-Bukhārī's *Ṣaḥīḥ*), *al-Ifādāt wa 'l-inshādāt* (adab work in which are autobiographical data, ed. M. Abu 'l-Adjifān, Beirut 1983). He also wrote poetry. He corresponded with contemporary scholars, especially *mufīṣ*, on different issues (on his *murāsālāt*, see al-Raysūnī, 106-22). One of them was whether a teacher (*murshid*) is necessary for the Sūfī novice (*murīd*). He received answers on this issue from various scholars, including Ibn Khaldūn in his *Shifā' al-sā'il li-taḥḍīb al-masā'il*. Al-Shāṭibī's *fatāwā* are preserved in compilations like *al-Hadiqa al-mustakilla* (ms. Escorial, no. 1096) and al-Wanṣharī's *Miṣyār* (see López Ortiz, *Fatwās granadinas*, 85-6; Masud, *Islamic legal philosophy*, 106-9, 119-43) and have been edited by Abu 'l-Adjifān, Tunis 1984 (2nd revised ed., Tunis 1406/1985). In al-Shāṭibī's *fatāwā* there is adaptation to social change and application of the concept of *al-maṣāliḥ al-mursala*, i.e. he accepts not only the *maṣāliḥ* (sg. *maṣlaḥa* [q.v.]) which have a specific textual basis, but also those which have not (*mursala*). Al-Shāṭibī's doctrine on *uṣūl al-fikḥ* is developed in his *al-Muwāṣṣafāt fi uṣūl al-sharī'a* (Tunis 1302/1884, Cairo 1341/1923). Al-Shāṭibī also wrote a work against innovations (*bida'*), his *K. al-Fiṣām* (ed. M. Rashīd Riḍā, in *al-Manār*, xvii [1333/1913]; several times reprinted). Al-Shāṭibī himself was accused of innovation and heresy, because he opposed certain practices (see Masud, 104-5) deeply rooted in the life of the Andalusī Muslim community. One of them was the mention of the *sultān*'s name in the *khutba*. His opposition to this attracted refutations and counter-refutations (Masud, 108-9). On al-Shāṭibī's transmissions, see al-Mudjārī's *Barnāmaḍī* (ed. Abu 'l-Adjifān, Beirut 1982, 116-22).

Al-Shāṭibī is one of the most important scholars of the Mālikī *madhhab* and one of its renewers, especially through the notion of *al-maṣāliḥ al-mursala*, central to his doctrine on *uṣūl al-fikḥ* and also in his *fatāwā*. For example, he allowed certain taxes not mentioned in the *sharī'a* but made necessary by the economic difficulties of the Naṣrid kingdom in Granada. Al-Shāṭibī's work has had an important influence in the writings of some modern Muslim thinkers, such as Rashīd Riḍā. Since the pioneering monograph of 1977 by M.Kh. Masud (see *Bibl.*), al-Shāṭibī's life and legal doctrine have in recent years been the object of several studies which show the originality and importance of his contribution to *uṣūl al-fikḥ*.

AL-SHĀṬIBĪ, ABU 'L-KĀSİM B. FIRRUH B. KHALAF b. Ahmad al-Ru'aynī, eminent Qur'ānic scholar who introduced didactic mnemotechniques in the discipline of Qur'ān reading (*kirā'a*).

He was born in 538/1144 at Játiva (al-Shāṭiba [q.v.]) in Muslim Spain. Although blind, he took up studies in *kirā'āt* and *ḥadīth* in his home town, where he also acted for one year as a preacher. He studied first with 'Abd Allāh b. Muḥammad al-Nafzī, then with 'Alī b. Muḥammad b. Hudhayl at Valencia (Balansiya), concentrating on al-Dānī's *Taysīr*, but taking up as well grammar and *adab*. On his way to perform the Pilgrimage to Mecca, he attended lectures by Abū Ṭāhir Ahmad b. Muḥammad al-Silafī at Alexandria. Upon his return in 572/1175, he established himself at Cairo, where he soon became a renowned Qur'ān reader and was appointed by al-Kāḍī al-Faḍl head instructor in the disciplines of *kirā'āt*, grammar and language in his new-founded al-Faḍlīyya madrasa. Upon Ṣalāḥ al-Dīn's reconquest of Palestine, al-Shāṭibī paid him a visit at Jerusalem in 589/1193. He died from a painful illness at the age of 52 on 28 Djumādā II 590/19 June 1194, and was buried at the smaller Karāfa cemetery.

Through al-Shāṭibī, leadership in Qur'ānic disciplines returned to the East from Andalusia, where it had reigned for over a century with authorities like al-Dānī (d. 444/1053 [q.v.]) and Makī b. Abī Ṭālib (d. 437/1046 [q.v.]), who had substantially developed its theoretical framework of combinatory phonetics. Al-Shāṭibī's most important achievement, which has secured him widespread fame until modern times, is, however, chiefly of a mnemonic kind. Although he wrote several prose compilations on *tafsīr* and Qur'ān readings (Brockelmann, I, 521-2, SI, 725-6), the subject of later continuous study has been his didactic poems, the *Akīlat atrāb al-kaṣā'id fī asnā 'l-makāsid* (printed in *Maḍmū'a fī 'l-kirā'āt*, Cairo 1929), simply called *al-Rā'īyya*, a rhymed version of al-Dānī's handbook on Qur'ānic orthography *al-Muknī*, and a poem in *ṭawīl*, *Nāzimat al-zuhr*, on the counting of Qur'ān verses. By far most prominent, however, is his *Hirz al-amānī fī waḍḥ al-tahānī* (ed. 'Alī Muḥammad al-Ḍabbā', Cairo 1937), a versification of al-Dānī's compendium of the Seven Readings, *al-Taysīr*, known simply as *al-Shāṭibīyya*, which was to constitute the basis of *kirā'āt* teaching from al-Shāṭibī's times until our day, and was also one of the sources used for the establishment of the Cairo edition of the Qur'ān in 1924. Al-Shāṭibī's poem is appreciated more especially because it answers the particular need of the discipline, sc. to ease the essential task of memorisa-

tion. Not only is the Qur'ān itself transmitted almost solely through memorising, but likewise is the discourse about *kirā'āt* and even Qur'ānic orthography. The reason is evident. Since the Qur'ān constitutes itself as text only through recitation, i.e. through being performed as a "speech act" addressed to listeners, the modalities of its performance, i.e. orthoepy and intonation, cannot be conveyed except through oral practice. It is, moreover, the personal presence of the instructor in this art that is considered indispensable, since he—occupying the final position within a chain of transmitters which goes back to the Prophet himself—guarantees the integrity of the tradition's flow from the initial and immediate situation of speech unto the contemporary listeners. The particular affinity of the Qur'ān-reading discipline to orality is further enhanced by the interdependence of the elements that constitute the performance of Qur'ān reading: the particular version of the text (*kirā'a*), the orthoepic rules (*taḍwīd* [q.v.]) and the melodic shape of the reading, the cantilena. These three parameters are constantly interacting. Any particular text version (*kirā'a*) requires not only a rhythm of its own, but also differs in terms of *taḍwīd*, i.e. particular issues of combinatory phonetics and the location of pauses, from any of the other versions. Again, the melodisation is conditioned by the particular *kirā'a*'s rhythm, and may serve to enhance the formal structuring of the text or special aspects of its contents. Finally, *taḍwīd*, the rules concerning pausa location and division of verses, determine the grammatical structuring of the phrases and thus the flow of the melody. Thus the substantially oral nature of the *kirā'āt* discipline makes it understandable that, already several generations before al-Shāṭibī, teaching material had been put in the form of didactic poetry. Nevertheless, all of these works were superseded by al-Shāṭibī's long *ṭawīl* poem (1,173 verses), the *Hirz*, which adds to the *kirā'āt* discourse as such a propaedeutic chapter on general phonetics. The early recognition of the work, enhanced undoubtedly by numerous commentaries, some of which were written by the author's own students (Bergsträsser, *GdQ*, iii, 222-4), may be partly due to al-Shāṭibī's personal fame as a saintly man, observant in his ritual duties, upright towards his colleagues and students, God-fearing and even credited with some miraculous powers. Undisputably, however, the poem itself possesses factual efficiency, due to a decisive new mnemonic device: the introduction of sigla into the presentation of the particular variants. These sigla, pointing at particular readers, transmitters or transmitter groups, appear in the written verse simply as initial letters of single words used within the discussion of the particular Qur'ānic lemmata. In order to be recognisable in their meta-lingual function, they have to be marked by a particular colour or repeated over the word they appear in. From Nöldeke (*GdQ*, i, 338) to Bergsträsser (*GdQ*, iii, 219-24), both of whom judged the *Hirz* from a merely literary point of view, this practice has been denounced as unconvincing. Since, however, the poem is not meant to be read silently but recited aloud, the mnemonic function of the sigla works on the phonetic level rather than on the visual; read as denoting sounds, not letters, they constitute an important contribution to the pre-modern mnemotechnics. It is only through the recent intrusion of the new phonographic medium into the transmission of Qur'ān reading, that the system so deeply imprinted by al-Shāṭibī has become outdated.

**SHATRANDĪ**, the game of chess. The derivation of the word from Sanskrit *catur aṅga* "having four ranks" (Nyberg, 54a) is generally accepted. Arab philologists often argued in favour of a vocalisation *shūtrandī* and offered more or less ill-advised attempts at etymology (Lane 1551c, and see R. Ermers, in *JAOS*, cxiv [1994], 294b). While the form of the word supports the game's Indian provenience as a war game, chess reached the Near East via Persia, as shown by the many Persian terms employed in it. The Muslim Near East, in turn, transmitted it to Europe. The word itself continued in use on the Iberian peninsula, as in Sp. *ajedrez*. The various vernacular European terms appear to go back to the exclamation *shāh* or *shāhak* indicating peril for the king, or perhaps to the word *shāh* with the definite article (pronounced *ashshāh* "the king") as designating the game itself.

The chronology of its westward march into the Arab world, probably in a sequence of separate episodes, cannot be determined with precision. Even if references to chess should be found in authentic pre-Islamic poetry, which does not seem to be the case, it would not mean a wide acquaintance in Arabia with a game that required a certain educational and

economic level. While the abundance of remarks about chess attributed to early Muslim authorities, including the Prophet himself, is clearly due to the concerns of later chess advocates or opponents, it does speak for its early adoption in Islam. The seemingly sudden appearance of a full-fledged specialised chess literature in 'Abbāsīd times and the great popularity then acquired by the game would also point to an earlier reception, even if we allow the doubtful proposition that the dynasty's Persian connections might possibly have had a minor supporting role.

The game was played, as it is today, on a board, usually made of soft material, of eight by eight fields (*bayt*). They were, however, not marked by alternating colours, as shown by the diagrams and in miniatures as late as the 9th/15th century (see S.C. Welch, *Persian painting*, New York 1976, 105, pl. 37), although it would seem logical to assume that the European style as exemplified by Alfonso el Sabio's *Libros de acedrex, dados e tablas* (see A. Steiger, in *Romanica Helvetica*, x [1941]) has, in fact, eastern antecedents. The chessmen, distinguished by the colours "black" and "red", were set up in the familiar manner. Many different arrangements, such as "Indian" and "Persian" forms or circular chess, are mentioned, but the historicity of the attributions might, in some instances, be called into question; they certainly did not enjoy widespread, if any, popularity. Chess sets could be very luxurious; at any rate, the men could not as easily be improvised, as was the case with backgammon pieces (see al-Djāhīz, *Hayawān*, Cairo 1323-5, v, 115, ed. Hārūn, v, 382). Their names were mostly Persian: *shāh* "king"; *fīrzan* (*fīrz*) "adviser (?)", queen; *fil* "elephant", bishop (Ar. = P.); *baydaq* "footman", pawn. The forms *fīrzan* and *baydaq* are explained as retrograde singulars from, respectively, *fraṭīn* > \**farāzīn* (Nyberg, 74a) and *bayādak* (modern Persian *piyāde*), see A. Spitaler, in *Corolla linguistica. Festschrift Ferdinand Sommer*, Wiesbaden 1958, 217. Even more disputed than the original of *fīrzan* is the derivation of *rukḥḥ* rook, castle, from Sanskrit *ratha* "chariot" through Pahlavi *rakhuw*, although it seems preferable to a combination with the fabulous bird *rukḥḥ* [q.v.]. Only the knight is Arabic, *faras* "horse". Among the few divergences from modern convention in their basic moves, the most important is the severe restriction of the queen to one field at a time. In a tradition attributed to 'Alī, the chessmen are compared to likenesses of living forms, thus making them religiously suspect; this could be explained away by the assumption that they looked more lifelike in the time of 'Alī than they did later (*Book on chess*, 13); for abstract shapes supposed to be chessmen, see E. Kühnel, *Die islamischen Elfenbeinskulpturen*, Berlin 1971, 28 ff., pl. V-VIII.

The numerous problems (*mansūbāt*, lit. "set-ups") of middle and end games were diagrammed and discussed. Unless a game (P. *dast*) ended in a draw or stalemate, it ended with *shāh māt* "checkmate". No satisfactory Persian etymon for *māt* has as yet been traced. It was apparently understood as Ar. "he died" already in al-Ya'qūbī, *History*, i, 103, l. 11, and this remains the preferable explanation; the strange syntax of *shāh māt* is possibly explained as a calque on a corresponding Persian expression. For the extended linguistic usage specific to chess, see the lists in Pareja, ii, pp. ciii-cxxix, and Wieber, 270-344, as well as the brief listing of Persian terms in *Elr*, v, 396, s.v. *Chess*.

It seems quite probable that the earliest written notes on chess were diagrams jotted down by players for their own personal use. Technical monographs were first written in the 3rd/9th century by al-'Adlī

and al-Rāzī, who are practically unknown, and in the following century by a certain al-Ladhlādī and the famous littérateur Muḥammad b. Yaḥyā al-Ṣūlī (Sezgin, *GAŚ*, i, 330-1); this is known from later quotations and *Fihrist*, 155-6, where an unidentified Ibn al-Uḳlīdīsī (not a son of the mathematician, see Brockelmann, *S I*, 387) is added. For the dubious attributions of special essays on chess to al-Djāhīz, see *Fihrist*, tr. B. Dodge, New York 1970, 408; Yāqūt, *Udabāʾ*, vi, 78, and to Aḥmad b. al-Ṭayyib al-Sarakhsī [*q.v.*], see Murray, 169-70.

The popularity and high standing of chess in general education stimulated the literary imagination. The stories on its origins, whose historical core, where there was one, remains obscure, were widely reported. Poets and littérateurs used references to chess in abandon. For instance, the ability of the pawn to transform itself into a queen by traversing the board served to indicate achievement of success from lowly beginnings by travel and other means. Or seriousness could give way to humour: *shaṭrandjīyya* was coined to denote a meat pie containing bones with no meat on them like chessmen, which has the diners move their hands around the bowl (Abū Hilāl al-ʿAskarī, *Dīwān al-maʿānī*, Cairo 1352, 298 ff.). A theological twist was injected into the debate about chess by a Muʿtazilī comparison of the metaphysical meaning of backgammon and chess, to the supposed disadvantage of the latter (see NARD; and Rosenthal, 165 ff., quoting Abū Zayd al-Balkhī's essay).

Chess players were ranked in five (exceptionally, six) classes. The highest, that of grand master (*ʿāliya*, pl. *ʿawālī*), at times became part of a professional description. Handicaps could be given to lesser players. Prowess in the game could bring riches and, above all, admittance to high society. Chess was, after all, the royal game "invented for kings and the rich, not for the poor and mean", as al-Sakhāwī [*q.v.*], in his monograph on chess, expressed the common thought. Skills like playing blindfold with the back to the board, playing a number of opponents simultaneously, special mixed cases such as playing two opponents blindfold (*ghāʾib*) and a third one open (*ḥādīr*), and the like were much admired and no doubt rewarded; but even an ordinary player down on his luck could make a living from chess travelling around in the provinces, presumably by exhibition games and instruction (al-Djāhīz, *Hayawān*, iv, 49. ed. Hārūn, iv, 147). A grand master and poet of the 8th/14th century, who was also able to teach Turkish, probably used all three qualifications to provide for his subsistence (Ibn Ḥadjar, *Inbāʾ*, v, 260; idem, *Ḍhayl al-Durar*, Cairo 1412/1992, 162; al-Sakhāwī, *Daʾwʾ*, vi, 151-2). Playing chess forged strong social bonds; it could cement friendships (Ibn Abī Uṣaybiʿa, ii, 68) or provide constant companionship (al-Ṣafādī, *Wāfi*, xv, 380; Wieber, 82). It is quite remarkable how often obituaries from the 9th/15th century mention competence in and devotion to playing chess.

Having its fanatical devotees, chess also engendered bitter enemies. An example of choice vituperation by a chess hater is found in al-Thaʿālibī, *Yatīma*, iv, 18-19 (Wieber, 134-5). Moral objections were raised by religious scholars at an early date and continued to be repeated and refined. They stressed the danger of neglect of prayer and religious imperatives due to absorption in playing and the potentially illegal exchange of money often connected with it, which was probably much more extensive than the sources let on. In sum, they stressed the game's character as "empty and wrong amusement (*lahw bāṭil*)" and thus

as something socially undesirable, even if it was recognised as distinguished from other gambling and play activities by its intellectual foundation. Its outright prohibition was attempted by lumping it together with backgammon and other games and amusements such as music, as indicated, for instance, by the title of al-ʿAdjurri's work. In the absence of any express reference in the Qurʾān and the authoritative *ḥadīth* collections, al-ʿAdjurri cited three traditions ascribed to ʿAlī (see above) and a very few others, among them Ibn ʿUmar's dictum that chess was worse than backgammon (cf. also J. Robson, *Tracts on listening to music*, London 1938, 34-5, 56-8, from the related *Kitāb al-Malāḥī* of the earlier Ibn Abī ʿI-Dunyā). A rather detailed survey of legal opinions by the modern editor of al-ʿAdjurri seems to suggest to him that they were inconclusive. A grudging classification of *makrūh* was attempted early and continued to be often used. In later times, the defence of chess had to be more forceful. Ibn Abī Ḥadjala, for instance, would claim decisive support by al-Shāfiʿī (see *Kitāb al-Umm*, vi, 213; Wieber, 184) and basic *tahrim* by the other schools, with Mālikism often singled out for the negative stance. Under the right social and economic conditions, this was undoubtedly effective to put chess under a cloud, even if an official prohibition such as that supposedly issued by al-Ḥākim [*q.v.*, see above, at vol. III, 79a) was not the rule.

The popularity of the game spilled at times over into other cultural activities. People dreamed about it; thus dream interpreters paid attention to it in their works, for instance, ʿAbd al-Ḡhanī al-Nābulusī, *Taʿfīr*, s.v. The production of chess sets often required highly skilled labour. Miniature painters created vivid chess scenes to illustrate the game's description in the *Shāh-nāma* and other works of Persian literature. A permanent mark on arithmetic was made by the famous story that the legendary inventor of chess asked that he be rewarded by the amount of wheat that would result from placing one grain of wheat (or some other unit) on the first field and then double it by geometrical progression until the sixty-fourth field was reached. This apparently insignificant reward turned out to be more than could be found in all the world. The computation (2<sup>63</sup> on the last field to a total of 2<sup>64</sup>-1) proved a challenge to mathematicians calling for a variety of solutions. The story was so impressive that according to Ibn Abī ʿI-Hadīd, *Sharḥ Nahḍ al-balāgha*, Beirut 1963-4, iii, 506), who refers to al-Bīrūnī, the Indians used the procedure to determine the age of the world.

**Bibliography:** The most detailed discussion of chess in Islam to date is R. Wieber, *Das Schachspiel in der arabischen Literatur von den Anfängen bis zur zweiten Hälfte des 16. Jahrhunderts*, Walldorf-Hessen 1972 (Beiträge zur Sprach- und Kulturgeschichte des Orients, 22). For the early 20th century, the authoritative high point in the large literature on the history of chess is H.J.R. Murray, *A history of chess*, Oxford 1913, repr. 1962, 1969. See further the general remarks by F.M. Pareja Casañas, *Libro del Ajedrez*, Madrid-Granada 1935, his ed. and tr. of the anonymous ms. Brit. Mus. Add. 7515, and the *Book on chess*, Frankfurt am Main 1986, a facs. of the Istanbul ms. Lala Ismail Ef. 560, prepared under the supervision of F. Sezgin. Recent editions are Muḥammad b. al-Ḥusayn al-ʿAdjurri, *Tahrim al-nard wa ʿl-shatrandj wa ʿl-malāḥī*, ed. Muḥammad Saʿīd ʿUmar Idrīs, Riyāḍ 1404/1984, and Ibn Abī Ḥadjala al-Tilimsānī, *Ummūdhādī al-kitāb fī nakl al-ʿawāl*, ed. Zuhayr Aḥmad al-Kaysī, Baghdād 1980. For chess in the

context of gambling, see F. Rosenthal, *Gambling in Islam*, Leiden 1975, 37-40, 85-96. For Middle Persian etymologies, H.S. Nyberg, *A manual of Pehlevi*, ii, Wiesbaden 1974, has been mainly used. See also J. Robson, *A chess maqāma in the John Rylands Library*, in *BJRL*, xxxvi/1 (1953), 111-27.

(F. ROSENTHAL)

**SHAṬṬ** (A.), lit. "bank, margin of a piece of water", Fr. Form Chott, also in English conventionally Shott, a geographical term used in the high plains of the Maghrib and the northern Sahara for the saline pastures surrounding a *sabkha* [q.v.]. It has often been confused with this latter term, especially in toponymy of the colonial period, hence one must be very careful when one meets the term. Thus there are found on the high plains the *Shaṭṭ* Tigrīn in Morocco; in Algeria, from west to east, the *Shaṭṭ* al-Gharbī, the vast Chott ech-Chergui (*Shaṭṭ* al-Sharkī) to the south of the town of Sa'īda, the Zahrez al-Gharbī and al-Sharkī to the north of Djelfa, and finally, the *Shaṭṭ* al-Hudna, occupying the depression of the same name. These Chotts of the high plateaux may be found at altitudes of more than 1,000 m/3,280 feet.

In the "Lower Sahara" of the eastern part of the Saharan Atlas (in particular, the massifs of the Aurès and the Nementcha), the Chotts are, on the other hand, found at low levels, sometimes at below sea level in the most westerly depressions: 33 m/108 feet below at the Chott Mérouane (*Shaṭṭ* Marwān) and 26 m/85 feet below at the Chott Melhrir (*Shaṭṭ* Malghīr) in Algeria. Further to the east, some less important Chotts link this last to the *Shaṭṭ* al-Gharsa and then to the very extensive *Shaṭṭ* al-Djārid in Tunisia, which stretches out into the *Shaṭṭ* al-Fadḡādī as far as a few tens of kilometres from the Mediterranean in the Gulf of Gabès.

The existence of this string of Chotts (in fact, of *sabkhas*), associated with the presence of shells along their banks (especially of cockle shells, *Cerastoderma glaucum*) has fed the myth of the "Saharan Sea". It is held that this part of the Sahara was recently invaded by the sea and that it would be possible, by excavating a canal from the Gulf of Gabès, to divert the Mediterranean's waters into the Chotts. Although it has been demonstrated that this plan is impossible to realise, it was still a major item in the programme of one Algerian politician who was a candidate in the presidential elections at the end of the 1980s.

(Y. CALLOT)

**SHAṬṬ AL-ʿARAB**, the name given to the united stream of the lower Euphrates and Tigris rivers in Mesopotamia.

#### 1. Definitions.

*Shaṭṭ* (A., pls. *shuṭūt*, *shuṭṭān*, *shuṭʿān*) meant, originally, one side of a camel's hump, and *shaṭṭ al-wādī* meant a canyon's or a valley's or a stream's bank or side, or the rising ground next to the bottom (*L'A*, Beirut 1956, vii, 334-5; Lane, *Lexicon*, 1548-9). Eventually, *shaṭṭ* became most commonly used in the sense of a stream's bank. Occasionally, this meaning was expanded to depict a plot of land, apparently close to the bank of a stream (Yāqūt, *Buldān*, Beirut 1955-7, iii, 344). The name *Shaṭṭ* al-ʿArab ("Bank of the Arabs") currently referring to the tidal estuary formed by the united stream of the two rivers [see AL-FURĀṬ; DĪḡLA], is very unusual, as it uses *shaṭṭ* in relation to the stream itself, rather than to its banks. In modern Mesopotamia-Irāk, *shaṭṭ* has indeed often been used to describe a stream. This usage is a relatively recent one. Yāqūt, who traded in the Persian Gulf, men-

tions *Shaṭṭ* ʿUṭhmān in the Baṣra area as being a plot of land, but he does not mention any *Shaṭṭ* al-ʿArab in that area (*loc. cit.*).

The early mediaeval name used by both Arabs and Persians was "Tigris" (*Diḡla*) (*Hudūd al-ʿālam*, tr., 76; al-Iṣṭakhṛī, Cairo 1961, 57; al-Mukaddasī, tr. B.A. Collins, London 1994, 12-13). Other Arab names were "Euphrates and Tigris" (Ibn Baṭṭūta), and "One-Eyed Tigris" (*Diḡla al-ʿAwā*). The reason for the addition seems to be either an island close to the mouth of the river, by the name of ʿUwayr (Ibn Khuradādhbih, 60), or the sand bar at the mouth. A mediaeval Persian (Pahlavi) name for the Tigris (and the *Shaṭṭ* al-ʿArab) was Erwand Rūd ("The Sublime River").

The modern Arab name, *Shaṭṭ* al-ʿArab, which was also used by the Ottomans, seems to be the result of extending the name of the Arab (i.e., the western) bank to include the whole river. One of the earliest modern mentions of the united stream as *Shaṭṭ* al-ʿArab appears in the accounts of the English traveller J.S. Buckingham, who stayed for a few months in Baṣra in 1816-17 (*Travels in Assyria, Media and Persia*, London 1829, 359-60). The modern Persian name is still Erwand Rūd.

#### 2. Geographical description.

The confluence of the Tigris and the Euphrates is just south of al-Kurna, and this is regarded as the beginning of the *Shaṭṭ*, but there is another confluence, some 50 km further south, where another part of the Euphrates flows through the Hawr Hammār marshes into the *Shaṭṭ* just north of Baṣra. The united river flows into the Persian Gulf near the town of Faw. The *Shaṭṭ* receives also the waters of the Kārūn River [q.v.] and its tributaries. The river's width ranges between 400 and 1,200 m, and its length is about 180 km. Its navigable depth is some 36 feet (six fathoms), though there are places where it is twice that depth. It is only 24 feet (four fathoms) deep at the sand bar near the confluence of the Kārūn (Iraqi Port Administration, *Shaṭṭ al-ʿArab survey map*, Baṣra 1964). In the 1920s the sand bar at the mouth of the river was dredged.

The country on both sides is level. Baṣra, where the tide rises and falls some 3 m, is less than 2 m above sea level. The land along the banks is higher than further out, owing to the silt brought down by the stream. Until the mid-1970s, the land was encroaching on the sea at the rate of some 35 km every 1,000 years, but since then this rate has diminished due to much upstream damming. Rich plantations of date palms line the banks for the whole length of the river, sometimes with orange trees underneath the dates. During the Iraq-Iran War (1980-8, see 3. below), these plantations were seriously damaged.

#### 3. Political history.

With the rise of the Ṣafawī dynasty in Persia in the early 10th/16th century [see ṢAFAWĪDS], wars between the Ṣafawids and the Ottomans produced frequent boundary shifts. In 1048/1638 Sultan Murād IV finally recaptured Baghdād. The Treaty of Zuhāb of 1049/1639, which drew a frontier zone, included much of the *Shaṭṭ* al-ʿArab well within the Ottoman domain. As a result, it was not mentioned explicitly in the agreement. Subsequent Ottoman-Persian confrontations necessitated further treaties, notably those of Kurdān of 1159/1746 and Erzurūm of 1823, which repeatedly returned to the *status quo* of 1639. Those treaties, too, remained silent in regard to the *Shaṭṭ* (J.C. Hurewitz, *The Middle East and North Africa in world politics, a documentary record*, New Haven and London 1975, i, 25-8, 79-80, 219-21). The *Shaṭṭ* al-

‘Arab appears explicitly in the May 1847 Second Treaty of Erzurūm, reached largely due to British and Russian mediation and intervention. Except for Ottoman recognition of Persian sovereignty over *Khurramshahr* and its port, sovereignty over the waterway was not defined specifically, but the text implies that it was regarded as Ottoman. In effect, the border ran along the eastern bank. Continued rivalry and arguments led to renewed British-Russian intervention and to the 1913 Protocol of Constantinople, followed by a demarcation commission that published its proceedings in October 1914. In the Protocol, Ottoman sovereignty was recognised over the whole *Shaṭṭ al-‘Arab* and its islands, save only a few, mentioned by their names (including ‘Abbādān [q.v.]). Opposite the port of Muḥammara (*Khurramshahr*) [q.v.], the border ran in the *thalweg*, some four miles above, and one mile below the confluence of the river *Kārūn*. As defined in the 1914 demarcation proceedings, except for these places, the border was to follow “the low-water level of the left (sc. eastern) bank”. Due to the eruption of the First World War and Ottoman reservations, the agreement was never ratified.

Following the War, the British authorities established the Basra Port Directorate which controlled all matters of maintenance, navigation and policing in the *Shaṭṭ*. In early 1930, the old conflict erupted again and was even brought, in 1934, before the League of Nations. Persia felt that admission of ‘Irākī sovereignty over the waterway leading to the large port of *Khurramshahr* and to the fast-growing port of ‘Abbādān (where the border still ran on the eastern bank) was humiliating and intolerable. As for ‘Irāk, because it had no other meaningful outlet to the open sea (whereas Iran had a number of alternative ports), it insisted on retaining the *status quo*. However, in 1937, the two countries signed a new treaty in Tehran, reaffirming the 1913 Constantinople Treaty and the 1914 Proceedings with two important changes in regard to the *Shaṭṭ*. Firstly, five miles opposite ‘Abbādān, the border was moved to the *thalweg*, as had been the case in regard to *Khurramshahr*. Secondly, a convention was to be concluded, to cover all matters of [joint?] conservancy and navigation, but because of disagreements, this was never concluded.

The outbreak of the Second World War and the British military occupation of ‘Irāk (May-June 1941) and southern Iran (August 1941) meant that navigation on the *Shaṭṭ* was managed exclusively by the British-controlled Basra Port Directorate. It collected dues and appointed pilots and navigation aids, almost exclusively ‘Irākī nationals. This state of affairs remained unchanged after the War. From the mid-1950s, Iran’s main objection to the *status quo* shifted to the economic aspects. It protested against the inequity of choosing the pilots and accused the ‘Irākī Basra port authorities of misuse of the funds accruing from the passage fees. In 1960-1, with the revolutionary régime of ‘Abd al-Karīm Ḳāsim having withdrawn from the Baghdad Pact and being completely estranged from Iran and the West, Iran demanded the moving of the whole border to the *thalweg*. It also tried to appoint its own pilots, but retreated when ‘Irākī counter-measures paralysed the port of ‘Abbādān.

In 1969, Iran, conscious of the international isolation of ‘Irāk’s new (1968) Ba‘th régime, demanded a new agreement which would define the border as the *thalweg* throughout the *Shaṭṭ* and establish a joint commission to supervise maintenance and navigation, complaining of obstruction of Iranian shipping there. When this was refused, Iran abrogated the 1937 treaty. Be-

tween 1969 and 1975 relations of the two powers sank to a new low, with Iranian support for Kurds in ‘Irāk and attempts to stir up ‘Irākī Shī‘is and ‘Irākī attempts to encourage dissidence amongst the ‘Arabistān/*Khūzistān* Arabs, but in 1975 the Shāh and Ṣaddām Ḥusayn did sign a new agreement in Algiers. Conscious of its military weakness, ‘Irāk conceded moving the border to the *thalweg* line throughout the *Shaṭṭ* and agreed to joint maintenance and navigation control, whilst Iran agreed *inter alia* to cease aiding the Kurds in ‘Irāk and inciting the Shī‘is. This agreement did not survive the Shāh’s fall. With the triumph of Āyat Allāh Rūḥ Allāh *Khūmaynī* [q.v. in Suppl.], relations worsened, with the latter aiming to export the Iranian Revolution and to support the Kurds again. In September 1980, Ṣaddām Ḥusayn, now (since 1979), President of ‘Irāk, declared the Algiers agreement null and void, and all-out war between the two powers began. ‘Irāk aimed at securing both banks of the *Shaṭṭ* and at pushing the Iranian front line far enough eastwards to keep the waterway beyond artillery fire. The fighting which centred round the *Shaṭṭ* resulted in enormous casualties for both sides; ‘Irāk failed to hold *Khurramshahr* after 1982, whilst Iran failed to capture Basra. The superior Iranian navy and its air power and artillery blocked the *Shaṭṭ* and put ‘Irākī shore facilities out of action, and 62 ships were trapped in the *Shaṭṭ* ports for the duration of the war.

After the cease-fire, peace negotiations failed, but as part of his preparations for the invasion of Kuwait, Ṣaddām Ḥusayn indicated willingness to begin talks on the future of the *Shaṭṭ*; these, however, came to an end with the invasion. In 1993 ‘Irāk started unilateral dredging operations, so that by 1994 ships were again able to navigate the river, but the conflict over sovereignty is unresolved, and traffic on the waterway remains (1995) far below its pre-1980 level.

**SHAṬṬĀRIYYA**, a Ṣūfī order introduced into India by Shāh ‘Abd Allāh (d. 890/1485), a descendant of Shaykh Shihāb al-Dīn Suhrawardī [q.v.].

On reaching India, Shāh ‘Abd Allāh undertook a lightning tour of the country. Himself clad in royal dress, the disciples accompanying him wore military garb, carried banners and announced his arrival by the beat of drums. In his *Latā‘if-i ghaybiyya* he explained the basic principles of *Shaṭṭārī* discipline, which he considered to be the quickest way to attain gnosis. Shāh ‘Abd Allāh settled at Māndū [q.v.] where he set up the first *Shaṭṭārī khānkhāh*. His work was continued by his two disciples, Shaykh Muḥammad A‘lā, popularity known as Shaykh Kādī of Bengal, and Shaykh Hāfiz of Dīawnpur. The latter had a very dynamic *khāṭifa* in Shaykh Buddhan, who popularised the *silsila* in northern India. Shaykh Rizk Allāh, uncle of Shaykh ‘Abd al-Hakk Muḥaddith of Dihlī, became his disciple. Shaykh Bahā’ al-Dīn, a spiritual descendant of Shaykh Buddhan, wrote a *Risala-yi Shaṭṭāriyya* on the principles of the order. Later on, Shaykh

Muhammad Ghawth of Gwāliyār (d. 970/1562-3 [q.v.] reinforced the *silsila* by giving it a compact organisation and an ideological direction. A prolific writer, he wrote *Dhawāhūr-i khamṣa*, *Kālid-i maḥẓan*, *Damāyir*, *Baṣāyir* and *Kanz al-tawhīd*, and translated the *Amrī kund* into Persian as *Baḥr al-hayāt*. He established intimate relations with the Hindus, and provided an ideological meeting ground with them in his *Baḥr al-hayāt*. His hobby was keeping bulls and cows. His successors (like Shāh Pīr of Mīrāth [q.v.] or Meerut) also kept cows. Among his distinguished *khatīfas* was Shaykh Wajīh al-Dīn 'Alawī, whose seminary at Ahmādābād attracted students from different parts of the country.

The Shaṭṭārī mystic ideology was based on *da'wat-i samā'* (control of heavenly bodies which influenced human destiny) and an interiorisation of religious rites. Their social relationship was conditioned by their faith in pantheism. Shāh Muhammad Ghawth stood up to receive every Hindu visitor. The Shaṭṭārīs established close contact with the rulers, and participated in political affairs also. Shāh 'Abd Allāh dedicated his *Latā'if* to Sultan Ghiyāth al-Dīn Khaldī. Shaykh Muhammad Ghawth helped Bābur in his conquest of Gwāliyār; he and his elder brother Shaykh Bahlūl developed a close association with Humāyūn and instructed him in *da'wat-i samā'*. Shaykh Ghawth migrated to Guḍjarāt when Shīr Shāh came to power, and corresponded with Humāyūn when in exile. Strangely enough, his relations with Akbar were not very cordial, but the latter built the Shaykh's tomb at Gwāliyār, and Dījāhāngīr built domes over the graves of Shāh 'Abd Allāh at Māndū and Shāh Pīr at Meerut. The *silsila* lost its importance after Shaykh Muhammad Ghawth. Its mystical influence was overshadowed by the Naqshbandī and the Kādīrī *silsilas*. However, Shāh Walī Allāh of Dihlī [q.v.] and his father had received *ijāzas* for the *Dhawāhūr-i khamṣa*.

**SHĀ'ŪL**, ANWAR (1904-84), 'Irākī lawyer, poet, short story writer, journalist, playwright and translator.

He was among the first generation of Jewish writers in literary Arabic language in Arabic characters in 'Irāk, headed by Sālim Ishāq (1877-1948), translator for the German Embassy in Baghdad, Salmān Shīna (1899-1978), the military attaché of the Ottoman army in the German army in 'Irāk, Ezra Haddād (1900-72), educator, and Murād Mikhā'il (1906-86), poet. Shā'ul was born in Hilla and on his mother's side he was the grandson of an Austrian tailor Hermann Rosenfeld, while on his father's side he belonged to the famous Baghdādī Sassoon family. He early lost his mother, and then in Baghdad he studied at the Alliance Française (1918-23), and in 1924 edited Salmān Shīna's literary and social weekly *al-Mishbāh* ("The lamp") (1924-7). He worked as a lawyer and was advisor to the treasury of the 'Irākī Royal Family.

At the age of 25 he established and edited his weekly *al-Hāsid* ("The reaper") (1929-38), one of the leading literary, social and political journals during the 1930s, in his main articles criticising the 'Irākī government, its ministers and officials for their greed and shortcomings, as well as the Fascist and Nazi régimes in Italy and Germany and their supporters among the 'Irākī youth. He also composed several poems against Nazi Germany and rejoiced at its fall and defeat, these and his other romantic poems appearing in his anthology *Hamasāt al-zaman* ("The whispers of time") (Baghdād 1956). A second anthology of poetry, most of which was written in Israel after his immigration thither in 1971, was published in Jerusalem 1983.

Shā'ul was one of the two 'Irākī writers who first wrote short stories; his collection *al-Hāsid al-Awwal* ("The first harvest") contained 31 of these. However, his writings in prose and poetry were much influenced by French literature, and he translated from French, including a collection of stories originally written by American and European writers from various countries, *Kiṣas min al-gharb* ("Western short stories").

His contribution to 'Irākī theatre and cinema was important, and included the writing of film scripts and songs. He compiled an *English-Arabic dictionary of printing terms* (Baghdād 1967), and his Press and Publication Company (1945-62) published several important Arabic books. In both 'Irāk and Israel he took an active part in social and literary circles, and published his autobiography *Kiṣsat hayātī wādī 'l-Rāfidayn*.

Marmorstein, *Two Iraqi Jewish short story writers*, in *The Jewish Journal of Sociology*, i (Dec. 1959), 187-200; S. Moreh, introd. to *Wa-bāzaghā faḍīr ḡadīd*, Jerusalem 1983, 7-11; Moreh and M. 'Abbāsī, *Tarāḡīm wa-āthār fī 'l-adab al-'Arabī fī Isrā'īl 1948-1986*, 'Shfar'am 1997, 113-15; Dāwūd Sallūm, *al-Adab al-mu'āṣir fī 'l-'Irāk 1938-1960*, Baghdad 1962, 147-9. (S. MOREH)

**SHAWĀHID** (A.), pl. form, of which the sing. *shāhid* (with the following terminology: *istashhada bi-* "call to witness, appeal to the testimony of"; *istadalla bi-* "use proofs drawn from, employ as proof"; *ihṭadīḡa bi-...* *li-ithbāt* "draw argument from ... to establish"; *dalīl*, *hujūḡa* "argument, proof, probative authority") denotes a probative quotation (*locus probans*), most often testimony in verse, which serves to establish a rule in the "literary sciences" which, according to the Andalusian scholar al-Ru'aynī (d. 779/1377 [q.v.]), "are six in number: lexicography, morphology, syntax, semantics of the phrase (*ma'ānī*), the art of figurative expression (*bayān*) and that of the new style (*badi'*)" (*Khizāna*, i, 5; Lane, s.v. *sh-h-d*; R. Paret, in *OLZ*, xi [1935], 690-2; Gilliot, *Les citations probantes*, § 2). In these last three domains, the scholars declare that recourse may be had to the testimony of poets of the four leading categories: pre-Islamic poets, poets who lived both before and during Islam (*mukhadram* [q.v.]), Muslim poets (*islāmīyyūn*, i.e. of the first century, poets of the new generation (*muwallads* [q.v.]) or moderns (*muhdath*; see *SHĪ'R*).

## I. Criteria for the acceptance of probative quotations

As regards the three first above-mentioned disciplines which come under the heading of philology, the criteria of acceptance of poetry as a probative source depend on the attitude towards the language held by the Arab scholars. The general consensus is that it is acceptable to draw conclusions from the poetry of the poets of the first two categories. For the majority of philologists, it is also legitimate to quote as linguistic testimony poets of the third category, such as *Ḍjarīr* or *al-Farazdaq* [q.v.]. Regarding poets of the fourth category, most scholars decline to draw conclusions from their verse. However, some are accepted as probative, under certain conditions; such was the case in particular of *al-Zamakhsharī* (d. 538/1144 [q.v.]) and of *al-Raḍī al-Astarābādī* (d. 686/1287 [q.v.]) (*Khizāna*, i, 6; Gilliot, § 6).

Another problem is that of verses which have not been transmitted in their entirety or of which the "author" is unknown. The prevailing opinion is that, if the quotation is made by an authority considered trustworthy in regard to the Arabic language, they may be legitimately used as a source of linguistic argument: "This is why the verses of *Sībawayh* are the most reliable verse testimony" (*Khizāna*, i, 16; Gilliot, § 16).

While less used by philologists, quotations in prose have given rise to an interesting debate which also involves theological considerations. Those which are drawn from the *Qurʾān* are recognised, whether the transmission of the *variae lectiones* (*kirāʾāt*) be "uninterrupted" (*mutawāṭir*) or "irregular" (*shādhidh*), as declared by *Ibn Ḍjinnī* (Gilliot, § 8).

Apparently more astonishing, although conforming to the Arabo-Muslim linguistic representation, is the attitude towards *ḥadīth*. The majority of scholars do not accept it as linguistic testimony, because the specialists in *ḥadīth* declare that its transmission according to the meaning (*bi l-maʿnā*) is permitted; as a result, it can never be known for certain that the current version represents the actual words of the one regarded as the best exponent of the Arabic language (*afṣaḥ al-khalk*), i.e. the Prophet. Some, such as *Abū Ḥayyān al-Gharnāṭī* (d. 745/1344 [q.v.]) see an additional reason for non-acceptance: the fact that the ancient grammarians, such as *Abū ʿAmr b. al-ʿAlā*, *al-Khalīl*, *Sībawayh*, *al-Kisāʿī*, etc., abstained from the use of prophetic traditions as sources of probative quotations. Here, as often, non-Arabs and those of mixed blood are accused of corrupting the "native purity" of the Arabs; transmitting traditions, "they committed linguistic errors (*lahn*) without knowing it". Among grammarians, admittedly the later ones, exceptions in this respect are, among others, *Ibn Kharūf* (al-Rundī al-Ishbīlī, d. 609/1212) and *Ibn Mālik* (d. 672/1274 [q.v.]). The latter especially made extensive use of *ḥadīth*, in particular in his *Sharḥ al-Tashīl*. These two authors were criticised for this, respectively by *Ibn al-Dāʾī* (al-Ishbīlī, d. 680/1281) and by *Abū Ḥayyān al-Gharnāṭī* (*Khizāna*, i, 10-12; Gilliot, §§ 9-10). Others adopted an intermediate position, believing it possible to distinguish between two categories of *ḥadīth*, one where transmission is according to the meaning, the other where the transmitters claim word-for-word representation of the prophetic declarations, especially those which illustrate the "excellence in language (*fasāḥa*) of the Prophet". From this latter category "it is appropriate to draw probative quotations (*yaṣiḥḥu l-istishād bi-hi*) in Arabic". This is the position taken by *Abū Ishāq al-Shāṭibī* (d. 790/1388; commentator on the *Alfiyya*), followed by *al-Suyūṭī* (*Khizāna*, i, 12-

13; *al-Suyūṭī*, *Iktirāḥ*, 52; Gilliot, §§ 11-12).

Some later authors, influenced by logic and by commentaries on the third part of the *Miftāḥ al-ʿulūm* of *al-Sakkākī* (d. 626/1229 [q.v.]), in particular the *Talkhīṣ al-Miftāḥ* of *al-Ḳazwīnī* (d. 739/1338 [q.v.]), have conducted a theoretical analysis of the difference between example (*mithāl*) and probative quotation (*shāhid*). In general, they place the former in the abstract category and the latter in the concrete category. *Shāhid* is appropriate for establishing the rule (*iḥbāt al-kāʾida*), *mithāl* for illustrating it (*idāḥ al-kāʾida*) (al-Tahānawī, *Kashshaf*, ed. A. Sprenger, s.v. *mithāl*, on the basis of *al-Sharḥ al-muṭawwal* by *al-Taftāzānī* (d. 791/1389), of the gloss by *Abū ʿl-Ḳāsim b. al-Bakr al-Samarḳandī* (wrote ca. 888/1483), of *al-Aṭwal* by *Ibrāhīm b. Muḥammad b. ʿArabshāh al-Isfaraʾīnī* (d. 945/1538) and of the gloss by *Ḥasan Ćelebi al-Fanārī* (d. 886/1481)).

## II. The literature of the genre

## 1. In language and in literature.

Since works specialising in grammar and in philology contain a vast number of poetical quotations, the commentaries and glosses composed in this domain are innumerable, the majority of them evidently applying to the *Kitāb* of *Sībawayh*; among the score of relevant titles, six have been edited or are in manuscript-form (Sezgin, ix, 58-63; Gilliot, § 18). *Al-Djūmal* by *al-Zaḍḍjādī* (d. 337/949 [q.v.]) has also enjoyed favourable treatment: a dozen commentaries on his verse, of which six have been edited or are in manuscript-form. The same applies to *al-Idāḥ* by *Abū ʿAlī al-Fārisī* (d. 377/987 [q.v.]): nine, of which four have survived (respectively, Sezgin, ix, 88-94, 104-7; Gilliot, §§ 22, 23), in particular *Ibn Barī* (d. 582/1187 [q.v.]), *Sharḥ shawāhid al-Idāḥ*, ed. ʿId Muṣṭafā Darwīsh, Damascus 1985 (see P. Larcher, in *Arabica*, xxxix [1992], 120-1). There have been, however, few commentaries on the verses quoted in the *K. al-Lumaʾ* by *Ibn al-Djinnī* (d. 392/1002 [q.v.]), it being understood that they are themselves hardly numerous. Worth mentioning is that of *Ibn Hishām al-Anṣārī* (d. 761/1360 [q.v.]) entitled *Sharḥ al-shawāhid al-ṣuḥrā*, which has not survived. In fact, the *K. al-Rawḍa al-adabiyya fī shawāhid ʿilm al-ʿarabiyya* (Ahlwardt 6752; Brockelmann, II<sup>2</sup>, 31, no. 7) which has been identified with this commentary (see *MIDEO*, xx, no. 31) is nothing other than a manuscript of *al-Iktirāḥ* by *al-Suyūṭī*, with an introduction fabricated by a copyist (Sezgin, ix, 174-7; Gilliot, § 24).

The verses quoted in the commentaries on the *Alfiyya* by *Ibn Mālik* have in their turn attracted the attention of numerous commentators. Examples are *Ibn Hishām* and his *Talkhīṣ al-shawāhid wa-talkhīṣ al-fawāʾid*, incomplete, also called *Sharḥ shawāhid Ibn al-Nāzim* (i.e. the son of *Ibn Mālik*, *Abū ʿAlī Badr al-Dīn*, d. 686/1287), ed. S.T. ʿAbd al-Sayyid, Cairo 1987 (*MIDEO*, xx, no. 31), or furthermore *al-Makāṣid al-naḥwīyya* by *al-ʿAynī* (d. 855/1451 [q.v.]), printed in the margins of the *Khizānat al-adab* by *al-Baḡhdādī*, Būlak 1299, which comprises commentaries on the verses contained in four commentaries on the *Alfiyya*: (1) *al-Durra al-mudīʾa* by *Badr al-Dīn*, son of *Ibn Mālik*, (2) the *Sharḥ* by *Ibn Umm Ḳāsim al-Murādī* (d. 749/1348), (3) *Awḍaḥ al-masālik* by *Ibn Hishām al-Anṣārī*, and (4) the *Sharḥ* by *Ibn ʿAḳīl* (d. 769/1367) (Brockelmann, I<sup>2</sup>, 359-62, no. 11 and S I). The verses contained in 3 and 4 have also been the object of numerous independent commentaries (Gilliot, § 27).

The verses quoted by *Ibn al-Ḥādīj* (d. 646/1249 [q.v.]) and by the commentators on *al-Kāfiya* and *al-Shāfiya* have also been the frequent object of

commentaries: the *Khizānat al-adab* by 'Abd al-Kādir al-Baghdādī (d. 1093/1682 [q.v.]), which is a commentary on the 959 *shawāhid* quoted by al-Raḍī al-Astarābādī in his *Sharḥ al-Kāfiya*, is the most esteemed. This work of unique quality is not only a model of the genre, but also a veritable encyclopaedia of grammar, poetics, literature, bio-bibliography and even history. Furthermore, the new Cairo edition, now complete, with its two volumes of indices, makes it an indispensable working tool (Gilliot, §§ 1, 26). The same al-Baghdādī is also the author of *Sharḥ shawāhid [shurūḥ] al-Shāfiya*, ed. M. Nūr al-Ḥasan, et alii, with *Sharḥ al-Shāfiya* by al-Astarābādī (the *Sharḥ* of al-Baghdādī is to be found in vol. iv), Cairo 1358/1939, repr. Beirut 1975, and of *Sharḥ shawāhid sharḥ al-Tuḥfa al-warḍiyya*, ed. N.M. Khawādjā, Faculty of Letters of Istanbul n.d.

The verses of numerous grammatical manuals of Ibn Hiṣḥām al-Anṣārī have also been subjected to commentary (Gilliot, § 29): 1. *Mughnī 'l-labīb*, by al-Suyūṭī, in *al-Faḥ al-karīb*. *Sharḥ shawāhid al-Mughnī*, i-ii, ed. A. Zāhir Kūdjan, Damascus 1966, and by 'Abd al-Kādir al-Baghdādī, *Sharḥ abyāt Mughnī 'l-labīb*, i-iv, ed. 'Abd al-'Azīz Rabāḥ and A. Yūsuf Dakḳāk, Damascus 1973-5; 2. *Ḳaṭr al-nadā*, by 'Uṭmān b. Makkī al-Zabīdī in *Ma'ālim al-iḥṭā*. *Sharḥ shawāhid ḳaṭr al-nadā*, completed in 1312/1894, printed Cairo 1324/1906; 3. *Ḳawā'id al-'irāb* or *al-'Irāb 'an ḳawā'id al-'irāb*, by Balkāsim b. M. al-Bidjā'ī (d. 866/1462) in *Sharḥ shawāhid al-ḳawā'id*, which includes commentary on only a few verses; 4. *Shudhūr al-dhahab [fi ma'rifat kalām al-'Arab]*, by Shams al-Dīn M. 'Alī al-Fayyūmī (d. ?; see Brockelmann, II<sup>2</sup>, 29-30, S II, 1477) in *Sharḥ shawāhid Shudhūr al-dhahab*, Cairo 1281/1864, 1291/1874, 1304/1886.

The criteria for the acceptance of probative verses in the "literary sciences" not being the same as those used by the grammarians, it is not surprising that other verses should also be found illustrated and elucidated in the commentaries of the genre, especially in those which are devoted to the third part of the *Miftāḥ al-ulum* of al-Sakkākī, and in particular those which are applied to the *Talkhīs al-Miftāḥ* of al-Ḳazwīnī (Brockelmann, I<sup>2</sup>, 353-6; S I, 516-19; Hādjidjī Khālifa, i, 473-9; Gilliot, § 28): the best known is *Ma'āhid al-tanṣīṣ*. *Sharḥ abyāt al-Talkhīs* by al-'Abbāsī ('Abd al-Raḥīm b. 'Ar., d. 963/1556), i-iv, in 2 vols., ed. M. Muḥyī al-Dīn 'Abd al-Ḥamīd, Cairo 1947. Its author not only comments on verses of the *Talkhīs*, giving information about the poets, but also adds verses which correspond to the subject under discussion.

2. In the Ḳur'ānic domain (Gilliot, iv/B).

Works comprising commentaries on the poetical quotations contained in the Ḳur'ānic commentaries, or those which explain the rare words (*gharīb*) of the Ḳur'ān are much less numerous.

Neither the *Sharḥ abyāt al-Maḳjāz* (i.e. *Maḳjāz al-Ḳur'ān* of Abū 'Ubayda), nor the *Sharḥ abyāt Ma'ānī 'l-Zaḳīdī* (i.e. *Ma'ānī al-Ḳur'ān*), both by Ibn al-Sīrāfī (d. 385/995), has survived. One which has survived, but has not been edited, is: Abū Muḥ. Ḥusayn b. Muḥ. b. Tāhir al-Sharīf al-Wahīd (17th century), *Sharḥ shawāhid Maḳjāz al-bayān* (Brockelmann, S I, 708), on the verses contained in the Ḳur'ānic commentary of the Shīrīf al-Ṭabarsī (d. 548/1153).

Others, which have been edited, include: Muḥibb al-Dīn al-Ḥamawī (Muḥibb al-Dīn Afandī, d. 1016/1608), *Tanzīl al-āyāt [alā 'l-shawāhid min al-abyāt]*, also entitled *Sharḥ abyāt al-Kashshāf*; *Khidr al-Mawṣilī* (d. 1007/1596), *al-Is'āf bi-Sharḥ shawāhid al-Ḳaḍī wa 'l-Kashshāf*, a commentary on the verses which cor-

roborate *Anwār al-tanzīl wa-asrār al-ta'wīl* by al-Bayḍāwī (d. 716/1316) and *al-Kashshāf* by al-Zamakhsharī.

3. On the literature of *hadīth* (Gilliot, iv/C). A single example of the genre exists: Ibn Mālik, *Shawāhid al-tawḍīḥ wa-taṣḥīḥ li-mushkilāt al-Djāmi' al-Ṣaḥīḥ*, ed. 'Abd al-Bāḳī, Cairo 1957, 1983, a grammatical commentary, divided into 71 questions, on 99 passages in al-Bukhārī's compilation. Three authors at least have composed commentaries on the verses cited in the *Gharīb al-hadīth* by Abū 'Ubayd, but only one of these seems to have survived.

**Bibliography** (besides the references in the article): 'Abd al-Kādir al-Baghdādī, *Khizānat al-adab [wa lubb lubāb lisān al-'Arab]*, i-xiii, ed. 'Abd al-Salām M. Hārūn, Cairo 1979-86; Suyūṭī, *al-Iktirāḥ*, ed. A.M. Ḳasim, Cairo 1976; al-Bāḳī (M.'A. Riḍā al-Sharīf), *Djāmi' al-shawāhid*, Tehran 1274/1857, 1319/1901; A. Fischer and E. Bräunlich, *Shawāhid-Indices*, Leipzig and Vienna, 1934-45; 'A.M. Hārūn, *Muḳḍam shawāhid al-'arabiyya*, Cairo 1972; A. al-Naffakh, *Fihris shawāhid Shawāyih*, Beirut 1970; Sezgin, ii, 89-91; Cl. Gilliot, *Les citations probantes (shawāhid) en langue*, to be published in two parts in *Arabica*, xliii (1996), the second part containing a comprehensive list of works and editions belonging to this genre. (CL. GILLIOT)

**SHAWĀNKĀRA** [see FADLAWAYH, BANŪ; SHABĀNKĀRA]

**SHĀWAR**, Abū *Shurjā* b. Mudjīr al-Sa'dī, a vizier of the last Fāṭimid caliph, al-'Adīd li-Dīn Allāh [q.v.], and the statesman who involved the forces of Nūr al-Dīn Maḥmūd [q.v.] in the affairs of Egypt.

He belonged to the Banī Sa'd, semi-settled Bedouin of Djudhām [q.v.], a tribal grouping both politically and militarily influential in the first half of the 6th/12th century. In Shawwāl 516/December 1122 Shāwar was released from a long period of Frankish captivity, and was established in *al-lā'ifa al-Ma'mūniyya*, the regiment of the vizier Ma'mūn al-Baṭā'ihī [q.v.]. He was one of the vizier Riḍwān b. Walakhashī's chief supporters in his disputes with the caliph al-Ḥafīz [q.v.], and fled with Riḍwān to Syria. After Riḍwān's defeat in Safar 534/October 1139, Shāwar first retired to Upper Egypt with his Bedouin, then was pardoned but detained in the palace at Cairo.

He was appointed governor of Upper Egypt, based at Kūṣ [q.v.], by the vizier Ṭalā'ī b. Ruzzīk [q.v.] in 555/1160. Having feared him as a possible rival, the vizier urged his son and successor, Ruzzīk [q.v.], not to provoke Shāwar by attempting to replace him. The advice was not followed and in Dhu 'l-Ḳa'da 557/November 1162 Shāwar openly rebelled. After an initial reverse at Daldja, he moved with a small band via the Western Desert oases to Tarūdja in the Delta, gathered supporters and descended on Cairo, which he entered on Sunday 22 Muḥarram 558/30 December 1162. Shāwar was proclaimed vizier with the title *amīr al-djuyūsh*. Ruzzīk had fled, was imprisoned and later, suspected of plotting amid growing factional rivalries, was executed in Ramaḍān 558/August 1163. That same month Shāwar sent *khilā'* (robes of honour) to Nūr al-Dīn, who accepted them and also the funds sent with them.

On Friday 28 Ramaḍān 558/30 August 1163, Shāwar was toppled from the vizierate by another *amīr* of Bedouin origin, Dīrghām [q.v.]. By Dhu 'l-Ḳa'da 558/October 1163, Shāwar was at the court of Nūr al-Dīn in Damascus seeking assistance. An interventionary expedition led to Shāwar's restoration (Rajab 559/May 1064; for text of his diploma, see al-Ḳalkashandī, *Subḥ al-a'shā*, x, 310-8) and to the first

clash with the Franks, whose interests and ambitions were already deeply involved in Egypt. Two other campaigns followed (562/1167 and 564/1168-9). For the details of these events, see **SHĪRKŪH**.

In the end, **Shāwar**, attempting to exploit now one and now the other of the rival outsiders, the Syrian forces and the Crusaders, was unable to maintain his independence. He had lost the support of the palace, the local élite and even of his own family, by his high-risk policy. The burning of **Fustāt** in **Ṣafar** 564/November 1168, probably on his orders to deny the attacking Crusaders the city and its resources, cost him much popular goodwill, even if the damage and losses were not so catastrophic as they have been portrayed (see W. Kubiak, *The burning of Miṣr al-Fustāt in 1168. A reconsideration of historical evidence*, in *Africana Bulletin*, Warsaw [1976], xxv). The new dominant force in Egypt was the Syrian army of **Nūr al-Dīn**, elements of which plotted the assassination of **Shāwar** on Saturday 17 **Rabīʿ II** 564/18 January 1169, and its commander **Shīrkūh** succeeded as **Fāṭimid** vizier.

**AL-SHAWBAK**, a fortress, originally constructed by the Crusaders, in Transjordan, now also the name of the settlement which grew up round it. It lies in lat. 30° 33' N., long. 35° 36' E. at an altitude of 1,382 m/4,532 feet in the south of modern Jordan, on a strategic position commanding the al-Karak-Taḥla-Maʿān mountain road and the mediaeval Islamic route via the Wādī 'Araba towards Egypt. The surrounding **Djabal al-Sharā** enjoys a good rainfall and winter snows, favouring woods and agricultural land; in mediaeval Islamic times, its famed apricots were exported to Egypt, according to Abu 'l-Fidā'. Its strategic position made it a coveted site for both Crusaders and Arabs, and habitation there certainly goes back to the Nabataeans.

It is reported that in 501/1107, the slopes of al-Shawbak formed part of the tributary domain of the Latin king Baldwin I of Jerusalem, under the local authority of a certain al-Aṣḥād al-Turkumānī. Shortly thereafter, in 509/1115, Baldwin I led a military force which crossed to the site and ordered the establishment of a military fortress adjacent to two small springs, which supplied a well within the fortress that he provided with a cavalry garrison. Baldwin I gave it particular attention when he visited it the following year, and then proceeded to 'Akaba, where he constructed a second fortress in order to control the traffic going to the **Hidjāz** and Egypt. Crusader control became firmly established with the construction of the citadel of al-Karak in 537/1142 by Fulk of Anjou, the king of Jerusalem. The land east of the Jordan River constituted a barony, with al-Shawbak (Montréal in the Frankish sources) at its seat, subsequently to be moved to al-Karak. The sources furnish us with the names of the individuals who were in charge of the fortress, such Romanus de Podio/Romain de Puy, etc.

Al-Shawbak was a target of the **Fāṭimids** in Egypt, who sent a military expedition that pillaged the locality and captured some prisoners in 552/1157. The following year, the **Fāṭimids** placed the fortress under siege, which lasted over a year, to be lifted only after the king of Jerusalem sent gifts and asked for a truce

of friendship (*muwādaʿa*). The **Ayyūbids** under **Ṣalāh al-Dīn** maintained their aggressive policy against the Franks east of the Jordan River. In **Ṣafar** 567/October 1171, **Ṣalāh al-Dīn** laid siege to the fortress, and its garrison surrendered within ten days. However, he departed before its submission when he received news that **Nūr al-Dīn Zankī** was approaching. The fortress finally surrendered in **Rabīʿ I** 585/October 1189, two years after the battle of **Ḥittīn** [q.v.]. **Ṣalāh al-Dīn** gave both al-Shawbak and al-Karak as an *iktāʿ* [q.v.] to his brother and successor al-Malik al-ʿAdil.

There were development schemes at al-Shawbak during the **Ayyūbid** period. Fruit trees were planted and the area, with its rich water resources, was rejuvenated to the extent that contemporary geographers compared it to the vicinity of Damascus. Inscriptions testify to the care that the **Ayyūbids** extended to it. The Franks recognised the strategic significance of al-Shawbak, and while besieging **Damiyya** in 615/1218, they offered to lift the siege in return for Jerusalem, al-Shawbak, and al-Karak. This request was declined. This may explain al-Malik al-Kāmil's interest in the place, for in 626/1229, he paid his nephew al-Malik al-Nāṣir **Dāwūd** 16,000 Egyptian *ḍinārs* to add al-Shawbak to his possessions, which he visited three years later while en route to Syria. It was part of the domains of the last **Ayyūbid** prince in southern Jordan, al-Malik al-Mughīth 'Umar, from 648/1250 until 659/1261. It then passed to the new **Mamlūk** rulers following their victory over the Mongols at 'Ayn **Djālūt**. However, in 692/1292, Sultan al-Aṣḥraf **Khālīl** ordered the demolition of the fortress on the advice of the local Bedouin chieftain, for whom it had been a major irritant. Later **Mamlūk** sultans, and in particular **Ḥusām al-Dīn Lādīn**, in 697/1297-8, restored the fortress and gave it their continuous attention, as is attested by inscriptions from that period. The great flood (*al-sayl al-aʿẓam*) and earthquake that struck the region in 718/1318 may explain the observation by Ibn **Faḍl Allāh al-Umarī** that the fortress was closed at that time.

There is no consensus in the sources regarding the status of al-Shawbak, with some referring to it as a village, others as a town, and others as a city. During the **Mamlūk** era it constituted an *ʿamal* with a *mutawallī*, and was part of the *niyāba* of al-Karak. Its *mutawallī* was appointed by the sultan in Cairo but reported to the governor of al-Karak. Biographical dictionaries provide the names of some individuals who held this position. A few of them may have been assigned the region as an *iktāʿ*. The citadel, which was one of the postal stations to Cairo, was occasionally the seat of a *kādī*, under the jurisdiction of the *kādī* in al-Karak.

The most important Bedouin tribes in the region were the Banū **Zuhayr** and Banū **Suniyyūn**. There were also significant numbers of **Melkite** Christians, who distinguished themselves in trade. Some were rich enough to give financial support to Sultan al-Malik al-Zāhir **Barḳūk**. They formed the majority of the population, which explains why in 700/1300, they and the Christians of al-Karak were exempted from the sultan's edict to change the colour of their turbans from white to blue.

Al-Shawbak during the 10th/16th century was a seat of the *nāhiya* as part of the *sandīq* of 'Adjlūn. Two *taḥṣīl defters* provide important statistics on the villages:

The revenues according to the first survey was 11,750 *akḥes*, falling to 14,000 *akḥes* near the end of the century. Christians paid the *ḥiṣya* at the rate of 80 *akḥes* per head. The decline in population is explained

	Households	Muslims	Imams	Christians
Tapu Defter 970 (no date)	145	16	2	11
Tapu Defter 850 (1005/1596)	65			5

by the deterioration in security. Most Christians migrated to the coastal area of Ghazza. The two *tapu defters* provide detailed information about the tribal groups (*tā'ifas*), as well as the names of the villages at that time. It is interesting to note that the villagers numbered less households than those of the nomads.

Information about al-Shawbak subsequently decreases, with only occasional references, such as that in 1022/1613, stating that the fortress was inhabited by *fallāḥīn* who provided 'Alī b. Fakhr al-Dīn with provisions. In 1812, it was visited by J.L. Burckhardt, who mentions that about one hundred *fallāḥīn* families lived there and paid tribute to the Huwaytat tribe. An uprising took place against the Ottoman garrison there in 1895. The *mutasarrif* of al-Karak laid siege to it, and about 200 people and 20 soldiers were killed. During the *Tanzimat* period, it was part of the *mutasarrifiyya* of al-Karak. Al-Shawbak was connected by a branch of the Hijāz Railway, no longer extant, which caused the depletion of its forests. Today, al-Shawbak is a *qaḍā'* that is part of the province of Ma'an.

**SHĀWĪSH** [see ḤĀ'ŪSH].

**SHĀWIYA** (A., pl. of *shāwī*) "sheep-breeder or herder", a term applied to groups in various parts of the Arab world.

1. The Maghrib.

Here the term, originally applied in contempt, has become the general designation of several groups, of which the most important are, in Morocco, the Shāwiya of Tāmasnā and in Algeria, the Shāwiya of the Awrās. E. Doutté (*Marrākech*, 4-5) mentions several other groups of less importance. An endeavour has also been made to connect Shoa, the name of a district in Abyssinia, with Shāwiya.

Wherever it is found, the term is applied to Berbers of the Zanāta and Hawwāra, more or less arabicised, mixed with purely Arab elements; almost always, moreover, these ethnic groups seem to have schismatic tendencies.

The massif of the Awrās, occupied by the Shāwiya of the department of Constantine, was in the 8th century the centre of resistance of the Ibāḍī [see IBĀḌIYYA] Khāridjīs, as the Mzāb still is at the present day. Now among the Shāwiya of Morocco, the successors to the heretical Barghawāta [q.v.] we find a tribe of Mzāb and the memory of "Judaizing" ancestors. On the other hand, Ibn Khaldūn tells us that at the beginning of the Marīnid dynasty in eastern Morocco, a group of Shāwiya lived in contact with the Zakāra, whose heterodox practices have been studied by A. Moulières.

According to Ibn Khaldūn (*Hist. des Berbères*, i, 176-82, tr. i, 271-82) the original home of the Hawwāra (*vulgo* Huwwāra [q.v.]) was the province of Tripoli and the adjacent part of the territory of Barka; conquered and oppressed by the Arabs, they had scattered through the whole of the Maghrib where, crushed by taxation and having lost that pride and independence which once characterised them, they devoted themselves to sheep-breeding, whence the name ultimately given them. As to the Zanāta, they were nomadic Berbers, like the Arabs, living in tents on the produce of their flocks and spending the summer in the Tell and the winter in the desert from Ghadāmis to the Sūs al-Aḳṣā (Ibn Khaldūn, *op. cit.*, ii, 1, tr. iii, 179-80).

The name of Shāwiya seems to be first found in Ibn Khaldūn (*Mukaddima*, i, 22, 16, tr. de Slane, i, 256, tr. Rosenthal, i, 251; *Hist. des Berbères*, i, 179, 10, tr. i, 278; ii, 245, 3, tr. iv, 31; the Shāwiya mentioned in this last passage do not seem to correspond to those of Tāmasnā but to some people of Eastern Morocco, neighbours of the tribes of Hawwāra and Zakkāra).

Next, Leo Africanus (i, 83-4), who calls them *Soava*, tells us that they are African (i.e. Berber) tribes who have adopted the Arab way of living. The majority live at the foot of the Atlas or in the mountain range itself, living by cattle- and sheep-breeding. Wherever they dwell they are always subject to the local dynast or to Arabs. This author already knows two main groups: one in Morocco, in Tāmasnā, the other on the borders of the kingdom of Tunis and the "land of dates" (*bilād al-djārid*).

realpatidar.com

It will be readily understood that in the Arab world, the term "sheep breeders" would have a contemptuous significance. As W. Marçais observed, "in ancient Arabia a certain disgrace seems to have been attached to the breeding of the smaller domestic stock. North African opinion has retained a prejudice against the rearers of sheep. The great camel-rearing nomads have nothing but contempt for them. In the middle ages the feeling may have been strengthened by racial antagonism, real or imaginary. But in general at this period, to abandon the camel and adopt the sheep was an avowal of a terrible downfall for a tribe. It meant renouncing the long free travels, the secure refuge of the desert and independence, to submit to local rulers, endure their blows and tolerate their fiscal exactions".

a. *Shāwiya* of Tāmasnā.

They occupy in the north-east the lower course of the Umm al-Rabi', vast fertile plains which extend to the latitude of the little harbour of Fedāla. They are descended, according to Leo Africanus (ii, 9), from the Zanāta and Hawwāra whom the Marīnid sovereigns settled there and who mixed with the remnants of the Barghawāta, the ancient heretical inhabitants of the region, as well as with the Arabs brought from Ifrīkiya by the Almohad Sultan Ya'qūb al-Manṣūr. These *Shāwiya* now speak Arabic; the modern tribes which seem to be of Berber origin are the Znāta, Medyūna, Mzāb, Mellīla, Zyāyda and the Ūlād Bū-Ziri.

b. *Shāwiya* of the Awrās.

They occupy this mountain massif in modern Algeria, between Batna and Biskra. Ibn Khaldūn (*Hist. des Berbères*, ii, 1, tr. iii, 179-80) already mentions sections of the Zanāta settled in the Awrās alongside of Hilālī Arabs who had conquered them. It is no doubt to their living in a mountainous country that these *Shāwiya* have preserved a Berber dialect to the present day.

2. Syria and the Arabian Peninsula.

*Shāwiya* is a flexible term, centering on sheep herding for an urban market, especially live animals for meat. This, of itself, does not have derogatory overtones; what does is the buying of protection (in the past) and herding for wages (in the present), which were and are practised by some participants. *Shāwiya*

describes groups who herd sheep as their main livelihood, some of whom have a low political status. Because herders needed to use seasonal grazing grounds or to secure access to markets far from their home base on a regular basis, agreements were made between herders and the "owners" of the grazing grounds and wells, or the markets. Such agreements could be contracts between "equals", groups who saw themselves as close in descent or similar in esteem, and the relationship was thus symmetrical. Those who were distant or lacked esteem paid for protection while using these areas, and thus had asymmetrical agreements.

There is a second question concerning the ownership of the sheep. Some owned the sheep they herded, while others herded sheep belonging to urban owners, village owners, or to camel herding owners, and yet others had flocks of mixed ownership. Herding one's own animals or someone else's was honourable in itself. Esteem or its lack depended on the political arrangements within which the herding took place, and on whether or not the owner and herder saw themselves as equal partners in a mutually beneficial enterprise, or as employer and employee.

These views are the current opinion (1994) of Rwanda, Sardiyya, 'Umūr, Benī Ṣakhr and Ahl al-Djabal sheep-herding tribesmen, using southeastern Syria, Jordan and northern Saudi Arabia. The confusion between a description of a means of livelihood and a description of low political status is common in casual speech, especially when talking about individuals or groups distant to the interests of the speaker. As the view that "we are all *shāwiya* now" might be thought to have modified thinking on occupation and political esteem, tribesmen were at pains to clarify that there is and was no determinative association.

Similar confusion is seen in the literature on *shāwiya* and sheep-herding in the past. Musil (*Arabia Deserta*, 223), speaking of the Bilād al-Shām in the early 1900s, says that the *shāwiya* were a low-status political category who bought protection since they herded sheep and goats, but sheep herders like the Wuld 'Alī and Hessene were held in esteem (*ibid.*, 391). Dickson (*The Arab of the desert*, 109-10), from the 1930s and 40s in Kuwait and eastern Arabia, describes them as an occupational category of people who herd sheep and goats for others. Other sources for Syria, Palestine and Lebanon mention tribes herding sheep and/or goats for peasant, urban and tribal owners, but do not mention *shāwiya*; nor is the term *shāwiya* found in the literature on animal herding contracts (Firestone, 201-8).

Dickson names three *shāwiya* (town usage) or *hukra* (desert usage) tribes specialising in herding flocks owned by townsmen or tribal leaders: all sections of the Muntafik confederation, except the al-Sa'dūn shaikhly family; two Muṭayr sections; and the Ahl al-Ghanam of the 'Awāzim. These latter herded sheep belonging to the 'Awāzim camel herding sections and flocks of Kuwaiti townsmen. The two lower-status Muṭayr groups herded sheep of the other Muṭayr sections. The Muntafik of Banī Mālik, Āl-Bū Ṣalāh, and Adjwād, with their neighbours the Benī Hashāyim and some *Shammar*, were mostly "of good Arab descent and some married with the best tribes in Iraq" (546). They had agricultural land along the Euphrates, where some members remained all year. From mid-October, herding families moved slowly south for some two hundred miles, until by February they were south and west of Kuwait. Although *Shī'a*, they were welcomed since they brought cheap mutton, butter, wool and sheepskins. They returned north at the end

of April with supplies of rice, sugar, coffee and clothes. While south, they paid *zakāt*, accepted in Saudi Arabia but returned in Kuwait.

Burckhardt described share-herding (i, 17-18) between the tribes and the villagers of the Hawrān, and it is implicit in the descriptions of livelihood attached to tribal listings in French Mandate records. Low status was associated with the taking of protection rather than sheep-herding as such; some sheep-herding tribes did not take protection and Musil (1927, 215) says the *shāwiya* had "eminent chiefs". Share-herding is honourable, since both sides contribute to the success of the enterprise, and the shepherd has real responsibility. Wage-herding is not, as the herder contributes only his labour, the owner making all decisions and being responsible for sheep and shepherd. Since the 1970s, share-herding has become less common because of changes in herding practices with the development of urban markets, increased sheep numbers, decreased pasture areas and greater state control over border crossings. Most wage-earning shepherds, the current *shāwiya* in a derogatory use by the Rwala, Sardiyya, and Benī Ṣakhr, come from tribes of the area of Rakka [q.v.] in Syria. The Ahl al-Djabal and 'Umūr rarely use employed shepherds, although they sometimes engage in share-herding with urban or tribal partners. The Rwala and others also share-herd, but within the wider domestic groups as an investment strategy rather than as a commercial activity. Métral (1993, 198) mentions the *shāwiya* of the Euphrates being among the current seasonal users of the Palmyrene steppes.

*Shāwiya* in this region (and it appears to be similar in parts of 'Umān) is thus a description of sheep-herding as a means of livelihood; the methods of arranging access to the necessary means to achieve this may involve behaviour considered dishonourable.

(W. and FIDELITY LANCASTER)

### 3. The Shāwi dialects of the Middle Euphrates valley.

The Shāwi dialects occupy a large area of Northern Syria on both sides of the Euphrates, beginning east of Aleppo and stretching down to the Syrian-Iraqi border near Al-Bu Kmāl. In this whole area only two or three riverine towns (Dēr iz-Zōr, Al-Bu Kmāl, perhaps Mayādīn) have preserved a sedentary dialect. Typologically, the Shāwi dialects are Arabic Bedouin dialects of the small cattle herders (*nomades moutonniers*). The data quoted come from the vicinity of Dēr iz-Zōr.

**Phonology.** The interdentalals *t*, *d* and *ḍ* (the latter resulting from the merger of O[ld] A[rabic] *dād* and *zā'*) have been preserved over the whole area (*tiḡīl* "heavy", *idīn* "ear", *arīḍ* "earth", *ḍall* "he remained"). OA *ḡīm* has been preserved as a voiced palato-alveolar affricate. OA *qāf* was shifted to *g* and has been preserved as such in the vicinity of back vowels (*nāga* "female camel", *tuḡul* "weight"). In the vicinity of front vowels, including the front varieties of *a* and *ā*, it has

been shifted to *ḡ*, thus merging with *ḡ* < OA *ḡīm* (*tiḡīl* "heavy", *ḡīl* "a little"). Similarly, OA *kāf* has been preserved in the vicinity of back vowels but shifted to a voiceless palato-alveolar affricate *č* in the vicinity of front vowels (*kučur* "large quantity", *yākul* "he eats" but *čūčir* "much", *ačal* "he ate", *čima* "truffles"). This results in a characteristic alternation of *g/ḡ* and *k/č* in morphemes derived from the same root (*tuḡul/tiḡīl*, *kučur/čūčir*, *yākul/ačal* etc.). Over most of the area OA *ḡayn* has been shifted to *q*, i.e. a voiceless uvular stop, pronounced like the *qāf* of Modern Standard Arabic (*qanam* "sheep", *ziḡir* "small", *qār* "other"). In addition to the inherited emphatic (velarised) consonants *ṣ*, *ṭ* and *ḍ* there is velarised *l*, especially in the vicinity of *g* (< OA *q*), as well as velarised *r*, *m* and *b* (*ḡāl* "he said", *ḡull* "small quantity", *kuḡāb* "kabooob"); most of these seem to have phonemic status, albeit with a low functional yield.

The OA long vowels *ī*, *ū*, *ā* have been preserved, whilst the diphthongs *ay* and *aw* have been monophthongised to *ē*, *ō* (*bēd* "eggs", *ḡōz* "walnuts"). There are three short vowels *i*, *u*, *a* which, however, in most cases do not reflect the corresponding OA vowels. Whereas *i* and *u* in unstressed open syllables have been elided, *a* in open syllables has been shifted to either *i* or *u*, according to front or back environment, or has been retained in the vicinity of emphatics and pharyngals (*miša* "he walked", *čitab* "he wrote", *kumaš* "he seized", *ḡarab* "he beat", *ḡalab* "he milked"). In two subsequent open syllables with short *a*, the vowel of the first syllable has usually been elided (*čitabit* < \**katabat* "she wrote", *kmušat* "she seized", *ḡrubat* "she beat", *ḡlibat* "she milked"). A short vowel *i* or *u* has been inserted between word final -CC (*čitābit* < \**katabt* "I wrote"). In the sequence \*-aXC- (where *X* stands for one of the back spirants *x*, *ḡ*, *h*, *'*, and *C* stands for any consonant) an *a* is inserted between *X* and *C* (the so-called "ḡhawa syndrome": *mxazūn* < \**max-azūn* < \**maxzūn* "stored", *aḡamar* "red", *ḡhalib* "she milks", *ḡhawa* "coffee").

**Morphology.** The definite article is *al-* (*al-bēt* "the house"). In the pronoun and the verb, gender distinction in the 2. and 3. persons plural has been preserved. The following paradigm shows the independent personal pronoun and the perfect and imperfect conjugation of the verb *ḡarab* "to beat":

3 sg. m.	<i>huwwa</i>	<i>ḡarab</i>	<i>yudrub</i>
f.	<i>hiyya</i>	<i>ḡrubat</i>	<i>tuḡrub</i>
pl. m.	<i>hum(ma)</i>	<i>ḡrubam</i>	<i>yudrubūn</i>
f.	<i>hinna</i>	<i>ḡruban</i>	<i>yudrubīn</i>
2 sg. m.	<i>inta</i>	<i>ḡarābit</i>	<i>tuḡrub</i>
f.	<i>inti</i>	<i>ḡarabti</i>	<i>tuḡrubīn</i>
pl. m.	<i>intum</i>	<i>ḡarabtum</i>	<i>tuḡrubūn</i>
f.	<i>intin</i>	<i>ḡarabtin</i>	<i>tuḡrubīn</i>
1 sg.	<i>āni</i>	<i>ḡarābit</i>	<i>aḡrub</i>
pl.	<i>iḡna</i>	<i>ḡarabna</i>	<i>nuḡrub</i>

Fischer and O. Jastrow (eds.), *Handbuch der arabischen Dialekte*, Wiesbaden 1980, 159-64; P. Behnstedt, *Sprachatlas von Syrien*, Wiesbaden 1996. (O. JASTROW)

**SHAWK** (A.), the verbal noun from *sh w k*, meaning "desire, longing, yearning, craving", much used as a technical term in Islamic religious thought and mysticism.

#### 1. The period before its adoption into Sūfism.

There are various meanings and stages discernible in the development of the term in mysticism.

(a) *In pre-Islamic profane poetry.* Fragments survive attesting a semi-technical usage of *shawk* as an element of profane love in the 'Udhri tradition (dating from the early 5th century), especially visible in the few extant poems of the two Murakkish [q.v.], al-Akbar and al-Asghar (see Al-'Udhari, *Jāhili poetry before Imru' al-Qais*, diss., London Univ. 1991, unpubl., 180-92).

(b) *In the Qur'ān and in Hadīth.* The term is not found in the Qur'ān, but the idea of yearning figures prominently in the *akhbār* ascribed to the Prophet David and in such manifestations of early Muslim piety as collection of prayers or *ad'ya* (sing. *du'a*), as in "whosoever yearns for Paradise moves swiftly towards good merit". Its early evolution as a religious term was bound up with scholastic discussions concerning the beatific vision, the possibility of seeing God in the Hereafter [see RUY'AT ALLAH], involving the idea of the justified believer's yearning to gaze on God's countenance and to meet with him, and *shawk* was especially stressed as a quality of the Prophet, in Abū 'Alī al-Dakkāk's words, cited by al-Kushayrī, "Yearning was composed of one hundred parts. Ninety-nine of these the Prophet possessed, and the one remaining part he divided among mankind" (*al-Risāla al-Kushayriyya*, ed. Mahmūd and Sharīf, Cairo 1966, ii, 626).

(c) *In pre-Islamic akhbār literature.* Here, *shawk* is a central motif in anecdotes from the Jewish and Christian traditions related by early Muslim scholars. Thus lengthy citations from *akhbār* on the Prophet David are cited by al-Ghazālī to clarify his mystical conception of *shawk* (see *Ihyā'*, iv, 324-5). Such traditions with their explicit association of technical terms like *ma'rifa*, *hubb*, *shawk* and *dhikr* show the common ground between early Islamic ascetical piety and the later development of Sūfī theosophical theories based on love, yearning and gnosis.

(d) *In mystical tafsīr.* Al-Sulamī's recension of the text of the Qur'ānic commentary ascribed to the Imām Dja'far al-Šādiq (ed. P. Nwyia, in *MUSJ*, xliii [1967], 181-230) outlines a highly elaborate hermeneutics of love in early pietistic Islam, based on such terms as *shawk*, *hubb*, etc., indicating a possible provenance for the later development of *shawk* in the sophisticated love theory of al-Hallāj and his later followers such as Rūzbihān Baklī (d. 606/1209). Also, Abū Sahl al-Tustarī [q.v.] in his mystical *Tafsīr al-Qur'ān al-azīm* expresses the idea that *shawk* or yearning is merely a reflection of the more essential love and light of God (see G. Böwering, *The mystical vision of existence in classical Islam*, Berlin-New York 1980, 165-70).

## 2. Its adoption into Sūfism.

*Shawk* actually appears in the earliest vocabulary of speculative Sūfism, even antedating such terms as *ma-kām* and *hāl* [q.v.] in the literature; it expressed both a longing for the beatific vision in the Hereafter and a psycho-spiritual sentiment of yearning as a part of a complex mystical love theory, this last being concerned with the interiorisation of piety, with a focus on the *bāṭin*, the life of the soul, rather than on the *ẓāhir* of public faith. Thus the complementary nature of the two notions is seen as early as the Persian Shākīk al-Balkhī (d. 194/810), acclaimed by al-Sulamī as a pioneer in *Khurāsān* to expatiate on the "mystical states" (*ulūm al-ahwāl*). Soon after his time, there arose debates amongst the mystics about the relationship of love to yearning, and about which was superior. Thus Sarī al-Sakāṭī [q.v.] held that *shawk* was the "highest station", whereas 'Abd Allāh al-Anṣārī [q.v.] considered it as the gnostic's greatest defect. Hārith al-Muḥāsibī [q.v.] steered a middle course in his *K. al-Maḥabba* (excerpts cited in Abū Nu'aym al-Iṣfahānī's *Hilya*),

that yearning was derived from love, and assisted the lover's pursuit of the divine vision. The imagery of lights and radiance appears in these works, and then in an author like Abū 'l-Husayn al-Nūrī (d. 295/907), that of fire—the fires of fear, love and yearning. There was a tendency to re-direct yearning towards the beloved of the heart, seen in al-Sarrādj's [q.v.] *K. al-Luma'*, with a final stage of yearning, that of ineffability, the subject having passed away (*fanā'*) in the object of yearning.

In his *Ihyā'*, al-Ghazālī has a lengthy *K. al-Maḥabba wa 'l-shawk wa 'l-uns wa 'l-ridā* (no. XXXVII), a comprehensive monograph on the philosophico-theological premises underlying the mystical understanding of the varieties of human and divine love. For him, all love derives ultimately from the love of God. Likewise, there is a first category of *shawk* based on contemplation and the heart's vision and a second category based on sacred tradition and God's natural and created manifestations. The gnostic's yearning for the Divine Unknown is endless, an infinite *shawk* which neither lessens in this world nor the next.

The concept appears extensively in the Persian mystical poets from the 6th/12th century onwards. Thus Sanā'ī [q.v.] has sections on *shawk* in his mystical *mathnawī* poems the *Hadīkat al-ḥaḳīka* and *Sanā'ī-ābād*. We find a special emphasis on the mystical piety of love, *madhhab al-iṣḥāk*, with *shawk al-kalb*, a yearning for contemplation of the Beloved in the mystic's heart in this present world, emphasised over *al-shawk ilā 'l-djanna*, seen, e.g. in Rūzbihān al-Baklī. But there is also a very thorough treatment of *shawk* in the Hanbalī mystic Ibn Kayyim al-Djauziyya (d. 751/1350 [q.v.]) in his *Rawdat al-muḥibbin* (see J. Bell, *Love theory in late Hanbalite Islam*, Albany 1979), and this continues in later Hanbalī authors, such as Mar'ī b. Yūsuf al-Karmī (11th/17th century).

(L. LEWISOHN, shortened by the Editors)

**SHAWK**, TAŠADDUḲ ḤUSAYN (Nawwāb Mīrzā), Urdu poet (?-1871).

He came from a family of physicians, and his paternal uncle, Mīrzā 'Alī Khān, was a distinguished medical officer in Lucknow at the court of the Nawwābs of Oudh (Awadh); Shawk himself was well educated, not only in medicine, but also in arts and sciences. He owed his skill in poetry to the guidance of Ātiṣh [q.v.]. He achieved for his *mathnawīs* considerable fame in his lifetime, especially in Lucknow, and even discerning critics like Alṭāf Ḥusayn Hālī acknowledge his merits (in his *Mukaddima-yi shi'r-ō-shā'iri*). Shawk paints vivid pictures of the Lucknow of Nawāb Wādjīd 'Alī Shāh, with its colourful customs and society. Saksena (see *Bibl.*), 30, includes Shawk among the [seven] "most notable" *mathnawī* writers. Yet elsewhere (150) he appears to denigrate Lucknow poets in the genre, who depict love which is not elevated, but "of a low kind", referring specifically to *Zahr-i-iṣḥāk* and other poems by Shawk.

The most famous of Shawk's *mathnawīyyāt* is *Zahr-i-iṣḥāk* ("The poison of love"), though from some points of view, others such as *Farīb-i-iṣḥāk* ("The allurements of love") are sometimes considered superior. Some argue that Shawk retails local stories, posing as the hero himself; others regard his stories as genuinely autobiographical. It is generally thought that his language was quite witty and acceptable, though Hālī

in his *Mukaddima* suggests that it became somewhat unacceptable (554). The story tells how a rich merchant had a beautiful daughter whom the hero, who lived in the same district, saw by chance when she appeared on the roof or balcony of her house. A love affair develops somewhat in the vein of *Romeo and Juliet*. Both the heroine and the hero successively drink poison, but in the end the effect is nullified. The story is important from several points of view. First, the element of magic, which had become normal in the *mathnawī*, is absent, save in the description of the failure of the poison to prove fatal. Secondly, the characters are not princely or noble, but ordinary, as indeed are the events. Thirdly, the poems are brief. Fourthly, at a time when Lucknow poetry seemed to concentrate on language, Shawk stressed meaning. A third *mathnawī*, *Ladhdhat-i-ṣṣḥk* ("The Pleasure of Love"), is his longest, and is more evocative of Mīr Ḥasan [q.v.]. This and his fourth *mathnawī*, *Bahār-i-ṣṣḥk* ("The Spring of Love") are said to illustrate his felicitous use of the language of the ladies of Lucknow. Shawk's fame seems to have been short-lived. For example, Muhammad Sadiq, *A history of Urdu literature*, London 1964, does not even mention his name; nor do his collections of two other genres of Urdu love poetry—*ghazal* and the more passionate *wāṣōkh*—seem to have made much impact.

**Bibliography:** Probably the best account of Shawk's *mathnawī* is to be found in Abu 'l-Layth Siddīqī, *Lakḥnāw kā dabistān-i-shā'irī*, Lahore 1955, 553-75, which contains substantial extracts from the poems. The sparse information to be found in Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, has been mentioned. There are various editions of the poetry; interesting comments on it are to be found in Aṭf Ḥusayn Ḥālī's *Mukaddima*.

(J.A. HAYWOOD)

**AL-SHAWKĀNĪ**, MUHAMMAD B. 'ALĪ b. MUHAMMAD, writer, teacher and *muftī* in Ṣan'ā' (ca. 1173-1255/1760-1839). His opinions and his writings are seen as foreshadowing the Islamic modernism of the first half of the 20th century. Rashīd Riḍā [q.v.] regarded him as the *mujaḥḥid* "regenerator", of the 12th century A.H. (*Tafsīr al-Manār*, vii, 144). Many of his books exist in modern (sometimes uncritical) editions. In his *al-Kawāl al-muḥḍ fī adillat al-idṭihād wa 'l-taklīd* (Cairo, Muṣṭafā al-Ḥalabī) he argues that it is not necessary to follow one of the established Islamic schools of law or *madhāhib*.

(J.J.G. JANSEN)

**SHAWKAT 'ALĪ** (1873-1938), Indian Muslim leader. Elder of the famous "Alī Brothers", Shawkat was born at Rāmpūr on 10 March 1873. He received a "modern", i.e. English, education at the insistence of his widowed mother, Ābādī Begum (who later played a significant role in the Indian freedom and Khilāfat movements) despite the opposition of her male relatives. She pawned her personal jewellery to send Shawkat to a school in Bareilly, from where he went to the M.A.O. College, 'Alīgarh. He did not show brilliance in his studies, but gained fame as a sportsman.

After his graduation in 1895, Shawkat was employed in the Opium Department for the next 17 years. He took premature retirement to tour the country as the Agha Khān's secretary in order to mobilise public opinion and to collect funds to convert the M.A.O. College into a full-fledged university.

Unlike his younger brother, Muhammad 'Alī [q.v.], an erudite writer and speaker, Shawkat was a practical man who fully supported his younger brother in his activities. Shawkat founded Andjuman-i Khuddām-i Ka'ba ("Association of the Servants of the Ka'ba") in 1913 to protect the sacred monument in Mecca and to facilitate pilgrimage from India. At about the same time, he assumed the managerial responsibilities of the newspapers published by Muhammad 'Alī, (the Urdu daily) *Hamdard* and (the English weekly) *Comrade*, due to the latter's ill-health.

The 'Alī Brothers were arrested in May 1915 on charges of arousing the Muslims against the British. They remained in prison until December 1919. Shawkat's pension from the Department of Opium was confiscated at the time of his arrest.

During the next decade the 'Alī Brothers dominated the Indian Muslim scene and took an active part in the freedom movement. They associated themselves with the Indian National Congress and played a crucial role in bringing it, especially its leader M.K. Gandhi, closer to the Muslims in the country. They played a key role in the Non-Cooperation (*Tark-i Muwālāt*) Movement of the early 1920s, and led the Khilāfat Movement [q.v.] aimed at protecting the Ottoman Caliphate.

The 'Alī Brothers were again arrested in 1921 for passing a resolution in the All-India Khilafat Conference at Karachi on 9 July 1921 calling upon Muslim soldiers in the Indian British army to desert from it. They were tried, along with five others, in the famous Karachi Trial of the same year (details in Rafique Akhtar, *Historic trial*, Karachi 1971).

Shawkat presided over the All-India Khilafat Committee's annual conference in 1923 at Cocanada. This conference formed a socio-political group, Hindustani Sewa Dal ("Indian service corps"), to improve the social conditions of the Indian people. Shawkat presided over the first session of this organisation at Belgaum in 1924.

At this time, a belligerent Hindu nationalism, including the movement of *Suddhi* ("purification", i.e. reconversion of Muslims to Hinduism), was raising its head. Muslims demanded assurances of a fair deal in an independent India where Hindus were going to be the majority. (The Lucknow Pact of 1916 had given some weighting to Muslim demands.) The Indian National Congress refused to give any special assurance to Muslims in the Nehru Report and the All Party Conference at Calcutta in 1928, and this caused most Muslim leaders to drift away from the Congress and demand a separate state for Muslims.

Shawkat resigned from the Congress and settled in Bombay, where he dedicated himself to the advocacy of Muslim causes through the Urdu daily *Khilāfat* and the Urdu weekly *Khilāfat-e 'Uthmāniyya*. Towards the end of his life, Shawkat was elected to the Central Legislative Council. He died in Dillī on 26 November 1938.

**Bibliography:** Unlike his younger brother, Shawkat does not seem to have been the subject of any independent work. See for a detailed account and some primary sources about his life: Mushirul Haq, *Shawkat Ali*, in S.P. Sen (ed.), *Dictionary of national biography*, Calcutta 1974, 176-8.

(ZAFARUL-ISLAM KHAN)

**SHAWKAT BUKHĀRĪ**, MUHAMMAD IṢHĀK, 17th-century Persian poet, died 1107/1695-6.

He spent the early part of his life in Bukhārā, where his father worked as a moneychanger. Shawkat also took up the same profession, but then set out

for *Khurāsān*. In 1088/1677-8 he arrived in Harāt and entered the service of the governor Šaḥī Kūfī *Khān Shāmlū*. Shawkat was also associated for a considerable time with Mīrzā Sa'd al-Dīn, vizier of *Khurāsān*, who treated him with great affection and kindness, but eventually he decided to sever all connection from worldly affairs and lead a life of seclusion. Ultimately, he took up residence in Isfahān, where he died under conditions of self-imposed poverty. He was laid to rest in Isfahān at the cemetery dedicated to the spiritual leader *Shaykh* 'Alī b. Suhayl b. Azhar Isfahānī.

According to some writers, the poet initially employed Nāzūk as his pen-name. His *diwān* contains *kašidas*, *ghazals*, *kiṭ'as* and *rubā'īs*. Most of his *kašidas* are in praise of the Imām Riḍā and the poet's chief patron Sa'd al-Dīn. Shawkat is especially noted for his *ghazals*, which are distinguished by an inventiveness in meaning and expression. He is regarded among those poets whose influence was chiefly instrumental in the popularisation of the "Indian style" (*sabk-i Hindī* [q.v.]). Though his work failed to gain recognition from early Persian writers, he was held in high esteem in Turkey where, according to E.J.W. Gibb, "he continued for more than half a century to be the guiding star for the majority of Ottoman poets".

(MUNIBUR RAHMAN)

**SHAWKĪ**, AHMAD, Egyptian poet and dramatist. Born in Cairo in 1868 into an affluent family whose genealogy shows a multifarious ancestry, mingling Turkish, Kurdish, Greek and Arab strains, he died in Cairo on 14 October 1932.

It is both convenient and realistic to distinguish between three periods in the biography of the poet. Until 1914, Shawkī was the poet of the court (*shā'ir al-umara'*); from 1914 to 1917 he was the poet in exile; and from 1919 to 1932 he enjoyed popular and critical acclaim, bearing the prestigious title of *Amīr al-shu'arā'*.

On leaving the School of Law of Sūḥ al-Zalāṭ in 1887, Shawkī was awarded a grant to pursue his legal studies at Montpellier. He was resident in France until 1891. Although he considered al-Mutanabbī his principal mentor, influences on him henceforward included Victor Hugo and de Musset, his favourite French poets. Until the outbreak of the First World War, as an official of the Palace, Shawkī was the poet of the Prince, to whom he addressed eulogies whenever the occasion arose, attempting to some extent to imitate the conduct of al-Mutanabbī with regard to Sayf al-Dawla [q.v.].

When war broke out in 1914, the Khedive 'Abbās was visiting Turkey. The British announced their Protectorate over Egypt, opposed the return of 'Abbās and appointed in his place the Sultan Ḥusayn Kāmil. Shawkī sought to please both the British and Ḥusayn;

however, his marked hostility towards Britain's Egyptian policy (especially at the time of the resignation of Lord Cromer) resulted in a limited form of exile; accompanied by his two sons 'Alī and Ḥusayn, he boarded a ship bound for Barcelona and was not to leave Spain until 1919.

Essentially a period of transition, these few years are marked by a relatively small volume of work, lacking any great originality (principally two plays in which he attempts to imitate two celebrated ancient models: al-Buḥturī and Ibn Zaydūn [q.v.]).

On his return to Egypt in 1919, it was the contemporary Egyptian scene which claimed the poet's attention: eulogies and funeral tributes addressed to renowned Egyptians, the Milner Report, reforms at al-Azhar, creation of the Bank of Egypt, Congress of Egyptian political parties, the fiftieth anniversary of the Dār al-'Ulūm—all kinds of events were extolled by the poet, in a style far removed from the panegyrics of the court or from the nostalgic effusions of exile in Spain. The talented singer 'Abd al-Wahhāb, who was his constant companion, was to popularise sung versions of these historical *kašidas*.

Despite sometimes acerbic criticism, the laurels awarded to Shawkī have not withered; the fiftieth anniversary of his death was marked by spectacular commemorative ceremonies which took place in Cairo between 16 and 22 October 1982 and brought together, at the highest level, Egyptian authorities and literary figures from the Arab countries and from Europe, coming to pay their respects to the "Prince of poets".

The sources of inspiration of Shawkī are essentially the following:

- (a) The *Fur'awniyyāt*, chronicles of the centuries in the epic style of Victor Hugo.
- (b) The *Islāmiyyāt*, the most celebrated of which was to be popularised by the renowned Egyptian singer Umm Kulthūm (*al-Hamziyya al-nabawiyya*).
- (c) The *Turkiyyāt*, celebrating the role of the Turks as defenders of Islam, especially in the Greco-Turkish war of 1921-2.
- (d) Egypt: compositions illustrating numerous and very diversified themes, reflecting the current scene and constituting in total a veritable poetical history of contemporary Egypt.
- (e) Occasional pieces: panegyrics, funeral odes, *naṣībs*.
- (f) Theatre: although Shawkī owes his renown to his lyrical compositions, it should not be forgotten that it was by means of drama that he made his entrance into the literary world, writing, while still resident in France, his first tragedy *'Alī Bāy al-Kabīr*. Much later, he returned to the genre with *Maḍnūn Layla* (1916), then with *Maṣra' Kilyubātrā* (1917), *Kambīz* (performed at the Ramesses Theatre in 1931), *Amīrat al-Andalus* and *'Antara*, his last work.

Badawi, Cambridge 1992, 47-8, 67-71, 358-60. (A. BOUDOT-LAMOTTE)

**SHAWKĪ EFFENDI RABBANĪ**, conventional form SHOĠHI EFFENDI (b. 1 March 1897, d. 4 November 1957), head or Guardian of the Bahā'ī religion 1921-57.

The great-grandson of Mīrzā Ḥusayn 'Alī Nūrī Bahā' Allāh [q.v.], the sect's founder, Shoghi was born in Haifa, Palestine, for some time the home of his grandfather, 'Abbās Efendi 'Abd al-Bahā' [q.v.] and later the international centre for the movement. Shoghi was educated in Haifa and at the Syrian Protestant College in Beirut, after which he spent about a year at Balliol College, Oxford. In November 1921, he was recalled to Palestine on the death of 'Abbās Efendi.

In his will, 'Abbās had appointed his grandson first in a projected line of "Guardians of the Cause of God" (*waḍi-yi amr Allāh*), modelled on the Shī'ī Imāms, whose role was to interpret Bahā'ī scripture and provide infallible guidance on religious matters. Shoghi used his Western-type education and his organisational skills to create a complex international organisation for the Bahā'ī movement. He also had a marked ability to systematise, and, through the medium of several books and innumerable encyclical letters, he fashioned a coherent, schematised picture of Bahā'ī history and doctrine which has subsequently come to be the authoritative version as understood by all modern adherents. His writings, most of which are in English, include an important history of the first Bahā'ī century, *God passes by* (1944), a translation of an early Bahā'ī chronicle of the Bābī movement, *Nabī's narrative* (1932), and interpretative translations of several important works of Bahā' Allāh (including the *Kutāb-i Ikān*). He also supervised several volumes of the yearbook, *The Bahā'ī world*, in which a normative presentation of the faith's history, doctrines, and administrative system was developed. He remained in Haifa, creating there the nucleus of the Bahā'ī World Centre, involving extensive buildings and landscaping work.

According to official accounts, on his death in London in 1957, he left no will or verbal instructions as to the future direction of the movement. Being childless, he was expected, according to the terms of 'Abd al-Bahā's will, to have appointed another male member of the Bahā'ī sacred lineage to succeed him; but he had by then excommunicated all his living relatives. The line of guardians thus ended with him, and

in current Bahā'ī estimation he is now "the Guardian of the Cause" *par excellence*. Overall religious authority within the movement now rests with a nine-man council, the *Bayt al-'Adl al-A'zam* (Universal House of Justice), elected every five years. An attempt to continue the guardianship was made by the former president of Shoghi's International Bahā'ī Council, Charles Mason Remey (1874-1974), whose followers form the Orthodox Bahā'ī Faith and its sub-groups, each with its own line of guardians. Given the overwhelming influence of the Universal House of Justice, however, it seems most unlikely that a *wilāyat* system will reappear in mainstream Bahā'ism.

**Bibliography:** Ruhīyyih Rabbani, *The priceless pearl*, London 1969 (hagiography by Shoghi's Canadian widow); Ugo Giachery, *Shoghi Effendi: recollections*, Oxford 1973 (jeune); 'Abd al-Hamīd Ishrāk Khāwarī *Sukhanrānī-yi Djanāb-i Ishrāk Khāwarī*, [Tehran] 1973-74 (uninformative); Dhikr Allāh Khādim, *Bi-yād-i mahbūb*, [Tehran] 1974-5; Shoghi Effendi, *God passes by*, Wilmette, Ill. 1944, idem, *The advent of divine justice*, New York 1939; idem, *The dispensation of Bahā'u'llāh*, New York 1934; idem, *The Promised Day is come*, Wilmette 1941; idem (tr. and ed.), Nabī-i-A'zam, *The dawn-breakers: Nabī's narrative of the early days of the Bahā'ī revelation*, New York 1932. For a full bibliography of Shoghi Effendi's English writings, see W.P. Collins, *Bibliography of English-language works on the Bābī and Bahā'ī faiths 1844-1985*, Oxford 1990, section V. Several volumes of Persian letters have been published. (D. MACEOIN)

**SHAWWĀL**, the name of the tenth month of the Muslim lunar year. In the Qur'ān (sūra X, 2), four months are mentioned during which, in the year 9/630-1, the Arabs could move in their country without exposing themselves to attacks (cf. "the sacred months" in v. 5). These four months were, according to the commentaries, Shawwāl, Dhū 'l-Qa'da, Dhū 'l-Hijjja and Muḥarram. In *Hadīth*, Shawwāl is therefore among "the months of pilgrimage mentioned in Allāh's Book" (al-Bukhārī, *Hadīth*, bāb 33, 37).

In pre-Islamic times, Shawwāl was considered ill-omened for the conclusion of marriages (*Lisān al-'Arab*, s.v.). In order to prove this opinion baseless, 'A'isha emphasised the fact that Muḥammad had married her in this month (al-Tirmidhī, *Nikāh*, bāb 10). In the modern Muslim world, there is difference of opinion concerning this point. Among the Muslim Tigré tribes of Ethiopia and Eritrea, Shawwāl is one of the months suitable for celebrating marriages; in 'Umān, on the other hand, it is considered ill-omened in this respect.

The law recommends fasting during six days following the 'id al-fitr ([q.v.]; cf. al-Tirmidhī, *ṣawm*, bāb 52, "Whosoever fasts the month of Ramaḍān as well as six days of Shawwāl, has reached the *ṣawm al-dahr*"; cf. also Muslim, *Ṣiyām*, trad. 203). Nevertheless, these days usually partake of the solemn character of the "lesser festival". For the same reason Shawwāl bears not only the epithet of *al-mukarram* ("the venerated"), but also such names as *faṭr kadām* (Tigré), *bayram* (Turkey), *faṭr 'l-awli* ('Umān), *uròè raya* (Acheh).

**Bibliography:** E. Littmann, *Die Ehrennamen und Neubenennungen der islamischen Monate*, in *Isl.*, viii. 228 ff.; Snouck Hurgronje, *Mekka*, ii, 97 ff.; idem, *The Achehese*, i, 237. (A.J. WENSING)

**SHĀY** [see ŠAY].

**SHAY'** (A.) "thing, entity".

The philosophical term *shay'* first of all has a generally accepted meaning: it designates that which is perceived concretely by the senses (*mudrak*) and at which a finger may be pointed (*al-mushār ilayhi*); although it

cannot yet be positively defined. However, in this perception, a thing is only a thing to the extent that, in the perception, it is distinct from another. In the plural, *ashya'* are objects given purely and simply as existing externally. They are to be distinguished from *a'yān* which signify the same objects, but in the sense that they are thought of in their individualised essence. Zayd and 'Amr are *a'yān*. It could be said that all people, philosophers and theologians included, employ the word *shay'* in this vague and general sense; it is a very frequent usage. Thus the Mu'tazilis speculate as to whether the shadow of a thing (*ẓill al-shay'*) is the thing itself or other than it. Some consider that it is other. Al-Djubbā'ī claims that the shadow is not a notion which has meaning in itself (*ma'nā*); the meaning of the shadow is that the thing casts a covering veil, not that it has a meaning in itself (*Maḳālāt*, ii, 96).

An interesting text of Fakhr al-Dīn al-Rāzī (*Mabāhiṭh*, i, 43-4) sets out the relationship between *a'yān* and *shay'*, where it is shown that existence is not that by which the thing is constituted in being (*dhābit*) but that it is the very fact of being constituted in being (*nafs kawm al-shay' dhābit*). "We mean by existence only the fact that the thing supervenes (*huṣūl al-shay'*), is realised and established in being .... If it is said that existence is an attribute (*ṣifa*) which demands that the thing is actualised in individual essences (*huṣūl al-shay' fi 'l-a'yān*), we shall say in this regard that it is not possible that the production of the thing in the *a'yān* should be caused by an attribute which is present in it". The demonstration which follows depends essentially on the consequence of such a conception, this being the infinite sequence of causes. The conclusion is that the existence [of things] "is only the fact of being constituted in the *a'yān*".

But the philosophical reflection of the Arab thinkers has led them to state that every person who speaks of a thing will *understand* what is meant by the word which he uses. He has a *mafhūm*. The Arab thinkers underlined the importance of the *mafhūm*, and they showed that it is indefinable, for the good reason that it is by means of it that a definition is possible; it is because it is understood through the word that expresses it that a concept can be defined. Ibn Sīnā (*K. al-Shifā'*) has in this sense assimilated the being in the capacity of the being (*ens qua ens*) to the thing, that is to the *mafhūm* of the word "thing". The thing is for him the equivalent of *mā* or of *alladhī*: "that which" (in Latin *quod*). It will be said in effect: the being is that which ..., or: the being is something which ...; in other words, the being is defined through the being, or through the *mafhūm* of the word, as the thing is defined through the thing or its *mafhūm*: a thing is some thing which .... Now when "that which" or "something which" is thus said, it is understood what is said, without need of definition. And if nothing were understood, there would be no definition. The thing is therefore the being in terms of being, in other words the fundamental *mafhūm* without which there would be no thought; it is, consequently, the foundation of all thought. Thus everything which is, everything which exists, whether an object (a house, a horse, etc.) or an abstraction (a feeling, a thought, etc.) can be called a "thing", and here there is constant use of the word which may be disconcerting to the Western reader but which is one of the most typical features of Arabic philosophical and theological language.

A question which then arises is: can the non-being be called a thing? Is there a "thingness" (*shay'iyat*) of the non-being, of nothingness (*'adam*)? Theologians and philosophers have upheld opposing theses on this topic.

At first sight, it is certain that if the thing is the *ens qua ens*, it would be contradictory to say that the non-being is a thing. This problem, which has tormented Arab thinkers, has a parallel in the theme of Plato's *Sophist*.

The Mu'tazilis reckon that the non-being is cognisable and that it is consequently a thing. Al-Djuwaynī made a survey of their opinions with the responses of the Ash'arīs (*al-Shāmīl*, 131-8): "If you maintain, they say, that the non-being is cognisable and is not a thing, it would be legitimate to say that there is an object perceived [by the senses] (*mudrak*) which is not a thing, which would be false". And the response is that it would be necessary to prove that there is equivalence between cognisance and sensible perception (*idrāk*). If so, any thing not perceived by the senses would be unknown, which is evidently false. Another Mu'tazilī argument is that we are aware of the negation of the impossible and the nothingness of the non-being. Here there are two negations: nothingness and non-being; impossibility and impossible. But how are we to distinguish between two negations, since negation does not contain within itself any discernment? It is necessary, however, to distinguish between, on the one hand, cognisance of the nothingness of the non-being, and on the other, the non-being itself. Cognisance of the nothingness of the non-being is thus not a non-being, as cognisance of impossibility is not impossible. It follows that the nothingness of the non-being, insofar as it is known, is *something*, since it is essential clearly to distinguish from the non-being the nothingness of the non-being which, itself, is known. And the response is that if that is the case, to distinguish the impossible from the possible, the impossibility of the impossible which cannot exist would need to be an entity (*dhāt*), in other words, a thing which exists.

This being so, al-Djuwaynī (134) criticises the notion of the "thingness of the non-being" (*shay'iyat al-ma'dūm*) and he castigates the Mu'tazilī of Baṣra al-Naṣībī, for whom the non-being, although it is neither an essence (*dhāt*) nor other than an essence, can be called "thing" in a general manner (*ittilāk*) and according to the language (*luḡat*). But this recourse to language is based either on reason or on current usage. However, languages are not created by reason but by convention (*iṣṭilāḥ*) or by divine institution (*ta'wīf*). Conventional institution cannot be used for purposes of argument here; as for divine institution, it demands that appeal is made to it only on the basis of Qur'ānic usage. Specifically, al-Djuwaynī's adversaries reckon that they can rely on Sūra XXII, 1: "Yes, the earthquake of the Hour [shall be] a tremendous thing (*shay' 'azīm*)". God thus calls it a "thing" before it has taken place, which would prove that He is using the word "thing" to denote that which does not yet exist. If it is said that there is no earthquake until the time that it exists, it can equally be said that there is no thing until the time that it exists. Furthermore, the words of the language are taken either in a literal sense or in a figurative sense. Languages, and hence the literal meaning of words, being variable, it is difficult to define in terms of a rational argument the literal meaning of the word "thing". Consequently, it must be acknowledged that this word is, in the majority of cases, used figuratively. It is thus not possible, according to al-Naṣībī's perspective, to justify the thingness of the non-being by a linguistic reference to the literal meaning of the word "thing".

Reflection on the "thing" also involves, on the one hand, the cognisance which God has of creatures, and

on the other, the divine attributes. The first question was of particular interest to the Mu'tazilīs. Hishām b. 'Amr al-Fuwaṭī did not say that God is aware of things from all eternity; God knows that He is unique, and if it were to be said that He is aware of things from all eternity, this would be to assert that they exist eternally with Him. When he was asked if God has known from all eternity the things that would exist, he answered that this implies that the finger can be pointed at things (*ishāra ilayhā*); only that which exists can be indicated. He did not call "things" that which God has not created and which is not, but he gave this name to that which He has created and to that which He has eliminated and which has become a non-being (*ma'dūm*). Al-Nazzām [q.v.] stated that God knows things eternally "in their time" (*fi awkāthihā*), i.e. in relation to the moment when He wills their creation. This leads to the notion that God knows things, not in themselves, but by means of His power and His will to create them. An analogous theory is found in the writings of 'Abbād b. Sulaymān: God does not cease to know things, substances and accidents. But He does not eternally know corporeal things, nor beings that are made (*al-maf'ūlāt*) and created (*al-makhlūkāt*). This idea seems close to that of *falāsifa* of the school of Avicenna, according to whom God does not know particulars as such but only their principles and causes. As for Muḥammad b. 'Abd al-Wahhāb al-Djubbā'ī [q.v.], he considered that God does not cease to know things, since things are things before being. Finally, others claimed that God does not cease to know things which have not existed and shall not exist. In fact, He knows all things which He can produce through one of His attributes: He knows them in this attribute (*Maḳālāt al-Islāmiyyīn*, i, 219-23).

A further question is: can it be said that God is "before things", or should it simply be said that He is "before", with nothing added? The disciples of 'Abbād b. Sulaymān say that He is "before", but not that He is "before things", no more than He is after things or the first among things (*awwal al-aṣḥyā'*). The disciples of al-Nazzām say that the Creator has not ceased to be "the anterior of things" (*kablu* [in the nominative case] *al-aṣḥyā'*), but not before things (*kabla* [in the accusative case] *al-aṣḥyā'*). It seems that here it is the case of the absolute anteriority of God, which the *falāsifa* call *takaddum* when commenting on Qur'an, LVII, 3, "He is the First"; this is the sense in which the neo-Platonists hold that the One is not a number, i.e. the first of numbers, but transcends the numerical succession; on the contrary, the expression "before things" implies a relationship to the thing which is inappropriate for God. However, the majority of Mu'tazilīs teach that God is "before things" (*kabla 'l-aṣḥyā'*) (*Maḳālāt*, i, 249).

As for the attributes of God, are they things or are they not? Some accept it, others deny it, since a thing has attributes, and when the attribute is defined as a thing with its attributes, no progress has been made. Similarly, when it is asserted that the attributes are not things because they are eternal, there is conflict with those who refuse to say whether the attributes are eternal or not; this touches on the problem faced by the Mu'tazilīs when distinguishing between attributes of the essence and attributes of action. If they are taken to be eternal, it is permissible to say that they are not things; but this is the crux of the question. In a general sense, before knowing whether the attributes are things or are not things, it would be necessary to know what they are in relation to God. But if the Ash'arīs are correct in saying that

they are not God and that they are not other than God, then how is it to be determined that they are or are not things? It could, of course, be said that when a particular attribute, such as knowledge or power, is considered, it is a thing by virtue of being an object of thought. But it does not follow that the attributes of God as such are things. The problem of the "thingness" of the divine attributes thus remains unresolved.

**Bibliography:** Ibn Sīnā, *K. al-Shifā'* (*al-Ilāhiyyāt*), ed. G.C. Anawati and Sa'īd Zayed, Cairo 1960, i, 30-1; Ash'arī, *Maḳālāt al-Islāmiyyīn*, ed. Muḥammad Muḥyī al-Dīn 'Abd al-Hamīd, 2 vols., Cairo 1950; al-Djuywaynī, *al-Shāmil fi uṣūl al-dīn*, ed. **SHAY' AL-KAWM**, the name of a Safaitic deity, unknown however in the pantheon of Central and South Arabia. In Safaitic inscriptions he appears as *ṣḥkum*, i.e. *Shay'* ha-Kawm, and it is only in the Nabataean and Palmyrene inscriptions (see G. Ryckmans, *Les religions arabes préislamiques*<sup>2</sup>, Louvain 1953 = Quillet, *Hist. gen. des religions*<sup>2</sup>, Paris 1960, ii, 199-228) that we have the form with the regular Arabic definite article, *Shay'* al-Kawm.

The name may refer to a tribal deity in the form of a lion or lion cub, so that *Shay'* Allāh (this theophoric name, probably a depaganisation of the god's name, is found in the lexica, e.g. *T'A*, v, 398 l. 29) could be parallel to the Biblical Hebrew name Ari-El (cf. Gesenius-Bahl, 65-6); according to Damascius, the ancestral god of Baalbek was worshipped in the form of a lion (W. Robertson Smith, *The religion of the Semites*, Cambridge 1894, <sup>3</sup>London 1927, 444-5). Recent Semitic scholarship has, however, suggested that *shay'* means here "comrade, companion", so that good sense may be made of the god's name as "escort, protector of the tribe" or "the fighting men of the tribe". An interesting feature, mentioned in a Palmyrene inscription by a Nabataean soldier, is the description of him as "the god that never drinks wine", a prohibition that may have extended to his devotees.

(T. FAHD)

**SHA'YĀ** (also *Asha'yā*), Isaiah, son of Amos, a prophet sent to Israel, unmentioned by name in the Qur'an (although *tafsīr* works mention him in connection with Qur'an, XVII, 4), but well known in *ḥiṣāṣ al-anbiyā'* literature, notably for his predictions of the coming of Jesus ('Isā [q.v.]) and Muḥammad. The story of Isaiah falls into three periods of prophecy. The account provided by al-Ṭabarī is typical. First, Isaiah is named as a prophet during the reign of Zedekiah (or Hezekiah, as in the Bible) and prophecies the king's death. The second period of prophecy occurs in the time of the siege of Jerusalem by Sennacherib (Sanḥārīb). After Isaiah announces that the king's death has been postponed for 15 years (because God has heard the king's prayer), God destroys all of the enemy forces except Sennacherib and five scribes. After parading them around Jerusalem for 66 days, Zedekiah follows the command of God and allows Sennacherib to return to Babylon. So the events become a "warning and admonition" of the strength of God. In the third period of prophecy,

the people are leaving the ways of God in the wake of the death of the king, and Isaiah warns them of doom. This leads to his martyrdom at the hands of his fellow Israelites. Isaiah flees when threatened and takes refuge inside a tree. Satan, however, shows his enemies the fringes of his clothes and they cut down the tree, killing him in the process (see M. Gaster and B. Heller, *Der Prophet Jesajah und der Baum*, in *MGWJ*, lxxx [1936], 35-52, 127-8).

(A. RIPPIN)

**AL-SHAYB WA 'L-SHABĀB** (A.), old age, senescence (lit. "white hair") and youth. This poetic theme of the Arabs has known a long and prolific history and has played, in urban post-Djāhili poetry, a role analogous to that of the *nasīb* in the moulding of the *qaṣida* [q.v.].

According to its etymology, *shabāb* apparently denotes the beginnings of anything. The term, together with *shabība* and *shabābiyya*, signifies not only youth and the beginnings of adulthood, but also the vigour of this age. The synonyms *fatā'* and *hadātha* are less often used: *sibā* is recorded as having the same meaning (*Lieder der Hudhailiten*, Berlin 1884 [= *Hudhaliyyin*], 96, l.8; al-Buḥturī, *al-Hamāsa*, Beirut 1387/1967, [= al-Buḥturī] 194, ll.18, 19; this period extends from puberty to the end of the thirties, or from 15 to 32 years of age; it is followed by the *kuḥūla* (Lane, s.v. *shabāb*).

The root *sh-y-b* features in Safaitic inscriptions in the forms *sh-y-b-t* and *'sh-y-b* (*Corpus Inscriptionum Semiticarum*, i, iv; G. Lankester Harding, *An index of Pre-Islamic Arabian names and inscriptions*, Toronto 1971, 363). *Sh-m-t*, given as an equivalent of *sh-y-b*, seems to have been of more limited use (al-Nābigha, ed. Ahlwardt, *al-'Ikd al-ḥamīn*, London 1870, vii, v. 26; L4, xiii, 45, l.5; al-Djāhiz, *K. al-Hayawān*, Cairo 1938-45, i, 347, l.10; Abū Dhū'ayb, *Dīwān*, Hanover 1926, 33, l.6; T4, v, 170, l.25; al-Akḥṭal, *Dīwān*, Beirut 1891, 69, l.6; Abū Zayd, *Navādir*, Beirut 1894, 144, 9; *al-Sulayk b. al-Sulaka, akhbārūhu wa-shi'ruhu*, Baghdad 1404/1984, 75). The lexicographers assert in this context that only *shamīṭa* can be used for feminine old age. However, in the *Lisān*, a verse is cited which mentions *musbilāt shaybuhunna wābiṭu* ("women despised for letting down their white hair", L4, ix, 303, l.4). *Gh-th-m* (in the form *aghtham*, "grey which is white rather than black") is also used as a synonym (Abū Zayd, *Navādir*, 52, l.4; L4, xv, 329, l.22). Finally, it is appropriate to mention *dh-r-*, which is given as an equivalent of *shamīṭa* (L4, i, 74, l.10, vi, 113, l.24, viii, 165, 6; Abū 'Ubayda, *Maḡāz al-Ḳur'ān*, Cairo 1347, i, 288, l.1; Ibn Kutayba, *Ma'ānī*, 1223; al-Buḥturī, 201, l.5; al-Tabarī, *Tafsīr*, Cairo, ed. Shākir, xv, 296, l.2; al-Bakrī, *Simṭ al-la'ālī*, Cairo 1354/1936, i, 480, l.13, ii, 967, l.3).

From the outset, semantics provides a hint of the dread engendered by the departure of youth and the appearance of the first signs of old age; thus *rā'yat al-shayb*, denoting the first white hair which appears on the head, derives from the root *r-w-* which expresses fright and terror (Kuthayyir 'Azza, i, 162; al-Buḥturī, 197, l.17; al-Sharīshī, *Sharḥ makāmāt al-Ḥarīrī*, Cairo 1300, ii, 222; cf. *ray'ān al-shabāb*).

It is very unusual for a poetic theme to link the

real and the imaginary to the extent that *shabāb* and *shayb* have done. Initially, the entire theme appears inexplicable, since the Bedouin did not tend to live long. Al-Djāhiz makes the comment in this regard: "There are among the Bedouin those who enjoy great longevity; however, accounts of them, in this respect, are tainted by numerous untruths" (*al-Hayawān*, i, 157). It was a society of the young; thus old people and their white hair were all the more visible and their situation all the more problematical.

1. The themes of youth and old age

a) *The real*

It is hard to comprehend the terror expressed in poems on this theme, in the light of the very widespread practice among men of dyeing the hair (*khidāb*), so extensive as to serve as a point of reference in the most diverse poetical texts (Imru' al-Qays, *Dīwān*, Cairo 1984, 176, where the blood of the slaughtered beast is compared with diluted henna as a dressing for the greying hair of an aged person; al-Buḥturī, 188, l.7; *al-Mufaḍḍaliyyāt*, Oxford 1918-21, 234, l.6, 288, l.20; L4, 462, l.25; T4, vii, 337, l.30; Djāriṣ, *Dīwān*, Cairo 1354/1935, 18, l.1). It is related in this context, that 'Abd al-Muṭṭalib was the first Meccan to introduce this practice to his fellow-tribespeople; he had discovered the benefits of dyeing during a visit to Yemen, where its use was very widespread (Ibn Ḥabīb, *K. al-Munammak*, Beirut 1405/1985, 112-13; Abū Hilāl al-'Askarī, *al-Awā'il*, Beirut 1407/1987, 17). Men who resisted this practice must have been few; among the poets, for example, only two, al-Murakkish al-Akbar and 'Antara, seem to have rejected dyeing. In this context, a certain adage is especially revealing: *al-khidābu ahad al-shabābayn* ("the dyeing of hair constitutes one of the two youths" [al-Tha'ālībī, *al-Tamthīl wa 'l-muḥāḍara*, Cairo 1961, 388]). Finally, opinions are divided as to its efficacy: while Maḥmūd al-Warrāk seems to favour it (Ibn 'Abd Rabbihi, *al-'Ikd al-farīd*, Cairo 1359-72/1940-53, iii, 50), Mālik b. Asmā' sees it as an imperfect solution which is incapable of deceiving female partners (*al-Hamāsa al-baṣriyya*, Haydarābād 1383, 188).

Within Islam, this practice receives the endorsement of the law. In *ḥadīth*, the Muslim is instructed to dye his white hair. As early as the 2nd/8th century the following tradition was in circulation: "The Jews and the Christians do not dye [their hair]; you must do otherwise" (Ibn Ḥanbal, *Musnad*, Būlāq 1313, ii, 240, 309, 401). Another tradition praises henna and *katm* (a black dye which masks the red of the henna (Ibn Ḥanbal, v, 147, 154, 156, 169). The sources contain copious information regarding the Companions, the Successors or *ṭābi'ūn* and the masters of later generations, who used the same products for the dyeing of their hair (Ibn Abi 'l-Dunyā, no. 3, ll.9-13; Ibn al-'Arabī, *Muḥāḍarat al-abrār wa-musāmarat al-akhyār*, Beirut 1388/1968, 349-50). Currently, in Salafī circles, this method of rejuvenation is recommended for men (Maḥmūd Shaltūt, *al-Fatāwā*, Cairo 1966, *ṣabgh al-shā'r*, 390-1; see also al-Māwardī, *al-Amthāl wa 'l-ḥikam*, Alexandria 1402, 152). In concurrence with the *Midrash* (*Pirkei Rabbi Eliezer ha-gadol*, Jerusalem 1973, § 51, § 52, 209), Muslim scholars declare that the Patriarch Abraham was the first man to see his hair turn white (*wa-huwa awwalu man ra'ā al-shayba fi 'l-dunyā*). Astonished, Abraham asked God what this signified. He was heard to say that it was a warning which urges the attentive man to prepare himself for future life and keep himself from sin. Another tradition, still in conformity with the *Midrash*, relates that Abraham and Isaac were so alike that

people were unable to distinguish one from the other. God smote the father with *shayb* as a means of setting them apart. Others, still speaking of Abraham, assert that *shayb* is a light and a tangible sign of majesty (*waḳār*; this is an accurate translation of the Midrashic term *hādār*; Rabbi Levitas used a formula which was to find lasting favour among the Arab poets, a crown of majesty, *keter hadūr be-rosho*, in *Pirkei Rabbi El'ezer*, loc. cit.). Understanding this, the Patriarch is supposed to have asked God to give him more; his hair then became all white (Sibt Ibn al-Djawzī, *Mir'āt al-zamān*, Beirut 1405/1985, i, 281). All of this gives the impression of a very favourable attitude towards this age, which is further confirmed by numerous other *ḥadīths*, (Ibn Abi 'l-Dunyā, no. 2, ll.14-5, 33).

All things considered, the fear of old age can be explained by the extent to which, in pre-Islamic society, the warrior was promoted to a rank of the highest prestige. Youth, indispensable for the practice of this occupation, was considered an inestimable advantage; its loss with the coming of *shayb* must have been regarded as an irreparable misfortune. On the other hand, it seems that the status of the war veteran and that of the old man were among the most precarious. The complaints of Sā'ida b. Dju'ayya on being relegated by his kinsmen to the remotest corners of the camp, in spite of his heroic record, are confirmed by the poetry of the *mu'ammariūn*. All insist on the tribal degradation of the aged hero: his leadership is utterly revoked; the tribe carries him as a dead weight. His kinsmen are ashamed of him, he is frequently scolded, he is relegated to the remotest corners of the tent for fear of his eccentricities and, henceforward, his advice is disregarded.

All lay the blame for their misfortunes on *shayb*; all evoke with nostalgia their glorious youth (al-Sukkārī, *Sharḥ ash'ār al-Hudhaliyyīn*, Cairo 1384/1965, iii, 1122-5; al-Sidjīstānī, *K. al-Mu'ammariūn*, Leiden 1889, 39, 40, 45, 47). It may be noted that the commentators on the *Kur'ān*, in their interpretation of *ardhal al-umr* ("the worst period of life", XVI, 79; XXII, 16) have given an image identical to that sketched by the *mu'ammariūn* (utterances attributed to Ibn 'Abbās in al-Ḳurṭubī, *al-Djāmi' li-ahkām al-Kur'ān*, Cairo n.d., 3756-7).

Islam, by means of the *Kur'ān*, *ḥadīth* and edifying texts, elevated the respect due to aged persons to the level of an essential moral principle. In parallel, there are traditions attacking youth; this impetuous stage is considered a branch (*shu'ba*) of folly (*al-shabāb shu'batun min al-djunūn* al-Māwardī, *op. cit.*, 131, 151). This attitude explains the advice given to young people to attempt to resemble the old (*ibid.*, 85). Finally, a man whose beard was not tinged with white was not regarded as fit to transmit *ḥadīth* (Wakī', *Akhbār al-kudāt*, ii, 54).

The very significant indications which have just been revealed provide a hint of a situation which is different from, and even opposed to, that described by the poetry of old age; furthermore, the persistence of pre-Islamic themes and their consolidation over the centuries following the disappearance of the *Djāhiliyya* clearly show that this vast corpus of work is dependent on the imaginary. Convention is the utterly dominant factor in this context.

#### (b) The imaginary

Poets dealing with this theme adopted a resolute and monolithic attitude. The two entities are absolutely antithetical, youth being considered the Good and old age representing Evil; such an approach tends to accentuate the conventional nature of this poetry.

#### 1. Youth

Youth is a precious possession and is dearly loved (semantic field jointly expressing the beautiful and the good; *ḥasan* = beautiful, al-Buḥturī, 181, l.14; *ḥamīd* and *maḥmūd* = "worthy of praise", *The Nakā'id of Djarīr and al-Farazdaq*, Leiden 1905-12, 963, l.10; *al-Aghānī*,<sup>3</sup> xii, 296, l.9; *Le diwān de Salāma b. Džandal*, Beirut 1910, 7, l.11; *fakḥr* = precious, *LA*, xvi, 61, 6; *TA*, ix, 78, 34; *li-llāhi durr 'l-shabābi* = "how excellent is youth", al-Buḥturī, 180, l.8, 186, l.7; Abu 'l-Shīṣ, 20). It is the age of vigour (semantic field expressing force, *ḥawī* = "robust", *al-Hamāsa*, 144, l.10; al-Mubarrad, *al-Kāmil*, Leipzig 1864-92, 766, l.16; *al-Hayawān*, ii, 201, l.2), of great ambitions (see below), of the good life (semantic field expressing recreation and debauchery, *lahawānā* = "we enjoyed ourselves", 'Abīd b. al-Abras, *Diwān*, Leiden 1913, 75, l.5; Aws b. Ḥajjar, *Diwān*, Vienna 1892, 4, l.7; *makhfūd al-'aysh* = "living in tranquility", *al-Hamāsa*, 576, l.1; *ladḥdha* = "pleasures", *al-Nakā'id*, 457, l.3) and of love affairs (*Hudhaliyyīn*, ed. Wellhausen, 76, l.8, Abū Ṣakhr al-Hudhalī, *al-Mufaddaliyyāt*, 773, v. 9; Salāma b. Džandal, 7, v. 13; Ibn Ḳutayba, *al-Shi'r wa 'l-shu'arā'*, Leiden 1904, 147, l.13; 'Ubayd Allāh b. Ḳays al-Ruḳayyāt, *Diwān*, Vienna 1902, 201, l.3).

#### 2. The loss of youth

One is forcibly robbed of this fortunate age ('Amr b. Ḳamī'a, *Diwān*, Cairo 1385/1965, 48-51; al-Buḥturī, 180, ll.18-21); furthermore, if al-Marzubānī is to be believed, 'Amr was the first poet to mourn over lost youth (*Mu'djam al-shu'arā'*, Cairo 1379/1960, 4). However, Abū Hilāl al-'Askarī (*K. al-Sinā'atayn*, Cairo 1352, ii, 155) proposes that primacy in this case belongs to 'Abīd b. al-Abras. The formulas belong to the semantic field of weeping and lamentation (*urritu min al-shabāb* = "I have been robbed [of the attire] of youth") of Abū 'l-'Atāhiya (*al-Anwār al-zāhiya fī diwān Abi 'l-'Atāhiya*, Beirut 1889, 32; al-Sarī al-Raffā', *al-Muḥibb wa 'l-maḥbūb*, Damascus 1407/1987, iv, 378; al-Nuwayrī, *Nihāyat al-arab*, Cairo 1342, ii, 26); those based on *bakā* ("he wept", 'Adī b. Zayd al-'Ibādī, 177; al-Buḥturī, 181, l.7-8; Di'bīl, clviii, 235), on *djazi'a* ("to show grief", al-Buḥturī, 280, l.16); on *fa-ndub* ("lament!" [imper.], al-Buḥturī, 181, l.8). In other contexts, these are exclamations of overwhelming grief which try to convey the sorrow caused by the irrevocable loss of a precious possession (*yā lahfa nafsi* "what a misfortune", al-Buḥturī, 180, l.18). Furthermore, all the formulae which evoke the departure of youth stress that what is involved here is a loan which must be repaid: *al-shabāb al-musta'ār* ("the youth which has been lent to us", 'Umar b. Rabī'a, *Diwān*, Leipzig 1901-9, 15, l.3); numerous words and combinations are borrowed from the language of death: *awdā* ("he has perished, death has claimed him", al-Namir b. Tawlab, in *LA*, i, 351, l.17, and ii, 180, l.16; other cases, al-Musāwir b. Hind, *Hamāsa*, 225, l.23; al-Aḥwaṣ, in al-Buḥturī, 190, l.6; al-Azharī, *Tahdhīb al-lughā*, Cairo 1384, ii, 382; etc.) *fanā* ("he has passed into annihilation", *al-Aghānī*,<sup>3</sup> xii, 292, l.6), *wa-kullu shabābun ilā ... bilan* (all of youth is a journey towards decay, Laylā al-Akhyaḷiyya, in Ibn Ḳutayba, *Shi'r*, 273, l.11; al-Buḥturī, 279, l.12; *Aghānī*,<sup>3</sup> xi, 241, l.10); at other times, the language used serves to evoke the absolute impossibility of a hypothetical return of *shabāb*: *hayhātī minka shabābun kunta ta'haduhu* ("how far from you is [a state of] youth that you used to know so well" Thumāma b. 'Amir al-Baḍjālī, in al-Buḥturī, 185, l.14) and the well-known *ayā layta [l-shabāba ya'ūdu yawm]* of Abū 'l-'Atāhiya ("is it possible that youth may return one day?" *Diwān*, 23);

Some ancient poets were acutely aware of the ephemeral nature of this joyous period, issuing an urgent appeal to enjoy the entertainments, pleasures and delights afforded by this age. For 'Alkama, only *shabāb* excuses licentiousness (*Dīwān*, al-'Ikḍ al-ṭhamīn, London 1870, 137). 'Adī b. Zayd al-'Ibādī justifies the antics of the young man (*ladhdhat al-fatā*) by reference to death, tirelessly lying in wait. Since pleasures are regarded as exclusively physical, the age which permits their procurement takes on, in their eyes, an unequalled importance. On the other hand, every hindrance is considered a misfortune: old age is thus an enemy as formidable as *manāyā* (death) and *zamān* (infinite time).

The libertine poets and the great lovers of Damascus and Medina under the Umayyads, and those of the 'Irākī metropolises under the 'Abbāsids, did not differ in their conception of these two antithetical entities. They expressed in convincing fashion the following idea. With old age, the conquest of women becomes impossible, but desire remains as vivid as ever; the problem is how to slake it (*Shi'r al-Hārithi b. Khālid al-Makhzūmī*, Baghdad 1972, 85; *Shi'r al-Aḥwaṣ al-Anṣārī*, Cairo 1970, 175; *al-Mukhtār min Shi'r Bashshār*, Cairo 1353/1934, 277, al-'Imād al-Iṣfahānī, *Khāridat al-kaṣr*, *kism shu'arā' al-Shām*, Damascus 1955-64, ii, 121, Ibn al-Buwayn; Bahā' al-Dīn Zuhayr, *Dīwān*, 73). This is not solely a matter of literature; a few poetical fragments have survived, where spouses mocked their aged partners and their inability to satisfy them (al-Baghdādī, *Khizānat al-adab*, Cairo 1409/1989, vi, 427-8; B. Yamūt, *Shā'irāt al-'Arab fi 'l-Djāhiliyya wa 'l-Islām*, Beirut 1934, 179).

In poetry, the appearance of this tangible sign of old age plunges the victim into a state of despair, the intensity of which may astonish at first sight. Whether it is a case of profane poetry, libertine poetry or that of the *zuhd*, the same tragedies described in the same terms arouse certain suspicions; furthermore, the classification of the poetical material reinforces the impression that what is presented here is in fact a literary fiction. Indeed, some works of *adab* have distributed these quotations according to the well-known pattern of the *maḥāsīn* (virtues) and the *masāwī'* (antitheses), in turn praising and deprecating *shayb* and *shabāb*; this process is attested in the work of al-Buḥturī, prior to the 3rd/9th century (al-Buḥturī, §§ 117, 118, 120, 121, contradictory pairs, the first evoking the negative and positive aspects of old age, the second those of youth). The structure of the chapters concerning old age in the work of pseudo-Tha'libī is constructed entirely according to this antithesis: paragraphs eulogising *shabāb* and *shayb* are matched by others which denigrate them (fols. 118 a-b, 118 b-119 b). The author surpasses himself in the last paragraph, where the negative and positive aspects of hair-dyeing are compared (*faṣl fi dhāmm al-khūdāb wa-madhīhi*, fols. 119 b-120 b).

### 3. Old age

This is an unwanted and spurned guest (*dayf baḡhīd*, 'Adī b. Zayd al-'Ibādī, 176; see also al-Farazdaq, *Dīwān*, Paris 1870, 107, 1.9; al-Akḥṭal, *Dīwān*, 168, 1.9; 'Umar b. Abī Rabī'a, *Dīwān*, 139, 1.6). It arouses the fear of the person affected (common semantic field expressing fright, *ra'aka 'l-mashību* "old age has plunged you into despair", 'Abīd, *Dīwān*, 6, 1.20; see also *Nakā'id*, 890, 1.4; *djaza'* "panic", *Aghānī*, xiii, 151, 1.9, Manṣūr b. Buḍjra; *al-Aṣma'iyyāt*, 44, 1.6, *shayb faḍī'* "dreadful old age"). This guest never comes alone, but is accompanied by a retinue of evils. Those most frequently evoked are worries, solitude and physical

decrepitude (Ibn Mukbil, *Dīwān*, Damascus 1381/1962, 184, speaks of feebleness, *da'af*; Ṭurayḥ b. Ismā'il al-Thaḡafī of his infirm, *mutada'dī*, body, al-Buḥturī, 194, 1.20; more specifically, Abu 'l-Naḍīm mentions the bent back, Ibn Qutayba, *Shi'r*, 385, 1.2) and mental decay, decline and imminent death. It is in other contexts considered an evil (*sharr*, al-Farazdaq, 107, 1.9; *al-Hamāsa*, 572, 1.15).

As soon as it is manifest, and can no longer be concealed, old age provokes the disgust of beautiful women (Abū Ṣakhr al-Hudhālī, *Hudhaliyyin*, ed. Wellhausen, 76, 1.8; 'Alkama, *al-Mufaddaliyyāt*, 773, 1.9; al-Aswad b. Ya'fur, *ibid.*, 348, 1.8; al-A'shā, *Dīwān*, London 1928, xxxiv, v. 3; Ibn Qhalaka(?) al-Tamīmī, in Abū Zayd, *al-Nawādir*, 255, 1.9; al-Buḥturī, § 120, devoted to the notion; Djarīr, *al-Nakā'id*, 844, 1.2; 'Ubayd Allāh b. Kaṣ al-Rukayyāt, *Dīwān*, 201, 1.3; al-Mubarrad, *al-Kāmil*, 330, 1.11; Dī'bil, vii, v. 44; xii, v. 52-3; xcvi, v. 3; clviii, the entire chapter, ccx, v. 1-5; Abu 'l-Shiṣ, 76, 99, 105-6, 108-9; Ibn al-Mu'tazz, *Tabakāt*, 75-6). This notion is attested in the majority of poems which have dealt with this theme, and it inspired one of the most esteemed verses on old age of the 'Abbāsid period:

*Lā ta'djābī yā Salma min radjulīn*

*daḥika 'l-mashību bi-ra'sihī fa-baka*

("Do not be astonished, O Salmā, at a man on whose head the white hair laughs, although he weeps") (Dī'bil, 204)

The poets who are affected by this condition speak of nubile women, insisting that they show restraint. In sprightly and elevated dialogues, and in defiance of his astonishment and indignation, they refer to the loss of potency which accompanies old age and to the dignity of deportment which is required in response to the first appearance of this sign; if he continues to cavort like a callow youth, he will offend social taboos. There is no excuse for excess at this age; dissipation is only to be excused among the young (Ibn Nubāta, *Dīwān*, ii, 407; al-Zamakhsharī, *Rabī' al-abrār*, ii, 424-5; *LA*, i, 324, 1.9, and *TA*, i, 223, 1.28, the maxim *lā shay'a akhṣā min zinā'i 'l-asṭiyabi*, "nothing is more demeaning than fornication by one who is smitten with white hair"). This collection of motifs is called *taṣābī 'l-shaykh*. In secular poetry, this *taṣābī* constitutes the basis of the share of the dialogue allotted to the female interlocutor; it is attested, furthermore, throughout the whole gamut of Arabic poetry until the *nahḍa* ('Abda b. al-Ṭabīb, *al-Mufaddaliyyāt*, 270, 1.7; Hassān, *Dīwān*, London 1970, 116, v. 11-12; Abū Hayya, 43, 63, 167, 168; see also Abū 'l-Tamahān al-Kaynī, *Dīwān*, Baghdad 1968, 23; Durayd b. al-Ṣimma, *al-Aghānī*, x, 16, 1.1; Aws b. Ḥajjar, *Dīwān*, 7, 11; Djarīr, in Ibn Qutayba, *Shi'r*, 307, 1.16; al-Farazdaq, *al-Nakā'id*, 869, v. 19; al-Kumayt, *al-Hāshimīyyāt*, Leiden 1904, 27, 1.1; al-Namarī, 84; Abū 'l-Shiṣ, 76). As regards this last motif, the majority of poets seem to imply that the lady has the right on her side. However, others are determined to refute these accusations. Their vigour, their youth of spirit and their force of personality have not been impaired; they implore the loved one to see *shayb* for what it really is, just a colour. The poet Kuthayyir appeals to 'Azza to continue loving an old man who remains, and always will remain, young (*yā 'Azza hal laki fi shaykhim fata' abadim*); he is careful to add that, for men of his stamp, biological age has no physiological or psychological influence (for other instances of this type, Ibn al-Mu'tazz, 209; Dī'bil, cliii, 197-8; al-'Ukbarī, *al-Tibyān*, Cairo 1308, i, 170). Sometimes, in his reply, the poet insistently declares to his partner that his white hair

is not due to age but to fearful ordeals that have been valiantly surmounted (al-Nābigha al-Djā'dī, in al-Ṭabarī, ii, 842, 1.15, *wa-lākītu raw'ātī<sup>m</sup> tuṣṣibu 'l-nawā-siyā* "I have faced terrible [battles] and the hair fringing my forehead has turned white;" see also 'Urwa b. al-Ward, *Diwān*, Göttingen 1863, 21, 1.3; Ibn Muḳbil, *Diwān*, 368; al-Asma'iyyāt, 19, 1.6). In this context, the same formula is attributed to the libertine al-Uḳayshir and to the *ghazal* poet Kuthayyir: *bihī shayb<sup>m</sup> wa-mā fakada 'l-shabāba* ("his hair has turned white although he has not lost his youth", *LA*, ix, 99, 1.12; *TA*, v, 85, 1.33; al-Djāhiz, *al-Hayawān*, iii, 60, 1.9; al-Bakrī, *Simt al-l'ālī* ii, 729, 1.1). On the other hand, in a motif related to that of the *taṣābī*, friends act in the same fashion as the lovely lady and no longer invite the unfortunate man to convivial meetings (Abū Ḥayya, 183; al-Namārī, 69; Abu 'l-Shīṣ, 36, 60, 75; Ibn al-Mu'tazz, *Ṭabakāt*, 77). This forced abstinence culminates in their assertion that happiness has disappeared with the ending of youth, *wallat ni'matu 'l-ayshī* ("the joy of life is ended", al-Buḥturī, 180, 1.6; 'Adī b. Zayd al-Ibādī, 176-7; Abu 'l-Shīṣ, 20).

Also, *shayb* indicates the death of close friends. In the context of the onset of white hair, Ibn Abī Du'ād evokes his weariness at having to make constant visit to cemeteries to pay his respects to deceased friends. In fact, this fearful guest portends the imminence of one's own death (Wakī', *Akhbār al-kuḍāt*, Cairo, iii, 299; Abū Nuwās, *Diwān*, 58; al-Shāfi'i, *Diwān*, 13; Yāḳūt, *Udabā'*, Cairo 1936-8, v, 324; al-Bākhārī, *Diwān*, i, 159. One *ḥadīth* asserts in this context that white hair is *iḥdā 'l-mītayn* ("one of the two deaths", *Rabī' al-abrar*, ii, 421); it is thus a sign that the end is near.

While this theme is essentially concerned with physical and social degradation and with sexual abstinence, it is a fact nonetheless that this poetry evokes certain changes in behaviour which are on the whole quite avoidable. Di'bil b. 'Alī al-Khuzā'i comments that with the onset of old age, he has been transformed from a cheerful hedonist and *bon viveur* into a carping critic (Di'bil, 44, v. 1: *kāna yunhā fa-nahā hīna 'nahā* "he was criticised; he became a critic when nothing else was left for him;" see also Abu 'l-Shīṣ, 108). The poetry of the *mu'ammariṇ* stressed this transformation of the personality. Abu 'l-Sammāl al-Asadī declares that grief has become an inseparable companion (*Mu'ammariṇ*, 65); al-Namir b. Tawlab comments that he is content with the minimum (*ibid.*, 80); al-Rabī' b. Ḍabū' al-Fazārī admits that, with the whiteness of his hair, he has become timorous (*ibid.*, 9); Labīd laments his own tendency to recount his memories ('Abd al-Salām Ḥārūn, *Maḍmū'at al-ma'ānī*, Beirut 1412/1992, 571). A single positive variation in this catalogue of gloom is that al-Ubayrid al-Riyāhī takes pride in the wealth of his experience (*ibid.*, 75).

All of this may be true, and may reflect profound distress among people who have nothing to wait for but death. However, it may equally well be a part of the poetic game; in fact, in the same poetic space, the same poet is to be found taking pride in his *shayb*. Abū Kabīr al-Hudhalī observes that white hair affects people of distinction (*LA*, vii, 127, 1.6; *TA*, iii, 622, 1.15; the same assertion figures in the work of Ibn Faswā, in Muḥammad b. Ḥabīb, *K. al-Muḥabbar*, Haydarābād 1361/1942, 143, 1.2; al-Marrār al-Faḳ'asī, *al-Mufaḍḍaliyyāt*, 143, 1.5; 'Umar b. Abī Rabī'a goes so far as to assimilate with *dhū shayba* the clichés typical of eulogistic poetry or of boastfulness, *wa-dhī shaybat<sup>m</sup> ka 'l-badri arwa'a azharā*, a man affected by venerable old age and shining white hair, *Diwān*, 159,

1.8; see also al-Buḥturī, 181, 1.13; 182, 1.12; 195, 1.6; al-Khansā', *Diwān*, Beirut 1889, 135, 1.13). It is appropriate to note that this notion differs from that which declares that *shayb* has not impaired one's former abilities; here, old age is eulogised in its own right. This could, indeed, be seen as a reaction of a compensatory type, but the reality is otherwise; what is involved is a literary theme. Anthologies and works of *adab* attest to this to a point beyond all expectation. In the writings of al-Tha'libī, for example, the section dealing with this theme belongs, according to the author's own classification, to the category of *taḥsīn al-kaḥī* ("beautification of the ugly", see *Bibl.*); this includes a collection of adages which celebrate the benefits of old age *min bāb taḥsīn al-kaḥī*, such as *al-shayb nūrī* ("white hair is my light" [67]). Even the greatest of fools (*al-ghāfil*) "can find here a guide on the way to rectitude thanks to the lights of his senescence" (*iḍhā shāba 'l-ghāfilu sāra fi ṭarīqi 'l-nuṣḥi bi-maṣābihi 'l-shaybi*, *loc. cit.*). For his part, al-Mubarrad considers this poetical corpus as belonging exclusively to a convention of composition (*K. al-Fāḍil*, 72).

In the same scheme of ideas, the white hair of courageous young men who have experienced traumatic events is likewise something to be boasted of (Ibn Sa'd, *Ṭabakāt*, Leiden 1918, i/2, 80, 1.10; *al-Nakā'id*, 442, v. 43); it is attested in martial poems in eulogies conferred upon heroes ('Amir b. al-Walid, *al-Aghānī*, xi, 102, 1.3; Umayya b. Abi 'l-Ṣalt, *Diwān*, Leipzig 1911, 55, v. 22; Naṣr b. Muzāḥim, *Wak'at Sifṭīn*, Beirut 1340/1921, 300, 1.14; Ibn Zāhir al-Asadī, in al-Mubarrad, *al-Kāmil*, 666, 1.4; A'shā Ḥamdān, in *al-Aghānī*, vi, 41, 1.9; Surāka al-Bārīkī, in al-Ṭabarī, ii, 879, 1.14).

In general, the *fakhr* genre accounts for a large proportion of Djāhili and Umayyad poetry of old age. The pattern is fairly predictable. It is admitted that it is true, my hair has changed colour; that is unimportant, since I have led an exemplary life filled with acts of generosity and heroism in war (Imru' al-Kays, *Diwān*, 230-1, 335; Abū Kabīr, *Sharḥ aṣḥār al-Hudhalīyyīn*, 1069-70; Humayd b. Thawr, *Diwān*, 1384/1965, 94-5; Ibn Muḳbil, *Diwān*, 72-4, 133, 184; 'Ubayd Allāh b. Kays al-Ruḳayyāt, in al-Buḥturī, 309). Clearly, these are conventional notions which have long been a part of the genre; sexual prowess and the qualities of *murū'a* are combined to enhance the image of a man and to make of him a perfect model.

#### 4. Edifying poetry

The appearance of *shayb* is variously interpreted. On the one hand it is supposed to favour the enhancement of moral qualities and behaviour, assiduous application to religious practices and a total adherence to precepts of prudery (al-Kālī, *Amālī*, Cairo 1953, ii, 95; al-Zamakhsharī, *op. cit.*, 417-20). From another perspective, the poetry of *zuhd* is intended to frighten; this is why Maḥmūd al-Warrāk and Abu 'l-'Atāhiya consider this sign as a portent (*naḍhīr*) of death which sets in motion the process of *ḥiṣād* (harvesting) which gathers up people who are already of advanced age. God sends this advance warning to allow men to prepare themselves on the eve of imminent decease (Maḥmūd al-Warrāk, *Diwān*, 39, 42, 78, 87, 107, 109, 114; Abu 'l-'Atāhiya, 39, v. 3-4, 44-5, v. 3-6 and 13-14, 51-2, starting from v. 4, 67-8, 71-2, 109-10, v. 13-6 and 21-4).

#### II. Poetical treatment

##### 1. Evolution of the theme

At the time of the Djāhiliyya, this theme took on the form of a concise evocation in the framework of *nasīb*. More substantial and of greater thematic impor-

tance are the verses which appear in poems attributed to the *mu'ammari*n, where the contrast *shabāb/shayb* constitutes the central axis on which the multiple motifs are brought into play, and the conceptual principle on the basis of which all the evocations can take shape.

With the development of urban civilisation and the appearance of a subsequent culture, poets subject this theme to original forms of literary treatment. In addition to long works, where *shayb* appears in an incidental fashion, fragments dealing exclusively with the theme begin to appear in ever increasing numbers; the latter, much closer to hastily conceived and executed improvisation than to mature and elaborate poetry, adopted this subject with a uniformisation of compounds, of poetic language and of the whole range of comparative tropes. These facile and ephemeral little pieces constitute a large proportion of this corpus. To this category belong the literary games between scholars (the *ikhwāniyyāt*). Protestations of friendship are found integrated there with the theme of youth and of old age, the poet delights in evoking his old age, the disappearance of beautiful women and of the *nudamā'* and the melancholy of a man in the twilight of his life (al-Namari, 68-9); quite often poems of *hanīn ilā 'l-awṭān* ("nostalgia for the homeland") opt for the same treatment, linking the *hanīn ilā 'l-awṭān* to the *hanīn ilā 'l-shabāb* (al-Namari, 116); al-Mas'ūdi, in a subsidiary text of *al-Tanbīh*, at a time of self-assessment, writes with the same feeling of *al-sibā* and *Baghdād* (al-Mas'ūdi, *Le livre de l'avertissement*, Paris 1846, 66-7).

The *Ẓurafā' al-Kūfa* ("the elegant persons of Kūfa") provide this theme with its finest artistic manifestation. Five long fragments by Yahyā b. Ziyād al-Ḥārithī (al-Buḥturī, 188-90, nos. 1,000-4) place alongside the habitual lamentations a novelty: *shayb* and *shabāb* are treated in tandem, with both considered equally good. Yahyā's companion, Muṭī' b. Iyās, composed one of the best surviving specimens; indeed, this poem of 17 verses begins and ends with lamentations. Between the two, the poet evokes his youth, seen as a personal friend, with good-natured nostalgia (plethora of terms in this register: *khatīl*, *ṣafī*, *uns*, *akḥū thika*); reliving his youth, Muṭī' adopts a rapid and petulant rhythm, using the *munsarih*, one of the most musical metres of Arabic poetry. The spirit which dominates here is decidedly original. This *roué* is careful not to represent youth as the time of unbridled dissipation, according to the customary scheme. Like any true friend, he is attentive and encouraging; he offers loyal support, but will countenance no complacency; fighting our natural laziness, he urges us to realise our most noble aspirations; and finally, he is an always available confidant (Von Grunebaum, *Shu'arā' 'abbāsiyyūn*, Beirut 1959, 33-4). Von Grunebaum appreciated this poem, which is reminiscent in tone of Theognis of Megara.

In the 3rd/9th century, Ibn al-Rūmī is reckoned to have carried the theme to its highest point. In the prelude to a set-piece, he reflects on his past and completes the balance-sheet of his life, from callow youth to maturity. The structure of this very simple passage, beginning with *shayb* (vv. 1-31) and ending with *shabāb* (vv. 32-70), gives it the appearance of an introspection, accentuated by the repetition of *yudhakkirunī 'l-shabāba* ("my youth returns to my memory through..."). It is important, however, to avoid overestimating the significance of these conclusions; the issue here is of individual arrangements or, if preferred, of happy accidental finds in the framework of

a traditional theme (*Dīwān*, i, 255-9). Al-Mubarrad, who was also an excellent judge of poetry, comments in this regard *annahum kālū fī bābi taṣarrufi 'l-zamāni wa-taṣarrumi 'l-ādḡāli akāwila ma'nāhā wāḥidā* ("they (sc. the poets) have spoken, concerning the chapter on the passing of time and the ending of life, verses of which the sense is identical", Von Grunebaum, *Al-Mubarrad's epistle on poetry and prose, in Orientalia*, x [1941], 377-8).

A similar theme, already clearly visible in the various evocations of this theme before Ibn al-Rūmī, is accentuated in later poets: from the 4th to the 9th/10th-15th centuries, poets paraphrase Ibn al-Rūmī in longer pieces and in fragments. The two Sharīf, al-Raḍī and al-Murtaḍā (*al-Shihāb*, 28-52; *Dīwān al-Sharīf al-Murtaḍā*, Cairo 1958, i, 199; *al-Shihāb*, 54-84), Bahā' al-Dīn Zuhayr (*Dīwān*, 73), Ibn Sanā' al-Mulk (*Dīwān*, 17, 52, 70, 72, 74, 459, 517, 576, 597-8), al-Fityān al-Shāghūrī (*Dīwān*, Damascus 1966, 51), Zāfir al-Haddād (*Dīwān*, 257-8) and many others mourn for lost youth and lament the consequences of their *shayb*, using the same poetic language, the same combinations and the same *mā'ānī*.

## 2. *Shayb and the transformation of the prelude of the ḡasida*

Under the Umayyads, the *nasīb* genre had more and more recourse to the theme of lamented youth; the refinement of tastes renders it indispensable to the *ḥusn al-takhallus*. It is considered an essential intermediate link between love/memory and the quest for a patron. From another perspective, the circumstances of libertine poetry impel the poets, especially in pieces where a certain tension is expressed, to resort to a prelude redolent with an atmosphere of contrast, introducing the pairings of old age/youth and the desired woman/the woman who rejects. This procedure breathes new life into the romantic prelude, since what is observed is a very vivid exchange of opinions, a duel between the beloved woman and the lover poet, all on account of the latter's advanced age and the loss of his hair. This technique of composition also permits the setting-down of accumulations of semantic opposites and thereby arrival at a more dense poetical text (see below).

At the end of the Umayyad age, and especially under the 'Abbāsids, despite the persistence of the former frameworks (Abū Ḥayya al-Numayrī, 34; Abū 'l-Shīṣ, 36-7), the prelude underwent a veritable revolution on account of the theme of old age. Numerous patterns are attested: (i) the poet retains from the amorous prelude the evocation of the *diyār* ("encampments") and the recollection of his past loves (when he was loved and his hair was black), and two new motifs are introduced, the mention of youth and the appearance of senescence (Abū 'l-Shīṣ, 34, 36-7); (ii) the appearance of overtures devoted exclusively to *shayb*, without regard to the subject of the poem. In the work of Abū Ḥayya al-Numayrī, a *mukḥḍram al-dawlatayn* poet (d. ca. 158/762), the opposition of these two antithetical, integrated elements constitutes the sole texture of the openings of poems. Eleven verses on *shayb* are attested there, a clear sign that the theme has attained full maturity, since it is only by means of it that the introduction of a long, set-piece poem is to be properly furnished (*ḡasida* iii, 42-5, dedicated to al-Hakam b. Ṣakhr al-Thakafī; see also number iv of the *Dīwān*; 'Abd Allāh al-Khaṭīb, *Ṣalīb b. 'Abd al-Kuddūs*, Baghdad 1968; 123; *Bashshār*, *Dīwān*, 1369/1950, i, 362, ii, 326; al-Husayn b. Muṭayr, *Dīwān*, in *RIMA*, i [1969], 226; Ibrāhīm b. Harma, *Shī'r*, Cairo 1389/1969, 226; Marwān b. Abī Ḥafṣa, *Shī'r*, Cairo

1973, 73, 77, 94; Di'bil, ccx, 254-5, the well-known poem in *-inā*, where he replies to al-Kumayt b. Zayd, pronounces a eulogy on the men of Yemen and recalls the base deeds of Ma'add; see also xix, 59-60, the opening of an *urjūza* dedicated to al-Ma'mūn). The variety of motifs attested in pattern (ii), despite their conventional nature, breathes new life into the prelude, an essential and indispensable component of every poem of this type. Notable here are nostalgia for past youth; the first signs of old age; the appearance of white hair; the mockeries of the beautiful woman; the retort of the elderly poet, his pride wounded, recalling his former vigour and his profligacies; finally, some poets place at the outset of an urban *kašida* an introduction in which *naṣīb*, *shabāb-shayb* antithesis and Bacchic poetry are combined (Abū 'l-Shīṣ, 60, 75-6, 105-6).

This transformation of the prelude should come as no surprise; the patrons, the sole recipients of poems of eulogy and occasional verses, had no wish to hear more about, or see themselves associated with, the destruction, disappearance and desolation which rule the theme of *bukā'* *'alā 'l-aṭlāl*.

A different elegiac opening was required, and *al-shabāb wa 'l-shayb* was eminently suitable. With the sophisticated play of oppositions and the high literary tone of comparisons and metaphors, it was possible to dabble in sentimentality without dwelling on the theme of the death which was feared, with justification, by members of the aristocracy only too aware of the precariousness of their situation. An old age of high quality offered an excellent alternative. The poet took great care to avoid mention of anything which could be disconcerting to his readers, such as physical decay or death; old age here is ahead of its time, putting forward the image of a man in the prime of life, conversing with a beautiful girl. Perfectly suited to the new mentality, the new introduction silenced the existential anguish of its pre-Islamic predecessor.

### 3. Poetic techniques

For youth, the tendency is to use combinations and metaphors where black is predominant; for old age, working on the assumption of symmetrical opposition, the preferred option is a semantic field based on white. Examples of the former are as follows: *al-ra's al-ahwā* ("the black head"), *ḥālīk al-lawn* ("of a very dark black colour"), *ghurāb kāna aswada ḥālīkī* ("a raven which was black as jet", Abū Hayya, 121), *ghurāb ghudāf* ("crow with black [feathers] supplied", *ibid.*, 42). Such are the emblems of *shabāb*. Examples from the opposing side are: *'alā wadaḥ<sup>m</sup> ka-lawmī hīlālī* ("white hair has appeared, the colour of which is equal to that of the crescent moon", Abū Hayya, 63), *ra's istanāra* ("a head which is illumined", Abū Hayya, 43), *'akārīb biḍ ... lahumna dabīb* ("white scorpions ... which crawl", Abū 'l-Shīṣ, 20), *ra's iṣṭu'al* ('Adī b. al-Riḳā', 108, v. 1; cf. *Qur'ān*, XIX, 4).

In fact, this language was destined to establish a whole range of oppositions which have given the theme its characteristic appearance:

Youth	Age
shining black	dirty white
bodily vigour	enfeeblement
upright carriage	decrepitude of body
contentment with life	peevish resentment
inexperience and haste	wisdom and equilibrium
decisiveness	irresolution
time of pleasures	time of enforced abstinence
the admired hero	the despised dead-weight

The first column has the overall advantage. Only the fifth item accords superiority to the old, although poets repeatedly insist that they would willingly forgo this asset. On the other hand, comparisons enabled the poets to add a new series of oppositions to the poem and thus to confer on these passages a fairly pronounced air of preciousness. Thus, for example, in the analogy of the jet-black raven applied to the hair of the young man (*ghurāb aswad ghudāf*, see above). The poet opposes to it the shining whiteness of the *ṣabāḥ* ("morning"); this uniting of opposites entails a chain-reaction of a paradoxical, hence quite unexpected nature. This black crow, contrary to what is normally accepted (*ghurāb al-bayn* "the crow of separation") is appreciated and symbolises joy, good fortune and freedom from care, not the sinister desolation of wastelands. Thus all the symbolism associated with black is rejected by this poetry. On the contrary, the *ṣabāḥ* ("luminous morning") of the hair is detested; its light, once it appears, plunges a man into despair, misfortune and sorrow. The poets accumulated such paradoxes in verses and fragments on this theme, contravening ancestral patterns of expression and thought. The end-result, with urban culture, was the emergence of a poetry of *shayb* redolent of "verbal fantasy", in the words of Von Grunebaum.

**SHAYBA**, BANŪ, the name of the keepers of the Ka'ba (*sadana*, *ḥadjaaba* [see SĀDIN; ḤĀḌIIB]), whose authority does not extend over the whole of the sanctuary (*masjīd al-harām*), nor even as far as the well of Zamzam and its annexes. They are the Banū Shayba or Shaybiyyūn and have as their head a *za'im* or *shaykh*.

Modern works only give brief references to them. Snouck Hurgronje gave the days on which they opened the door of the Ka'ba. He noted that they only admitted the faithful on payment of a fee and quoted the witty Meccan saying: "The Banū Shayba are wreathed in smiles; this must be a day for opening the Ka'ba". They found a further source of revenue in the sale of scraps of the covering of the holy house, which was replaced every year by their care [see KISWA]. The embroidered parts reserved in theory for the Ottoman sovereign were given more or less gratuitously to the great personages who represented him at Mecca and on the *ḥajj*. The remainder, in accordance with custom (Wüstenfeld, *Chroniken d. Stadt Mekka*, iii, 72), was the perquisite of the Shaybiyyūn, who sold it in the little booths at the Bāb al-Salām (al-Batanūnī, *al-Rihla al-hiǧāziyya*, Cairo 1329/1911, 139), the ancient Bāb Banī Shayba, the principal gate of the mosque. They also sold there the little brooms made of palm leaves, which were all alleged to have been used for cleaning the floor of the Ka'ba, a solemn ceremony in which the greatest personages gloried in participating (Ibn Djubayr, *Rihla*, ed. Wright, 138; al-Batanūnī, 109). They also had the charge and care of the offerings made by the faithful, which adorn the interior of the holy house. This treasure comprised the most diverse objects, articles of gold and of silver, precious stones, lamps richly adorned, foreign idols, the offerings of converts in distant lands. This treasure was regularly plundered by the Amirs of Mecca, by the governors, by its guardians and even by the Shaybiyyūn themselves (M. Gaudelroy-Demombynes, *Le Pèlerinage à la Mekke*, Paris 1923, 57) although according to tradition, the grand master Shayba is said to have defended it against the attempts of the caliph 'Umar (Ibn al-Athīr, *Uṣd al-ghāba*, iii, 8). They had charge of the interior curtains of the Ka'ba. They had at one time the care of the *Maḥām Ibrāhīm* [q.v.] which was considered a dependence of the holy house.

The possession of these diverse functions by the Shaybiyyūn became latterly so generally recognised that it attracted no attention. They evoked a more lively interest from earlier authors, and especially from the pilgrims. The principal narratives are those of Ibn Djubayr in 579/1183 and of Nāṣir-i Khusraw in 437/1046. The visit to the Ka'ba accompanied by a *ṣalāt* of two *rak'as*, made if possible, at the very spot where the Prophet performed them on the day of the taking of Mecca, is a pious act, which is not a part of the rites of the Pilgrimage, but one from which the pilgrims themselves hope to acquire further merit, although the people of Mecca seem to attach but slight importance to it. The dates of the public opening seem to have varied a little (*Le Pèlerinage*, 60 ff.) but the ceremony has remained unchanged. The *za'im* alone has the key of the Holy House, the history of which is given below. When the gangway (*daraǧī*), which gives access to the door which is above ground

level, has been put into position by the Shaybiyyūn, their chief advances and, while he is inserting the key, one of his acolytes hides it from the gaze of the faithful. In the 6th/12th century (Ibn D̲j̲ubayr, 93; *Le Pèlerinage*, 59), he held a black cloth (the 'Abbāsīd colour) in his extended hands. A century earlier (Nāsiri Khusraw, 209), there was a curtain on the door which a Shaybī lifted to allow the *za'im* to pass and which he let fall again behind him. The Prophet had veiled (*satarahu*) the door on opening it (al-Ya'kūbī, *Ta'rikh*, ii, 61). In imitation of the Prophet, the *za'im* enters alone or with 2 or 3 acolytes, prays the two ritual *rak'as*, then opens the door to the public, whose admission he regulates. The Persian pilgrim as well as the Spanish one made a visit to the Ka'ba and they both noted the miracle, which allowed this very small building to hold at one time such a large number of the faithful. Nāsiri Khusraw counted 720 in it at the same time as himself. Ibn D̲j̲ubayr was particularly interested in the Ka'ba and its *ḥaḍaba*. He was present at the reception of Sayf al-Islām Tuḡtigin, the brother of the Ayyūbid Ṣalāḥ al-Dīn (146-7), on whose left hand the *za'im* of the Shaybiyyūn solemnly entered the mosque; the *za'im* Muḥammad b. Ismā'il b. 'Abd al-Raḥmān was his chief informant (81). He tells us that during his sojourn, the Amīr of Mecca, Mukṭhir, arrested the *za'im* Muḥammad and, accusing him of such baseness of conduct as was "unworthy of the guardian of the Holy House", confiscated his goods and set up in his place one of his cousins, whom popular report accused of the same vices. Then some time after, he saw the *za'im* Muḥammad, after paying 500 dīnārs to the Amīr, re-established in his office, strutting proudly before the gate of the Ka'ba (163, 164, 166, 179). This act of dispossession does not prove that there was any exact custom which regulated the relations of the Amīr with the Banū Shayba. Under al-Mutawakkil (232-47/847-61), they sent delegates to the caliph at Baghdād to assert, in opposition to the proposals of the governor of Mecca, their right to decide what works were necessary to undertake at the Ka'ba; the master of works sent by the caliph was to apply only to them. When he came to make his first enquiry, the master Ishāk was, however, accompanied by the *ḥaḍaba shaybiyyūn*, and also by the governor, by pious individuals and by the *ṣāhib al-barīd* "the postmaster", in reality the redoubtable intelligence officer of the sovereign (*Chron. d. Stadt Mekka*, i, 210, 11).

The privilege of the Banū Shayba is very old; the historians of the 3rd/9th century Ibn Hishām, Ibn Sa'd, al-Ya'kūbī and the compilers of collections of *ḥadīths* confirm this; but they pile up proofs of its legitimacy in a way that makes one think it was recent and disputed.

According to tradition, Kuṣayy [*q.v.*], the ancestor of Quraysh, had reserved the guardianship of the Ka'ba (*ḥiḍāba*) for 'Abd al-Dār and his descendants. At the time of the conquest of Mecca, it was in the hands of 'Uṭhmān b. Ṭalḥa b. Abī Ṭalḥa 'Abd Allāh b. 'Abd al-'Uzzā b. 'Uṭhmān b. 'Abd al-Dār (al-Ṭabarī, iii, 2378; *Uṣd al-ghāba*, iii, 7, 372, etc.). Ibn Sa'd (*Ṭabaqāt*, v, 331) has a variant story which casts doubts upon the near relationship of 'Uṭhmān and Shayba, while the genealogy given by the *za'im* to Ibn D̲j̲ubayr (81) intercalates an ancestor Shayba unknown to the other authors. 'Uṭhmān by a happy foresight was converted at al-Hudaybiya [*q.v.*] with other notable personages of Mecca, although several members of his family had perished at Uhud in the ranks of Quraysh (al-Ṭabarī, i, 1604; *Aghānī*, xv, 11;

Ibn Sa'd, v, 331, etc.). On the day of the taking of Mecca, he accompanied the Prophet to the Ka'ba and the latter demanded the key from him; in general, the authorities say that he gave it up, but according to one tradition (Badr al-Dīn al-Aynī, *Umdat al-kārī*, iv, 609; *Chroniken*, i, 187), 'Uṭhmān, a new convert, had to get it from his mother, an infidel, who had charge of it and who refused to give it up. 'Uṭhmān had to threaten to kill himself before her eyes. According to another authority (*Chroniken*, i, 185), she heard in the courtyard of the house the threatening voices of Abū Bakr and of 'Umar before she decided to give it up (cf. Ibn Khaldūn, *Ibar*, ii, 44). But another tradition which does not assume the conversion of 'Uṭhmān in 8/629-30, shows him on the terrace of the Ka'ba holding the key in his hand and shouting to the Prophet: "If I were sure that he is the Messenger of God, I would not refuse it to him". 'Alī climbed up, held his hand out, took the key and himself opened the door; here 'Alid bias is evident (al-Rāzī, *Mafātīḥ al-ghayb*, ii, 460; al-Kalkashandī, *Subḥ al-a'shā*, iv, 264). The general tradition is that the Prophet, in possession of the key, opened the door and entered with 'Uṭhmān, Bilāl and Usāma, prayed two *rak'as* in a spot which is to-day held sacred and went out holding the key in his hand. At this point, the traditions differ once more in detail, but end in the restoration of the key to 'Uṭhmān; according to one account, the Prophet either on his own motion or because of the appeals of al-'Abbās or of 'Alī, leant on the posts of the door of the Ka'ba and made a speech which ended: "Everything is under my feet except the *sidāna* and the *sikāya* of the pilgrims, which are going to be restored to those to whom they belong". He gave the *sikāya* to al-'Abbās and returned the key to 'Uṭhmān; according to the other tradition, the Prophet came out of the Ka'ba uttering verse 61 of sūra IV, which according to an opinion which al-Ṭabarī (*Tafsīr*, v, 86) accepts as only of secondary value, was revealed at this moment and applies to the *sidāna* and the *sikāya* (Yāqūt, *Mu'djam*, iv, 625; al-Rāzī, *Mafātīḥ*, ii, 460; *Chroniken*, i, 186).

But 'Uṭhmān, master of the *sidāna* and of the key, did not exercise his rights; he followed the Prophet to Medīna and died there in 42/662-3 or he was killed at Adjnādayn [*q.v.*] in 13/634. No-one mentions him further, and authors take the precaution of making the Prophet say that he returned the *sidāna* to 'Uṭhmān and to Shayba, and to the Banū Ṭalḥa (Ibn Taghribirdī, *Nuḍjūm*, i, 138; al-Nawawī, *Minḥādī al-ṭālibīn*, 407; *Uṣd*, iii, 372; *Chroniken*, i, 184).

This attempt to make the first cousin of 'Uṭhmān, Shayba b. 'Uṭhmān b. Abī Ṭalḥa, be present at the taking of Mecca is unfortunate. Shayba was not yet a Muslim, although some late authors tentatively tried to convert him at the taking of Mecca. They were not able to escape the legend, which grew up round the conversion of Shayba a month later. Shayba sought out the Prophet in the middle of the combat in order to take vengeance for the death of his father, who had been killed at Uhud by Ḥamza, but from the Prophet a light emanated causing him to lose heart. Muḥammad put his hand upon his heart and caused the demon to depart from him. Shayba was converted (al-Ya'kūbī, ii, 64; Ibn Hishām, 845; Ibn Sa'd, v, 331; al-Ṭabarī, i, 1661, 3; *Uṣd*, iii, 7; *Chroniken*, ii, 46; etc.) and without the writers knowing why, Shayba became the keeper of the Ka'ba; all his family hastened to come to his assistance; his brother Wahb b. 'Uṭhmān, the sons of 'Uṭhmān b. Ṭalḥa, those of Musāfi' b. Ṭalḥa b. Abī Ṭalḥa who was killed at Uhud, "It is

then", concludes al-Azrakī (*Chroniken*, i, 67), "all the descendants of Abū Ṭalḥa who in general exercise the *ḥijāba* (*Chroniken*, i, 67)". But according to all the traditionists, it was Shayba who was their chief. It was he who had the power to demolish houses dominating the Ka'ba (*Chroniken*, iii, 15). It was he who came into conflict with Mu'āwiya about the sale of a house and who at the time of the second pilgrimage of the Caliph, not wishing to be disturbed, sent his grandson Shayba b. Ḍjābir to open the door of the sanctuary (*Chroniken*, i, 89). It was he who arbitrated between the two *ḥādīdī* chiefs, the partisans of 'Alī and those of Mu'āwiya (al-Ṭabarī, *Annales*, i, 3448, iii, 2352; al-Mas'ūdī, *Murūdj*, ix, 56-7 = § 3632); one of his sons 'Abd Allāh or Ṭalḥa was a victim of the "abominable" al-Kasrī (*Chroniken*, ii, 37, 38, 175). It was he who appears in one of the versions of the *ḥadīth* where 'Ā'isha wished to have the Ka'ba opened (*Chroniken*, i, 220, 222, 223). There were discussions with 'Ā'isha which settled that it was lawful for the Shaybiyyūn to sell parts of the covering (*kiswa*) but only for the maintenance of the poor (*Chroniken*, i, 180, 182, iii, 70-2; al-Kalkashandī, iv, 283); in spite of the efforts of the makers of *ḥadīths*, the question was discussed by jurists and in 621/1224, the Ayyūbid al-Malik al-Kāmil, the nephew of Ṣalāḥ al-Dīn, purchased from the Shaybiyyūn, for an annual fixed sum, the revenues that they drew from the opening of the Ka'ba and forced them to open it free of charge (*Chroniken*, i, 266). Shayba died in 57/676-7 or under Yazīd b. Mu'āwiya (al-Ṭabarī, iii, 2378; Ibn Sa'd, v, 331; *Usd*, iii, 8).

The tradition which gave to the Shaybiyyūn the *ḥijāba* of the Holy House is an ancient one. It is still perpetuated in the name of the archway, which, beside Zamzam, marks the ancient boundary of the wall of the *masjid al-ḥarām*. When the former had been enlarged, the new gate, called at the present time Bāb al-Salām, which was in a line with the Ka'ba and the ancient arcade, was called in its turn Bāb Banī Shayba (*Le Pèlerinage*, 132-3). But for this institution, as for many others, the period when it was established and merged in a pre-Islamic institution, remains obscure.

**Bibliography:** Given in the article; see also G. de Gaury, *Rulers of Mecca*, London 1951, 75. (M. GAUDEFRY-DEMOMBYNES)

**SHAYBA** b. **UTHMĀN** [see **SHAYBA**, BANŪ].

**SHAYBĀN**, an Arab tribe, one of the most important *butūn* of Bakr b. Wā'il.

Ibn Khallikān, ed. 'Abbās, v, 244, attributes to it, following Ibn al-Kalbī's *Qamharat al-nasab*, the following *nasab*: Shaybān b. Ṭalḥa b. 'Ukāba b. Sa'b b. 'Alī b. Bakr b. Wā'il b. Kāsīt b. Hinh b. Afṣā b. Du'mī b. Ḍjadīla (or Ḍjudhayla) b. Asad b. Rabī'a b. Nizār b. Ma'add b. 'Adnān, as well as an identical *nasab* for the other ancestor, nephew of the first, Shaybān b. Dhuhl b. Ṭalḥa b. 'Ukāba or 'Ukāba. But there are several other *nasabs* corresponding to other branches (detailed in Ibn Ḥazm, *Qamharat al-nasab*, ed. Hārūn, Cairo 1982, and al-Dhahabī, *al-Mushtabih fi 'l-riḍāl*, ed. al-Baḍjāwī, Cairo n.d.), as well as Shaybān b. Ḍjābir b. Murra b. 'Ā'is or 'Ā'ish (al-Mawla Bek, al-Baḍjāwī and Ibrāhīm, *Ayyām al-'Arab fi 'l-Islām*, Cairo 1942, 23), which should be connected with tribal groups arising from Shaybān, such as Murra b. Dhuhl, 'Ā'ish b. Rufā'a b. al-Hārith and 'Amr b. Kays. They form part of the imprecise network of Bakr b. Wā'il with Kays b. Ṭalḥa, Dhuhl b. Taym Allāh and 'Idjl. Al-Makrīzī, *Khitāt*, ii, 163, mentions the presence in Egypt of several *nasabs* for

the B. Ṣabra, including the Shaybānī one of Ṣabra b. 'Awf b. Muḥakkim b. Dhuhl b. Shaybān b. Ṭalḥa b. 'Ukāba, with a continuation identical with the one at the head of this article.

During the *Djāhiliyya*, this tribe wintered in Nadjd at Djadiyya, in an area which it shared with the B. Ḍjusham, and moved in summer either to the upper Euphrates, the Djazīra, or eastwards to the middle and lower Euphrates, between al-Hīra and al-Ubulla, or even to the southwest of 'Irāk, sharing pastures with Kinda, and around the Gulf. This tribe was celebrated at that time, as in the early Islamic centuries, for the remarkable quality of its poets, its use of a very pure form of Arabic language and its fighting ardour. It was frequently opposed in battle to the Yarbū' and Salīṭ b. Yarbū', Taghlib and Tamīm (for these, see the ch. *Ayyām Rabī'a* in al-Mawla Bek, etc., *op. cit.*, and Yākūt, *Buldān*, i, 554, ii, 369, 690, iii, 686, iv, 102, 443, 487, with other mentions in the index of places inhabited or frequented by the Shaybān).

The capacity of the Shaybān for risking their lives to satisfy an amorous passion is splendidly illustrated in a story given by Ibn al-'Adīm, *Bughya*, ed. Zakkār, iii, 1420, also vii, 3116, a vainglorious dispute between a Shaybānī and a Dhuhlī within the clan of Bakr b. Wā'il, settled by the arbitration of a man from the tribe of Hamadhān, and vividly recounted.

At the time of Muhammad, the Shaybān behaved as faithful allies of the B. Ḥāshim, and then more particularly of the sons of 'Alī and the 'Abbāsids. Linked personally to the caliph rather than as a member of the *umma* as a whole, the Shaybānī al-Muthannā b. Hāritha played an important role in the conquest of 'Irāk in the reigns of Abū Bakr and Umar (F.M. Donner, *The early Islamic conquests*, Princeton 1981, and art. s.v.). After the conquests, the main sphere of action of the tribe remained around the western fringes of Mesopotamia, the Gulf and the Djazīra, and extended northwards to Diyār Rabī'a and Mudar, as well as to Armenia and Ādharbāyḍjān. Outside these regions, there were groups of Shaybān also in Khurāsān and northern Syria. After the early Islamic period, Shaybān is less often mentioned than various of the groups descending from it. However, some members, or *mawla* of the tribe, are mentioned as poets, grammarians and philologists in southern 'Irāk. Abū 'Amr Ishāk b. Mirār al-Shaybānī (d. ca. 210/825 [q.v. in Suppl.]), one of their *mawālī*, was a leading figure in the school of Kūfan philologists (others cited in Ibn Khallikān, *Wafayāt*, index).

Under the caliph 'Abd al-Malik, the strength of the Shaybān was still considerable, since one of the first great Khāridjites, Shabīb b. Yazīd b. Nu'aym al-Shaybānī, was able to raise the Arabs of Diyār Bakr and Rabī'a, assemble troops of cavalry and march on Kūfa. He was drowned in 77/697 whilst trying to escape from al-Hadjdjādī. Abū Dāwūd Khālid b. Ibrāhīm al-Dhuhlī al-Shaybānī was one of Abū Muslim's close retainers. Al-Daḥḥāk b. Kays al-Shaybānī led a Khāridjite movement in 127/745 in the Kūfa area; this was sternly repressed, and al-Daḥḥāk killed in 128/746 (see above, vol. VI, 624). On the other hand, it was by combatting the Rāwandīyya rebels that Ma'n b. Zā'ida al-Shaybānī [q.v.], former servant of the Umayyads, was able to secure pardon from al-Manṣūr; he was subsequently killed fighting the Khāridjites. 'Isā, a *mawla* of Shaybān, rebelled with fifty followers, against al-Manṣūr, who sent against him Ziyād b. Mushkān, a *mawla* of the B. Māzin, who killed him and his partisans (al-Balādhuri, *Ansāb*, iii, ed. al-Dūrī, 251). In his civil

warfare with al-Ma'mūn, al-Amīn had as one of his generals the chief of the Rabī'a of al-Djazīra, Ahmad b. Mazyad al-Shaybānī, who brought with him 20,000 Arabs. His brother Yazīd (d. 185/801), governor of Adharbāyḡjān, fought the Neo-Mazdakite Khurramiyya in Armenia. Under Hārūn al-Rashīd, he fought and in 179/795 killed his Khāridjite fellow-tribesman al-Walīd b. Ṭarīf al-Shārī, and he combatted Khazar incursions into Armenia. He took part at al-Hādī's side in the warfare against the Iranian ruler in Ṭabaristān, Wādād-Hurmuzd. In 207/812-13, al-Ma'mūn sent a son of Yazīd's, Mukhālīd or Khālīd, at the head of a troop of Rabī'a against 'Ubayd Allāh b. Sarī. In 216/831-2, Yazīd's brother 'Abd Allāh led an expedition into the Gharbiyya of Egypt (al-Makrīzī, *Khūṭat*, i, 173, 178-9). The greater part of such Shaybānī commanders as these were great lovers of poetry and patrons of poets.

ʿIsā b. Shaykh b. al-Salīl al-Dhuhlī al-Shaybānī [q.v.] appears in al-Mutawakkil's reign, was governor of Ramla in Palestine ca. 251/866, then in Damascus, then governor of Armenia, probably up to his death in 269/882-3. His son Ahmad was governor of Diyār Bakr, Taro and Arzene. He probably had to combat his Khāridjite fellow-tribesmen in the Djazīra and at Mawṣil on behalf of al-Mu'taḡid, dying in 285/898 and having as his successor his son Muḥammad, from whom al-Mu'taḡid seized by force his last possession of Āmid in 286/899. Muḥammad was assigned a house in Baghdād but then imprisoned. In the accounts of these episodes, the quality of poetic composition for both men and women of his family is stressed. At the beginning of the Carmathian propaganda, in the Sawād of Kūfa, together with several tribes of Rabī'a, from Bakr b. Wā'il or Yashkur, Shaybān are mentioned at the side of 'Ā'ish, 'Abbās, Dhuhl, 'Anaz(a), Taym Allāh, Tha'l (Tha'laba?) and Dubay'a b. 'Idjīl (al-Makrīzī, *Itti'āz al-hunafā'*, ed. Shayyāl, Cairo 1967, i, 156; Ibn al-Dawādārī, *Kanz al-durar*, ed. al-Munadjjid, Cairo 1961, 6, 46-8). Individuals with the tribal *nisba* are mentioned in northern Syria and in Persia. Thus under the walls of Aleppo, the great commander Ibn Rashīk was attacked with a lance and killed by Ibn Yazīd al-Shaybānī (Canard, *Sayf al-Daula. Recueil*, Algiers 1934, 400). The tribe is mentioned with other Kayṣī ones with whom it acted in common. Thus Muslim b. Kuraysh, the 'Uḡaylid amīr of Mawṣil and Aleppo, wishing to attack the Salḡūk Tutuṣh at Damascus, gathered around him the tribes of Numayr, 'Uḡayl and Shaybān, as well as the Kurds and *Mawālida* (Ibn al-Kālānīsī, *Dhayl ta'rīkh Dimashk*, ed. Amedroz, 114; Ibn al-'Adīm, *Ta'rīkh Halab*, ed. al-Dahhān, Damascus 1954, ii, 80).

After the 5th/11th century, the tribe of Shaybān as such is less often mentioned, and it is difficult to follow the subsequent fortunes of this highly-fragmented group. The last mention of it in the index to Ibn al-Athīr stems from 501/1107-8, when 85 warriors from Shaybān were killed at the side of Ṣadaqa b. Mazyad al-Asadī in lower 'Irāk (*Kāmil*, x, 448).

The Arab Banū Shaybān should not, of course, be confused with the Shībānids [q.v.] or Shaybānids of Central Asia, descendants of the Mongol prince Shībān b. Djoṭī b. Čingiz Khān.

**Bibliography:** Given in the article. See also the various arts, in this Encyclopaedia on the various al-Shaybānīs. No diachronic study of the history of the tribe seems to have been attempted, one going beyond the simple listing of a restricted number of pieces of information concerning the Shaybān; such a work would be valuable for our knowledge of the accul-

turation, and then integration, of the nomadic Arabs within the conquered lands. (TH. BIANQUIS)

**AL-SHAYBĀNĪ**, ABŪ 'ABD ALLĀH MUḤAMMAD B. AL-ḤASAN b. Farḡad, jurist of the Ḥanafī school [see AL-ḤANAFIYYA] of the very highest eminence, immediate disciple of Abū Ḥanīfa and of Abū Yūsuf [q.v.].

#### I. Biography

Usually called "Muḥammad b. al-Ḥasan", or simply "Muḥammad", in classical judicial literature, al-Shaybānī was the scion of a prosperous family, *mawlās* of the Banū Shaybān, originally from Harastā in the vicinity of Damascus. It was at the end of the Umayyad dynasty that the father of Muḥammad b. al-Ḥasan, a soldier, emigrated to 'Irāk and settled in Wāsiṭ, where Muḥammad was born in 132/750; it was in Kūfa, the home town of Abū Ḥanīfa, that the latter grew up.

Attracted at a very early age to the "quest for knowledge" rather than to a military career, according to the biographers (see, e.g., al-Dhahabī [d. 748/1347], *Manāḡib al-imām Abī Ḥanīfa wa-shāhibayhi Abī Yūsuf wa-Muḥammad b. al-Ḥasan*, Cairo n.d. 49-60), al-Shaybānī studied in Kūfa as a pupil of Abū Ḥanīfa himself for a period of time which must have been short (two years according to al-Shīrāzī, *Ṭabaḡāt al-fuḡahā'*, Beirut n.d. 142), since the latter died in 150/767 when al-Shaybānī was barely eighteen years old. In fact, it was mostly as a result of study with his senior, Abū Yūsuf, the leading disciple of Abū Ḥanīfa, that al-Shaybānī became, at a very early age, a jurist whose increasing renown was soon to arouse the resentment of his master. In Kūfa, al-Shaybānī had other teachers as well, including Sufyān al-Thawrī and al-Awzā'ī [q.v.], with whom he trained as a traditionist (*muhaddith*). At an unknown date, he also visited Medina, staying there two or three years (al-Kāḍī 'Iyād, *Tarīḡ al-madārik*, Rabat 1983, i, 171), in order to study with Mālik b. Anas [q.v.]; he transmitted a version of the latter's *Muwatta'*, with the addition of his own annotations and commentary (last dated edition, Beirut 1984).

At twenty years old, al-Shaybānī was already teaching in one of the mosques of Kūfa where his prowess as an orator (he was reckoned a particularly fine exponent of the Arabic language), as a traditionist and as an expert in religious law "proved by the method of *ra'y* [q.v.]" attracted numerous students to him.

While a resident in Baghdād, al-Shaybānī was appointed judge (*kāḍī*) of al-Raḡḡa by Hārūn al-Rashīd with whom, in the light of various episodes recounted by the biographers, his relations were not always amicable (al-Shaybānī had an exalted opinion of his position and also, it seems, of himself), although he remained an influential member of his entourage until he was relieved of his duties, probably ca. 187/803, and returned to Baghdād, where he resumed his educational activities. It was during this period that his teaching exerted the widest influence, over, in particular, the most prestigious of his pupils, Muḥammad b. Idrīs al-Shāfi'ī [q.v.], who was later to compose a refutation addressed to him (the *K. al-Radd 'alā Muḥammad b. al-Ḥasan*, in *K. al-Umm*, Cairo 1906, vii, 277-303) while retaining immense admiration for him. Another of his leading pupils was 'Isā b. Abān (d. 221/836). Among his other, lesser-known disciples were Ibrāhīm b. Rustam al-Marwazī (d. 211/826), Ahmad b. Ḥafṣ al-Kabīr (d. 217/832), Khālaf b. Ayyūb al-Balkhī (d. 205/820, 215 or 220), Mūsā b. Naṣr al-Rāzī (d. ?), etc. (for a list of scholars who transmitted traditions (*hadīth*) according to al-Shaybānī, see al-Dhahabī, *op. cit.*, 50).

Muhammad b. al-Ḥasan al-Shaybānī died, either in 187/803 or, which is more likely, in 189/805, according to the biographers, in Kḥurāsān (at Ranbuwayh or at Rayy), where Hārūn al-Rashīd had taken him as part of his entourage, having reinstated him in his judicial position. He died on the same day and in the same place as the eminent grammarian and philologist al-Kisāʿī, leading Hārūn al-Rashīd to remark that he had buried *fiqh* and grammar side by side.

## II. His work and thought

(a) The body of work, almost all of it preserved and published, which is attributed to Muhammad b. al-Ḥasan al-Shaybānī, enormous. But, as has recently been shown by N. Calder (*Studies in early Muslim jurisprudence*, Oxford 1993, 39-66), extreme caution is required, concerning not so much the authenticity of this attribution but rather the precise nature of the latter. At that time, there can be no doubt that the very notion of a "book", having a single and identified author, did not exist in erudite circles: a certain disciple would collect the teachings of one or another scholar which he eventually committed to writing, accompanied by his own embellishments or commentary; this compilation would then be handed down from disciple to disciple, each in turn adding his own commentary, until a final version came into being, and was attributed to an ancient authority.

Since in the Ḥanafī school, as it developed during the classical period, Muhammad b. al-Ḥasan was seen to be accorded the role of the one who set down in writing the *fiqh* of the first Ḥanafīs, (principally Abū Ḥanīfa, Abū Yūsuf and himself), it is particularly difficult to make sense of his bibliography. There is no doubt, for example, that the treatise on *fiqh* currently published under the title of *Kūṭab al-Aṣl* (ed. al-Afghānī, Haydarābād 1966-72, and Beirut 1990; partial Ger. tr. Wiendensohler, *Mängel beim Kauf nach islamischem Recht*, Walldorf-Hessen 1960; separate edition of the *K. al-Buyūʿ wa l-salam* by Ch. Chehata, Cairo 1954), which is also known by the name of *al-Mabsūṭ*, and which is attributed to al-Shaybānī, is in fact a compilation of forty-seven short texts on *fiqh*, considerably adapted over the years, which Ibn al-Nadīm (d. 385/995), an early bibliographer, attributed to him in his renowned *Fihrist* (Beirut 1978, 287-8). The *K. al-Aṣl* played a vital role in the Ḥanafī *madhhab*, to such an extent that, according to some of its leading scholars, for a Ḥanafī jurist it was sufficient to memorise it for being considered a *muḍṭahid* (al-Imām ʿUmar b. ʿAbd al-ʿAzīz, *Sharḥ Adab al-kāḍī li ʿl-Imām Abī Bakr Aḥmad b. ʿUmar al-Khaṣṣaf*, Beirut 1994, 19).

Besides this collection of opuscula, dealing with different aspects of practical law and assembled into a single whole, al-Shaybānī is also the author, again according to Ibn al-Nadīm and later biographers, of various works, including the *K. al-Djāmiʿ al-kabīr* (Haydarābād 1936), *K. al-Djāmiʿ al-saghīr* (publ. in the margins of the *K. al-Kharāj* of Abū Yūsuf, Būlak 1884, Lahore 1909; partial Ger. tr. by I. Dimitroff in *MSOS*, xi/2 [1908], 60-206), the *K. al-Siyar al-kabīr* (publ. with the commentary of al-Sarakhsī, Haydarābād 1916-17 and Cairo 1957) and the *K. al-Siyar al-saghīr*, tr. M. Khadduri, *The Islamic law of nations*, Baltimore 1966. The *K. al-Aṣl*, the four works mentioned above and *al-Ziyādāt* belong, according to a classification established by the Ḥanafī biographers, to the *zāhir al-rivāya* of the school, in the sense that their transmission, from the origin, was supposed to be faultless, uninterrupted and substantially attested.

According to the same biographers, other texts attributed to al-Shaybānī did not enjoy the same sta-

tus in terms of the quality of their transmission, with the result that their current content was considered dubious (a remark in fact applicable, from a viewpoint of contemporary criticism, as has been observed above, to the entire corpus of al-Shaybānī). Among the published works attributed to al-Shaybānī and also worth mentioning, besides the revision of the *Muwattaʿ* of Mālik already noted, are the *K. al-Āṭḥār* (Lahore 1910 and ed. al-Afghānī, Beirut 1993 with an excellent introd.), the *K. al-Hudūdīya ʿalā ahl al-Madīna* (Haydarābād 1965-71), the *K. al-Makhārīj fi ʿl-hiyāl* (ed. Schacht, Leipzig 1930, repr. Hildesheim 1968) and *al-Amālī* (Haydarābād 1941). For more details regarding the work of al-Shaybānī, editions and the innumerable commentaries which it generated, see Sezgin, *GAS*, i, 421-33.

Since Abū Ḥanīfa himself wrote nothing on the subject of *fiqh*, and since Abū Yūsuf apparently left behind only a very few texts, it is essentially through the intermediary of the work attributed to al-Shaybānī (and, to a lesser extent, that of al-Shāfiʿī) that the judicial opinions developed by and around Abū Ḥanīfa (and more generally, in the legal circles of Kūfa) can, with a reasonable degree of certainty, be known. This explains why E. Sachau, and other orientalisists who shared his assessment, considered that al-Shaybānī had played a decisive role, more important even than those of Abū Ḥanīfa and Abū Yūsuf, in formulating the doctrines of the Ḥanafī school and, more generally, of Islamic law (Sachau in *SBWAW*, *phil.-hist. CL.*, lxxv, 723). This appraisal is, however, perhaps excessive, for two reasons. On the one hand, as explained above, al-Shaybānī cannot really be considered in anything other than a remote sense the real author of the corpus attributed to him; on the other, the vocation of *fiqh* was originally supposed to be, and to remain, an orally transmitted discipline. It was probably only at the time when *fiqh* definitively lost this quality, and its preferred mode of transmission became the written form, that al-Shaybānī was to have this monumental and systematic corpus, originally fragmentary and definitely far less voluminous, attributed to him by the later Ḥanafīs (the same thing occurred within the confines of the Shāfiʿī school in respect of the *K. al-Umm* attributed to al-Shāfiʿī) and in this regard, the role of the great Ḥanafī al-Sarakhsī (d. 490/1097 [q.v.], i.e. three centuries after al-Shaybānī) seems to have been definitive. Furthermore, so far as the Ḥanafī biographers are concerned, al-Shaybānī invariably occupies only the third rank, after Abū Ḥanīfa and Abū Yūsuf, in the hierarchy of authorities of the school.

(b) The thought of al-Shaybānī, as has been shown by J. Schacht (*The origins of Muhammadan jurisprudence*, Oxford 1979, 306-10, and *An introduction to Islamic law*, Oxford 1964, 45) represents considerable progress in relation to that of his two masters in Kūfa, Abū Ḥanīfa and Abū Yūsuf, and in many respects it prefigures the rift between the schools, dominant at that time, known as "local", and the "personal" schools which were to succeed them, as reflected in the work of his pupil al-Shāfiʿī. In this regard, it is relevant to note that, in addition to texts of practical law, al-Shaybānī seems also to be the author of a small number of writings on topics of legal theory (*uṣūl al-fikh* [q.v.]: a *K. Iqṭihād al-raʿy*, a *K. al-Istihān* and a *K. Uṣūl al-fikh* are attributed to him in the *Fihrist* of Ibn al-Nadīm (Fakhḥ al-Islām al-Bazdawī also attributes to him a *K. Adab al-kāḍī*, to which he refers in *Uṣūl al-Bazdawī*, ed. with al-Bukhārī's commentary *Kashf al-asrār*, Beirut 1991, i, 59-60). Study of the classical

literature of *uṣūl al-fikh*, which often draws attention to opinions of al-Shaybānī, tends to confirm the impression that he was also a theorist of *fikh* (see, e.g. al-Lāmishī, *Kūtab fi Uṣūl al-fikh*, Beirut 1995, index).

As recounted by a classic of Ḥanafī literature of *uṣūl al-fikh* (*Uṣūl al-Bazdawī*, 59-61), the doctrine of al-Shaybānī relating to the respective roles of "reasoning" (*ra'y*) and of tradition (*ḥadīth*) in the elaboration of *fikh*, a doctrine which firmly insists on their necessary complementarity (*lā yastakīmu al-ḥadīth illā bi 'l-ra'y wa-lā yastakīmu al-ra'y illā bi 'l-ḥadīth*), seems to be in perfect harmony with the *fikh* which he effectively formulated and which Schacht has successfully analysed, comparing it with that of his predecessors. On the one hand, al-Shaybānī takes care to justify his legal doctrine on the basis of traditions traced back either to the Prophet, or to other authorities (where necessary, he feels free to quarrel with the latter); thus "he fills his books with *ḥadīth*" (al-Bazdawī, 61). He appears in this context to stand apart from other jurists of Kūfa, and from Abū Yūsuf in particular, in according, in a non-systematic manner, priority to traditions attributed to the Prophet over those of the Companions (*al-Ṣaḥāba* [q.v.]). It is known that al-Shāfi'ī, for his part, was to accord probative worth to Prophetic traditions exclusively; on this point also, al-Shaybānī gives the appearance of being the initiator of Shāfi'ī-like theses (Schacht, *Origins*, 27-34). On the other hand, the judicial reasoning, the *ra'y* of al-Shaybānī, is considerably more rigorous and systematic than was that of Abū Ḥanīfa, Abū Yūsuf or Mālik. In a word, he tends to associate himself with the strict "analogical reasoning" (*kiyās* [q.v.]), of which al-Shāfi'ī was to give, in the *Risāla*, the first formal theorisation available to modern scholarship. It is not impossible that, in his *K. Iqṭihād al-ra'y*, which is unfortunately lost, al-Shaybānī had preceded him in this project.

In theological matters, al-Shahrastānī (d. 548/1163 [q.v.]) and other heresiographers assert that, following the example of Abū Ḥanīfa Abū Yūsuf, al-Shaybānī adhered to the Murjī'ī doctrine [q.v.] (*Livre des religions et des sectes*, tr. D. Gimaret and G. Monnot, Louvain 1986, i, 433; on the very close relations between Ḥanafism and Murjī'ism, in which al-Shaybānī is just one of the participating players, see W. Madelung in *Isl.*, lix [1982], 32-39). A *Credo* ('*Akīda*'), preserved in manuscript form, is attributed to him, but not one of his biographers mentions its existence.

(E. CHAUMONT)

**AL-SHAYBĀNĪ**, ABŪ 'AMR IṢḤĀK b. MIRĀR, lexicographer belonging to the Kūfan school, who is often quoted under his kunya Abū 'Amr. He was probably born somewhere around 120/738 in Kūfa and lived to a very great age. The biographies mention several years as his date of death, but the most probable date of death is 213/828 (Diem, *Das Kūtab al-ḡim*, 10). According to a report in Ibn al-Anbārī (*Nuzha*, 58, l. 11), his mother was a Nabaṭī and he knew some of her language. His foreign descent is confirmed by a remark in Ibn Khallikān (i, 201, l. 6) who says that he was a *maṭlā*. It is not certain whence his *nisba* al-Shaybānī was derived; according to most sources, he received this *nisba* because he educated the sons of some members of the Banū Shaybān.

Al-Shaybānī was trained in grammar and lexicography, as well as *ḥadīth*; his teacher in poetry was al-Mufaḍḍal al-Ḍabbī [q.v.]. In his theological opinions he may have been a Mu'tazilī; in a report in Yāqūt (*Muḍjam*, vi, 84) he is said to have maintained that the Qur'ān was created. Among his pupils were the lexicographers Ibn al-Sikkīt and Abū 'Ubayd [q.v.] and the traditionist Ahmad b. Hanbal, who quotes him as a source in his *Musnad*. His fame rests mainly on his qualities as a collector of poetry. He is reported to have collected the *diwāns* of more than eighty tribes, which have not been preserved. Both his son 'Amr and his grandson Muḥammad b. 'Amr transmitted lexical explanations to poems from him. In the Kūfan line, the transmission through his grandson to Abū Muḥammad b. Yahyā al-Marwazī (d. 298/910) was preserved in the *Maḍjālīs Tha'lab* (e.g., i, 137; ii, 479, 485) as a later addition to the manuscript.

Abū 'Amr was the author of several lexicographical treatises, most of them dealing with specialised semantic domains, such as the terminology of human anatomy (*khalk al-insān*) and that of camels and horses. He is also said to have written a book called *al-Nawādir* and a collection of rare expressions from the *ḥadīth* (*gharīb al-ḥadīth*) (cf. Sezgin, *GAS*, viii, 121-3). The only work that has been preserved is his *K. al-Djīm* (in some sources called *K. al-Lughāt* or *K. al-Hurūf*; according to others these are independent books). This book was transmitted mainly by two lexicographers, al-Sukkarī [q.v.] and Abū Mūsā al-Ḥamiḍ (d. 305/918), a pupil of the Kūfan grammarian Tha'lab. Both recensions seem to have been used in the unique Escorial manuscript (no. 572; for a description of this manuscript see Diem, 12-14).

In the *K. al-Djīm*, each chapter contains words beginning with the same radical, without further criteria of division. There is a large amount of association within each chapter, so that even words beginning with different radicals are quoted when the context leads him to do so. Unlike his contemporary al-Khalīl [q.v.], he followed the usual alphabetical order of the Arabic alphabet rather than a phonetic order. Earlier investigators, who did not have the possibility of study

ing the entire treatise, believed that the reason for its name is that the dictionary stops with the letter *ḡīm*, but Diem's analysis has shown that this is not the case, since the Escorial manuscript contains the entire alphabet. The reason for its being called thus cannot be that the book started with the letter *ḡīm*, either, since the Escorial manuscript starts with the letter *hamza*. The reason for the name must have been unclear from an early date onwards, since the biographers were puzzled by this question, too. Al-Suyūṭī, for instance, mentions that he believed for some time that the book was called thus because it started with the letter *ḡīm*, but then he saw a manuscript in which the first letter was the *hamza*. According to the explanation in the *Kāmūs*, the word *ḡīm* was a substantive with the alleged meaning of *ḡibāḡ* "brocade".

It is not unlikely that the treatise as we have it is an unfinished version. From the biographical literature we know that Abū 'Amr did not transmit the book to any of his pupils, possibly because he intended to revise it thoroughly, but never got around to doing so. In its present form the classification and analysis of the words is rather confused. Not only is there no apparent order in each chapter, but within each lemma the information is given haphazardly.

The main corpus for his collection of words was probably his own collection of *ḡihili* poetry. Within each lemma he quotes systematically and in a fixed order from 17 different *ḡiwāns*. The total number of poetic lines quoted is about 4,300 as against only two verses from the *Kur'ān* (Diem, 60). Krenkow's evaluation of the book as a prime source for our knowledge of pre-Islamic dialects is not confirmed by the later analysis made by Diem (74-7), since his only contribution to the study of the *lughāt* is a small number of lexical items. In general, al-Shaybānī does not elaborate on the meaning of the words, and he discusses only rare words that apparently occurred in his collection.

Although quotations from the *K. al-ḡīm* are found in all the major dictionaries, including the *Kāmūs* and the *Tāḡ al-arūs*, most later lexicographers did not know the work first hand, but quoted it through Ibn al-Sikkī's *Islāh al-manṭiq* (Diem, 118-9). In the *Lisān al-'Arab* he is not one of the most frequently quoted authorities, but still the index to the *Lisān* mentions him 92 times. For some of the *ḡawāhid*, the *K. al-ḡīm* remains the only available source.

Al-Shaybānī is almost never quoted on grammatical doctrine, but Abū Ḥayyān has a quotation from his *K. al-Farāḡ*, which is not mentioned anywhere else, in which he discusses the priority of the agent over the object in syntactic terms (*Tadhkirat*, 305, cf. 538, 668, about morphology). Elsewhere (*Manḥadj*, 405, l. 32), the same author reports a syntactic opinion from al-Shaybānī which had been transmitted from him by the grammarian al-Akhfash.

(K. VERSTEEGH)

**SHAYBĀNĪ**, ABŪ NAṢR FAṬḤ ALLĀH KHĀN, 19th century Persian poet, born about 1241/1825 in Kāshān, died 20 Raddjāb 1308/1 March 1891.

He came from a noble family claiming descent from the Shaybānī tribe, from which he took his pen name. His grandfather held the governorship of Nāṭanz, Kāshān, Ḍjawshakān and Kūm during Āghā Muḡammad Khān's reign (1193-1212/1779-97), whilst his father, Muḡammad Kāzīm Khān, was employed under Muḡammad Shāh (r. 1250-64/1779-97) and later served as financial agent of the governor-general of Kāshān and Hamadān. In accordance with the family tradition, Shaybānī also was identified with the court and government, early having access to the court of Muḡammad Shāh and acting as companion in attendance to the heir-apparent (afterwards Nāṣir al-Dīn Shāh, r. 1264-1313/1848-96). In later years he was involved from time to time in important official assignments. However, despite his official preoccupations, he was essentially a private individual seeking a life of seclusion. Consequently, he resigned from public affairs and went to live on his estates. He finally decided to settle down in Tehran and died there.

Shaybānī's attachment to Ṣūfism, and the influence it had on his poetic outlook, may be discerned in the introspective trend often depicted in his verse. As a writer, he was competent in both prose and poetry. Included among his representative writings are his prose and verse *Durḡ-i durar* "A casket of pearls", and collection of odes *Fath u zaḡar* "Victory and triumph". His major prose work is the *Maḡālāt-i Shaybānī*, which is autobiographical in nature, and was composed in 1273/1856-7.

Shaybānī's poetic career spanned over a period of some fifty years, from the last part of Muḡammad Shāh's reign to about the end of Nāṣir al-Dīn Shāh's time. His output comprises *kaṣīdas*, *ghazals*, *rubā'īs*, *kuṭ'as* and *dū-baytīs*. A selection of his verse, probably prepared by the poet, was published in Istanbul in 1308-9/1890-1. His style of writing follows the trend of the old masters, such as Rūdākī and Farrukhī [q.v.], and may be identified with the Khurāsānī school of Persian poetry. He is among the leading poets of the Kāḍjār period who revolted successfully against the predominance of the "Indian style" (*sabk-i Hindī* [q.v.]), and strove for a "return" (*bāzgaṣht*) to early indigenous forms. However, the real contribution of Shaybānī's verse must be sought in the choice of his subject and the mood of his poetry. He was perhaps the first poet to criticise openly in several of his poems the decadent state of contemporary society and politics—a theme that was to become the stock-in-trade of the Persian poets in the post-Constitutional period. Moreover, his verse often reflected a subjective element that was new to native literary tradition, and evoked certain parallels with the pessimism and ultra-realism in the European literature produced during the second half of the nineteenth century (see R. Levy, *Persian literature*, London 1948, 99).

(MUNIBUR RAHMAN)

**AL-SHAYBĀNĪ**, IBRĀHĪM B. MUḤAMMAD, Abū 'l-Yusr al-Qayrawānī al-Riyāḏī "the mathematician" (223-298/838-911), *adīb* and author of *rasā'il*.

He was born in Baghdād, where he pursued his studies before making his way to Ifrīkiya in 261/874 during the reign of the Aghlabid amīr Ibrāhīm b. Aḥmad al-Aghlab (261-90/874-902). Unfortunately, little is known concerning the life in Baghdād of this prolific letter writer and poet. Besides the valuable information regarding him supplied by Ibn al-Abbār in his *Takmilā* (i, article 454, p. 174), stating that al-Shaybānī was the disciple and friend of writers such as al-Djāhīz, al-Mubarrad and Ibn Kutayba, and of the poets Dī'bil, Abū Tammām and al-Buḥturī, substantial evidence concerning his life in the East is lacking. The same cannot be said of his life in Ifrīkiya, which began in 261/874 when he was 38 years old. Al-Shaybānī settled in Aghlabid Ifrīkiya after wanderings which took him as far as Spain. He was received at Qayrawān by the three last Aghlabid amīrs, including Ziyādāt Allāh III (290-6/902-9), who treated him with lavish generosity and entrusted to him the post of director of the Bayt al-Ḥikma. It is again Ibn al-Abbār who states that this epistolary writer was at the head of the Bayt al-Ḥikma during the reign of Ziyādāt Allāh (*op. cit.*, 174). Al-Shaybānī was opportunist enough to turn away from his Aghlabid patrons just before their deposition, in a bloodless coup, by the Fātimids (296-362/909-73), and what is more, he composed panegyrics in honour of the caliph al-Mahdī (297-322/910-34); as a reward, he retained his post at the head of the above-mentioned establishment until 298/911, the date of his death at Qayrawān.

Ibrāhīm al-Shaybānī was a talented writer and a first-rate scholar, seeking to combine the pertinence of ideas and flexibility and elegance of expression with the rigour of the language. In fact, he established himself as a master of the epistolary genre on account of his flowing style, his pure language and his zest. The few biographical sources which mention him attribute to him the titles of numerous works including *Sirāḡ al-hudā fi 'l-Qur'ān wa-ṭ-ṭarīḡ wa-ma'ānīh*, *Musnad fi 'l-ḥadīth*, *Lakṭī al-marḡdān* (after the model of the 'Uyūn al-akhbār of Ibn Kutayba), *Kuṭb al-adab*, *al-Muraṣṣ'a wa 'l-mudabbajja*. As for *al-Risāla al-'adhrā'*, composed without any doubt by al-Shaybānī and addressed to his friend and correspondent Ibn al-Mudabbir (d. 279/892), as is proved by the unique manuscript which contains it (Dār al-Kutub, Cairo, Taymur no. 80), it is "one of the most ancient treatises on administration and public life" (Gottschalk, in *ET*, iii, 880a). This letter achieved immediate and considerable success and was rapidly transmitted throughout the Muslim world; it has been continually studied, annotated and used as an educational text. However, Kurd 'Alī, who was the first to have the opportunity of establishing the unique text of the

*Risāla* of al-Shaybānī (see M. Kurd 'Alī, *Rasā'il al-bulaghā'*, Cairo 1331/1913, 176-93) and who cannot have known everything about this Aghlabid letter writer, inadvertently attributed it to Ibn al-Mudabbir, this leading into error Zakī Mubārak in his *Étude critique sur la Lettre Vierge d'Ibn al-Mudabbir* (*sic*), Cairo 1931, and Gottschalk in his art. *IBN AL-MUDABBIR* (*loc. cit.*).

In this context, the following points should be noted:

(1) The *kunya* of Ibn al-Mudabbir is Abū Ishāq and not Abū 'l-Yusr, as claimed by Kurd 'Alī, Zakī Mubārak and Gottschalk (see on this topic, *Aghānī*, Beirut 1380/1960, xxii, 151; Yāqūt, *Mu'djam al-'udabā'*, Beirut, i, 226; al-Ziriklī, *al-A'lām*, i, 56).

(2) The Title of the *Risāla* as it is found in the Cairo manuscript is the following: "The virgin letter, concerning the criteria of rhetoric and of the instruments of writing, sent by Abū 'l-Yusr Ibrāhīm b. Muḥammad al-Shaybānī to Ibrāhīm b. Muḥammad b. al-Mudabbir (*al-Risāla al-'adhrā' fi mauāẓin al-balaghā wa-adawāt al-kitāba*, *kataba-hā* Abū 'l-Yusr Ibrāhīm b. Muḥammad al-Shaybānī ilā Ibrāhīm b. Muḥammad b. al-Mudabbir).

(3) Several paragraphs of the *Risāla al-'adhrā'* have been reproduced in the *Ikd* of Ibn 'Abd Rabbihi and attributed without any hesitation to al-Shaybānī, although Ibn 'Abd Rabbihi gives no title to this letter (see *al-Ikd*, Cairo 1365/1944, iv, 155-205).

(MOHAMED MOKHTAR LABIDI)

**SHAYBĀNĪ KHĀN** [see SHĪBĀNĪ KHĀN].

**SHAYBĀNIDS** [see SHĪBĀNIDS].

**SHAYDĀ, MULLĀ**, 17th century Persian poet of India, commonly known as Mullā Shaydā, born in Fathpūr Sikrī, near Āgra, d. in 1080/1669-70.

His father was a native of Mashhad, from where he migrated to India during the reign of Emperor Akbar. It is reported that Shaydā was attached initially to a nobleman who spotted his poetic talents, and eventually introduced him to the Emperor Djāhāngīr so that he became enrolled among the *ahadīs* or "gentlemen troopers", a class of servants employed mostly for household duties. Later, he decided to seek employment with 'Abd al-Raḥīm Khān-i Khānān (d. 1036/1627 [*q.v.*]), writing a *kaṣīda* in praise of the latter and sent it to him at Mandū, and after some time, was released from the royal staff and joined Khān-i Khānān's service in Burhānpūr.

Another patron whom Shaydā served was Prince Shahriyār (d. 1037/1628), the ill-fated youngest son of Emperor Djāhāngīr, who was blinded and subsequently executed. Thereafter the poet entered the service of the Emperor Shāh Djāhān among the *ahadīs*. In course of time, he retired from his job, living comfortably on the government pension granted to him, and settled in Kashmīr where he died.

Shaydā has been described as an irascible person provoked easily on mere suspicion, and he composed satirical verses attacking several of his contemporaries, so that his behaviour made him many enemies.

and he was often a target of their hostility.

Evidence is lacking about the actual extent of Shaydā's poetical output. Estimates in this connection vary from 50,000 to 100,000 couplets. The poet is also said to have composed a *mathnawī*, entitled *Dawlat-i bidār*, "The awakened fortune", modelled after Nizāmī's *Makhzan al-asrār*. It seems that Shaydā was negligent in the preservation of his works. The *Khizāna-yi 'āmira* gives a description of a copy of Shaydā's works used by Āzād for his account of the poet. The contents of this manuscript included 14 lengthy *kašidas* and a *kiṭā* dealing with some of the ornaments of rhetoric. A manuscript of Shaydā's *ghazals* is in the British Library; it contains a total of some 1,200 couplets.

Shaydā has won critical approval for his poetic achievements, being represented as a follower of the old school. In the *Ma'āthir-i Raḥimī* he is depicted as one of the talented poets of his time who had a probing imagination, and could conceive novel subjects, but showed mental apathy in their arrangement. He wielded a facile pen which enabled him to compose lengthy *kašidas* within the smallest amount of time. His knowledge of prosody was excellent, and is seen in his frequent use of difficult metres and rhyme.

(MUNIBUR RAHMAN)

**SHAYKH** (A.), pl. *shuyūkh*, denotes etymologically "someone whose age appears advanced and whose hair has gone white", used for a man over fifty years old (*L'A*, Beirut 1988, vii, 254; *T'A*, Cairo 1869-89, ii, 267-8). The Qur'ānic usage of *shuyūkh*, in XL, 67, is in this sense. From pre-Islamic times onwards, the idea of authority and prestige has accordingly been attached to the term, so that *shaykh* is used for the chief of any human group, whether the family (al-Zabīdī states that a woman's *shaykh* is her husband, *T'A*, ii, 268), a tribe, a trade guild, etc. In the early Islamic context, *al-shaykhān* denotes either the two caliphs Abū Bakr and 'Umar (Ibn Khaldūn, *Mukaddima*, Beirut n.d., 357) or the two best-known traditionists, al-Bukhārī and Muslim (*ibid.*, 346). The

term *shaykh* may be applied to the head of a religious establishment (*madrasa*, *dār al-ḥadīth*, *ribāṭ*, etc.), and to any Muslim scholar of a certain level of attainment (in the biographical collections, the term is generally linked with others, such as *imām*). In the peripheral regions of the Islamic world, *shaykh* may have various meanings. In India, it denotes a category of the descendants of the Prophet or *ashraf* [see HIND, ii, at vol. III, 410a], whilst in Ibn Baṭṭūta's time, the inhabitants of Mogadishu applied it to their sultan (*Rihla*, ii, 182, tr. Gibb, ii, 374-5).

The term *shaykh* is often found with a complement. The *sh. al-balad* can be the equivalent of the mayor of a town, or more simply, an employee looking after the good management of the town (Dozy, *Suppl.*, i, 809). Amongst the Ḥafṣids of Tunis, the grand vizier had the title *sh. al-Muwahhidīn*, in reference to the Almohads, whose heirs the Ḥafṣids claimed to be (Ibn Khaldūn, *op. cit.*, 266). On the purely religious level, the honorific title *Sh. al-Islam* [q.v.] is found, also the function of *sh. al-ikrā'* (master in instruction of the Qur'ān readings), and the designation *sh. al-Sunna* for traditionists or other persons scrupulously observing the *Sunna*.

In Sūfī mysticism, the *shaykh* is the spiritual master (pls. *shuyūkh*, *mashāyikh*). Having himself traversed the mystical path (*ṭarīq(a)* [q.v.]), he knows its traps and dangers, and is therefore essential for the aspiring novice or *murīd* [q.v.], who must place himself totally under his guidance (termed *iktidā'*; see esp. al-Ḡhazālī, *Ihyā'*, Beirut, iii, 75-6; al-Suhrawardī, *Awārif al-ma'ārif*, Beirut 1983, 83). He thus becomes the novice's spiritual father and "educator", *al-shaykh al-murabbī* (see e.g. Ibn Khaldūn, *Shifā' al-sā'il li-taḥḍīb al-masā'il*, Tunis 1991, 224, 226) or *sh. al-tarbiya*. His closeness to God makes him a *walī* or saint, and provides a firm basis for his authority; the Sūfīs interpret in this sense the *ḥadīth* "the *shaykh* has the same position amongst his followers as the Prophet in his community" (see e.g. the *K. Khāṭm al-awliyā'* of al-Ḥakīm al-Tirmidhī, Beirut 1965, 489, and on this tradition, al-Suyūṭī, *al-Djāmi' al-saghir*, no. 4969). A wider circle than his spiritual disciples seek out the Sūfī master not for *tarbiya* but for the spiritual influence, *baraka* [q.v.] emanating from him; in this case, he is envisaged as the *sh. al-tabarruk*. The *shaykh* usually officiates in a *zāwiya* [q.v.] founded on his personal initiative (most of the *shaykhs* whom Ibn Baṭṭūta met in the course of his travels were heads of this kind of institution). In Persia, the *shaykh* of a *khānqāh* [q.v.] had a similar spiritual charisma, but in the Ayyūbid and the Mamlūk Near East the *khānqāh* became a public institution, and its *shaykh*, nominated by the ruling power, belonged more to the class of 'ulamā' or administrators than to the Sūfīs. At Cairo and Damascus there was a supreme *sh. al-shuyūkh*, charged with the office of controlling the practice of *taṣawwuf* and whose role was often more political and diplomatic than spiritual (whence al-Subkī's severe judgement on this pompous title, see his *Mu'īd al-ni'am*, Beirut 1986, 96). At a later period, the Ottomans introduced a *sh. al-turuk* ("head of the mystical paths" rather than "of the Sūfī brotherhoods") in each major city of the empire, with the same function as the *sh. al-shuyūkh*. At the beginning of the 19th century, Muḥammad 'Alī Pasha [q.v.] set up a *sh. mashāyikh al-turuk al-shūfiyya*, with authority over the whole range of Egyptian brotherhoods.

One should also note that titles like *shaykh*, *sh. al-shuyūkh* or *sh. al-mashāyikh* are equally used for the heads of trade and professional guilds (see, e.g. above, [www.realpatidar.com](http://www.realpatidar.com)).

vol. II, 967b, and III, 206a), evoking the affinities which existed between *ṭasawwuf* and *futuwwa* [q.v.]. In later Ṣūfism, the *sh. al-saḍḍiyyāda* denoted the successor—corporeal or spiritual—of the eponymous head of the order; the prayer carpet, *saḍḍiyyāda* [q.v.], considered as stemming from the master, symbolises the transmission of spiritual authority to his “heir”. Finally, a woman in whom is recognised the quality of a spiritual master (above all, *vis-à-vis* other women) is still today called *shaykha*.

**SHAYKH ‘ADĪ** [see ‘ADĪ].

**SHAYKH ĀDAM**, ṢAFĪ AL-DĪN b. Tayyib Shāh b. Malik b. Ismā‘īl, the successor to Dāwūd Burhān al-Dīn b. Kuṭb Shāh in 1021/1612 as the twenty-eight *dā‘ī* of the Musta‘lī-Tayyibī Ismā‘īlīs in India known as the Dāwūdī Bohras.

According to Ismā‘īl b. ‘Abd al-Rasūl al-Maḍjūdī (*Fahrasa*, ed. ‘Alīnaḳī Munzawī, Tehran 1966, 118; the text is corrupt and not clear), Shaykh Ādam was a descendant of either Siddharāja Jayasimha (or Jayasingha), the Rājput ruler of Guḍjarāt (1094-1143), who was converted to the Ismā‘īlī faith by Mawlāya ‘Abd Allāh, or a descendant of the latter missionary who had come from Yemen. He lived in Aḥmadābād and died there on 7 Rājāb 1030/28 May 1621. The year of his birth is unknown, but Muḥammad ‘Alī, the author of *Mawsim-i bahār* (Bombay 1301/1884, iii, 259-64) states that while he was still a young boy he studied with Yūsuf b. Sulaymān, the first Indian to be appointed as the head of the *da‘wa* in 946/1539. The latter lived in his native place Sidhpur [q.v.] for five years after becoming the head of the *da‘wa* and then went back to Yemen, where he died in 974/1567. If Shaykh Ādam studied with Yūsuf b. Sulaymān while he was still in Sidhpur, he must have been at least ten years of age or older, which implies that he was born before 940/1533. According to the same author, he then served Djalāl b. Ḥasan, the twenty-fifth *dā‘ī*, who succeeded Yūsuf b. Sulaymān and attained prominence during the time of the succeeding *dā‘ī*, Dāwūd b. ‘Adjab. In 998/1590 he was delegated by the *dā‘ī* to preach and propagate the *da‘wa* in the Deccan (Kuṭb al-Dīn Burhānpūrī, *Muntazaf al-akhbār*, ms. collection of Zāhid ‘Alī, 541 ff., 625-8). After the death of this *dā‘ī*, the Bohra community was divided over the succession dispute; a great majority upheld the succession of Dāwūd Burhān al-Dīn and came to be known as the Dāwūdīs, whereas a minority accepted the claims of Sulaymān b. Ḥasan, the grandson of Yūsuf b. Sulaymān, and became known as the Sulaymānīs. During this time of crisis Shaykh Ādam firmly stood by the *dā‘ī* Dāwūd Burhān al-Dīn, defending his succession before the court of the Mughal emperor Akbar.

His *Kutāb palī mādū* deals with the beginning of the Musta‘līan *da‘wa* in India, the arrival of Mawlāya ‘Abd Allāh (sent from Yemen by Lamak b. Mālik) in Cambay, and the legend about the conversion of Siddharāja Jayasimha, and the subsequent history of

the *da‘wa* until the author’s time (al-Maḍjūdī, *Fahrasa*, 118). It is an important source for the history of that early period: manuscript copies of it are, however, very rare.

(I. POONAWALA)

**SHAYKH AL-BALAD** “the Chief of the City”, the title given in Ottoman Egypt during the greater part of the 18th century to the most powerful bey in Cairo.

By the early 18th century real political power in Egypt no longer rested with the paṣhas, the official representatives of the Ottoman sultan in Istanbul, but with the military grandees—at first Janissary regimental commanders and then exclusively with the Mamlūk beys, who accepted the nominal Ottoman sovereignty, and whose supremacy was decided by fierce power struggles among military factions and households. The strongest bey was called by various appellations, such as *Amīr Miṣr* (“the commander of Cairo”), *Kabīr al-Kawm* (“the senior of the people”, i.e. the Mamluks), *Kabīr al-Balad* (“the senior of the city”), until these titles were superseded by *Shaykh al-Balad*, a title which expresses not only his supremacy but also the limitation of his power to Cairo; he could not extend his rule to all of Egypt, owing to the weakness and fragmentation of Egyptian government, notably in Upper Egypt where the Arab tribes were virtually autonomous.

*Shaykh al-Balad* was not an official Ottoman title, and the Ottomans strongly objected to it, as it expressed the *de facto* rule of the beys and the mere symbolic position of the Ottoman paṣhas in Cairo. In several official decrees issued in the years 1138/1726 and 1143/1730, the Ottoman government calls this title “a devilish innovation”, the source of all the trouble in Egypt, and threatens with death whoever uses it. With their accustomed flexibility, however, the Ottomans eventually put up with this show of Egyptian semi-independence, and an edict issued by the sultan in 1159/1746 names ‘Uthmān Bey, a former *Amīr al-Haḍḍā*, as *Shaykh al-Balad*.

The first bey who is called *Shaykh al-Balad* in the sources was Muḥammad Bey Čarkas in the third decade of the 18th century. During the second half of that century, the ascendancy belonged to the Kāzdughlī Mamlūk faction and the *Shuyūkh al-Balad* came from them. By far the most famous and powerful one was ‘Alī Bey *Bulut Kapan* (“the cloud catcher”, known as “the Great”) whose incumbency (1173-87/1760-73) marked the first attempt since the early 16th century of a rebellion in Egypt against the central Ottoman government. He was succeeded by Muḥammad Abu ‘l-Dhahab [q.v.], ‘Alī Bey’s Mamlūk, who finally turned against him and demonstrated loyalty to the Ottomans.

The title survived as long as the beys held effective power in Cairo, until the French invasion of Egypt in 1798.

(M. WINTER)

**SHAYKH HUSAYN**, a saint (*walī*) of Ethiopia, whose *kubba*, in the Bale or Bali region of Oromo province, is the goal of an important popular pilgrimage. There are various orthographies of his name: Seec Hussèn, Schech Ussen (Italian), *Shaykh* Husayn (Arabic), Shék Husén (Oromo, Amharic), Sheikh Xuseen (Somali), etc.

Sh. Nūr Ḥusayn is said to have lived ca. A.D. 1200. Coming from Merca, on the Somaliland coast, or possibly from Harar, he was reputedly the first great preacher of Islam in the region. He was a thaumaturge, who also had the gift of ubiquitousness. In the 16th century, the Oromo, then followers of traditional religions, came from the south or from the east, gained control of the region and took over the cult passed on to them by the Hadiya-Sidama peoples. Later, the cult became strengthened through a confusion with the one centred around Abba Muda (son [?] of the eponymous ancestor of the Oromo). Today, a syncretistic character of the cult of Sh. Ḥusayn is discernible, but it is only with great prudence that one can set up the equations Abba Muda = Shék Husén and Waaqa (the Oromo supreme deity, identified with the Heavens) = Allāh, God.

The place where his tomb is situated, Annajina (or Dire Shék Husén) is 250 km/155 miles as the crow flies to the south-east of Addis Ababa, to the east of Gobba, on the right bank of the upper course of the (*webi*) Shebelle [*q.v.*], at an altitude of 1,489 m/4,884 feet. The region is one of Arsi (Amhar. Arusi) Oromo farmers and herdsmen. The sanctuary's fame is such that it extends to the whole of the Oromo and Somali lands of the Horn of Africa, and each year attracts tens of thousands of devotees. A main pilgrimage takes place on the anniversary of the saint's death and a second one during the *ḥaǧǧi* month, both at the full moon. The ritual is inspired by that of the Meccan Pilgrimage and by practices dating from the time before the Oromo embraced Islam. But these last probably borrowed from the syncretism already reached by the Sidama.

The pilgrims (*ǧūla*) arrive in groups, on foot or on riding beasts. They all carry a long, forked stick (*ulee*), which has a practical use but is, above all, a sign of their status as pilgrims, which opens to them doors of hospitality. They begin their devotions as soon as they gain sight of the sanctuary.

Within the sacred area properly so-called, bounded by an enclosure, even if it is forbidden to cut down trees, out of respect for their spirit (*ayyaana*), it is nevertheless recommended that shreds of cloth or skin should be hung from their branches as offerings. Near to the pool of Dinkiro, which is fed by a miraculous spring, there stands the mosque of Shaykh Ḥusayn. The tomb is in a crypt reached through a low door. The faithful crowd into there, praying, crying, singing and covering themselves with the white dust of the soil or of the walls kneaded with saliva. Outside the grills of the mausoleum, the crowd sings hymns with alternate verses (*baro*) and dances.

The pilgrim then visits sites in the valley of Kacham-saré: the Serpent Grotto, where can be seen the snake which the saint petrified by his single glance; the Grotto of Sins, where the pilgrim sets apart some of the miraculous earth and white stones which he then throws into the Valley of Sins in order to be purified from his faults; the Grotto of Grass, where he makes a vow whilst pulling a sprig of grass; etc. Strange rock formations which abound in the region are everywhere attributed to the saint's actions. The rites to be fulfilled also include fumigations with plants and incense, and the drinking of coffee and chewing of *kāt* [*q.v.*] (Oromo *chaatii*). Divination, and cults of possession and exorcism, are likewise practiced.

The whole of the sacred site is in the hereditary custody of one family, the Wau of the Gamuoro tribe, adherents of the Ahmadiyya *ṭarīqa*. The mosque, built at Annajina by 'Abd al-Shakūr, *amīr* of Harar [*q.v.*]

1197-1209/1783-94, and dedicated by him to Shaykh 'Abd al-Kādir al-Djilānī (the maternal uncle of Sh. Ḥusayn, according to local tradition!), is the sole rallying-point for members of the Kādiriyya brotherhood. In the minds of many of the faithful, pilgrimage to Sh. Ḥusayn replaces the Pilgrimage to Mecca and allows the poor to fulfil the obligation of *ḥaǧǧi*.

The cults of Shaykh Ḥusayn, of his kindred and that of his disciples, are very strongly alive in the region. His father's *kubba* is situated at Annajina near to the Imaro pool, one of his sons is honoured at Harar, another in the neighbourhood of that same town, etc. The most important of these accessory sanctuaries, arising only in the second half of the last century, is that of Sof Omar (Ar. Šūfī 'Umar). This is made up of a group of grottoes along the course of the Web (Amhar. Wāyb) river, some 60 km/37 miles to the south of Annajina, grottoes in which the homonymous personage is said to have lived. This mystic—one of the 6,666 disciples of Sh. Ḥusayn, according to popular enthusiasm—may have come from the Tegray/Tigré region in the north of Ethiopia in the 18th century. Sh. Ḥusayn's devotees (*gariba*, pl. *garībatta*), frequenters of these sacred places, wander around the region, and well beyond it, living off alms.

(A. ROUAUD)

**SHAYKH AL-ISLĀM** (A.), an honorific title in use in the Islamic world up to the early 20th century, applied essentially to religious dignitaries.

1. Early history of the term.

The title first appears in Khurāsān towards the end of the 4th/10th century. While honorific titles compounded with *Islām* (like 'Izz-, Djālāl-, and Sayf al-Islām) were borne by persons exercising secular power (notably the viziers of the Fatimids, cf. M. van Berchem, in *ZDPV*, xvi [1893], 101), the title of Shaykh al-Islām has always been reserved for 'ulama' and mystics, like other titles of honour whose first part is *Shaykh* (e.g. *Shaykh al-Dīn*; the surname of *Shaykh al-Futūyā* is given by Ibn Khaldūn to the jurist Asad b. al-Furāt, cf. *Muḥaddima*, tr. de Slane, i, p. lxxviii). Of all these titles only that of *Shaykh al-Islām* has been extensively used. Though apparently used in some instances purely as an honorific, the consistency with which the title appears in the major cities of Khurāsān,

and the fact that no two persons bear the title in the same place at the same time, suggests a functional connotation. Some *Shaykh al-Islām* were Sūfīs and others scholars of *ḥadīth*. There is no evidence that they were generally known as *fuḳahā'* or that they delivered *fatwās*. Rather, they seem to have been among the most admired or influential '*ulamā'*' in their milieux, and there are indications that their function was to authorise the initial convening of a class for a new teacher in a city during the period before the *madrassa* took over this function. The biographer of one *Shaykh al-Islām*, the Hanbalī Sūfī Abū Ismā'il 'Abd Allāh al-Anṣārī [q.v.] of Harāt, praises him for "the ordering of *madrāsas*, teachers (*aṣḥāb*), and convents and the holding (*nuwāb*) of classes", see R.N. Frye (ed.), *The histories of Nishapur*, The Hague 1965, first ms. of al-Fārisī, fol. 33b; second ms. of al-Fārisī, fol. 82b). Further indications of an educational function for the *Shaykh al-Islām* are given by R.W. Bulliet, *The Shaikh al-Islam and the evolution of Islamic society*, in *SI*, xxxv, 53-67.

While the office is attested in a number of Persian cities in the 5th/11th century, it seems not to have spread in its functional form to the west. In Syria and Egypt, *Shaykh al-Islām* became a title of honour but not an official title. It was bestowed on jurists whose *fatwās* attained a degree of fame and acceptance, such as Ibn Taymiyya [q.v.], who was called *Shaykh al-Islām* by his supporters but denied the title by his adversaries. Later uses of the title under the Il Khāns, the Dīlī Sultanate and Tīmūrids indicate an '*alīm*' of high rank performing various functions in the religious and educational arena. These figures were not generally *muftīs*. To the west, however, by 700/1300 the title had gradually become associated with the deliverance of *fatwās*. This was the case in Syria and Egypt, but opinions differ as to whether *Shaykh al-Islām* was purely title or designation of the local *muftī* in Anatolia during Saldjūq and early Ottoman times. Insofar as it designated an office of any kind, however, it was a local rather than a state one, contrary to the practice in contemporary régimes to the east of Persia, where it was more often, though not invariably, a state post conferred by the ruler.

*Bibliography:* Given in the article.

(J.H. KRAMERS-[R.W. BULLIET])

## 2. In the Ottoman empire.

The title *shaykh al-islām* is most famously associated with the Ottoman office of the *Muftī* of the Capital, which is to say, for by far the greater proportion of its existence, the *Muftī* of Istanbul. While several early, not altogether trustworthy uses of the title *shaykh al-islām* occur in documents around the turn of the 14th century (M. Akdağ, *Türkiye'nin iktisadî ve ictimai tarihi*, ii, Ankara 1971, 62, n. 1), these perhaps reflecting a continuance of Saldjūq usage, its earliest use as a title of the *Muftī* of the Capital—with which office it became exclusively associated amongst the Ottomans—is found in the so-called *kānūn-nāme* [q.v.] of Mehemmed II relating to state organisation (*TOEM*, supplement to parts 13-15, 10), traditionally dated to ca. 1480. Whatever the truth in general in the debate over the authenticity of this important document, it is certainly the case that the extant manuscripts, which date from the early 17th century, are shot through with anachronisms, of which this may well be one. It nevertheless appears that the Ottomans used the term "*Muftī*" and "*Shaykh al-Islām*" interchangeably and often together (as indeed in the passage referred to), the former being by far the more common designation in earlier centuries, the latter gaining the

greater currency with the passage of time, and particularly from the 18th century (cf. İ.H. Uzunçarşılı, *Osmanlı devletinin ilmiye teşkilâtı*, Ankara 1965, 174).

The origins of the office of *Shaykh al-Islām*, or *Muftī*, are obscure from the point of view both of the identity of the first few holders of the post and of the reasons for its creation. On the former point, two separate Ottoman traditions exist in the form of lists of the holders of the office, one found at least as early as the *Devha-yi meshā'ikh-i kibār* of the 18th-century writer Müstakīm-zāde (Müstakīm-zāde Sulaymān Sa'd al-Dīn Efendi: d. 1202/1787-8 [q.v.]), the other, rather earlier, in the *Takwīm al-tawārikh* by Kātib Çelebi [q.v.]. Müstakīm-zāde's list begins with Mollā Shems al-Dīn Muḥammad b. Ḥamza b. Muḥammad al-Fenārī (Mollā Fenārī, d. 834/1431 [see FENĀRĪ-ZĀDE]), *Muftī* in Bursa, that of Kātib Çelebi with Khidr Beg (d. 863/1459 [q.v.]), the first *kādī* of Istanbul, to whom, Kātib Çelebi says, the office of *Muftī* of Istanbul was also given at the time of the conquest (1453). Though Kātib Çelebi's account has found favour with certain later authors (e.g. Husayn Hezārfenn [q.v.], d'Ohsson, Hammer-Purgstall), that of Müstakīm-zāde—which depends ultimately on the statement in Tashköprü-zāde (*al-Shakā'ik al-Nu'māniyya*, Arabic text in margin of Ibn Khallikān, *Wafayāt al-ayyān*, Būlāk 1299, i, 87) that Mollā Fenārī was "*muftī* in the Ottoman lands" (*muftī fi 'l-mamlaka al-Uṭmāniyya*), this being the first occurrence of such a title in his work—has generally, and rightly, been preferred. (On the considerable problems posed by both lists with respect to the *Muftīs* of the 15th century, see R.C. Repp, *The Muftī of Istanbul*, London 1986, 137 ff.)

If the uncertainties about the facts of the lives of the 15th-century *Muftīs* make it difficult to fix a reliable line of succession, the exiguous nature of the evidence about their activities renders it equally difficult to define their functions and rôle. Several certainly, and perhaps all, taught at important *madrāsas* while holding the office of *Muftī*. Fakhr al-Dīn al-'Adjamī (d. 873/1468 ?), the second (or third ?) *Muftī*, is remembered for having prevented the young Mehemmed II [q.v.] from coming under the influence of the Hurūfiyya [q.v.], a fact which suggests that he (like some later *Muftīs*) may have been regarded as a personal religious adviser to the sultan: it is also noteworthy that he, unlike his one, possibly two predecessors, but like all his successors, did not hold the office of *kādī* simultaneously with that of *Muftī*. Mollā Gūrānī (d. 893/1488 [see GÜRĀNĪ]), while *Muftī*, conducted an investigation into the suspect conduct of a highly-regarded scholar, while Mollā 'Arab (d. 901/1495-6) was likewise involved in several investigations of suspected heresy and was also active in persuading Bāyezīd II [q.v.] to make peace with the Mamlūks in 896/1491. No function can be shown to be exclusive to the 15th-century *Muftīs*, however, and none common to all of them (apart, possibly, from teaching), except, importantly, the issuing of *fatwās* [q.v.], which they and all their successors, at least until the time of Abu 'l-Su'ūd (d. 982/1574 [q.v.]), did personally. Their pay was low, certainly compared with that of the *kādī* 'askers and *kādīs* [q.v.], and there is no evidence that they were at this stage regularly consulted on affairs of state (the *Muftī* was not in the 15th century, or ever, a member of the imperial council, the *diwān-i humāyūn* [q.v.]).

Despite the apparent lack of definable duties, however, several bits of evidence suggest that the office of *Muftī* was one of considerable importance from its inception. Early testimony to this effect is found in

the account of the Burgundian courtier Bertrandon de la Broquière, who was granted an audience with Murād II [q.v.] in Edirne in Radjab 836/March 1433. In describing Murād's entry into Edirne, he notes that he was preceded by "the grand caliph, who is amongst [the Ottomans] as the Pope is amongst us"; the editor of the work appears certain to be correct in identifying "the grand caliph" as the *Shaykh al-Islām* Fakhr al-Dīn al-'Adjamī (*Le voyage d'outremer de Bertrandon de la Broquière*, ed. Ch. Schefer, *Recueil de voyages et de documents*, xii, Paris 1892, 181; cf. Repp, *op. cit.*, 115-16, 120). This same Fakhr al-Dīn is likewise found in the place of honour, on the sultan's right hand, at a learned discussion during the circumcision feast of two of the sons of Mehemmed II in 861/1457. As further evidence of the importance of the office one should note that several outstanding scholars of the time such as Mollā Fenārī, Mollā Khosrew (d. 885/1480-1 [see KHOSREW MOLLĀ]) and Mollā Gūrānī held it as the culmination of distinguished careers. And finally in this connection, for all the doubts about the authenticity of the *kānūn-nāme* of Mehemmed II alluded to above, the passage therein concerning the *Muftī* cannot be ignored: "The *Shaykh al-Islām* is the chief of the *ulamā'* and the *Mu'allim-i Sulṭān* [*Kh'ādja/Hoca*] is similarly the head of the *ulamā'*. It is fitting for the Grand Vizier to place them above himself out of respect. But the *Muftī* and the *Kh'ādja* are many ranks higher than the other viziers and also take precedence over them." (On the questions of precedence thus raised, see further Repp, *op. cit.*, 192-6.)

The contrast between, on the one hand, the ill-defined and apparently relatively modest duties performed by the early *Muftīs* and, on the other, the considerable prestige which the office of *Muftī* seems to have enjoyed from its very beginnings, is illuminating in several respects. The lack of evidence concerning any significant administrative duties consistently and exclusively performed by the 15th-century *Muftīs* makes it difficult to accept that an administrative purpose can have lain behind the founding of the office. Thus R.W. Bulliet's thesis that the explanation of its creation lies in an attempt by the sultans to control the Muslim religious establishment by the control of the educational system through the *Shaykh al-Islām* appears untenable (*The Shaykh al-Islām and the evolution of Islamic society*, in *SI*, xxxv [1972], 53-67). (The view that the Ottoman sultans attempted to control the religious establishment is entirely tenable, but this process was accomplished through the creation of a highly elaborated hierarchy of learned offices which began in the time of Mehemmed II (d. 886/1481), long before the *Muftī* came to head it.) Similarly, Walsh's assertion that the right to issue *fatwās* was confined to the *Shaykh al-Islām* from the inception of the office (implicitly as a means of developing a more unified system of law) is unsustainable [see FATWĀ. ii. Ottoman Empire, and further, Repp, *op. cit.*, 299-300].

Walsh's recognition of the peculiarly non-secular character of the office is noteworthy, however, a point reflected also in the most plausible of the explanations offered by Kramers for the foundation of the office, namely that it represents "a survival of the ancient mystical religious tradition in the Ottoman state, a tradition which demanded alongside of the secular power, a religious authority having no judicial powers but representing, so to speak, the religious conscience of the people" (art. *Shaykh al-Islām*, in *ET*). To regard the creation of the office of *Muftī* as meeting a need for a distinctively religious figure in the state, one who would stand apart from the

secular government, who would embody the authority of the *Shari'a* and who would perhaps even provide a religious sanction for the régime, offers the basis for an explanation of the creation of the office which is consistent with such few facts as are known and which at the same time throws a different light on some apparent peculiarities connected with it. It is in this sense that the separation of the office of *Muftī* from a simultaneously-held post of *kādī*—an office held in deep suspicion by the more devout *ulamā'*—which occurred with the appointment of Fakhr al-Dīn al-'Adjamī is important. The *Muftī*'s relatively low salary and his not being a member of the *diwān-i humāyūn*, moreover, far from being signs of the relative unimportance of the office in the 15th century, as they have usually been regarded, should rather be seen as a conscious effort to protect the office from the taint of secularism. Why the need for such an office was felt—whether in some way it was a response to the defeat at the hands of Tīmūr (804/1402), which had been widely seen as divine retribution for the godlessness of the reign of Bāyezīd I (1389-1402; see H. İnalcık, *The rise of Ottoman historiography*, in B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962, 155) and/or possibly to heterodox movements in the first quarter of the 15th century—cannot be known on the basis of the evidence currently available.

Notable amongst the 16th-century *Muftīs* were Mollā 'Alā' al-Dīn 'Alī al-Djamālī [see DJAMĀLĪ], Kemāl Pasha-zāde [q.v.], and Abu 'l-Su'ūd [q.v.]. 'Alī al-Djamālī's long period as *Muftī* (908-32/1503 to 1525-6) saw the office acquire significant additional duties in the form of the responsibility for the teaching at Bāyezīd II's newly-built *madrasa* in Istanbul (in later times assumed by a deputy, the *ders wakīlī*) and for the supervision (*nazāra*) of his *awakāf*, this latter responsibility being one not infrequently assigned by the sultans to the Grand Vizier. He is likewise credited with having restrained Selīm I [q.v.] on several occasions from harsh acts on the grounds of a proper concern for that sultan's welfare in the after-life; though angered, Selīm attempted to reward him with appointment to the offices of the two *kādī askers* combined, an offer which 'Alī Djamālī refused.

Kemāl Pasha-zāde (d. 940/1534), with Abu 'l-Su'ūd perhaps the most noted of Ottoman scholars of the classical period, is also associated with him in a famous assessment of their respective accomplishments as *Muftī*: "Truly the effect of their *idjtiḥād* [individual reasoning] was the harmonising of the Ottoman *kānūns* [q.v.] with the noble *Shari'a* and the ordering of religious and state affairs on the best possible basis" (New'ī-zāde 'Atā'ī [see 'ATĀ'Ī], *Hadā'ik al-ḥakā'ik fī takmilat al-Shakā'ik*, Istanbul 1268, 185).

It was in Abu 'l-Su'ūd's tenure of the office of *Shaykh al-Islām* (952-82/1545-74) that it was to become the head of the already well-established learned hierarchy and to take on definitively the form it was to have until the 19th century. Greatly valued by Süleymān I [q.v.], Abu 'l-Su'ūd strove, as the passage just quoted suggests, to bring together the requirements of the *Shari'a* and those of the administration of the state into a workable legal framework. He was active in the issuing of private *fatwās* as well as *fatwās* on matters of public policy. In the latter category, his *fatwā* authorising the taking of Cyprus from Venice (see Peçewī, *Tārīkh*, 2 vols., Istanbul 1281-3, i, 486-7) may represent the first time a *muftī*'s *fatwā* was regarded as sufficient religious sanction for an important matter of state policy (in later centuries, the *Muftī* appears

to have become at the least the spokesman for the 'ulamā', though he continued to consult widely before delivering his opinion: cf. I. Mouradgēa d'Ohsson, *Tableau général de l'Empire ottoman*, 7 vols., Paris 1788-1824, iv, 511-13, 528. On the difficult question of the status of the *Muftis' fatwās*, see Repp, *op. cit.*, 113-15, 212-21, 279-90. If not actually instituted before his death, the *Muftis'* close involvement in appointments to the higher offices in the learned profession, a function which they took over from the *kādī 'askers*, was certainly mooted in Abu 'l-Su'ūd's time, with the intent that he should take on this fundamentally important duty (Repp, *op. cit.*, 293-5). Abu 'l-Su'ūd's achievements were recognised by substantial rewards, notably a greatly enhanced salary which, at least from 973/1566, came to surpass that of the *kādī 'askers*.

Further systematic work needs to be done on the nature of the office in the 17th and 18th centuries, during which time (and indeed until the end of the empire) the *Muftī* was recognisably a state official, having gradually been absorbed into the hierarchy, at its head, from the previous position of having stood entirely outside it. He was now frequently, if not invariably, drawn into the decision-making process, in which he played an important part, on matters of state policy such as the making of war and peace or the deposition of a sultan, not in the forum of the *divān-i humāyūn*, of which, as mentioned earlier, he was not a member, but through the medium of "consultations" (*müşāwure, meshwure*). The very much greater involvement in affairs of state and the consequent demands on his time meant that the function of the preparation of *fatwās*, and particularly "private" *fatwās*, a function of such importance in the early years of the office, passed largely into the hands of a deputy, the *fatwā emīni*, who became with the passage of time a highly influential figure in his own right (on this post, and the organisation of the *Muftī's* deputies generally, see Uzunçarşılı, *op. cit.*, 195 ff.; U. Heyd, *Some aspects of the Ottoman fetwā, in BSOAS*, xxxii [1969], 35-56). It might be speculated that this absorption into the learned hierarchy, at its head, of an office which had originally stood outside it, and much of whose *raison d'être* lay in its independence from the secular government, had its cost. Certainly in purely material terms, though the *Muftis* gained greatly in terms of salary, perquisites and defined powers, they lost the tenure of the office for life which the early *Muftis* had almost without exception enjoyed; removal from the office was by now a common occurrence.

In 1241/1826, following the destruction of the Janissaries, Maḥmūd II [q.v.] gave the residence of the Agha of the Janissaries near the Süleymaniye mosque to provide an office for the *Shaykh al-Islām* and his department. The *Shaykhs* now for the first time had a permanent location for their work, having previously carried out their functions in their own residences or in rented accommodation [see BĀB-I MESHĪKHAT]. The diminution of the powers and influence of the 'ulamā' generally in the 19th century affected the position of the *Shaykh al-Islām* as well: they gradually lost their influence, more particularly after the revolution of 1908. The last holder of the office, the 131st, resigned on 4 November 1922 in the wake of the abolition of the sultanate a few days earlier. The office came formally to an end following the abolition of the caliphate on 3 March 1924.

(R.C. REPP)

**SHAYKH MŪSĀ NATHRĪ**, modern Persian writer dealing in historical novels. The details con-

cerning his life are at the best sketchy. By profession, he was involved in educational activities, serving as principal of the government college *Nusrat* in Hamadān and as Director of Education in Kirmānshāhān (for his latter designation, see *Armaghān* [March-April 1930], 73). He edited the periodical *Itihād* which was published from Hamadān in 1293/1914 (Šadr Hāshimī, *Tārīkh-i dīrāyid u madjallāt-i Irān*, i, Isfahān 1343/1964-5, 46). An article from him, entitled *Shā'ir kist* "Who is a poet?", appeared after his death in the July-August 1968 issue of *Armaghān*, suggesting that he died not later than that year.

**Shaykh Mūsā Nathrī** was among the pioneers of the modern historical novel in Persian. His first work in that genre, entitled *Ishk u salhanat* "Love and kingship", was published at Hamadān in 1337/1919 (repr. Bombay 1342/1924), and deals with the exploits of Cyrus the Great, founder of the Achaemenid dynasty. The material for the narrative was borrowed by the author from the French translation of Herodotus's account and historical works in French, as well as from the Avesta. The author claimed that his work was the first historical novel in Persian composed after Western literary models, but Buzurg Alavi has pointed out that Muḥammad Bākīr Mīrzā *Khusrawī's* *Shams u tughra* is earlier (1328/1910). However, as a piece of fiction, it hardly stands up to artistic scrutiny. According to the criticism of E.G. Browne (*LHP*, iv, 465), the book "is overloaded with dates, archaeological and mythological notes and prolix historical dissertations." It was the first of a trilogy; the others, which appeared later, are *Sūtāra-yi Lidī* "The Lydian star" (Bombay 1344/1925-6) and *Sargudhasht-i shahzāda khānum-i Bābīlī* "The story of a Babylonian princess" (Kirmānshāhān 1311/1932). These show only a slight advance upon their predecessor, and not surprisingly have received little attention from Persian critics. The only aspect of **Shaykh Mūsā Nathrī's** literary exercises finding approval concerns his language, which tends towards a simplified form. His works, therefore, must be judged not so much for their artistic merit as for their place in the overall historical evolution of modern Persian fiction.

**SHAYKH ŠAFĪ** [see ŠAFĪ AL-DĪN ARDABĪLĪ].

**AL-SHAYKH SA'ID**, a monsoon harbour on the straits of Bāb al-Mandab [q.v.], lying just north of the so-called Small Strait on a cape whose high cliffs dominate the island of Mayyūn [q.v.]. This Strait is also called Bāb Iskandar because Alexander the Great is said to have built a town here. The harbour, named after **Shaykh Sa'id** whose tomb is found on the northern side of the cape, has been identified by Sprenger and Glaser with ancient Ocelis or Acilia, which is mentioned by Pliny, Ptolemy and in the *Periplus Maris Erythraei*, and conceals perhaps some

name like 'Uḡayl. The harbour is said to have belonged to the pre-Islamic Ḳatabān [q.v.], then to the so-called Gebanites and finally to the Ḥimyarites. Its name is also connected with Mahra b. Ḥaydān b. 'Amr b. al-Ḥāf, the ancestor of the Mahra [q.v.].

The cape was acquired from the local sultan by the French admiral Mahé La Bourdonnais in 1734. Napoleon Bonaparte wished to garrison the cape, a proposal which was also suggested by the French government to Muḥammad 'Alī Paṣhā [q.v.]. When the latter was preparing to put the plan into force in 1838, he encountered the resolute opposition of the British, who occupied Aden in 1839 and established a coaling station on Mayyūn (Perīm) in 1857. The cape was bought from the local sultan 'Alī Ṭabāt by a Marseilles firm, and turned over to the Société de Bāb al-Mandab in 1871. In 1884 the harbour was occupied by the Turks, who fortified the cape, notwithstanding continuous but fruitless attempts by the French to enforce their claims. Al-Shaykh Sa'īd was bombarded by the British in 1914, but the Turks held out, being supported in 1915 by troops sent by the Zaydī Imām Yahyā b. al-Manṣūr. The Turks even bombarded Mayyūn and temporarily closed the Straits of Bāb al-Mandab.

**SHAYKH AL-ṬĀ'IFA** (see AL-ṬŪṢĪ, MUḤAMMAD B. AL-HASAN).

**AL-SHAYKH AL-YŪNĀNĪ**, the disguise of one of the participants in the transmission of authoritative Neoplatonic thought to Islam based upon a translation of large portions of books IV-VI of the *Enneads* of Plotinus. Fragments with this designation have been recovered without, however, allowing a reconstruction of the form and extent of his work. It is also debatable whether al-Shaykh al-Yūnānī was substituting for the name of a given philosopher and even might have belonged to the entire lost Arabic Plotinus source. The wide range of meaning of *shaykh* [q.v.] permits a choice between "Greek Teacher" and "Greek Old Man"; occasional Greek references to some Neoplatonists as *gerōn*, among them Porphyry (see Kutsch), might perhaps tip the scales in favour of "Old Man", whether Porphyry's role in the Arabic Plotinus reflects historical links [see FURFURYŪS] or not (see Zimmermann). In addition to the fragments from the *Enneads*, al-Shaykh al-Yūnānī is credited with a brief treatise on topics of Neoplatonic philosophy. In this case, as well as in other references, there can hardly be any doubt that he was understood to be one and same person, even where he is brought into contact with ancient philosophers or, rather mysteriously, is described as a pupil of Diogenes (see *Siwān al-hikma*, ed. D.M. Dunlop, 56-7, 58-61). The manifold problems connected with this figure cannot be separated from the entire complicated and fateful history of the Arabic Plotinus, for which see ṬHŪṢĪYĀ.

(F. ROSENTHAL)

**SHAYKHIYYA**, an important school of speculative theology within Twelver Shī'ism, influential mainly in Persia and 'Irāq since the early 19th century. Although at times its leaders have been excommunicated and its doctrines condemned as heretical, Shaykhism (also known as the *Kashfiyya*) has accommodated itself fairly successfully with the majority Uṣūlī establishment and is generally regarded as a school (*madhhab*) rather than a sect (*fiṛqa*). Bābism [see BĀB, BĀBĪS] began in the 1840s as a radical development of Shaykhī heterodoxy.

#### 1. Early history.

The origins of Shaykhism are to be found in a highly original attempt to effect a synthesis between (1) the theosophical Shī'ism of Mullā Ṣadrā Shīrāzī [q.v.] and the School of Iṣfahān, (2) the waning Akhbārī tendency, and (3) what Amanat calls a "diffuse gnosticism", influenced by crypto-Islāmī and related ideas. Later Shaykhī doctrine owes much to a wish to play down the school's own distinctiveness and effect a compromise with the Uṣūlī establishment.

The school's originator, Shaykh Aḥmad al-Aḥsā'ī (1166-1241/1753-1826 [q.v.]), is still reckoned one of the leading Shī'ī 'ulamā' of the early Qājār period, and a thinker of considerable force. His early life in al-Aḥsā', a backwater with few provisions for religious learning, was unpropitious for one with ambitions to scholarship; but by the time of his arrival in the Shī'ī shrine colleges of 'Irāq in the early 1790s, he already possessed a prodigious knowledge, not only of *fiqh* and *kalām*, but of the theosophical texts that were to form the basis of a wide-ranging critique in later years.

More importantly, he had experienced numerous dreams and visions, chiefly of the Imāms, allowing him to claim privileged understanding of the Ḳur'ān and Traditions. This claim to intuitive knowledge sets al-Aḥsā'ī apart from the representatives of the two main currents of Shī'ī thinking then contending for dominance: the Uṣūlīs, with their emphasis on *iḡtibād* through reasoning, and the Akhbārīs [see AKHBĀRIYYA in Suppl.], who stressed a literal adherence to the texts themselves, without recourse to *iḡtibād*.

Having acquired licences from several eminent *mudjtahids*, in 1221/1806 al-Aḥsā'ī travelled to Persia. Here he remained for almost twenty years, patronised by Faṭḥ 'Alī Shāh [q.v.] and a succession of Qājār notables. He lived mainly in Yazd (1806-14) and Kirmānshāh (1814-21), where he enjoyed the patronage of Muḥammad 'Alī Mīrā and wrote some of his most important books, including the *Sharḥ al-ziyāra al-djāmi'a al-kabīra* (his *magnum opus*) and commentaries on the *Risāla al-'ilmīyya* of Muḥsin Fayḍ al-Kāshānī and the *Arḥiyya* and *Mashā'ir* of Mullā Ṣadrā.

In 1822 in Qazwīn, al-Aḥsā'ī first encountered a

charge of apostasy, and in the last four years of his life, spent largely in Karbalā', he became the object of a campaign of vilification. He died on his way to Mecca on 21 *Dhu 'l-Ḥa'da* 1241/27 June 1826, aged seventy-three.

Al-Aḥsā'ī was succeeded in Karbalā' by a younger Persian disciple, Sayyid Kāzīm Raṣṭī (d. 1259/1844; birth dates range from 1198/1784 to 1214/1799-1800 [q.v.]), like his mentor the product of a non-clerical family. Raṣṭī remained in Karbalā' until his death and, despite repeated denials that he had established a new *madhhab* within Islam and insistence that he was no more than an expounder and defender of the views of al-Aḥsā'ī, became an effective focus for the allegiance of a small but influential grouping of 'ulamā' and laymen. A school had effectively been created: on Raṣṭī's death, his followers split into radically different factions. This division, which has recently been studied in some detail by Amanat, Bayat, and MacEoin, is of wide significance, since it encapsulates some of the most important tensions in Kādjār Shī'ism.

The two most extreme divisions to emerge after 1844 were Bābism, which rapidly outgrew its Shaykhī origins to proclaim a new revelation and a new *Sharī'a*, and a conservative branch based in Tabriz. This latter group included leading 'ulamā', merchants, government officials, and notables; after a period of wholesale separation from the religious mainstream, it merged with it and lost its character as a distinct school.

The successive claims of Sayyid 'Alī Muḥammad Shīrāzī, the Bāb [q.v.], were a logical development of several strains in Shaykhī thinking, most importantly the emphasis on intuitive knowledge and the concept of a single individual, the Perfect Shī'ī or *bāb*, who could act as an infallible guide to the Imām. Both al-Aḥsā'ī and Raṣṭī seem to have been regarded (and to have regarded themselves) in this light; the latter divided the dispensation of Islam into two distinct periods: a cycle of outward observances (which came to an end after twelve centuries) and one of inner truth (which began with the appearance of al-Aḥsā'ī).

#### 2. Kirmānī Shaykhism.

The Bāb's chief rival for the allegiance of the school was Ḥādījī Muḥammad Karīm Khān Kirmānī (1225-88/1810-70), the eldest son of Ibrāhīm Khān Zahr al-Dawla, the governor of Kirmān and Balūčistān (1803-24) and one of al-Aḥsā'ī's leading patrons in Persia. A member of the ruling Kādjār family by birth and marriage, Karīm Khān's role as a religious leader in the Kirmān region was both strengthened and complicated by his position as the senior member of the powerful Ibrāhīmī clan and his control of its financial resources. The history of Kirmānī Shaykhism is closely linked both to the fortunes of the Ibrāhīmī family and wider political developments.

A prolific writer and would-be polymath, Karīm Khān sought to reconcile Shaykhī teaching with Uṣūlī orthodoxy, insisting that the school agreed in all its main principles (*uṣūl*) with traditional Shī'ī doctrine, while differing only in practice (*furū'*). The clear heterodoxy of the Bāb and his followers was both an impetus to this policy and an aid in furthering it. Hence his ambivalence over the doctrine of the Fourth Support (*al-rukn al-rābi'*), with which he became particularly associated. In a novel reworking of the traditional five bases of religion (divine unity, prophethood, resurrection, divine justice, and the imamate), Kirmānī reduced them to three (knowledge of God, prophethood, and *imāma*) and added a fourth pillar, knowledge of the friends and enemies of the Imams. In its original formulation, this doctrine leaned towards

recognition of a single, divinely-appointed mediator between the Imām and the faithful (identified with al-Aḥsā'ī, Raṣṭī, and, it would seem, Kirmānī himself). Later, however, almost certainly as a reaction to the Bāb's advancement of similar claims, this was modified to a more general advocacy of the 'ulamā' and other holy figures as representatives of the Imām. In many respects, this debate prefigures that around Khumaynī's concept of *wilāyat al-fakih* and whether its application should be to a single individual or a collective body of *muḥtashids*.

Kirmānī's most significant break with the doctrine of an inspired guide came, however, with his appointment of his own son, Muḥammad Khān (1263-1324/1846-1906) and the creation of a spiritual dynasty similar to those found in Sūfism. Leadership of the school was passed down through a series of Ibrāhīmī khāns (generally known by the title Sarkār Akā): Ḥādījī Zayn al-'Abidin Khān (1276-1360/1859-1942), Abu 'l-Kāsim Khān (1314-89/1896-1969), and 'Abd al-Ridā Khān (d. 1979). This period saw mounting conservatism, particularly with regard to social reform and acceptance of Western ideas. Bayat speaks of intellectual stagnation in a situation where original Shaykhī doctrine was taught privately while public profession was made of orthodoxy (Bayat, 181).

During the leadership of Ḥādījī Muḥammad Khān, tension between Shaykhīs and their opponents, known as Bālāsārīs, erupted into violence on several occasions, culminating in virtual civil war in 1905 (MacEoin, *Bālāsārī*). Identification of the Shaykhīs with Kādjār interests, and Muḥammad Khān's own hard-line royalist stance, encouraged a widening of the issues to a point where the original dispute was eclipsed by growing agitation for a constitution.

Following the assassination of 'Abd al-Ridā Khān in the aftermath of the Iranian revolution of 1979, the headquarters of the school was moved to Baṣra in 'Irāq, where leadership passed to Ḥādījī Sayyid 'Alī Mūsawī.

At its height in the last century, Shaykhism was an influential school with converts in all the main Persian cities, 'Irāq, India, and eastern Arabia. In Persia, the membership included high-ranking government officials and even Muẓaffar al-Dīn Shāh [q.v.]: in this respect, it appears to have been an acceptable alternative to Sūfism, following the collapse of the Nī'matullāhī revival of the early 19th century.

#### 3. Doctrine.

In broad terms, Shaykhī doctrine differs very little from that of orthodox Twelver Shī'ism, and is generally little further from it than the views of the theological thinkers: if anything, al-Aḥsā'ī and Raṣṭī made greater efforts than Ṣadrā and his followers to remain part of the official religious system. Despite an obvious debt to Ibn al-'Arabī and the Shī'ī theosophers, al-Aḥsā'ī disagreed with them on several important issues, in particular the doctrine of the oneness of existence (*waḥdat al-wuḍūd*). Since God remains ontologically separate from and inaccessible to creation, al-Aḥsā'ī emphasised the role of the prophets and imāms as intermediaries between the divine and human worlds. Within this context, he regarded the imāms as the four causes of creation: active (they are the locations of the divine will); material (all things have been created from the rays of their lights); formal (God created the forms of all creatures from the lights of their forms); and final (God created all things for their sake).

It was this view that led to one of the earliest arguments against al-Aḥsā'ī, namely, that he held the

imāms to be creators instead of God. Although he denied this criticism in its extreme form, and argued that his views were based on well-known traditions, there is no doubt that the imāms and their role as manifestations of the divinity played a central role in his theology. Belief in the necessity for the continuing presence of an imām combined with al-Aḥsāʾī's own conviction of the possibility of visionary contact and inspiration to produce a central doctrinal focus on intermediacy in each generation.

This itself led to the view that religious truth has developed through the ages, mankind being likened to a growing child in need of progressively stronger diets. Alongside the idea of an age of inner truth succeeding one of outward observance, Shaykhī teaching proposed that humanity had either come of age or was about to do so—a doctrine which had its strongest impact on Bābism and its successor, Bahāʾism [q.v.].

Raṣṭī's belief that a new age of spirituality had started with al-Aḥsāʾī seems to have given rise to speculation within the school as to the possibility of the advent of the Twelfth Imām's imminent advent, but how extensive such chiliastic expectation really was it is very hard to establish. The Kirmānī Shaykhīs naturally play down all suggestions of messianism, while modern Bahāʾīs exaggerate its role on the basis of oral statements. In their writings, both al-Aḥsāʾī and Raṣṭī adopt a conventional attitude to the question of the Imām's return. Nevertheless, the fact that Raṣṭī's death was immediately followed by a frantic outburst of millenarianism suggests that, at the very least, talk of living gates to the Imām had excited speculation that the Maḥdī himself might soon make his appearance.

In their lifetimes, however, orthodox criticism of al-Aḥsāʾī and Raṣṭī found a particular focus in the former's teaching on the eschatology of the individual. In several works—notably the *Sharḥ al-ziyāra*—he developed an original doctrine of resurrection based on a complex system of physical and spiritual bodies (for details, see MacEoin, *Cosmology*, Corbin, *Terre céleste*, 146-74). According to this scheme, man possesses four bodies: two *qiasad* and two *qism*. For the orthodox, the crucial problem with this system, which involves resurrection in an interworld known as *Hūrkalāyā*, was its denial of a return for the first *qiasad*, the fleshly body of terrestrial elements. Although the Shaykhī doctrine does not entirely spiritualise the process of resurrection, it tended to be interpreted in that way by the school's opponents.

#### 4. Literature.

The corpus of written materials produced by the school's leadership is enormous, although very little has been penned by adherents. A great deal still exists only in manuscript form, although the Shaykhī community of Kirmān has made microfilm copies of all the originals in its own library. Their Saʿadat Press has published reliable editions of works by all the shaykhs, amounting to several hundred volumes, and plans to issue more. A full bibliography of Shaykhī writing from al-Aḥsāʾī to Abu ʾl-Kāsim Khān may be found in the latter's *Fihrist*, to which Momen's *The works of Shaykh Ahmad al-Aḥsāʾī* is useful addition.

**Bibliography:** Shaykh Ahmad b. Zayn al-Dīn al-Aḥsāʾī, *Qawāmī al-kalīm*, 2 vols., Tabriz 1273/1856-7, 1276/1860 (94 treatises); idem, *Sharḥ al-ziyāra al-qāmī'a al-kabīra*, new ed., 4 vols., Kirmān 1355-6 Sh./1976-7; Sayyid Kāzīm Raṣṭī, *Datīl al-mulḥayyirīn*, n.p. 1276/1859-60; Shaykh ʿAbd Allāh Aḥsāʾī, *Sharḥ-i ḥālāt-i Shaykh Ahmad al-Aḥsāʾī*, Bombay 1309/1892-3 (the main biographical source); H. A.

**SHAYKHŪ, LUWĪS**, conventionally L. CHEIKHO, with the correct name Rizk Allāh b. Yūsuf b. ʿAbd al-Masīḥ b. Yaʿqūb (1859-1927), Jesuit scholar and polygraph. He was the author of many works on Arabic language and literature, especially, Christian Arabic, and founder of the journal *al-Mashrik*. Originally from upper Mesopotamia, he spent most of his life in Beirut.

Born at Mārdīn [q.v.], now in Turkey, he came to Beirut at the age of nine for secondary education. He entered the Jesuit order in 1874, studied for four years in France, and on his return to Lebanon, taught in the Jesuit secondary school in Beirut where he began publication of his *Maḥjānī al-adab*. After further studies at the Université de Saint-Joseph, in England, Austria and Paris, where he became familiar with libraries there and with current orientalist scholarship, he returned in 1894 to Beirut and stayed there substantially until his death, devoting himself to work on Arabic language and literature and to editing *al-Mashrik*, founded by him in 1898.

A catalogue of his impressive literary output, virtually exhaustive, has been given by C. Hechaimé, his successor as editor of *al-Mashrik*, in his *Bibliographie analytique du Père Louis Cheikho, avec introd. et index*, Beirut 1979, which also includes (161-78) everything which had until then appeared on Shaykhū, during his lifetime and afterwards, and in both the Arab world and that of Orientalist scholarship.

Of his 2,750 writings, the greater part of which—though not the most important—appeared in *al-Mashrik*, some 979 titles are devoted to Christianity and its writings, not directly concerned with Arabic studies. But his major works included his anthology of Arabic literature, the *Maḥjānī al-adab fī ḥadāʾik al-ʿArab*, Beirut 1882-3, 6 vols.; his *Sharḥ* on it, 3 vols.; and its *Fahāris*. The whole work had a great success, with many editions. He edited, from manuscript, the Arabic version of *Kalīla wa-Dimna* [q.v.] (1905), the *diwāns* of Abu ʾl-ʿAtāhiyya (1886, 1887), of al-Khansāʾ, and above all, of the *Ḥamāsa* of al-Buḥārī (1910). In the

field of philology, he edited Ibn al-Sikkīt's *K. Islāh al-manjik* and *K. al-ʿAlfūz*; two general works on the Arab literature of the 19th century and the first quarter of the 20th century respectively; and his *Catalogue raisonné des manuscrits de la Bibl. Or. de Beyrouth* (191-3-26), a library of which he was in effect the founder and the donor of a large part of its mss.

A lifelong concern of Shaykhū was to highlight the contribution of Arab Christians to the Arabic language and literature, a topic little noticed until his time. It was this fact, plus criticisms from some Western and Arab scholars, which led him to write, from 1910 onwards, one of his most important and controversial works, *al-Naṣrāniyya wa-ādābuhā bayna ʿArab al-Djāhiliyya/Le christianisme et la littérature chrétienne en Arabie avant l'Islam*. He had already written on the topic earlier in his career, but this work excited, when gathered together in three vols. 1912-23, lively polemics, well studied in Hechaimé, *Louis Cheikho et son livre: Le christianisme et la littérature chrétienne en Arabie avant l'Islam*, Beirut 1967. Shaykhū was criticised for including as Christians poets whose religious allegiance was doubtful or unclear, but Hechaimé points out that he had the over-enthusiasm of a pioneer but was breaking new ground in bringing the topic forward for critical assessment and examination.

Yet undoubtedly his major achievement was *al-Mashrik*, founded in 1898 and having appeared, with interruptions from the two World Wars, continuously ever since; it is thus, with Zaydān's *al-Hilāl*, the sole journal of the late 19th century to have survived till the present time. His declared aim for it was "strenuously to support the cause of the Christian religion, and to promote seriously the disciplines of oriental scholarship and the diffusion of the sciences". Like many other founders of journals of the *Nahḍa*, he threw himself totally into it, writing numerous articles, almost all its reviews of works appearing at the time: a total of 2,700 writings, making up ca. 7,000 pages. If some of his apologetic concerns are now less prominent, the journal remains highly valuable for reconstituting the intellectual milieu of the late 19th century in the East, and is an immensely valuable source on the Arabic language and literature of its time.

Shaykhū, disregarded by some, strongly criticised by others, at times not always himself showing a sense of discernment, could never be ignored, given the stature of his personality, his immense literary output and his restless character. He remains, with others of his colleagues at Beirut, such as L. Ma'lūf, A. Ṣāḥnānī, H. Lammens and J.B. Belot, a major figure in Arabic letters of the *Nahḍa*.

**Bibliography:** Given in the article. Brockelmann's notice, S III, 428, is very short and has errors. Those of Y.A. Dāghir, Beirut 1956, ii, 515-24, of Kaḥḥāla, *Muʿallifin*, viii, 161-2, and Ziriklī, *Aʿlām* Beirut 1980, iii, 246-7, are equally succinct.

(L. POUZET)

**SHĀYKIYYA** (*sic*; the name comes from the eponym, Shāyk; there is no medial *hamza*), a tribe of the northern Nilotic Sudan, first mentioned in 1529 (R.S. O'Fahey and J.L. Spaulding, *Kingdoms of the Sudan*, London 1974, 28). The approximate historical boundaries of their territory stretched from al-Dabba, at the southern end of the great bend of the Nile, upstream to just above the Fourth Cataract.

Despite claims to 'Abbāsīd descent, the Shāykiyya are undoubtedly Arabised and Islamised Nubians (J.L. Spaulding, *The Old Shaiqi language in historical perspective*, in *History in Africa*, xvii [1990], 283-92). In the 16th century, they were subjects of the Fundj Sultanate

[*q.v.*] under the latter's northern governors, the ʿAbdallāb. At the end of the 17th century the Shāykiyya revolted against ʿAbdallāb rule; thereafter, they were *de facto* independent until the Turco-Egyptian conquest of 1820, which they fiercely resisted.

On the eve of the 1820 conquest, the Shāykiyya were divided into four kingdoms—Hannikāb, Kadjabī, ʿAdlānāb and ʿUmarāb. Under Turco-Egyptian rule (1820-85), many Shāykiyya horsemen served the régime as irregular soldiers (*bāshibūzuk*), while others took service with the Khartoum traders in the southern Sudan. During the time of the Mahdist rebellion and state (1882-98 [see MAHDIYYA]), many Shāykiyya went over to the Mahdī, while others resisted. During the Anglo-Egyptian Condominium (1898-1956), many Shāykiyya joined the Sudan Defence Force; upon independence in 1956, a significant proportion of the officer class were Shāyki.

**Bibliography:** W. Nicholls, *The Shaikia. An account of the Shaikia tribes and of the history of Dongola Province from the XIVth to the XIXth century*, Dublin 1913 (expanded Ar. tr. ʿAbd al-Majīd ʿAbdīn, Khartoum n.d.); Hayder Ibrahim, *The Shaiqiya. The cultural and social change of a Northern Sudanese riverain people*, Wiesbaden 1979; Ali Salih Karrar, *The Sufi brotherhoods in the Sudan*, London 1992 (main focus on the Shāykiyya region).

(R.S. O'FAHEY)

**SHAYṬĀN** (A.), evil spirit, demon, devil.

1. In pre-Islamic Arabia.

According to the lexicographers, *shayṭān* is derived from the verb *shaṭana* "to detain somebody in order to divert him from his intention and his destination", *shaṭan* being "a cord" and *shāṭin* "an evil man". The verbs *shayṭana* and *tashayṭana* signify "to behave like the *shayṭan*".

The *shayṭān* is an evil, rebellious spirit, inhabiting Hell-Fire; he cannot be seen, but he is imagined as a being of great ugliness (al-Djāhiz, *Ḥayawān*, vi, 213). Proverbs underline his wickedness, his cunning and his malice. He is called by this name for having turned aside from the righteous path and for rebellion; hence the name is applied to any impertinent rebel among humans, *qinn* and animals (Yāqūt, *Muʿjam*, Beirut 1957, iii, 384). Defining the *qinn* [*q.v.*], al-Djāhiz (*Ḥayawān*, vi, 291) states: "If he is faithless, dishonest, hostile, wicked, he is a *shayṭān* (demon); if he succeeds in supporting an edifice, lifting a heavy weight and listening at the doors of Heaven (*istirāk al-samʿ*) he is a *mārid* (rebel); if he is more than this, he is an *ʿifrūt* (powerful demon); more still, he is an *ʿabkarī* (genie of great intelligence)". Prior to this (vi, 191) he has declared: "If he is pure, clean, untouched by any defilement, being entirely good, he is a *malak* (angel)".

This definition corresponds closely to the notions of the pre-Islamic Arabs, for whom the *shayṭān* is a rebellious *qinnī*. This emerges from Qurʾānic statements, which on numerous occasions evoke a degree of identity between *shayṭān* and *qinn* or *qinnī*. This applies in particular to the passages relating to the story of Solomon (II, 102; XXI, 82; XXXVIII, 377), to the Revelation (XXVI, 210, 221; VI, 112, 121), to the guarding of the doors of Heaven (XV, 17; XXXVII, 7; LXVII, 5) and to the kidnapping of humans by spirits (VI, 71). There are numerous passages where *shayṭān* denotes the deities of paganism (II, 14; IV, 76, 117, 119-120; V, 90-1; XIX, 44-5; etc.). The same sense is also given to *qinn* in VI, 100, and XXXIV, 41.

In the most ancient Arab traditions, reflected in the lexica, in the Qurʾān and in the *Ḥadīth* and the

*Akhhār*, the *shaytān* is seen as a "genie", sometimes good and sometimes evil. He accompanies man in all his activities. The Prophet is reported to have said: "There is not one of you who does not have a *karīn* derived from the *djinn*" and "There is no descendant of Adam who does not have a *shaytān* attached to him (see al-Damīrī, *Hayāt al-hayawān*, i, 242, 246, quoting Muslim, see *Concordance de la Tradition Musulmane*, s.v. *shaytān*). This "inseparable companion" appears in Qur'ān L, 24, 27, as a second witness on the Day of Judgment, in parallel with the *sā'ik* and *shahīd* (v. 21) who is the man's guardian angel. The angel being a foreign importation, the composer of the text has judged it appropriate to mention his rival, more familiar to those for whom the Revelation is intended.

A man's activity seems to be conditioned by the presence of this *karīn* beside him or within him. Through his superhuman intelligence, the latter seems to be at the origin of all progress. In fact, in the Qur'ānic story of Solomon, it is said that the latter received from God, among other favours, *shayāfīn* builders (*bannā'*) and divers (*ghawwās*), functions which were imposed upon them (XXXVIII, 37). Al-Djāhīz, speaking of the intelligence of the *shaytān*, writes: "The *shayāfīn* are, by comparison with us, more subtle, less harmful, more intelligent, less curious, of lighter body, of more extensive knowledge and of more profound wisdom. For proof of this, all that is needed is general agreement that there is nothing on the earth that is of marvellous innovation, subtle, majestic, nor any secret or manifest transgression, emanating from passion and desire, which is not the consequence of a solicitation by the *shaytān* and a seduction exerted by him" (*Hayawān*, Cairo 1323/1905-6, vi, 83-4). In fact, in the folklore of pre-Islamic Arabia, every work "of genius" is attributed to the *shaytān* (e.g. the construction of Iram *Dhāt al-'Imād*).

One of the well-known roles of this *karīn*, called *lābī'* "follower" or *sāhib* "companion", is to act as inspirer to soothsayers and prophets (see Fahd, *La divination arabe*, 91 ff.). The Angel Gabriel, inspirer of the Prophet, is called *shaytān* by a woman of Quraysh (*abī'a 'alayhi shaytānuhu* "his *shaytān* has been late in coming"). It was after this delay on the part of the Angel that sūra XCIII was revealed (see al-Bukhārī, ed. Bulāq 1289/1872, i, 146).

Still better known is the *shaytān* of the poet. Al-Djāhīz relates that the Arabs "claimed that every great poet (*faḥl*) had a *shaytān* of whom he was merely the mouthpiece" (*Hayawān*, vi, 225-9). This *shaytān* could have its own name: that of al-Farazdak was called 'Amr (see I. Goldziher, *Die Ginnen der Dichter*, in *DZMG*, xlv [1891], 685 ff.; Tor Andrae, *Mahomet, sa vie et sa doctrine*, Paris 1938, 28, compares this *shaytān* to the "muse" of the poet). It was reckoned to be either male or female: Abu 'l-Nadīm boasted that the *shayāfīn* of all the other poets were female, whereas his was male (quoted in *La divination arabe*, 74, no. 1); another claimed that, despite his youthful age, "his *shaytān* was the greatest among the *djinn*" (al-Djāhīz, *Hayawān*, loc. cit.). The poet was in a relationship of absolute dependence with regard to his *shaytān* (see e.g. *Aghānī*, vii, 67, quoted in *La divination arabe*, loc. cit.). This dependence and the loyalty which it supposedly entailed earned poets the nickname of *kilāb al-djinn* "the dogs of the *djinn*" (al-Djāhīz, *Hayawān*, loc. cit.).

The Qur'ān abhors the poet on account of the mystical and magical nature conferred upon him, both through the mystery of the secret knowledge which he possesses and through the fact that he is the habi-

tation of a spirit at whose behest he speaks and composes his verses; all of this makes him a dangerous member of society. Ḥudjir, the last king of Kinda, is supposed to have expelled his son Imru' al-Qays and to have "sworn not to dwell in his presence in order to avoid the shame [which would have attached to him], resulting from the fact that his son spoke in verses" (*Aghānī*, ix, 44; *La divination arabe*, 74). Accused by his enemies of being a poet, Muḥammad vehemently refutes the charge. Numerous sūras stress the absence of any similarity between his message and that of the poet: "We have not taught him poetry" (XXXVI, 69); "This is not the speech of a poet" (LXIX, 4). The basis of this reaction was definitely the belief deeply ingrained among Arabs that poetic inspiration was demonic in origin. The spirit which inspired Ḥassān b. Thābit [q.v.], Muḥammad's own poet, was, at the outset of his career, a female *djinni*. A text of al-Djāhīz exposes an attempt at the depauperisation of poetic inspiration in Islam. In effect, the Prophet would have replaced this *shaytān* with "the holy spirit" (*rūḥ al-kudus*). "Speak, he was told, and Djibrīl shall be with you; 'holy spirit' being one of the names given to Djibrīl" (*Hayawān*, loc. cit.; *La divination arabe*, 72-3). The *djinni* of 'Abīd b. al-Abras made him swallow a hair-roller in his sleep and caused him to rise; he rose speaking in verse, something that he had never done before, and he became the poet of the Banū Asad (*Aghānī*, xix, 84; *La divination arabe*, 73).

The angelology and demonology of primitive Islam remained rudimentary and anthropomorphic. "The conception of inspiration and revelation from these sources is deeply felt. The *hadīths* assembled by Ibn Sa'd (*Ṭabaqāt*, i/1, 131 f.) regarding the various attitudes of the Prophet at the time when he was under the influence of inspiration, illustrate such a conception" (*La divination arabe*, 75 ff.). For more substantial information, see Fahd, in *Sources orientales*, viii [1971], 155-214, section *Angels, demons and djinns in Islam*.

**Bibliography:** Besides the references made in the text, ample documentation is to be found in the article mentioned above (212-14) and in the voluminous notes. See also Fahd, *La divination arabe*, Paris 1987. For the pagan deities (Nuhum, Kuzah, Tāghūt, etc.) considered to be *shayāfīn*, see idem, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, index s.v. *shaytān*. The notions of al-Djāhīz, al-Damīrī, al-Kazwīnī, etc. have been assembled by G. van Vloten in *Dämonen, Geister und Zauber bei den alten Arabern*, in *WZKM*, vii [1893], 169-87, 233-47, viii (1894), 59-73, 290-2. In this article, the emphasis is laid on lexicographical material. See also: A.S. Tritton, *Spirits and demons in Arabia*, in *JRAS* (1934), 715-27; A. Eichler, *Die Dschinn, Teufel und Engel im Koran*, Leipzig 1928; Goldziher, *Abhandlungen zur arabischen Philologie*, i, Leiden 1896, where *djinn*, *shaytān*, *hidja'*, *la'na*, etc. are examined.

Among the Arabic sources, the following should be cited: Ṭabarī, i, 79 ff. (where there is a compilation of traditional notions on the origin and organisation of angels, demons and *djinn*); Kazwīnī, *ʿAdja'ib al-makhlūqāt*, i, 55-63 (Ger. tr. with commentary by S.J. Ansbacher, *Die Abschnitte über die Geister und die wunderbaren Geschöpfe aus Kazwini's Kosmographie*, Kiel 1905; F. Taeschner, *Die Psychologie Kazwini's*, Kiel-Tübingen 1912). Considering the importance of the material contained in the *K. al-Hayawān* of Djāhīz (the references of van Vloten being based on manuscript sources), the passages concerned are the following (ed. 'Abd al-Salām Harūn, Beirut 1388/1969): i, 153, 300: *shaytān al-ḥamāta*; i, 153, 300;

iv, 133; vi, 192: *ḥayya* = *shayṭān*; i, 153; vi, 193: the pride of the *shayṭān*; i, 291; vi, 190-1: definition of the *ḍinn*; vi, 194-5: the *ḍinn*, the ascetics and the traditionists; iv, 39-40; vi, 211: *ru'ūs al-shayāṭīn*; vi, 220-2: images of *ḍinn*, *ghūls*, angels and humans; vi, 22: *ḥadīṭh* on the existence of the *shayāṭīn*; vi, 225-9: the *shayāṭīn* of the poets; vi, 230, 265-81: *istirāk al-sam*; vi, 231-3: *shayāṭīn* of Shām and of India; i, 299, 300; vi, 213, 214, 218: *varia*. (T. FAHD)

2. In the Qur'ān and Islamic lore.

The word is used 70 times in the Qur'ān in the singular form, including six times in the indefinite (IV, 117, XV, 17, XXII, 3, XXXVII, 7, XLIII, 36, LXXXI, 25), plus 18 times in the plural *shayāṭīn*, always definite. Etymologically, the word is related to the Hebrew *sāṭān*; the route of its passage into Arabic is not evident, although it is generally thought to have passed into Arabic through Christian languages (especially Ethiopic).

In the singular usage, al-Shayṭān is a personal name equivalent to Iblīs [q.v.] and its employment is parallel to the Jewish and Christian use of the name. The relationship between the names Iblīs (used only 11 times in the Qur'ān) and al-Shayṭān is noteworthy. The name Iblīs figures mainly in the stories of the creation of Adam and the subsequent fall of the devil (the context of 9 passages is "bowing" before Adam). Al-Shayṭān, on the other hand, is the one who tempts Adam and Eve, but his role in scripture extends well beyond this one myth. Iblīs, then, is the one who is proud and disobedient, while al-Shayṭān is the tempter and it is in that role that the emphasis falls within the Qur'ān in speaking of him in other contexts as well. The two names are used within the same narrative (II, 30-9) in such a manner that it does not seem possible to suggest that there has been a blending of separate myths related to these two names. The implication (most likely derived from Christian sources) may be that, within the telling of the myth which is reflected in the Qur'ān, Iblīs gained the name al-Shayṭān after his disobedience (see e.g. al-Ṭabarī, i, 80).

According to the Qur'ānic picture, among Satan's attributes are his ability to cause fear (III, 175), cause people to slip (II, 36, III, 155), lead astray (IV, 60), precipitate enmity and hatred (V, 91), make people forget (VI, 68, XVIII, 63), tempt (VII, 27, XLVII, 25), cause to forget (XII, 42), and provoke strife (XVII, 53). He is described as a comrade to unbelievers (IV, 38), a manifest foe (VII, 22), an enemy (XII, 5). Guile (IV, 76), defilement (VIII, 11) and abomination (V, 90) are associated with him. The image of evil as a "path", like that of righteousness, is conveyed: Satan takes steps and his followers take steps towards him (II, 168, 208, VI, 142, XXIV, 21; see also IV, 83). Satan is thus seen as an influence towards a number of specific as well as more general sins, actions which take people away from God. Among his tools to do this are a number of vocal attributes: he calls (XXXI, 21), simply speaks (XIV, 22, LIX, 16), promises (II, 268), and whispers (VII, 20, XX, 120; see also L, 16, CXIV, 4-5). The subtlety of the evil influence is especially suggested by the onomatopoeic *waswasa* ("whisper") in its root repetition, in its insistence that Satan does not just call or speak but comes over and over again.

The proper name al-Shayṭān may be distinguished from the Qur'ānic plural usage *shayāṭīn*, which is often thought to reflect Arabian notions of devils, although it is used in a sense which is not unknown

within the Biblical tradition also (e.g. "adversaries" in 1 Samuel, XXIX, 4). These "devils" can be humans or *ḍinn* [q.v.; see Qur'ān, VI, 112] and come in varying ranks [see e.g. 'IFRĪT]. The references suggest that the word is used to refer to the hosts of evil (e.g. Qur'ān, II, 102, VI, 121), the evil leaders among humans (e.g. II, 14, VI, 112) and mischievous spirits very similar to *ḍinn* (e.g. VI, 71, XXI, 82). They are the friends of the unbelievers (VII, 27), they make evil suggestions (XXIII, 97) and they were believed by Muhammad's opponents to be the source of his inspiration (XXVI, 210, 221) (see A.T. Welch, *Allah and other supernatural beings: the emergence of the Qur'anic doctrine of tawhīd*, in *Jnl. of the American Academy of Religion*, thematic issue, XLVII [1979], 744-5).

The phrase *al-shayṭān al-radīm* in XVI, 98 (see also III, 36), which has led to widespread practices for protection from the evil influence of Satan, especially in Qur'ānic recitation (*istī'ādha* [see TA'AWWUDH and RAḌWĪD]), presents its own particular problems. While the word *radīm* [see RAḌM] literally means "stoned" and is sometimes taken as a reference to the stoning of the pillars of Satan in the HADUD [q.v.] and related to the stories of Abraham and the sacrifice of his son, it has been suggested that the word is an Ethiopic loan word from meaning "accursed" (see A. Jeffrey, *Foreign vocabulary of the Quran*, Baroda 1938, 139-40). The indefinite usage in the phrase *kull shayṭān radīm*, "every accursed satan", in XV, 17, and LXXXI, 25, suggests a plurality of such satans. This may be understood as parallel to the construction *kull shayṭān marīd*, "every rebel Satan", in XXII, 3, and XXXVII, 7 (see also IV, 117). The linking of these to a literal notion of stoning Satan is probably derived from LXVII, 5 (see also XXXVII, 6-7), which speaks of "lamps" (*masābīḥ*) in the heavens (i.e. stars) being objects to throw at the satans.

In *Hadīth*, the name Satan continues its Qur'ānic prominence, with Iblīs not mentioned often (8 lines of references to Iblīs, versus about 120 lines to al-Shayṭān, in A.J. Wensinck, *Concordance*, viii, Indices, *ad loc.*). Satan is spoken of as the cunning force of evil who interferes with human activity. He is especially prevalent at prayer: "Ā'ishā asked Muhammad about those who glance about in prayer. He said, 'That is the portion which Satan steals from the prayer of anyone.'" (al-Bukhārī, *Kitāb bad' al-khalk*, *bāb sifāt Iblīs wa-ḍunūdhi*). God provides assistance to the believer against Satan, although each person has a satan resting on his shoulder as a constant tempter who is spoken of as "my satan". From here, the popular image of satans, their appearance and their influence develops.

In exegetical material and other literature reflecting more popular images, the Qur'ānic predominance of the evil influence of al-Shayṭān on humans becomes overtaken by the personality of Iblīs, ultimately reaching the point of Ṣūfī meditation on the "disobedience of Iblīs" because of his ascetic, worshipping nature and because of his personality which reflects human ambiguity and complexity [see IBLIS]. This is by no means to the total neglect of the word *al-shayṭān*, however. Rūmī, for example, suggests in his *Mathnawī* (ed. and tr. R.A. Nicholson, London 1925-40, iii, 3196), "The ego and Satan were also one from the beginning and were enemies and enviers of Adam" in common with a motif which identifies the "lower" self with Satan in the Ṣūfī struggle against the *nafs* (see e.g. Annemarie Schimmel, *Mystical dimensions of Islam*, Chapel Hill, N.C. 1975, 113).

In theological thinking, the existence of al-Shayṭān

as a force of evil has been accepted without a great deal of speculation as to its implications. The emphasis in Islamic thinking has always been that individuals are responsible for their own "fall", as in the case of Adam, and while the role of Satan as a tempter is real (and satisfies a human psychological need, as F. Rahman points out), he provides no excuse for evil behaviour on the part of the individual. Al-Ash'arī's statement in his credal summary (*Makālāt al-Islāmiyyīn*, ed. H. Ritter, Istanbul 1929-30, 296) "And that God bestows His sustenance upon His servants, be it lawful or prohibited; and that Satan whispers to men, and makes them doubt, and tramples upon them" reflects the acceptance of the reality of Satan but affirms his lack of real power to effect evil.

**SHAYṬĀN AL-TĀK** "the demon of the arcade", the name by which non-Shī'ī Muslim authors usually referred to the Imāmī Shī'ī theologian of the 2nd/8th century ABŪ DJĀFAR MUḤAMMAD (b. 'Alī) b. al-Nu'mān b. Abī Ṭarīfa al-BADJALĪ AL-KŪFĪ (also called al-Aḥwal "the squinter"). No precise dates for him are known; it is only known that he died after 183/799, if it is true (as al-Baghdādī and then al-Safadī state) that he was one of those who "categorically affirmed" (*kaṭa'a*) the death of Mūsā al-Kāzīm.

At the outset, his by-name of Shayṭān does not seem to have been felt as derogatory. Ibn al-Nu'mān functioned in Kūfa as a money-changer (*sayrafi*), at the spot called *Tāk al-mahāmīl* "Arcade of the litters"; it was his skill in detecting spurious coins which is said to have earned him the by-name. This does not affect the fact that, in general, Imāmī authors themselves prefer to call him Mu'min al-Tāk, Shāh al-Tāk or, more simply, Šāhib al-Tāk. In Sunnī heresiography, his followers are habitually called the Shayṭāniyya, the sole exception being al-Shahraṣṭānī, who uses the term Nu'māniyya.

Shayṭān al-Tāk was a skilful controversialist, and had discussions notably with his compatriot Abū Hanīfa. Amongst his works (all lost) there appear amongst others several pro-Shī'ī works of propaganda (*K. al-Imāma*, *K. al-Radd 'alā 'l-Mu'tazila fī imāmat al-majdūl*, *K. al-Djāmal fī amr Ṭalḥa wa 'l-Zubayr wa-'A'isha*, etc.), as well as a *K. al-Ma'rifa*, and also what was probably a treatise on *fikh* called *If'al lā taf'al* "Do, don't do!". He was also a poet in his spare time, and al-Marzubānī cites him in his anthology of poets of the Shī'a.

In *kalām*, his theses cannot be differentiated from those of the Imāmī theologians of his time, except on points of detail. Like the great majority of them, he thought that, basically, God only has knowledge of things at the moment when He created them; that our own personal "items of knowledge" (i.e. those concerning God) cannot be the result of an act of reasoning, but it is God who creates them within ourselves by "constraint" (*al-ma'arīf kulluhā idtirār*); that ability to act (*istiḥā'a*) is simply health (*siḥḥa*) and is necessarily, arising from this fact, anterior to the act. Going further, in this respect, than Hishām b. al-Hakam [*q.v.*], he held, like the other Hishām (sc. b. Sālim al-Djāwālīkī), that all that exists in this present world is body, including our movements and all

our other acts. It thus seems also that, whilst not allowing himself to apply formally this term to God (cf. al-Baghdādī, *Fark*, 216 ll. 14-15; al-Shahraṣṭānī, *Milal*, 404 ll. 8-9), he represented Him as likewise being a body; according to al-Kulaynī (*al-Uṣūl min al-Kāfi*, Tehran 1375/1955, i, 101 ll. 1-2), he pictured God, like Hishām b. Sālim and others, "with a hollow body as far as the navel, and the rest full and solid (*ṣamad*)".

(D. GIMARET)

**SHAYYĀD**, a term that meant primarily "speaker" or "one who recited or sang stories or poems in a loud voice", as used in Persian and Turkish between the 7th/13th and 10th/16th centuries. Although probably the emphatic form of the Arabic root *sh-y-d*, meaning "one who highly praised someone or something", it was never used in Arabic. Indeed, Arabic commentators and writers sought its meaning in the Persian word *shayd* ("deceit") and equated it with *kādhīb* ("liar"). Thus some saw it as the Arabic emphatic form of *shayd*, i.e. as an Arabised Persian term. *Shayyād* was not included, however, in the great Persian dictionaries of the 11th/17th and 12th/18th centuries. It was first listed in the *Ghiyāth al-lughāt* published in 1242/1826-7, but not all subsequent Persian dictionaries included it. All this has contributed to much confusion about its true meaning.

*Shayyād* seems to have first appeared in Sa'dī's *Gulistan* (656/1258) and later in such works as Ḥamd Allāh al-Mustawfī al-Kazwīnī's *Ta'rīkh-i Guzīda* (730/1330) and Allākī's *Manāḳib al-ārifīn* (754/1353-4). Disagreement over its meaning began with the earliest translations of, and commentaries on, the *Gulistan*. Some writers generally equated it with "liar" or "trickster", but others, almost all the 10th/16th-century Turkish writers, defined it as a person who elegantly addressed assemblies or told tales and, in the course of doing so, raised his voice; and they used it interchangeably with the Persian *kisṣakhān* (Turkicised as *kisṣakhān*). Sometimes they added to this the connotation of "conjurer" or "masquerader", making it synonymous with the Persian *ma'rakagīr*.

Some 19th-century European writers, based on Sylvestre de Sacy, also added to *shayyād* the meaning of "dervish". In *EP*, s.v. *Shayyād*, F. Köprülü categorically made this word synonymous with *kalender* or vagabond dervish, as well as *ayyār* [*q.v.*]. He also provided his own subjective definition to link *shayyād* to "dervish". He did not, however, provide any historical evidence to show that *shayyāds* were a special Bātinī dervish group in Anatolia between the 7th/13th and 10th/16th centuries, as he believed. Because some dervishes, including poets like *Shayyād Hamza* [*q.v.*], had the byname *shayyād*, he assumed that this was a term for another kind of dervish. In his *Risāla-yi ta'rīfāt*,

the 10th/16th-century Turkish poet Fakīrī, whom Köprülü cited in this regard, provides no proof that *shayyāds* had any relationship to Bātinism or being dervishes as such. He only says that, shouting at the top of his voice, a *shayyād* would describe the battles of 'Alī and Hamza b. 'Abd al-Muṭṭalib in an exaggerated manner. A *shayyād* could be a dervish, but Fakīrī does not mention this word in his discussion of dervish groups. Moreover, neither Wāhidī (*fl.* beg. of 10th/16th century) in his *Manāḳib-i Hādīdīya-yi Dīhān*, nor Karakāsh-zāde 'Ömer Efendi (*fl.* end of 10th/16th century) in his *Nūr al-hudā li-man ihtadā*, in their accounts of contemporary dervish groups, mention this term. Aflākī, in his *Manāḳib al-'arīfīn*, mentions *shayyāds* in the circle of Mawlānā Djalāl al-Dīn al-Rūmī and his first *khalīfas* [*q.v.*]. But again, this does not mean that *shayyāds* were by definition any group of dervishes. From much of the contextual evidence, F.N. Uzluk has, in fact, concluded that *shayyāds* were minstrels or *saz* [*q.v.*] players who were often found at Mawlawī gatherings (*Şeyyad sözü hakkında araştırma*, in *DTCFD*, viii [1949], 587-92).

It is especially worthy of note that the great Ottoman historian Muṣṭafā 'Alī (d. 1008/1600), in his *Mawā'id al-naṣā'is fī kawā'id al-maḳālīs*, never discusses *shayyāds* in the context of dervish groups, although he had a thorough knowledge of such groups and included them in this work. Muṣṭafā 'Alī characterises *shayyāds* and *kışakḥāns* as people who told lies without reason and swore oaths in order to convince their listeners of what they were saying. This resulted from their attempts to explain unbelievable events in an exaggerated manner. Altogether, the *shayyāds* appear to have been a class of people who had the profession of speaking as narrators or storytellers in a loud voice before large groups. In the early 11th/17th century, the term *shayyād* began to disappear from use and was replaced by such words as *kışakḥān*.

**Bibliography:** For a thorough discussion, see *IA*, art. *Şeyyad* (Ö.F. Akun). (G. LEISER)

**SHAYZAR**, a town of northern Syria, on the right bank of the Orontes (*nahr al-'Aṣī* [see *AL-'Aṣī*]) some 20 km/12 miles to the north-west of Hamā, ancient *Sizara*, Byzantine Greek *To Sezer*. It is mentioned from earliest recorded times in Egyptian texts, notably the Amarna tablets. The town was refounded by the Seleucids at the end of the 4th century B.C. under the name of Larissa, but resumed its original name in the Roman period. The name *Shayzar* is attested in the pre-Islamic Arabic literature, e.g. in Imru' al-Qays. According to al-Balādhurī, *Futūḥ*, 131, the town was conquered by the Arabs under Abū 'Ubayda in 17/638; under the Umayyads, it became an *iklīm* or district of the *djund* of Hims.

All through the mediaeval period, *Shayzar*, which controlled one of the Orontes crossings, held a strategic position of the first order. At the end of the 4th/10th century, it was a pawn in the struggles amongst the different masters of Syria: Byzantines, Fāṭimids and Ḥamdānids. Thus the Greeks occupied it 968-70 and again in 994-8, it having passed in the interim into the hands of the Ḥamdānids and then the Fāṭimids. After 999, for nearly 80 years, the town reverted to the Byzantine emperors.

The real apogee of the town came at the end of the 5th/11th century with the installation of the Banū Munkidh [*q.v.*] at *Shayzar* in 474/1081. Five princes of this family governed it until 552/1157: Sadīd al-Mulk 'Alī (474-5/1081-2), then his son Abū 'l-Murhaf Naṣr (475-91/1082-98), and another of his sons, Abū Salāma Murshid (491/1098), who renounced power

in favour of one of his brothers, Abū 'l-'Asākīr Sulṭān (491-2549/1098-?1154). The last Munkidh prince, Tādī al-Dawla Muḥammad, son of the preceeding, died in 552/1157. The Banū Munkidh, from the Arab tribe of Kināna, had settled in northern Syria at the opening of the 11th century when they entered the service of the Mirdāsids [see *MIRDĀS*, *BANŪ*] of Aleppo. The latter ceded to them, in the first place, *ca.* 1025, the territories at around *Shayzar* which they were controlling at that time. In 474/1081 Sadīd al-Mulk 'Alī purchased from the Byzantine bishop of al-Bāra the town of *Shayzar*, and from this time onwards, the Banū Munkidh resided in the citadel of *Shayzar*. We know of the town's history under them especially well from the autobiography, the *K. al-Fitbār*, of a member of the family, Usāma Ibn Munkidh. For three-quarters of a century the family succeeded in forming their territories into an autonomous, petty principality. But it was the object of many covetous rivals, given its position at the centre of the ambitions of the princes of Antioch, Aleppo and Damascus. The Munkidh *amīrs* nevertheless succeeded in preserving their autonomy by diverse means. The payment of tribute to a nearby prince assured them of protection, as in the 1080s with the prince of Aleppo Muslim b. Kuraysh, and also enabled them to obtain the evacuation of hostile armies from their territories. Thus in 1110 and 1121, there was secured the departure of the Franks of Antioch, who had established themselves on the fringes of *Shayzar*. The same means were used in July 1133 regarding the prince of Damascus, Shams al-Mulūk, who was besieging the fortress. The Munkidh princes conducted a skilful policy of alliances and of playing off one power against the other. Thus in the 1080s, the *amīr* married one of the daughters of the Salḡūk of Damascus Tutuṣh, who was at that time envisaging the conquest of the whole of Syria. In the 1120s, at the time when the Crusaders were at their most dangerous, Abū 'l-'Asākīr Sulṭān succeeded in establishing friendly relations with King Baldwin II of Jerusalem. After the end of that decade, the decisive alliance was that with the new ruler of Aleppo, Zangī, which allowed *Shayzar* to resist the implicit alliance between the Bōrīds or Bōrīds of Damascus and the Crusaders. Even so, the principality was in real danger on two occasions during the first half of the 6th/12th century. First, the Assassins or Ismā'īlīs succeeded within a few hours in seizing the fortress of *Shayzar*, left temporarily deserted by the Banū Munkidh. Then in 1138, the citadel was besieged by a coalition organised by the Byzantine emperor John Comnenus and including the Crusaders and the Damascenes. The town was saved by a lifting of the siege before it could succeed, probably to be connected with dissensions in the besiegers' camp.

The Munkidh period of *Shayzar*'s history was also one of a relatively significant cultural development of the principality, due first of all to members of the ruling family such as the prince-poet Abū Salāma Murshid, or his famous son Usāma, both famed in the realm of letters. There were also a number of refugees from the Crusaders, fugitives from places like Tripoli, Ma'arrat al-Nu'mān or Kafarṭāb at the court of *Shayzar*. These included political refugees, such as the *amīr* of Tripoli Fakhr al-Mulk Ibn 'Ammār in 502/1109, but above all, scholars and teachers of Usāma like the poet Ibn al-Munīra and the Andalusian grammarian Abū 'Abd Allāh, who had worked at the *dār al-'ilm* in Tripoli.

The violent earthquake of 552/1157 brought about the death of the greater part of the Munkidh fam-

ily, who were present at an entertainment in one of the rooms of the citadel at the time of the quake. Nūr al-Dīn profited from the opportunity to seize Shayzar in face of the Franks and the Assassins who were coveting it. The town was given to a family who were probably of Kurdish origin, the Banu 'l-Dāya, who, apart from a brief period of disgrace 570-2/1174-6, administered it for Nūr al-Dīn, for Ṣalāh al-Dīn and then for the Ayyūbids of Aleppo until 630/1233. The first governor of this family, Majd al-Dīn Abū Bakr Ibn al-Dāya, was the foster-brother of Nūr al-Dīn. His successors were his brother Ṣābiḳ al-Dīn 'Uṭhmān and then the latter's son and grandson 'Izz al-Dīn Mas'ūd and Shihāb al-Dīn Yūsuf. Yūsuf was dismissed by the ruler of Aleppo, al-Malik al-'Azīz, probably because he had for a certain time given allegiance to al-Malik al-Mu'azzam of Damascus. Shayzar then lost its relative autonomy and was given to a Kurdish *amīr* called Ibn al-Dunyar, who was directly responsible to the Ayyūbid ruler of Aleppo. The fortress, whose garrison had been reduced after the end of the Banu 'l-Dāya, was dismantled some years later in face of the Mongols.

The town of Shayzar was divided into a lower town or *madīna* (in European sources, *suburbium*, *pars inferior civitatis*), occupied today by a hamlet, and an upper town dominated by the citadel (*kal'a*) (the *praesidium*, *oppidum*, *pars superior civitatis*). The lower town, to the north of the fortress, between it and the bridge used as a crossing over the Orontes, was several times occupied by besiegers, although it was probably protected by a wall. The fortress, however, was sited on rocky outcrop oriented north-southwards and called by al-Dimashqī, 205, "the cock's crest". On the southern side, to strengthen the site's defences, a deep ditch had been dug by cutting into the rock for several metres. Of the fortress of the Banū Munqidh, nothing remains for certain, everything having been destroyed by the earthquakes between 552/1157 and 565/1170. The oldest remains now visible are ostensibly, according to Max Van Berchem, those of the southern keep, said to date from the time of Nūr al-Dīn. The inscriptions still *in situ* speak of works undertaken by the Ayyūbid sultan of Aleppo al-Malik al-'Azīz in 630/1233, and then, after the devastating appearance of the Mongols, by the Mamlūk sultans Baybars (659/1260) and Ḳalāwūn (689/1290). From the 14th century onwards, mentions of Shayzar become rare. The fortress never recovered the importance which it has had in the 12th and 13th centuries, and was probably definitively abandoned under the Ottomans.

AL-SHAYZARĪ, AMĪN AL-DĪN ABU 'L-ḠHAṆĀ' IM MUSLIM b. Abi 'l-Thānā' Maḥmūd b. Sanad al-Dawla

Djamāl al-Mulk Abi 'l-Faḍāl Ni'ma b. Sanad al-Dawla Abi 'l-'Aṭā' Arslān (Raslān) b. Yahyā, *adīb*, poet and astronomer.

His grandfather and great-grandfather belonged to the *mamlūk*, in the rank of an *amīr*, of Usāma b. Munqidh (d. 584/1188 [see MUNQIDH], lord (*sāhib*) of Shayzar [q.v.] on the Orontes. His father (d. after 565/1169) was an *adīb* and poet at the court of Usāma, but acquired also a reputation as grammarian (*naḥwī*) in the Great Mosque at Damascus (Imād al-Dīn, *Khārīda* [al-Shām], Damascus 1375/1955, i, 575-9); Ibn al-Kittī, *Inbāh*, Cairo 1374/1955, iii, 273; Ibn Khallikān, Beirut 1389/1969, ii, 524-5, in no. 310). Al-Shayzarī was born in Damascus where he also grew up; later he went to Yemen at the court of the Ayyūbid al-Malik al-Mu'izz Ismā'il b. Tuḡtūḡīn (r. 593-8/1197-1201). To the latter he dedicated his anthology *'Adjā'ib al-ash'ār wa-gharā'ib al-akhbār*, consisting of 25 chapters. The unique manuscript, dated 690/1291, is in the Maktabat Dār al-'Ulūm al-Islāmiyya in Peshawar; a modern copy of this manuscript is at Leiden (R. Weipert, in *ZGAW*, ii [1985], 241, in addition to Brockelmann, S I, 460 and to Sezgin, ii, 80). Al-Shayzarī composed a second anthology soon after 622/1225, called *Djamharat al-Islām dhāt al-nathr wa 'l-nizām*. It comprises 16 books, which start with *madh* and end with *dhawāb/khiṭāb*, and each has 10 chapters, the first 5 of which—according to the author—always deal with poetry (*naẓm*) and the other 5 with prose (*nathr*; with very many verses!) of poets and literary people of the Islamic period, i.e. from the 1st to the 7th centuries A.H., occasionally with exact dates. The work was composed for the last Ayyūbid in Yemen, al-Malik al-Mas'ūd Ṣalāh al-Dīn Yūsuf b. al-Malik al-Kāmil Muḥammad (r. 612-26/1215-29) and contains at the end of each of the 16 books—additionally also, in other places—a poem in his honour composed by the author, who sporadically designates himself as *mamlūk*, and a second one by his son Aḥmad. This *adab* work is an interesting and informative source, for it gives not infrequently *abyāt* (with explanations), *hikāyāt*, *rasā'il* and excerpts or accounts of all sorts from texts, from traditions of the period and of families, and from his own life, preserved otherwise only covertly or not at all (cf. Brockelmann, I<sup>2</sup>, 302, S I, 374, xi, 5; see for this *Arabica*, i [1954], 237; Kh. Mardam Bak, in *MMFA*, xxxiii [1377/1958], 3-20). The unique manuscript of Leiden of 697/1298 is available in a facsimile edition by F. Sezgin, Frankfurt/Main 1986 (with reference to the Ph.D. thesis by M.D. Aḥmad, *An introduction to and analysis of the Leiden ms. ... with a critical edition of some ... passages*, Oxford [1954?]). Another work by al-Shayzarī which has been preserved (al-Ziriklī, *al-'Aṭām*, Beirut 1979, vii, 223) and which was also composed on behalf of al-Malik al-Mas'ūd, is *'Adāt al-nuḡūm*, an almanac "which closely resembles the celebrated *Calendar of Cordova*. The astronomical information contained in al-Shayzarī's almanac, such as the solar meridian altitude (52½° at the equinoxes) and midday shadow lengths for each month, indicates that the work was not compiled for use in the Yemen" (D.A. King, *Mathematical astronomy in medieval Yemen. A bibliographical survey*, Malibu 1983, 22; idem, *A survey of the scientific manuscripts in the Egyptian National Library*, Winona Lake, Indiana 1986 [= American Research Center in Egypt, Catalogs, vol. v], 66). When and where al-Shayzarī died cannot be ascertained.

**SHEBEK** [see SHABAK].

realpatidar.com

**SHEBELLE**, a river of the south of Ethiopia and of Somalia, the *Shabeelle* or *Webi Shabeelle*, perhaps thus named because it was pointed out to the first travellers as the river (Som. *webi*) [of the land of] leopards (Som. *shabeel*, sc. *Felis pardus nanopardus*), an animal which abounds in these regions. But the dwellers along the river simply call it "the river" (Som. *webi-ga*). The name of the Shebele, an ethnic group settled before the Somali, may have played a role.

It is the longest stretch of water in the Horn of Africa, both in regard to its length (2,488 km/1,546 miles) and in regard to the extent of its catchment area (200,000 km<sup>2</sup>). It rises in Ethiopia on the fringes of Bale, Arsi and Sidamo, at Hogiso, at an altitude of 2,680 m/8,790 feet, 225 km/140 miles south of Addis Abeba, to the north of Mount Guramba and not far from the sources of another important river, the Ganale, which combines its waters with other rivers to form, in Somalia, the Juba. After the explorations of Christopher (1843), Sacconi (1883) and Baudi di Vesme (1888, 1891, etc.), its course was explored and its sources pinned down by an Italian expedition under the Duca degli Abruzzi, Luigi Amedeo di Savoia (1928-9).

After an origin in rugged country, it flows in a vast bend towards the north-east, rapidly losing height, and then turns southwards. In its upper course it receives numerous affluents from the Harärgé and Arsi mountains before forming the southwestern border of the Ogādēn [*q.v.*]. When approaching Mogadishu [see **MAKDISHU**], at Bal'ad it runs parallel to the coast for 1,200 km and ends its course in a marshland between Jilib (Gelib) and the sea, not far from the mouth of the Juba, with which, when very swollen with flood waters, it may sometimes join up.

The Shebelle is, with the Juba, the only permanent river in Somalia. Both of them traverse arid regions, in such a way that they have been compared to the Tigris and Euphrates and the region which they encompass in Mesopotamia. The river has made possible sedentary and agricultural life along its banks, which contrasts with the nomadism dominant on the plateau through which it flows. The first attempts at modern agricultural activity were made by the Italians. Carletti, governor of Somalia 1906-10, reserved several million hectares for colonists, and an experimental agricultural station was opened in 1912; but it was only after the First World War, under the Fascist governor De Vecchi (1923-8), that new efforts led to a transformation of the economy of Somalia. The main protagonist here was the Duca degli Abruzzi, who set up the Società Agricola Italo-Somala (1920) and was able to involve the population there (the Bantu Shidle, etc.) in projects for producing cotton, sugar, bananas, rice, oil-yielding seeds, etc. The economic value of the valley has continued up to our own time, and has called for numerous hydraulic works in damming the waters and dividing them up into channels, thereby compensating for the river's irregularity of flow. An important barrage is planned in Ethiopia.

The populations of the lands traversed by the river are in overwhelming majority Cushitic and Muslim, Oromo on the Ethiopian side and Somali in the Somalia Republic.

**SHEBİN KARAHİŞAR** [see **KARĀ HİŞAR**].

**SHEBŞEFĀ** (**SHEBİSEFĀ**, **SHEBŞAFĀ**) **KADİN**, Ottoman princess (d. 1220/1805), probably the sixth in rank among the *kādīns* of Sultan 'Abdülhamid I. She was the mother of a prince who died young and of Princess Hibetullah Sultān (b. 1202/1788). In 1212/1798 she acquired the *çiftlik* of Djihān-zāde Hüseyin Beg, and also owned agricultural land in the vicinity of Salonica or Selānik [*q.v.*], apart from a pension out of the funds of the Istanbul customs. Shebşefā Kadın is noted for the foundation bearing her name in the Istanbul area of Zeyrek, established in 1202/1787 according to the inscription over the entrance to the mosque. Originally built on different levels, the foundation consists of mosque, primary school and *çeşme*, along with the grave of the foundress. A *wakfiyye*, dated 1220/1805, specifies that the school was also to be open to girls, a provision which has earned Shebşefā Kadın the reputation of a pioneer in Ottoman female education.

(SURAIYA FAROQHI)

**SHEFİK MEHMED EFENDİ**, called Muşarrıf-zāde, Ottoman imperial chronicler, poet and prose stylist, d. 1127/1715, best known for his *Şefik-nâme*, a history of the events of the year 1115/1703.

Little is known of his family and early years. He was born in Istanbul, and later adopted the pen-name Şefik. His father is thought to have been employed in the accounts office of the imperial kitchens (*maḥbākhi-i 'amire*). Mehmed himself entered the bureaucratic service as a clerk (*kātib*) in the *dīwān-i hümāyūn*, where he later rose to become head of one of its scribal bureaux. In the 1690s he served as a clerk in the Ottoman military campaigns against Venice, Austria and Russia. Around the beginning of the 18th century, his fortunes took a distinct turn for the better when he became a confidant of Rāmī Mehmed Paşa [*q.v.*], the incumbent *Re'is ül-Küttāb* [*q.v.*], an office which was even then evolving into the Ottomans' Ministry of Foreign Affairs. After Rāmī Mehmed became *Wezīr-i A'zam* in 1115/1703, Şefik Mehmed was named an official chronicler of the realm, although apparently without the title of *wak'a-nüvis*.

Şefik Mehmed's principal work, the *Şefik-nâme*, records in heavy, allegorical style the so-called *Edirne Wak'ası*, the events surrounding the deposition of Sultan Muştafā II [*q.v.*] in 1115/1703, and the role of Muştafā's imperial *Imām* and *Şeykh al-Islām* Sayyid Feyḍ Allāh Efendi [*q.v.*]. The same "Edirne Episode" was also responsible for the fall of Şefik Mehmed's patron Rāmī Mehmed, and consequently for his own eclipse. Although the same events are discussed in another of his works, entitled *Muwaddah-i Şefik-nâme*, this version has been all but overlooked because of the *Şefik-nâme*'s fuller, if opaque, treatment. F. Babinger in *ET* refers to yet another manuscript on the same subject, called *Tārīkh-i 'Abd Allāh*, which he attributes to Şefik

Mehmed as well. A copy of the work, bearing this title, is apparently held by the Vienna National Library, but its relationship to the other manuscripts remains in question. Manuscript copies of the *Shefik-nāme* and *Muwaddah* can be found in numerous libraries in Turkey and Europe. Of the variously titled versions (if they are all, indeed, *Shefik* Mehmed's), only the *Shefik-nāme* has been printed. Although probably written around 1118/1706, that is, about three years after the events described, it was first published in 1866. Later editions appeared in the 1870s, sometimes including either the commentary of Maḥmūd Djelāl al-Dīn Paṣha (entitled *Rawdat al-kāmilin*, printed Istanbul 1289/1872-3) or that of *Shefik* Mehmed's contemporary, 'Abd Allāh Mehmed b. Aḥmed Efendi. Manuscript copies of both commentaries are also available in many of Istanbul's libraries, including Istanbul University, Topkapı Sarayı and Süleymaniye. Although *Shefik* Mehmed remained active through his historical writings and poetry in the years after the 1115/1703 revolution, he did not achieve wide public notice until 1125/1713, when his friendship with the new *Wezir-i A'zam*, Dāmād 'Alī Paṣha [q.v.], secured him a place in the *Wezir*'s circle of intimates and he was rewarded with the chief post in the small accounts bureau (*küçük muhasebefiliik*) of the *eukāf*. He died in Istanbul in 1127/1715. Like many Ottoman litterateurs, he was proficient in Persian and Arabic, and was a member of the Mawlawī Şūfī order [see MAWLAWIYA].

**SHEHIR EMĀNETİ** (ت.), a term used for two successive institutions of the Ottoman empire.

The first of these appears in the person of the *shehir emīni* mentioned in the *Kānūn-nāme* of Meḥmed II as ranked below the *defterdār* and *defter emīni* but above the *re'īs ul-küttāb*, without his function being defined. His appearance just after the conquest of Constantinople led Byzantine scholars of the 19th century, perhaps inspired by a passage of Count Andreossy, who translated this function as "prefect of the town" and followed by some Turkish authors ('Othmān Nūrī, in *Medjelle-yi Umūr-i Beledīyye*, i [Istanbul 1922], 1358-9), to put forward the hypothesis that this official was the successor of the Byzantine *eparchos*, himself the heir of the Roman *praefectus urbis*. However, later Turkish scholars, starting with Fuat Köprülü (*Bizans'ın osmanlı müesseselerine te'siri*, Istanbul 1931, 266-7), have rejected this idea, noting, quite rightly, the dissimilarity between the two offices. In effect, the *eparch*, the leading administrator of the capital, responsible for its provisioning, judge and police chief and deputy for the emperor during his absence (L. Brehier, *Les institutions de l'Empire byzantin*, Paris 1949, 186-92), seems rather to have fulfilled the urban functions of the Grand Vizier, or at least those of his lieutenant, the *kā'immakām*, than the much more modest ones of the *shehir emīni*, who appears to have functioned more like intendant of the royal buildings in pre-Revolutionary France.

The *shehir emīni*'s functions, so far as they can be deduced from the various documents in which he is mentioned, involved the construction, repair, provisioning and payment of salaries of the personnel of the imperial palaces in Istanbul, sc. the New one (Topkapı) and the Ancient one, as well as those of *Ghalata* Saray and of Ibrāhīm Paṣha, serving as bar-

racks for the '*Adjemī oghlans*. Together with the *maṭbakh-i 'āmire emīni* (head of the imperial kitchens), the *darbhāne emīni* (head of the imperial mints) and the *arpa emīni* (head of the imperial stables), he was one of the four great civilian dignitaries (*kh'āddegān*) of the outside administration (*bīrūn*) of the palace. He was thus the superior in rank of the head architect and his services, and supervised the building of the imperial buildings, apart perhaps from the greatest building operations, such as complexes of religious buildings, etc., for which an *ad hoc* supervisor was appointed.

He seems to have been a more important personage in the 16th century, and often to have been assimilated to the military class, since we see a *müferrika* becoming *shehir emīni* and a *shehir emīni* becoming a *çavuşh bashi*, than he was in the 18th century, when the office was held by persons previously in the rank of *ketkhüdā*. This decline in status entailed a conflict of authority with that of the chief architect, and in 1831 the two functions were suppressed and replaced by that of the director of imperial buildings (*ebniye-yi kh'āsse, müdīri*), but the appointment to this latter office of the last chief architect, 'Abd ül-Ḥalīm Bey, shows that it was really the second which absorbed the first.

The second *shehir emīni* appears 24 years after the disappearance of the first when, in a report of 13 June 1855, the High Assembly of the *Tanzīmāt* proposed suppressing the Ministry of *Ihtisāb*, which had in 1826 succeeded to the functions of the traditional *muhtesib* with the same functions of urban policing, and its replacement by a *shehir emīni* flanked by a municipal council made up of "the members of the trade corporation with the highest profile" ('Othmān Nūrī, *op. cit.*, 1371-2). If this new office of *shehir emāneti*, translated in texts of the time as "Préfecture de la ville", seems directly inspired by the French prefectorial system, whilst taking into account the assimilation of the term *shehir emīni* to that of town prefect, proposed by Andreossy, the duties for which he became responsible, of cleansing and keeping tidy the city, as well as the new *shehir emīni*'s responsibility to tour the markets and bazaars, merely perpetuated the functions of the old *muhtesib*.

The date of the creation of this new office corresponds to that of the Crimean War, when the presence of a large number of foreigners in the Ottoman capital brought a demand for municipal services like paved streets and street lighting. Since neither the ancient services of the *ihtisāb* nor those of the *shehir emīni* were capable of responding to the new needs of a municipality, the *intizām-i shehir komisyonu*, translated into French as "Commission municipale" was set up on 6 May 1856 with the participation of several members of the city's European colony. It made up the nucleus of the "sixth circle", *altındjı dā'ire*, the first municipality of the Ottoman empire, limited to the quarters of Pera (Beyoğlu) and *Ghalata*, largely occupied by Europeans and the non-Muslims subjects of the Porte. Founded in December 1857, it was merged after 1869 in the Istanbul municipality with the creation of a municipal council responsible to the *shehir emīni*, who thus became mayor of the city.

After the foundation of the Republic, a *shehir emāneti* was also created for Ankara on 16 February 1924. Finally, by the law of 3 April 1930, a uniform system of municipalities (*beledīye*) was created for the whole country.

**SHEHIR EMĀNİ** [see **SHEHIR EMĀNETİ**].

**SHEHIR KETKHÜDĀSĪ** (r.), an official of the pre-modern Ottoman empire, who had financial and administrative duties. His prime function was to collect the specified taxation from a town or its quarters (a function thus corresponding to that of the *shaykh al-balad* in Egypt), whereas the *āyān* [q.v.] acquired tax-farming rights in the rural areas of the provinces. As with the *āyān*, the office of *shehir ketkhüdāsī* tended to become hereditary; and there was, obviously, much scope in it for oppression of the taxpayers. Having lasted from the time of Süleymān the Magnificent, the office was abolished in the early 19th century as part of Maḥmūd II's [q.v.] reforms.

**SHEHR** [see **SHAHR**].

**SHEHR-I SEBZ** [see **KASH**].

**SHEHZĀDE** (p., T.), a title of Ottoman princes.

The term *shehzāde* (or *shāhzāde*, from Pers. *shāh* "king" + *zāda* "born of"), "prince", was one of the titles used for the male children born to a reigning Ottoman sultan. It is said to have been introduced by Mehmed I (816-24/1413-21) for his own sons, and over subsequent decades gradually superseded the earlier term *çelebi*. *Shehzāde* came into use around the same time as the title *pādīshāh* [q.v.], as part of the general elevation of Ottoman political and cultural pretensions following Mehmed I's reunification of the state, and continued in use until the reign of 'Abd ül-Ḥamīd I (1187-1203/1774-89), when *efendi* became the preferred princely title.

As a title (particularly from the mid-10th/16th century onwards), *shehzāde* was regularly used in conjunction with the basic title *sultān* [q.v.], by which all adult sons of the reigning sultan were also known: i.e. "Shehzāde Sultān X" (and even "Shehzāde Sultān X Khān [sic]"), the designation applied by Peçewī to all six sons of Ahmed I, see *Ta'riḫ-i Peçewī*, Istanbul 1281/1864, ii, 347-9. A clear distinction was thus made between the ruler and his sons. *Shehzāde* was also widely used in a purely descriptive sense, synonymous with *oghul*, "son": e.g. *shehzādeleri Sultān Bāyezīd ... we Sultān Muṣṭafā* "his [Mehmed II's] sons Sultan Bāyezīd ... and Sultan Muṣṭafā" (Tursun Bey, *Tārīḫ-i Ebū 'l-Feth*, ed. M. Tulum, Istanbul 1977, 84).

**SHEKER BAYRAMI** [see 'ID AL-FITR].

**SHEM'DĀNĪ-ZĀDE SÜLEYMĀN EFENDİ**, also known as Findiklî Süleymān Efendi, 18th century member

of the Ottoman 'ulemā', provincial judge (*kādī*), and author of the *Mür'ī 'l-tewārīḫ*, was born in Findiklî, Istanbul, at an unknown date. He was the son of a Tokat merchant, Shem'dānī Mehmed Agha, who reputedly stood up to rebels who were attempting to raid the Istanbul Customs Office during the events of the Patrona Khalil [q.v.] rebellion in 1143/1730. He was later recognised for his bravery by the Grand Vizier Yegen Mehmed Paşa [q.v.], who had been the Customs Officer in Istanbul at the time of the events in question (Aktepe, p. xvii). Süleymān Efendi, then, was a member of a prominent Istanbul family, which had settled in Istanbul at least by 1143/1730, if not earlier. He apparently preferred the religious profession over commerce, and chose to be a judge (Aktepe, p. xviii). Information on his career is scant, but a few details are scattered throughout his history. He is known to have been appointed judge at İsmā'il in Rumeli in 1178/1765, where he served as a guide and host for the passage of Selīm Giray Khān into Ottoman territory. Of other Balkan towns, he was appointed to Bepazarı and Pravište at dates unknown. In 1183/1769, he was appointed to Ankara; in 1185/1771, to Tokat and in 1190/1776, to al-Fayyūm [q.v.] in Egypt. He died in Istanbul in 1193/1779, and was buried in Eyyüb (Aktepe, pp. xvii, xviii).

Süleymān Efendi wrote his *Mür'ī 'l-tewārīḫ* as a supplement to Kātib Celebi's [q.v.] *Takwīm al-tewārīḫ*, written in 1058/1648, and extended by Mehmed Sheykhī and İbrāhīm Müteferriḳa [q.v.] to 1145/1733. Süleymān Efendi had intended to end his work with 1188/1774, presenting it to the new sultan 'Abd ül-Ḥamīd I [q.v.], but he extended it to 1191/1777 to include some of the post-war events and appointments (Aktepe, pp. xxi-xxii). He acknowledged his debt to the official historians Şubhī and 'İzzī Süleymān, whose works he consulted and incorporated until the year 1165/1752. The value of the work lies in Süleymān Efendi's original contribution for the period from 1165-91/1752-77, especially for the 1768-74 Russo-Turkish War, when, as *kādī* of Tokat, for example, he was responsible for enrolling a regiment of Janissaries for the battlefield (Aktepe, ii/b, 61). His description offers historians one of the few realistic pictures of the difficulties of 18th-century Ottoman mobilisation, and his work supplements the other chronicles of the same period, those of Enwerī and Wāṣif [q.v.].

**SHEM'Ī**, the *takhalluṣ* or pen-name of a Turkish translator and commentator of Persian literary works who flourished in the second half of the 10th/16th century. In his own works and in most of the biographical sources only this name is mentioned. B. Dorn, referring to "two manuscripts" of Hādīdjī Khalīfa, asserted that he was properly called Muṣṭafā Darwīsh. Even more uncertain is the name Shem'-Allāh Perzerīnī which Bursalī Mehmed Tāhir attributed to him; this was based perhaps on the confusion with another Shem'ī, a Şūfī poet from the town of Prizren [q.v.], or Perzerīn, who belonged to the mystical tradition of Shēykh Wefā (d. 896/1490-1) and died in 936/1529-30 (see Hādīdjī Khalīfa, ed. Flügel, iii, 287, and Latīfī, *Tedhkere*, Istanbul 1314/1896-7).

210-2, tr. O. Rescher, Tübingen 1950, i, 164-5). The dates mentioned in the sources for the death of the commentator Shem'ī, sc. about 1000/1591-2 (Hādjīdīr Khalīfa, ii, 53) and 1005/1596-7 (Thüreyyā), cannot be correct because his commentary on Džāmī's *Subḥat al-abrār* was completed in 1009/1600-1, and as late as 1012/1603-4 a verse translation of *arba'in* traditions, entitled *Miftāḥ-i futūḥāt*, was dedicated by Shem'ī to Sultan Mehmed III (see Blochet, ii, 169). Also, very little is known about his life. He is described as a man of mystical inclination who made a living as a private teacher of "the sons of the people and the servants of the great and the exalted" (Na'imā). The numerous commentaries on Persian classics which he wrote are obviously related to this profession. Several of these works were dedicated to officials of the Ottoman court during the reigns of Murād III (982-1003/1574-95) and Mehmed III (1003-12/1595-1603).

Shem'ī wrote commentaries on: (1) Farīd al-Dīn 'Aṭṭār's *Pand-nāma*, with the title *Sa'adat-nāma*, and a dedication to Zīrek Agha, a courtier of Murād III (cf. e.g. Hādjīdīr Khalīfa, ii, 68; Dorn, 333-5; Dozy, ii, 115; Rieu, *Turkish mss.*, 154-5; Blochet, i, 319; H. Ritter, in *Oriens*, xiii-xvi [1961], 232-3). (2) *Mantik al-tayr* by the same (1005/1596-7), at the request of Hasan Agha, the *agha* of the Janissaries (cf. e.g. Hādjīdīr Khalīfa, vi, 190; H. Ritter, in *Oriens*, xi [1958], 55). (3) Nizāmī's *Makḥzan al-asrār*, dedicated to Ghadanfer Agha, the *dābit-i Bāb al-sa'adet* (cf. Hādjīdīr Khalīfa, ii, 975). (4) Sa'dī's *Gulistan* (977/1569 or 979/1571), at the request of Mehmed Çelebi, the intendant of the sultan's gardens (cf. e.g. Hādjīdīr Khalīfa, v, 231; Pertsch, 93-4; Rieu, *Persian mss.*, ii, 607; idem, *Turkish mss.*, 156-7; Blochet, i, 350, 384; Ateş, 193). (5) *Büstān* by the same (about 1000/1591-2) (cf. e.g. Hādjīdīr Khalīfa, ii, 53; Rieu, *Turkish mss.*, 156; Ateş, 198; Leiden, ms. Or. 12448). (6) Djalāl al-Dīn Rūmī's *Mathnawī-yi ma'nawī* (ca. 999/1590-1) in six books, by order of sultan Murād III (cf. e.g. Hādjīdīr Khalīfa, v, 375; Rieu, *Persian mss.*, ii, 589; idem, *Turkish mss.*, 155). (7) Hāfiz, *Diwān* (981/1574), for his patron Ahmed Ferīdūn (cf. e.g. Hādjīdīr Khalīfa, iii, 273; Rieu, *Persian mss.*, ii, 631; idem, *Turkish mss.*, 158). (8) Džāmī's *Bahārīstān* (between 982-7/1574-9), dedicated to the Grand Vizier Şokollī [q.v.] Mehmed Paşa (cf. e.g. Dozy, ii, 357; Rieu, *Persian mss.*, 755). (9) *Tuḥfat al-ahrār* by the same (1006/1597), for Mehmed III's *Khādūm* Hasan Pasa (cf. e.g. Hādjīdīr Khalīfa, ii, 219; Pertsch, 105; Dozy ii, 120; Ateş, 443). (10) *Subḥat al-abrār* by the same (1009/1600), dedicated to Ghadanfer Agha (cf. e.g. Hādjīdīr Khalīfa, iii, 575; Blochet, ii, 331; Ateş, 439). (11) *Shāhī, Diwān*, for his patron Ahmed b. Mehmed (cf. e.g. Hādjīdīr Khalīfa, iii, 286; Dozy, ii, 119-20; Blochet 341).

Shem'ī used a fairly simple method. Invariably, the main element of his comment was a full Turkish paraphrase of the Persian text, to which very short explanatory remarks were added. Not inappropriately the term "translation" (*terdjüme*) is sometimes applied to his commentaries. His work, as well as that of his confrère Surūrī [q.v.], is often criticised in Sūdī's [q.v.] commentary on the *Diwān* of Hāfiz.

**SHEMS AL-DĪN GÜNALTAY**, in modern Turkish, ŞEMSEDDİN GÜNALTAY, 20th-century Turkish statesman and historian. A prolific historian and a professor, Shems al-Dīn Günaltay (1883-1961) served as the Prime Minister of the Turkish Republic during its decisive transition to a multi-party system in the mid-century.

After obtaining a degree in science at a teachers' college, he graduated from the University of Lausanne, where he studied natural sciences. Privately, he mastered Arabic and Persian. After teaching and serving as principal at various high schools, he was in 1914 appointed *müderris* or professor of Turkish history and the history of Islamic nations at the University of Istanbul. He also taught the history of religion and Islamic philosophy at the Süleymaniye Madrasa. In 1915 he became a member of the Ottoman Parliament, where he served until its dissolution. During the national liberation struggle (1919-22), he was a member and Deputy Chairman of the Istanbul Municipal Council.

A staunch supporter of Muṣṭafā Kemāl Paşa (Atatürk [q.v.]) and his successor, President İsmet İnönü [q.v. in Suppl.], Günaltay served more than 30 years as a parliamentary deputy (first for Sivas, then for Erzincan). From January 1949 to May 1950 he was Prime Minister. As such, he introduced legislation for direct parliamentary elections and enabled Turkey to have its first free national elections, as a result of which his party fell from power. From May 1950 to his death in October 1961, Günaltay was successively parliamentary deputy, Chairman of his party (the Republican People's Party) for Istanbul and Member of the Council of Deputies and Senator.

During much of his political life, Günaltay continued to teach history at the University of Istanbul. He also served as President of the Turkish Historical Society from 1941 onwards.

**Bibliography:** Günaltay's major scholarly works include *Ta'rikh-i edyān* ("History of religions", 1922), *İslām ta'rikhi* ("History of Islam", 1925), *İslāmda ta'rikh ve müverrikhler* ("History and historians in Islam", 1923-1925), *İslām dīni ta'rikhi* ("History of the Islamic religion", 1924), the 5-volume *Mufasssal Türk ta'rikhi* ("Comprehensive history of the Turks", 1928-1933), the 4-volume *Yakın şark tarihi* ("History of the Near East", 1937-51), and *Türk tarihinin ilk devirleri* ("Early periods of Turkish history", 1937).

(TALAT SALT HALMAN)

**SHEN-SI**, SHAANXI, a province in the northwest of China, bounded in the north by the province of Suiyüan, in the south by the provinces of Ssu-ch'uan and Hu-pei, in the west by the provinces of Kan-su and Ning-hsia, and in the east by the provinces of Shan-si and Hē-nan. Shen-si has been of geographical and political importance, as many dynasties (from the Cho in the 12th century B.C. to the Tang in the 10th century A.D.) established their régimes in this area, previously called Kuan-chung. The capital of Shen-si is Hsi-an (previously called Ch'ang-an), which was a cosmopolitan city in the past.

It was a centre of Muslims during the Tang (A.D. 618-907), Sung (A.D. 960-1279) and Mongol-Yüan (A.D. 1206-1368) periods. Muslims were assigned an autonomous district in the city during the Tang period, and one of the oldest Chinese mosques, named Hua-chüeh-hsian Ta-shi (also called Tang-ta Shi), originally built around A.D. 742, is located here.

After the Mongol conquest of China, a mass Muslim migration from Central Asia into China took place. In 1289, when the Mongol prince Ananda (who succeeded his father Prince Mangala) was appointed as Prince An-hsi to govern Shen-si, more Muslims were brought into this province. Ananda and his son Ürlüg Temür had close contact with Central Asian Muslims. It is said, according to the author of the *Djāmi' al-tawārikh*, that they were converted to Islam and gave strong support to it. Muslim communities in Shen-si, especially in the north, thus increased and gradually developed into one of the biggest Muslim population concentrations. (By the mid-19th century, before the great rebellions, the Muslim population in Shen-si was probably around 4,000,000; but after the suppression of the rebellions, the population was reduced to around 500,000.)

Chinese Islamic *madrasa* education has been regarded as starting from Shen-si, and from there spread all over China. Hu Têng-chou (1522-97), a Shen-si native of Hsien-yang, with the Islamic name Muḥammad 'Abd Allāh Ilyās, was the founder of the so-called Shen-si school of Chinese *madrasa*-mosque education (another one is the Shan-tung school). Hu's teaching was said to emphasise interpretation of the doctrine of *Tawḥīd* and Islamic philosophy. He adopted a great number of Arabic works as textbooks, and invented a so-called Ching-t'ang Yü (*madrasa* language) in his *halka* teaching. Ching-t'ang Yü is, in fact, a hybrid of Chinese and Islamic (Arabic and Persian) languages. This language is still employed in Islamic college teaching at the present time. Hu's inclination to an Arabic form of Islam, since he spent quite a long period studying in Arabia, distinguished the Shen-si school from the Shan-tung school, which was more inclined to Persian Islam.

Shen-si has always been rather a poor province in natural resources, while its people were notorious for being truculent and violent in nature. Likewise, Shensi Muslims were also known for their militant characteristics. Throughout modern Chinese history, Muslims from this region played a significant role in local rebellions; however, it was not until the mid-19th century that Shen-si Muslims fought for their own lives and religion. Shen-si Muslim insurrections in 1860s and 1870s resulted from social, economic and religious conflicts between the Han and the Muslims, and political oppression from corrupt local Manchu bureaucrats. It has also been suggested that the Muslim insurrections echoed the Taiping Revolt. Muslim rebellions in Shen-si, were certainly influenced by the *Djahriyya* Šūfī (a sub-order of the *Nakshbandiyya*) reform movement led by Ma Minghsin [*q.v.*] early in the 19th century. Ma's movement stimulated the Muslims' consciousness and strengthened their Islamic identity. The best known Shen-si Muslim rebel leader was Pai Yen-hu [*q.v.*], who later, together with his followers, fled to Sinkiang to join Ya'kūb Beg's [*q.v.*] movement, then fled to Kazakhstan and Kirghizia and eventually settled there; they were the forefathers of the present Dungans.

**SHENLIK** (τ.), an Ottoman term for public festivities which marked special occasions and, unlike ceremonies limited to certain groups, involved the participation of the entire populace.

The main festivities of the empire included religious ones such as the commemoration of the death of Ḥusayn on 10 Muḥarram, the eve of the Prophet's birthday and the end of Ramaḍān, marked and celebrated by holidays. The Pilgrimage provided other opportunities for public festivities: the departure of the royal caravan and pilgrims for Mecca on 12 Raġab and their return on the third month of the year were publicly honoured. On the return of the Pilgrimage caravan, for instance, houses were decorated, the pilgrim's door was painted green, and everyone sought the pilgrim's blessing and intercession. Another religious celebration of non-Muslim origin occurred on 23 April when all celebrated St. George's Day, on which the Muslims commemorated Khidr, as a festival for spring when many went on picnics.

Non-religious public festivities included the girding of the sultan which marked the formal acknowledgement of his succession, as well as the birth or circumcision of his children, the sons' initiation into formal education, the wedding of a member of the sultan's family or some noted dignitary, and the reception of certain ambassadors. Another major occasion was the departure of the Ottoman army on campaign, often accompanied by the firing of cannon, beating of drums, and performances by military bands; major victories and the homecoming of the army were also extensively observed, with mock battle scenes and illuminations. Fireworks, including small rockets (*fiştek*), were often the most significant feature here. In many instances, the sultans also promoted spectacular pageants, mock battles between Muslims and Christians, water triumphs, illuminations and fireworks in order to keep up the morale of the populace in times of defeat and other calamities. There were also parades of trade guilds before the sultan, lasting for as long as three days or more, in which they displayed their professional techniques on large floats. The mingling of religious with secular events often enhanced its splendour. Many Ottoman works, such as the *Sümāme-yi hümāyūn* (Topkapı Palace Archives doc. no. R. 283) and *Sümāme-yi Wehbi*, (Topkapı, Palace Archives doc. no. A. 3539), contain depictions of such public festivities.

(FATMA MÜGE GÖÇER)

**SHERBET** (Ar. Pers. Tk.), a fruit-based drink; the term is derived from the Arabic *sharba*, meaning a drink or beverage. Sherbet was first recorded in English in the early 17th century, and there are many other European cognate forms, viz. *sorbet* (Fr.), *sorbetto* (It.), *sorbete* (Sp.), etc. According to Turkish and European sources, in Istanbul sherbet was made from a variety of ingredients, of which the most common was lemon juice, mixed with sugar, honey and water, and sometimes with musk and ambergris, often cooled with ice or snow in summer, and served warm by itinerant vendors in the winter time. Other ingredients might include violets, *nîlûfer* (water-lily flowers), rhubarb, roses, lotus, tamarind and grapes. Richard Knolles, *The general history of the Turkes*, London 1621, describes a dinner given for foreign ambassadors in Istanbul in 1603, when "the table ... thus furnished, the guests without any ceremony of washing sat down on the ground ... and fell on their victual, and drank out of great earthen dishes, water prepared with sugar, which drink they call Zerbet"; elsewhere he mentions that it is made of "the juice of lymons, water and sugar". George Sandys, *A relation of a journey begun An.Dom.1610*, London 1615; an anonymous manuscript in the British Museum of 1027/1618 (Add. 23880); and J.-B. Tavernier, *a new relation of the Inner-Part of the Grand Seigneur's Seraglio*, London 1677, all describe the composition and serving of sherbet in detail.

The Turkish historian Ewliyâ Çelebi, *Narrative of travels in Europe, Asia and Africa*, tr. J. von Hammer, London 1834-50, lists the ingredients of a variety of sherbets, and another fruit-based drink, *khô shâb* (possibly with an alcoholic content) which was equally popular in the 17th century. He names the various districts where the sherbet-makers lived, such as Top Hane, Findıklı and Scutari, and their special products. He also describes a procession in 1042/1633, when the merchants of musk sherbets (*eshribe-yi mümesseke*) "pass exposing to public view in china vases and tankards every kind of sherbet made of rhubarb, ambergris, roses, lemons, tamarinds, etc., of different colours and scents, which they distribute among the spectators".

The lemon juice which was so important a component of sherbet, came from lemons (*lîmûn*), almost exclusively imported from the island of Chios; see Sandys, Du Loir, *Les Voyages*, Paris 1654, and R. Mantran, *Istanbul dans la seconde moitié du XVIII<sup>e</sup> siècle*, Paris 1962, for the Turkish sources. Sherbet was served in pottery or glass covered bowls; a Turkish painting of a *sherbetçi* shows the sherbet seller at his stall, working a hand-pump in order to activate a sherbet fountain (Warsaw University Library, Teka 171, no. 536). A by-product of the sherbet industry was the ingenious invention, at Kütahya in the early 12th/18th century, of pottery lemon-squeezers with a concealed trap; see J. Carswell, *The lemon-squeezer: an unique form of Turkish pottery*, in *IV<sup>me</sup> Congres International d'Art Turc*, Univ. de Provence, Etudes historiques 3, Aix 1976.

**Bibliography:** Given in the article. See also J.W. Redhouse, *A Turkish and English lexicon*, Constantinople 1890, s.vv. *sharâb*, *sherbet*, *sherbetçi*.

(J. CARSWELL)

**SHEREF, 'ABD AL-RAHMÂN** (1853-1925), late Ottoman historian and statesman.

'Abd al-Rahmân Sheref was born in Istanbul, the son of a chief clerk at the Imperial Arsenal (*Tophâne-yi 'amire*), whose family hailed from Safranbolu in northwestern Anatolia. 'Abd al-Rahmân Sheref graduated from the famous Galatasaray Lycée in 1873. After this he taught at several different establishments,

from the *Makhrêdj-i Aklâm* (a college for civil servants which existed between 1864 and 1876) to the *Dâr al-Fünûn* (University), which was re-opened in 1900, having been closed since 1880. All through the long reign of 'Abd al-Hamîd II (1876-1909 [q.v.]) he was a central figure in the educational establishment, serving for sixteen years as director of the Civil Service Academy (*Mekteb-i Mülkiye*) and for fourteen as director of the Galatasaray Lycée.

After the Constitutional Revolution in 1908, 'Abd al-Rahmân Sheref gained even more prominence. He was appointed to the Senate (remaining a member until the end of the Empire) and was made Minister for the *Defter-i Khâkânî* (Revenue Register). He also served as Minister of Education for three short spells and as Minister of Pious Foundations (*Evkâf*) and President of the Council of State. As Minister of Education, he took the initiative in founding bilingual (French-Turkish) "model" (*nümüne*) secondary schools.

From 1909 until the end of the empire in 1922 he was the last official chronicler (*wak'a-nüvis*) of the Ottoman Empire. In this capacity, he finished the eighth and last volume of the history of his predecessor Lütfî Efendi. His own chronicle of the years 1908-18 has remained unpublished. 'Abd al-Rahmân Sheref's importance for the study of Ottoman history lies not so much in any great originality or depth but in his work as an organiser and populariser. He published fourteen books and numerous articles. Some of the former, such as the *Ta'rikh-i dawlet-i 'othmâniyye* (1883) and the *Fedhileke-yi ta'rikh-i dawlet-i 'âlîye-yi 'othmâniyye* (1884) were widely used as textbooks in schools. He also wrote a regular historical column for the newspaper *Wakîf* ("Time"). 'Abd al-Rahmân Sheref was instrumental in establishing history as a modern discipline in Turkey. The most important step in this direction was the establishing in 1910 of the *Ta'rikh-i 'Othmânî Endjümeni*, (Society for Ottoman History). This society, of which he became permanent president, concentrated on translating European works on Ottoman and Turkish history and on text editions. Its main aim, the publication of a large-scale Turkish history of the Ottoman Empire, was not realised during his lifetime, but the institute's journal, *Ta'rikh-i 'Othmânî Endjümeni Medjmu'ası* (*TOEM*), published from 1910 to 1924 and continued under the title of *Türk Ta'rihi Endjümeni Medjmu'ası* until 1928, was the first of its kind in the Empire.

In 1923, 'Abd al-Rahmân Sheref was elected to the National Assembly in Ankara as one of the representatives for Istanbul. He also headed the Turkish Red Crescent Society. In 1925 he fell ill; he died at Istanbul at the age of 72 and was buried in his native Eyüp.

(E.J. ZÜRCHER)

**SHEWKİ BEG** (Şevki Bey in present-day Turkish orthography), Turkish composer of great popularity, was born the son of a comb-maker in 1277/1860 in the Fâtih quarter of Istanbul. The exceptionally gifted young man was accepted at the Sultan's music school (*Mûzika-i hümayûn mektebi*) under the aegis of Callisto Guatelli (1868-99), and studied there under

the celebrated composer Hâdjîdîr Ârif Beg (Hacı Ârif Bey, d. 1302/1885). Strongly addicted to alcohol and unable to pursue a normal existence, he lived a dervish-like (*rindî*) variant of a Romantic artist's life. At the age of 31, he died on 2 Dhu 'l-Hijjâ 1307/19 July 1890 and was buried at Beylerbeyi on the Bosphorus.

Shewkî Beg, sometimes called the "Turkish Schubert", is known for his songs in the form of *şarkî* (*şarkî*), the "Lied" form of Turkish art music that had gained a new quality and popularity by the compositions of his famous teacher. In his own lyric-melancholic style, Shewkî Beg composed several hundred *şarkî* songs. In contrast to Hâdjîdîr Ârif Beg, he contented himself with a relatively small selection of modes (*makâm* [q.v.]/*makam*) and metres (*usûl*/usûl). About one-third of the pieces attributed to him are composed in one and the same *makâm*, called "lovers" (*uşşâk*/uşşâk)—a remarkable correspondence to the main subject of his song texts. The most popular of these texts were recorded, together with indications of mode and metre, in contemporaneous and later song text collections.

Some of his melodies have survived in musical notation. Suphi Ezgi (1870-1962), who knew Shewkî Beg personally, is said to have written down 120 of his songs. He published fifteen of them in his voluminous book on Turkish music (see below). A few more are included in other printed and handwritten song collections.

**Bibliography:** Suphi Ezgi, *Nazarî ve amelî türk musıkisi*, i-v, Istanbul 1933-53, *passim*; İbnülemin Mahmut Kemal İnal, *Hoş sadâ*, Istanbul 1958, 276-8; Y. Öztuna, *Şevki Bey*, Ankara 1988 (lists 234 works, presents 140 song texts; full bibl.); idem, *Büyük türk musıkisi ansiklopedisi*, Ankara 1990, ii, 355-9. (E. NEUBAUER)

**SHEYKH-OGHLU**, Şadr al-Dîn Mustafâ (modern Turkish: Şeyhoğlu, Sadrüddin Mustafa) (b. 741/1340-1), sometimes referred to as Şeykh-zâde, under which name he was dealt with in *ET*. He should not be confused with the translator of *Kırk vezirler hikâyeleri* [see **SHEYKH-ZÂDE**, 3].

Poet, translator and court dignitary, Şeykh oghlu was an important figure in the development of Ottoman *diwân* poetry, especially the *methnewî* genre, in the 8th/14th century. He extended the focus of the *methnewî* to romance and human love rather than just religion and mystic love, an approach seen also in the *Djemsîd we-Khurşîd* written in 805/1403 by his rival Ahmedî [see **AHMADÎ**]. Outstripped as a lyricist by the latter, Şeykh-oghlu also drew less attention than later writers of such *methnewîs* as *Leylâ* and *Medîrûn*, *Yûsuf* and *Zelîkhâ* and *Khusrev* and *Shîrîn*. He is, however, a figure about whom many contradictory and erroneous statements have been made in the sources both old and recent, Turkish and European. Most common of the errors, which we find in the earliest of Ottoman literary biographies, the *Heşht bihişt* of Sehî (d. 994/1586 [q.v.]), is to identify him with Djemâlî the nephew of Şeykhî [q.v.], who completed his uncle's *Khusrev ü Shîrîn*, used the *laqab* of Şeykh-zâde or Şeykh-oghlu, and was still alive in the last decade of the 15th century (see Hüseyin Ayan, *Şeyhoğlu Mustafa Hürşîd-nâme* (Hürşîd ü Ferahşâd), *inceleme-metinsözlük-konu dizini*, Erzurum 1979, 8; and Ömer Faruk Akün in *IA*, art. *Şeyhoğlu*).

Şeykh-oghlu's birthdate is given as 741 or 742 (1340-1), but it is not known where he was born, nor when and where he died. A statement at the end of his *Kenzü 'l-küberâ* indicates that he completed that

work in 789/1401, but he must have died after 804/1401 and before 812/1409.

The name Mustafâ, by which he has been known over the centuries, was one acknowledged by Şeykh-oghlu himself and recorded also by Ahmedî, but it has now been shown that he also used the name Şadr al-Dîn. As a result, two translations (see below), previously credited to an unknown Şadr al-Dîn have been credited to Şeykh-oghlu (Zeynep Korkmaz, "*Kâbüs-nâme*" ve "*Marzubân-nâme*" çevirileri kimindir?, in *Türk Dili Araştırmaları Yıllığı* [1966], 267-78; Kemal Yazuv, *Şeyhoğlu Kenzü'l Küberâ ve Mehekkü'l-Ulemâ* (*inceleme-metin-indeks*) Ankara 1991).

Statements in Şeykh-oghlu's works show that his forebears included high officials and scholars, and that his family was an influential one at the court of the Germiyan *amîrs* of Kütahya [see **GERMİYÂN-OGHULLARI**]. It seems that he was brought up there during the reign of Mehmed b. Ya'kûb I and given a *medrese* education. As an adult, he acted as chief of chancery and treasurer to Mehmed b. Ya'kûb's successor Süleymân Shâh (d. 789/1387). Süleymân was a ruler well-known as a patron to men of letters, encouraging them to execute translations from Arabic and Persian and to produce original works in Turkish. On the death of Süleymân, Şeykh-oghlu served the Ottoman Yıldırım Bâyezîd until that ruler was defeated by Tîmûr at Ankara in 805/1402, after which he transferred his allegiance to Bâyezîd's son, Prince Süleymân supporting him in the struggle for the throne.

There is still uncertainty about Şeykh-oghlu's total literary output. Poems by him appear in some old collections and he is said to have written an *Aşk-nâme*, but no manuscript has been discovered. Well-known are his *Khurşîd-nâme* and a *Kenz ül-küberâ*. The former, a *methnewî* romance completed in 789/1387, comprises close to 8,000 *bayts* (see Ayan, 24 ff.). In his preface, Şeykh-oghlu refers to it also as *Şehristân-i 'ushshâk*, and sources have labelled it variously as *Khurşîd ü Ferahşâd* (or *Ferahşâd*), *Khurşîd ü Ferrukhşâd*, or simply *Ferrukh-nâme*. The text indicates that, although Şeykh-oghlu began the work for Süleymân Shâh of Germiyan, after the death of that patron in 789/1387 he presented it to Bâyezîd. As for the origin of the work, Şeykh-oghlu's statement that it came from "a pleasant Arab story" (A. Bombaci, *La letteratura turca*, Milan 1969, 295), has to be weighed against the fact that it draws heavily on the *Shâh-nâmâ* and the general literary tradition of Iran for themes and motifs, but also includes strong personal views as well as elements from the history and traditions of the Turks (see Ayan, 31 ff.). Most of the characters in the work have Persian names, exceptions being Bogha Khân the Tatar ruler, and Turumtay his vizier (which, Akün suggests, indicates a memory of İlkhânîd days in Anatolia). The introductory sections cover the usual topics required of a *methnewî*, and the main story is structured on the motif of falling in love "sight unseen", one frequently encountered in both Persian and Turkish literature, the protagonists being Khurshîd, daughter of the Khân of Irân, and Ferahşâd, son of the ruler of the Maghrib. The *Kenz ül-küberâ*, a prose work liberally interspersed with verse, was completed in 803 Radjab/March 1401 and is believed to have been Şeykh-oghlu's last work. Categorized by Kemal Yazuv as the second example (after the *Kutadghu bilig* [q.v.]) of a "Mirror for Princes" in a Turkic language, the work resembles in format, but is not a translation (as has been suggested) of Nadjm al-Dîn Râzî's *Mirşâd al-'ibâd* (Yazuv, *op. cit.* 10-11). It opens with appropriate

introductory material. Then in four chapters *Sheykh-oghlū* discusses the status and responsibilities of rulers, state officials, legislative, scholarly and religious functionaries, supporting his views with anecdotal material that shows him to be well-versed in scholarship and literature, and makes the work an important source of information on 9th/15th-century society.

As for the two translations now credited to *Sheykh-oghlū*, and undertaken at the command of Süleymān Shāh, these are: (1) *Marzubān-nāme* (believed to be the earlier), based on the Warāwīnī version of the original 4th/10th-century work, was itself later translated into Arabic [see *MARZBĀN-NĀMA*]. With its didactic nature, typical of Persian *andarz* literature, the use of animal fables as in *Kalīla wa-Dimna*, and motifs in its frame story reminiscent of *Kutadghu bilig*, the work must have been especially attractive to *Sheykh-oghlū*, and presumably influenced the writing of his own last work, *Kenz ul-kübrā* (see Yavuz, 11). (2) *Ābūs-nāme*, written by the Ziyārid ruler of Ṭabaristān and Gurgān, Kay Kāwūs b. Iskandar [q.v.] for his son Gīlān Shāh in 475/1082-3, a work also in the *andarz* and "Mirror for Princes" tradition.

In addition to *Sheykh-oghlū*'s importance for the literary, intellectual and social aspects of Anatolia, he has a place in the development of the Turkish language as a literary vehicle in the 8th/14th century. Said to have complained (fashionably) about the unsuitability of Turkish as a vehicle for poetry, he nevertheless stressed the importance of producing works in that language and is praised for the style that he accomplished (see Akün, 483, and Ayan, 11, 15; the Zeynep Korkmaz study of the *Marzubān-nāme* supplies a detailed analysis of his language).

**SHEYKH-ZĀDE**, the name of various figures in Ottoman Turkish literature.

1. A name sometimes used in reference to *SHEYKH-OGHLU*, Şadr al-Dīn Muṣṭafa [q.v.].

2. The *lakab* of Dīemālī, nephew of *Sheykhī* [q.v.].

3. An unidentified Ottoman writer referred to by sources also as *Sheykh-zāde* Ahmed or Ahmed-i Mişrī and said to have presented to Murād II a collection of stories, *Hikāyet-i erbaʿin-i, ṣubḥ u mesā*, translated from Arabic. The Arabic original is considered no longer extant and, contrary to earlier studies, a recent work in Turkey (Mübeccel Kızıltan, *Kırk vezirler hikāyetleri. Metin-dizin-kaynakça*, doktora tezi, İstanbul Üniversitesi 1991) posits that two writers are involved, an Ahmed-i Mişrī who translated the work from Arabic and presented it to Murād II (1421-51), and a *Sheykh-zāde* who took up the text later, presenting it to both Murād II and Meḥmed II (1451-81). The collection of stories, related in a frame-style format and centred on the motif of a chaste youth and lustful stepmother, is well-known in English through E.J.W. Gibb, *The history of the forty Vezirs*, London 1886.

(KATHLEEN BURRILL)

**SHEYTĀNLĪK** (Grk. Gýaros, vernacular Gióúra), the Tkish. name (lit. "devilry, craftiness") for an island of the Aegean Cyclades group, lying to the northwest of Syros or *Shire* [q.v.]. From Roman times onwards, up to the period 1936-74, it has served as a place of exile and imprisonment for political prisoners, but may also have acquired its name from its great vulnerability to pirate attacks. In Byzantine times, as in Antiquity, shells for purple dye were fished for there (see K.R. Setton, in *Speculum*,

xix [1944], 196). From 1206 to 1566 it was part of the Archipelago Duchy of Naxos (see *NAKSHE* and map XIV in Pitcher, *Hist. geogr. of the Ottoman empire*), but was seized temporarily by *Khayr al-Dīn Pasha* [q.v.] in 1537; it then became part of a petty Italian maritime state with strong Roman Catholic influence until the Ottomans took it over in 1617 (see K.R. Setton, in *Camb. med. hist.*, iv/1<sup>2</sup>, 426). Greek pirates used it as a base during the War of Independence (1821 onwards), preying on European shipping, as attested by the contemporary Jourdain (*Méms. hist. et militaires sur les événements de la Grèce*, Paris 1828, ii, 225). At present, the island is uninhabited.

**Bibliography:** See also the bibls. *NAKSHE*, PARA, SANTURIN ADASI and *SHIRE*. (A. SAVVIDES)

**SHEYYĀD ḤAMZA**, modern Turkish Şeyyad Hamza, a 7th/13th-century Turkish mystical poet mentioned in 10th/16th-century biographies but about whose life details are elusive.

He probably lived mainly in the Akşehir-Sivrihisar area, and a tombstone in Akşehir [see *AKŞEHİR*] is reported to be that of a daughter Aşlı *Khātūn* (Rıfka Melül Meriç, *Akşehir türbe ve mezarları kitabeleri* in *TM*, v, 179). Mehmed Fuad Köprülü was the first to note him in this century, publishing a 15-*beyt* remnant of a *methnewī* of his contained in Egerdirli Hādjidīr Kemāl's *Ḍāmī' al-nezā'ir* (on this genre see Nihat Sami Banarlı, *Resimli Türk edebiyatı tarihi*, İstanbul 1971, 617-8) and characterising him and his *lakab* as typical of the Bāṭinī trends [see *BĀṬINIYYA*] current in Anatolia during the period of the Mongol invasion (see Köprülü's *El* art. *SHAYYĀD ḤAMZA*). Subsequent research has uncovered more of Hamza's works, produced other theories on his *lakab* (see Vasfi Mahir Kocatürk, *Tekke şirri antolojisi*, Ankara 1968, 13-15, and *İA* art. *Şeyyad* by Ömer Faruk Akün, cf. also *SHAYYĀD*), and questions about his Bāṭinī connection, pointing to his importance as a predecessor of Yūnus Emre [q.v.] and his place in the early experimental period of Ottoman literature. Hamza was familiar with both the folk and *diwān* poetic tradition. Some of his folk poems contain coarse elements and reflect the turmoil of 7th/13th-century Anatolia. In general, however, they express with simple lyricism his moral and religious views. His *diwān* works include *naʿts* (in praise of Muḥammad), a *naẓīre* on a *ghazel* of Rūmī, amatory verse and admonitions concerning the vanity of the world and inexorable death. Important is his 1529-*beyt methnewī* entitled *Destān-ı Yūsuf* ("Epic [or Tale] of Joseph"), a work based on the Qurʾānic version of the Joseph story [see *YŪSUF U ZALĪKHĀ*], uniting popular Islamic tradition with mystic concepts. The format, while adhering in general to the Persian *mathnawī* tradition, replaces interspersed *ghazels* with five *nūkie* or moral commentaries. The poem's general tone is strongly reminiscent of folk narrative. The Turkish (largely free of Arab- or Persianisms) requires frequent prosodic licence to achieve the chosen (*remel*) metre, and the rhyme structure lacks polish. The M.A. thesis (1992) of Stephanie B. Thomas at Columbia University comprises a study of the work in the context of the Joseph tradition, with an annotated translation of a 952/1545 manuscript as published by Dehri Dilçin (*Şeyyad Hamza: Yusuf ve Zeliha*, İstanbul 1945). Another 76-*beyt methnewī* is entitled *Hādhā dāsītān-ı Sulṭān Maḥmūd* ("This is the tale of Sultan Maḥmūd [of Ghazna]"). Its topic (found earlier in Persian) is an encounter between Maḥmūd and a poor dervish. A dialogue between the two debates the worth of worldly values, establishing that control of the lower self (*nefs*), not rank and riches, ensures a place in Paradise (Sadettin

Buluç, *Şeyyad Hamza'nın bilinmeyen bir mesnevisi*, in *TM*, lxxv [1968], 247-57).

**Bibliography:** For additional sources, see the work of Banarlı cited above; *LA* art. *Şeyyad Hamza* (Sadettin Buluç); and Metin Akar, *Şeyyad Hamza hakkında yeni bilgiler*, in *Türklik Araştırmaları*, ii (1986), 1-16. (KATHLEEN BURRILL)

**SHĪHAWRĪ** [see **SHĪHĪ**].

**SHĪʿA**, in the broad sense, refers to the movement upholding a privileged position of the Family of the Prophet (*ahl al-bayt* [q.v.]) in the political and religious leadership of the Muslim Community. The name is derived from *shīʿat* 'Alī, i.e. the party or partisans of 'Alī, which was first used in the inter-Muslim war during 'Alī's caliphate distinguishing them from the *shīʿat* 'Uthmān, the partisans of the murdered caliph 'Uthmān opposed to 'Alī. The present article will deal with the origins and early development of the Shīʿa until the emergence of the major sectarian branches. For these, see the individual articles on Ithnā 'ashariyya, Ismāʿīliyya, Zaydiyya, etc.

In the lifetime of Muḥammad, his close kin enjoyed a raised religious status of purity recognised by the Qurʾān. As his kin (*dhawu ʿl-kurbā*), there were counted the descendants of his great-grandfather Hāshim and, to some extent, the descendants of Hāshim's brother al-Muṭṭalib. They were, like the Prophet himself, not allowed to receive or to handle alms (*zakāt*) as these were considered unclean. In compensation for this exclusion they were entitled to receive a portion of the *khums*, the fifth of war booty reserved to the Prophet, and of the *fayʿ* [q.v.], property which fell to the Muslims without war effort. After Muḥammad's death, the establishment of the caliphate by Abū Bakr on the basis of a privileged position for the tribe of Quraysh as a whole, and the confiscation of Muḥammad's property, deprived the Prophet's Family of the special status, as they were disinherited and lost their title to their Qurʾānic share of the *khums* and *fayʿ*. The Banū Hāshim vainly protested against these developments by refusing to pledge allegiance to Abū Bakr for six months. The disestablishment of the Family of the Prophet after his death was the ultimate motive for the rise of the Shīʿa.

As leader of the Banū Hāshim was first generally recognised Muḥammad's cousin 'Alī because of his close association with the Prophet, his marriage to Muḥammad's daughter Fāṭima and his early merits in Islam. Early Shīʿī support, however, was not restricted to him and his descendants. Throughout the Umayyad age there was broad awareness that the Prophet's Family comprised all of the Banū Hāshim, as is evident, for instance, in the poetry of al-Kumayt entitled *Hāshimīyyāt*. There were, however, preferences, partly on a local basis, for some particular branch of the Family. In Baṣra, descendants of al-Hārith b. 'Abd al-Muṭṭalib b. Hāshim occasionally enjoyed support as kin of the Prophet since they were settled there. In Kūfa, where 'Alī resided during his reign, his descendants were most often preferred to others. Support of descendants of al-'Abbās and of 'Alī's brother Dja'far should not be seen as an illegitimate deviation from early Shīʿī backing of the 'Alids.

A popular movement in favour of 'Alī first emerged in Kūfa under the governorship of al-Walīd b. 'Uḡba during the first half of 'Uthmān's caliphate. Its spokesmen, many of them Qurʾān readers (*kurrāʾ* [q.v.]), later appear as leaders of the *shīʿat* 'Alī under the latter's caliphate and, if they survived, after his assassination. They were calling for the removal of 'Uthmān from the leadership and for allegiance to 'Alī. One of them,

Mālik b. al-Hārith al-Ashṭar [q.v.], became the leader of the Kūfan revolt which overthrew 'Uthmān's governor Saʿīd b. al-ʿĀs [q.v.] and installed Abū Mūsā al-Ashʿarī [q.v.] in his place. He also led the Kūfan rebel group which joined the groups from Egypt and Baṣra converging on Medina to press for the resignation of 'Uthmān. Although he and the Kūfans did not join in the siege of the caliph's palace carried out by the Egyptians, he played a major part in securing the succession of 'Alī to power against the rival candidacy of Ṭalḥa [q.v.] and subsequently in rousing Kūfan support for 'Alī against 'A'isha, Ṭalḥa, and al-Zubayr in the Battle of the Camel, in spite of the neutralist stand of the governor Abū Mūsā al-Ashʿarī.

'Alī's reign bore from the outset the character of a counter-caliphate. He was heralded by his supporters and officials as the most excellent of Muslims after the Prophet, and was acclaimed in poetry and eulogies as the *waṣī*, the legatee, of Muḥammad. Such claims, which put the legitimacy of the caliphate of his predecessors in question, lent the conflict between him and his opponents a religious dimension apart from the political one. Already in the Battle of the Camel, 'Alī's opponents spoke of a "religion of 'Alī (*dīn* 'Alī)", a notion deeply resented by the Prophet's cousin, who insisted that he represented the religion of Muḥammad.

'Alī's own attitude to the legitimacy of his predecessors' reign, as expressed in his speeches and letters, was complex. He praised Abū Bakr's and 'Umar's conduct in office highly and reprimanded any of his followers who depreciated them. He severely criticised 'Uthmān for misgovernment and arbitrary innovations. Holding that 'Uthmān had provoked the rebellion against himself, he refused to condemn the rebels, while not expressly condoning the murder of the caliph and distancing himself from any personal involvement in the rebellion. He asserted that he personally had a better right to the succession of Muḥammad than any other Companion, on the basis of his close kinship and association with him as well as his outstanding merits in the cause of Islam. The Community of the Faithful as a whole deserved blame for having turned away from him after the death of Muḥammad. It was 'Alī who first gave the *ḥadīth* of Ghadīr Khumm [q.v.] publicity by inviting those Companions who had heard the Prophet's statements there to testify on the square in front of the mosque of Kūfa. These statements have traditionally been understood by the Shīʿa as an implicit appointment of 'Alī to the succession in the leadership of the Community. 'Alī made plain that he considered the Family of the Prophet to be entitled to the leadership of the Community as long as there remained a single one of them who recited the Qurʾān, knew the *sunna* and adhered to the true faith.

The most basic distinguishing beliefs of the Shīʿa thus go back to 'Alī, who must to this extent be considered its founder and first teacher. This fact has been largely unpalatable to Sunnī historiography, which therefore created and propagated as the founder of the Shīʿa the figure of 'Abd Allāh b. Saba' [q.v.], the malicious Yemenite Jew who first stirred up the rebellion against 'Uthmān and invented the doctrine of 'Alī being the legatee of Muḥammad, ending up with extremist fiction denying the death of 'Alī and deifying him. Only this latter aspect may well have had a historical foundation. Ibn Saba' appears to have been active in al-Madā'in after 'Alī's death and to have propagated belief in his return (*raḍīʿa*) and ultimate victory over his enemies.

When 'Alī was assassinated in 40/661, his parti-

sans in Kūfa were evidently convinced that only a member of the Prophet's Family could legitimately succeed him. Although 'Alī, probably following the Prophet's precedent, refused to appoint a successor after having been mortally struck, his eldest son al-Ḥasan [q.v.], grandson of Muḥammad, was immediately recognised without dissent. A few months later, al-Ḥasan abdicated in favour of the Umayyad Mu'āwīya [q.v.] on the basis of a treaty which stipulated a full amnesty and safety of life and property for the *shī'at 'Alī* and which denied Mu'āwīya the right to appoint a successor. According to some accounts, it provided for al-Ḥasan to succeed him, according to others for election by a council (*shūrā*), evidently on the model of the electoral council appointed by 'Umar. Although the abdication aroused general disappointment and some protest among the Shī'a, it was not regarded as a renunciation by al-Ḥasan of his ultimate title to the leadership, and he continued to be recognised as the legitimate Imām. Al-Ḥasan died in 49/669 or 51/671, poisoned, it was widely suspected, by one of his wives at the instigation of Mu'āwīya. The Shī'a now turned to his younger brother al-Ḥusayn [q.v.] and, disaffected by what they regarded as the oppressive and vindictive nature of Mu'āwīya's rule, urged him to rise to restore the legitimate reign of the Prophet's Family. Although by character more inclined to pursue the leadership actively than his brother, al-Ḥusayn declined to act as long as Mu'āwīya was reigning, evidently recognising the continued validity of al-Ḥasan's agreement.

The Shī'ī riot in Kūfa in 51/671, for which Ḥudjir b. 'Adī [q.v.] and other leaders were executed, was not an attempted revolution but an incident intentionally provoked by Mu'āwīya and his governor Ziyād b. Abīhi [q.v.] with the aim of crushing latent opposition to the Umayyad rule. Mu'āwīya had, in breach of the spirit, if not the letter, of his treaty with al-Ḥasan, ordered his governor of Kūfa, al-Mughīra b. Shu'ba [q.v.], to curse 'Alī from the pulpit in the Friday prayers and to insist on the presence of several Shī'ī leaders, among them Ḥudjir. Al-Mughīra had done so, but failed, evidently against Mu'āwīya's intentions, to discipline those who protested against the cursing. Al-Mughīra's successor Ziyād took the occasion of pebbles being thrown at his deputy in protest against the cursing to intervene, ordering the rounding-up of Ḥudjir and other Shī'ī leaders. There was some fighting between police and rioters in which no-one was killed. Ḥudjir eluded Ziyād for a time, finding refuge in the quarters of various tribes. Eventually, he surrendered voluntarily on the promise of being sent to Mu'āwīya. Ziyād drew up an accusation of armed rebellion against the Shī'ī leaders and had it signed by representatives of the Kūfan nobility. Mu'āwīya offered them pardon if they would renounce their loyalty to 'Alī and curse him. As they refused, he ordered the execution of Ḥudjir and five others. The law of Islam and practice so far prevalent allowed only imprisonment and exile for insurrection. These executions amounted to murder. The incident, rather than crushing the opposition, inflamed the sense of outrage of the Kūfan Shī'a.

After the death of Mu'āwīya and the succession of his son Yazīd [q.v.], the Kūfan Shī'a and many of the tribal leaders wrote letters to al-Ḥusayn inviting him and offering him their backing. Al-Ḥusayn had, together with other members of the Islamic aristocracy, declined to pledge allegiance to Yazīd during Mu'āwīya's lifetime and, after his death, fled from Medina to the Sanctuary in Mecca in order to avoid

being forced to do so. He sent his cousin Muslim b. 'Aqīl [q.v.] ahead of him to test the ground in Kūfa. On receiving at first a favourable report from Muslim, al-Ḥusayn set out for Kūfa. Determined action by the governor 'Ubayd Allāh b. Ziyād, however, induced the Kūfan tribal leaders to abandon their backing of the revolt. Muslim b. 'Aqīl was killed, and al-Ḥusayn soon faced a Kūfan army preventing him from proceeding or returning. He and over twenty members of the Prophet's *ahl al-bayt*, brothers and sons of al-Ḥusayn, sons of al-Ḥasan, and descendants of 'Alī's brothers 'Aqīl and Dja'far, were massacred at Karbalā' on 10 Muḥarram 61/10 October 680.

The violent death of the Prophet's grandson at the hands of a Kūfan army, after the Kūfans had first invited him and then failed to stand up for him, had a profound effect on the Shī'a. The passion motive, the call for repentance and martyrdom, became permanent aspects of Shī'ī spirituality. In immediate reaction, a movement of penitents (*tauwābūn*), calling for self-sacrifice and revenge for al-Ḥusayn, sprang up among the old partisans of 'Alī led by Sulaymān b. Šurad al-Khuzā'i. It gathered strength after the death of the caliph Yazīd as Kūfa came nominally under Zubayrid rule. In 65/684-5 some 4,000 volunteers left Kūfa, visited Karbalā' to weep and make vows on the grave of al-Ḥusayn, and moved against an Umayyad army near 'Ayn al-Warda. They were defeated, and the majority, including Sulaymān b. Šurad, were killed.

As the old guard leaders of the Shī'a were killed off, new forces came to the fore. After the death of the caliph Yazīd, al-Mukhtār b. 'Ubayd al-Thakafī [q.v.], nephew of 'Alī's governor of al-Mada'in Sa'd b. Mas'ūd, sought the leadership of the Shī'a in Kūfa, promising to take revenge for the blood of al-Ḥusayn more effectively than his rival Sulaymān b. Šurad. When the latter was killed, most of the Shī'a turned to him, although some of the conservatives remained aloof from his movement. Al-Mukhtār claimed to be acting on behalf of 'Alī's non-Fātimid son Muḥammad b. al-Hanafīyya [q.v.], whom he proclaimed the Imām and the Mahdī [q.v.], who would restore justice on earth. This choice was natural after the death of al-Ḥasan and al-Ḥusayn, since Muḥammad b. al-Hanafīyya was the only surviving son of 'Alī closely associated with him during his reign. Ibn al-Hanafīyya gave limited encouragement to al-Mukhtār, especially to his aim to seek revenge for al-Ḥusayn, but declined to assume personal leadership of the movement and to come to Kūfa. Al-Mukhtār took possession of Kūfa by revolt in 66/685. Although he attempted to reconcile the defeated tribal chiefs, initially restraining his followers from taking revenge on those involved in the killing of al-Ḥusayn, conflict soon arose as he accepted substantial numbers of non-Arab clients (*mawālī*) into the ranks of his movement. The tribal chiefs staged a revolt but were defeated. Now fully in control, the radical Shī'īs took revenge for al-Ḥusayn, seeking out and killing those most guilty in his death. Shortly afterwards, the Kūfans defeated a Syrian army on the river Khazir, killing 'Ubayd Allāh b. Ziyād. Many of the tribal chiefs and their supporters had found refuge in Baṣra, governed by Muṣ'ab b. al-Zubayr [q.v.], and agitated for action against al-Mukhtār. The latter was killed as the Baṣrans took Kūfa in 67/687. Muṣ'ab b. al-Zubayr allowed the Kūfan nobles to massacre their opponents, and 6,000 to 8,000 of al-Mukhtār's followers are said to have been killed.

The movement founded by al-Mukhtār survived.

however, and spread, chiefly among the lower classes, outside Kūfa also. It was commonly called that of the Kaysāniyya [q.v.], after the chief of al-Mukhtār's body-guard Abū 'Amra Kaysān [q.v.], and espoused a distinctly messianic Shī'ism. The name Saba'iyya also applied to it by early contemporaries evidently connects it with the earlier messianic teaching of 'Abd Allāh b. Saba' concerning 'Alī in al-Madā'in. Muḥammad b. al-Ḥanafīyya continued to be recognised as the Imām and Mahdī until his death in 81/700. After his death, which was denied by many, he was generally expected to return and to reign in glory. Other beliefs and practices of the followers of al-Mukhtār also aroused hostility and scorn among conservative Shī'is as well as Sunnīs. Al-Mukhtār had made predictions in rhymed prose like the pre-Islamic soothsayers, and was widely called by his opponents a magician or false prophet although he did not claim prophethood. He instituted or allowed the public veneration of an empty chair, practiced especially by some Yemenite tribes. The chair was said to be a relic from 'Alī and was compared to the Ark of the Covenant of the Jews. The failure of some of al-Mukhtār's predictions to be realised is said to have given rise to the doctrine of *badā'* [q.v.], the possibility of a change of God's will. Upholding a radical interpretation of 'Alī's attitude towards the caliphs preceding him, the Kaysāniyya definitely rejected their legitimacy.

The usurpation of the rights of the Family of the Prophet by the early caliphs was also at the core of the Shī'ī teaching of 'Abd Allāh b. al-'Abbās (d. 68/687-8) in Mecca. Ibn al-'Abbās [q.v.], cousin of Muḥammad and 'Alī, had been drawn by the caliph 'Umar close to himself and became initially 'Alī's most trusted associate during his reign, though there arose later disagreement between them. After 'Alī's death he backed al-Ḥasan's caliphate, urging him to resume his father's war against Mu'āwiya. After al-Ḥasan's resignation he became the main spokesman for the rights of the *ahl al-bayt*. He consistently countered the reports of Abū Bakr's daughter 'Ā'isha which described her father as the closest intimate of Muḥammad, chosen as his successor by his appointment to lead the communal prayers during Muḥammad's final illness. Contrary to her claim, the Prophet had not insisted on Abū Bakr leading the prayers when she pleaded for him to be excused. Rather, he had suggested that 'Umar should lead them. The latter declined, however, to take precedence before Abū Bakr. 'Umar had thwarted the mortally ill Muḥammad's intention to dictate a testament as guidance for the faithful, insisting that the Prophet was delirious and the Qur'ān was sufficient guidance for them. Muḥammad had not died in 'Ā'isha's arms, as she claimed, but leaning on 'Alī's chest. Although critical of some aspects of 'Alī's conduct, Ibn al-'Abbās made clear that the Banū Hāshim, and he himself, were convinced of 'Alī's legitimate right to the succession to Muḥammad, of which he was deprived by Abū Bakr with the backing of the majority of Quraysh. Muḥammad's kin had protested against Abū Bakr's usurpation, first by burying the Prophet privately in his house, thus denying the caliph the occasion to do the last honours for his predecessor. The election of Abū Bakr in the Hall of the Banū Sā'ida, which took place at the time of the preparation of Muḥammad's burial, had later been described by 'Umar in public as a *falta*, a precipitate, arbitrary act, excusable only because God had bestowed success on it. Abū Bakr had illegitimately denied the Banū Hāshim their inheritance from the

Prophet and their Qur'ānic share of war booty and *fa'y*. 'Umar had attempted to satisfy their just claim by offering them partial restitution, but they had declined his overtures as being insufficient.

Ibn al-'Abbās warned al-Ḥusayn of the danger of his rising and did not back it. Jointly with Muḥammad b. al-Ḥanafīyya, however, he resisted the demands of the anti-'Alid counter-caliph 'Abd Allāh b. al-Zubayr that they should pledge allegiance to him. Ibn al-Zubayr imprisoned them together, and they were freed by a Kūfan Shī'ī cavalry troop sent by al-Mukhtār. Ibn al-Zubayr accused 'Abd Allāh b. al-'Abbās and his brother 'Ubayd Allāh of trying to "raise the banner of Abū Turāb (sc. 'Alī) which God had lowered and of gathering the muddleheads from 'Irāq around themselves."

The descendants of Fāṭima were, after the massacre of Karbalā', for a generation eclipsed in the leadership of the Shī'a. Al-Ḥusayn's only surviving son 'Alī Zayn al-'Ābidīn [q.v.] kept aloof from Shī'ī activity and attracted no substantial following. Al-Ḥasan's senior son al-Ḥasan also avoided involvement with the Shī'a. Only al-Ḥusayn's grandson Muḥammad b. 'Alī, known as al-Bākir [q.v.], after his father's death in 94/713-14 actively engaged in Shī'ī teaching, while refusing to be drawn into revolutionary activity, and became the founder of systematic Shī'ī religious law. His teaching in particular raised the religious rank and spiritual authority of the Imāms who were endowed with a divinely inspired knowledge. The Imām was described by him as *muḥaddath*, "spoken to" by the angel of revelation. The term was taken from a variant reading of Qur'ān, XXII, 52, "We have not sent before you any Messenger of Prophet" adding "or *muḥaddath*", which was contained in the codex of 'Abd Allāh b. al-'Abbās and was interpreted as a form of revelation ranking below that reserved for prophets. The Imām was not expected, however, to add in any way to the message and the law revealed by the Prophet, but rather to preserve it in its integrity through his divinely-granted authority. The world was in permanent need of such an Imām and could, in the absence of a prophet, never exist for a moment without him. In a hostile environment, the Imām was protected by his and his followers' license and obligation to practice *taqiyya* [q.v.], the precautionary concealment of their religious beliefs and practice.

Al-Bākir's legal and ritual teaching comprised most of the features which were later seen as distinctive of Shī'ī law, such as the *ḥay'ala* in the call to prayer [see *ADHĀN*], the prohibition of the *mash'ala'l-khuffayn* [q.v.] in the ritual ablution, and the permission of *mut'a* [q.v.], temporary marriage. The latter permission (which was not upheld by Zaydī and Ismā'īlī law) also reflects influence of the doctrine of 'Abd Allāh b. al-'Abbās, who taught that *mut'a* had been practised in the time of Muḥammad and Abū Bakr and had been prohibited only by 'Umar. Al-Bākir's quietist conduct aroused little suspicion among the authorities, and he was widely respected as a traditionist among Sunnī scholars. Among the Shī'a in Kūfa, his prestige was widely recognised.

The activist Shī'a who had backed al-Mukhtār went underground after his death. The leadership in Kūfa fell to Salama b. Budjāy of the Banū Musliya Madh-hijī. His father Budjāy b. 'Abd Allāh had been a close associate of Muḥammad b. al-Ḥanafīyya and al-Mukhtār, and was executed by Muḥab b. al-Zubayr. Salama became intimately attached to Muḥammad b. al-Ḥanafīyya's son Abū Hāshim, who took a more active part than his father in the organisation of a

tightly-knit secret movement spreading Shī'ī revolutionary propaganda. After his father's death, Abū Hāshim was recognised by the movement as their Imām. After Abū Hāshim's death in 98/718 there were rival claims among his followers, that he had appointed as his successor either the 'Abbāsīd Muḥammad b. 'Alī b. al-'Abbās or the Dja'farīd 'Abd Allāh b. Mu'āwiya b. 'Abd Allāh. Salama b. Budjayr is said to have recognised the 'Abbāsīd, but he died shortly afterwards. Decisive was the arbitration of the dispute by Abū Riyāh Maysara al-Nabbāl, a *mawla* of the Azd, in favour of Muḥammad b. 'Alī. The Banū Musliya and their clients now backed the 'Abbāsīd and, after him, his son Ibrāhīm. The movement had, still under Abū Hāshim, begun to spread to Khurāsān, mainly through the missionary activity of Bukayr b. Māhān, son of a client of the Banū Musliya. While in Kūfa its appeal remained limited, it attracted a broad following among Arab and Persian Muslims during the last decades of the Umayyad caliphate.

A few years after al-Bākir's death, his brother Zayd b. 'Alī came to visit Kūfa in a dispute about a debt. He was immediately surrounded by Shī'īs who persuaded him to lead a rising. Initially, he enjoyed broad backing, but his refusal to denounce Abū Bakr and 'Umar as apostates and to condemn their conduct, even though he upheld the prior title of 'Alī to the succession to Muḥammad, was taken by many of the former supporters of al-Bākir and other radicals as a motive to withdraw. They now generally recognised al-Bākir's son Dja'far al-Sādiq [q.v.] as the legitimate Imām. Zayd's revolt failed and he was killed in 122/740.

The schism during Zayd's revolt was decisive for the further development of the Shī'a, giving rise to its Imāmī and Zaydī branches. Dja'far al-Sādiq, who may be considered the founder of the Imāmiyya, closely followed and elaborated the teaching of his father. The teaching authority of the Imāms was further strengthened by the doctrine of their immunity from error and sin (*ʿisma* [q.v.]). The imāmate was based on a divinely-guaranteed explicit designation (*naṣṣ* [q.v.]) of the Imām, and, after al-Ḥasan and al-Husayn, was handed down from father to son among the descendants of the latter. Knowledge of and obedience to the rightful Imām were incumbent upon every believer. By ignoring the explicit *naṣṣ* of the Prophet for 'Alī and by backing the caliphate of Abū Bakr and 'Umar, the mass of the Community had fallen into apostasy. The radical tendencies of the following of Dja'far al-Sādiq were strengthened by their gradual absorption of the remnants of the Kaysāniyya and adoption of some of their controversial doctrines like *badāʿ* and *raḍīʿa* and their messianic expectation of the Mahdī. This expectation was blunted, however, by al-Sādiq's strict prohibition of his followers engaging in revolutionary activity and his insistence that the rising of the legitimate Imām as the Kā'im or Mahdī would occur only in the distant future. The nascent Imāmiyya thus combined radical Shī'ī religious dogma with political quietism.

The sectarian movement arising out of the supporters of Zayd's revolt, later known as the Zaydiyya, was, by contrast, moderate in its Shī'ī doctrine and deviation from the religious views of Sunnism, but politically militant. The imāmate could be claimed only by someone prepared to rise with the sword actively seeking the leadership, in addition to being qualified by religious knowledge. The first Imām after al-Husayn was thus Zayd b. 'Alī. Neither his more learned brother al-Bākir nor his father were Imāms.

There was no need for an Imām at all times and, after 'Alī, al-Ḥasan, and Husayn, no designation of a successor, though recognition and support of a legitimate claimant was a religious obligation. The Imām was not immune from error and sin and had no superior teaching competence; rather, a collective religious authority of the Family of the Prophet was generally acknowledged. Since the designation of 'Alī as Muḥammad's successor had been obscure (*naṣṣ khafī*), the Community, in recognising Abū Bakr and 'Umar as caliphs, had not fallen into a state of apostasy but at most into a state of sin. Others held that their caliphate was justified since 'Alī had recognised it. Messianic tendencies were generally weak among the Zaydiyya.

Zayd's son Yahyā, who escaped to Khurāsān after the collapse of his father's revolt, was tracked down by the Umayyad authorities there and killed in 125/743. His murder strengthened the hand of the Shī'a in Khurāsān, and revenge for Zayd and Yahyā became one of the slogans of the rapidly-expanding revolutionary movement. The leader of the movement was now, after the death of the 'Abbāsīd Muḥammad b. 'Alī, his son Ibrāhīm. Its propaganda, however, was in favour of the reign of "the one agreed upon of the Family of Muḥammad (*al-ridā min Al Muḥammad*), suggesting a broad choice among the Banū Hāshim.

As the imminent overthrow of the Umayyad caliphate became predictable, leading representatives of the Banū Hāshim met in a secret gathering at al-Abwā', on the road to Mecca, to discuss the choice of a common candidate for the reign. Present were especially Ḥasanids and 'Abbāsīds, including Ibrāhīm b. Muḥammad. The senior Ḥasanid, 'Abd Allāh b. al-Ḥasan b. al-Ḥasan b. 'Alī, promoted the candidacy of his son Muḥammad b. 'Abd Allāh, a namesake of the Prophet, whom he had been grooming for the role of the Expected Mahdī. He gained the support of the 'Abbāsīd Abū Dja'far, the later caliph al-Manṣūr, and Muḥammad b. 'Abd Allāh, known as al-Nafs al-Zakiyya [q.v.], received the pledge of allegiance of those present. However, Dja'far al-Sādiq, who arrived later, refused to recognise him as the Mahdī and maintained that he would not pledge allegiance to him in the presence of his father 'Abd Allāh b. al-Ḥasan, the senior among the descendants of 'Alī. Given the large following of Dja'far in the Shī'a, his opposition was a severe setback for the efforts to unite the Prophet's Family behind a common leader, and this encouraged the 'Abbāsīds to seek the caliphate for their own candidate.

The rivalry between 'Alids and 'Abbāsīds erupted into open conflict as soon as the Family of the Prophet achieved their victory over the Umayyads. As the 'Abbāsīd Imām Ibrāhīm b. Muḥammad b. 'Alī was discovered, imprisoned, and killed by the last Umayyad caliph Marwān, the 'Abbāsīds fled to Kūfa. The local leader of the revolutionary movement there, Abū Salama al-Khallāl [q.v.], sheltered them but hesitated to pledge allegiance to Ibrāhīm's chosen successor Abū 'l-'Abbās al-Saffāh. In accord with the general sentiment in Kūfa, he was inclined to back an 'Alid candidate. His hand was forced, however, by the Khurāsānian army commanders who pledged allegiance to Abū 'l-'Abbās. A few months later he was murdered for his display of disloyalty by an emissary of Abū Muslim al-Khurāsānī [q.v.]. The inaugural address of al-Saffāh, partly delivered by his uncle Dāwūd b. 'Alī, stressed the right of the 'Abbāsīds to rule as members of the Prophet's Family and denounced those Shī'īs who asserted a superior title of the 'Alids.

The Ḥasanid Muḥammad b. 'Abd Allāh remained,

together with his brother Ibrāhīm, in hiding after the establishment of the 'Abbāsīd caliphate, and his supporters spread propaganda for him as the Mahdī. The second 'Abbāsīd caliph, Abū Dja'far al-Manšūr, was seriously worried and made vain efforts to find him, imprisoning his father and at least nine others of his Ḥasanīd kin as they refused to reveal his whereabouts. When Muḥammad revolted in Medina in 145/762-3, al-Manšūr murdered his imprisoned kinsmen. In spite of widespread popular backing, Muḥammad and Ibrāhīm were defeated and killed. Al-Manšūr now gave his own son and heir-apparent Muḥammad the title *al-Mahdī* in an attempt to attract popular messianic sentiments to the 'Abbāsīd house. His bloody repression of the Ḥasanīds, however, rather strengthened the pro-'Alid sympathies in the Shī'a. The Zaydiyya first restricted their backing to the Tālibīds, the descendants of 'Alī's father Abū Tālib, and then the descendants of al-Ḥasan and al-Ḥusayn.

The Khurāsānī Shī'a, who had initially recognised the imāmate of the 'Abbāsīd caliphs, were at the same time substantially reduced, first by the defection of the supporters of Abū Muslim al-Khurāsānī after he was killed by al-Manšūr, then by al-Manšūr's suppression of those extremists deifying him, and finally, by the defection of the supporters of his nephew 'Isā b. Mūsā, who had been appointed by al-Saffāh to succeed al-Manšūr but was replaced by the latter's appointment of his own son Muḥammad al-Mahdī. Al-Mahdī tried during his reign to tie the 'Abbāsīd Shī'a more closely to the ruling house by denying the imāmate of 'Alī and his offspring and by asserting the sole right of al-'Abbās and his descendants to the Prophet's succession. His son Hārūn al-Rašīd saw no interest in maintaining a Shī'ī following and preferred to identify fully with orthodox Sunnism. The 'Abbāsīd Shī'a disintegrated under his reign. The attempt of his son al-Ma'mūn to recover broad Shī'ī support for a caliphate of the Banū Ḥašim, including 'Alids as well as 'Abbāsīds, by appointing Dja'far al-Šādiq's grandson 'Alī al-Riḍā as his successor, ended in failure. There was stubborn opposition from the 'Abbāsīds and little appreciation among the Shī'a, who were now upholding the sole right of the descendants of the Prophet through his daughter Fāṭima. When 'Alī al-Riḍā died, al-Ma'mūn did not seriously renew his efforts. The 'Abbāsīd caliphate had become virtually Sunnī and the Shī'a strictly 'Alid.

**SHĪ'AR** (A.), a term having various significations. The root *sh-ʿ-r* involves, *inter alia*, the ideas of knowing something; being aware of something; being a poet; being hairy; notifying, making aware of something; marking something; etc.

*Shī'ār* stems from the latter semantic field. It denotes: 1. The rallying signal for war or for a travel expedition, war cry, standard, mark indicating the place of standing (*wuḳūf*) of

soldiers in battle or pilgrims in the Pilgrimage ('Arafa: the idea of "recognising" this mark). The war-cry of the Prophet's Companions was "*Amit, amit! O victorious ones, go forward, go forward!*", thus pre-saging victory (*T'A*, s.v.). The ancient Arabs departed for the Pilgrimage as for war, round their chief and their banner, with each tribe having its own fixed place at 'Arafa and Minā [*q.v.*] around the standard or the decorated tent of the chief. They had their own cry, imitating that of the totem animal or bird of the tribe, and also the distinctive ritual formula of the *talbiya* [*q.v.*], indicating readiness to serve the chief and also uttered before the completion of the separate rites of the Pilgrimage. See on this, T. Fahd, *Le pèlerinage à la Mekke*, in *Le pèlerinage. Etude d'histoire des religions*, i, Paris 1974, 65-94.

2. The idea of a mark is extended to the *budna*, victim intended to be slaughtered in sacrifice (*hady*) at the time of the Pilgrimage (see refs. in Wensinck, *Concordance*, iii, 136, 143), marked by a knife-cut on the two sides of the back (*sinām*). Whence *shī'ār* is synonymous with *idmā'* "to draw blood". *Ush'ūra* can be said of a slain ruler instead of *kuṭila*, and it was said of 'Umar when a man wounded him on the forehead at the time of the throwing of stones at Minā, *ush'ūra amīr al-mu'minīn*; he was murdered on his return from the Pilgrimage. The blood-money for the *muḥār* was 1,000 camels (*T'A*, s.v.).

*Shā'ira*, denoting the *budna*, is extended, in the plural *shā'ir* (Kur'an, II, 158, XXII, 32, 36) to all the rites of the Pilgrimage: standing places, journeyings, runnings, throwing of stones at Minā, sacrifices, the *talbiya*, etc. *Al-Mash'ār al-Harām* (II, 198) is the journey between 'Arafa and Minā and that between al-Šafā and al-Marwa.

3. The places where these rites were performed were also called *maḥā'ir*. A *maḥār* was any place or thing which puts one in the presence or gives a feeling of the sacred or of a divinity: symbols of the divine, such as animals, trees, hills and standing stones. According to H. Lammens, *ish'ār* denoted the place where victims meant for sacrifice were marked; similarly, *manāsik* (Kur'an, II, 128, 200, XXII, 34, 67) originally denoted the places where sacrifices to the gods were offered, places along roads and on the Pilgrimage route, marked by the presence of some source of coolness (water, a tree or a rock), eventually denoting those cult places frequented by the pious (cf. *T'A*, vii, 87). On those places marked out as sacred (*maḥā'ir*, *anṣāb*, *marwāḳif*, *manāsik*, *djamarāt*, *masāḳid*, etc.), see Lammens, *Les sanctuaires préislamites de l'Arabie Occidentale*, in *MUSJ*, xi (1926), 39-169, at 78 ff.; Fahd, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 238 ff.

4. *Shī'ār* also denotes the distinctive clothing, etc., which the *Dhimmīs* [see *DHIMMA*] were required to wear in 'Abbāsīd and later times; see for this, *GHYĀR*.

**Bibliography:** Given in the article. On the *manāsik*, see the refs. in Brockelmann, S III, index, 962. (T. FAHD)

**SHĪ'B DJABALA**, one of the three most famous *ayyām* [*q.v.*], battle-days of the Arabs in pre-Islamic times, the other two being the First Day of al-Kulāb and *Dhū Kār* [*q.v.*]. The *yawm* is variously dated to around A.D. 550 or 570. The two main contestants in this *yawm* were the tribes of Tamīm and 'Āmir, in which 'Āmir emerged victorious over Tamīm.

The chief instigator of the *yawm* was the Tamīmī chief Laḳīṭ b. Zurāra, who wanted to avenge the

death of his brother Ma'bad at the hand of 'Āmir after he had been captured at the *yawm* of Raḥraḥān during the preceding year. Lakīṭ was able to muster against 'Āmir a large tribal host, consisting of almost the whole of Tamīm, Asad, Dhubyān and al-Ribāb. In addition to these tribes that belonged to Muḍar, the large tribal group, Lakīṭ invoked and received the assistance of the Lakhmid king of al-Hīra [q.v.], al-Mundhir b. al-Nu'mān, who sent to him his brother Hassān, and of the Kindī king in Ḥaḍjar (Yamāma), al-Djawn, who sent to him two of his sons, according to one account Mu'āwiya and 'Amr. The confederate tribal host advanced against 'Āmir, 'Abs and other tribal contingents, which had fortified themselves in the ravine or *shī'b* in the mountain called Djabala in Naǧd; hence the name of the *yawm* as Shī'b Djabala. A stratagem, conceived by the 'Absī chief Ḳays b. Zuhayr that sent the ferociously thirsty camels out of the ravine, followed by the infantry, and then the cavalry of 'Āmir and 'Abs, carried the day. Lakīṭ fought heroically but was killed, as was one of the two Kindī chiefs, while the other was captured.

The *yawm* was remarkable for the participation of the prestigious Kinda [q.v.]; the battle is sometimes referred to as Yawm al-Djawnayn after the two Kindī chiefs; and one of them, Mu'āwiya, assigned the banners to the various tribal detachments before the battle was joined. But the *yawm* also contributed to the further decline of Kinda's power among the Northern Arabs and to its ultimate departure to Ḥaḍramawt, whence it had originally emigrated to central and northern Arabia.

Better than Yākūt and Bakrī on the topography of Shī'b Djabala is the Saudi traveller M. b. Bulayhid al Naǧdī, in *Saḥīḥ al-akhbār*, 1972, iii, 216. The best discussion of Yawm Shī'b Djabala remains the one by G. Olinder, who analysed the sources and the various accounts in *Al al-Gaun of the family of Ākil Al-Murār*, in *MO* xxv (1931), 208-29.

(IRFAN SHAHĪD)

**SHIBĀM**, the name of three fortified places, whose first mentions go back to Antiquity, and of a mountain, all in Southwest Arabia. They have been distinguished, from the times of Hamdānī and Yākūt onwards, by suffixing the name of a neighbouring settlement or the local region.

1. **Shibām Ḥaḍramawt**, in lower Ḥaḍramawt, in the wādī of the same name, famed for its lofty houses in sun-dried brick, warranting its designation as a UNESCO site of world significance.

In South Arabian inscriptions, it appears as *S<sup>2</sup>bm* from the end of the 3rd century A.D. and in the 4th century, the time of the conquest of Ḥaḍramawt by Ḥimyar. Islamic Shibām was known above all as a centre for the Ibādīyya [q.v.] after their defeats in the 120s/740s, and for three centuries it seems to have been part of an Ibādī principality. According to Hamdānī, the western part of the region belonged to Kinda; it was an important town at this time, with 30 mosques (*Ṣifa*, 86). Its history then merges into that of the dynasties of western Yemen (Ṣulayhids, Ayyūbids, Rasūlids, etc.), until a local power of Ḥaḍramawt established its authority in the 9th/15th century, that of the Kathīrīd sultan 'Alī b. 'Umar, consolidated by his great-grandson Abū Ṭuwayrīk Badr (d. 977/1570). After him, Ḥaḍramawt became again fragmented, but the main Kathīrīd line persisted till the end of the 18th century, until another Kathīrīd came from Indo-

nesia and divided power there with the Yafī'īs. Then the whole area passed to the Ḳa'ātīs in 1858 until their removal in 1967.

Shibām is a fortress town, with walls and towers which made it impregnable. The houses rise to eight storeys, utilising the cramped defensive site, a height unusual in Ḥaḍramawt. Water is gained by a sophisticated system for storing up rainwater and by wells. Shibām has enjoyed a prosperity not easily explicable by the modest agricultural resources of the surrounding territory, but stemming from commercial revenues drawn by its people, situated as it has been on the caravan route from the ports of al-Shīhr and al-Mukallā towards the direction of Ṣan'ā'. Before the decline of caravan traffic in the 1930s, each month the town received 400 to 1,000 camels. There were also, until after the Second World War, important remittances from male members of the population who had emigrated to India, Singapore and Indonesia. The village of al-Saḥīl has grown up *extra muros*, and today, with 15,000 inhabitants, is more populous than Shibām itself with 8,000.

(A. ROUAUD and CH. ROBIN)

2. **Shibām Kawkabān** (also Sh. Akyān or Sh. Ḥimyar in ms. sources), a large settlement, with 2,000 inhabitants at the time of the 1975 census, 37 km/20 miles to the northwest of Ṣan'ā' and on the plain of Ṣan'ā', dominated by the vertical wall of the Djabal al-Ḍulā' (3,140 m/10,300 feet).

It is mentioned in inscriptions from the 3rd century A.D. onwards (*S<sup>2</sup>bm* or *S<sup>2</sup>bm'*) as centre of the Dhū Hagarān Shibām tribe. The name Sh. Akyān preserves the name of the *ḳays* or lords of the local principality, the Banū Dhū Kabīr Akyān. In early Islamic times, Sh. Kawkabān was the birthplace of the local Yu'firid dynasty (232-387/847-998), founded in High Yemen, and contributing to the disappearance of 'Abbāsīd caliphal authority in Yemen. The Great Mosque of the town may date from the Yu'firids or earlier. At this time, according to al-Hamdānī, the local population were still considered "Ḥimyarite", including in language; this presumably implied a claim to continuity with the old South Arabian culture and a local language close to Arabic but with some unusual features. From the 10th/16th century, Sh. Kawkabān was a bastion of the 'Alid Sharaf al-Dīn family, who provided two Zaydī Imāms of Yemen; today, it comes within the area of the tribe of Hamdān. At all times it has played a notable role in Yemeni affairs, as frequent references in the chronicles attest, arising from the agricultural richness of the region around it, the strength of the fortress of Kawkabān and its proximity to Ṣan'ā'.

3. **Shibām al-Ghirās** (also Sh. Sukhaym in ms. sources), a small village and archaeological site 24 km/15 miles northeast of Ṣan'ā', and near the western slope of the Djabal Dhū Marmar. In old inscriptions, it appears as *S<sup>2</sup>bm'* (1st-2nd century A.D.), and was the chief centre of the tribe of Yursam (*Yrs'm*). The name of the village of Ghirās (population 500 in 1975) serves to distinguish it from the other Shibāms. Its main claim to fame is its vast mosque containing the tomb of the Imām al-Mahdī Aḥmad b. al-Ḥusayn (d. 1092/1681), whose reign was marked by the expulsion of the Jews of Ṣan'ā' and their exile to the region of al-Mawzā' in 1090/1679 in the aftermath of the messianic movement of Shabbatay Ṣwī [q.v.]. At present, there are alabaster quarries in the neighbourhood of the village.

4. **Shibām Harāz**, a peak of 2,940m/9,643 feet in the Harāz massif west-south-west of Ṣan'ā', with a

fort on its summit of the same name. In 429/1037-8, according to the Sunnī sources, the founder of the Sulayhids [q.v.] ‘Alī b. Muḥammad, raised his standard near here and launched the Fātimid *da‘wa* in Yemen. The fort and the nearby town of Manākhā formed one of the main strong points of the Ottoman occupation of Yemen 1871-1918.

Other minor Shibāms exist in Yemen. Hence toponyms of this root, unknown elsewhere in the Arab world, have been especially popular here. The root itself seems to have two main semantic spheres: “band, gag” and “coldness”, neither explaining these place-names. However, Landberg, *Glossaire d’arabes*, s.v., gives the meanings for *shabama* “to be high”, *shibām* “height”, which fits better; the toponyms in question are all at the foot of slopes and cliffs or refer to a peak.

(CH. ROBIN and A. ROUAUD)

**SHĪBĀNĪ KHĀN** (also known as Shāhī Beg, Shāh Bakht, and Shībak/Shībak) Muḥammad b. Shāh Budāk (gh) b. Abi ‘l-Khayr, conqueror of most of western Central Asia between 1500 and 1509 and reviver of the Činggisid khānate. His genealogical claim to the Činggisid legacy rested on his lineal descent from Shībān, the fifth son of Djoči b. Činggis Khān. His royal clan is therefore called the Shībānid one, although it should more properly be known as the Abu ‘l-Khayrid/Shībānid one (to distinguish it from, among others, the Yādgārid or ‘Arabshāhid Shībānid clan who gained control of Kh‘ārazm at about the time of his death.)

Muḥammad Shībānī was born in 855/1451 and died at the age of 61 (lunar years) at the end of Sha‘bān 916/late November or early December 1510. After the death of his father (Shādī/S.K. Ibragimov, 50, gives the obituary date 864/1459-60), his grandfather, Abu ‘l-Khayr [q.v.] took custody of the two sons, placing him and his brother, lifelong companion and fellow adventurer, Mahmūd (858-907/1454-1501), first in the care of a “Uyghūr Bāy Shaykh” and then in the hands of an *amīr*, Karāčīn Beg. The former was probably responsible for Shībānī’s early

book learning and the latter for his hunting and military skills. Shībānī’s childhood and adolescence were spent in and around Sighnāk [q.v.] on the lower Syr Darya (Jaxartes), his grandfather’s headquarters.

Muḥammad Shībānī’s career did not start very promisingly. When he was in his late teens his grandfather died (872/1468) and the confederation which he had created along the Syr Darya, already in the process of disintegration, collapsed. Karāčīn Beg, who still exercised some control over the two teenagers, took them to Astrakhān, presumably seeking the protection and patronage of the Djočid khāns there. But problems in Astrakhān soon forced the three to leave.

The chronology of the period before 905/1500 is uncertain. The information on Shībānī Khān’s career comes from the pens of men writing after he had established himself in Samarkand in 1500 who view the preceding period as prelude (Kamāl al-Dīn Bannā’i, the anonymous author of *Tawārīkh-i guzīda—Nusrat-nāma*, Mullā Shādī, Muḥammad Sālīh, Bābur and Kh‘ādamīr.) His fluctuating fortunes during the quarter-century or so after his grandfather’s death may be inferred from what is known of his peregrinations during this time.

After leaving Astrakhān, he and his brother returned to Sighnāk and the Syr Darya plain. His apparently unsuccessful attempt to establish himself in the region prompted his taking refuge at Bukhārā far to the south of his homeland. There the Arghūn *amīr*, ‘Abd al-‘Alī Tarkhan (d. ca. 1494), hired him, presumably as a mercenary, and there he stayed for two years. He eventually gravitated back to the middle Syr Darya, where the commander of the fortress of Arkūk offered his allegiance. (The commercial importance of Arkūk at this time is evident from Khundjī, 85, who calls it “an entrepôt (*bandargāh*) for merchants coming from Samarkand and Bukhārā.”) Shībānī then continued down-river and seems to have taken or been given Sighnāk, his grandfather’s old capital. But the entire Syr Darya watershed remained an object of contest between the “Kāzāk” Djočids who had split with Abu ‘l-Khayr in the mid-1460s, the Mirānshāhī Timūrids who held Samarkand and Bukhārā and whose *amīrs* (like Muḥammad Mazīd Tarkhān) were active in the middle and upper Syr Darya basin, and the Čaghatāy Činggisids (Yūnus Khān, d. 892/1487) and his sons, Sultān Mahmūd, d. 914/1509, and Sultān Ahmad d. 909/1504) whose centre was Tashkent. In this fluid situation, Shībānī seems to have enjoyed only occasional military success, usually in service to others.

Muḥammad Shībānī does not seem to have come into his own as a significant force until the early 890s/mid-1480s when he carried out successful raids in Kh‘ārazm (then subject to the ‘Umar-Shaykhī Timūrids of Harāt). In the course of these forays, he briefly captured Adāk (or Awāk) and Tīrsāk (Dīrsak), important fortresses on the main north-south route east of the Caspian (see V.V. Bartol’d, *K istorii orosheniya Turkestana*, St. Petersburg 1914, repr. in *Sochineniya*, iii, 95-233, Moscow 1965, 68-9, who dates this episode to 891/1486). The booty taken in these raids was considered noteworthy by at least one source. (*Tawārīkh-i guzīda—Nusrat-nāma*, fols. 122b-123a). Another story (Kh‘ādamīr, *Habīb*, 274) indicating his growing influence has to do with his participation in the 893/1488 campaign of the Mirānshāhī Timūrid ruler of Samarkand, Sultān Ahmad Mīrzā (r. in Samarkand 873-99/1469-94) to take Tashkent from the Čaghatāy Činggisids. At Tashkent, Kh‘ādamīr reports his defection to the Čaghatāy side, the consequent defeat of the Samarkand expeditionary force and his being re-

warded by Sultān Maḥmūd Khān of Tashkent with the town of Arkūk. Bābur in discussing the battle (17, 25) makes no mention of Shībānī Khān's role in the defeat of Sultān Aḥmad.

The next decade or so is a particularly obscure one and Muḥammad Shībānī and his family do not clearly re-appear in the narratives until his spring 905/1500 campaign to take Samarkand, ostensibly on behalf of Sultān Maḥmūd Khān who had already tried unsuccessfully to capture the city after the death of Sultān Aḥmad Mīrzā in 899/1494.

From this point onwards, his career is easier to follow. In 905-6/1500 he captured Samarkand, symbolic site of Tīmūrid authority. Although the Mīrānshāhid Zāhir al-Dīn Bābur took it and held it over the winter of 1500-1, Muḥammad Shībānī re-captured it after a long siege the next spring. The second taking of Samarkand began a busy period of territorial conquest for the fifty-one year old warrior. His success there prompted increasing defections to his side of the Turko-Mongol tribes supporting the Tīmūrids and the Čaghatay Činggisids and gave him the means now to conduct campaigns of conquest and expansion.

Shībānī Khān was a relentless campaigner, rarely spending more than a month or two (usually during the winter) in any one place. In addition, he could rely on his brother's son 'Ubayd Allāh and his own son Muḥammad Tīmūr to conduct independent campaigns in his name. Between 906/1501 and the end of 912/spring 1507, he added most of the region of Transoxania, Kh'arazm and Balkh to his domains. In mid-Muḥarram 913/late June 1507 he took the capital of Khurāsān, Harāt, and followed that with an attempt the same year on Kandahār. The campaign season of 914/1508 was mainly spent in the west taking brief control as far west as Astarābād and south to Bisṭām. After spending the summer near Bisṭām, the Khān returned to Bukhārā where he spent the winter, celebrating the 'Id al-fitr (23 January 1509) in the city. Shībānī Khān then led a lightning campaign (detailed by Khūndjī Isfahānī, 199-263) against the Kāzāks in the Dasht-i Kīpčāk. His itinerary in these last two years of his life indicate a frenetic pace of travel and fighting which took him across the Kizil Kum desert to Sīghnāk, then north deep into the Dasht-i Kīpčāk, back along the Syr Darya to Sawrān, Yaśī and Arkūk and thence to Samarkand. From there he went briefly to Bukhārā, returned to Samarkand, rode south to Karshī, then headed west for Marw and Mashhad, where he performed *ziyarat* at the shrine of the Imām Ridā. From there he rode directly to Harāt, reportedly led a long raid to Kirmān, returned to Harāt and led a punitive expedition against the Hazāras and Nīkūdārīs of the Hazāradjāt. He was still in Harāt in October 1510 when news of Shāh Ismā'īl Šafāwī's march on Khurāsān reached him. He moved immediately to Marw, and near Marw in a battle with the Šafavid Kizilbāsh army he was killed, on or about 27 Sha'bān 916/29 November 1510 (see Bartol'd, *Otčet o komandirovke v Turkestan*, in *ZVOIRAO*, v [St. Petersburg 1904], 15, [repr. in *Sočineniya*, viii, Moscow 1973, [119-210], at 144). In all, Muḥammad Shībānī may have travelled as many as 4,000 miles in the last two years of his life in an attempt to hold together the territories he had succeeded in conquering.

Muḥammad Shībānī's main political achievements were the elimination of Tīmūrid authority in Transoxania and Khurāsān; expulsion of the Čaghatay Činggisid line from Tashkent and the Farghāna Valley, and forging a confederation of Turko-Mongol tribal groups (Djalāyir, Dürmān, Kunghrat, Manghit, etc.) under

the acknowledged khānate of the Abu 'l-Khayrid/Shībānīd clan, thus laying the foundation for the political structure that would govern the oases of Transoxania and Balkh for most of the 16th century.

Like his Tīmūrid predecessors, Muḥammad Shībānī was a patron of scholarship and the arts. Khūndjī and the anonymous author of *Tawārīkh-i guzida-Nusrat-nāma* detail the discussions of social and religious issues over which he presided and the scholars who attended his convocations. His patronage and his own production of literature in Persian and Turkish have been studied (Hofman, 226-8).

Among his architectural projects was the Madrasayī Khāniyya in Samarkand, a bridge over the Zarafshān, a pleasure palace at Kān-i Gil (*čāhār bāgh* with *imarat* and *iwān*) and another at Karshī (on these latter two, see Khūndjī, 291, 318-19).

**Bibliography:** 1. Sources. The major sources for Muḥammad Shībānī's life are: (1) Kamāl al-Dīn Bannā'ī (or Binā'ī), *Shaybānī-nāma* (for bibliographic information, see Bregel-Storey, ii, 1117-18; listing of chapter headings and partial text—fols. 34b-38b of 42 fols. Leningrad ms., in A. Samoilovich, *Shaybani-name, Persidskii unicum biblioteki Khvinskago khana*, in *ZVOIRAO*, xix [1909], 0164-0176; selected translations of fols. 1b-36b in S.K. Ibragimov et al., *Materiali po istorii Kazakhskikh khanstve XV-XVIII vekov*, Alma-Ata 1969, 96-127) (Binā'ī was in Shībānī Khān's entourage 907-13/1501-7); (2) Mullā Shādī, *Fath-nāma* (composed ca. 1501-2; Bregel-Storey, 1120-1, a partial tr. in Ibragimov et al., 53-90 (fols. 56a-77b, 111b-122b of Leningrad University ms. no. 962) (on Shādī, see Ibragimov, 44-8); (3) Muḥammad Šālih, *Shaybānī-nāma* (Čaghatay text), ed. P.M. Melioransky and A.N. Samoilovich, St. Petersburg 1908, German tr. A. Vámbéry, *Die Scheibaniade*, Stuttgart 1872 (Muḥammad Šālih joined Shībānī Khān's entourage in 1500 at Samarkand, see Ibragimov, 11); (4) anon., *Tawārīkh-i guzida-Nusrat-nāma*, ed. A.M. Akramov, Tashkent 1967 (Akramov proposed (14) that the author was the above Muḥammad Šālih, but see Ibragimov et al., 10-11; excerpts tr. in *ibid.*, 16-43); (5) Faḍl Allāh b. Rūzbihān-i Khūndjī, *Muḥmān-nāma-yi Bukhārā*, ed. M. Sutūda, Tehran 1341/1963 (Khūndjī fled from the Imāmī Kizilbāsh régime of Shāh Ismā'īl Šafāwī and in 910/1504 was granted asylum by Shībānī Khān. His work was finished in September 1509); (6) 'Abd Allāh b. Muḥammad b. 'Alī Naṣrallāhī Balkhī, *Zubdat al-āthār* (see D. Deweese, *A note on manuscripts of the Zubdat al-āthār, a Chaghatay Turkic history from sixteenth-century Mawarannahr*, in *MME*, vi [1992], 96-100; Ibragimov, 128-34) (Balkhī, an employee of the Tīmūrids, joined Shībānī Khān after the conquest of Harāt in 913/1507).

The preceding authors were all very favourably disposed towards Shībānī Khān. Contemporary authors hostile to him include Kh'āndamīr, *Ḥabīb al-siyar*, Tehran, Ābān 1333/1954, iv, and Zāhir al-Dīn Bābur, *The Bābur-nāma in English (Memoirs of Babur)* tr. A.S. Beveridge, London 1922, repr. Delhi 1979, and *Baburnama*, 3 vols. Turkish transcription, Persian ed. and English tr. W.M. Thackston, Cambridge, Mass. 1994. A mid-16th-century Central Asian work very hostile to Shībānī Khān is Mīrzā Muḥammad Haydar Dughlāt, *A history of the Moghuls of Central Asia, being the Tarikh-i Rashidi of Mirza Muhammad Haidar, Dughlāt*, ed. N. Elias and tr. E. Denison Ross, London 1895.

For information on Shībānī Khān's connections with literary figures of his time see, besides Khūndjī,

Zayn al-Dīn Wāsiṭī, *Badā'ī' al-waḳā'ī'*, ed. A.N. Boldīrev, 2 vols., Moscow 1961, and Khwādja Bahā' al-Dīn Ḥasan Nīḥārī, *Mudhakkir al-aḥbāb*, ed. Syed Muhammad Fazlullah, New Delhi 1969, esp. 13-16 of introd., 15-22 of text. This latter work emphasises, perhaps apocryphally, Shībānī Khān's close ties with the Nakshbandīs of Bukhārā.

Other useful, though retrospective, sources are: (late 16th century) Ḥāfiẓ-i Tanīsh, *Sharaf-nāma-yi shāhī* (*Abd Allāh-nāma*), facs. ed. of St. Petersburg (Leningrad) IVAN ms. no. D88, ed. and tr. M.A. Salakhmetdinova, Moscow 1983 (vol. i of four projected vols.) and (mid-17th century) Maḥmūd b. Amīr Walī, *Bahr al-asrār fi manāḳib al-akhyār*, vi/3, Tashkent IVAN, inv. no. 1375. Safawid sources (e.g. Ḥasan-i Rūmlū, *Aḥsan al-tawārīkh*, ed. C.N. Seldon, Baroda 1931, *passim* to p. 123) should also be consulted for Shībānī Khān's Khurāsān campaigns.

(R.D. McCHESNEY)

**SHĪBĀNIDS**, a Turco-Mongol dynasty of Central Asia, the agnatic descendants of Shībān, the fifth son of Djoči son of Činggis Khān, more especially two distinct branches of those descendants, the Abu 'l-Khayrīds and the 'Arabshāhids-Yādgārīds who, in the early 10th/16th century, seized control of the urban oases of Transoxania or Mā warā' al-nahr and Khwārazm [q.v.] from the Tīmūrīds [q.v.].

#### I. History and politics

For nearly the entire 10th/16th century the Abu 'l-Khayrīds ruled most of what is now southern Kazakhstan, eastern and southern Uzbekistan, Tajikistan, Kyrgyzstan and northern Afghanistan. The 'Arabshāhid-Yādgārīd branch held what is now Turkmenistan and western Uzbekistan, i.e. the lands of the lower Amū Daryā and its extensive delta and the oases along the northern slopes of the Kopet Dagh for much of the 10th/16th and 11th/17th centuries. During the 10th/16th century, the Shībānīds of Khwārazm were dominated by the Shībānīds of Transoxania, whose centres were Bukhārā, Samarkand, Tashkent and Balkh.

The proximate origin of Shībānīd sovereignty in

Transoxania and Khwārazm was the khānate of Abu 'l-Khayr Khān [q.v.] in the Kīpčak Steppe (the prairie north and east of the Aral Sea) the traditional homeland (*yūrtgāh*) of the house of Shībān b. Djoči. The Turkish and Mongol groups (Kerait, Djalayir, Kunghrat, Durman, Onggut, Manghit, Saray, Nayman, etc.) which provided the military manpower for these Shībānīds came to be generically known, for reasons no longer clear, as Özbegs [q.v.], a term eventually adopted by outsiders to signify the entire political organization including both the non-Činggisids, the Özbegs proper, and the Činggisid royal clan.

In a political environment which gave precedence to descendants of Činggis Khān, the Abu 'l-Khayrīd/Shībānīd clan under a skilled tactician, Muhammad Shībānī [q.v.] (grandson of Abu 'l-Khayr) emerged as the sovereign clan, when it ousted the then-dominant sovereign family, the Tīmūrīds [q.v.], from Transoxania at the beginning of the 10th/16th century. By 913/1507, eastern Khurāsān (including Harāt, Marw and Mashhad), Transoxania (Bukhārā, Samarkand, Kash, Karshi, Tashkent), Khwārazm (Khitwa, Urgandj and Wazir), Turkistān, and the Farghāna Valley had been conquered and claimed by Muhammad Shībānī, and many of the military supporters of the Tīmūrīds had joined forces with the Shībānīds. But in 916/1510, when Muhammad Shībānī was killed at Marw in battle with the newly-emergent Safawid state of Persia, his cousins and their Özbeg backers temporarily lost those urban centres. Two years later, however, led by 'Ubayd Allāh b. Maḥmūd [q.v.], a nephew of Muhammad Shībānī; Djānī Beg b. Khwādja Muhammad, a cousin and Suyūndj Muhammad b. Abi 'l-Khayr, an uncle, the Abu 'l-Khayrīds regained control of Bukhārā, Samarkand and Tashkent. They and their descendants held those regions until 1006/1598, adding Balkh and the land between the Hindū Kush and the Amū Daryā in 1526. The Murghāb basin generally proved to be the westward limit of Abu 'l-Khayrīd authority, although the Shībānīd clan contested with the Safawids for Harāt [q.v.] and eastern Khurāsān throughout the century; Harāt was captured briefly in the 1530s and then taken and held for a decade at the end of the century (1588-98). To the east and south, the T'ien-shan, Pamir and Hindū Kush ranges and the polities which lay beyond them, the remnants of the Čaghatay [q.v.] khānate in Eastern Turkistan and the Mughal state in India created by the Tīmūrīds expelled from Transoxania, contained Shībānīd expansion. To the north, the Syr Darya basin tended to mark the northern limits of the clan's jurisdiction.

Both neo-Shībānīd states preserved a tradition of corporate or clan rule. According to this tradition, described by Faḍl Allāh b. Rūzbihān Khundjī, the eldest member of the royal clan held the nominally supreme, but largely ceremonial, position of *khān* (see *Table*). At an assembly (*kuriltay*, *kangesh*) of the eligible clan members, the *khān* presided over the distribution (*taksim*) of territory in the form of appanages. Each family (or cousin clan, see Dickson) within the royal clan received a territory or territories as an appanage over which it exercised independent authority. As generations matured and increasing numbers of princes (*sultāns*) demanded a share of the corporate legacy, appanages had to expand either by annexing non-Shībānīd territory or through the elimination or subordination of cousin-clans.

The four major sub-clans in the Abu 'l-Khayrīd khānate (and their appanage holdings after the restoration in 918/1512) were the Suyūndjukids (Tashkent

Table. The Abu 'l-Khayrid or Shġibānid Khāns

Khān	Regnal dates	Clan	Relation to predecessor
Muḥammad Shġibānī b. Shāh Budak	907-16/1501-10	Shāh Budakid	Grandson (of Abu 'l-Khayr)
Kūčkūndjī Muḥammad b. Abi 'l-Khayr	918-37/1512-30	Kūčkūndjid	Uncle
Abū Sa'īd b. Kūčkūndjī	937-40/1530-3	Kūčkūndjid	Son
'Ubayd Allāh b. Maḥmūd	940-6/1533-40	Shāh Budakid	First cousin once-removed
'Abd Allāh b. Kūčkūndjī	946-7/1540	Kūčkūndjid	First cousin once-removed
'Abd al-Laṭīf b. Kūčkūndjī	947-59/1540-52	Kūčkūndjid	Brother
Nawrūz Ahmad (Barak) b. Suyūndjuk	959-63/1552-6	Suyūndjukid	First cousin
Pīr Muḥammad b. Dġānī Begī	963-8/1556-61	Dġānī-Begid	First cousin once-removed
Iskandar b. Dġānī Beg	968-91/1561-83	Dġānī-Begid	Brother
'Abd Allāh b. Iskandar	991-1006/1583-98	Dġānī-Begid	Son
'Abd al-Mu'mīn b. 'Abd Allāh	1006/1598	Dġānī-Begid	Son
Pīr Muḥammad b. Sulaymān	1006-7/1598-9	Dġānī-Begid	First cousin once-removed

and the Farghana Valley), the Kūčkūndjids (Samar-kand), the Shāh Budakids (Bukhārā) and the Dġānī Begids (Karmīna, Mīyānkāl and, after 1526, Balkh). From approximately 1512 to 1550, these four Abu 'l-Khayrid sub-clans consolidated their holdings, carried out campaigns of expansion in Khurāsān and Kh'ārazm and also occasionally collided with each other's territorial ambitions. But, generally speaking, until the middle of the century, succession of the eldest Abu 'l-Khayrid was preserved and the integrity of cousin clan appanage rights respected.

The third quarter of the century was a period of inter- and intra-clan struggle. Individual clans sought to expand at each other's expense and succession within appanages also became subject to contest. The first cousin clan to disappear was the Shāh Budakid, Muḥammad Shġibānī's own clan and holder of the Bukhāran appanage. Disagreement among Shāh Budakids over succession to the Bukhāran appanage led to intervention by the Dġānī-Begid clan and its eventual capture of the Bukhāran oasis in 964/1557. The Kūčkūndjid sub-clan at Samarkand, whose head was recognised, on the basis of seniority, as reigning Abu 'l-Khayrid-Shġibānid khān from 1512-52 (except for the years 1533-40) was the next to be ousted from its appanage. Long-standing internal tensions invited the interference of the Suyūndjukids in Tāshkent and the Dġānī-Begids of Bukhārā. In 986/1578, the Kūčkūndjids finally lost their home appanage of Samarkand. Over the next four years, continual contests between the Suyūndjukids and the Dġānī-Begids resulted in the ascension of the latter as the dominant cousin-clan.

The Dġānī-Begids themselves endured intra-clan struggles, particularly between the Balkh and Bukhāran branches. The single-minded efforts of one of the Dġānī-Begid *sultāns*, 'Abd Allāh b. Iskandar [q.v.] first to unify the Dġānī-Begid appanage under his father and then to expand Dġānī-Begid control at the expense of the Kūčkūndjids and then the Suyūndjukids, temporarily at least transformed the Abu 'l-Khayrid state from one of more or less equally powerful appanages centred on Bukhārā, Samarkand, Tāshkent and Balkh to one more closely resembling an imperial entity with a single powerful dynastic family (the Dġānī-Begid) intent on limiting succession to the khānate to its own lineage. Although 'Abd Allāh enjoyed some success in the short term, especially because he was able to create a military force able to make major advances against the Ṣafawids in the west, the Mughals in Badakhshān, and the Shġibānids of Kh'ārazm, his struggle to create an imperium eventually ran counter to the interests of the non-Činggisids, the Ōzbegs *amīrs*, whose interest lay in preserving Činggisid traditions, especially the system of appanages with their

amirid sub-infeudations which gave the *amīrs* the resources needed to maintain their tribal identities.

After eliminating the Kūčkūndjid and Suyūndjukid clans, 'Abd Allāh embarked on a series of external campaigns which covered the period 992-1004/1584-96. In 992/1584, Badakhshān fell to the Dġānī-Begid. Three years later he turned his attention to Khurāsān. Harāt surrendered in 996/1588, Mashhad in the following year and Sabzawār and Nīshāpūr soon thereafter. Sīstān, too, was eventually conquered, and even the Ṣafawids in Kandahār acknowledged Bukhāran hegemony. Two campaigns against Kh'ārazm in 1002/1593 and 1004/1595-6 put that region firmly if briefly under the control of Bukhārā. He also led a campaign force as far as Kāshghar in 1003/1594-5. But establishing Bukhāran control here proved impossible.

But any dynastic ambitions 'Abd Allāh Khān may have had perished with him in 1006/1598. His son, 'Abd al-Mu'mīn, antagonised important Ōzbeg *amīrs* and was assassinated six months after his father's death. Another Dġānī-Begid, Pīr Muḥammad b. Sulaymān, was recognised very briefly by the *amīrs* at Bukhārā. But by the spring of 1007/1599, a new Činggisid line, descendants of the thirteenth son of Dġochi, Tokā (Tughā) Tīmūr (and known as Ashṭar-khānids or Dġānids [q.v.]), was installed in Samarkand and Bukhārā with the backing of most of the Ōzbegs *amīrs*.

In Kh'ārazm, the 'Arabshāhid/Yādgārid Shġibānid clan underwent a similar process of succession, clan contests and eliminations in the name of the Činggisid tradition.

## II. Society, economy, culture

Most of Shġibānid society was engaged in agrarian pursuits typical of an early modern pre-industrial society. The written record identifies three elite groups, understood as having distinctive characteristics: the royals (those of Činggisid descent), the *amīrs* (ranking members of Ōzbeg tribes), and the intellectuals—the religious scholars, heads of saintly orders, administrators of shrines, poets, artists and a range of others acknowledged by society as distinctive and worthy because of some innately spiritual or intellectual capacity. The (male) royals were distinguished by the titles *khān* (the sovereign) and *sultān* (an individual eligible to succeed to the khānate). A range of military and administrative offices was reserved for *amīrs* (*atalīk*, *divānbeġi*, *hākīm*, *parwānadjī*, etc.). Similarly, specific administrative offices, and at least one military office were reserved for the intellectuals (*shaykh al-islām*, *kādī*, *muftī*, *mudarris* and *naķib* [q.v.]). Court protocol, including the seating arrangements and thus hierarchy of office, was ascribed to the *yasa* of Činggis Khān. The evolution of offices and office-holding from Tīmūrid times has yet to be studied.

Intellectual families such as the *Djūybārīs* of Bukhārā, the *Ahrārīs* of Samarkand and the *Pārsā'īs* [q.v.] of Balkh enjoyed great local authority under the Shībānids. They were the hereditary recipients of the local offices of *shaykh al-islām* and *kāfī al-kudāt*, and as administrators (*mutawallīs*) of shrines, they disposed of great wealth in endowments. The rise of these great shrine families is a significant feature of Shībānid history. Based on surviving records, after the middle of the 10th/16th century, at the latest, the wealth of these families seems to have surpassed that of any of the royals or *amīrs* from their own regions. These families played a leading role as patrons of art and architecture.

Judging by the recorded activities of the rich, wealth was produced first by land and only secondarily by import-export exchange. Land under private ownership (*milk*) prevailed through the Shībānid era. State land (*mamlaka*) seems to have been generally of minor importance, while endowment (*wakf*) land seems to have steadily increased in importance under the Shībānids.

Historically, the Shībānid territory produced and exported fresh and dried fruits, fibres, some precious metals and livestock, notably horses. Although there are no meaningful trade figures for the Shībānid period, the main trading partner appears to have been Mughal India. Certainly, the establishment of a Central Asian dynasty (the *Timūrids* of India) in northern India early in the 10th/16th century encouraged the expansion of all contacts between the two regions including economic ones. *Bābur* records many of the Central Asian products and goods desired in northern India and describes the large trade in horses through Kābul. An apparent boom in commercial construction in Bukhārā in the late 10th/16th century suggests generally flourishing if not expanding inter-regional trade under the Shībānids.

With the emergence of the *Ṣafawid* state as the Shībānids' main political rival, Shībānid patronage of sectarian activities concentrated on sponsorship of *Ḥanafī* *Sunnī* scholarship. *Khundjī's* *Mihmān-nāma-yi Bukhārā* reflects the early convergence of Shībānid political interests and sponsorship of *Ḥanafī* *Sunnī* scholarship in the detailed record of debates (*mabāhiṭh*) on theological issues conducted under the aegis of *Muhammad Shībānī Khān*. The sectarian ambiguity manifested by the late *Timūrid* political authorities, at a time when their rivals did not use a distinctive theology for self-definition, was superseded by a careful clarification of the *Ḥanafī* *Sunnī* foundations of the new state, clearly meant to contrast with the *Imāmī Shī'ī* symbols displayed by the *Ṣafawids*. Bukhārā and Samarkand became refuges for prominent *Ḥanafī* scholars and the building and endowment of *madrasas*, a favoured use of any capital accumulated by the Shībānid and *Özbek* leaders.

**Bibliography:** I. History and politics. The major contemporary indigenous sources for Shībānid political history (in approximate order of composition): *Faql Allāh b. Rūzbihān-i Khundjī, Mihmān-nāma-i Bukhārā*, ed. M. Sūtūda, Tehran 1341/1963 and ed. and partly tr. A.K. **SHĪBARGHĀN**, a town situated in Džūzdžān [q.v.] province of northern Afghānistān, in lat. 36° 35' N. and long. 65° 45' E. Arab geographers referred to it as *Shaburkān* or *Sabūrkan*. Excavations of graves at Tila Tepe, in 1978, 5 km/3 miles north of the town, have revealed the area was an important trade and cultural centre from as early as the Iron Age. Kushan-Sāsānid ceramics dating from 1st to 7th century A.D. have also been found in the area (V. Sarianidi, *Raskopki Tillya-Tepe v severnom Afganistane*, Moscow 1972; W. Ball, *Archaeological gazetteer of Afghanistan*, Paris 1982, i, 1079, 1192).

In the 4th/10th century Ibn Hawkal states that *Shibarghān*, along with *Yahūdiyya* or *Yahūdihān* (now *Maymana* [q.v.]), *Andkhūy* (now *Andkhuy* [q.v.]) and *Anbār* (now *Sar-i Pul* [q.v.]) and other places was located in the district of *Džūzdžān*. In the early Islamic era, the main trade route between *Harāt* and *Balkh* [q.v.] appears to have passed through *Shibarghān*. The anonymous author of the *Hudūd al-'ālam*, a native of the area, remarks that "*Ushbūrkan*" was "situated on a steppe (*sahra*) on the high road. It abounds in amenities and has running waters" (tr. Minorsky, 107, comm. 335). *Mustawfi* states that the town's climate was temperate and grain was cheap (*Nuzha*, ed. Le Strange, 155, tr. 153). Indeed, throughout history, *Shibarghān* has had a reputation for the fertility of its loess dunes (*zūl*) and soil which produces an abundance of fruit (grapes and melons in particular) and wheat.

*Shibarghān* seems to have experienced an economic and political decline following the demise of the *Ghaznawids* [q.v.] in the mid-6th/12th century. This was probably due to the rise of *Ghūrid* empire to the south and the increasing importance of the easier, *Maymana-Andkhūy* road for caravan trade. By the time of the Mongol conquest of the region (619/1221-2), the fortress towns of *Fāryāb* [q.v.] (near modern *Dawlatābād*), *Tālākān* and *Yahūdiyya*, had eclipsed

the settlements which lay further east. *Shibarghān*, however, appears to have been spared by the Mongols and doubtless profited by the almost total destruction of its economic rivals, *Fāryāb* and *Tālākān*. Some fifty years after the Mongol invasion (1275), *Marco Polo* records that *Shibarghān* was a thriving market town and an important staging post on the caravan route. The famous melons of the town were dried and exported to India and China, where the fruit was considered a delicacy. It was also renowned for its wild fowl and game.

Under the *Tukāy-Timūrid* ruler of *Balkh*, *Nāḏir Muḥammad Khān* (1000-60/1591-1650 [q.v.]), *Shibarghān* and *Andkhūy* were regarded as a single *iktā'* and its revenue assigned to his sixth son, 'Abd al-Rahmān. Following the *Moghul* occupation of *Balkh* (1056-7/1646-7), *Nāḏir Muḥammad* withdrew to *Shibarghān* before fleeing to Persia. The latter half of the 11th/17th century saw the decline of the appanage system and the rise of *amīrid* power. The *Ming amīrs* of *Shibarghān* and *Maymana* engaged in a long and bitter struggle with the eastern *amīrs* of *Kataghān* for control of *Balkh*. In 1164/1751, following the evacuation of *Balkh* by *Nāḏir Shāh Afshār*'s [q.v.] garrisons, *Hādījī Bī Mīng*, *hākīm* of *Maymana*, enlisted the support of *Aḥmad Shāh Durrānī* [q.v.] and thus subjugated his *Kataghānid* rivals. *Hādījī Bī*'s unpopular alliance with the *Afghāns* and his despotic rule, however, led *Izbāsir*, *hākīm* of *Shibarghān*, to rebel. Though this uprising was suppressed, the dynasty *Izbāsir* founded (?) survived until the third quarter of the 19th century. During this era, the *hākims* of *Shibarghān* played an important part in resisting *Afghān* encroachment and annexation. *Shibarghān*'s last independent ruler, *Hākīm Khān*, was deposed by *Amīr Shīr 'Alī Khān* in 1875. In 1865 the town was totally destroyed by a violent earthquake in which an estimated 3,000 people perished.

By 1934 *Shibarghān* was "a ruined place" (R. Byron, *The road to Oxiana*, London 1934). From 1960 onwards, however, it experienced an economic renaissance following the discovery of vast gas reserves in the vicinity. *Shibarghān* is presently (1995) the headquarters, and home town, of the *amīr* of the northern provinces (*Wilāyat-i Shamāl-i Afghānistān*), General *Dūstam*.

**SHIBITHTH** (A., in popular parlance *shibitt*, *shabath*) is dill (*Anethum graveolens* L., *Umbelliferae*).

Like Akkadian *šibittu*, the name goes back to Aramaic *šāḫittā* (W. von Soden, *Akkadisches Hand-wörterbuch*, iii, 1227b). The Greek name *ἀνιθῶν* (*anithūn*), which lives on in Mozarabic *anīṭū*, was taken from the *Materia medica* of Dioscorides; the Berber synonym *asliṭi* circulated also. When blossoming, dill resembles the

fennel (*basbās* [q.v. in Suppl.], *Foeniculum vulgare*, L.); like the latter, dill is an ancient plant and is used in kitchen and medicine in the same way as the fennel. The main areas of origin of the cultivated dill are middle and southeastern Europe; wild dill is found in the Mediterranean area and in the Near East. Roots, seed and herb of the dill contain an aromatic, ethereal oil. From old times, the young sprouts have been used as spices for cucumbers and salads.

The main significance of dill, however, was already in ancient Egyptian times in the field of medicine. It was used as a stomachic, carminative, diuretic and vermifuge drug. Its peculiarity consists in the fact that it dispels colic originating from flatulence, heavy gases, and mucus coming from stomach and intestines; it also puts one to sleep. Its seeds, pulverised and cooked in water, cause heavy vomiting and purify the stomach from dyscratic juice (*ruṭūbat*). A hip bath in an extract from dill is good for pains of the womb. Applied as a poultice, dill divides the swellings originating from flatulence. Its ashes are good for soft (*mutarahhil*), heavily festering ulcers, and its decoction for pains of kidneys and bladder, caused by constipations or flatulence. Pulverised and boiled with honey until concentration, and then applied on the backside, dill has a strongly laxative effect. Taken in soup or broth, its seeds strengthen the flowing of milk. The freshly blossoming dill in particular is good for colic, haemorrhoids and sticky vomit from the stomach.

**SHIBL AL-DAWLA** [see MIRDĀS, BANŪ].

**AL-SHIBLI**, ABU BAKR DULAF B. DĪHAḌDAR, a SUNNĪ mystic. Born in Sāmarrā' or Baghdād (of a family which came from Transoxania) in 247/861, he died there in 334/945. Before his conversion to Šūfism he was an official at the 'Abbāsīd court in Sāmarrā', apparently a chamberlain or *ḥāḍib* of the caliph's brother Abū Aḥmad al-Muwaffaq [q.v.] as well as, or subsequently, a *waḥī* or deputy-governor of Damāwand. He was a reputed scholar in Mālikī law and an assiduous student of *ḥadīth*.

At the age of about 40 he converted to the mystical life, under the influence of the Šūfī Khayr al-Nassājī of Sāmarrā' (d. 322/934). Soon after, Khayr sent al-Shiblī on to al-Djunayd [q.v.], in Baghdād, for further spiritual training. He remained a novice of al-Djunayd until the latter's death in 297/910. The intense relationship between master and novice became the object of countless stories based on the twin motif of al-Shiblī being rebuked by al-Djunayd for 1. his restlessness, "drunkenness", theopathic language and pretension (*da'wa*) as well as for 2. his public preaching. For some time, al-Shiblī associated with al-Hallāj [q.v.], but he denied him before the vizier and went, it is said, to accuse him at the foot of the scaffold (309/922). Al-Shiblī affected a bizarre mode of life, cultivating "eccentricities" of speech and action which caused his repeated internment in the lunatic asylum

in Baghdād. He was criticised, in particular, by the Ḥanbalī scholars Ibn 'Aḳīl and Ibn al-Djawzī [q.v.], for the pretentiousness in his speech (some Šūfīs pointed out that he discoursed on "states", and "stations", not on unity, *tawḥīd*), for his claim of being empowered with universal intercession, for a lack of respect for the data of revelation (angels, hellfire, prophets), for his wastefulness and concomitant neglect of his family, as well as for his painful and humiliating penances.

He has left no works, but his sayings (or "allusions", *ishārāt*) figure in the Šūfī manuals and collections on *sharḥ* [q.v.], as do his deliberate eccentricities, ecstatic states and penances. His *ishārāt* were counted by contemporary Šūfīs to be one of the "three miracles of Baghdād/of the world". A considerable number of mystical poems have been recorded from him, many of which are quotations of bacchic poets like Ibn al-Mu'tazz or amatory poets such as Abū Nuwās, Bashshār b. Burd, and most importantly, Ḳays, the *maḍnūn* [see MAḌNŪN LAYLĀ], whose example of excessive love al-Shiblī adopted as a model for loving God.

As a master of novices he trained numerous disciples, often in rough, sometimes violent ways (visitors flee from him; al-Djunayd warns his pupils to speak to al-Shiblī "from behind the throne; for his swords drip with blood"). Al-Shiblī demands of his pupils to see nothing in him but the traces of divine power and instructs them through "eccentric" behaviour: he throws stones at them to teach them about true love; he cuts his beard off to indicate that one should not mourn over the dead but make the Living God one's sole concern; he burns his clothes as they distract from worship. He had servants or *khuddām*, attending to his and his family's needs, as well as pupils, who received an initiatory garment, like Naṣrābādhī, Abū 'Amr al-Zadjdjādī and Ibn Khaffīf al-Shirāzī [q.v.]. In the classical transmission of the *khirka* [q.v.] al-Shiblī figures as a link in the chain, between al-Djunayd and al-Naṣrābādhī. Ibn Khaffīf is said to have received "the white garment of al-Djunayd" (*ḍiāma-yi safīd*) out of al-Shiblī's hands, which was passed thereafter on to al-Kāzarūnī [q.v.]. The anonymous author of the Šūfī manual *Adab al-mulūk*, possibly identical with 'Alī b. Dja'far al-Sirawānī, a pupil of al-Shiblī based in Mecca, presents him as the most important authority in Šūfism after al-Djunayd. He had disciples in Khurāsān, such as Muḥammad al-Farrā' (d. 370/980-1), a student of the Sunnī *kalām* theologian and Šūfī Abū 'Alī al-Thakafī (d. 328/939-40), who was spied upon by order of al-Shiblī; Abū Sahl al-Su'lūkī (d. 369/980), a student of al-Aṣḥ'arī; and the governor (*malik*) of Harāt. Ibn Abī Dhūhl (d. 378/988-9), who "spent a fortune on al-Shiblī". His closest disciple, however, was Abū 'l-Ḥasan al-Ḥuṣrī of Baghdād (d. 371/982), "the true inheritor of al-Shiblī" (Anṣārī). By contrast, everyone else was but a "hearer of his word". Al-Shiblī's claim that the eastern side of the Tigris was safeguarded against the Shī'ī Būyids only through his presence, coupled with the fact that shortly after his death the Daylamīs completed their conquest of Baghdād, indicates that al-Shiblī's influence at the end of his life extended even to the highest ranks of government. His tomb in Baghdād was still visibly intact in 1982.

**AL-SHIBLĪ**, ABŪ ḤAFṢ 'UMAR B. IṢḤĀQ b. Aḥmad al-Ghaznawī al-Dawlatābādī al-Hindī al-Ḥanafī Sirādj al-Dīn, celebrated *faqīh*, more commonly known by the *nisba* al-Hindī.

Born in India ca. 704/1304-5, he studied *fiqh* in Dihlī with Wadīh al-Dīn al-Dihlawī al-Rāzī, Shams al-Dīn al-Dūlī al-Khaṭīb, Sirādj al-Dīn al-Thakafī al-Dihlawī, Rukn al-Dīn al-Badā'ūnī, pupils of Abu 'l-Kāsim al-Tanūkhī (d. 670/1271-2), and *hadīth* in Cairo with Aḥmad b. Maṣṣūr al-Djāwharī and others. Having made the pilgrimage to Mecca, where he also studied, he came to Egypt in ca. 740/1339-40 where he continued his studies, related traditions and held several religious posts. He cultivated relations with both '*ulamā'*' and '*umara'*' and gained favour with Sultan al-Nāṣir b. Qalāwūn (748-52/1347-51, 755-62/1354-61). With the help of the *amīr* Ṣarghitmish, Sirādj al-Dīn obtained the office of *kāḍī 'l-askar* in 758/1357. Previously, the Ḥanafī chief judge (*kāḍī 'l-quḍāt*) of Egypt *Djamāl al-Dīn* Ibn al-Turkumānī had appointed him as his deputy. Upon the death of the latter in Sha'bān 769/March-April 1368, al-Shiblī replaced him as Ḥanafī *kāḍī 'l-quḍāt* and held that office until his death on 7 Raddjab 773/14 January 1372. As Ḥanafī *kāḍī 'l-quḍāt*, he used his influence with the Mamlūk elite to promote the status of the Ḥanafī judgeship, seeking privileges previously attached only to the Shāfi'ī chief judgeship. Despite good relations with members of this elite, al-Shiblī did not hesitate to oppose their attempts to abuse religious functionaries, as, for example, when he berated Aldjāy al-Yūsufī, *nāẓir al-awḳāf* at the Ibn Ṭulūn mosque, who begrudged them an increase in their salaries. He had also Sūfī tendencies; in Mecca he associated with the *shaykh* Khidr, and was later a follower of Ibn al-Fārīd [q.v.] (cf. below), associating with those Sūfīs inclined toward ideas of monism (*al-sūfiyya al-itihādiyya*).

His best known works are: 1. *al-Tawḥīd*, a commentary on the *Ḥidāya* of al-Marghīnānī (cf. Brockelmann, I<sup>2</sup>, 466, no. 24); 2. a second commentary on the *Ḥidāya* in syllogistic form; 3. *al-Shāmil fī 'l-fiqh*, dealing with *furū'*; 4. *Zubdat al-aḥkām fī 'khtilāf al-a'imma al-a'lām*; 5. a commentary on the *Badī' al-nizām fī uṣūl al-fiqh* of al-Sā'ātī (cf. Brockelmann, I<sup>2</sup>, 477, no. 49, 2); 6. a commentary on *al-Mughnī fī 'l-uṣūl* of al-Khabbāzī (cf. Brockelmann, I<sup>2</sup>, 476-7, no. 48); 7. *al-Ghurra al-munīfa fī tarqīh madhhab Abī Ḥanīfa*; 8. *Kūbā fī fiqh al-khilāf*; 9. a commentary on *al-Ziyādāt* of al-Shaybānī (cf. Brockelmann, I<sup>2</sup>, 178, no. II); 10. an unfinished commentary on *al-Djāmī' al-kabīr* (identical with the *Mukhtasar al-talḥīs*, *ibid.*, no. III, preserved in his autograph; the work is said to have originally included also *al-Djāmī' al-saghīr*); 11. a commentary

on *al-Tā'iyya* of Ibn al-Fārīd (cf. Brockelmann, I<sup>2</sup>, 305-6); 12. a work on *taṣawwuf*; 13. a commentary on *al-Manār fī 'l-uṣūl* of al-Nasafī (cf. Brockelmann, II<sup>2</sup>, 250, no. I, 1); 14. a commentary on *al-Mukhtār fī 'l-fatāwā* of al-Bulḍajī (cf. Brockelmann, I<sup>2</sup>, 476, no. 47, 1); 15. *Lawā'ih al-anwār fī 'l-radd 'alā man ankara 'alā 'l-āristān laṭā'if al-asār*; 16. *'Uddat al-nāsik fī 'l-manāsik*; 17. a commentary on the *Akida* of al-Taḥāwī (cf. Brockelmann, I<sup>2</sup>, 181, no. 7, 7; where a ms. is quoted); 18. *al-Lawāmi' fī sharḥ Djām' al-djāwāmi'* (of al-Subkī; cf. Brockelmann, II<sup>2</sup>, 109, no. 1); 19. Brockelmann finally gives a collection of his *fatwās*. On manuscripts of the surviving works cf. Brockelmann, II<sup>2</sup>, 96, no. 9.

(J. SCHACHT-[LINDA S. NORTHRUP])

**SHIBLĪ NU'MĀNĪ** (1857-1914), leading Urdu writer of the 'Alīgarh Movement, was born into a well-to-do family at Bindūl, in the A'zamgarh [q.v.] District of the then United Provinces.

Early in life he became preoccupied with the Ḥanafī law school, and acquired expertise in the languages and literatures of Arabic, Persian and Urdu. Islamic history and biography, and literary criticism in Persian and in general, became his *métiers*, and he composed poetry in both Persian and Urdu, but though superficially he seems to challenge comparison with that other 'Alīgarh polygraph, Aḥṭāf Husayn Ḥālī [q.v.], he does not equal him as a poet. The turning point in his career came in 1882 when he first visited 'Alīgarh, where his brother was a student. The two influences there were Sir Sayyid Aḥmad Khān [q.v.] and his liberalism, and secondly Dr. Thomas Arnold, Professor of Philosophy, who introduced him to Western literary criticism. Sir Sayyid appointed him lecturer in Persian and Arabic. After the latter's death in 1898, Shiblī broke his relationship with 'Alīgarh, having founded a rival National English School in A'zamgarh. He became a sort of free-lance scholar and author, spending his time in various places, such as Kashmīr and Haydarābād, and wrote an account of his travels in Egypt and Turkey, *Safar-nāma-i Miṣr-ṣ-Rūm-ṣ-Shām*; his Urdu prose style is simple and clear, and not overlaid with English vocabulary, as that of Sir Sayyid and Ḥālī. He died in A'zamgarh.

Shiblī is described by Saksena (287) as "one of the most striking personalities of his age, a versatile genius with a remarkable career", listing a dozen aspects of his activities. Elsewhere (292), he names about two dozen of his literary works in a rather confused manner, both incomplete and inaccurate. Shiblī was ambitious, and felt an urge to produce large-scale works; thus Muhammad Sadiq tells us (275) that he planned an encyclopaedia of Islamic history, combining Western and Oriental methods, but had to restrict himself to a number of monographs, including *al-Fārūk* (1899), a study of the second caliph 'Umar; *al-Ghazālī* (1902); *Sawānīh-i Rūmī*; and *Sirat al-Nabī* (published posthumously, completed by Sulaymān Nadwī, 1916). His second major project, which he almost, but not quite, completed, was his critical history of Persian poetry,

*Shi'r al-'Adjam*, of which vol. i was published in 1908, ii in 1909, iii in 1910, and iv in 1912; vol. v was published posthumously in 1918. It is a brilliant account of Persian poetry, which had played so important a role in the emergence of Urdu poetry.

Finally, reference must be made to his Urdu poetry, which he composed all through his life; he also took part in *mushā'aras* [q.v.] (poetical contests and celebrations). Abu 'l-Layth Ṣiddīqī and a number of collaborators divided his poetry into four stages in an Urdu anthology, *Urdū niṣāb* (see *Bibl.*). They stress that, as a poet, he was original, not basing his poetical techniques on any teacher. The outstanding stage was the fourth (1908-14), which was a period of turmoil in the Islamic world. In this period he wrote both political and ethical poetry, and some Islamic historical poetry. Among the most famous was *Shuhadā'-i kaum* ("The martyrs of the nation"), which commemorates the death of Muslims killed by British troops in the "Cawnpore incident" of 1912 [see KĀNPUR].

**Bibliography:** Shiblī's prose works will be found in various editions. For a reliable assessment of his achievements and ideas, see Muhammad Sadiq, *A history of Urdu literature*, London 1964, 274-85, and see 161-3 for Shiblī's *Muwāzana-yi Dabīr-ō-Anīs* (dated 1907), his major critical work on Urdu literature, which is important for the study of Urdu *marthiya* [q.v.]. His poetry has already been mentioned; see Abu 'l-Layth Ṣiddīqī *et alii*, *Urdū niṣāb*, Lahore 1969, 144-6, which includes the text of *Shuhadā'-i-kaum*. Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, 287-94, also contains useful information on it. (J.A. HAYWOOD)

**SHIFĀ'Ī IṢFAHĀNĪ**, Ḥakīm Sharaf al-Dīn Ḥasan, Persian physician and poet of the Ṣafawid period. He was born in 956/1549 (Gulčīn-i Ma'ānī) or 966/1558-9 (Ṣafā) at Iṣfahān. His *nom-de-plume* refers to the medical profession, which was a tradition of his family. He was also a student of speculative mysticism, but he achieved his greatest fame as a poet. His literary work consists of *ghazals* and *qasidas*, written respectively in the style of Bābā Fighānī and Khākānī (cf. Rypka, 300), as well as poems in several other forms, including a series of *mathnawīs*. His best known poem is the didactic *mathnawī Namakdān-i ḥakikat*, written in imitation of the *Ḥadīkat al-ḥakika*, which has sometimes been mistaken for a work by Sanā'ī [q.v.] himself (Munzawī, iv, 3286). Other works in the same form are *Dida-yi bidār* or *Didār-i bidār*, after the model of Nizāmī's *Makhzan al-asrār* (cf. Munzawī, iv, 2820; Ethé, 836; Bertel's, 210), *Mīhr u maḥabbat*, on the theory of love, completed in 1021/1612-3 (cf. Munzawī, iv, 3252; Ateş, 510), and a poem, called either *Maḍīma' al-bahrayn* or *Maṭla' al-anwār*, based on Khākānī's *Tuḥfat al-ʿIrāqayn* (cf. Ethé, 835; Rypka, 300). Shifā'ī also left a *sakī-nāma* (published by Gulčīn-i Ma'ānī in *Tadhkira-yi may-khāna*, 532-4).

Shāh 'Abbās I [q.v.] held him in high esteem and gave him the honorary titles *malik al-shu'arā'* wa *muntāz-i Irān*. Contemporary critics acknowledged him as one of the best poets of his time, but at the same time feared his sharp and often scurrilous wit. Apologising to the Shāh in a short poem, he mentioned satire as an element indelible from his identity (*māhiyyat*), "just as one cannot wash away from amber the attraction of straw" (Iskandar Beg Munshī, 1083). According to most sources, Shifā'ī died on 5 Ramaḍān 1037/9 May 1628 at Iṣfahān and was buried at Karbalā'.

Already during his lifetime, a selection from his poems, to the amount of 5,000 *bayts*, was brought to India (Fakhr al-Zamānī, 523). In 1040/1630-1 a com-

prehensive collection of 20,000 *bayts* was assembled by Mīrzā Muḥammad Taqī Dawlatābādī (cf. Gulčīn-i Ma'ānī, *Shahrāshūb*, 54).

**SHIGHNĀN** [see SHUGHNĀN].

**SHĪH** (A., from Aramaic *shāh*) is the plant species *Artemisia*, *Compositae*.

The word was probably used by the Arabs as a collective noun for the some 200 types of this species, spread in the Mediterranean area and the temperate latitudes. These types occur as herbs and shrubs, many of them being aromatic. In medicine, the herb and its ethereal oil as well as the blossoming buds and their ethereal oil are used mainly as aromaticum amarum, as a stomachic, digestive, carminative, choleric drug, and the blossoming buds also as an anthelmintic. It was further used as spice in the kitchen and as a stimulus of appetite. The Arab authors note mainly the following types of *Artemisia*: 1. *Shīh* in the specific meaning of *Artemisia iudaica* L.; 2. *Sārīfūn* (σέριφον), probably *A. maritima*; 3. *Tarkhūn*, *A. dracuncul*, tarragon; 4. *Kaysūm*, *A. abrotanum*, southernwood or "Old man"; 5. *Birindjāsaf*, *A. vulgaris*, mugwort, often identified with *kaysūm*; 6. *Afsantīn* or *abū shīnthiyā*, the wormwood (absinth), *A. absinthium*; 7. (?) *A. arborescens*.

It should, however, be realised that the descriptions of plants hardly suffice for determining the types, because nomenclature and synonymy are so vague. The most accurate, yet inadequate, botanical description may be presented here by way of example. It is found in *Dioscorides triumphans* (see *Bibl.*) iii, 107, under the entry *artēmāsīyā* (ἀρτεμισία), where five types of *kaysūm* are described: "One of its types has many twigs, which come forth from a single root, about one yard long. Its leaves are attached to the twigs at some distance from one another, resemble those of the small type of the anemone (*al-nu'mān* [see SHAKIKAT AL-NU'MĀN]), are denticulated (*musharraf*) on both sides and grow smaller and smaller the more they are found near the upper end. At the end of each twig there are yellow-coloured blossoms, round and closely connected like a bunch (*ḍīamā'a*) of heads of absinth (*ru'ūs al-afsanīn*). They vary in smell from pleasantly to repulsively, and their taste is bitter. This type has roots like those of the white hellebore (*al-kharbak al-abyad*). A second type ramifies already at the soil from a single root and rises about one yard ... A third type

buds three or four twigs from one single root, just one yard long, to which leaves are attached in the same way as they are to the blue stock (*al-khīr al-azrak*)... A fourth type grows in riverbeds and ponds... The fifth type has many twigs, ramifying from one single root, just about two yards long. Its leaves resemble those of the olive tree (*al-zaytūn*), white on the side turned towards the ground and green on the side turned upwards, but smaller than those of the olive tree... [At the end:] The first type is the common sage (*arṭāmāsiyā*), called in Spain *fasātāyun* (= *afsanūn*). The second is called *al-ʿabaytharān*, also named “the fox’s basilicum” (*rayhān al-thaʿālīb*), the third is “the golden one” (*al-mudhahhab*), the fourth is called in Romance *yundja* (*juncia*). The fifth and last one is called *furubina* (Romance *flor de pena*), also “olive of the castles” (*zaytūn al-ḥuṣūn*) and *abrūshiyā* (ἀβροσσία), of which *al-mudhahhab* is a type”. For the complete text and the explanation of the terms, see *Dioscurides triumphans*, loc. cit. The first type, with many twigs and a pungent odour, is probably *A. arborescens* L. The fourth type, with one twig, which grows in inland water, could be *A. campestris*. For one of the other types the widespread *A. vulgaris* is probably to be taken into account. As one can see, the description of the types mentioned follows a rather fixed scheme: outward appearance, twigs, roots, leaves, blossoms, then taste and odour.

The Arab authors give many details about the medicinal use of *shih*. It resembles absinth, but does not have the latter’s astringent power. Taken with rice and honey, it kills intestinal worms. The *Artemisia* from the mountains (*al-shih al-djabālī*) is bitter, divides and dissolves flatulence and is less astringent than absinth. Its ashes, taken with almond oil, are good for loss of hair (*dāʾ al-thaʿlab*). It makes the itch disappear (*al-ukla*), is good for laboured breathing and aids urination and menstruation.

(A. DIETRICH)

**SHIHĀB**, BANŪ, a dynasty of *amīrs* who held the tax-farm or *iltizām* [q.v.] of the Lebanon mountain districts of the *sandjak* of Sidon-Beirut, and later also those of the *wilāyat* of Tripoli, from 1697 until 1841.

The Banū Shihāb were already the recognised chieftains (*muḥaddamūn*) of Wādī al-Taym, a valley of the Anti-Lebanon, at the time of the Ottoman conquest of Syria (922/1516). Their involvement in the affairs of the Lebanon resulted from their alliance and intermarriage with the Banū Maʿn [q.v.], the paramount Druze chiefs of the Shūf [q.v.] region, who held the *iltizām* of the mountain districts of Beirut-Sidon almost continuously from ca. 998/1590 until 1108/1697. When the Maʿnid line died out, this *iltizām* was transferred by the Ottomans to their Banū Shihāb relatives, allegedly with local consent (1108/1697). Subsequently (1124/1712), the Banū Shihāb fixed the organisation of the territory assigned to them in fiscal units called *muḥāṭaʾāt*, assigning the administration of each unit to the strongest family of *mashāyikh* among the local Druzes or Maronites.

As newcomers to the Lebanon, the Banū Shihāb, who were Sunnī Muslims, faced strong opposition among the Druzes of the country from the very start. But the Druzes were further alienated by the consistent Shihābī support for the Christian Maronites. This

alienation worsened as leading Shihābī *amīrs* began to convert to Christianity and become Maronites, a process starting in the latter decades of the 18th century. The subsequent alliance of the Banū Shihāb with Muḥammad ʿAlī Pasha [q.v.], and their collaboration with the Egyptian occupation of Syria (1832-40), set them on the collision course with the Ottomans which was the direct cause of their downfall.

The Banū Shihāb survive today in two branches, one Maronite, the other Sunnī Muslim. A member of the Maronite branch, General Fuʾād Shihāb, was elected president of the Lebanese Republic for the period 1958-64.

**SHIHĀB AL-DĪN AL-ḤUSAYNĪ**, Shāh, a Nizārī Ismāʿīlī dignitary and author of the 13th/19th century. Shihāb al-Dīn, also called Khālīl Allāh, was born around 1268/1851-2, probably in ʿIrāq; he was the eldest son of Ākā ʿAlī Shāh, Āghā Khān II (d. 1302/1885), the forty-seventh *imām* of the Nizārī Ismāʿīlīs, and the elder half-brother of Shūlṭān Muḥammad Shāh, Āghā Khān III (1294-1376/1877-1957), the forty-eighth Nizārī *imām*. Shihāb al-Dīn spent the greater part of his life in Bombay and Poona, where he died in Ṣafar 1302/December 1884, being eventually buried in the family mausoleum at Nadjaf.

Shihāb al-Dīn Shāh was a learned member of the Āghā Khāns’ family; he was also regarded as one of the *pīrs* or *ḥudūdjas* of the Nizārī Ismāʿīlīs, particularly by the Nizārī Khōdjas (see Muḥammad b. Zayn al-ʿAbidīn Fidaʾī Khurāsānī, *Kitāb-i Ḥidāyat al-muʾminīn al-tālibīn*, ed. A.A. Semenov, Moscow 1959, 178-9; W. Ivanow, *Ismāʿīlīya*, in *Memoirs of the Asiatic Society of Bengal*, viii [1922], 66-7). Shihāb al-Dīn composed a few treatises in Persian dealing particularly with the ethical and mystical aspects of the Nizārī Ismāʿīlī doctrines. His works, preserved in India and Central Asia, in fact represent the earliest examples of a literary revival, initiated in the second half of the 13th/19th century and utilising the Persian language, in the life of the Nizārī Ismāʿīlī community. His writings include the *Khīṭābāt-i ʿāliya* (ed. H. Udjākī, Ismaili Society series A, no. 14, Bombay 1963) and the unfinished *Risāla dar ḥaqīqat-i dīn* (ed. and tr. W. Ivanow, Islamic Research Association series, no. 3, Bombay 1933). Later editions and English translations, by W. Ivanow, of his *Risāla* were published in 1947, 1955 and 1956 in the series of publications of the Ismaili Society of Bombay; this work has also been translated into Arabic, Urdū and Guḍjarātī (see Shihāb al-Dīn Shāh al-Ḥusaynī, *True meaning of religion*, tr. W. Ivanow, Bombay 1956, Preface).

**SHIHĀB AL-DĪN AL-KARĀFĪ**, Abu 'l-'Abbās Ahmad b. Abi 'l-'Alā' Idrīs b. 'Abd al-Rahmān b. 'Abd Allāh b. Yallīn (626-84/1228-85), Mālikī jurist and legal theoretician from the North African Berber tribe of the Ṣanhādja. He apparently grew up in al-Karāfa in Old Cairo, whence his sobriquet of al-Karāfī. Later, he came to head the Mālikī school of Cairo and to occupy the Mālikī professorship at the famous Ṣālihiyya madrasa. He also held a professorship at the Mālikī-Ṣhāfi'ī Taybarsiyya college and presided over a *ḥalqa* at the Cairo Friday mosque. He was probably the greatest Mālikī legal theoretician of 7th/13th-century Egypt. As such, many scholars, Mālikī and non-Mālikī alike, travelled from Syria and North Africa to study *uṣūl al-fikḥ* with him. His six-volume opus on Mālikī law, *al-Dhakhira*, testifies to his mastery of the positive branches (*furū'*) as well. None of this would be enough, however, to induce him into accepting a position as judge.

In addition to his legal activities, al-Karāfī also had a hand in several other disciplines. His *al-Isṭibār fīmā tudrikuhu al-abṣār*, for example, was a response to some questions on ophthalmology and astronomy from Frederick II of Sicily. His *al-Adwiba al-fakhira 'an al-as'ila al-fāḍila* (cited by Brockelmann as *al-Ghurba al-fakhira radd*<sup>am</sup> *'alā al-milla al-kāfira* and hailed as "the greatest apologetic achievement in Islam", S I, 665) includes actual citations from the Hebrew Bible (in Arabic script). In theology he followed the school of al-Ash'arī. Though a committed rationalist, however, he was far from extreme in his judgments of non-Ash'arīs, including Ḥanbalīs and other traditionalists, even so-called *ḥashwīs*. As for Ṣūfism, he appears to have had little interest in it.

Among al-Karāfī's most important teachers was the redoubtable Ṣhāfi'ī jurist 'Abd al-'Azīz (better known as 'Izz al-Dīn) b. 'Abd al-Salām (d. 660/1262), who deeply influenced him but whose effective endorsement (in Ṣhāfi'ī-dominated Cairo) of the notion that might made right would ultimately become al-Karāfī's *bête noire*. In attempting to come to terms with this problem, al-Karāfī introduces a rather sophisticated doctrine of *taḥlīd* and looks to the *madhhab* as the chief means of protecting minority views from being overridden by '*ulamā'*' associated with state power. This is most clearly reflected in one of his most important works, the *Kitāb al-Ihkām fī tanyīz al-fatāwā 'an al-ahkām wa-taṣarrūfāt al-kādī wa 'l-imām*, which also includes an important discussion on the limits of law. Of the many other works he composed, mention should be made of *K. al-Furūk* (also known as *Anwār al-burūk fī anwā' al-furūk*), on *kawā'id* or legal precepts, *Nafā'is al-uṣūl fī 'ilm al-uṣūl*, a commentary on Fakḥr al-Dīn al-Rāzī's *al-Maḥṣūl*, on *uṣūl al-fikḥ*, of which he also composed an abridgment, *Sharḥ tankīh al-fuṣūl*.

**SHIHĀB IṢFAHĀNĪ**, the pen-name of Mīrzā Naṣr Allāh, a prominent Persian poet of the Kādījār period, *flor.* in the 19th century.

According to a reference in *Gandī-i shāyḡān* by Mīrzā Ṭāhir Iṣfahānī Shī'rī, it may be assumed that Shihāb

was born during the twenties of the 19th century. His birthplace was Simfrum, a small town in the Iṣfahān district. His family had a long history of supplying military judges to the government from among its members. Shihāb, however, devoted himself from the beginning to the study of Arabic and had an inclination towards writing poetry. In 1254/1838-9 he went to Tehran, where he was engaged in literary activity for several years before attracting the attention of Muḥammad Shāh (r. 1250-64/1834-48). The latter admired Shihāb's work, and honoured him eventually with the title of *Tādj al-Shu'arā'*. Shihāb's closest patron was Hādījī Mīrzā Ākāṣī, prime minister of Muḥammad Shāh, from whom he received many favours. The poet's fortunes continued to prosper during the reign of Muḥammad Shāh's successor, Nāṣir al-Dīn Shāh (1264-1313/1848-96). Besides writing poems, which brought him financial rewards, he was officially assigned the task of organising mourning assemblies commemorating the death of Ḥusayn. Towards the later part of his life he retired to Iṣfahān, where he died in 1291/1874-5.

Shihāb's chief field of poetic exercise seems to have been the panegyric, in which he reportedly wielded a fluent pen and could compose lengthy *qaṣidas* within a short time. A critical remark by Dīwān Begī (ii, 889) regarding his poetic style confirms the view that he was fond of grandiloquence, allusions and metaphors. The Sipahsālār Library in Tehran owns a manuscript copy of his *dīwān* containing a collection of *qaṣidas* and comprising some 8,000 couplets.

(MUNIBUR RAHMAN)

**SHIHĀB TURSHĪZĪ**, the pen-name of the Persian poet Mīrzā 'Abd Allāh Khān, b. probably ca. 1167/1753 (Bahār, *Armaghān*, xiii/1, 37), d. 1215/1800-1.

He started his poetic career in his home town of Turshīz in Khurāsān, but left it in 1189/1775-6 for Shīrāz, the capital of Karīm Khān Zand [q.v.]. His ambition took him from place to place in search of suitable patronage. Finally, in 1203/1788-9, he entered the service of Shāhzāda Maḥmūd Durrānī b. Timūr Shāh, the Afghān governor of Harāt (who subsequently became ruler of Afghānistān); Shāhzāda Maḥmūd had employed the poet's father, Ḥabīb Allāh Turshīzī, for thirty years (see Shihāb's verses quoted in Buzurg-niyā's article published in *Armaghān*, vi/9, 557). Shihāb remained with his patron for some nine years, becoming his poet-laureate and chief astronomer as well as attaining the rank of Khān. Their association came to an end with Shāhzāda Maḥmūd losing the governorship of Harāt in 1212/1797-8 in an internal power struggle. Thereupon, Shihāb retired to Turbat-i Ḥaydariyya [q.v.], where he died not long afterwards.

Apart from poetry, Shihāb was also skilled in other fields such as astronomy, painting, the art of making pen-boxes and calligraphy. He was the author of several poetical works which included *Khusrāw wa Shīrīn*

(*Durrat al-tāḍī*), *Yūsuf u Zūlaykhā*, *Bahrām-nāma* and *ʾIkā-i gawhar*, a piece dealing with astronomy. Some of his writings which remained incomplete were a *Tadhkirat al-shuʿarāʾ* and a *Murād-nāma*, the last-named being an account of the events and affairs during the reign of ʿAlī Murād Khān Zand, who ruled Isfahān 1193-9/1779-85. In 1206/1791-2 Shihāb, according to his own statement, compiled a *diwān* of his verse, at the instance of his patron. His total output has been estimated at 20,000 verses (*Nigāristān-i Dārā*, 213), but the copies of his collected poems found in Persia are said to contain between 3,000 and 10,000 verses only (*Tārīkh-i tadhkirahā-yi Fārsī*, 303).

Shihāb was a prominent poet of the period of literary "return" (*bāzgašt*), which marked the end of the influence of the Indian style (*sabk-i Hindī* [q.v.]) in Persian poetry, and the revival of earlier indigenous models. His speciality was the *kašida*, in which he imitated the examples of early masters like Anwarī and Khākānī. The main figures in whose praise he composed his poems were Karīm Khān and ʿAlī Murād Khān Zand; Shāhẓāda Mahmūd Durrānī, who was his chief patron; and Fath ʿAlī Shāh Kādjār.

Another distinguishing feature of Shihāb's literary activity was his satirical verse, directed against fellow-poets, certain tribes and clans, as well as against such places as Shirāz, Yazd, Tehran, Sīstān and Kāshān. In the *ghazal*, his individuality of style found expression in the choice of rhymes which differed from those employed by such established *ghazal* writers as Saʿdī and Hāfiz.

(MUNIBUR RAHMAN)

**SHIHNA** (A.), an administrative-military term in the mediaeval eastern Islamic world.

From the end of the 3rd/9th century, the term, which in a general sense meant a body of armed men, sufficing for the guarding and control of a town or district on the part of the sultan, is occasionally found in the specific sense of the *shurṭa* [q.v.] (Tyan, *L'organisation judiciaire en pays d'Islam*, Paris 1938-43, ii, 366, n. 5). As the designation for a military governor of a town or province, the term *shihna* belongs primarily to the period of the Great Salḍūks, though Abu ʿl-Faḍl Bayḥakī (writing in 450-1/1058-9) uses the term in the sense of the commander of a body of armed men in charge of a town or district on behalf of the sultan (*Tārīkh-i Bayḥakī*, ed. ʿAlī Akbar Fayyād, Mashhad 1350/1971, 22, 23, 24) and his

office as *shihnagī* (*ibid.*, 9, 10, 25, 26, cf. also Doerfer, iii, 320-1). The term is found throughout the Il-Khānate and survives into the period of the Turkoman dynasties of the Kara Koyunlu and the Ak Koyunlu [q.v.]. Thereafter, it disappears except in a debased sense in some provincial districts, being superseded by the term *dārūgha* [q.v.]. The *shihna* belonged to the military classes and officials of the ʿurf jurisdiction. The authority which he held was, like that of other officials, essentially delegated authority.

Nizām al-Mulk [q.v.] appears to have regarded the terms *muḥtaʾ*, *wālī* and *shihna* as broadly synonymous (*Siyāsat-nāma*, ed. Schefer, 28). There are cases of the same individual being referred to variously as *shihna*, *wālī* and *muḥtaʾ*. The amir ʿAbbās (d. 541/1146-7) is called *shihna* of Ray by Ibn al-Djawzī (*Muntazam*, x, 102) and *wālī* of Ray by Awliyāʾ Allāh ʿAmulī (*Tārīkh-i Rūyān*, ed. M. Sotoodeh, Tehran 1348/1969, 126). ʿImād al-Dawla wa ʿl-Dīn Ḳumādī (d. 548/1153-4), who succeeded his father ʿAlāʾ al-Dīn Abū Bakr Ḳumādī and his grandfather ʿImād al-Dīn Ḳumādī in the governorate (*ayālat*) and office of *shihna* of Balkh (*Muntadjab al-Dīn Badīʿ al-Kātib al-Djuwaynī*, *ʿAtabat al-kataba*, ed. ʿAbbās Ikbāl, Tehran 1329/1951, 76, 77), is called *muḥtaʾ* of Balkh by Ibn al-Aṭṭār (xi, 116), whereas Rāwandī states that he was *wālī* of Balkh and then made *shihna* of the Ghuzz (*Rāhat al-sudūr*, ed. Muḥammad Ikbāl, Leiden-London 1921, 177-8; see also Lambton, *The administration of Sanjār's empire as illustrated in the ʿAtabat al-kataba*, in *BSOAS*, xx [1957], 380-3, repr. in eadem, *Theory and practice in mediaeval Persian government*, Variorum, London 1980, and eadem, ch. "The internal structure of the Saljuq empire", in *Camb. hist. Iran*, v, 244-5, repr. in *Theory and practice in mediaeval Persian government*).

Generally speaking, the *shihna* was the military governor of the town, or the town and district, to which he was appointed. His functions were the preservation of public order, security on the roads and the suppression of bandits and robbers (cf. the document in the *ʿAtabat al-kataba*, 61, for Sayf al-Dīn Yurungkush as *shihna* of Djuwayn, a document in the *Mukhtārāt min al-rasāʾil*, ed. Irāḍī Afshār, 1355/1976-7, 264, and a draft diploma for the office of *shihna* in the *Dastūr-i dabīrī* of Muḥammad b. ʿAbd al-Khālīk al-Mayhanī, ed. Adnan Erzi, Ankara 1962, 113-14; and see H. Horst, *Die Staatsverwaltung der Grosselügen und Horazmshāhs*, Wiesbaden 1964, 93-6). He presided over a *diwān* to which, presumably, cases concerning public order were referred, and he apparently had at his disposal a body of men to enable him to apprehend evil-doers and to execute such orders as might issue from his *diwān*. He may also in some cases have executed the decrees of the *ḳāḍī*'s office. He did not have power to appoint officials other than those in his own *diwān* (which differentiated him from a *wālī* or governor). He was paid by dues (*rusūm*, *marsūm*) collected from the local population and levied according to custom (the rate is not stated in the sources).

As well as *shihnās* of towns, there were also *shihnās* of tribal groups. In the case of Balkh, the two offices were held by the same person, but this was not always so (cf. the document in the *ʿAtabat al-kataba*, 80-3, for the appointment of Inanč Bilge Ulugh Džandār as *shihna* of the Turkomans of Gurgān, and an undated document in the *Mukhtārāt min al-rasāʾil*, 263-4, for the appointment of a *shihna* of the Atashī (?) Turks of ʿIrāk and Kurdistān).

The *shihna* of Baghdād in the Salḍūk period held a special position, in that he was not only the military governor of the town, but also the representative,

as it were, of the sultan vis-à-vis the caliph.

Under the Saldjūks of Rūm, the *shihna* appears to have been the military governor of a town or the head of the garrison of a town (Cl. Cahen, *La Turquie pré-Ottomane*, Istanbul-Paris 1988, 198).

In the sources for the Mongol invasions and the Il-Khānate, there is a lack of precision in the use of the term *shihna*. It is used at times synonymously with *baskāk*, *dārūgha* (*dārūghaʿī*) and *nāʿib* (D.O. Morgan, *Who ran the Mongol empire?*, in *JRAS* [1982], 129, and see Lambton, *Mongol fiscal administration in Persia*, in *SI*, xiv [1986], 80 n. 2). By the reign of Ghazan (694-703/1295-1304 [q.v.]) the *shihna* and *baskāk* were distinguished from each other and from the commander of the citadel of a town (see below). However, in a document for the appointment of a *shihna* in the *Dastūr al-kātib* of Muḥammad b. Hindūshāh Nakhḍjawānī, ed. A.A. Ali-zade, ii, Moscow 1976, 36, *shihnagī* and *baskākī* appear to be used synonymously.

The importance of the *shihna* varied; some, like *sulṭāns* and *maliks*, received large *payzas* when their appointment was registered; others, who were of lesser rank, and medium *maliks* (*malikān-i mutawassit*) smaller *payzas* (Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 295).

According to Djuwaynī (i, 96, tr. Boyle, i, 122), Čingiz Khān appointed a group of persons to the office of *shihna* in Samarkand after its conquest. Yeme and Subetey, as they pursued Djalāl al-Dīn Muḥammad Khwārazmī through Khurāsān, left *shihnās* in the towns through which they passed with an *al-tamgha* as a sign of the surrender of the population (*ibid.*, i, 177; also 113, 115, 120, 121, 136-7). When Abū Bakr Saʿd b. Zangī, the ruler of Fārs, sent his brother Tahamtam to Ogedey with his submission, tribute was laid on the province and a Mongol *shihna* appointed (Wassāf, *Tārīkh*, ed. M.M. Isfahānī, lith. Bombay 1269/1852-3, B. Spuler, *Die Mongolen in Iran*, Leiden 1985, 117-18). In 650/1252-3 Mengü-Kaʿan appointed governors (*hākīmān*), *shihnās* and scribes to assess the taxes and to number the population (Djuwaynī, iii, 72-3, tr. ii, 596). As the conquests proceeded and the Mongols established an administration, *shihnās* were appointed over towns and districts (Spuler, *op. cit.*, 284-5).

As in the Saldjūk period, the *shihna* was concerned with the administration of customary law. There is, however, a *yarligh* for the appointment of *kādīs* issued by Ghazan, in which it is stated that *shihnās*, *maliks*, *bitikciyān*, *kādīs*, 'Alawīs and 'ulamā' were to assemble in the Friday mosque in the *ḍiwān al-muʿālaʿa* to hear cases between Mongols, or between Mongols and Muslims, and other cases which were difficult to decide, and to settle them according to the *sharīʿa* (Rashīd al-Dīn, *op. cit.*, 219), but this probably merely reflects Ghazan's policy to convert the Il-Khānate into an Islamic state. Clearly, the *shihna*'s activities were conducted mainly according to customary law. A document for a certain Shaykh Dorsun as *shihna* of such-and-such a province (*wilāyat*), which instructs him to investigate thoroughly *yarghuʿī* affairs and to decide them according to justice and the *yasak* (*Dastūr al-kātib*, ii, 37), most probably reflects general practice. Another document in the same collection, concerning the complaint of the people of Salmās [q.v.] against the extortion of their *shihna*, states that the latter had been dismissed and his successor ordered to settle affairs justly according to the rule of the *yasak*. The people were to refer *yarghuʿī* matters to him (*ibid.*, 38-9). It would seem from the document that cases were submitted by the *shihna* to the *yarghu* (*ibid.*, 39).

A letter to a *kādī* in the *Dastūr al-kātib* forbids *yarghuʿiyyān*, *shihnagān* and others from interfering in *sharʿī* affairs (i/2, Moscow 1971, 455). Ghazan's *yarligh* on the unification of weights and measures was addressed to *shihnagān*, *maliks*, *bitikciyān* and others (Rashīd al-Dīn, *op. cit.*, 257); this implies that these matters were within the purview of the *shihna*. Under Ghazan, the *shihna* also appears to have been concerned with the general provincial administration. When he decided that grain should be stored in the provinces for the use of the army, the *shihna* of the province was ordered to take delivery of the grain and to pay cash for it (*ibid.*, 301). Together with provincial governors (*hākīmān*), the *shihnās* were in charge of the billeting of *ilṭis* and others in the provinces, a practice which Ghazan forbade (*ibid.*, 356-7).

The payment of the *shihna*, as in former times, was by ducs. In the *Saʿadat-nāma* of 'Alā-yi Tabrizī, an item is included in the provincial expenses of Tabriz of 1,000 *dīnārs* for the office of *shihna* (*shahāniyya*), 5,000 *dīnārs* for the garrison of the citadel (*al-isfah-sālāriyya bi-kalʿa mukaddamuhum fulān*) and 15,000 *dīnārs* for the officials of the *tamgha* (*ummāliyyat al-tamgha*); the sum for the *baskāk* was 10,000 *dīnārs* (Mirkamal Nabipour, *Die beiden persischen Leifäden des Falak 'Alā-ye Tabrizī über das staatliche Rechnungswesen im 14. Jahrhundert*, Göttingen 1973, Persian text, 134). A document in the *Dastūr al-kātib*, ii, 29, states that the *wazīr* was to get from the *shihna* a bond (*malʿakā*) that he would not take more from the province and its population than was laid down in the *ḍiwān* as the due of the *shihna*. From other documents in the collection (cf. ii, 36, 38-9, 305-6, 323-4) it would seem that extortion by *shihnās* was not unknown (cf. Rashīd al-Dīn, *op. cit.*, 244).

Under the Kara Koyunlu and the Ak Koyunlu, the *shihna* is found as a local official concerned with the maintenance of public order, ranking among the *dārūghas*, *maliks* and *kalkhudās* (cf. a *farmān* of the Kara Koyunlu Djahānshāh dated 853/1449, in A.D. Papazyan, *Persidskie dokumenty matenadarana i ukazī, vīpusk perviy (xv-xvi vv.)*, Erivan 1956, 245). Faḍl Allāh b. Rūzbihān Khundjī Isfahānī mentions *shihnās* and *kotwāls* [q.v.] (fortress commanders) of various towns and fortresses belonging to Diyār Bakr in 882/1478 (*Tārīkh-i Amīnī*, ed. J.E. Woods, London 1992, 126). Under the Safawids, the term *shihna* was no longer in general use.

(ANN K.S. LAMBTON)

AL-SHIHR a town and region on the South Arabian Indian Ocean coast approximately 330 miles east of Aden [see 'ADAN], the main port of Hadramawt [q.v.] until the 19th century, when al-Mukallā rose to prominence. The port is particularly well known as a fishing and trading centre, but is throughout the centuries associated with the incense trade: Ibn Khuradādhbih (147-8) calls the area the Land of Incense (*bilād al-kundur*) and quotes the following line of poetry:

Go to al-Shihr; don't go to Oman ('Umānā); if you don't find dates, you will find incense (*lubānā*)!

Niebuhr, writing in the 18th century (*Description de l'Arabie*..., Amsterdam and Utrecht 1774, iii, 244), reports that incense was still exported through the port of al-Shihr, and Serjeant (*The ports of Aden & Shihr (mediaeval period)*, in *Les grandes escales I. Recueils de la Société Jean Bodin*, xxxii [1974], 221) informs us that it was still handled in the port. The town itself is walled and is situated along a long sandy beach, access to ships in the anchorage being by boat. It is divided into two by the wadi bed, al-Misyāl, the western

ern quarter bearing the name Madjraf and the eastern one al-Ramla. The quarter system within the town is still strong and there are several markets: Sūk al-Lakham (shark), Sūk al-Hunūd (despite the fact that there can be few Indians left in the town), Sūk Shibām, named after the inland town [q.v.], etc. Fishing is still an important local industry and the major port commodity apart from incense is fish-oil. Ambergris (*anbar Shihri*) was also a well-known product of the coast, at least in earlier times. The incense comes from the upper reaches of the mountains in the Shihri region. There are graves along the shore said to be those of the victims of the Portuguese attacks on the town from the 10th/16th century onwards (see below). It was from al-Shihri that many Hadramīs migrated to East Africa and they were thus called Shihiris (Serjeant, *Ports*, 221). The region is now in the governorate of Hadramawt in the Yemen Arab Republic and comprises the following settlements: al-Days, al-Hāmī, al-Rayda and Kaṣīr/Kuṣayr (*al-Mawsūʿa al-Yamaniyya*, eds. Ahmad Djabir 'Afif *et alii*, Ṣan'a' 1992, 549).

Having a much more limited hinterland than Aden, the port was always of less importance. Its early history is far from clear, but it appears to have been controlled by the Ziyādids (ca. 203-371/818-981), a Tihāma-based Yemeni dynasty (Ibn al-Mudjāwir, *Taʾrīkh al-Mustabshir*, ed. O. Löfgren, Leiden 1951-4, 67). The Banū Ma'n (5th/11th century vassals of the Ṣulayhids [q.v.] in Aden) also held al-Shihri (Abū Makhrama, in Löfgren, *Arabische Texte zur Kenntnis der Stadt Aden im Mittelalter*, Uppsala etc. 86). The town is mentioned on occasions during the Rasūlid period (626-858/1228-1454), but figures much more prominently in the history of the Portuguese off the South Arabian coast. The town, which they called Xaer/Xael, was always vulnerable from the sea and they attacked it on more than one occasion and plundered the port (e.g. Serjeant, *The Portuguese off the South Arabian coast*, Oxford 1963, 67). In 867/1462, the Kathīrī sultan Badr b. Tuwayrik captured al-Shihri from the Tāhirids (858-923/1454-1517), the successors in the south of the Yemen to the Rasūlids. However, it later came under the control of the Ku'aytī sultanate of al-Mukallā (Serjeant, 25).

Al-Hamdānī (51) says the name of al-Shihri is derived from *shahar al-ard*, which, he adds, is the salinity (*sabakhi*) of the soil where bitter plants grow. Perhaps more plausible is Abū Makhrama's suggestion (66) that its inhabitants were the *Shahrā'* of Mahra and that the *alif* and *hamza* have been dropped and the *shin* vocalised with a *kasra* instead of the original *fatha*. The latter, al-Shahr, is in any case an alternative pronunciation. Other sources (e.g. al-Hamdānī, 134, and al-Idrīsī, *Opus geographicum*, Naples and Rome, i-ii, 1970-1, 52, 154-5) state that the inhabitants do not speak good Arabic, and this may be rather a reference to their speaking a language other than Arabic (Mahri?). The latter source says specifically that the Arabs do not understand the language of al-Shihri at all and he calls it "old Himyari". Yākūt (*Mu'djam*, Beirut 1979, iii, 327) prefers to associate the name with *shihra*, a narrow tract of land.

**Bibliography:** Apart from the references given in the text above, the rare Government of Bombay, *An account of the Arab tribes in the vicinity of Aden*, Bombay 1909, contains an interesting and informative chapter, pp. 125-48, entitled *Historical résumé of Mokalla, Shahr and Hadthramūt*. (G.R. SMITH)

**SHIHRI** or **SHAHRI**, the common term by Arabs and Arabists for the Modern South Arabian language Shēri (in older literature also called Shaurī/

Shahari), spoken in the mountains of Zūfār ('Umān) by about 50,000 speakers. As the word Shēro (pl.) designates only the underprivileged, non-tribal part of the population, Johnstone (*Jibbālī lexicon*, p. XI) established the term "Jibbālī", a translation into Arabic (Shēhr = mountains), in order to avoid old social distinction. Together with the other non-Arabic languages of southern Arabia (Mehri [see MAHRI], Soqotri [see SOKOTRA], Harsūsi [see HARASIS], Baṭhari [see BATĀHIRA] and Hōbyōt), Shēri belongs to a group of closely connected languages called "Modern South Arabian". A special trait of Shēri, not found in any other of the Modern South Arabian languages, is the existence of nasal vowels, a result of the disappearance of "m" in intervocalic position. According to Johnstone (*Jibbālī lexicon*), three main dialects can be distinguished, of which the western one is hardly known. A distinctive mark of the central dialect is the existence of the two phonemes *ṣ* and *ṣ̣* (spoken like *ṣ* but without touching the alveoles with the tip of the tongue) instead of *ṣ* in the eastern dialect. The origin of Shēri and the other Modern South Arabian languages is controversial. Even though they are not direct descendants of Epigraphic South Arabian, they have so many common features with them (perfect 1st and 2nd persons with *k*, three sibilants *s*, *ṣ*, *ṣ̣*) and with the languages of Ethiopia (ejectives), that they should be incorporated in the group of South Semitic to the exclusion of Arabic.

**Bibliography:** See that to MAHRI. The most important work is T.M. Johnstone, *Jibbālī lexicon*, Oxford 1981. Recent publications include: J. Rodgers, *The subgrouping of the South Semitic languages, in Semitic studies in honor of Wolf Leslau on the occasion of his 85th birthday*, ed. A.S. Kaye, Wiesbaden 1991; A. Lonnet, *La découverte du sudarabique moderne. Le Ekkili de Fresnel (1838)*, in *Matériaux Arabes et Sudarabiques*, iii (1991); M.-C. Simeone-Senelle, *L'expression du "futur" dans les langues sudarabiques modernes*, in *Matériaux Arabes et Sudarabiques*, v (1993).

(W. ARNOLD)

**SHIKĀRĪ** (p.), a form current in Muslim India, passing into Urdu and Hindi and derived from Pers. *shikār* "game, prey; the chase, hunting", with the senses of "a native hunter or stalker, who accompanied European hunters and sportsmen", and then of these last sportsmen themselves (see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, London 1903, 827-8, s.v. *Shikaree, Shekarry*).

The native hunters stemmed from the many castes in India whose occupation was the snaring, trapping, tracking, or pursuit of birds and beasts, but the caste which adopted or received the word Shikārī as its tribal name was found chiefly in Sind by the early 20th century. A writer in 1822 said: "Shecarries are generally Hindoos of low caste, who gain their livelihood entirely by catching birds, hares, and all sorts of animals", but the Shikārīs of Sind seem to have abandoned the occupation from which they take their name. They are described as outcast immigrants from Rājputāna, found from Bengal to the Panjāb, the origin of whose honourable appellation was unexplained, though they probably possessed, like other aboriginal races, a knowledge of wild animals and skill in tracking and were employed by the Muslim nobility in quest of sport. They were subsequently engaged in making baskets, and as sweepers and scavengers, and appear to have corresponded in most points, to the Bhangīs of Bengal and Hindūstān. They ate carrion, and, even when professing Islam, were considered unclean, and not allowed to enter a mosque,

unless they underwent a ceremony of purification by fire, after which they were classed as Māčchīs. Those whose occupation was the taking of life were naturally held in small esteem in a land which has been permeated by the principles of Buddhism, Jainism, and Brahmanism, but the purification ceremony demanded by Muslims before admitting Shikārīs to their worship was an example of the extent to which Islam in India had been affected by the attitudes of Hinduism.

**SHIKĀRPŪR**, the name of two places in Sind.

1. That in upper Sind, situated in lat. 27° 57' N. and long. 68° 40' E., was founded in 1667 by the Dā'ūd-pūtras, a warrior/weaver tribe, on the *Shikārgāh* or hunting ground [see *SHIKĀRĪ*] of the Mahars, hence the name. In 1701 they were defeated by the first Kalhōra chief, Yār Muḥammad (1701-18); his son Nūr Muḥammad (1718-54) drove them eastward where they founded Bahāwalpūr [q.v.].

In 1739 the Mughal Emperor, Muḥammad Shāh [q.v.], had to cede all the region west of the Indus to Nādir Shāh, who in 1740 invaded Sind to punish Nūr Muḥammad and annexed Bhakkar, Sibi and Shikārpūr. He restored Shikārpūr to the Dā'ūd-pūtras, but in 1754 the Kalhōras recovered it when Aḥmad Shāh Durrānī [q.v.] made Murād Yār governor over the whole of Sind.

During the period of vassalage to Kandahār (1746-1825), the region, now known as the *Mughūlī Pargana*, saw a great influx of Pathān settlers who received lands on reduced rents (*Paltadārī*). At the same time, Shikārpūr became an entrepot for trade with the regions of eastern Persia, Afghānistān and Central Asia, a trade monopolised by the Hindus, and its merchants and covered market were famous throughout Asia.

Sind's vassalage to Afghānistān was broken by the Tālpūrs in 1789, who recovered Shikārpūr also in 1825.

The period of British rule (1843-1947) saw a gradual decline in Shikārpūr's importance, since their control of the Frontier region and Balūchistān, and the opening up of the Khyber pass route and the railway link to Quetta, ended its strategic and economic role.

Reduced to the position of a country town on the eve of Pākistān's creation (1947), it gradually began to develop as a centre of agriculturally-based industries. It became a District headquarters (1977) and now possesses a municipality. Its population, estimated at 20,000 to 25,000 by the middle of the 19th century, is now 88,000.

Its most celebrated literary and spiritual figure was Shāh Faḳr 'Alwī (d. 1780), an Afghān migrant, and founder there of the Kādīrī *khānqāh* and a *madrasa*; venerated by rulers like Aḥmad Shāh Durrānī, he wrote books in Arabic, Persian and Pashto, and his letters and books like *Futūḥāt al-ghaybiyya* won general recognition. Also, Munshī 'Aṭā Muḥammad (d. 1855) wrote the *Tāza nawā'i ma'ārik*, a contemporary account of the Tālpūrs and their relations with the rulers of Kābul (ed. H. Rashīdī, Karachi 1959).

2. That in Lower Sind was founded by the Phans seven miles away from Dādū town, and was also captured by Nūr Muḥammad in 1701. It was renamed (old) Khudābād and remained the Kalhōra capital till Ghulām Shāh (1757-72) transferred it to nearby Haydarābād. Devastated by the Tālpūrs in 1781, it is now in ruins.

3. There exist other Shikārpūrs in the subcontinent, including in the Bulandshahr District of U.P. and in

Mysore (Karnataka). See *Imperial gazetteer of India*<sup>2</sup>, xxii, 277-8.

**SHIKASTA** [see KHATT].

**SHIKK** 1. Shikk is the name of two diviners or kāhins who allegedly lived shortly before the rise of Islam. According to the *Abrégé des merveilles*, Shikk the Elder was the first diviner among the 'Arab al-'Āriba. He is a completely fabulous personage. Like the Cyclops, he had only one eye in the middle of his forehead or a fire which split his forehead into two (*shakka* "to split"). He is also confused with al-Dajjāl [q.v.], Antichrist, or at least Dajjāl is of his family. He is said to have lived chained to a rock on an island where volcanic phenomena occurred. The second Shikk, called al-Yashkurī, was the most famous of his time, along with Saḥī [q.v.]; he expounded a vision of Rabī'a, son of Naṣr the Lakhmid prince of Yeman, foretelling the conquest of Yemen by the Abyssinians, its liberation by Sayf b. Dhī Yazan and the coming of the Prophet.

2. According to al-Kazwīnī, the Shikk are a kind of Shaytān, forming part of the group of *mutashayyafūn*; they are in the shape of a half-man, with one arm and one leg. The Nasnās, other halves of men, are produced from Shikks and whole men. These Shaytāns appear to travellers. It is said that 'Alkāma b. Safwān b. Umayya met one of them one night near Ḥawmān and after an exchange of high words, the man and the djinnī killed one another.

Wüstenfeld, Göttingen 1848-9, i, 371. On the kāhin in general, see Bal'amī, *Chronique de Tabari*, tr. H. Zotenberg, Paris 1867, ii, 169, and KĀHIN. A new analysis of the documentation used in this article, with some additions, has been made by T. Fahd in his *La divination arabe*, Paris 1987, see esp. 44, 66, 83, 101, 125, 186-9, 250.

(B. CARRA DE VAUX-[T. FAHD])

**SHIKKA BANĀRIYA** [see AL-KĀF].

**AL-SHĪLĀ** or **AL-SĪLĀ**, the term for Korea in Arabic geographers of the 3rd/8th century.

Ibn Khurradādhbih describes in his *Kutāb al-Masālik wa 'l-mamālik*, 68-70, cf. 170, the sea route from West Asia to China, describing the provinces, routes and products encountered. According to him, starting from Sanfu (Champa) [see ŠANF] and travelling eastward along the coasts, there were Chinese ports, such as al-Wākīn (or Lūkīn, to be identified with Chia-chou at Hanoi), Khānfū [q.v.] (Kuang-chou or Kuang-tung), Djāndjū (Chüan-chou) and Kānfū (Yang-chou); and beyond China, there were regions called Wāk-wāk (perhaps Japan) and al-Shīlā, with high mountains and rich gold mines. Judging from the geographical situation in the T'ang period, Shīlā would appear to

be a region of Korea or Japan. *Shilā* or *Silā* is presumably a word derived from *Si-ra* (> *Sila*). *Sira* was originally called *Sin-ra*, which was one of the ancient Korean Kingdoms (ca. B.C. 57-A.D. 935). It thus appears likely that the ancient name of the Korean Kingdom of *Sin-ra* (> *Shilā*, *Silā*) was transmitted, by way of Chinese merchants or other informants, to Arabic geographers of the 3rd/8th century.

**SHILB**, modern Silves in southern Portugal, a town of medieval al-Andalus in the *kūra* of *Ukshūnuba*.

Arabic geographers describe it as being in a fertile region, with many trees, especially pines, orchards and watercourses. The town itself is on a slight hill at the side of a river (the *nahr Shilb*, modern Arade), which supplied the town with water. It was linked to the roads of the south-west of the Peninsula, and its nearness to the sea (15 km/9 miles) gave access to maritime produce and trade. Roman remains have been found on the site; the exact date of the Arabic conquest is unknown, but Islamic pottery from the 2nd/8th century has been found. There was a Yemeni element in the Arab population, and local scholars with *nisbas* such as al-Awdī, al-Lakhmī, al-Himyārī, etc., are mentioned but there were also local lineages, such as that of the Banū Abī 'l-Habīb.

In Umayyad times, *Shilb* took part in the decentralisation movement notable throughout al-Andalus in the later 3rd/9th century. A lord of *muwallad* origin, Bakr b. Yahyā, dominated the *Ukshūnuba* region, and the *amīr* 'Abd Allāh b. Muḥammad I had to confirm his son Yahyā as governor of *Shilb*. In 317/929, 'Abd al-Rahmān III, in his endeavours to restore unity in the kingdom, attacked Bakr's grandson *Khālaf*, who nevertheless managed to retain his position as caliphal governor in return for paying taxes and promising not to aid rebels. When the Umayyad caliphate fell, local notables seized power at *Shilb*, as at other places. The chronology here is obscure, and it is uncertain whether one or two separate families are involved, but the sources agree that a *qādī* of *Shilb*, 'Isā b. Muḥammad from the Banū Muzayn, assumed power and founded a petty dynasty, which was soon attacked by al-Mu'taḍid b. 'Abbād of Seville, who conquered the town in 455/1063, nominating his son al-Mu'tamid as governor there. The prince-governor was accompanied by his friend and *wazīr*, Ibn 'Ammār [*q.v.*], himself a native of *Shilb*, and it was there that al-Mu'tamid met his future favourite wife, I'timād. When al-Mu'tamid succeeded to power in Seville, he left the town to his son 'Ubayd Allāh al-Mu'tadd, but like the rest of the 'Abbādid lands, *Shilb* soon fell to the Almoravids.

A new stage in the history of the south-west of the Peninsula was the revolt of Ibn Kaṣī [*q.v.*], who was supported by the people of *Shilb* and Yābura (Evora), who gave their allegiance in 539/1144, with Ibn al-

Mundhir becoming Ibn Kaṣī's governor at *Shilb*. Attacks by the forces of *Shilb* and the *kūra* on Seville and Cordova failed, but Ibn Kaṣī ended up as governor of *Shilb* for the incoming Almohads. However, he and the notables of *Shilb* did not give their allegiance, amongst representatives of al-Andalus, to the caliph 'Abd al-Mu'min at Salé, and he began negotiations with the Portuguese. His death, at the hands of a plot of the *Shilb* citizens, is attributed to this attempted rapprochement with the Christians. The Almohads then attached the whole *kūra* to Seville, nominated Almohad governors and settled troops (*munaḍḍajādūn*) and their families in the region. The fortifications of the fortresses of *Shilb* and *Bādja* (Beja) were repaired, but in 585/1189 the Portuguese captured *Shilb* after a fierce siege, and the inhabitants had to abandon it, leaving behind all their possessions. The Almohad caliph al-Manṣūr recovered it in *Ḍjumādā II* 587/June 1191, and the last years of Muslim control there saw *Shilb* under the dominion of the lord of *Labla* (Niebla), *Shu'ayb* b. Muḥammad b. Maḥfūz, who rose against the Almohads in 631/1234. The town finally passed into Portuguese hands in 1240, and it is Christian sources which describe this conquest, led by Santiago Paio Peres Correia.

A good number of poets stemmed from *Shilb*, with Ibn 'Ammār probably the most famous, but one should also note two poetesses, Maryam bt. Abī Ya'kūb al-Shilbī (5th/11th century) and al-Shilbiyya (6th/12th century). Today, the fortress is the most important relic in the town of the Islamic period; there has been preserved an inscription on the base of a tower of the enceinte dated 624/1227, together with epigraphic and ceramic fragments and coins.

**AL-SHILLĪ**, Abū 'Alawī Muḥammad b. Abī Bakr, biographer and historian from Tarīm [*q.v.*]. Born in 1030/1621-2, he died at Mecca in 1093/1682. He studied theology, sciences and, above all, mysticism in his native town, in *Zufār*, in India and in Mecca and Medina. After the death of *Shaykh* 'Abd Allāh b. Abī Bakr b. al-Djamāl in 1072/1661-2, he began to lecture at the Great Mosque in Mecca, but had to renounce his teaching activities after four years because of ill health. On the basis of a number of works on *Ḥadramī sayyids* and *Sūfis* [see *BA*, *ALAWĪ*].

he brought together more than 280 biographies in his *al-Mashra' al-rawi fi manāḳib al-sāda al-kirām Al Abi 'Alawī*, published Cairo 1319/1901-2. His *al-Sanā' al-bāhir bi-takmil al-Nūr al-sāfir 'an akhbār al-karn al-ashir* is a supplement to 'Abd al-Kādir b. Shaykh al-'Aydārūs al-Hindī [see 'AYDARŪS, 4], *al-Nūr al-sāfir* ..., ed. Baghdad 1353/1934. He also wrote *'Ikd al-djauwāhir wa 'l-durar fi akhbār ahl al-karn al-hādī 'ashar*.

**SHIMSHĀT**, a mediaeval Islamic town in eastern Anatolia/western Armenia. It lay, at a site whose definite location is unknown, on the left bank of the southern headwater of the upper Euphrates, the classical Arsania, modern Murad Su. Its location was, according to Yāqūt, *Buldān*, ed. Beirut, iii, 362-3, between Bālūya (modern Palu) and Ḥiṣn Ziyād or Khartpirt [q.v.] (modern Harput), and it is not to be confused with Sumaysāt [q.v.] on the Euphrates further south. It was in the borderland between the Arabs and the Greeks, and possession of it must have oscillated between the two peoples. It was the place of origin of a 4th/10th century poet of a certain distinction, Abu 'l-Hasan 'Alī al-Shimshātī [q.v.], and we know that in 326/938 it was still in Arab hands, for in that year, the Ḥamdānīd Sayf al-Dawla [q.v.] fell back on it before the Byzantine Domestikos after besieging Ḥiṣn Ziyād (E. Honigmann, *Die Ostgrenze des byzantinischen Reiches*, 76). By Yāqūt's time, however (early 7th/13th century), *Shimshāt* was in ruins, with only a tiny population.

**AL-SHIMSHĀTĪ**, ABU 'L-ḤASAN 'ALĪ B. MUḤAMMAD b. al-Muḥahhar al-'Adawī, Arab philologist, minor poet and anthologist. As poetic occurrences of his *nisba* and the town to which it refers show (Yāqūt, *Buldān*, Beirut 1376/1957, iii, 363a, l. 4; and *Irshād*, Cairo n.d., xvii, 241, l. 5), the name-form "al-Sumaysātī", given in Flügel's ed. of the *Fihrist* and, as an option, by Brockelmann, *GAL* S I, 251, should be discarded. Sumaysāt and *Shimshāt* refer to two different places (Yāqūt, *Buldān*, s.vv., and cf. Le Strange, *Lands of the Eastern Caliphate*, 116-17 (*Shimshāt*), 108 (Sumaysāt), and cf. map iii). According to Ibn al-Nadīm, who used to know al-Shimshātī, the latter was still alive when he was writing, i.e. in 377/987 (*Fihrist*, 154, ll. 24-5; the year is given by Yāqūt, *Irshād*, loc. cit., 240, ll. 12-13). No other precise dates of his life are known.

He was attached to the court of the Ḥamdānīds in Mawṣil, where he served as a teacher to Abū Taghlib b. Naṣir al-Dawla and his brother. For this reason he was also known by the nickname "the teacher" (al-Mu'allim), e.g. in a mocking poem that Sayf al-Dawla [q.v.] himself wrote about al-Shimshātī (Yāqūt, *Buldān*, loc. cit. at l. 5, and cf. *Fihrist*, 235, l. 1).

He was of Shī'ī convictions, and thus has an entry in al-Nadījshī (who was his disciple, *Riḡāl*, 186 ff.), which also contains the longest list of his works.

He is known, first and foremost, for the only extant work of his, the *K. al-Anwār wa-maḥāsīn al-ash'ār*. This is an anthology of poetry, roughly of the *K. al-Ma'ānī* type, usually with longish chunks of poetry and com-

bined here and there with prose accounts. The chapters deal with the following topics: 1. Weapons; 2. Battle-days of the ancient Arabs (explicitly devoted to the lesser-known ones, of which he includes thirty); 3. Horses; 4. Land and camels, sea and ships; 5. Former encampments and mirages; 6. Houses and castles; and 7. Hunting.

From his *adab* work *al-Nuzah wa 'l-ibtihādī*, a fragment dealing with a dispute between the two grammarians al-Zadjidjādī (Baṣran) and Tha'lab (Kūfan) [qq.v.], of whom the former is the first-person narrator, is preserved in Yāqūt, *Irshād*, i, 137-43; in al-Suyūṭī, *al-Aḥbāh wa 'l-naḥā'ir*, Ḥaydarābād 1359-61, iv, 123-6; and presumably also in a small independent work by Ibn Ṭūlūn (see Sezgin, *GAS*, viii, 99; and for Ibn Ṭūlūn, Brockelmann, II<sup>2</sup>, 481-3).

**SHĪN** [see sĪN].

**SHĪNĀ**, SALMĀN (1898-1978), 'Irākī Jewish journalist, lawyer and a member of the 'Irākī Parliament. Born in the Jewish quarter of Baghdad, he received a conventional religious Jewish education in a Heder (equivalent to the Muslim *kuttāb*), and then continued his primary and secondary studies at the secular Jewish school of the Alliance Française Israélite in Baghdad, and excelled in languages. Later, he joined the Ottoman Secondary School in Baghdad and was recruited to the Ottoman Army as a reserve officer during the First World War, as an adjutant and interpreter to the German General von Becker at the Turkish Headquarters.

After the defeat of the Ottoman army in 'Irāk, he was taken prisoner, but refused to join the British forces on the grounds that the Ottomans had always helped the Jews, especially after their expulsion from Spain in 1492. He became a prisoner of war in India, but was repatriated to 'Irāk in February 1919.

In 1920 he joined the Law College in Baghdad where many 'Irākī politicians such as Ṣāliḥ Ḍjabr, later on Prime Minister (1947-8) studied. On 10 April 1924 his weekly magazine *al-Mishbah* was first issued, subtitled in Hebrew letters *Ha-Menorah* ("The Candelabrum"), with its Jewish emblem. This was the first Jewish literary and cultural weekly magazine published in literary Arabic in Arab script in 'Irāk. Shīnā edited his magazine, writing its main articles and translated many news items and articles from European and American magazines concerning Jewish and Zionist activities and achievements, in the Holy Land and abroad. The young poet and writer, Anwar Shā'ul [q.v.] joined him in editing the literary part of the weekly, and many other young Jewish poets and writers became contributors. Their works were among the first romantic poems and short stories published in 'Irāk, being influenced both by European literature and by the Arabic Mahdjar [q.v.] school in the USA. Shīnā and Anwar Shā'ul also encouraged theatrical activities among the Jewish community in 'Irāk, and among the plays performed was an Arabic translation of Corneille's *Le Cid* (1925). He also established, with other Zionist activists, The Hebrew Literary Association (*al-Djam'iyya al-'Ibriyya al-Adabiyya*) as a club and library, where Jewish journals in Hebrew, English and French were received.

realpatidar.com

In 1925 Shīnā started practising as a lawyer, serving the Jewish community and defending its interests after the rise of the Nazi and Palestinian national activities in 'Irāk, where there were many Palestinians headed by the Mufti al-Hādīj Amīn al-Husaynī [q.v. in Suppl.], who were later, in October 1939, joined by their leader. Their activities culminated in the *coup d'état* of Rashīd 'Alī al-Gilānī, defeated in May 1941 by the British Army, followed by the Pogrom against the Jews of Baghdād on 1-2 June 1941.

In 1947 Shīnā was elected a member of the 'Irāqī Parliament and served until 1951, the most critical years in the history of the Jews of 'Irāk, which ended with their mass immigration to Israel. Shīnā himself resigned from the Parliament and emigrated to Israel, where he worked as a lawyer, serving his community and protesting against what he termed "discrimination against the Jews of 'Irāk", whose properties were frozen in 'Irāk and who were without community leaders in the new Israeli society. In 1956 he unsuccessfully stood as a candidate for the Knesset. He continued as a lawyer and activist until his death at Ramat-Gan in 1978.

(S. MOREH)

**SHĪNĀSĪ**, İbrāhīm Efendi (1826-71), Ottoman poet, journalist, playwright. A pioneer in the Westernisation of Ottoman Turkish literature, İbrāhīm Shīnāsī Efendi (in modern Turkish: İbrahim Şinasi) is credited with many firsts—the first play for the legitimate stage, the first translations of French poetry, the first privately-owned Turkish newspaper and some of the earliest journalistic articles, the use of punctuation, incipient modern literary criticism in prose, as well as the introduction of the norms and concepts of French political theories, culture and literature.

Shīnāsī was born in Istanbul in 1826, the son of an artillery officer. After his early education at a neighbourhood school, he became an apprentice clerk at the Bureau of the Tophane Imperial Arsenal, where he was trained by several senior staff members in Arabic, Persian and French.

In 1849, through the good offices of the Grand Vizier Muṣṭafā Reshīd Pasha [q.v.], he was sent to France where, in addition to literature, he studied public finance. Gaining fluency in French, he reportedly made the acquaintance of Renan, Lamartine, and the family of the prominent orientalist Sylvestre de Sacy; according to some sources, he became associated with the Société Asiatique.

During his studies in Paris, Shīnāsī prepared a compilation entitled *Durūb-i emthāl-i 'othmāniyye* ("Ottoman proverbs"), published in 1863. The first edition contained about 1,500 proverbs and some 300 aphorisms, couplets, and expressions. (In 1870 he published an enlarged second edition which featured more than 2,000 proverbs and over 400 maxims.) This work, with its substantive introduction on paremiology and folk wisdom, stimulated among the Ottoman educated élite an interest in popular culture.

Upon his return to Istanbul in 1852 or early 1853, he worked briefly at the Arsenal again, following which the sultan appointed him to the Council of Public Education. Although some literary histories claim that

he also served as a member of the *Enḡümen-i Dānīsh*, this has never been documented. Shīnāsī's official status wavered, depending on the political vicissitudes of his protector, Muṣṭafā Reshīd Pasha.

In 1859, Shīnāsī published *Terdjüme-yi manzûme* ("Translation of verses"), a small selection of poems by Racine, Lamartine, Gilbert, La Fontaine, and Fénélon, rendered into Turkish verse. E.J.W. Gibb attributes considerable seminal influence to this volume, claiming that the translations "mark the turning-point in the history of Ottoman poetry". Shīnāsī's renditions are quite smooth in style and faithful to the originals. They served as the first Ottoman taste of the poetry of the Western world in Turkish.

In October 1860, Shīnāsī started to publish, together with Āgāh Efendi (1832-85), a weekly newspaper named *Terdjümān-i Ahwāl* ("Interpreter of events"), the first unofficial, privately-owned Turkish newspaper. Here, Shīnāsī articulated his commitment to enlighten the public "in an easily comprehensible language".

*Shā'ir ewlenmesi* (Eng. tr., *The wedding of a poet*, by E. Allworth, New York 1981), a one-act comedy, written by Shīnāsī in 1859, was serialised in *Terdjümān-i ahwāl* in 1860 and published in book form the same year. Designed as a play of social criticism, mainly of the hazards of the traditional custom of arranged marriages, it interfuses some of the techniques of European comedy with devices and personae from the *Orta oyun* [q.v.] (the Ottoman *Commedia dell'arte*). *Shā'ir ewlenmesi* stands as the first Turkish play written for the express purpose of being produced on the legitimate stage. Its first production, however, did not take place until 1908 (in Salonica).

Because of disagreements with Āgāh Efendi, Shīnāsī left *Terdjümān* in the spring of 1861, and launched, in June 1862, his own journal *Taşvîr-i afkâr* ("Chronicle of opinions"), which became a platform for innovative ideas based on European-type rationalism and technological reform for the salvation of the Ottoman state. Shīnāsī wrote many articles dealing with urban problems, agriculture, industry, and governmental corruption, and advocated the rule of law based on the rights of the people, political rationalism, secularisation, and a system of governance sustained by national sovereignty, freedom, and citizenship rights.

Shīnāsī was joined in 1863 by the young Nāmīk Kemāl (1840-88 [q.v.]), in spreading the vision not only of a progressive civil society but also of a modern literature for the Ottomans. Together in *Taşvîr-i afkâr* they endeavoured to promote a new *Weltanschauung* derived from Western civilisation. Many of their themes and recommendations came to play a prominent role during the last half-century of the Ottoman state.

Significantly, it was Shīnāsī who introduced to the Ottoman political and intellectual circles such concepts as "republic", "popular sovereignty", "art for society's sake", "political economy", "secularism", etc. In both *Terdjümān* and *Taşvîr*, he pursued his goal of not only "informing the people about events and new ideas" but also "communicating to the government the will of the nation". In this two-way process, he revitalised the vernacular through his use of a simplified vocabulary and streamlined journalistic style. Shīnāsī's *Taşvîr* printing house constituted a meeting place for young Ottoman men of letters and intellectuals and a breeding-ground for ideas seeking to create a new Ottoman society and literature.

In 1865 Shīnāsī departed for Paris, leaving *Taşvîr-i afkâr* in Nāmīk Kemāl's hands. His departure was probably prompted by his fear of becoming implicated in a plot to assassinate the Grand Vizier Ali

Pasha. In Paris he was supported by Muṣṭafā Fāḍil Pasha, but had little or no contact with the Young Ottomans, choosing to stay out of politics. During his four years there, interrupted by a short visit to Istanbul, he concentrated on a dictionary of the Turkish language. This ambitious enterprise, as reported by Ebūz-ziyā Tewfīk (1848-1913), was left unfinished, with 19 of the 31 letters of the Ottoman alphabet completed and 14,000 pages produced—a claim disputed by numerous scholars. No part of this dictionary—which Shināsī had discussed with the linguist Emile Littré and the orientalist Pavet de Courteille—has survived. (Reportedly, Shināsī had also produced, possibly around 1855, a grammar for schools entitled *Mebādī-yi ‘ilm-i sarf*, but no copy of it has ever been found, if it was published at all.) Following his return to Istanbul in the fall of 1869, Shināsī rented a small house, where he also set up a printing press to republish some of his books. He died on 13 September 1871.

Shināsī's poetry, most of it written in the early period of his life, is hardly distinguished by high literary merit. He published *Muntakhabāt-i aṣḥār* ("Selected poems") in 1862, and his complete *Dīwān* came out posthumously in 1885. His output consists of an *ilāhī* (hymn), a *münāḍiāt* (supplication), a small number of *ghazals*, a few chronograms and encomiastic verses, a handful of "parallel" or "imitative" poems and didactic verses, and independent (often aphoristic) couplets. Among his most appealing poems are several La Fontainesque fables. His major poems include four *kaşidas* composed for his benefactor Muṣṭafā Reşīd Pasha. These are of interest for several reasons, aside from the fact that Shināsī wrote full-scale panegyrics exclusively for this Grand Vizier. He introduced formal revisions (principally the elimination of the *nesib* or exordium section), used the *kaşida* as a vehicle for his positivist ideas, and praised his subject in such terms as "the president of the nation of virtue", "the apostle of civilisation", even courageously asserting that "your legislation puts the Sultan in his place".

Shināsī employed conventional Ottoman stanzaic forms and adhered to the aesthetic values of *Dīwān* (classical, elite) poetry. His innovations were of a limited nature: they indicated, however, the possibility of taking certain liberties with tradition. He composed one whole poem in what he called "pure Turkish" in which he kept out words borrowed from Arabic and Persian. In some of his critical writings and in a polemical exchange, he helped to introduce a new and strong sense of the integrity of the Turkish language.

Shināsī was also the first Ottoman poet to translate some of his own lines of poetry into French. (Samples of his renditions appear in his *Muntakhabāt* and *Dīwān*.) His universalist ideal is contained in one of his most frequently quoted lines: "My nation is mankind, my country is the face of the earth".

**SHĪNĪ, SHĪNĪYYA, SHĀNĪ** (A.), a type of mediaeval Arabic warship used in the Mediterranean. The *shīnī* is mentioned briefly in *SAFINA*. 1 (b) as a type of galley, but its importance in naval history of the time merits separate notice.

Ancient and mediaeval Mediterranean shipbuilding is poorly documented, and, while the study of cargo-carriers has been somewhat enhanced by an increasing number of discovered wrecks, the only ancient wreck of a war vessel we possess is the Punic ship of Marsala (A. Guillermin, *Archaeologic excavations and experimental archaeology. The Punic ship of Marsala and Trirème Olympias*, in *Tropis*, iii [1995], 193-6). We are left mainly with the literary evidence and a few schematic designs of ships in both the Arab and Byzantine sources, the comparative study of which is necessary before any conclusions are drawn.

The type of the Byzantine *dromon*, which was used as a model for the Arab *shīnī*, followed the classical Mediterranean tradition, i.e. the "shell technique" of shipbuilding, the ribs being added after the planks had been joined together (M. Daefler, *Late 17th century conception of French galleys*, in *Septième Colloque International d'Archéologie Navale*, Saint-Vaast-la-Hougue 1994, 15). Nevertheless, the Byzantine *dromon* of the middle 7th century, and consequently the first Arab warships, were very different from the earlier *dromons* of the 5th and 6th centuries, which had been swift, small, 30-oared vessels (the word *dromon* comes from *δραμῆν* "to run, to move quickly").

Though the Arab *shīnī* followed in general the type of the Byzantine *dromon*, there was at first a substantial difference in that the fighting crew engaged were better-paid Muslims, while the sailing crew were lesser-paid Christian Egyptians. Eventually, of course, Muslim sailors with nautical experience entered the ranks of the sailing crew.

The 7th-century Byzantine *dromon* and the Arab *shīnī* sacrificed speed and manoeuvrability for heavy machine equipment, mainly stone-throwing catapults, hence the main weapon of earlier times, the ram, was abandoned by both types of ship: thus in the famous naval battle of *Dhāt al-Şawārī* (34/655-6 [q.v. in Suppl.]) no use of the ram is reported (see V. Christides, *The naval engagement of Dhāt al-Şawārī A.H. 34/A.D. 655-56*, in *Byzantina*, xiii [1985], 1331-45).

Arab and Byzantine naval technology reached their peaks in the 9th and 10th centuries, when, in addition to the heavy stone-throwing machinery, Greek Fire began to be used by Arabs and Byzantines on their warships, and then in Mamlūk times, gunpowder and cannons (see *NAFT*, 2, and *BĀRUD*, iii, and the chapter on incendiary weapons in A.Y. al-Hassan and D.R. Hill, *Islamic technology*, Cambridge 1986, 106 ff.).

The Arabic sources provide us with many details concerning the function of the Arab warships which do not appear in other sources. Thus the *shīnī* was two-banked, with a separate leader in each bank, and in the lower level, a sick bay was placed with the proper medical personnel (Christides, *Naval warfare in the Eastern Mediterranean (6th-14th centuries). An Arabic translation of Leo VI's Naumachica*, in *Graeco-Arabica*, iii [1984], 143). Like its counterpart the *dromon*, it had lateen sails, originally two and later three. Arab warships were usually painted black and their sails were white (idem, *Byzantine dromon and Arab shīnī*, in *Tropis*, iii [1995], 118). The *shīnī* was propelled by sails and oars. Ibn al-Mammātī states that it sailed with 140 oars, leaving open the question of the number of oarsmen as well as that of the fighting men who were placed above them (*K. Kawānīn al-dawānīn*, ed. A.S. Atiya, Cairo 1934, 340). It seems that in the Arab warships, as in the Byzantine *dromons*, one person manned one oar; we can assume, therefore, that in every war vessel there were about 150 to 165 sailors, if we

add the supplementary crew (Arabic iconography attests the use of one man to each oar in each ship; see D. Nicolle, *Shipping in Islamic art: seventh through sixteenth century A.D.*, in *The American Neptune*, xlix/3 [1989], 168-97). Nevertheless, the number of the oarsmen in the average *shīnī* appears different in the Arabic sources and cannot be defined precisely; likewise, the number of the warriors, which probably varied in each warship, is unknown.

The average *shīnī* had a castle placed next to the main sail or just under it (for the position of this castle in both Arab and Byzantine warships, see Christides, *Ibn al-Manqalī (Manglī) and Leo VI. New evidence on Arabo-Byzantine ship construction and naval warfare*, in *Byzantino-slavica* [1995]).

In addition to the average *shīnī*, there were bigger warships with the same name but with a crew of 200 (Ibn al-Manglī, *al-Adilla al-rasmiyya fi 'l-ta'ābī al-harbiyya*, ed. M.S. Khaṭṭāb, Baghdad 1988, 243).

*Bibliography*: Given in the article.

(V. CHRISTIDES)

**SHĪNKĪTĪ**, a town of the mediaeval Islamic Sahara.

Various hypotheses have been put forward regarding the name *Shīnkīt/Shīndjīt*, of which the following two merit discussion. The first gives to it the meaning "source of horses", with *sen* = "sources" and *gītī* = "horses". According to the various proponents of this etymology, the word's origin could be either from Azayr or Azer (a Soninké tongue, now extinct, formerly spoken in the Western Sahara) or else Zenāga Berber. The second hypothesis derives the name from *shīn*, said to be a deformation of *sen* or *sin*, which in the Adrar and the Tangant conveys the idea of height in relation to the rest of the countryside and *gītī*, the name of a hill near the town of *Shīnkīt*.

Although *Shīnkīt* was to become famous to the point that it was used to denote the whole Moorish territory from *Sākīyāt al-Hamrā'* to the Senegal River, it was never mentioned by the mediaeval Arabic geographers. Is this because the town did not at that time exist, or because it was relatively little known, compared to the great urban centres of the Sahara? The question remains open, but it is nevertheless true that Valentim Fernandès, a Moravian author living in Lisbon, was the first, in his *Description of the African coast from Ceuta to the Senegal* (1506-7), to draw the attention of the Western world to the existence of *Shīnkīt*. However, this does not tell us anything about the origin of the town: at the earliest, in the 14th century, according to H.T. Norris, in his art. *MŪRTĀNĪYĀ*, at VII, 624a, whilst al-Khalīl al-Nahwī, *Bilād al-Shīnkīt, al-manāra wa 'l-ribā'*, Tunis 1987, 72, claims that *Shīnkīt* was actually founded in 660/1262 on the ruins of an ancient *Shīnkīt* (the mythical Abbayr) founded in 160/772.

From the 17th century onwards, the Banū Hassān, a branch of the Arab Ma'kil tribe, came into the western Sahara with permanent effects there, imposing their dialect (*Hassāniyya*) and gradually establishing amirates, including that of the Adrar, in which *Shīnkīt* was situated. Nevertheless, out of respect for its scholars and saints, the *amīrs* of the Adrar never levied tribute on *Shīnkīt*, which, despite its fame, never became a political capital, although it became more renowned than any other town of Mauritania in the central lands of the Muslim world. The men of scholarship and piety of *Shīnkīt* were, in this regard, respected everywhere, and attracted students, all the Islamic sciences being taught in their mosques or in the homes of these '*ulamā'*. When they completed their

studies and left *Shīnkīt*, most of these former students would style themselves *Shanākīta* (pl. of *Shīnkītī*).

The Pilgrimage to Mecca also contributed to the fame of *Shīnkīt*, whose permanent population can never have exceeded more than a few thousand persons at most. However, according to Sīdī 'Abd Allāh b. al-Ḥādīdī Brāhīm (d. 1233/1878), author of the sole treatise on the history of *Shīnkīt* (the *Ṣaḥīḥat al-naḥl fi 'Alawīyyat Idaw 'Alī wa-Bakrīyyat Muḥammad Ghūl*), "numerous pilgrims from different parts of the Moorish lands used to join the Pilgrimage caravan of *Shīnkīt* when leaving on this quest. All the pilgrims of the Muslim West used to pass as *Shanākīta*". Hence these persons formed a bridge between *Shīnkīt* and the Orient, with several of them settling in this last region, retaining their *Shīnkītī* genealogy and decisively contributing to the cultural influence of this small town. In the course of their travels, they would bring back books and treatises procured in Arabia or elsewhere in the Orient or Muslim West and containing the conventional learning of the Islamic sciences, which they would then spread amongst the peoples of the Southern Sahara, still in course of being Islamised.

As intermediaries between the Arab world and the black peoples, the *Shanākīta*, notably the Idaw 'Alī of *Shīnkīt*, contributed considerably both to the spread of Islam, in the shape of the Ṣūfī brotherhoods, and to the spread of Arabic language and culture into the south of the Sahara, a region which they visited also for commercial purposes.

(OUSMANE KANE)

**AL-SHĪNKĪTĪ** (SĪD) AḤMAD B. AL-AMĪN (b. 1280/1863 or 1289/1872, d. 1331/1913), Mauritanian scholar and author, whose reputation in the Muslim World principally rests upon his written description of Mauritania and the Western Sahara and his appreciation of the poetic masterpieces of the Moors in Classical Arabic and in their colloquial dialect, *Hassāniyya*. He was born into a scholarly family of the Idaw 'Alī Zwāya who were resident in al-Madhardhra in the Trārza [see *MŪRTĀNĪYĀ*]. His mother, a pious and well-educated lady, stemmed from the *Aghlāl* of *Shīnkīt*. His early years were spent in the study of Arabic language and literature and the Islamic sciences in the nomadic schools. Later he

undertook extensive journeys inside Mauritania and he stayed for some time at the *zāwiya* of Shaykh Mā' al-'Aynayn [q.v.] at Smāra.

He undertook the *ḥajj* in 1317/1899 and he met scholars in Mecca and Medina. He returned to Egypt, though he made *détours* into Syria, to Izmir, Istanbul and into Russia. Why he chose to visit the latter is unknown, nor is it known where he stayed, though a visit to Kazan seems likely. He arrived in Cairo in 1320/1902. He lived there for the remainder of his bachelor life, writing and publishing books and mixing socially with the scholars of al-Azhar.

His masterpiece, *al-Wasīf*, a compendium of Mauritanian verse accompanied by a concise survey of the geography, history, folklore and proverbs of the Moors, made the Arabs of the *Maghrib* aware, for the first time, of the profound scholarship which was then a living tradition in the furthest Saharan regions. He was the first scholar to write extensively on the prosody and the oral and sung poetry (*legħna*) amongst the *Shanākīta*. *Ḥassāniyya* is extensively vocalised in his book. Few of the Mauritanian classical poets whom he quotes have biographies. An exception is Muḥammad Maḥmūd b. al-Talāmīd al-Turkūzī, a Mauritanian scholar who was highly regarded in Egypt and with whom he had sharp exchanges on religious and literary matters (*al-Wasīf*, Cairo 1378/1958, 381-97).

Aḥmad b. al-Amīn was devoted to Sūfism. He, together with Shaykh Abū Bakr Muḥammad Luṭfī, wrote a commentary upon *Ṣaḥāriḍī al-lu'lu'* (Maṭba'at al-Hilāl, Cairo 1324/1906) by al-Sayyid Tawfīk al-Bakrī (see F. de Jong, *Turuq and Turuq-linked institutions in nineteenth-century Egypt*, Leiden 1978, 182-8). In the foreword to this commentary, Aḥmad b. al-Amīn remarks (in eloquent *saḍī'*) that, having left Shinkīṭ and having travelled extensively in the Middle East, he was honourably received by al-Sayyid Tawfīk "chief of the *Sharīfs* of Egypt and *Shaykh* of the Sūfī orders". He wrote a spirited defence of the *Tidjāniyya tarīka*, of which he was a member, against attacks made against it by Shaykh Yūsuf al-Nabhānī.

*Works.* Ahmed-Baba Miské (1970, 35-6), lists fourteen works by the author. Some of them were original compositions, others were works edited by him. Most of the latter are commentaries upon pre-Islamic and early Islamic poetry. A *Diwān* of al-Ḥuṭay'a's verse is also attributed to him. It is unlikely that the list, which Miské provides, is complete. In view of the fact that these works (including *al-Wasīf*) were printed between 1302/1902 and 1331/1912, the author was astonishingly productive during the years when he was resident in Cairo. He was helped by Aḥmad Taymūr Bāshā, the keeper of the Taymiyya library and he was given every assistance in his literary activities. Two works (*Taḥārāt al-'Arab*, 1326/1908 and *Diwān Tarafa b. al-'Abd*, 1327/1909) were printed in Kazan. It is perhaps significant that, following his Russian visit, Cairo was to be the forum for the Universal Islamic Congress, advocated by Ismā'īl Gasparli [see GASPRINSKY], held in 1907 [see RMM, iv [1908], 103 ff.).

**SHINTARA** (or *Shantara*), Arabic name of the modern Cintra, a little town in Portugal, at a height of 207 m/700 feet above sea-level, 28 km/16 miles to the north-west of Lisbon. It was quite prosperous under Muslim rule, and the Arab geographers remark on the fertility of the country round; its apples were universally famous. Cintra always shared the destinies of its great neighbour Lisbon as long as it was in the hands of the Muslims; it was reconquered in 1147 by Alfonso Henriquez, king of Portugal. After it had become Christian again, it was the favourite residence of the Portuguese kings; it was in the palace of Cintra that Dom Sebastian decided in 1578 upon the expedition against Morocco which ended disastrously on the banks of the Wādī 'l-Makhāzin near al-Kaṣr al-Kabīr.

The modern Cintra is dominated by the ruins of an old stronghold of the Muslim period. Of this fortress, now called *Castello dos Mouros*, built at a height of 429 m/1430 feet, there only remain two masses of masonry with the remains of a chapel and baths.

**SHĪR** [see ASAD].

**SHĪR WA KHŪRSHĪD** [see NISHĀN. 1].

**SHĪR 'ALĪ** (ca. 1823-79), Amīr of Afghānistān 1863-79.

He was the fifth son and successor of Amīr Dūst Muḥammad (d. 9 June 1863). His mother, Khadīdja, was both Dūst Muḥammad's favourite wife and a Bārakzay (daughter of Raḥmat Allāh Khān Popalzay) and probably for these reasons he was nominated heir following the death of his full brother, Ghulām Ḥaydar, on 2 July 1858, having previously served as governor of Ghaznī. In 1863 Shīr 'Alī's claims were opposed by his elder half-brothers, Muḥammad Afḍal (1811-67) and Muḥammad A'zam (1818-69), other brothers joined the conflict and a civil war ensued which lasted until 1869. Shīr 'Alī's forces were alternately victorious and defeated, and in 1867 he was reduced to the possession of Harāt only, with Afḍal and then A'zam ruling in Kābul. In 1868 he recovered Kandahār and then Kābul, although it was not until the beginning of 1869 that he finally defeated A'zam and his nephew, the future Amīr, 'Abd al-Raḥmān (ca. 1844-1901, the only son of Afḍal) and re-established full control of Afghānistān.

As Amīr after 1868, Shīr 'Alī continued and extended the policy of his father in attempting to build a stronger, more centralised state in Afghānistān. He suppressed rebellions by his sons, Muḥammad Ya'kūb (ca. 1849-1923) and Muḥammad Ayyūb (ca. 1856-1914), and extended his authority over northern Afghānistān. He centralised the administration, established a rudimentary system of ministries, developed communications including roads, bridges and a postal system (the first Afghan postage stamps appeared in 1870), attempted to reform the currency with the introduction of the *afghānī* in place of the former *rupee*,

and founded a periodical, *Shams al-Nahār* (1875-9) and the first state school. He restricted the political influence of the 'ulamā', and exalted the status of the ruler, seeking but not adopting the title of Shāh. In 1874 he established a short-lived consultative council. Revenues were increased three-fold between 1863 and 1878. Over 40% of the revenue was spent on the army, which was the central feature of Shīr 'Alī's reforms. He reduced the size of the tribal militia and the feudal army and strengthened the standing army, which was trained and equipped in European style, modelled on the British-Indian forces and often led by British-trained officers. By 1878 the standing army numbered 56,000, including 58 infantry and 12 cavalry regiments. In addition, Shīr 'Alī developed the artillery, creating workshops to manufacture modern iron weapons. By 1878 he had 370 guns. The workshops also manufactured small arms including Sniders and Martini Henrys. The army was deployed through Afghānistān mainly with a view to the needs of internal security. In developing the state institutions, Shīr 'Alī relied especially on Ghilzays and Wardaks, who provided 80% of the standing army. These tribes, together with Persians, Harātīs and Parsiwāns, dominated the administration. The Durrānī tribes were largely excluded from power.

Shīr 'Alī's foreign affairs were dominated by his dealings with Russia and, especially, with British India. During the civil war, the Government of India had followed a policy of non-interference, known as "masterly inactivity". The various contenders for power had been given *de facto* recognition in accordance with their holdings, but material assistance claimed under the 1857 treaty made with Dūst Muḥammad was refused until November 1868. In March 1869 Shīr 'Alī met the new Governor-General, Lord Mayo, at Ambāla, and asked for an offensive-defensive treaty, a regular subsidy and recognition of his son, 'Abd Allāh Džān (1862-78), as heir. Mayo offered only general assurances, money and arms, including artillery. Shīr 'Alī was seemingly satisfied, although in subsequent years he renewed his demands. British interest in Afghānistān derived from border problems, commercial hopes and, especially, concerns about the expansion of Russia in Turkistān towards the northern Afghān border. Without consulting the Amīr, Britain sought agreement with Russia on the northern boundaries of Afghānistān, which were roughly defined in 1873. The Amīr was obliged to abandon his hopes of extending his territories beyond the Oxus. Britain also assumed responsibility for defining part of the western frontier with Persia; by the Goldsmid arbitration of 1873, Sistān was divided between Persia and Afghānistān. Shīr 'Alī's unhappiness was further increased by the British occupation of Quetta [see *kwāṭṭā*] on 8 December 1876.

The occupation of Quetta was one element in a new British policy (the so-called "forward policy") inaugurated by the Conservative Government in 1875 and carried on by the Governor-General, Lord Lytton, from 1876. A major background factor in his new policy was the development of the Eastern Crisis of 1875-8, which led to war between Russia and the Ottoman Empire in 1877 and threatened the possibility of war between Britain and Russia. Such a war could have extended to Central Asia, and the attitude of Afghānistān became of major importance. Lytton was prepared to offer Shīr 'Alī a new alliance, stronger guarantees of protection, an annual subsidy and recognition of 'Abd Allāh Džān, in return for the acceptance of British agents in Afghānistān and effec-

tual British control of Afghānistān's foreign relations. Negotiations were carried on in 1876 and 1877, but no agreement had been reached when Lytton broke off negotiations in March 1877. Lytton now applied pressure on Shīr 'Alī either to force him to agree to British demands or to overthrow him. An Ottoman embassy was sent to Kābul in an effort to persuade the Amīr to renounce contacts with Russia. The reception of a Russian envoy in Kābul in July 1878 gave Lytton the excuse to demand the reception of a British mission and a promise by the Amīr to sever all relations with Russia. In September 1878, Shīr 'Alī refused to admit the British mission and in November, Lytton's forces invaded Afghānistān. Shīr 'Alī's army proved incapable of effective resistance and in December Shīr 'Alī fled north, resigning authority to his oldest and former rebel son, Muḥammad Ya'kūb ('Abd Allāh Džān had died in August 1878). It is uncertain whether Shīr 'Alī formally abdicated in December. On 21 February 1879 Shīr 'Alī died at Mazār-i Sharīf and was succeeded briefly by his son Muḥammad Ya'kūb Khān.

(M.E. YAPP)

**SHĪR SHĀH SŪR**, FARĪD AL-DĪN, son of Miẓān Ḥasan Sūr, the founder of a line of Dihlī Sultans, the Sūrīs [*q.v.*], which ruled during the interval between the first and second reigns of the Mughal Humāyūn [*q.v.*], sc. 947-62/1540-55, Shīr Shāh's own reign spanning 947-52/1540-5. The Sūrīs were a small Afghān tribe from Rōh [*q.v.*], the north-west frontier region of India.

His father Miẓān Ḥasan seems to have been in the service of one of the leading nobles of the Lōdī Sultans of Dihlī, the Khān-i A'zam 'Umar Sarwānī and then from 901/1496 was in Dīawnpur [*q.v.*], where he received the *pargana* of Sahsarām [*q.v.*] as his *iktā'* for maintaining 500 *suwārs* or cavalymen. Farīd al-Dīn himself entered the service of Ibrāhīm Khān Sarwānī till the latter's death in battle in 926/1520 against the Rājput Rānā Sāṅgā of Mēwāī [*q.v.*], and then entered that of Sultan Ibrāhīm Lōdī till the latter's death at the first battle of Pānīpat [*q.v.*] (932/1526). It was shortly after this that Farīd al-Dīn was awarded the honorific of Shīr Khān, in token of his bravery in the field, by Bahār Khān Nūhanī, rebel against the Lōdīs in Bihār, where he had assumed the title of Sultan Muḥammad Shāh and had become the rallying-point for Afghān opposition to the incomer Bābur [*q.v.*]. Shīr Khān nevertheless gave his support to Bābur in 933-4/1527-8, whilst still retaining the confidence of the Afghān chiefs in Bihār who supported Maḥmūd Lōdī, proclaimed sultan there against Bābur.

With Humāyūn's victory of 937/1531 over the Afghāns, Shīr Khān made his peace with the Mughal, retaining his base in Bihār as Humāyūn's vassal and warding off invasions from Bengal in 938/1532 and 940/1534. In 941/1535 he assumed the title of Shīr Shāh and struck his own coins, a declaration of independence, whilst Humāyūn was pre-occupied in Guḍjarāt. He defeated the sultan of Bengal Maḥmūd Shāh and made him his tributary, with a further expedition against the latter's capital Gawr or Lakhnawātī [*q.v.*] in 944/1537. Humāyūn invaded Shīr Shāh's territories from Agra, but was repulsed and twice defeated in 946/1539 and 947/1540, on the second occasion being compelled to retreat hurriedly to the Panḍjāb and then Sind and eventually to Persia.

Shīr Shāh was now master of northern India, and began his five years' sultanate in Dihlī and Agra. He eliminated various rival chiefs and nobles and, in anticipation of extending his empire southwards, attacked Mālwa [*q.v.*] and drove out its ruler Mallū Khān Kādir Shāh, after which he entrusted the governorship of Mālwa to Shadjā'at Khān Sūr; and in 949/1542-3 he attacked the Rājā of Dīodhpur [*q.v.*] in his principality of Mārwar, in Rājputānā. Shīr Shāh's death came about accidentally during the siege of Kāliṇḍjar in 952/1545. He was succeeded by his son Islām Shāh.

Shīr Shāh was one of India's great rulers, whose achievements might well have equalled or surpassed those of Akbar, had his reign not been cut short by death. In military affairs, he employed artillery and musketeers extensively in his armies. He is praised by historians like Badā'ūnī for the peace and order of his kingdom, and for his caravanserais and other provision for travellers and merchants, Muslim and Hindu alike, along the roads. He broadened the base of his originally Afghān support by awarding positions and estates to Rājput chiefs also, here foreshadow-

ing Akbar's policy. He placed the governance of his empire on a firm footing by retaining the *sarkār*, composed of a number of *parganas*, as the optimum fiscal and administrative unit.

(I.H. SIDDIQI)

**SHĪR** (A.), poetry.

1. In Arabic.

(a) The pre-modern period.

It is the supreme ornament of Arab culture and its most authentically representative form of discourse. The ideas articulated by poetry and the emotional resonances which it conveys earn it, even in the present day, where numerous new literary forms are in competition with it, the approval of scholars and the populace alike.

Despite the phonetic resemblance, *shīr* is totally unconnected with the Hebrew *shūr*; the 'ayn is a "hard" consonant which persists in the roots common to the two languages. The term is attested in ancient Arabic (G. Lankester Harding, *An index and concordance of pre-Islamic Arabian names and inscriptions*, Toronto 1971, 350-1) and very often used in pre-Islamic poetry.

I. *Shīr* and its synonyms.

The equivalents here are not simple synonyms; they stress one aspect or another of the poetics of *shīr*: (i) It is appropriate to cite in the first instance the terms, the content of which suggests the notion of quality and of major artistic merit; thus *kaṣīd* would denote artistic poetry as opposed to *radīaz* (Lane, root *k-s-d*, 2531b-2532a; 'Alī al-Djundī, *al-shu'arā' wa-inshād al-shīr*, Cairo 1969, 13). The same is true of *kaṣfī*: *kaṣfī*, in the first form, signifies the honouring of some person with a mark of distinction (Ibn Kutayba, *al-shīr wa 'l-shu'arā'*, 61; al-Nahshālī, 27, quoting Abū Tammām; Goldziher, *Abhandlungen*, i, 3, 14-15; Gaudefroy-Demombynes, 60); the same is true of *durr* (poetry) or *durar* (sing. *durra* "pearl", *Sira*, Göttingen 1858-60, 862, l. 10; *Lā*, xvi, 56, l. 19, the poet al-Zafayān; Ibn Kutayba, *op. cit.*, 508, l. 15; Labīd, *Diwān*, Leiden 1891, 22, l. 15; *Aghānī*<sup>3</sup>, x, 285, l. 20) and *al-muḥabbār* (fabric of high quality manufactured in the Yemen, Ru'ba, *Diwān*, Berlin 1903, 61, xxxvi, v. 22; Ibn al-Mu'tazz, *Tabakāt al-shu'arā'*, 385, quoting 'Alī b. 'Aṣim al-'Anbarī, Goldziher, *op. cit.*, 129-31);

(ii) terms which express perfect order and symmetry are also attested. *Naẓm* "the arrangement of pearls in a necklace" is said to express better than anything else this necessity, raised to the status of a guiding principle (*al-Mufaḍḍaliyyāt*, Oxford 1918, 717, l. 14; al-Marzubānī, *al-Muwashshah*, Cairo 1343, 14, l. 14; 'Ubayd Allāh b. Kays al-Ruqayyāt, *Diwān*, Vienna 1902, 238, l. 1; al-Djāhiz, *Kiṭāb*, in *Rasā'il*, Cairo 1979, ii, 159, l. 12; Muḥammad al-Kalā'ī, *Ahkām san'at al-kalām*, Beirut 1985, 40; Muḥammad Zaghlūl Sallām, i, 37). Another necklace of pearls, *simt*, denoted an entire poem; thus the *Mu'allakāt* were called *sumūt*; in the same range of ideas, the poem of 'Alkama was considered the best necklace of all time, and each of its verses, a pearl. *Nasāḍja*, sometimes associated with *ḥaka*, *nasāḍja* and *nasāḍja* "to weave, weaving" (see Ibn Khaldūn, *al-Muḥaddima*, iii, 332) belong to the same category (Wellhausen, *Lieder der Hudaibiten*, Berlin 1884, 116, l. 17; Ibn Kutayba, *K. al-Ma'ānī al-kabīr*, Haydarābād 1369/1946, 633, l. 19; 814, l. 9; *Abū Dahbāl*, in *JRAS*, [1910], 1051, l. 2; al-Marzubānī, *op. cit.*, 318, relates an opinion of Marwān b. Abī Ḥaṣṣa, *innī kad ḥukū kāfiyat<sup>m</sup> tuwāzīnu ḥādḥā 'l-shi'ra* "I have already woven [= composed] verses which constitute the equivalent of this poetry"; Goldziher, *op. cit.*, i, 132-3); (iii) the profession *ṣinā'a* in the sense of poetry is also attested (see below, *The poetics of effort*), and *adab* in the sense of rhymed speech, very frequent, is said to have insisted on a period of apprenticeship for the acquisition of culture by the novice-poet before full acceptance into the world of poetry. This equivalence seems to have been something ancient: in a tradition related by al-Nahshālī (*al-Mumtā'*, 24) the poet 'Abd Allāh b. Aḥtam (*fl.* in the reign of the caliph 'Uthmān) takes pride in belonging to a family of *udabā'*. Textually, it is established from the last decades of the Umayyad period onward with Muḥammad b. Kunāsa (d. 161/778) (*Aghānī*<sup>3</sup>, xiii, 344, l. 4; see also Ru'ba, *Diwān*, 16, vi, 40; S.A. Bonebakker, *Early Arabic literature and the term Adab*, in *JSAI*, v, 1984, 399, *Bashshār* b. Burd; al-Mutanabbī: *anā 'l-ladhi nazara 'l-a'mā ilā adabi* "I am he whose poetry the blind man has seen", (see *al-'Arf al-tayyib fī sharḥ diwān Abi 'l-Tayyib*, Beirut 1887, 343, l. 11; Ibn Nubāta (d. 405/1015) who describes poets as *udabā'*, al-'Alawī, *Naḍrat al-ighrīd*, 347; see also al-Nahshālī, 18, 24). The term *karīd* would add the idea of cutting into the living flesh of words, a material which resists and does not let itself be easily manipulated (al-'Alawī, *op. cit.*, 8; Von Grunebaum, *Growth and structure*, 127; Ibn Kutayba, *ibid.*, 222, l. 14, 'Amr b. Kamī'a; al-Farrā', *Ma'ānī al-Kur'ān*, Cairo 1374, 140, l. 6, Ḥumayd b. al-Arkat; *al-Mufaḍḍaliyyāt*, 180 l. 1; al-A'shā, *Diwān*, London 1928, clv, v. 8; 'Umar b. Abī Rabī'a, *Diwān*, Leipzig 1901-9, 43, l. 3; Zubayr b. Bakkār, *Dhamharat nasab Kuraysh*, i, 42, l. 8; *al-Aghānī*<sup>3</sup>, x, 285, l. 2; Goldziher, *op. cit.*, i, 120-1).

Finally, it is appropriate to note that, for the archaic period and under the Umayyads, *shi'r* also signified *hidjā'* [q.v.]. Among numerous examples, worth mentioning is *fa-hādḥā awānu 'l-shi'ri sullat siḥāmuḥu* "this is the moment of [injurious] poetry, the darts of which have been drawn from the quiver" (*al-Ḥamāsa*, Bonn 1828, 646, l. 11, anonymous poet). Al-Farazdaq expresses grief on account of the false attribution to him of versified insults, a *shi'r* which he is supposed to have addressed to Khālīd b. 'Abd Allāh al-Kasrī (*wa-ra'awū 'alayya 'l-shi'ra wa-mā anā kulṭuḥu* "they have recounted [injurious] poetry under my name, that which I have never said", *Diwān*, Paris 1870, 222, l. 2; see also *al-Ḥamāsa*, 54, l. 28; al-Ṭabarī, ii, 1829,

l. 2; Ibn Kutayba, *Ma'ānī*, 708, l. 15; al-Balāḍhūrī, *Ansāb al-aṣhrāf*, v, Jerusalem 1936, 318; *Nakā'id al-Djārī wa 'l-Farazdaq*, Leiden 1905-12, 126, l. 17). Finally, al-Mutawakkil al-Laythī (d. ca. 72/691) claims that he has never aimed the darts of *shi'r* against a Muslim (*al-Aghānī*<sup>3</sup> xii, 165, l. 2).

## II. Periodisation.

At a very early stage, as early in fact as the 2nd/8th century, the familiar distinction between three periods in the development of poetry is already evident in the writings of al-Djumaḥī (d. 231/845): pre-Islamic, the poetry known as *mukhaḍram* straddling the Djāhiliyya and Islam, and Muslim poetry written by poets born after the Revelation (Ibn Sallām al-Djumaḥī, *Ṭabakāt fuhūl al-shu'arā'*, 1394/1974, 23-4). With Ibn al-Mu'tazz (d. 296/908), this periodisation becomes more precise, since he mentions the verse of the ancient poets (*kudamā'*), of the *mukhaḍramūn*, of the *awā'il al-islāmiyyīn* (the former Islamic poets), i.e. the Umayyad poets, and of the *muhdathūn* (modern poets), i.e. the poets of the 2nd-3rd/8th-9th centuries (*Ṭabakāt al-shu'arā'*, 201). Currently, in spite of certain criticism which will be revealed shortly, the periodisation of Ibn al-Mu'tazz is followed unanimously, although some contemporary scholars would have preferred a less political and more genuinely literary division. Gibb, Blachère, Bencheikh and Heinrichs propose a more strictly cultural periodisation, distinguishing between four periods. Gibb identifies the heroic age, the age of expansion, the golden age (750-1055), the silver age (1055-1258), concluding with the age of the Mamlūks (1258-1800). The problems of such a classification are obvious: it is based on value judgment and assumes uninterrupted decadence during the period extending from 750 to 1800. Blachère (*Moments tournants dans la littérature arabe*, in *SI*, xxvi [1966], 5-18) and Bencheikh (*Poétique*, 11-18) identify the four following divisions: archaic period, a century of transition, the golden age and decline. Filshinsky opposes the notion of cultural decline and asks how this conception is to be reconciled with the intense poetical activity attested in Egypt over three centuries (Filshinsky, *La périodisation dans la littérature arabe médiévale*, in *Narodī Azī i Afriki*, 1962/4, 144-56).

To avoid the pitfalls of a historical division, W. Heinrichs proposes distinguishing three movements in the development of Arabic poetry, each of which has produced a type of poetry. The first, that of the Hijāzī school, produced ca. 650 a form of love poetry characterised by a narrative theme describing the actions and reactions of persons drawn from life who address the audience directly (Heinrichs, 24). The second, that of *badi'*, opted for a poetry resolutely based on rhetorical embellishments, which have gradually been transformed into an artistic principle (25). "Fantastic" poetry constitutes the third movement: here the poet's attention is turned away from reality and towards imagery. The poets of this movement offer their public images which could have no real existence. In later times, poems overloaded with ornamentation constitute in fact a combination of all the known genres; the end result is an increase in affectiveness (52). This original conception, if recognised as valid, could prove extremely fruitful; however, Sperl denounces it as tainted with historicity and recommends that it should be avoided (*Mannerism*, 3-4).

## III. Poetic discourse and its original meaning.

(1) *Origins*. From the second half of the 3rd century A.D. onward, *shi'r*, in its contemporary form, seems to be associated with song (see below, the tradition mentioned by Sozomen; Djawād 'Alī, ix, 85-8; Adonis,

*Poétique*, 19-20; Ḥassān, *Dīwān*, London 1970, 420: "Sing in each poem that you speak, song is surely the favoured place of poetry"; Thuwaynī and 'Awwād, *al-Sulayk b. al-Sulka akhbāruhu wa-shi'ruhu*, Baghdad 1984, 32-3, 50-1; Ibn Sa'īd, *Nashwat al-ṭarab*, 'Ammān 1982, i, 436 and bibl., where the poet offers to sing (*ughannikum*) a poem to the keepers of the flocks; *al-Aghānī*<sup>3</sup> xviii, 78, where Durayd b. al-Ṣimma, at the time of the recitation of a poem, is said to be in the process of singing (*taghammā*); 'Alī al-Djundī, *op. cit.*, 6, 22, 24-5; Sh. Dayf, 51; Muḥammad Zaghlūl Sallām, i, 36). The poetry/song association should not be regarded as a peculiar phenomenon; among the Greeks, the poet is primarily called the bard, the singer. This *shi'r mughannā* contradicts the generally accepted hypothesis on the beginnings of this form. Originally, it is said, it was linked with *saḡī* and had taken its definitive form 150 years before Islam (al-Djumaḥī, *op. cit.*, 112-13; al-Djāhiz, *K. al-Hayawān*, Cairo, i, 74; resumed by al-Marzubānī, *op. cit.*, 74; al-Suyūṭī, *al-Muzhir*, Cairo n.d., ii, 477; according to al-Nahshālī, *al-Mumtā'*, 22, poetry allegedly took on its definitive form in the period of 'Abd al-Muṭṭalib b. Ḥāshim b. 'Abd Manāf or his father, in other words the great-grandfather or grandfather of the Prophet). Modern scholars do not disagree (Blachère, *HLA*, ii, 187-93; Adonis, *Poétique*, 22-3).

Vestiges of spontaneously-spoken poetry shed some light on the question. Al-Suyūṭī, quoting al-Aṣma'ī, relates that the most ancient poetry of the Bedouin of the Djāhiliyya, that of the *awā'il al-'Arab*, amounted to a small number of verses spoken by men and women in response to a pressing emotional need (*al-Muzhir*, ii, 477). The poems of the wells (a case of ancestral usage among the Semitic peoples, cf. the Biblical *shirat habe'er*, Num. xxi. 18-20), with striking structural, thematic and stylistic resemblances between the Bible and the verse of the Bedouin of the Djāhiliyya (Djawād 'Alī, ix, 410-12, has assembled a large number of specimens of this poetry), lullabies and other fragments associated with infancy (Sa'īd al-Daywadī, *Ash'ar al-tarkīṣ*, Baghdad 1970, *passim*), funeral dirges (Goldziher, *Bemerkungen zur arabischen Trauerpoesie*, in *WZKM*, xvi [1902], 308) and verses evoking skirmishes—all of these, rather than rhymed prose, supplied the first foundations.

Chronologically, it seems that *al-shi'r al-kaḍīm*, as it is known to us, is considerably older, if credence is to be given to a tradition cited by the Greek historian Sozomen. This historian writing at the turn of the 4th-5th centuries, relates that the Arabs of the desert celebrated their victory over Queen Mavia and the Roman emperor Valens (i.e. between 364 and 378) with the singing of ballads (*odai*). This plural suggests that there was a cycle of poems; this cycle preceded the fragments of a similar cycle, that of the War of Basūs [q.v.], the specimen generally regarded as the oldest verse chronicle of the Arabs. It would therefore seem reasonable to move the appearance of this material back in time to the last quarter of the 3rd century, by virtue of the poetical tradition associated with Ḥīra and, more specifically, with 'Amr b. 'Adī, the first Lakhmid king of Ḥīra whose maternal uncle Djadhīma lived in the 3rd century; 'Amr, a historical figure, was allegedly the author of poetic fragments in classical Arabic aimed at 'Amr b. 'Abd al-Djinn ('Irfān Shāhid, *The composition of Arabic poetry in the fourth century*, in *Studies in the history of Arabia*, ii, *Pre-Islamic Arabia*, Riyāḍ 1404/1984, 87-91).

(2) *The poetic ritual*. Arabic poetry is rooted in the oral; it was a voice before it acquired an alphabet, and what results from this is a concurrence between

speech and its affective and emotional connotations. This aspect guides discourse towards the following stable procedures: (i) a poetic style overlaid with a multiplicity of synonyms and comparisons; (ii) a predilection for allusive expression; (iii) recourse to a specialised language very different from daily speech; (iv) the use of stable poetic hybrids; and (v) the obligation to be predictable and to abstain from upsetting the audience (M. Zwettler, *The oral tradition of Classical Arabic poetry, its character and implications*, Columbus, Ohio 1978, 98-102, 109-20, 170-2; McDonald, *Orally transmitted poetry in pre-Islamic poetry, Arabia and other pre-literate societies*, in *JAL*, ix [1978], 26-30; J.T. Monroe, *Oral composition in pre-Islamic poetry*, in *ibid.*, iii [1972], 36-8).

The poet knew that if he wanted to be heard and not to risk disappearance into obscurity, he was obliged to construct his discourse on the basis of an auditory aesthetic. This demanded the exclusion from his discourse of distant allusions and of hermetic or ambiguous statements; otherwise, he was in danger of breaking the continuity of the contact which linked him to the public. Thus in the pre-Islamic period, poetry declared that which the audience already knew, and poetic individualism consisted not in what was said but in the manner of its saying. Oral recitation was to leave on Arabic poetry a mark that would last for centuries; it would be, in Bencheikh's words, an art of expression and not an art of creation. The recitation of pre-Islamic poetry was strangely reminiscent of a ritual; the officiating poet, who did not create poetry for himself, but for others, encouraged active participation on the part of his public as a means of appealing to the hearts of his hearers. Poetic engagement derived in this case from the limpidity of the verse and the familiarity of experienced listeners with the wording and with the thematic sequence of the *qasida* (A. Hamori, *On the art of medieval Arabic literature*, New York 1974, 21-2, 24; Adonis, *Poétique*, 34-5).

This ritualistic aspect of poetry was consolidated by the concept of divine inspiration, already current in the earliest periods. If traditions are to be believed, the great bards of the Djāhiliyya considered that the poem was the speech of a god or of a *djinnī* (demon). It is alleged in this context that 'Abid b. al-Abraṣ (*ḡl* in the Djāhiliyya) saw in a dream a messenger who touched him with a ball of hair (*kubba min sha'r*, cf. the graphical resemblance between *sha'r* and *shi'r*); he commanded him to awake; he rose and began reciting *radīaz* (*al-Aghānī*<sup>1</sup>, xix, 84) and became a poet. He is no different from the prophet Isaiah, who was touched by the angel with a burning coal, in a dream, and began prophesying immediately afterwards (Isa. vi. 5-8). More often, the *djinn* are evoked both before and after Islam (Muḥammad Zaghlūl Sallām, i, 34-5; *CHAL*, i, 41). Von Grunebaum has emphasised, rightly, their resemblance to the Muses: Hesiod, describing his encounter with the Muses, records an experience which is comparable, structurally, to that of Ḥassān with the *djinn* at the time of his first steps in poetry (*Aesthetic*, 333).

This discourse, communicated to the poets by supernatural creatures, possesses a magical force on account of its provenance and also on account of the perfect arrangement of the verbal veneer; this is true not only for curses, as has been proved magisterially by Goldziher (see *ḤIḍġā'*; Von Grunebaum, *Growth*, 123), but also for the *madīḥ* who enjoys lasting renown. A Bedouin declares, after receiving a reward from 'Alī b. Abī Ṭālib, "the eulogy keeps perpetually alive the name of the one who practises it" (Ibn Rashīk, i, 29; see also Gaudefroy-Demombynes, p. xviii).

This concept, albeit somewhat modified, persists after Islam (al-Djundī, *op. cit.*, 19-20, quoting Ru'ba). Abān al-Lāhikī (d. ca. 200/816) falsely accused by Abū Nuwās of being homosexual, finds himself deprived of his role as lector to the Barāmika. His patrons know it well, but even tendentious poetry is irreversible; they tell him, quoting a pre-Islamic verse:

[*basīf*]

*Kad kīla mā kīla in šidk<sup>an</sup> wa-in kadhib<sup>an</sup>  
fa-mā i'iddhārūka min kaw<sup>l</sup> idhā kīla*

"What has been said has been said, be it true or false,  
How can you be excused against words already spoken?"

(Ibn al-Mu'tazz, 204).

(3) *Artistic poetry*. In order to be effective, poetic discourse needed to be distinguished by its high aesthetic tone and to express the values of ambient society.

The role allotted to poetry seems to have been that of giving to the generality a unique image in a unique language. Throughout the period, this discourse is seen as definitely and definitively evolving. The diverse dialects and various approaches are blended in a literary language which develops to encompass metre and other disciplines; new types of comparisons come into being (Von Grunebaum, *Growth*, 123). In the pagan era, spontaneous poetry coexists with fashioned creations which are extremely demanding in their pursuit of a more developed aesthetic. This pursuit reflects the effort of generations of poets who have broadened their range of enquiry and their vision; from the spontaneous glimpse of nomadic life and of the mundane, there is progress towards more profound reflection and interpretation of life. The best and most successful example of this seems to be the exceedingly elaborate treatment of human time. Beyond the existential anguish deriving from the confrontation between human duration and objective time, the majority of poets have considered time to be a cyclical process wherein tension arises from the opposition between the eternal renewal of temporal units and the limited nature of the units of existence allotted to man. Poetry of sterling quality can triumph over time. Consequently, the poet raises the praxis to a very high artistic level. This is primarily an exercise in recollection; the poet evokes memories of love and acts of valour. Verbs in the perfect tense predominate, perhaps to emphasise the fixed and intangible, hence unalterable nature of the *murū'a* of the poet's family, of himself and of his patron. Other favourite themes sung by the poets, such as nostalgia for past loves or lamentations for the dead (*rithā'*) take on, sometimes, a poignant tone. Only descriptions of animals are in the imperfect tense, with the scene unrolling before our eyes. This is no longer a function of memory, rather of events-in-progress.

In the thematic patterns of eulogy, of lamentations and evocations of tribal glory, the poet expressed the group more than he expressed himself. First person singular became subsumed by first person plural, but the poet's role as spokesman remained distinct. He was the witness and the singer. In all other classes of poetry, the poet plays the leading role: he sings of his individual success, and his personal determination to confront the desert and its perils in the camel-related sections. The human, through individual effort, triumphs over the void and the negation symbolised by the desert (A. Miquel, *al-Sahrā' fī mu'allakat Labid*, in *Hawliyyāt al-Djāmi'a al-Tūnisīyya*, xii [1975], 63-88). It is not at all coincidental that this section concludes

with the release of the hunted animal and its coupling which presages a new life (the *plerosis*, cf. Hamori's analysis, *op. cit.*, 21-5).

One of the paradoxes of pre-Islamic poetry is touched upon here. It is individual, emotional and passionate on the one hand; on the other hand, the self, frequently transcended by the tribe, appears to reflect a collective consciousness (Adonis, *Poétique*, 19).

Accordingly, rhymed speech adopts a dual course with the existence, alongside tribal poetry, of another which is urban or semi-urban. Ibn Sallām al-Djumaḥī notes a definite contrast between *shī'r ahl al-bādiya*, the poetry of the Bedouin of the desert, and that of the Meccans, characterised by softness (*līn*) and facility; he adds to them the poetry of 'Adī b. Zayd, of al-A'shā and of Umayya b. Abi 'l-Salt. All of these and many others among the tribal poets are tied to patrons who provide for their upkeep in exchange for bombastic eulogies. *Takassub*, earning one's living, dates back to the Djāhiliyya and does not constitute, by any means, a stylistic vice associated with post-Djāhili urban civilisation. In the archaic period, the phenomenon was anything but limited; very few poets of the 6th century escaped its attractions.

While tied to patronage, this body of poets maintained its links with the tribal group through the intercessory role which it played in its contacts with patrons. On several occasions Zuhayr b. Abī Sulmā and the two Nābighas, al-Dhubayānī and al-Djādī, intervened in defence of the interests of their fellow-tribesmen. However, a development of the very highest importance took place when a poetry devoid of any tribal association came to the forefront. This poetry ceased to play a tribal role; henceforward it was obliged to appeal to an audience more refined than tribesmen and itinerants, to more demanding connoisseurs; in this, poetry was the winner. This amounted in fact to progress.

An unmistakable sign of this ascent towards more constraining artistic demands is supplied by conventions at the level of expression which underline the inclusion of this form of discourse among the highest strata of speech (Blachère, *HLA*, ii, 386; Bencheikh, *Poétique*, 8).

On the level of expression, it is appropriate to note not only the use of the dual, the apostrophising of two companions, but also clichés such as the comparison of the traces of an encampment in the sand with tattoos or with letters drawn by a scribe, the various tropes in the descriptions of animals, the description of weapons of war and of the beloved woman. From the archaic period onward, the codification of the poetic text is an established feature. The poet, far from feeling trapped in a straitjacket of constraining and dominating elements, settles comfortably into a protective tradition; or, more accurately, convention constitutes an instrument which he fashions as he pleases, but which he cannot change on pain of derogation. Conventions constitute a code to which conformity is obligatory; otherwise, damage is done to the harmony and to the perfect arrangement supplied by poetic discourse.

A great modern Arab poet and original thinker, Ṣalāḥ 'Abd al-Ṣabūr, has stressed the utility of the conventions. While it is true that the greatest talents are capable of dispensing with them, the majority of poets find in these constraining rules a stock of tropes, of hybrids and poetical expressions sanctified by usage and by the sanction of ambient society, a stock which they are only too eager to plunder (*Kirā'a dīdīda*, 13).

(4) *New horizons*. It was to be a few decades before

the new religion changed the poets' vision of the universe; the great conquests suddenly immersed the victors in an urban environment and contributed to the fragmentation of the various clans, already weakened by war and the crises of the time. Although paganism disappeared, an Islamic verbal art was yet to emerge. The majority of poets seem to have considered Islam a social and political movement rather than a profound spiritual experience. All of this contributed to the straining of relations between the tribe and poetry. The poets were to follow the course previously traced by the incense-bearing poets of pre-Islam, notably the poets of Hira. The domestication of poetry was now complete: caliphs and governors encouraged these artists to compose eulogies for them with the aim of consolidating their régimes and bolstering their personal prestige. Henceforward, *shi'r* was transformed into a privilege reserved for the prince and his courtiers. Committed and personal poetry was now of secondary, even marginal importance, as the poets harnessed their best artistic resources to the requirement of official compositions.

As a result of this process, lasting and very fruitful mutations transformed the world of poetry. A new artistic liberty was born, freed from the modes dictated by genres of secular life, and a poetry of conflicts and contradictions came into being. In 'Irāk, and specifically in Kūfa, a poetry of libertinism and pleasure prefigured the most successful examples of *muḍūn* [q.v.] composed by the *zurāfā'* of Kūfa and the innovatory poets of the 2nd/8th century. Poems celebrating the variegated humanity of taverns by al-Ukayshir al-Asadī (d. 80/699, most fragments in *al-Aghānī*<sup>3</sup>, xi, 251-76), the cruel and acidly humorous portraits by 'Abd Allāh b. Zabīr al-Asadī (d. ca. 80/699, fragments in *ibid.*, xiv, 216-62) and the gallant exploits of Ismā'īl b. 'Ammār al-Asadī (d. towards the end of the Umayyad dynasty, in *ibid.*, xi, 364-79; Ibrāhīm al-Nadīdjār, *Maḍīma' al-dhākira*, Tunis 1989, 221-33)—all of these introduce an original tone, with previously unknown metaphors and themes coexisting with the content of the *māḍūn* concept. Such poems as these are apt to flourish among poets when restrictions are removed and all constraints relaxed. These poems, as well as the amorous works of the poets of the Hīdjāz, demonstrate that poetic discourse served for them as a catharsis; by means of it, they could escape from dispossession, from tensions, from oppression and from massacres (*CHAL*, i, 394).

The *qaṣida*, quintessence of the pre-Islamic artistic traditions, underwent certain modifications, although the descriptive passages are remarkable for their fidelity to the archaic model. The urban poems composed according to traditional models do not have the coherence which is characteristic of the most successful poems of pre-Islam. The great poets of the period, with the exception of al-Akhtal (d. 92/710) and Dhū 'l-Rumma (d. 117/735) [q.v.], succeeded only with rather disjointed and pluri-thematic poems; numerous poems by Djarīr and al-Farazdaq included several topics which were not linked conceptually. Only the artifice known as *ḥusn al-takḥalluṣ* "good transition" made it possible at a later stage to effect a formal fusion of heterogeneous motifs. At the same time, there developed in the Hīdjāz a poetic movement of constantly increasing influence; this was the Hīdjāzi school, mentioned above. Numerous poets of this school created a narrative poetry in the full sense of the term. This original approach furnished well-crafted compositions and discourse with a degree of continuity, since the omnipresent concept of the verse as an independent

unit is seriously challenged here (Von Grunebaum, *Growth*, 132-3; Heinrichs, 47).

(5) *The poetical profession according to the testimony of the poets.* Poetical texts, which are supposedly texts of the period, are unanimous in presenting poetry as a recalcitrant material, which is only to be tamed by dint of painful and prolonged effort. This testimony is highly significant since it is attested in a neutral context. In his testament, al-Ḥuṭay'a (d. ca. 50/652-3 [q.v.]) takes stock of the whole of his career and gives his own perspective on patterns of composition. The dominant theme which emerges is as follows. The difficulty of composing, since the tortuous paths of *shi'r* are strewn with perils, means that the poet needs to confront this constantly; only a solid training (*'ilm*) enables him to control the material which he seeks to fashion (*Diwān*, Cairo 1987, 291).

Ka'b b. Zuhayr [q.v.] (d. in the reign of Mu'āwiya b. Abī Sufyān) does not disagree. The outstanding poem is a fabric of superb quality; it is the result of prolonged effort and commitment on the part of the poet-artisan. In a quatrain composed in response to an explicit request from al-Ḥuṭay'a, one of his father's pupils, he describes in lavish detail the process of polishing by which the poem is turned into a smooth piece of woven material, free of knots and of the same density throughout. In other words, in order to attain a harmonious and symmetrical discourse of outstanding quality, it is necessary to control the verbal core and to fashion it by means of incessant arrangement and rearrangement. Recourse to the term *thakkafa* dispenses with the need for any commentary. In its original sense, it signifies to rectify, straighten; it was used in the making of spears, at the stage of straightening wood which is naturally curved; it is thus a process of rectification of an inert material (Gaudefroy-Demombynes, 59, bibl. n. 60).

Tamīm b. Muḥbil, himself a *mukḥadram* poet (d. ca. 70/690), expresses similar concepts. Verse is by nature rebellious (root *m-r-d*); as a superb poet, he has succeeded in overcoming the stubborn mountains of poetry (*huzūn ḡibal al-shi'r*) and reducing them to amenable plains; once controlled, verse reveals all its hidden beauty and attracts the admiration of the public (*Diwān*, Damascus 1962, 136). At no time is the poet found boasting of his facility at composition, or developing a poetry of improvisation or of immanent inspiration. Only Imru' al-Kays boasts of the abundance of his inspiration; verses come rushing to him in such numbers that they risk becoming congested; he repels them energetically (*adhūdu 'l-kawāfiya 'annī*) before proceeding to a choice, retaining only the most perfect and discarding the minor pearls (Gaudefroy-Demombynes, 60).

The craft and the polishing were indispensable for the acquisition by poets of two cardinal qualities, *nafas* (breath) and *ḡazāla* (robustness and purity of poetic language), necessary for the composition of set pieces. However, it would be a mistake to exaggerate the importance of the notion of apprenticeship and its defining role; it amounted to nothing more than an idealised approach conceived at a late stage, in the 3rd/9th century, in order to justify a certain conception of *fuhūla* and of archaic poetry. In fact, poetry was considered a natural gift (*tab'*), an innate predisposition. If natural talent did not exist in a person, no apprenticeship could make him a poet.

The Umayyad poets expressed views similar to those of their Dījāhili forbears regarding the nature of poetry and the criteria of composition. *Shi'r* is conceived as a challenge between two equally-determined adver-

saries, the poet and the poetry. There is insistence on hard work and effort. At no time is there any reference to a poet in a state of grace, cut off from the rest of the world as he composes, with a seething mass of ideas and images bubbling in his breast and seeking release by way of his mouth.

In the framework of a *kašida* of threats, Suwayd b. Kurā' (born at the beginning of Islam, he reportedly reached the era of Djarir and al-Farazdaq), devotes eight verses to describing, in bombastic tone, his manner of composing superior verses. The ideas developed are as follows: poetry, like a disobedient young camel (cf. 'ARŪp; one of its meanings is a camel very difficult to control), allows itself to be tamed only by the best riders. The verses (*kawāfi*) are described as 'awāsi (disobedient) and as a band of recalcitrant wild animals (*sarḥ min al-wuhūshi nuzzā'*); it must be treated with a great deal of patience; humbly, the poet needs to display tact and to devise stratagems during sleepless nights (*abītu bi-abwābi 'l-kawāfi ... ukālī'uhā hattā u'arrisa* "I spend nights at the gates of rhymes ... until I possess them"). This is the price at which it allows itself to be possessed; the term 'arras shows that the possession is carnal. The poet-possessor must show great vigilance, for with poetry everything is problematical: once mastered, it must be carefully confined in the depths of one's heart (v. 10); otherwise, the verses will flee faraway; they can only be recaptured by means of prodigious efforts which leave indelible traces in the body of the poet (Ibn ʿUtayba, *op. cit.*, 17). 'Adī b. al-Rikā', a contemporary of Suwayd, considers his role as that of a craftsman, planning terms and verses in order to smooth the rough areas and promote harmony among the verses, thus succeeding in composing a *kašida* of the highest quality. Dhū 'l-Rumma employs the same images in his attempt to characterise the composition of the poem as closely resembling the training (*riyāda*) of a weaned animal (*Dīwān*, Cambridge 1919, 329-30, vv. 26-9; Goldziher, *op. cit.*, 94; partially translated by Gaudefroy-Demombynes, 60).

The approach expressed by these poets, all of them from the first century of the Hījra, suggests a stable profession and a perfect mastery of the tools of the trade. For a poet, to compose means enhancing the fruits of his inspiration by means of the memorisation which mobilises, every time that the artist creates his poem with the memory which utilises the finest realisations of his linguistic and poetic heritage, retained since the period of his training. Šalāh 'Abd al-Šabūr considers this strenuous poetic technique an act of homage on the part of the poet towards an immeasurable legacy: in some sense, he writes, the poet presents his poem to this stock which constitutes the quintessence of sensibility and its perfect expression as realised in the ancient poetry (*Kirā'a dīdida*, 15).

#### IV. The effervescence of urban poetry.

Cultural prosperity, the practice of translation which was institutionalised from the end of the 2nd/8th century onward, the development of written translation according to rigorous criteria in the various disciplines, major conflicts of ideas and the constitution of an Arabic prose capable of expressing the most complex thoughts—all of these factors exerted influence on both poetry and poetics.

(1) *The evolution of discourse.* Under the earlier 'Abbāsids, Arabic poetry remained an essentially lyrical text, descriptive in character. This lyricism reflected the unwillingness of the poet, unless commanded to do so, to deal with exterior phenomena or social rela-

tions. In this framework, poems denouncing the vanities of the world (*zuḥdiyyāt*, according to Heinrichs, 25), the poetry of sexual perversion (*muḍḥūniyyāt*, according to *ibid.*) and Bacchic poetry (*ḫamriyyāt*) were treated with special favour. Complaints about life and its misfortunes are liberally scattered in numerous poems of this period. This is not, strictly speaking, a poetry of asceticism but rather an absolute denunciation of life; it could be said that the texts delight in demonstrating the campaign of systematic annihilation conducted by life against the human being. Evoked here are the deterioration and subsequent death which accompany the process of life; also stressed is the absence of any metaphysical dimension and the desire merely to detach the man from the world below, a hunting-ground reserved for villains and sensualists. The *ḫakawā 'l-zamān* is a poetry of setback and of impotence. More than is the case with *zuḥd*, it constitutes at the most a decidedly superficial poetry of edification. As for sexual perversion, the distinction is drawn between poems dedicated to the ephebe with the *zuḥafā'* of Kūfa, Abū Nuwās, al-Husayn b. al-Daḥḥāk and Dīk al-Djinn, versus phallic poems with Abū Ḥakīma, Ibn al-Ḥadīdjādī and Ibn Sukkara, or the poems in praise of onanism by Abū 'l-Anbas al-Šaymarī. These poems, in which exacerbated emotional states are to be detected, seem to have expressed, at least initially, a rebellion against society and a refusal to subscribe to its values. Later, this poetry was to enjoy social indulgence, at least with the poetry dedicated to ephebes, and its usages became generalised even in the work of poets who did not practise perversions.

At the same time, a clear demarcation further widens the gulf between longer pieces and fragments, or if preferred, between set-piece and impromptu poetry. This distinction facilitates a more profound understanding of the evolution of poetry in the 2nd/8th century. Much is owed here to the specific contribution of Jamel Bencheikh. The impromptu, as Bencheikh rightly declares, comprises several rhymed phrases, of great simplicity and with a single theme (Heinrichs, 36, describes these very short poems as spontaneous poetry; they address a single theme). What matters here is the rapidity of the response and its spiritual quality. It is therefore the nimbly-elevated impromptu which most delight the literary coteries. The themes of this elegant discourse are well known and were worn threadbare by long service; they are confined to love-sickness, invitations to trysts, excuses, reproaches, compliments or wise aphorisms. The 'Abbāsīd coterie preferred this supposedly "natural" poetry to the *kašida* with its immutable conventions. In fact, poets did not have a choice; in the *maḍlīs*, they were under instructions to improvise forthwith or to reply in the course of a contest. This poetry, of rather lofty formal elegance, expressed stereotypes briskly in a minor tone, sometimes in fairly exaggerated style. In fact, this amounts to an exercise in re-use of the acquired skills of set-piece poetry rather than a creation at the level of composition (Bencheikh, *Poétique*, 68-79). On the other hand, the long piece is a product of reflective creation and demands prolonged and laborious preparation, essential if the poet is to invent original hybrids, thus expressing new *ma'ānī* and a large number of motifs (*ibid.*, 80; 113; Muṣṭafā Haddāra, *Ittiḥāṭ al-ṣi'r al-'arabī fi 'l-kam al-ḥānī al-ḥidri*, Cairo 1963, 148-9, 162).

This situation leads furthermore to the depreciation of poetry; it is considered an amusement or, at best, little more than pleasing discourse.

(2) *Poetics*. These centuries are the golden age of theoretical writing. Most striking is the profusion of these works and their diversity; alongside the poets, there is a proliferation of transmitters, essayists, *mullakallimūn*, philologists, critics and philosophers. The result does not fail to impress, in spite of the absence of systematic thought, the constitution of clearly-defined poetics and the tendency of poetical treatises to be pragmatic rather than theoretical; it is appropriate to mention here one substantial exception, the writings of the philosophers. The contribution of Von Grunbaum in this domain has been decisive.

#### A. The poets

Generally, but not always, they maintain their conception of the poetics of effort. In the works of Abu 'l-'Amaythal (d. in the 3rd/9th century) the same clichés are found, referring to the rectification of material which is naturally misshapen ('Alī al-Djundī, *op. cit.*, 115); to the weaver bent over his work in the writing of al-Sayyid al-Himyarī (d. ca. 179/795, term *ahūk*, *ibid.*, 114); Ibn al-Rūmī (d. 283/896) adds to the analogies of his two predecessors the well-known one of the wild camel, but he also insists on the efforts that he invests in embellishment and refinement (*arhafuḥā* and *raḥḥakḥuḥā*, *Dīwān*, Cairo 1993, 359-60, vv. 2-9). It is not until the second half of the 3rd/9th century that the term *ṣan'a* in its poetic sense is attested in a poem among the works of al-Nāshī<sup>2</sup> al-Akbar (d. 293/906), in a verse praising his expertise and the harmony (*ta'āf*) of his verses (Muḥammad Zaghlūl Sallām, *Min turāth al-naḥd al-'arabī*, Abu 'l-'Abbās al-Nāshī<sup>2</sup> al-Akbar *wa-kitābuhu fi 'l-shi'r*, in *Maḥallat Kulīyyat al-Ādāb, Dīmi'at al-Riyād*, v [1977-8], 179, v. 1). Furthermore, as a result of titivation and corrective work (*tahdhīb*), his poem acquires an inimitable quality and, thereby, provokes embarrassment and surprise (*yataḥayyarū 'l-shu'arā'u*): in fact, the form (*al-lafẓ*) and the content (*al-ma'nā*) are integrated in absolute fashion (*alfayta ma'nāhu yutābiku lafẓahu*) and its apparent facility conceals the inability of other poets to compose a comparable text. It is only at this price that the durability of poems can be assured (v. 7).

In the second long section of 18 verses devoted to poetic genres, the four opening verses provide a detailed survey of the content of this concept among poets and the various tasks which it entails. *Ṣan'a* implies a rectification of the distortion of material (*zaygh*), the consolidation of the texture of the poem (*ṣhadd al-mutūn bi 'l-tahdhīb*); the poet should plug the gaps in his discourse by means of prolixity, assert his finest qualities by means of concision, impose harmony through the conciliation of opposites and clarity through the juxtaposition of analogous or similar *ma'ānī* (*ibid.*, 192). The poets of this period evince vigorous opposition to the poetics of facility; such a conception is quite rare in poetical compositions (see e.g. *Shi'r Abi Hayya al-Numayrī*, Damascus 1975, 160, vv. 1-3). *Ṣinā'a* and *shi'r* were so closely linked that they have been used as synonyms in two instances in the writings of Abu 'l-'Atāhiya (*wa-radja'nā ilā 'l-ṣinā'ati lammā \* kāna suḥḥu 'l-imāmi tarka 'l-ṣinā'ah*, "I returned to poetry when the Imām was seized by wrath following [my] abandonment of poetry"; the poet refers to his decision to relinquish poetry on account of his religious convictions, and to al-Rashīd's decision to imprison him in order to compel him to return to composition, *al-Aghānī*<sup>1</sup>, iii, 160, l. 20; see also 149, l. 20).

#### B. The critics

(a) *Ṣan'a* as opposed to *ṭab'*.

Numerous tendencies are in collision here, dictated by literary attitudes, but determined also by contro-

versies unrelated to poetry. At a very early stage, from the 2nd/8th century onward, the poetics of effort are called into question as critics extol the virtues of natural talent, *maṭbū'*. The factor giving rise to this attitude seems to have been the revival, after a temporary eclipse caused by the hostility of the new religion, of the theory of inspiration, deriving from occult and supernatural forces. Discourse placed in the mouth of the poet, which is a receptacle and nothing more, by its very nature requires no improvement. From another perspective, it seems that the Mu'tazilī circles of Baṣra, including al-Djāhiz, considered true eloquence to be that which is uttered spontaneously without the least effort; ideal poetry would not differ at all from improvised discourse; this quality belongs naturally to the Bedouin of the Djāhiliyya and their poets. The profession objected to this postulate, it being, according to the Baṣran thinker, the contrary of eloquence. Other scholars of the same city, in particular Ibn Sallām al-Djumaḥī, al-Aṣma'ī and his school, responsible for the constitution of the classical corpus, were of the same opinion. All of them must have been profoundly influenced by the improvised contests held in the Mirbad [*q.v.*].

One of the most ancient texts on poetics is the *ṣaḥīfa* of Bishr b. al-Mu'tamir. Here the author develops, in Heinrich's words, a rudimentary theory of *ṭab'* (talent) and of *nashā'* (creative force) (*Arabische Dichtung*, 286). The primary condition for being in a position to compose is, he asserts, the creative force; all depends on this and on its favourable disposition (*iqḍāba*). Once this has been acquired and beyond the obligation to adopt *al-lafẓ al-ṣarīf* (a noble poetic language) and *al-ma'nā al-badī'* (the most original modalities of expression), Bishr advises the artist to avoid unduly laborious efforts which could result in affectedness. On the contrary, he should opt for discourse which is fluent in terms of pronunciation, for easy and direct *ma'ānī*. In parallel, he should set aside hermetic figures and complicated hybrids, since there is a risk that these will undermine the themes and neutralise the impact of the words. In common with the other classical critics, he takes great care to separate *al-lafẓ* from *al-ma'nā*. Four qualities are required for the language: softness, elegance, majesty and fluency. As for modalities (*ma'ānī*), those chosen should be clear and immediately comprehensible (al-Djāhiz, *Bayān*, i, 135-6, 137).

Al-Djāhiz, too wise a connoisseur to fail to understand the importance of the *ṣan'a* element, confines himself to recording his distaste for these over-finical poets whom he calls *'abid al-shi'r* ("the slaves of poetry") and his objection to excessively polished poems, *al-shi'r al-ḥawli* ("poems taking a year to compose"). However, it should be stressed that over-worked, i.e. excessively re-worked poetry was not considered bad poetry. The reverse was the case. Ibn Kutayba considers the poetry resulting from study an excellent discourse, solidly constructed (*djayyid muḥkam*). But the experts have no difficulty identifying the patterns, the prolonged reflection and the strained thought of the author; furthermore, the latter does not refrain from recourse to poetic licences (*darūrāt*); connoisseurs can tell that he has omitted the modalities of expression which were necessary; on the other hand, he praises the facility of composition of the *maṭbū'* and his total mastery of the material; immediately obvious are the splendour of his talent (*raḥmaḥ al-ṭab'*) and the wealth of his temperament; finally, he does not fail to admire the transparency of the *ma'ānī* since, he says, the first hemistich prefigures the end of the verse and the beginning gives a clear impression of rhyming style.

(Gaufrey-Demombynes, 24-6). The deliberations of Ibn Ḵutayba reveal the veritable point at issue. Beyond spontaneity and the gift of improvisation, there is a certain conception of poetry which is considered legitimate: the facile and transparent text is alone held to conform to the genius of a poetic sensibility and its modes of expression.

In post-Djāhizian poetics, these concepts take on a rather different meaning. *Shi'a* in the sense of "titivation" was never denounced by the ancient theoreticians, on the contrary (Shawḳī Dayf, 19-37). The rapidity of inspiration, and the talent, coming quickly once summoned, are followed by a phase of labour and refinement aimed at eliminating the dross; the poet casts and recasts and purifies his material through a process of quite intensive alteration (fine passages recorded by Gaufrey-Demombynes, pp. xxix-xxx). With the first successes of the school of *badī'* (the *ṭaṣnī'* of Shawḳī Dayf, 219-39) and the extension of *ṣan'a* to all phases of composition, the critics established a distinction between the craft of the Ancients which derives from a *saḍīyya* (natural tendency) and that of the Moderns. Among the latter, it signifies "artificial and acquired", since their poetic language is the fruit of study and of reflection (*al-tahṣīl wa 'l-rivāya*); it is incompatible with *ṭab'* (natural disposition), being *mutasannī'*, *mutakallif* or artificial, M. Ajami, 53-4. Curiously, Abū Hilāl al-Askarī reports the champion of *ṭab'*, al-Buḥturī, as a conscientious craftsman, rejecting after the first draft everything which he found unsatisfactory. On the other hand, the representative of the meticulous poetical approach is presented as an unconditional partisan of the free-and-easy attitude, delivering the fruit of his inspiration without embellishing it; his phrase is thus tainted with numerous defects (Bencheikh, *Poétique*, 87). Most curiously, *ṭab'* seems to accompany intensive work in the phase which follows natural composition; *takalluf* appears to characterise the poetry of inspiration. The paradox is rather more apparent than real. In the process of creation, the *maḥbū'ūn* poets proceed after the composition of the verse to the embellishment of expression. Among the poets of *badī'*, gestation must have been very painful at the time of the translation of the poetical idea into images; having suffered so much, the poet refused to relinquish even the most preposterous image. Among the poets of this school, imagery reigns supreme. The poetical conception of Abū Tammām integrates creativity and craft in the process of the material translation of the image.

The *ṭab'* of the Ancients, confronting the affectedness of the Moderns, received its most systematic interpretation through the theory of *'amūd al-shi'r*, and later through that of the *tarākīb al-'Arab* or that of the *uslūb al-'Arab* of Ibn Ḵhaldūn which legitimises a certain tradition of composition, that of the Bedouin of the Djāhiliyya, to the exclusion of all others (M. J. Ajami, *'Amūd al-shi'r: legitimization of tradition*, in *JAL*, xii [1981], 30-48; Ibn Ḵhaldūn, *al-Muqaddima*, iii, 329-33; Ihsān 'Abbās, *Naḳd*, 41-2, 627-30; Bencheikh, *Poétique*, 56-8).

This approach dominates for several centuries and has seldom been challenged. 'Abd al-Kāhir al-Djurdjānī (d. 471/1078 [q.v. in Suppl.]), a very original critic, declines to separate the diverse elements of a poem, which is considered as the fruit of an alchemy; combined in it are creative acuity, *ihsān* (faculty of perfection), *ibda'* (spirit of invention) and above all, *ṣan'a*. According to him, it amounts to a spiritual force of creativity which sets in motion the imagination of the poet and enables him to illuminate the meagre or prosaic reality in a discourse which describes an

unequalled splendour (*Asrār al-balāgha*, 241-2, 244, 250, 315-16).

The poet-theoretician Ibn Shuhayd (d. 426/1053 [q.v.]) anticipates in certain respects post-Djāhizian criticism and the approach which considers *ṭab'* a spiritual force (*mawādd rūḥiyya*). On the basis of this principle, he reaches the conclusion that poetry is the fruit of imagination. His theory of beauty, a divine emanation, possesses strong neo-Platonic resonances, which are quite rare in classical poetry among the Arabs (Monroe, 140-2).

(b) *Poetry as an 'ilm*.

According to a tradition attributed to Ibn Sīrīn, 'Umar b. al-Khaṭṭāb is supposed to have stated that poetry was the most authentic *'ilm* of the Bedouin of the Djāhiliyya (Ibn Sallām, i, 24, § 32; al-Suyūṭī, ii, 473); similar opinions are attributed to 'A'isha, to Ibn 'Abbās, and to other major figures of Islam (Ibn 'Abd Rabbihī, v, 247; Ibn Sallām, i, 10; Ibn Rashīq al-Kayrawānī, 30; al-Muzaḥḥar al-'Alawī, *Nadwat al-ighrīd*, 356-7; al-Zamakhsharī, v, 218-19, § 132). From the 3rd/9th century onward, works of criticism follow the same line. Ibn Ḵutayba asserts in this context that poetry is the mine of sciences of the ancient Arabs, the book of their wisdom, the archives of their history, the treasury of their great days (sc. battles) and the rampart which defends their glory (*'Uyūn al-akhbār*, Cairo 1925, ii, 185). Military, cultural, linguistic, literary and social history are found condensed in this discourse.

On the other hand, empirical observations of zoology, meteorology and botany accumulated in the same texts. Like any science, to be in a position to serve, it is essential that this poetry be authentic; otherwise, it has no utility. In effect, poetry of high quality is the proper means of inculcating the values of the Ancients, who were models of human behaviour. By means of the exalted *ma'ānī* which it puts at the disposal of the cultivated man, it enables him to compose verses, adages and sentences which are so well cast that they appeal to the sympathies of audiences in all periods. 'Abbāsīd critics considered pre-Islamic poetry as a great reservoir of quotations of considerable utility for talented folk of all periods. The purpose of every poem is to dispense wisdom; in this, they are removed from our current conceptions which are alone responsible for the aesthetic finality.

In fact, these precious materials are in a sorry state on account of the considerable number of falsifications which have intruded (Ibn Sallām, 4, § 3, *wa-fi 'l-shi'rī muḥta'al'm mawḍū'ān kathīr* "in poetry, a considerable portion is false, forged and counterfeit"). This defect results from the written *tadwīl* (mode of transmission). In poetry, Ibn Sallām declares, it is necessary to set aside the gleanings of scriptory transmission (*wa-laysa li-ahad' an yakbala 'an saḥīḥat' wa-lā yarwī 'an suḥufī* "all persons should refuse to accept a poem deriving from a register; they should decline to repeat the transmission of a connoisseur [trained] in the registers", Ps.-al-Khalīl b. Aḥmad, *K. al-'Ayn*, Baghdad 1967, iii, 120). Furthermore the term *tashīf* [q.v.] (forgery) was allegedly derived from *saḥīfa* (al-Djawharī, *al-Sihāh*, Beirut 1979, vi, 1384, b., 1.1).

Beyond the willingness to create a new branch of poetics, that of *tashīf*, an attempt is observed on the part of Ibn Sallām to determine the identity of those entitled to transmit the classical heritage. It is from this perspective that it is appropriate to consider the charges against Hammād and members of his school. Was it his wish to entrust these tasks to scholars who worked according to the methods of the School of

Baṣra and to shun the disciples of the School of Kūfa? The stakes were high; if this principle were followed, Baṣran scholars would become the sole guardians of pre-Islamic poetry or, in other words, the sole guarantors of the Arabic poetical corpus.

This attempt seems to have been long-lasting since the works of Ḥamza al-Iṣfahānī and of Abū Hilāl al-ʿAskarī on *taṣhīf* contain an impressive list of Baṣran ʿulamāʾ. There is nothing Saussurian about this hostility towards the scriptory which emanates from conceptual intransigence. Writing, being by nature defective, did not permit an accurate and faithful transmission of texts. Works of poetics, of *adab* and of grammar teem with anecdotes concerning the errors and changes introduced by transmitters, errors attributable to graphical mistakes and to defective readings (Gaudefroy-Demombynes, 20-1, 71 [nn. 82, 84]; Ḥamza al-Iṣfahānī, *al-Taṣhīf ʿalā ḥudūth al-taṣhīf*, Baghdād 1967, 55; al-Suyūṭī, *op. cit.*, ii, 355).

The *shīʿr*-ʿilm parity could derive, as Heinrichs maintains, from the care taken by theoreticians to exclude any trace of fiction from poetry. Whatever the case, this parity has made it possible to express in new terms the relations between the latter and religion.

#### Poetry and Islam

In Islam, the religious disciplines represent the ultimate ʿilm. The afore-mentioned equivalence legitimised poetry and conferred on it a status immediately below the sciences of religion in terms of the rigour and of the demands of authenticity. The noisy conflicts of the early stages soon gave way to a degree of tolerance, itself replaced in the 2nd-3rd/8th-9th centuries by a honeymoon: *shīʿr* is accepted in the most orthodox circles as a privileged discipline of Islamic culture when it fulfils certain conditions; the very orthodox Ibn Kūṭayba writes in this context, *wa-kullu ʿilm muḥtādī ilā ʿl-samāʿi wa-aḥwadih ilā dhālika ʿilmu ʿl-dīni thumma ʿl-shīʿru* "every science must be transmitted orally; and this requirement is nowhere so great as in the religious sciences, and after these in poetry" (*op. cit.*, 20, tr. Gaudefroy-Demombynes; see also 70-1, nn. 79-81, much valuable information provided by this eminent scholar). This mutation of *shaʿara* (to feel) to *shaʿara* (to know) in religious circles takes on in the opinion of the poet-theoretician Adonis the significance of a veritable revolution. Henceforward, poetry ceases to depend on simple sensation, i.e. the primary degree of cognition, and belongs to the universe of the most exalted truth (*Poétique*, 77).

Poetry also figures prominently in the classification of sciences established by leading scholars.

Examination of such a list would seem to be considerably more informative than recourse to always unreliable traditions, regarding a favourable attitude on the part of the Prophet, of ʿĀʾiṣha, of one or other Companion or Successor (traditions compiled and annotated by Muṣṭafā ʿUlayyān, *Naḥw naḥdī islāmī fī riwāyat al-shīʿr wa-naḥdīhī*, ʿAmmān 1944; al-Naḥṣhalī, 22; Gaudefroy-Demombynes, p. xxvi) (*HAL*, i, 391; Cantarino, 28-34, emphasise the negative attitude of these same figures with regard to poetry). In the course of time, the problem posed by these relationships ultimately loses all cultural or religious significance; it then recurs in *adḥẓāʾ*, pl. of *dhuzʾ*, formally arranged in antithetical sections (ʿAbd al-Ghanī b. ʿAlī al-Muḥaddasī, *Dhuzʾ aḥādīth al-shīʿr*, ʿAmmān 1989, 37-80, favourable traditions, 81-98, unfavourable point of view).

Ibn Ḥazm (d. 456/1064 [q.v.]) places the ʿilm al-*shīʿr* immediately after the sciences of the Qurʾān, of grammar and of lexicography. Like his predecessors, he assigns to this ʿilm a double aim, moral and util-

itarian, and distinguishes three branches: one which is illicit in the case where a man devotes himself to it entirely; a second which is licit but subject to numerous reservations, since here the man devotes to it the most lucid part of his time; a third is strongly recommended, being the case in which the believer devotes to it a part of his time. Thus conceived, this science of poetry is of undoubted utility; it inculcates in the one who practises it wisdom (*ḥikma*) and a more profound understanding of Arabic grammar and language (*Risālat al-talkhīs li-wuḍūḥ al-takhlīs*, in *Rasāʾil Ibn Ḥazm al-Andalusī*, Beirut 1981, iii, 163-4).

It should be clearly stated that at no time was there objection to poetry as such. Furthermore, only the believer who composes *ḥidāʾ* or eulogies to someone who does not deserve this, or who composes frivolous poems evoking the fineries of women, is judged impious (*fāsiq*).

#### (c) The school of *badīʿ* or poetics according to Abū Tammām.

The ʿAbbāsīd critics associate the appearance of *badīʿ* with modernity: the poets of their era opted for this poetic language because of their late arrival. For Ibn Ṭabāṭabā, the Ancients said everything because they preceded all others. Their verses encapsulated original *maʿānī* in the most elegant and the purest language. Modern poets could not compete with them in this domain. They thus exerted all their ingenuity to composing extremely reflective poems, their superiority residing in the subtlety of exceedingly elaborate thought. Their poems are the fruit of a sustained effort, they are *mutakallīfs* in comparison with the natural fluidity of their predecessors (Ibn Ṭabāṭabā, 15). And then *badīʿ* appeared. The facts seem to confirm this analysis beyond all expectation. In fact, the first fruits are associated with Muslim b. al-Walīd [q.v.] alias Ṣarīʿ al-Ghawānī (d. 208/823). It is said that he attempted in his poems to convey the message in terms of its finest image. He is the first, according to Ibn Kūṭayba, to have softened verse and rendered the sense subtle; he was also the source of inspiration of Abū Tammām (*Shīʿr*, 528). Ibn Kūṭayba's remarks clearly show that Abū Tammām is considered the undisputed champion of this school.

Von Grunebaum sees in the appearance of this poetic school a reaction against the platitudes engendered by the conceptions of modernist poets, who expressed their thoughts in excessively limpid language in short verses. The poetry of Abū Tammām constitutes an attempt to halt these modernists (*Growth*, 132-3).

The poetics of *badīʿ* comprise the following elements: (i) the poetics of *Djāhili* orality, based on a logical and apparent line between the signified and the signifier, is definitively rejected; images are dismantled, as are the hybrids and the inherited expressions which constituted the reservoir exploited by the poets of subsequent generations. The new imagery disconcerted critics and scholars with its original character; they saw it as eccentric poetry, bordering on anti-poetry, to borrow an expression of Ibn al-ʿArabī. (ii) Rhetorical embellishment is consciously pursued; sometimes this is taken to absurd lengths, as was the case with Abū Tammām (Heinrichs, 25). Flourishes are raised to the status of essential principle of composition; they no longer constitute a device for enhancing the beauty of the discourse. (iii) Henceforward, the image constitutes an end in itself. The poets of *badīʿ* were prodigious builders of images: swords, in a poem of al-Mutanabbī, are dejected and emaciated by love-sickness (*al-ʿArf al-tayyib*, 147, v. 1, *ka-annamā*

*yubdāna min 'ishki 'l-riḳābi nuḥūlā*). (iv) An extensive and profound knowledge of the treasures of the language is required for the unfettered composition of hybrids and metaphors, without which the language could constitute an obstacle. (v) The faculty of inventing *ma'ānī* or that of forming new ones by means of derivation (*tawlīd al-ma'ānī*) is considered a necessity. In fact, what is involved is the thorough exploitation of one *ma'nā* before moving on to another; this contributes to the cohesion and organic unity of the poem. By this procedure, the *badī'* school is clearly distinguished from previous methods of poetry, content to put forward the *ma'nā* or to deal with it very briefly. (vi) Poetic creativity is turned further towards original discovery. (vii) *Badī'* locates poetry in writing, all the more so since certain flourishes depend on a visual and graphical effect (cf. the very informative analysis by Adonis, *Poétique*, 50-5, 65-7).

This more reflective, more intellectualised poetry first astonished, then aroused strong reservations; theoreticians considered it a text dependent on reason rather than on sensation or song. In comparisons between Abū Tammām and al-Buḥturī, it is conventional to see in the former a thinker who speaks to the intellect and in the latter a singer who addresses the emotions. Furthermore, it perhaps facilitated the appearance of the theory of poetic obscurity.

(d) *Limpidity as opposed to obscurity in poetry.*

In the 2nd/8th century, writing had not succeeded in suppressing the orality of poetry; writing served as an instrument of memory for poets, and their discourse did not experience notable changes, particularly the separation of poetry from thought. On the basis of this principle, al-Djāhīz proceeded to promote a poetry which would be beyond any interpretation and understood without exertion of thought. For this, easy and supple speech was an essential condition; to this end, recourse to *gharīb* (rare terms) is denounced; on the other hand, the poet is encouraged to use words which are conventional, agreeable and easily heard, and thereby immediately grasped. In short, clarity is the supreme quality in poetry. More than any other, al-Djāhīz advocated the poetics of *wudūh* or limpidity (*Bayān*, i, 106; Bencheikh, *Poétique*, 84-6). This conception enjoyed lasting success, in the opinion of critics from Abū Hilāl al-ʿAskarī (Arazi, 485-7), by way of Ibn Sinān al-Khafādjī (*Sirr al-faṣāḥa*, Cairo 1932, 290-1; Arazi, 482) to Ibn al-Athīr (*al-Maṭṭal al-sāʿir*, ii, 415-7; Arazi, 483). It is interesting in this context to note the high esteem in which *tashīm* is held (= the quality of a poem where the hearer, having heard the first hemistich is in a position to foresee the remainder of the verse and to anticipate with the recitation of the second). This procedure requires a poetic language of crystal transparency and a stability of relations between poet and public, such as existed at the time of the Djāhiliyya (D. Semah, *Poetry and its audience according to medieval Arab poetics*, in *IOS*, xi [1991], 91-105).

On the other hand, a decidedly less important trend opts for the mysterious in poetry. For Abū Hilāl al-Ṣābī, the best poem is that in which the basis is wrapped in obscurity. This poetical obscurity constitutes the very essence of this form of discourse (*wa-afkharu 'l-shi'ri mā ghamuḍa fa-lam yu'ṭika gharāḍahu illā ba'da mumāṭalatim wa-'ardim minka 'alayhi* "the best poetry is poetry surrounded by mystery, which yields up its intentions only after numerous tergiversations and a request that you address yourself to it" [Arazi, 498, § 2]). Prose, to be effective, needs to be immediately understood; this is why it depends on limpidity. As

regards *shī'r* the obscure constitutes, according to al-Ṣābī, a necessity on the level of creative activity. Being confined within tightly-drawn limits, i.e. the verse, this discourse is constrained, as a result of fragmentation at the level of the line, to move within extremely narrow limits and to express brief thoughts which are considerably more superficial than those of letters (the critics of the period were satisfied with the concept of the independent verse as a unit of composition conveying one meaning, Ibn Sallām, *op. cit.*, i, 360-1; al-Mubarrad, *al-Kāmil*, 44). The *kātib* has at his disposal unlimited space and is not subject to any yoke hampering his freedom of expression; he can thus give to ideas an almost absolute priority. On the other hand, the poet, confined within a narrow space, that of the verse, is obliged, to avoid falling into platitude, to veer towards an excess of *ma'ānī* (*faḍl fi 'l-ma'nā*) and the ideas expressed err on the side of exaggerated concision. The inevitable result is a certain affect- edness, an expression remote from the natural and an elliptical style (Ibn al-Athīr, *op. cit.*, ii, 415; Ibn Abi 'l-Ḥadīd, 303, 305; 'Id Radjā', *Dirāsāt*, 1979, 34; Arazi, 478). It is appropriate to stress that al-Ṣābī introduces to us a constitutive element of poetry, which characterises the most successful examples. In developing this notion of poetics, al-Ṣābī was probably thinking of the poetry of his time, that of *badī'*, which responds partially, it is true, to this aesthetic of obscurity.

Abū Ḥāzim al-Ḳarṭājannī [q.v.], in the 7th/13th century, was perhaps the theoretician who best systematised this concept. Through a game of contrasts cleverly set in motion, he sets out to integrate limpidity of language with obscurity of modalities and of thoughts (al-Ḳarṭājannī, 172). Numerous cases were foreseen by this theoretician (they are revealed in Arazi, 480-1). His conclusion does not fail to astonish with its modern resonance: the *ma'nā* must be delicate and subtle by definition; the more that thoughts err on the side of subtlety, the more the poetic phrase will need to mobilise an excess of clarity; thus is achieved a fine equilibrium where the two entities are opposed and integrated (al-Ḳarṭājannī, 177-8). Von Grunebaum correctly observes in this context that poetic obscurity existed in poetry in mediaeval Europe and that it consisted of an extension of Aristotelianism (*Aesthetic*, 328-9).

Unfortunately for Arabic poetry, the ideas of al-Ṣābī were generally misunderstood by classical critics as well as by certain modern researchers, who have seen here a call for obscurantism in poetic language (Arazi, 483-5, § 1.3.1.). Accorded a hostile reception, they seem to have played only a marginal role in poetics.

(e) *Al-lafz wa 'l-ma'nā.*

The critics were fascinated by the concrete formulation of the poetical idea. Much less clear was the question, should this formulation be considered as dependent on the treatment of the words or on the conceptual content? Since the objective of poetry is not the thing stated but the manner in which it is stated, it was in the natural order of things to establish a distinction between the two entities and to prefer *lafz* over *ma'nā*. Furthermore, the confinement of the *ma'ānī* within a limited space, which was not to be overstepped, persuaded poets to concentrate all their efforts on finding the formal garment best suited to the allotted space, and it induced them to adopt the same attitude as that held by the critics. The poet exercises the highest degree of control over his material, which is language. An intangible sign of this

control is the concision which is strongly recommended. Al-Djāhīz played an essential role in the constitution of this conception; he was followed enthusiastically by later scholars of poetry (*al-Hayawān*, iii. 131-2; al-ʿAskarī, *Sināʿatayn*, 58; Von Grunebaum, *Aesthetic*, 327; Heinrichs, *Arabische Dichtung*, 286-7).

In the 5th/11th century, ʿAbd al-Kāhīr al-Djurdjānī was concerned to stress the negative nature of the Djāhīzian concept of *maʿānī*. First of all, the separation of *lafz* and of *maʿnā* seemed to him an aberration; it was hardly conceivable to separate the objective which is sought, i.e. the modalities of expression, from their projection into words. On the other hand, he challenges the notion that the literary merit of a poem emanates solely from the beauty of the terms used, conceived as preponderant units. A term cannot be *faṣīḥ* in itself, but only through its concurrence with the *maʿānī* and the harmony which it establishes between the different elements of expression. If al-Djāhīz is to be followed, thoughts and their modalities will come to be excluded from the domain of eloquence and poetry will be reduced to verbal juggling, banishing the beauty of the composition (*al-naẓm*) and the quality of the texture of the poem (*al-taʿlīf*) (Djamil Saʿd, 175-90).

It is, however, appropriate to mention the existence, at a very early stage, of an approach opposed to the supremacy of formalism. According to a work of Ibn Abī Ṭāhir Tayfūr (d. 280/893 [q.v.], thus a contemporary of al-Djāhīz), *al-Manṭūr wa ʿl-manẓūm*, it is possible to state that it was the *maʿānī* which conferred on pre-Islamic poetry its undisputed primacy. It needs to be recalled that *maʿnā* is a mixed entity dependent simultaneously on style and on thought, on form and on essence and on the treatment of words and the content. This integration of *lafz* and of *maʿnā* is a very healthy element in poetry, since it establishes no distinction between essence and form. The Seven long [poems] (*al-sabʿ al-tiwāl*) possess in common a profusion of *maʿānī* of unrivalled beauty: *fa-mina ʿl-shiʿri ʿl-ladhi lā mathīla lahu al-kaṣaʿidu ʿl-sabʿu ʿl-tiwālu ʿl-lati kaddamthā ʿl-ulamāʾu ʿalā sāʿiri ʿl-aṣḥāri fa-inna ʿl-wāhidata minhā tashmilu ʿalā maʿānin lā mathīla lahā* "in this poetry which has no equal, the Seven long [poems] which the scholars placed above all other poems; each in fact includes numerous *maʿānī*, unique in their genre" (Beirut 1977, 21-2). If the poems of Imruʾ al-Qays, of Zuhayr, of ʿAntara, of Labīd, of ʿAmr b. Kulthūm, of al-Hārith b. Ḥilliza and of al-Nābigha al-Dhubyānī are counted among the pearls of Arabic poetry, it is because of the beauty of their motifs. The superiority of every poet depends on the range of the *maʿānī* which he has enunciated, and the grading of poets according to categories (*tabakāt*) is done in accordance with these criteria. This conception developed by al-Ḥirmāzī (*flor.* in the time of al-Rashīd, 170-93/786-809, preceding al-Djāhīz by a generation) was adopted by Ibn Tayfūr, Ibn Djinnī and al-Djurdjānī, but remained a minority and somewhat marginal view.

### C. The philosophers

The influence of Aristotelian ideas on the evolution of Arabic poetics has been decisive; these have been the ideas most systematically explored by the Muslim philosophers. Unlike the theoreticians, the philosophers were concerned to clarify a complete poetic art; they conceived poetry as a universal cultural phenomenon. Their speculations possess a hitherto unknown scientific rigour, since they considered poetic discourse as a subdivision of logic. They thus deny any role in poetry to the imagination and estab-

lish incompatibility between reason and poetry (Von Grunebaum, *Aesthetic*, 323).

These poetics of the philosophers do not derive from a more or less accurate paraphrase of the *Poetics* of Aristotle. It is rather a question of commentaries expressing the personal opinions of those philosophers who took inspiration from the notions expressed in *al-Muʿallim al-awwal*. Three essential principles dominate the poetic art as viewed by the philosophers: truth (and falsehood), imitation and evocation.

(i) Aristotelian theory makes of poetical beauty an ornament and a generalisation of the truth. According to the philosophers, and more specifically Ibn Ruṣḥd, the poet should evoke, with eloquence and plausibility, a chosen and average nature which is true for all times and for the greatest public, thus detaching the permanent from the ephemeral; this is called *al-ḥakīka*, the truth (Cantarino, 37). However, poetry is accorded the right to turn away from obligatory truth; this is the well-known poetic *kadhīb* which differs from its homonym as employed by the critics. The latter understood it as meaning falsehood in the literal sense. On several occasions, traditions recount very flattering anecdotes regarding the veracity of certain poets, in particular, Zuhayr; the qualities attributed to patrons in his eulogistic poems are genuine qualities. In this context, the maxim *aʿdhabu ʿl-shiʿri aṣḍakuhu* "the finest of poems is the most truthful" makes its appearance. Beyond this ethical aspect (Von Grunebaum, *Spirit*, 46-7; Iḥsān ʿAbbās, *Nakd*, 34-6) critics have questioned the exactitude of *maʿānī*, as in the work of al-ʿAmīdī. In consequence, everything dependent on the impossible is bad. This attitude does not lack positive results, such as the necessity for the urban poet to employ a poetic language which accords with the milieu in which he lives and with clarity (*ibāna*) of expression (Von Grunebaum, *Critic*, 104).

Among the philosophers, this concept rather signifies the right accorded to poetry to turn away from objective truth. In fact, from this perspective, recognition is given to the legitimacy of poetical subjectivity, or to that of the imagination which is the cause of *muḥākāt* (see below). For the poet, this faculty prevails over thought, as is affirmed by al-Fārābī, Ibn Sīnā and Ibn Ruṣḥd (al-Rūbī, 114-15, with abundant bibl.). As the imagination conceives and expresses a mimesis and a resemblance and not reality, it is a case of a *kadhīb*, and the best poem is that which succeeds more than others in giving the illusion of reality, in inducing belief in the veracity of this *muḥākāt*.

(ii) *Takhayyul* denotes the power of creating images; it is stimulated, according to Ibn Sīnā, by an emotion which arouses the poet, by respect or admiration, by sadness or gaiety (*Fann al-shiʿr min kitāb al-Shifāʾ; Djawāmiʿ al-shiʿr*, 67-80). This power derives from a faculty called *al-mutakhayyila* (according to al-Kindī, *al-muṣawwira*, for al-Fārābī, *al-kalb*) responsible for the re-actualisation of images which have been perceived in the past. At the time of inspiration, the *mutakhayyila* does not confine itself to reviving these images, it restructures them, initiates new combinations of images which did not exist in this form in reality (al-Fārābī, *Arāʾ ahl al-madīna al-fādila*, 70-2). The poet is therefore obliged to keep in mind those images stored in his memory, perhaps also the *maʿānī* inherent in these images and to remodel them in a new, or even divergent fashion. Ibn Sīnā adds to this the entire stylistic apparatus, such as poetic language, technical procedures, rhyme, metre and even *maʿānī* (*Fann al-shiʿr min kitāb al-Shifāʾ*, 163). Thus conceived, *takhayyul* ultimately encompasses the whole process of creation.

The Islamic philosophers ranked it above the *kuwwa nāṭika* or logical force, but made it subservient to the intellect (*al-ʿaql*) on which it depends totally. The process of *al-takhyyul al-shiʿrī* appears to be a kind of emanation (*ḥayd*) or of vague and imprecise inspiration (*ilhām ghāmid*). Such a conception confers on poetry a status resembling that of prophecy or something close to it; both are phenomena of conscious inspiration involving subjects endowed with natural dispositions. If poetry is part of logic, the fact remains that it lies in the eighth and last position according to the classification adopted by al-Kindī and, later, by al-Fārābī (al-Rūbī, 54-6).

All visions of *takhyil*, translated into language, are transformed into *muḥākāt* or *akwāl muḥākīya*, i.e. symbols, mimeses and enigmas. Were it not for *muḥākāt*, the human *mukhayyala* would be incapable of operating and would remain at the stage of virtuality.

(iii) Arts such as drawing and painting are based on *muḥākāt* or imitation. Only poetry, among all the other arts, is a *muḥākāt* in the form of words. This faculty reconstructs the real into a better or worse form through the allocation of excess of beauty or of ugliness. Poetic discourse thus surpasses and transcends the real. In fact, this discourse, which is itself the fruit of *muḥākāt*, constitutes a subjective apprehension, since it depends on the vision which exists in the *mukhayyala* of the poet. In these terms, al-Fārābī stresses, a poem does not constitute a totally identical imitation of reality, but there is a relation of resemblance.

Ibn Sīnā gives valuable particulars regarding the nature and functioning of this force; it does not operate in the case of fables and of stories set to metre and rhyme. Neither of these belongs to the category of poetry. In the versified *Kalīla wa-Dimna* [q.v.] and in stories or tales, all is fictitious. They cannot be classed as *shiʿr*, which is concerned with things that exist or could exist. The Islamic philosophers followed the Aristotelian concept of the poet's role as transmitter of an event which is real or which could be so. Poetry, from this point of view, is closely akin to philosophy; both aspire to express global verities.

As regards the objectives which poetry sets out to retain, beyond aesthetic pleasure which is the primary aim, it is considered a school for the improvement of the soul. It is thus essentially a didactic discourse, being more easily digested by the "common people". It is the only means by which the latter can assimilate wisdom. Thus the ethical aspect, so highly esteemed by the puritans, is brought into play. The discourse which inflames the instincts and induces men to commit evil acts is thus denounced, and for this reason al-Fārābī reviles Arabic poetry as a school "of cupidity and mendacity". Ibn Miskawayhi advises that young people should not be instructed in the poetry of the *nasīb*, since it encourages fornication; on the other hand he sees educational merit in poems which celebrate courage and manliness.

#### D. The first grammarians

The first grammarians showed great interest in archaic poetry. Modern scholars have insisted on stressing the primal role played by versified texts in the researches of Arab grammarians and in the development of 'Arabiyya, the classical Arabic language. *Al-shiʿr al-ḥadīm* took the role of *shāhid*, proof text, and thus guardian of validity, of legitimacy of usage and of quality (Blachère, *HLA*, i, 89-96, 111-12). H. Fleisch asserts that treatises of grammar from the 2nd/8th century to the period of the *Nahḍa*, in fact present the grammar of *Djāhili* poetry. Classical Arabic grammar allegedly revealed, studied and codified a stage

of the language, that represented by ancient poetry (*Traité de philologie arabe*, i, 1961, 9-10; see also, J. Fück, 'Arabiyya, Paris 1955, 5; 'Abd al-Ḥamīd al-Shīkānī, *al-Aʿrāb al-ruwāt*, Tripoli (Libya) 1391/1982, introd., 7, 29; Ibrāhīm Anīs, *Min asrār al-luḡha*, Cairo 1958, 321).

Careful study of Sibawayhi's *Kitāb* reveals the dominant role of the speech of Bedouin heard directly from their own mouths. Furthermore, discernible in the approach of the great grammarian is a certain reluctance to use *shiʿr* to legitimise a linguistic facet (Sibawayhi, *Kitāb*, Paris 1881-5, 7). In § 7 of the *Kitāb*, he declares that the rules governing *kalām* differ from those governing *shiʿr*; in other words, as grammar seeks to codify the rules of the language, it cannot rely on poetry. Furthermore, having quoted a verse and studied the form of expression which it initiates on the level of morphology and syntax, Sibawayhi adds *wa-hādihā lā yaḍūzu illā fi 'l-shiʿrī wa-fi ḍaḥḥ minā 'l-kalām* "this is only permissible in poetry and in approximative speech" (*ibid.*, 18, l. 3). This equivalence of poetry = approximative discourse dispenses with any commentary. This manner of regarding the poetic language derives from a broader conception of this form. This disciple of al-Khalīl b. Aḥmad seems to have had little appreciation for the very artificial figures and expressions adopted by the poetic language. When he introduces poets, he criticises them "for being ready to accept aberrant forms and figures to such a point that they use words improperly, because they are [metrically] convenient and are not vitiated by any deficiency as regards the measure" *wa-yaḥṭamūnā kabha 'l-kalāmī ḥattā yaḍūhū fi ḡayri māwḍiʿihī li-annahu mustakīm<sup>m</sup> laysa fihī naḡsu* (*ibid.*, 9). For his part, Ḥamza al-Iṣfahānī (4th/10th century [q.v.]) also fulminates against aberrant figures and the violence done to the language by poets ('*asf al-luḡha*) on account of the tyrannies of form to which they are subject (*al-Tanbīh 'alā ḥudūṭ al-tashīf*, Beirut 1992 [= Damascus 1968], 97-101). Later, the linguistic quest changes on account of the closure of the doors of *idjtiḥād* in grammar, and visiting the desert is seen as futile on account of the degradation of Bedouin speech. Consequently, ancient poetry is endowed with incomparable prestige in the eyes of grammarians: it is the perfect expression of good usage. In relatively late grammatical works, only the poetical *shawāhid* are retained for purposes of testimony.

#### V. Unregulated poetry.

Unregulated is used here in the sense of unrestrained, excessive (*Grand Robert*, s.v.). This is in fact the period of the fantastic, to borrow the expression of Heinrichs, in the long evolution of Arabic poetry. By means of an intensive and original usage of tropes, the poets break all logical links between the elements in a comparison; they opt for an imagery totally divorced from nature and proceed towards constructions dependent on the imaginary, in other words a fantastic creation. The later 'Abbāsīd poets show themselves consummate masters of this art. An example given by Heinrichs is the image whereby al-Ṣanawbarī compares red anemones tossed by the wind with banners made of rubies set on a background of chrysolites (Heinrichs, 26).

In order to understand the full significance of this approach, it needs to be linked to the role of the image in the poetics of al-Djurdjānī. Metaphorical language, he asserts, is magic (*Asrār*, 40). The image reconciles the irreconcilable, unites incompatible opposites and introduces us to a world of the bizarre, in which images are not immediately comprehended by the imagination (*ibid.*, 140, 144, 150, 188). Evidently,

what is involved here is an artificial creation, even a discourse full of affectation. There is nothing pejorative in this concept. Modern conceptions of aesthetics consider it on the contrary as an art form tending towards irrealism, refined and sophisticated, drawn to fantasy and paradox and transcending affectation and oddity; the subjects here are unashamedly fantastic, even esoteric. This important process of evolution proceeded for several centuries. Beginning in the 4th-5th/10th-11th centuries, it reached its zenith in the 6th-12th century. The centuries of affectation are characterised by an intense poetic activity directed entirely towards a single objective: what matters in poetry is literature, i.e. recourse to a formed and formalised language.

(1) *The revival of established genres.*

The poets of these centuries are outstanding painters. In the Ayyūbid and Mamlūk periods, descriptive poetry demonstrates an intense love of nature; the poets of Spain, of Syria and of Egypt celebrate it with enthusiasm. The countryside is transformed here into a cornucopia of colours and scents bathed in abundant water (Ibn Munīr al-Tarābulusī, *Diwān*, Beirut 1986, 149-50, 178, the perfumes of Damascus); human arrangements, *shirāḍīs*, places of libation (*maḍālis*), wells, etc., are shown in the forefront of the scene (Ibn Munīr al-Tarābulusī, 133, § 40, 134, § 42; al-Suyūṭī, *Husn al-muḥāḍara*, Cairo 1967, 358-63). Similarly, rivers and lakes are very often celebrated (Umayya b. 'Abd al-'Azīz, *Diwān*, Beirut 1990, 81, 85, 133, 145; Muḥammad Zaghlūl Sallām, *al-Adab fi 'l-'aṣr al-mamlūkī*, Cairo 1971, 115-16).

This attachment to nature remains a powerful influence under the Mamlūks and the Ottomans, and the tendency to sing the praises of its more enchanting aspects becomes a regular feature among the poets of the two periods: Ibn Zāfir al-Haddād, Ibn Kāsim al-Hamwī (d. 542/1156), al-Shihāb al-Shāghūrī (d. 615/1218), and for the Ottomans, Ibn al-Nakīb (d. 1081/1670, Ibn al-Nahhās al-Halabī (d. 1052/1642) and Abū Ma'tūk al-Mūsawī (1087/1676) have evoked in numerous instances the beauties of Syria and, in the case of Egypt, the Nile and its verdant banks. At the same time, this taste for nature is revived by love of the soil, by literary reminiscences and the introduction of a new poetical form which wallows in nature, the *muwawshshah* [q.v.] of Andalusian origin. Also encountered in the texts is a sustained interest in the climate and in meteorological phenomena, rains, wintry weather (al-Suyūṭī, ii, 398), snowflakes and the cheerful nature of the spring (*ibid.*). Furthermore, conventional or scientific objects such as the astrolabe (Umayya b. 'Abd al-'Azīz, 90-1, § 111), censers (*ibid.*, 93, § 118), candles, tooth-picks (*Shadharāt al-dhahab*, vi, 59), etc., which could seem prosaic at first sight, are frequently evoked.

Description adopted a poetic language which was sometimes elliptical, most often enigmatic, and *ma'ānī* which, far from revealing the object, screened it in a subtle and pleasurable manner through the adoption of procedures of affectation and fantasy. Very often, the poet gave to his description an enigmatic form by recourse to the interrogative pronoun "what-is-it-that?" (*mā*), and an allegorical language. Fityān al-Shāghūrī, describing the cupola of the Umayyad Mosque, transforms it into a young woman (*ghāda*) of great beauty born by a vulture (al-Shihāb al-Shāghūrī, *Diwān*, Damascus 1967, 245). Nothing in the poem helps the reader to penetrate the secret of this fantastic image. In these conditions, it can be understood how works of poetics under the Mamlūks insisted on

*tauriya* [q.v.] or double-meaning, the less common interpretation being envisaged. No fewer than three works are attested by al-Ṣafadī, Ibn Hūdjdja and Ibn Khātima (Muḥammad Zaghlūl Sallām, *Ta'rikh al-naḥḍ*, ii, 332, 366, 369) which clearly illustrate the tendencies of this poetry.

(2) *The vigour of religious poetry.*

Ṣūfī poetry experienced the most ostentatious period of its history. The works of Ibn al-Fāriḍ (d. 632/1231) and of Muḥyī 'l-Dīn Ibn 'Arabī (d. 638/1240) gave the impetus to a trend which was to be maintained until the *Nahḍa* [q.v.]. Sharaf al-Dīn al-Anṣārī (d. 662/1264), al-Shābb al-Zarīf (d. 688/1293), 'Aḥīf al-Dīn al-Tilimsānī (690/1291), al-Zahīr al-Irbilī (d. 697/1302), Ibn al-Nahhās al-Halabī (d. 1052/1642) and 'Abd al-Ghanī al-Nābulusī (d. 1142/1731) are the loyal heirs of their illustrious predecessors. In the best examples, the discourse aspires to escape from the rational. The language is allegorical and the words take on a symbolic meaning which can be penetrated only by initiates. This essentially subjective poetry transcends semantics to express that which transcends words. Here, there is no self-modelling according to the exigencies of a well-defined dogma. In a sense, the involvement here is with open texts, bearing multiple suggestions. Furthermore, the Ṣūfī poems of the period renew acquaintance with an ancestral tradition closely associated with the use of song among mystics (al-Ahwānī, *Ibn Sanā' al-Mulk wa-mushkilat al-ukm wa 'l-ibtikār*, Cairo 1962, 197). Furthermore, no doubt influenced by the mystical poems of the Persian *sāḳi-nāma*, the Ṣūfī *khamriyya* [q.v.] enjoys a certain vogue; numerous poems based on this pattern are attested from the 7th/13th to the 12th/18th century. Finally, it should not be forgotten that it is this period which sees the emergence and proliferation of the poems called *al-madā'ih al-nabawiyya* or eulogies of the Prophet: generally long pieces, constructed on a binary base, the opening being reserved for the *naṣīb nabawī* (a love-song addressed to the Prophet) which is combined with the *na't al-nabī* (portrait of the Prophet), praises and accounts of his miracles, his virtues and his fine deeds (Zakī Mubārak, *al-Madā'ih al-nabawiyya fi 'l-adab al-'arabī*, Cairo 1967, index). A woman, 'Ā'isha al-Ba'ūniyya (d. 922/1516), seems to have been particularly distinguished in this field: she devoted a special *diwān* (*diwān mustakill*) to this type of poem. Certain researchers see in this renewal of religious poetry an attempt to find a refuge from an unbearable reality and a reaction to the decline in status of the professional poet. Henceforward, their numbers were to contract and they were replaced by scholars, in particular, by *kādīs* possessing profound affinities with religious motifs (Muḥammad Zaghlūl Sallām, *Adab*, 109). *Imitation and decline*

During the five centuries from the 5th-10th/11th-16th, Arabic poetry ceases to be regarded exclusively as entertainment and regains a part of its ancient primacy. Circumstances favoured this development. Various campaigns and victories over the Crusaders stirred up among contemporaries, poets in particular, a great wave of enthusiasm and optimism. The victories of Ṣalāḥ al-Dīn and those of al-Zāhir Baybars inspired numerous poems on the part of the *kādī* al-Fāḍil, al-'Imād al-Iṣfahānī, Abū 'l-Faḍl and al-Djilyānī, who were not lacking in epic spirit (Abū Shāma, *al-Rawḍatayn*, Cairo 1956-62, ii, 102-18; Ibn Waṣīl, *Mufarriḡ al-kurūb*, Cairo 1953-60, 234 ff.; for the Baybars cycle, Ibn Taghrī-birdī, *Nuḍjūm*, Cairo 1929-56, xii, 322; Bāshā, i, 530-3).

This poetry is produced by epigones; the poets of

this period made imitation of the ancients and slavish adherence to established models into an institution.

New forms, the *mu'arada* [q.v.], the *takhmīs* [q.v.] and the *tasmīt* [see MUSAMMAT], impose on the poet the need to introduce whole poetical phrases, ranging from the hemistich and the verse to the totality of the *qaṣīda*. The later poet becomes, at best, a commentator and his poem a continuation and elucidation of that of the model. The case of Ṣaḥī al-Dīn al-Hillī seems typical in this respect: a considerable proportion of his poems are *mu'aradas* of poems of al-Mutanabbī, or *tasmīts* of the *qaṣīda* of Qaṭarī b. al-Fudjā'a, of the *lamiyya* of al-Samaw'al and of the *nūniyya* of Ibn Zaydūn; another poem includes the *Lamiyyat al-'Arab* of al-Shanfara: verses by the *su'lūk* poet are cited textually (*taḍmīn*), separated one from another by those of the Mamlūk poet. The same procedure is attested with the *maḥṣūra* of Ibn Durayd, two integral poems of al-Mutanabbī and of al-Tughra'i and the second hemistiches of the *Hamāsa* of Abū Tammām. Originally, it is quite possible that the later poets were induced to follow these procedures through their admiration for a valued heritage, or as a means of protecting and conserving it. In this regard, under the Ottomans, the poets Ibn al-Nakīb and Amīn al-Djundī (d. 1257/1841) proceeded in an absolutely identical fashion. Furthermore, the former, no doubt considering himself a memorialist, and still with the aim of conveying a culture, composed a poem of 119 verses entitled *Ḍamharat al-mughannīn* and dedicated to musicians, singers, favourites and drinking companions (*nudamā'*) from the Umayyads to al-Rāḍī; he also evokes here the sweetness of life among the Barmakids and the enjoyable parties given by al-Ṣāhib Ibn 'Abbād and al-Muhallabī. All these evocations were strewn with quotations from verses composed in earlier periods (al-Muhibbī, *Khulāṣat al-aṥar fī a'yān al-kam al-ḥādī 'ashar*, Cairo 1384, ii, 396-7). On reading Mamlūk and Ottoman compositions, there is no justification for speaking of decadence or of lexicographical poetry. Admittedly, since the time of the Ayyūbids there is a marked tendency among poets to engage in extravagant rhetorical games: the verses known as *al-abyāt al-mushadidjara*, which can be read from beginning to end, but also from end to beginning, constitute, at best, a verbal prank and a tangible sign, perhaps the only one, of undeniable mastery of the language. Finally, poets were much fewer in number, as the culture itself had contracted and was upheld only in small and isolated enclaves. Looking to a past which it sought to safeguard and deprived of any regenerative element, it perpetuated a patently outdated discourse. At this time, poetry had lost its momentum and was evidently awaiting a change—which came with the *Nahda* [q.v.].

(b) The modern period.

The science of literature (*ilm al-adab*) among the Arabs is defined as "the systematic science of literature that deals with language in the form of poetry

and prose from the point of view of purity of language and rhetoric" (Cheikho, *Ilm al-adab*). The Arabic language is considered by the Arabs as the most "poetic language" (*al-lughā al-shā'ira*) created by God, a language whose characteristics distinguish it from other languages. As the language of the Holy Qur'ān, Arabic acquired an aura of sanctity, stability and eternity. Thus the poetics of Arabic language should conform to the language of the Qur'ān and address itself to serious subjects. As such, a fundamental difference exists between Arabic and European poetics. The European understanding of poetics as a systematic science of literature, as art, as communication, as an expression of culture in history and as a personal creation, was a concept which was not rediscovered by Arab poets until the 20th century.

In fact, throughout the history of Arabic literature there are clear-cut definitions of poetry and prose, distinguishing one from the other, so as not to allow prose to be confused with poetry, though the former may have rhyme, rhythm, metaphor or any other poetical technique except metre and the intention to write poetry. The revolt against conventional Arabic metres reflected a problem with a long-disputed course of development. Although poetry has in the recent years lost its prominence, nevertheless the problem of the rigid rules of Arabic metre which started at the beginning of the 20th century is still going on.

Poetry written in literary Arabic is considered among the Arabs as the most venerated and most sublime literary trend of Arabic literature. Hence colloquial poetry was excluded as a literary genre. During the 19th and beginning of the 20th centuries, under the impact of the West, some Arab poets tried to introduce new poetic diction, metaphors, themes and to find new forms and music which suited them, in order to be able to avoid what they considered the enslaving style, monometre and monorhyme, and the sonorous and declamatory tone of the classical Arab poetry.

Arab poets noticed that the most distinctive features in European poetry when compared with Arabic are the dramatic, narrative and epic poetry, which use stanzaic form and blank verse, while the most prominent trend in Arabic poetry is confined to the lyrical monorhymed ode (*kaṣīda* [q.v.]). However, most of the Arab poets, mainly the neo-classicists of the second half of the 19th century, who were convinced of the richness of their language, agreed that rhyme is essential in Arabic poetry. It provides a musical effect and adds melody through the harmony of sound; it proves the ability of the poet and attracts attention; it adds dignity and helps in memorising the sequence of lines; it divides the poem into equal and parallel verses; it raises and satisfies the expectation of the listener; and it helps to make the verse more memorable and binds the lines together with one common bond.

The neo-classical trend emerged in an epoch when poets were still using the diction, style and poetic forms of the stagnation period in which the dominant social trend of poetry recorded happy and sad occasions, was composed with emphasis upon form and verbal play on words, spurious embellishment, paronomasia (*taḍnīs*), plagiarism, alliterations, antithesis and different types of parallelism (synonymous, antithetical and climactic). Various types of pun were also used, with an emphasis upon form, such as verses in which all the words are without diacritical marks. Alternately, one word may bear the diacritical marks while the other words remain unmarked. It was also prevalent to use *taḥṣīr*, i.e. to add to each verse of

a well-known poem a second hemistich to its first hemistich and a first hemistich to the second one, padding its meaning and extending it. Many such poems end with a verse denoting the year of the event according to the numerical value (*hisāb al-djummāl* [q.v.]) of the alphabetic letters of the last hemistich or verse. These forms in which the poet tries to show his wit and his ability to draw on the supply of classical methods stored in his memory, inventing new puns or tricks, transformed Arabic poetry into pseudo-classical poetry, into an intellectual game and an intelligent form of frivolous entertainment admired by the élite.

During the second half of the 19th century, a new generation of poets influenced by European poetry, strove to revive the classical *kaṣīda*, its form, diction, metaphors and themes, after its decline to low levels of weak and pseudo-classical verse mentioned above. The revival of the conventional Arab ode by neo-classical poets began in Egypt and the Arab world when the revival of the Arab-Islamic heritage was considered the best response to the foreign, hostile and invading Christian European culture. The neo-classical trend began with Arab poets such as Nāṣif al-Yāzidī (d. 1871 [q.v.]) in Lebanon and Maḥmūd Sāmī al-Bārūdī (d. 1914 [q.v.]) in Egypt. The form of the *kaṣīda* ideally suited the poets who served the ruling courts, high government officials, influential families, the Arab national and social movements and the religious revival.

Although European literary critic theories began to show their initial influence, yet the conventional definition of poetry was the dominant one among Arab scholars and prosodists. Conservative poets and writers still dealt with the usual themes such as *madīḥ* (panegyric), *riḥāʾ* (elegy), *ghazal* (erotic poetry), *wasf* (description), *tahānī* (congratulation) and served rulers and influential personalities. In this neo-classical Arabic literature, Arab poets revived the rhetoric and declamatory style and the religious and fatalistic spirit of classical poetry. The new poetics sought to emulate the conventions and the basic canons of poetics through *muʿarāḍa* [q.v.] (imitation of an excellent classical poem using the same metre, rhyme and theme with the intention of surpassing it). This trend of platform poetry developed not only to serve rulers, religious and national revivals but also to emphasise national ideas by recalling the glorious and profound classical heritage.

When the Ottoman consul-general in Bordeaux, Rūḥī al-Khalīdī [q.v.] compared the *ʿilm al-adab* among the Arabs and the Europeans, he said in his monumental *Taʾrīkh ʿilm al-adab* that European writers claim that Arab poets were interested in word-juggling and artificial embellishment with and without diacritical dots and in rhetorical devices, yet with no thought or fictional imagery. Moreover, these European writers say that the *makāmāt* [q.v.] deal with deception, with erotic subjects directed towards males and with perverted love. To these accusations, they add that when great Arab poets and writers deal with deep thoughts, they express them in an artificial and difficult language (2nd ed., 71-2).

Yet the neo-classical poets were proud to achieve the purity of diction, strength of texture, polished language, aristocratic tone, rhetorical devices considered as making up the only perfect and sublime poetry, expressive of the collective conscience and aesthetics of their religion and culture. Any other form or style was considered inferior or unsuitable for the "serious" subjects of traditional poetry. The neo-classical poets'

identity and confidence in their culture were not shaken. They saw their achievement as a step toward the restoration of the magnificent Arabic heritage and its glorious past, and precisely for this reason, any attack upon neo-classical poetry by modernist Arab critics and poets was considered as an attack on Islam.

Modernist critics and poets sought to formulate new poetic theories by combining Arabic conventional poetics with modern European theories. Even in 1949, after the rise of three romantic schools in Arabic poetry, *al-Rābiʿa* (1920-31) in the USA, *al-Diwan* (1921), and *Apollo* (1932-4) in Egypt and their new theories of poetics, the Egyptian critic al-Khafadī in his *Fann al-shiʿr* ("The poetic art") defined Arabic poetry as "speech versified according to the Arabic metres, with the intention of using metre, expressing sense and using rhyme". Earlier, numerous definitions were attempted, which the Lebanese-American romantic poet, writer and critic Miḥāʾil Nuʿayma [q.v.] considered to be dull and inaccurate. Influenced by Russian poetics, especially by the critic V.G. Belinski (1811-48), he cautioned that, in addition to metre, rhyme, emotion and imagination, poetry should communicate pantheistic and metaphysical sensitivity. Such critics maintained that poetry, as established in classical Arabic literature, is the most artistic of all literary genres. Poetry employs language in a particular manner: it makes use of alliteration and onomatopoeia, and it is far more tolerant of metaphors and symbols than prose.

The new vision of the modernists rebelled against the neo-classical platform orator poet, in short, the elegant poet whose ambition was to become a poet-laureate on the pay-roll of the ruler or of the Muslim religious endowments (*awḳāf*). Modernists, in contrast, demanded from the poet independence in the humanist European tradition. The poet was now freed to depict his own life, emotions and thoughts as the subjects of his compositions. Unfortunately these poets and critics derived their deals haphazardly from heterogeneous European critical, scientific and philosophical theories, showing an indiscriminate fascination with all Western products in the context of their desperate quest for a theory of contemporary poetics that would explain the dichotomy between word and meaning, form and content.

The pioneer modernists calculated that, by adopting the forms and themes of Western poetry, a revolution in Arabic literature and a general change in the spirit of Arabic culture and poetry would ensue. Their objective was to attack the major neo-classical poets and establish their own new poetic movement. This struggle came to be known as the struggle between the old and the new (*al-sirāʾ bayn al-kadīm wa ʾl-djādīd*). This resulted in the romantic trend in modern Arabic poetry, involving a vehement struggle on the part of the poet for freedom to express his own ideas and emotions and his own personal experience. In effect, the modernists denounced the neo-classical blind imitation of classical themes, such as the yearning for the place of the beloved, or the lamenting over the ruins of encampments, experiences which they had never themselves known.

Only during the second half of the 20th century, after the split in Arabic poetry into two distinct trends, have Arab poets and critics succeeded in formulating a completely new conception of Arabic poetics. Poetry is no longer defined in terms of its form, i.e. as speech in metre and rhyme. Rather, the evaluation is based on the poem's expressive value and its organic unity. The following themes have come to assume paramount

importance: humanistic trends, optimistic, psychological and rational undercurrents, and universal experience. The emphasis is now on thematic content; poetry becomes a vehicle for narrative, dramatic, epic and lyrical trends, and form is secondary. Form was liberated, into free verse (*shi'r hur*) in the sense of *vers irrégulier* or the Cowleyan ode; blank verse (*shi'r mural*), employing conventional Arabic feet in unrhymed verses, or rhymeless verses of irregular number of feet; in poetic prose (*shi'r manthūr*), using the music of thought based upon repetition and parallelism; and even the prose poem (*kaṣīdat al-naṭhr*) advocated by Adonis ('Alī Aḥmad Sa'īd) in accordance with the French *poème en prose*.

For the Romantic Arab poets and critics, contrary to the classical view, the first criterion of poetic excellence is that poetry should contain human values and not only embellished language.

After the Second World War, the social-realistic trend in modern Arabic literature replaced the romantic trend. The poets of this trend acquired a common ideology and employed similar artistic techniques and diction, forming a literary school in the proper sense of the word. This school insisted on utilitarian values and practiced engaged or purposive literature. They formed an ideology consisting of a blend of socialism and existentialism, describing their new brand of literature as "realistic, optimistic and constructive literature". Committed literature was viewed by its practitioners as a revolt against romantic poetics, which they dismissed as emotional, metaphorical, pessimistic and destructive.

With the gradual decline of social, political, patriotic, national and descriptive trends in Arabic poetry during the mid-20th century and the success of the Romantic Arab poets in achieving harmony between form and content, a new trend arose. This was led by the *Shi'r* ("Poetry") magazine, established in Beirut in 1957 by Yūsuf al-Khāl and its theoretician the Syro-Lebanese poet Adonis. The group of poets who edited and supported the magazine dealt with the question of the dichotomy between the literary and colloquial Arabic, and gave it precedence over the question of words and meaning. They believed that language in poetry is not a means of expression but of creation. For the *Shi'r* group, words were expected to suggest and inspire rather than express. In addition, the new poetry was to have a dominant metaphysical tendency; it should strive to go beneath the surface level to the deeper reality of the universe.

The argument of the new trend of post-modern poets is that political events cannot be the object of poetic inspiration but only of prosaic forms of literature. To love beauty teaches people to rebel against oppression; as such, didactic and socio-political poetry are superfluous. Poetry should reflect the personality, mentality and psychological mood of the poet, a particular self-image and a unique inner life. On the other hand, those who defend the obligation of the poet to his society are the proponents of a national literature which expresses itself in the social-realistic trend.

The post-modern poets maintain that their new poetry has outgrown the conventional themes and rules, just as the modern age has superseded preceding ages. Poetry, they argue, is an expression of a poetic experience which should not be confined to the personal emotions. Conventional poetry recorded events and emotions, but did not go beyond them. Modern poetry is less limited, since it attempts to reveal the essence of life and not merely to be moved by it. It assumes a more positive stand. The essence

of modern poetry is creative and evolutionary thought, not precise description. It is a comprehensive realisation of the Arab existence, a call to give expression to life's deepest meaning. It stems from a metaphysical sensitivity, which does not feel things according to their essence, but is a quality which only the imagination can reach. This quality allows modern poetry to break the chains of time, events, reality and predetermined ideas. It is not a reflection of something, but a conquest revelation of a new world. The search in a poem is not for images, but for a poetic universe and for connections with the human being and his situation.

With the flexible form of Arabic free verse and *poème en prose* of the new trends of Arabic poetry, the modernisation of Arabic poetics was completed. This new poetry was influenced by classical Arabic poetry as well as by Western thinkers and critics from Plato and Aristotle to Rousseau, Darwin, Nietzsche, Schopenhauer, Renan, Sainte-Beuve, Auguste Comte, Bergson, Coleridge, Hazlitt, Sartre and Camus, as well as European and American poets from Shakespeare, Baudelaire, Eluard, Poe, Eliot, Blake, Byron, Shelley, Wordsworth and Whitman to Pasternak.

The influence of these thinkers and poets has gone beyond changing the form and content of modern Arabic poetry; they have also enabled Arabs to understand better their classical heritage. This point has been discussed by the defender of the poetics of Arab modernity, Adonis, who has admitted that "I did not discover this modernity in Arabic poetry from within the prevailing Arab cultural order and its systems of knowledge. It was reading Baudelaire which changed my understanding of Abū Nuwās and revealed his particular poetical quality and modernity, and [it was] Mallarmé's work which explained to me the mysteries of Abū Tammām's poetic language and the modern dimension in it. My reading of Rimbaud, Nerval and Breton led me to discover the poetry of the mystical writers in all its uniqueness and splendour, and the new French criticism gave me an indication of the newness of al-Jurjānī's critical vision. I find no paradox in declaring that it was recent Western modernity which led me to discover our own, older, modernity outside our 'modern' politico-cultural system established on a Western model" (Adonis, *An introduction to Arab poetics*, 81).

As in the case with Western literature, modern Arabic poets use mythology, religious symbols, Greek and Eastern legends as well as Christian, Muslim and Hebraic symbols to communicate their new poetic vision. These symbols are employed even by practising Muslim poets and by formerly active Communists, who in this respect follow Boris Pasternak and other Russian poets. Eastern, and especially Syro-Phoenician, Babylonian and ancient Egyptian mythology and gods, have returned to the East through Western poetry.

These religious and mythological symbols are used in modern Arabic poetry not as expressions of religious experience, but in order to convey mental and physical states. Their main purpose is to communicate the psychological mood of the poet, who feels persecuted and alienated from his politically suppressive society. His efforts to reform his society and country are futile because of the military or semi-military régimes dominant in Arab countries. In this pessimistic context, most of the symbols used are tragic ones. Christ is the favourite symbol of the poet who sacrifices himself for his country and people. Other symbols connected with the Crucifixion are also used, such as Christ bearing the Cross, an image denoting

the long path of suffering through which the poet has to pass.

Already in 1965, these symbols provoked tremendous objections by official and the growing conservative circles in the Arab world who announced that their duty was to guard the sacred and stable values of Muslim society. They argued that the destruction started by the new trends has encroached upon the Arabic language itself. Poetry, the art and glory of choice language, have a strong connection with the national spirit. Moreover, they have accused modern poets of allowing corrupting foreign elements to penetrate the Arab existence. Among these alien elements, they have warned, is the practice of incorporating ideas and symbols derived from non-Muslim religions. Some of these ideas had already been rejected by Islam, such as Original Sin, the Crucifixion and Redemption. Moreover, the poets have used the word *ilāh* "deity" in its original pagan sense. These attacks by official circles in the Arab world represent a serious blow and a severe setback to Arabic thought. These conservative arguments preceded the assassination of the Egyptian thinker Dr. Faraj Fūda, the attempt by Muslim fundamentalists in Egypt on the life of the Nobel Prize laureate of literature, Nadjīb Maḥfūz in 1994, and the threat to assassinate the writer, thinker and philosopher Anīs Maṣṣūr. On the other hand, poets such as Nizār Ḳabbānī and Maḥmūd Darwīsh remained rather conservative in their political attitudes and in their use of metaphor and religious symbols.

## 2. In Persian.

In the introduction to *Mi'yār al-aṣḥār*, a Persian textbook of prosody written in 649/1251-2, and ascribed to Naṣīr al-Dīn Tūsī [q.v.], *shi'r* is said to be "imitative and measured speech" (*kalām-i mukḥayyal-i mawzūn*), according to the logicians, or speech "with measure and rhyme" (*mawzūn-i mukaffā*) in popular usage. These definitions, which refer to the Aristotelian *mimesis* as well as to the basic prosodical features, express a conformity to a concept of poetry commonly held in traditional Islamic civilisation. This is rooted in the paradigmatic role assigned since early Islam to Arabic poetry and the formal rules governing that poetry. Persian classical poetry, the beginnings of which can be traced back to the 3rd/9th century, is the oldest example of the adaptation of an indigenous poetic tradition to the Arabic standards. Although several fragments of Persian poems, dating back as far as the 1st century A.H., are on record, until the 3rd century all lack the characteristics of metre and rhyme marking classical poems. They are remnants from the pre-Islamic poetry of Persia, which was almost exclusively an oral art. The prosody of that tradition is still imperfectly understood, but it was undoubtedly very different from the classical standards, especially because of the absence of quantitative metres and regular rhyme. Persian critics of the Middle Ages refused to recognise anything as poetry that was not written according to these standards. Shams-i Kays [q.v.] went as far as to state that prosody was in all its aspects an invention of the Arabs to which the Persians had added nothing new (*Mu'djam*, 68).

In modern times, the Indian scholar U.M. Daudpota still put much emphasis on the virtual identity of the two traditions. However, Hellmut Ritter, examining the aesthetic function of imagery in the poetry of Nizāmī, found a fundamental difference in the prevalence of explicit poetic comparisons in Arabic poetry on the one hand, and a Persian preference for metaphorical expression on the other (*Bildersprache*, 13-21; see also *Geheimnisse*, 1\*f.). This immediate and flexible use of imagery provided Persian poetry with a manneristic idiom which for centuries dominated the literary language, both in poetry and in prose. Benedikt Reinert has clarified the complex relationship between Arabic and Persian poetry by pointing out that there was in fact an interplay of literary influences from both sides. The 'Irāqī phase in the history of Arabic poetry, when the *mudhathūn* [q.v.] poets introduced rhetorical innovations and new genres into the tradition inherited from the Ḍjāhiliyya, was the immediate ancestor of Persian poetry, but was itself influenced by Middle Persian forms of poetry. Features favoured in particular by the Persian poets were, among others, the use of the *radīf* rhyme, a strict application of the quantitative principle in Persian metrics, a different structure of poetical comparisons, an excessive use of hyperbole, the introduction of the heroic and didactic genres and the description of nature as a theme for the *nasīb* (*Probleme*, see esp. 72-82).

Writers on various aspects of literature have left statements about the values attached to poetry in Persian culture. Kay Kāwūs [q.v.], the author of the oldest Persian Mirror for Princes, classified poetry among the intellectual pursuits, warning at the same time against difficult poetry which would be in need of a commentary and could therefore fail to speak directly to those for whom it was written (*Kābūs-nāma*, 187). Being concerned in particular with the usefulness of poetry to a ruler, Nizāmī 'Arūḍī [q.v.] pointed to the catharsis which could be effected by poetry, for instance in politics, as well as to the publicity value which provided one of the most important justifications for traditional court poetry. In rhetorical textbooks, the practical advantage of a critical knowledge of poetry was emphasised for any one who was concerned with composition, including especially official scribes, because the stylistic convention prescribed the embellishment of prose by means of poetic insertions.

More fundamental are the attempts to establish the metaphysical status of poetry by emphasising its connection with human speech and logic. Such considerations are to be found as more or less obligatory introductions to anthologies, e.g. of 'Awfī's *Lubāb al-albāb* and Dawlatshāh's *Tadhkirat al-shu'arā'*. Speech (*sukhan*) constitutes God's special gift to mankind, by which the human species is distinguished from all other living beings. On account of its privileged relationship to the capacity of speech, the writing of poetry belongs to the highest pursuits of the soul. Poets also frequently express their views on this particular aspect of their art. Passages on the relationship between speech, or logic, and poetry have found their place among the subjects treated in the introductions of *mathnawī* poems. A remarkable specimen is the long and intricate introduction which Nizāmī Gandjawi [q.v.] added to the dedication of his didactic poem *Makhzan al-asrār*. Defending the originality of his work, he makes use of the allegory of a spiritual journey in search of the inspiration which only the poet's own heart can provide. Poetry is related to the *logos* but also to the Divine word of revelation; the latter association gives the poet a spiritual status close to that of the prophets. Nizāmī also points out that poetry is an immaterial art, in spite of the fact that it uses all the elements of the cosmos as the raw material for its imagery (*Makhzan al-asrār*, ed. A.A. Alizade, Baku 1960, sections xii-xviii).

Such a high opinion of poetry could not fail to lead to a discussion about the permissibility of the "mercenary" panegyrics of the court poets. This question became particularly acute since the 6th/12th century, when Persian poetry came to be used more and more for religious purposes. Sanā'ī [q.v.] reduced the conflict between his calling as a homiletic poet and the practices of professional court poetry to a choice between "the Law" (*shar'*) and "poetry" (*shī'r*). Farīd al-Dīn 'Aṭṭār [q.v.], claiming the rightful use of poetry by the mystics, harmonised the opposition implied in Sanā'ī's word play by adding a third term, viz. "the (heavenly) throne" (*'arsh*), symbolising the goal of the mystical search, which in his view sprang from the same source as literary art and the obedience to the Law of Islam, just as the three words shared the same letters (*Muṣibat-nāma*, 46-7).

By then, poetry was firmly established as a medium for the expression of mystical experience and religious and ethical instruction. Remarkable for this development were the greater importance of the *ghazal* [q.v.], and of the didactical *mathnawī* [q.v.], which became enriched by the often intricate use of narrative ele-

ments. The scope for secular epics became restricted, except on the level of popular literature. The panegyric *kaṣīda*, as well as the stanzaic poems, were used for other purposes more suitable to religious interests such as didacticism, religious hymns and elegies on the Shī'ī martyrs. The dichotomy between court and religion is only a simplified model of the actual situation. There was an exchange of motives and themes, going into both directions, which gave Persian poetry the ambiguity which became one of its most fascinating features.

According to many modern critics, Persian poetry reached its culmination point in the 8th/14th century, especially with Hāfiz [q.v.], and then ceased to develop any further. During the Tīmūrid period, a decline already began, marked by the mere imitation of earlier poets and an empty display of rhetorical virtuosity. Under the Ṣafawids [see ṢAFAWIDS, III. Literature], there was a brief and limited revival of creativity, exemplified especially in the 16th century by the stylistic fashion of *wuḳū'-gū'ī*, and subsequently by the rise of the *sabk-i Hindī* [q.v.]. In Persia, the Indian style was not long accepted as an avenue to escape from the impasse, though it produced at least one generally recognized master in the poet Ṣā'ib [q.v.]. About the middle of the 18th century, a reaction to the Indian style, afterwards styled the "literary return" (*bāzgaṣht-i adabī*), took the form of a neoclassicism which continued to dominate poetry until the 20th century. This revival was founded on the early court poetry, which was admired for its harmony, natural grace and simplicity. Nearly all poetry written in the Qājār period is at best a clever imitation of poetry produced at the courts of the Sāmānids, Ghaznawids and Saldjūks.

In the first decade of this century, the Constitutional Revolution (*inkilāb-i mashrūṭa*) again challenged the inventiveness of Persian poets. The novelty of the *mashrūṭa* poetry consisted mainly in the introduction of new subjects, derived from current events, and in an attitude of *engagement* towards society, both of which had been virtually unknown to the classical tradition. Formal innovation was still only incidental to the main concern with contents, but a few experiments with prosody can be noticed, e.g. the choice of new rhyme schemes by Dihkhudā (1879-1956) and Bahār's [q.v.] use of uncommon variations of the stanzaic poems, like the *mustazād*, an extension of the classical *mathnawī*. More interesting was the turn towards forms hitherto restricted to oral poetry: both 'Arif [q.v., in Suppl.] and Bahār recognised the effectiveness of the *tasnif*, a ballad already in use for popular comments on political events, to reach mass audiences during public performances of poetry and music. The strength of the tradition showed itself not only in the overall tendency to stick to the timeworn vocabulary and imagery, but also in attempts to provide individual poems from the past with a topical meaning. A striking example is the treatment of Khākānī's famous *kaṣīda* on the ruins of the Sāsānid palace at Ctesiphon as a symbol of the modern longing for the rebirth of vanished greatness. Muḥammad Riḍā 'Ishkī (1893-1924 [q.v., in Suppl.]) chose Ctesiphon as the setting for his poems *Rastākhīz-i salāṭīn-i Irān* and *Kāfan-i syāh*, written in the novel form of musical drama. In an ode on the Communist Revolution, Lahūfī (1887-1957 [q.v.]) transferred this theme to the Kremlin. The form of the strife poem (*munāzara*), used by Asadī (11th century), was transformed into a medium for modern social and moral criticism by Parwīn I'tisāmī (1906-41 [q.v.]).

The impact of Western poetry, which has been

instrumental in the process of literary modernisation in all non-Western cultures, made itself felt comparatively late in Persia. Debates between the proponents of change and the defenders of traditional poetry (*shi'r-i sunnatī*) went on until after the Second World War, although the first signs of Western influence can already be noticed in the early 1920s. Among the first to turn to Western models were 'Ishkī, with his musical dramas, and Īraj Mīrzā (1874-1924), whose *Zuhra u Manūchhr* was an imitation of Shakespeare's *Venus and Adonis*. The allegorical narrative *Afsāna* (1922) is in retrospect seen as a landmark in the development of modern poetry, although the poet Nīmā Yūshīd [q.v.] did not yet depart much from traditional prosody. More important are the atmosphere, which reminds one of French romantic poetry of the 19th century, the realistic descriptions of nature and the reflections on the future of Persian poetry in the discussions of the poet and his muse. In the following decades, Nīmā began to question the principles of classical Persian verse. He rejected its isometric lines and tight rhyme schemes as unsuitable for contemporary poetry, because they forced the poet to use superfluous words in order to fill empty spaces in prescribed patterns and thereby limited his creative freedom. Instead, metre and rhyme should be subservient to poetic expression. In his "broken metrics" (*'arūd-i shikasta*), the ancient metrical feet can still be recognised, but their number in each line varies according to the expressive needs of the poet. Rhyme also was freed from its formal rigidity; this opened the possibility for various kinds of irregular rhymes as well as for blank verse. Even more radical were Nīmā's experiments with a new poetic imagery which equally were inspired by modern literary trends in the West, notably by surrealism.

For a long time, Nīmā remained a more or less isolated and controversial pioneer. Only ca. 1950 did a number of young poets accept his ideas as the basis of a modern Persian poetry. Starting from the nucleus of his fundamental rules, they developed themselves into various directions. The most radical innovator among them was Ahmad Shāmlū, who also broke through the barrier which had always divided the language of written poetry from spoken Persian. The debate between the modernists and the defenders of the tradition gradually lost most of its heat. Although prominent poets like Shahrīyār [q.v.] could still make a meaningful use of the ancient forms, by the 1960s the new poetry had become generally accepted.

The political events in Persia after 1941 affected poetry as much as the Constitutional Revolution had done this. Political and social engagement (*ta'ahhud*) became again an avowed task of poetry, although political oppression and censorship did not leave a very large scope for the expression thereof. External conditions often forced poets into opaque symbolism. However, the desire to be in line with international trends of modern poetry also gave much modern Persian poetry an obscurity which made it difficult to understand for readers who were still attached to the poetic idiom of the past.

The process of poetic modernisation fostered the rise of literary criticism on a scale which Persia had not known before. Nīmā's own theories were expounded in private letters and scattered articles which were only recently collected and published by Sīrūs Tāhbāz. To most critics, they constitute the basics of their own evaluation of modern poetry.

(J.T.P. DE BRUIJN)

### 3. In Turkish.

A. The pre-Ottoman period [see 'OTHMĀNLĪ. III. (a) 1; TURKS. Literature].

B. The Ottoman period [see 'OTHMĀNLĪ. III. (a), (b), (c)].

C. The Republican period.

When the Ottoman Empire dissolved, the over-ornate *Dīvān* poetry of the élite, written in '*arūd* [q.v.] using Ottoman Turkish, lost its frame of reference. Republican values envisaged that the literature should go to the people and reflect their lives and values using their language, i.e. spoken Turkish. Although the roots of a search for new forms and expressions for a wider audience go back to the *Tanzīmāt* period (mid-19th century), it was during the War of Independence and after the declaration of the Republic (1923) that Turkish intellectuals moved outside Istanbul to acquire a first-hand experience of Turkey and its people. For the poets, the Anatolian villager, the folk poetry in spirit and form (its traditional syllabic metre and various poetic forms) and the wealth of folk traditions which had been so far neglected, now became major sources of inspiration as well as providing vast amount of subject-matter. *Dīvān* poetry and '*arūd* did not vanish immediately after the Republic; in fact, its influence can be traced even in contemporary poets in a synthesised form. Ahmet Haşim (1885-1933), Mehmet Akif Ersoy (1873-1936) and Yahya Kemal Beyath (1884-1958) continued to write in '*arūd* after the 1920s. Atilla İlhan (1925-), Edip Cansever (1928-85), and Behçet Necatigil (1916-79) make use of the *Dīvān* style, but without '*arūd*, in their works. Beginning with the *Tanzīmāt* period, and during the early years of the Republic, it was the French poetic tradition which inspired the Turkish poets; e.g. Beyath was

under the influence of the Parnassians, and Ahmet Haşim (1884-1933) of Symbolism. One way of looking at modern Turkish poetry is by decades, although the time span is short and the same poets will have continued to write in the next decade, possibly with a change in style.

a. 1923-38. This was the decade when excitement about the new state and the newly-discovered populism and nationalism was deeply felt. The poets of the old school, such as Abdülhak Hamid Tarhan (1852-1937), Ahmet Haşim, Yahya Kemal Beyatlı, Celal Sahir Erozan (1883-1935), and Mehmet Akif Ersoy [see MEHMET AKIF] continued to write, usually with *arūd* but using a purer Turkish than before. Beyatlı lauded the magnificence of the Ottoman Empire and the pain of losing it, as expressed in "The Open Sea":

While my childhood passed in Balkan cities./  
There burned in me a longing like a flame./In  
my heart the melancholy that Byron knew./

Haşim, the Symbolist, talked of spiritual exile, and declared "We ignore the generation which has no sense of melancholy"; these two poets were to influence the coming generations more than any of the other poets of the era. Ersoy, writer of the lyrics of the Turkish national anthem, adapted *arūd* to spoken Turkish masterfully and his use of the style of the Islamic *khutba* created a most original effect. His poetry was heroic, didactic, idealistic, preaching purity of the soul, and his elegy "For the Fallen at Gallipoli" is one of the most famous poems of the period:

Soldier, you who have fallen for this earth/Your  
fathers may well lean down from heaven to kiss  
your brow./You are great, for your blood saves  
the True Faith./Only the heroes of Badr are  
your equals in glory./

For the populist/nationalist poets of the period, inspired by folk poetry, Ziya Gökalp (1876-1924) [see GÖKALP, ZIYA], and Mehmet Emin Yurdakul (1869-1944) [see MEHMET EMİN] are the best examples, didactic in tone and close to folk poetry in form. Faruk Nafiz Çamlıbel (1898-1973) [see ÇAMLİBEL, in Suppl.] wrote about Anatolia and its people with the eyes of an urban intellectual observing the rural scene for the first time. Halit Fahri Ozansoy (1891-1971), Orhan Seyfi Orhon (1890-1972) [see ORKHAN SEYFİ], Yusuf Ziya Ortaç (1913-1975) [see ORTAÇ, YUSUF DİYÂ], Enis Behiç Koryürek (1891-1949) [see KORYÜREK], Cahit Külebi (1917-) and Ceyhan Atuf Kansu (1919-78) began to write also during this period. Most of these poets were teacher-poets. Through the Halkevi or "People's Houses" [see KHALKEVİ] organisation and its publication, they were able to disseminate their ideas and poems, and an interest in folk culture became popular among the masses through them. A painter and a poet, Bedri Rahmi Eyüboğlu (1913-75) [see EYÜBOĞLU, in Suppl.], not only used the folk poetry tradition but also depicted the colours and the art of Anatolia using words. Some of these poets were more didactic than others; e.g. Behçet Kemal Çağlar (1908-69) dedicated his poetry to the love of Atatürk and the Republican ideals. The poets painfully observed the wretched economic and social condition of Anatolia, and some perceived the Russian Revolution as a new source of hope. This brings Nazım Hikmet (1902-63) [see NÂZİM HİKMET] to mind. Under the influence of Mayakovski in his earlier poems, he launched his free verse and, although he also wrote sensitive and tender love poetry, he is better known by his poems of revolution. In the "Epic of Şeyh Bedrettin"; using modern verse, he united, with great skill, the

traditions of *Dîvân* poetry and folk literature:

It was hot/very hot./The heat was a knife with  
a bloody handle/and a dull blade./It was  
hot./The clouds were loaded,/ready to burst/to  
burst right away./Without moving, he looked  
down/from the rocks/his eyes, like two eagles,  
descended on the plain./There/the softest and  
the hardest/the stingiest and the most gener-  
ous/the most loving/the greatest and loveliest  
woman/the EARTH/was about to give birth/to  
give birth right away./

The era was not dominated only by Nazım Hikmet; there was also much diversity. While Necip Fazıl Kısakürek (1905-83) used religious and mystical themes, a group of young poets believing in art for art's sake gathered their poems into a book called *Yedi meşale* "The Seven Torches" (1928). These were Muammer Lütü (1903-47), Sabri Esat Siyavuşgil (1907-68), Yaşar Nabir Nayır (1908-81), Vasfi Mahir Kocatürk (1907-61), Cevdet Kudret Solok (1907-) and Ziya Osman Saba (1910-57). They asserted that they were tired of the current state of poetry and sought new ways, but on close reading, their poetry is clearly under the influence of Parnassianism, and the movement was in any case short-lived. Their contemporaries were Ahmet Hamdi Tanpınar (1901-62), Ahmet Muhip Dranas (1909-80), both students of Yahya Kemal, who wrote under the influence of Haşim and Valéry, whilst Ahmet Kutsi Tecer (1901-67) wrote in traditional syllabic metre in stanzaic form expressing genteel sensibilities and Cahit Sıtkı Tarancı (1910-56) achieved popularity with his sincere love of humanity and celebration of life.

b. 1940-60. Politically, the early part of the period was marked by the move from a single-party system to pluralistic democracy and liberalisation, whereas the second part is marked by the crises of democracy and military intervention. In poetry, the 1940s bring to mind firstly the *Garip* "Strange" or *Birinci Yeni* "First New" movement. Orhan Veli Kanık (1914-50) [q.v.], Oktay Rifat Horozcu (1914-88) [see OKTAY, RİFAT] and Melih Cevdet Anday (1915-) caused a literary upheaval when they published their poems in a book called *Garip* in 1941. In this they called for abandoning everything that Turkish literature had so far been teaching, including conventional rigid forms and metres. They asked for less rhyme and for a language reduced to a bare minimum, and an avoidance of metaphors and word plays; instead, their theme would be to celebrate the common man and their aim to write for him. Kanık's poem "Epitaph", which talks about the corns of Süleyman Efendi, is a good example. There was little room for sentimentality, but the love and joy of life were always there, mixed with a sinister sense of humour and poetic reality; his "For the Homeland", often recited even today, is one such poem:

All the things we did for our country/Some of  
us died/Some of us gave speeches./

Oktay Rifat caught the underlying political desperation of his contemporaries in his "Underdeveloped".

To fall behind; in science, in art, leafless/  
Unflowering in the spring; an aching star/  
Imprinted on the forehead.

But Kanık died young, and the other members of the group were to leave it in the 1950s. This latter decade in Turkey saw the liberalisation of political life. There was a growing middle class which did not care too much for poetry; the beginnings of industrialisation (with all its pain) and emigration to the

big cities caused complex socio-economic changes. The *Garîp* movement in poetry had outlived its time, and its followers had by now turned to other more personal styles: Rifat took up Neo-Surrealism, and Anday began to write in an epic style, intellectually complex poetry. Some of the poets of the period grew tired of the "poetic realism" which had become fashionable with the *Garîp* movement. Salah Bırsel (1919-) wrote:

Take "Love for Mankind" as your topic/And  
free verse as your prosody./Relevant or not,  
Whenever it occurs to you,/Insert the word  
"Hunger"/At a convenient spot./Near the end  
of the poem/Rhyme "Strife" with "the Right to  
Good life."/There, that's the way to become A  
Great Poet.

More organised reaction to the *Garîp* came in the form of the *İkinci Yeniler* "Second New" movement (1955-65), which advocated "art for innovation's sake". In the 1960s, a monthly review called *Papirüs* edited by Cemal Süreyya (1931-90) brought the proponents of this together; İlhan Berk (1916-), Cemal Süreyya, Turgut Uyar (1927-85) and Edip Cansever (1928-86) are the better-known poets of this movement. They tried their hands at new rhythms and more modern imagery, with distortion of language to the degree of meaninglessness as their mark. They tried to recover the poetic qualities banished by the *Garîp* poets, but they were neither élitist nor anti-populist; on the contrary, they tried to depict the experiences of the individual in the city. They were esoteric, individualistic and metaphysical. Thus Cemal Süreyya is witty, subtle and full of clever imagery, with love, understanding, warmth and irony as the major features in his works:

The clock chimed like a Chinese jar./Bending  
my brim hat over my misery,/Out of my white  
insomnia, I/Exiled to your face,/You woman,  
You were in every secret corner,/Your shadow  
nettled on the dark street,/(from "Country")

Edip Cansever, influenced by T.S. Eliot, told of the alienated man in an urban setting; Ece Ayhan (1931-) was obscure in his prose poems about history and the underworld; Sezai Karakoç (1933-) was inspired by Islam; whilst Kemal Özer (1936-) was politically committed.

During the 1950s, the proponents of classical Turkish poetry formed a circle around the journal *Hisar* (ran until the 1980s), with such prominent names involved in it as Munis Faik Ozansoy (1911-75), Orhan Seyfi Orhon and Mehmet Çınarlı (1925-).

c. 1960-. The striking feature of the 1960s was the politicisation of the young poets after the military take-over, which advocated a firm return to populism and the teachings of Atatürk. The young poets of the 1960s were a sober group, critical of anyone who did not write for a political purpose, so that Nazım Hikmet and Ahmet Arif (1926-91) became their heroes. Atıf Behramoğlu (1942-), Süreyya Berfe (1943-), İsmail Özel (1944-) started a joint action against what they called the bourgeois writers under the name of "Revolutionary Young Poets". But after the military intervention of 1971, Behramoğlu abandoned crude propaganda and his didactic attitude; Berfe identified with the underprivileged and wrote with a folk style and popular language and İsmet Özel turned to Islam.

Amongst the other poets of the period may be mentioned Hasan Hüseyin (1927-84), Özdemir İnce (1936-), Arif Damar (1925-), Refik Durbaş (1944-), Özkan Mert (1944-), Kemal Özer (1935-), Turgut Uyar (1927-85), Metin Eloğlu (1927-85) and Edip Cansever (1928-85), whilst Atilla İlhan (1925-) and

Can Yücel (1926-) became influential also. Atilla İlhan combined the elements of classical with folk poetry, and his exotic and romantic imagery made him popular among the young generation in the 1960s. Yücel is subtle in his irony, combined with lyricism and sensitivity; he tackles politics and sex with the same ease, and his mastery of both Ottoman and folk expressions and puns have contributed to his popularity:

We can show you two kinds of people/who've  
learned a thing or two about political finesse:/  
politicians and convicts./The reason is there for  
all to see:/for politicians, politics is the art of  
staying/out of jail,/for convicts it is the prospect  
of freedom. (Poem no. 26).

General characteristics of modern Turkish poetry are thus the discovery of Turkish, as used by the folk, in its various forms and its wealth of expressions; and a synthesis of centuries of oral tradition, folk literature, *Dîwân* poetry and universal literary traditions. Halman (1982, 21) lists some of the themes and concerns of Turkish poetry as "nationalism, social justice, search for modernity, Westernization, revival of folk culture, economic and technological progress, human dignity, mysticism, pluralistic society, human rights and freedoms, democratic ideals, hero-cult, populism, Atatürkism, proletarianism, Turanism, Marxist-Leninist ideology, revival of Islam, humanism—in fact, all aspects and components of contemporary culture".

#### 4. In Urdu.

The word has two common meanings in Urdu. Firstly, it means poetry in general, as an art form. It has a synonym, *shā'irī*, and the two words are sometimes combined in the expression *shī'r-ō-shā'irī*. Another Arabic word, *naẓm*, is also used. The second meaning of *shī'r* is a verse or couplet, pl. *ash'ār*. There was comparatively little interest in Urdu prose in India until the end of the 18th century. But poetry, following Persian models, thrived in the South—the Deccan—under the patronage of local Muslim rulers, such as those of Golkonda and Bidjāpūr, from the early 17th century onwards. Whether the language used is better described as a dialect of Urdu, or as a distinct Dakhani language, is for linguists to decide. What cannot be denied is that poetry in the Urdu *lingua franca* of northern India owed much to a few years' stay in Dihli by a poet of the Deccan, Wālī; it is not entirely fanciful to suggest that he is to Urdu poetry what Chaucer is to English.

The forms and techniques of the poetry were based on those of Persian, which in their turn were based on Arabic. The favourite theme was love, embodied in *ghazal* [q.v.] poetry. The poet complained of his beloved's neglect of him, each poem consisting of between ten and twenty verses. The verse consisted of two hemistiches (*misra'*), each second one having the same rhyme. The rhyme was also established in the first hemistich of the first verse. In some *ghazals*, the beloved might be God, whilst when this

beloved was human, it might be masculine rather than feminine.

There were other forms of monorhyme poetry, the most important being *kaṣīda* [q.v.] or eulogy, and satire or *hiǧā'* [q.v.]. There were various types of stanzaic poetry, the simplest, used for longer narrative poems, being *mathnawī* [q.v.] in rhymed couplets. Elegy (*marthiya* [q.v.]) was at first in verses of four, then later six, hemistiches. In addition, mention should be made of short poems (*kit'a*, pl. *kitā'*), consisting of as few as one or two verses. These might, for example, serve as chronograms, giving birth or death dates of famous men in Arabic letters instead of numbers.

Authoritative critical and analytical books about poetry in Urdu did not appear until the 19th century. By this time, the so-called Dihlī school of Urdu poetry, which owed its origin to Walī, was on the decline. Political instability, due to Afghan and Marāṭhī incursions, had made the capital of the Mughal Empire a difficult place of residence, and poets gravitated to Lucknow. India fell increasingly under the control of the British, through their East India Company. This control was strengthened by the Sepoy Mutiny of 1857. Education followed British criteria. This affected the 'Alīgarh Movement led by Sir Sayyid Aḥmad Khān [q.v.]. Among the major influences on Urdu poetry were loosening of the stranglehold of *ghazal* and of Persian influence, and the rise of literary criticism. As Muhammad Sadiq says (*op. cit.* in *Bibl.*, 269 ff.), the *Mukaddama-yi-shi'r-ō-shā'iri* by Aḥfāḥ Ḥusayn Ḥālī "Marks the dawn of historical and scientific criticism in Urdu... it is the first formal treatise on poetry in Urdu." Ḥālī saw poetry as a civilising instrument instilling morality. Its degeneration in the East was due largely to political reasons. Despotism killed sincerity and encouraged exaggeration. To end this decadence, poetry should not only be subordinate to morality but should also eschew the supernatural and follow reality. Ḥālī refers to English, Persian and Arabic as well as to Urdu poetry. He aimed to commend poetry to the puritanical Indian middle classes who were highly suspicious of it. He was himself a poet; he did not always live up to his own standards, but in his *Musaddas* (a long poem subtitled "The flow and ebb of Islam", in stanzas of six hemistiches) he found a theme worthy of his genius.

A second major study of Urdu poetry is *Ab-i-hayāt*, by Muhammad Ḥusayn Āzād (1830-1910) (see Sadiq, 288 ff.). But much of our information about Urdu poets comes from a literary form called *tadhkira* [q.v.]: that is, short notes on a number of poets illustrated by short quotations. In the earlier examples, the biographical information tended to be in Persian.

The popularity of poetry was both illustrated and stimulated by the social institution of the *mushā'ara* [q.v.]. This took the form of a meeting of poets who would recite their poems in rivalry—not unlike that of the mediaeval German Minnesingers. These played a major role in the emergence in Lucknow in the mid-19th century of the *marthiyas* of Anīs and Dabīr [q.v.] as rivals to *ghazals* in popularity.

This article is not intended to be a history of Urdu poetry. For this, reference should be made to the two general works by Muhammad Sadiq, and Ram Babu Saksena in the *Bibl.*, and to the individual articles on poetical forms and individual poets in this *Encyclopaedia*. As with modern Arabic poetry, one sees classical traditions modified by Western notions. Those notions in Urdu came largely from English, though occasionally from Russian and (in the case of Iqbal) German. Until the present century, it was quite com-

mon for poets to produce Persian *dīwāns* as well as Urdu ones—not infrequently as copious as or even more copious than their Urdu *dīwāns*. This applied to Ghālīb (1797-1869 [q.v.]), considered by many as the last of the great classical Urdu poets, but it also applies to Muḥammad Iqbal (1873-1938 [q.v.]), the "national poet of Pakistan."

**Bibliography:** Muhammad Sadiq, *A history of Urdu literature*, London 1964, is a mine of information on the subject, often unrivalled in the analysis and discussion of important aspects. Examples are his accounts of Walī, Ḥālī and Āzād. Particularly helpful are the numerous Urdu quotations, with English translations. Unfortunately, these are lacking in the other major study, Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927. For a general account in Urdu, see 'Ibādat Brēlwi, *Shā'iri aur shā'iri kī tankīd*. For the *tadhkira*, see Farmān Fathpūrī, *Urdū shu'arā' kē tadhkirē aur tadhkira nigāri*, Lahore 1972. Among the many editions of Ḥālī's *Mukaddama-yi-shi'r-ō-shā'iri*, one may mention that edited by Wahīd Kūrēshī, Lahore 1953. Āzād's *Ab-i-hayāt* was first published in 1881, but made no mention of the important poet Mu'min [q.v.]; consequently, a later edition should be used.

(J.A. HAYWOOD)

5. In Malay and in Indonesia [see Suppl.].

6. In Swahili [see SWAHILI. 2. Literature].

7. In Hausa.

Hausa *waka* includes all forms of song, including a number of categories borrowed from Classical Arabic literature. The most important of these are: *madahu* (< *madh*, *madīh*), or sometimes *begen annabi*, basically "pleading with the Prophet"; *wa'āzi* (< *wa'āz* "warning, admonition"), which dwells on the torments of Hell Fire for the wicked and the joys of Paradise for the believer; *wakokin tausari* or *wakokin najumi*, astrological verse, dealing with the Zodiac and other astronomical and astrological matters; *wakokin tauhidi* (< *tauhīd*), which sets out the essentials of Islamic theology; and *wakokin fikihi*, dealing with Islamic law. These categories are, however, only approximate, and there is much overlapping; thus *wa'āzi* verse may include material pertaining to *tauhidi* or even *madahu*.

For a fuller treatment, and for bibliography, see HAUSA. iii. Literature.

(M. HISKETT)

**SHIRĀ'** (A.), verbal noun of the root *sh-r-y*, a technical term of early Islamic religion and, more generally, of Islamic commercial practice and law. The word appears to be one of the *addād* [q.v.], words with opposing meanings, in this case, buying and selling; the basic meaning must be to exchange or barter goods.

Early theological usage was based on such Qur'anic texts as II, 203/207, "Amongst the people is the one who sells (*yashirī*) himself, desiring God's approval (or: to satisfy God)"; II, 15/16, "These are those who have purchased (*ishtaraw*) error for right guidance/bartered guidance for error"; and XII, 20, "They sold him (*sharawhu*, sc. Joseph) for a low price". The *sabab* of II, 203/207, is said by Ibn Kathīr (*Tafsīr*, Beirut 1987, i, 254), from Ibn 'Abbās, to have been when the Companion Ṣuhayb al-Rūmī lost his wealth by making the *hiǧra* to Medina, and the Prophet told him that he had in fact gained a profit. Al-Ash'arī (*Maḳālāt al-islāmiyyin*, ed. H. Ritter, Istanbul 1929, i, 102) reports that the leader of the Ḥafsiyya sub-sect of the Ibādiyya sect of the Khāridjites, Ḥafṣ b. Abī Miqdām [see IBĀDIYYA, at vol. III, 660a], interpreted the verse as referring to the assassin of 'Alī, Ibn Muldjām [q.v.].

Thus this concept became especially associated with the *Khāridjites* [q.v.], who interpreted the Qur'ānic references as applying to *Khāridjite* believers who sacrificed their lives in opposing an unjust ruler and thereby "purchased" Paradise. Accordingly, the active participle *shārī*, pl. *shurāt*, becomes a name for the *Khāridjites* in general (see al-Sam'ānī, *Ansāb*, ed. Haydarābād, viii, 13).

Hence in legal practice, *shirā'* has the predominant meaning of buying rather than selling. The importance of *shirā'* as a legal term can be found in its nature as a positive action that formulates the purchasing element of the contract of sale. However, the legal literature on *shirā'* seems to treat it as a subsidiary component of *bay'* [q.v.] and is therefore dealt with as part of that contract. The contract subject (*maḥall al-ʿaḳd*) of both *bay'* and *shirā'*, is covered by the maxim that applies to all contracts of exchanges, i.e. what is prohibited to take is prohibited to give.

*Shirā'* appears to be discussed, as an identified issue, when it can lead to a prohibited transaction. To avoid the possibility of interest (*ribā* [q.v.]) the buyer is prohibited from reselling a commodity before purchasing it unless it is in the form of *murābaha* (see below). In the civil laws of Islamic countries like Egypt, Syria, Libya and 'Irāk, the sale contract creates three fundamental obligations upon the purchaser (*al-mushtarī*): payment of the price, payment of the contract's expenses, and collecting the goods. The *Madjalla* [see *MEJELLE*] agrees with the principle of these three obligations, giving a definition of the *mushtarī* as "he who buys" (art. 161). This definition could be understood to include "any person" who buys, whether for the purpose of consuming the goods or reselling them. The inclusion of the two types of buyer in one definition, without distinguishing their contracts on the base of their intention, can be significant in the case of the *murābaha* contract when the intention of the buyer to resell is clearly declared. *Murābaha* is a permissible form of sale that allows a purchaser to buy with the intention of subsequently reselling to a designated buyer with a fixed profit rate. The payment of the sale price, inclusive of the agreed profit margin, may be immediate or deferred. *Murābaha* also serves to protect the innocent general consumer who is inexperienced in trade. According to Udovitch, by basing the sale price on the original price, the customer was provided with a modicum of protection against unfair exploitation by merchants. Today, *murābaha* is considered as the most popular mode of financing used by Interest-Free Banking. The views on the legitimacy of *murābaha* banking are divided regarding the nature of the guarantee that some Interest-Free Banks "expect" from the client/consumer for whom they purchased the commodity. If the customer is given total freedom to purchase the commodity or not, it is a legitimate practice; otherwise it is treated with doubt, as it could mask interest (*ribā*) in the guise of a legitimate form of sale. The above definition in the *Madjalla* appears to open the gate to include both kinds of *murābaha*, whether with a designated buyer or without, since "any" buyer can fit the category.

The rights of the *mushtarī* appear to be well taken care of in Islamic law under the institution of *hisba* [q.v.]. However, he seems to be more protected by *hisba* before the contract than after it. If the item is purchased and then appears to be fraudulent, then the dispute can only be settled in court on the ground of *gharar* or *ghishsh* in the same way as any other contract.

(M.Y. IZZI DIEN)

AL-SHI'RĀ (fem., with *alif maḥṣūra*), the old Arabic name for Sirius (α Canis Maioris), the brightest fixed star in the sky (apparent magnitude -1.46).

The origin and meaning of the name are debated; while some scholars, less probably, assume a derivation of *al-shi'rā* from the star's Greek name Σείριος (on this, cf. Scherer, 111 ff.), others, with more probability, maintain a genuine Arabic origin (see the discussion and references in Kunitzsch [1], 117-18, nos. 1 and 3; Eilers, 124). In the dual, *al-shi'rayān* designated the two stars Sirius, α Canis Maioris, and Procyon, α Canis Minoris, together. Both of them were also given specifying adjectives, Sirius as *al-shi'rā al-ʿabūr* ("al-shi' which has crossed [the Milky Way]") and *al-shi'rā al-yamāniya* ("the southern *shi'rā*") and Procyon as *al-shi'rā al-ghumaysā'* ("al-shi' with eyes filthy from weeping") and *al-shi'rā al-sha'amiya* ("the northern *shi'rā*"), and each of them could be named by one of the adjectives alone (cf. Kunitzsch [2], nos. 289a/b, 290a/b). In *anwā'* books and other texts it is often mentioned that *al-shi'rā* is "in *al-djauzā'*" which refers to its position, in ecliptical longitude, in the zodiacal sign of *al-djauzā'* = Gemini, the Twins. In Greek-based "scientific" astronomy, following Ptolemy, Sirius is located on the mouth of the Greater Dog. In the star catalogue of his *Almagest*, Ptolemy gives the proper name of the star as ὁ Κύν (the Dog), a name identical with the name of the whole constellation, Canis Maior, the Greater Dog; the classical name, Σείριος, is not mentioned here, which was rendered in the Arabic versions as *al-kalb* ("the Dog"), for which elsewhere *kalb al-djabbār* ("Orion's Dog") is also found (cf. Kunitzsch [2], nos. 139-40). In modern times, Sirius is reported as being called *al-Mirzam* in Central Arabia (Hess, 221, and others; in classical tradition *al-mirzam* designated β Canis Maioris, β Canis Minoris and γ Orionis; cf. Kunitzsch [2], nos. 164a/b/c, 165a/b, 166a/b) and, perhaps, *ʿalīb* in some places in the Yemen (cf. Gingrich, 161-2, and others). *Al-shi'rā* is frequently mentioned in classical Arabic poetry. Some Arabs counted *al-shi'rā* among the *anwā'* asterisms, though not as one of the 28 lunar mansions [see *ANWĀ'*; *MANĀZIL*], and they had *radjāz* verses on its heliacal rising (around 27 June; see Pellat, 23, nos. 13-14). There are traditions saying that *al-shi'rā* was one of the stars worshipped in pre-Islamic times by certain tribes, this star being indicated for the Kays (Henninger, 66 ff.). Ibn Kūtayba specifically tells that Abū Kabsha was the first to worship *al-shi'rā* (*K. al-Anwā'*, Haydarābād 1956, 46). It is obviously with regard to this pagan superstition that the Qur'ān asserts "He [i.e. God] is the Lord of *al-shi'rā*" (LIII, 49). In the *tafsīr* literature (*ad locum*) this item was afterwards discussed extensively. In another context it is well known that Sirius ("Sothis") was of special importance in ancient Egypt; its heliacal rising indicated the rise of the Nile and determined the beginning of the new year (cf. van der Waerden, 11 ff.). In Hellenistic times there developed a genre of

astrological and astrometeorological literature describing weather prediction and other prophecies related to the heliacal rising of Sirius, partly in connection with observations of the Moon (cf. Gundel, index s.vv. Sirius, Sothis). In the course of the transmission of the ancient sciences to the Arabs, texts of this kind also reached the Islamic world and are now found in numerous manuscripts, often ascribed to such pseudo-authors as Hermes or Ptolemy; one such treatise was also written by the famous Egyptian astronomer Ibn Yūnus, d. 399/1009 (see Sezgin, *GAS*, vii, 54, 67, 173, 199, 312, 317; Fahd, 488-9, 494; Ullmann, 284, 291). A reflex of these traditions is also found in the *anwā'* book of Ibn Māsawayh, d. 243/857 (*K. al-Azmina*, ed. P. Spath, in *BIE*, xv (1933), 235 ff., esp. 254, ll. 3-8 = tr. G. Troupeau, in *Arabica*, xv (1968), 113 ff., esp. 132, on 19 July).

**SHĪRAWAYH**, ABŪ SHUDJĀ' b. SHĪRAWAYH b. Shahradār b. Shīrawayh b. Fannākhusrū al-Daylamī al-Hamadhānī (b. Hamadhān 445/1053, d. 509/1115), traditionist and historian. His father, his son Shahradār and his grandson Abu 'l-Ghanā'im Shīrawayh were all scholars and traditionists of great erudition (Subkī, *Tabakāt*, vi, 193). Abū Shudjā' pursued his studies as a pupil of the greatest masters of the period, in particular: Abu 'l-Faḍl Muḥammad al-Kūmasānī, Yūsuf b. Muḥammad al-Mustamlī and Ahmad b. 'Isā al-Dīnawarī.

Having acquired a sound and thorough education, especially in jurisprudence (*fiqh*), in tradition (*ḥadīth*) and in history, he devoted himself to teaching in the *madrasa* of Hamadhān. He was then tutor to numerous pupils, including his son Shahradār, Muḥammad b. al-Faḍl al-Isfara'īnī and Abū Mūsā al-Madīnī who, in their turn, became eminent traditionists (Subkī, *op. cit.*). Shīrawayh died on 9 Raddjab 509/29 November 1115 (*op. cit.*) at 64 years of age.

He composed numerous monographs, most of which no longer exist, such as his *Ta'rikh Hamadhān* ("History of Hamadhān") to which he owed his reputation among his contemporaries. Unfortunately, no information is currently available regarding this book. Fortunately, however, three other works of his, of *ḥadīth* and of history, have been preserved; numerous manuscripts, as yet unedited, are kept in various libraries (see Brockelmann, I<sup>2</sup>, 419-20, S I, 586):

(1) The *Firdaws al-akhbār bi ma'thūr al-khūbāb al-mukharrajī 'alā K. al-Shihāb* ("The Paradise of stories"). This is a collection of traditions, drawn from the *Shihāb al-akhbār* of Muḥammad b. Salāma al-Kuḍā'ī (d. 454/1062). Like its author, this work was evidently much appreciated by the specialists of the period. It con-

tains some ten thousand *ḥadīths*, accompanied by complete chains of transmitters (*isnāds*) and divided into chapters arranged in alphabetical order (*Bāb al-alif*, *Bāb al-bā'*, *Bāb al-tā'*, to *Bāb al-yā'*). Later traditionists followed his example; al-Suyūṭī (d. 911/1505 [q.v.]), among others, adopted the same method of classification in his *Djāmi' al-saghir* (cf. Ḥadīdjīr Khalifa, *Kashf*, ii, 1254). In numerous instances, the *Firdaws* of Abū Shudjā' has been annotated, supplemented or summarised. His son Shahradār (d. 558/1162) enriched it with a supplement, the *Musnad al-Firdaws*, in four volumes, where he assembled 558 chains of transmitters (*isnāds*) used by his father (ms. Rāmpūr, no. 359). A certain 'Alī b. Abī 'l-Kāsim b. 'Alī composed a summary of it entitled *Bustān al-mustakhradj min al-Firdaws* ("The Garden", extract from the *Firdaws*), contenting himself with only 1,140 traditions. An abbreviated manuscript of this book is to be found in the Algiers Library (no. 496). Numerous manuscripts of the *Firdaws* of Shīrawayh are still preserved in several libraries, especially in Cairo, Rāmpūr, Berlin etc. (cf. Brockelmann, *loc. cit.*).

(2) *Riyād al-uns li-'uḳalā' al-ins* ("Garden of amusement for the sages of mankind"). In this work, the author traces, in great detail, the history of Islam from the birth of the Prophet Muḥammad to the time of the 'Abbāsid caliph al-Mustazhir bi-llāh (487-512/1094-1118), his contemporary. Apparently, a single manuscript of this work, which comprises 86 leaves, has survived. It is kept in the National Library of Cairo (no. 48 ma). The copyist, Abū Muḥammad b. 'Abd al-Malik b. Abī 'l-Ḥasan, claims to have copied it in 585/1190 from an autograph manuscript.

(3) *Nuzhat al-ahdāk fī makārim al-akhḫāk* ("Survey of ethics"). This also constitutes a small collection of traditions. Like the *Firdaws*, it is subdivided into chapters arranged in alphabetical order; it seems that only one manuscript is still in existence.

(MOKTAR DJEBLI)

**SHĪRĀZ**, which has the title *dār al-'ilm*, the capital of the province of Fārs, is an Islamic foundation, on a continually inhabited site, which may go back to Sāsānid, or possibly earlier, times. It was probably founded, or restored, by Muḥammad the brother of Ḥadīdjīr b. Yūsuf, or by his cousin Muḥammad b. al-Kāsim, in 74/693 (A.J. Arberry, *Shiraz, Persian city of saints and poets*, Norman, Okla. 1960, 31). It is situated at 5,000 ft. above sea level in 29° 36' N. and 52° 32' E. at the western

end of a large basin some 80 miles long and up to 15 miles wide, though less in the vicinity of Shīrāz. A river bed, which is dry for most of the year, bounds the northern part of the city and runs southeastwards towards Lake Māhalū (J.I. Clarke, *The Iranian city of Shiraz*, University of Durham, Department of Geography Research Papers series no. 7, 1963, 8).

According to Mustawfī, there were eighteen villages, irrigated by *kanāts*, in the surrounding district (*hawma*) of Shīrāz, which belonged to the city (*Nuzhat al-kulūb*, ed. and tr. Le Strange, text, 116). A network of roads radiates from Shīrāz (see Le Strange, *Lands*, 195-8). It is approached on the south from the Persian Gulf through high mountain passes, and on the north through a series of hills which separate it from the plain of Marvdasht. Its water supply comes mainly from *kanāts*, of which the most famous is that of Ruknābād [*q.v.*], made by Rukn al-Dawla b. Būya (Mustawfī, *Nuzhat*, 115). July is the hottest month with a mean temperature of 85°, February the coldest with 47°. The annual rainfall is 384.6 mm (*Camb. hist. of Iran*, i, *The land of Iran*, ed. W.B. Fisher, Cambridge 1968, 249). There have been several major earthquakes; those of 1824 and 1853 caused heavy loss of life and destruction of property (Clarke, 11). Over the centuries, the city has also suffered from floods, famines epidemics and sieges.

Throughout the Middle Ages, Shīrāz was a centre of learning, where Islamic theology, mysticism and poetry flourished. Ibn al-Khaffīf (d. 371/982 [*q.v.*]), who founded a *ribāṭ* there, is buried in the city. *Kādis*, '*ulamā*' and *Ṣūfis* and, to some extent, the rulers of the city as well as the people generally, shared in the vigorous religious life which prevailed (see Ibn al-Balkhī, *Fārs-nāma*, ed. Le Strange, London 1921, 117-18, on the *kādis* of Shīrāz; Abu 'l-'Abbās Ahmad b. Shihāb al-Dīn Zarkūb, *Shīrāz-nāma*, ed. Ismā'īl Wā'iz Dījāwādī, Tehran AHS 1350/1971-2, on the '*ulamā*'; and Dījāwādī, *Shadd al-izār*, ed. Muḥammad Kaẓwīnī and 'Abbās Ikbāl, Tehran AHS 1327/1948-9 on the *Ṣūfis*). Mustawfī mentions that the people of Shīrāz were much addicted to holy poverty and were of strict orthodoxy (*Nuzhat*, 115, Fr. 113). Ibn Baṭṭūta also states that they were distinguished by piety, source religion and purity of manners, especially the women (*The travels of Ibn Baṭṭūta A.D. 1325-1354*, tr. H.A.R. Gibb, ii, Cambridge 1962, 300). The Dhahabiyya order, established in the early 11th/17th century had, and has, its centre in Shīrāz (see R. Gramlich, *Die Schiitischen Dervischorden Persiens*, in *Abhandlungen für die Kunde des Morgenlandes*, Bd. xxxvi, 1, 1965, Bd. i, 2-4, 1976, Bd. xlv, 2, 1981; and see *ṬARĪKA*). The poet Ḥāfiz [*q.v.*], who lived in Shīrāz under Shāh Shudjā' b. Mubārīz al-Dīn Muḥammad (759-86/1357-84 [*q.v.*]), is buried outside the city, as also is Sa'dī [*q.v.*], who flourished at the court of the Atabeg Abū Bakr b. Sa'd (623-59/1226-61).

In the early centuries, Shīrāz was under caliphal governors. Al-Iṣṭakhrī mentions the tax rates prevailing in Shīrāz (157). He states that the land in the bazaars belonged to the government (*sultān*) and private persons paid ground rents (158). In the middle of the 3rd/9th century, Ya'kūb b. Layth, the Ṣaffārid [*q.v.*], having seized Fārs, made Shīrāz his capital. His brother 'Amr b. Layth [*q.v.*], who succeeded him, built a cathedral mosque on the site of which the present *masjīd-i dīāmi* stands [see *FĀRS*]. 'Alī b. Būya 'Imād al-Dawla [*q.v.*] took Fārs in 321/933. He was succeeded by his nephew 'Aḍud al-Dawla b. Rukn al-Dawla [*q.v.*], who ruled Fārs from 338/949 to

366/977 and 'Irāk and Fārs from 366/977 to 372/983. Under his rule, Shīrāz became an important economic and cultural centre. The anonymous *Hudūd al-'ālam* (written in 372/982-3) states that Shīrāz was a large and flourishing town with two fire-temples (tr. Minor-sky, 126; see also Spuler, *Iran*, 191-2). 'Aḍud al-Dawla built there a large library, a hospital, mosques, gardens, palaces, bazaars and caravanserais and a cantonment for his troops called Kard Fanā Khusrāw. This became a small town in which business flourished. It provided an annual revenue of 16,000 *dīnārs*. According to Ibn al-Balkhī, Shīrāz and Kard Fanā Khusrāw together accounted for 316,000 *dīnārs* out of the total revenue of Fārs of over 2,150,000 *dīnārs* (*Fārs-nāma*, 132, 172). After the death of 'Aḍud al-Dawla, Kard Fanā Khusrāw fell into decay and was nothing but a hamlet when Ibn al-Balkhī was writing in the first decade of the 6th/12th century, and its estimated revenue ('*ibrat*') was 250 *dīnārs*, though the sum collected was not more than 120 *dīnārs* (*Fārs-nāma*, 132-3). The hospital by this time was also in decay, but the library, which had been cared for by the family of the *kādi al-kudāt* of Fārs, was still in good condition (*ibid.*, 133-4).

Towards the end of the Būyid period, there was much disorder in the neighbourhood of Shīrāz. Ṣamṣām al-Dawla Bā Kālīdjār, fearing attacks, built a strong wall round the city (Ibn al-Balkhī, 133). According to al-Mukaddasī, the city had eight gates (430), though some authorities mention eleven. The accounts of Fārs during the early years of Saldjūk rule are somewhat confused. In 439/1047-8 Abū Kālīdjār b. Sultān al-Dawla made peace with Toghrīl Beg (Ibn al-Athīr, ed. Beirut, ix, 536) and governed Shīrāz on his behalf. He was succeeded by his son Fulād Sultān, who was overthrown in 454/1062 by Faḍlūya, the Shabānkāra [*q.v.*] leader, who was, in turn, defeated in the following year by an army from Kirmān under Kāwurd [*q.v.*]. Shīrāz was repeatedly plundered during these years (Ibn al-Balkhī, 133). After the death of Malik Shāh (485/1092), Saldjūk control over Fārs weakened, but various of the Saldjūk governors, in spite of frequent struggles between rival *amīrs* for control of the province, appear to have established a degree of security and good government in Shīrāz. Among them were Čawlī Saḳaw, Karača, Mengü-Bars, and Boz-Aba [see *BOZ-ĀBEH*]. The first-named was assigned Fārs by Muḥammad b. Malik Shāh [*q.v.*] in 502/1108-9 or 503/1109-10, and he went there with Čaghri, Muḥammad's infant son, to whom he was atabeg (Ibn al-Athīr, x, 517, Ibn al-Balkhī, 141, 146-7). Karača, who was atabeg to Saldjūk Shāh b. Muḥammad, built and endowed a *madrasa* in Shīrāz, which was still one of the great *madrasas* of the city in the 8th/14th century (Zarkūb, *Shīrāz-nāma*, 64-5).

Mengü-Bars also built a *madrasa* in Shīrāz, and during his government Abū Naṣr Lāla founded a *madrasa* near the Iṣṭakhr Gate, which was in excellent condition when Zarkūb was writing (*Shīrāz-nāma*, 65). After the death of Mengü-Bars, Boz-Aba took possession of Fārs in 532/1137-8. He was turned out by Kara Sunkur, but retook the province in 534/1139-40. He died in 542/1147. His wife Zāhida Khātūn is reputed by Zarkūb to have governed Shīrāz for twenty-one years (this must have been both during Boz-Aba's lifetime, when he was presumably often absent from the city on campaigns, and thereafter). She built a magnificent *madrasa* in the city and constituted numerous *aukāf* for it. Sixty *fukahā* received allowances daily and many pious and learned men dwelt there. It had

a high minaret but this, Zarkūb states, was in ruins when he was writing (*Shīrāz-nāma*, 66-7).

The Salghurids [q.v.] established themselves in possession of Fārs by the middle of the 6th/12th century. Under their rule, Shīrāz flourished. They and their ministers made many charitable foundations in the city. Sunkur b. Mawdūd (d. 558/1162-3), the founder of the dynasty, built the Sunkuriyya *madrasa* and a mosque, and a minaret near the latter and a *sikāya* near the former (*ibid.*, 72-3). His tomb was in the Sunkuriyya mosque, and 208 years after his death the people of Shīrāz were still seeking fulfilment of their vows at it and the *shar'ī* judge accepted oaths invoking the name of his tomb (*ibid.*, 73). Zangī b. Mawdūd (d. 570 or 571/1175-6) constituted several large villages and pieces of land into *wakf* for the shrine of Ibn Khafīf (*ibid.*; Mustawfī, *Tārīkh-i guzīda*, ed. Husayn Nawā'ī, Tehran AHS 1336-9/1958-61, 504). He also built a *ribāṭ* in Shīrāz (Zarkūb, 73). Amīn al-Dīn Kāzīrūnī (d. 567/1171-2), the *wazīr* of Tekele b. Zangī, who succeeded Zangī b. Mawdūd, built a *madrasa* close to the 'Atīk mosque and a *ribāṭ* (*ibid.*, 72). After a period of internecine strife during which agriculture was ruined and famine and pestilence broke out (Mustawfī, *Guzīda*, 504-5), Sa'd b. Zangī (591-623/1195-1226) established his supremacy, and prosperity was restored in the early years of the 7th/13th century. According to Waṣṣāf, Sa'd's tax administration was lenient (*Tārīkh-i Waṣṣāf*, ed. M.M. Isfahānī, Bombay 1269/1852-3, 161). He built a wall round the city, a splendid new *ḡāmi'* and the Atābakī Bazaar (Waṣṣāf, 155; Zarkūb, 77). His *wazīr* 'Amīd al-Dīn Abū Naṣr As'ad also built a *madrasa* in the quarter of the Iṣṭakhr Gate (*ibid.*, 79). Sa'd, who had extended his rule to include Kirmān, made an expedition into 'Irāk in 613/1216-17 but was defeated by the Kh'ārazmshāh Muḥammad. On his return to Shīrāz, his son Abū Bakr, displeased with the terms he had made with the Kh'ārazmshāh, refused him entry into the city. In the fighting which ensued, Sa'd was wounded, but the people of Shīrāz let him into the city by night. He seized and imprisoned Abū Bakr. However, on Sa'd's death in 628/1230-1, Abū Bakr succeeded him (Mustawfī, *Guzīda*, 505).

The Mongols were meanwhile advancing on Persia, and so Abū Bakr sent his nephew Tahamtam to Ōgedey offering submission and agreeing to pay tribute (Waṣṣāf, 156). Shīrāz was thus spared devastation by the Mongols, though Mongol *shūhnas* came to Shīrāz and lived outside the city (*ibid.*, 157). However, the favourable tax situation which had prevailed under Sa'd b. Zangī did not continue. The demands of the Mongol commanders, and the establishments of the Mongol princesses, together with the needs of Abū Bakr's army and administration, increased. A new settlement, the *mīrāṭhī* settlement, was drawn up by 'Imād al-Dīn Mīrāṭhī, the head of Abū Bakr's *diwān al-inṣhā'*. Under it, new and higher taxes were imposed on Shīrāz, including house taxes (*dārāt*), *tayyārāt* (the meaning of this term is uncertain; it may have meant in this context water taxes), imposts upon the import of cloth, taxes on horses, mules, camels, cattle and sheep, and *tamgha* taxes on foodstuffs apart from wheat and barley (Waṣṣāf, 161-2; Zarkūb, 82). Despite higher taxation, Abū Bakr is well spoken of by the sources. He made many charitable bequests (Mustawfī, *Guzīda*, 506). He built a hospital in Shīrāz and a *sikāya* at the 'Atīk mosque and constituted many *awḳāf* for them (Zarkūb, 85). Two of his ministers, Amīr Muḥarrab al-Dīn (d. 665/1266-7) and Fakhr al-Dīn Abū Bakr, emulated him; the former built a *madrasa* in the Shī-

rāz bazaar and a *ribāṭ* adjoining the 'Atīk mosque, a *dār al-hadīth* and hospital and a *sikāya* by the 'Atīk mosque and constituted many *awḳāf* for them, while the latter built a *ḡāmi'*, *dār al-hadīth*, hospital and *sikāya*. The *ḡāmi'* was in good repair when Zarkūb was writing and the Friday prayers were held in it (*Shīrāz-nāma*, 84).

On Abū Bakr's death in 659/1261, Fārs fell into a state of disorder (Waṣṣāf, 180). Finally, Hülegü sent an army to Shīrāz to avenge the murder by Saldjūk Shāh b. Salghur Shāh of two *baskaks* whom Hülegü had sent to Shīrāz. He was defeated and killed in 662/1263-4 (*ibid.*, 183-9). The last of the Salghurids was Abish bt. Sa'd (d. 685/1286-7). She was married to Tash Mōngke, Hülegü's son, and was given estates in Shīrāz and a grant on the taxes of the city as her marriage portion (*mahr wa shūr bahā*) (Lambton, *Continuity and change in medieval Persia*, 272). At the beginning of 665/1266, two Mongol officials were sent to Shīrāz to take what was in the provincial treasury and to collect the annual taxes, a task which they were unable to carry out. The next few years were troubled by much disorder (Waṣṣāf, 190-3). In 680/1281 Abaka died. Tegüder appointed Tash Mōngke as governor of Shīrāz with orders to dismiss Bulughan, Abaka's *baskak*. Bulughan fled, and Fārs submitted to Tash Mōngke. When Tash Mōngke returned to the *urdu* in 682/1283-4, his wife Abish was made governor of Shīrāz by Tegüder. Her appointment coincided with the outbreak of three years of drought and famine in 683-5/1284-7, during which, Waṣṣāf alleges, over 100,000 persons died (*Tārīkh-i Waṣṣāf*, 209; Lambton, *op. cit.*, 272 ff.). After the death of Abish in 685/1286-7, disorders broke out in Shīrāz. Djoṭī, who was sent by Arghun to restore order, made heavy exactions on the people (Waṣṣāf, 225).

During the Ilkhanate, repeated demands for alleged arrears of taxation by *iltis* [see ELḌ] and others were made on the province of Fārs and there is no reason to suppose that Shīrāz was exempt from these demands (Lambton, *Mongol fiscal administration in Persia, II*, in *SI*, lxx [1987], 104-15). The situation was further worsened by natural disasters. Spring rains failed again in 698/1299; pestilence broke out and an epidemic of measles (*sarkhadja*), from which, Waṣṣāf alleges, 50,000 people died in Shīrāz and the surrounding districts (*Tārīkh*, 359). Under Ghazan [q.v.] various steps were taken to reform the administration of the province, but according to Waṣṣāf these measures were not successful (*ibid.*, 115-22). Mustawfī mentions the absence of justice in Shīrāz in his time (*Nuzha*, 115). He states that the taxes of Shīrāz were levied as *tamgha* and farmed for 450,000 *ḡānars* (*ibid.*, 116). There were 500 charitable foundations (*buḳ'a*) in Shīrāz, which had been made by wealthy people in the past and which had innumerable *awḳāf*, but, he continues, "few of these reach their proper purpose: for the most part they are in the hands of those who devour them" (*ibid.*, 115). He states that the city had 9 gates and 17 quarters (114). Ghazan made a *dār al-siyāda* in Shīrāz (Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 204) and in 702/1302-3 a *yarligh* was issued for a high wall and deep moat to be made round the city. Five *tumans zar* from the taxes, presumably of Shīrāz, for that year were allocated to this purpose, and when this proved insufficient, the order was given for the revenue for the whole year to be allocated (Waṣṣāf, 385). Whether the work was ever completed is not stated.

Küdüdjīn, the daughter of Abish Khātūn and the eldest of Tash Mōngke's many daughters, was given

a permanent contract (*muḳāṭa'a-i abadī*) on the taxes of Fārs by Abū Sa'īd, the last of the Il-Khans, in 719/1319-20. Waṣṣāf praises her care for the people. He records that she paid particular attention to the upkeep of the buildings made by her forbears, including the 'Aḳudī *madrasa* in Shīrāz (*Tārīkh*, 625). This *madrasa* was built by Terken Khātūn, the wife of Sa'īd b. Abī Bakr, and possibly named after her son Muḥammad, who had the *laqab* 'Aḳud al-Dīn. Waṣṣāf states that the revenues of the *awḳāf* of the *madrasa* amounted to over 200,000 *ḍīnārs* when he was writing (i.e. in 727/1326) and that Kūrdūdjīn expended them on their proper purposes and increased them (*ibid.*, 624-5; Lambton, *Continuity and change*, 275-6).

During the reign of Abū Sa'īd, Maḥmūd Shāh, the son of Muḥammad Shāh Indjū, who had been sent to Fārs by Oldjeytū to administer the royal estates, succeeded in making himself practically independent in Shīrāz and Fārs [see INDJŪ]. He was succeeded by his son Mas'ūd, who surrendered Shīrāz to Pīr Husayn, grandson of Čoban [see ČŪBĀNIDS], in 740/1339. He was driven out two years later by his nephew Malik Aṣṣāf. On the latter's withdrawal in 744/1342-3, Abū Ishāk, the youngest son of Maḥmūd Shāh, established his rule. It was during his reign that Ibn Baṭṭūṭa visited Shīrāz for the second time in July 1347. In spite of the extortion and financial disorders in Shīrāz under the Ilkhanate described by Mustawfī and Waṣṣāf, there seems to have been a revival under the Indjūids. Ibn Baṭṭūṭa states that the revenue yield was high (*Travels*, tr. Gibb, ii, 1962, 307). He speaks highly of the bazaars of Shīrāz (*ibid.*, 299). He describes how Abū Ishāk conceived the ambition to build a vaulted palace like the Aywān Kisrā at Ctesiphon and ordered the inhabitants of Shīrāz to dig its foundations. When he saw this edifice, it had reached about 30 cubits from the ground (*ibid.*, 310). Among the sanctuaries of Shīrāz, Ibn Baṭṭūṭa mentions especially that of Aḥmad b. Mūsā, which was highly venerated by the Shīrāzīs. Tash Khātūn, the mother of Abū Ishāk, built at his tomb a large college and hospice, in which food was supplied to all comers and Qur'ān readers continually recited the Qur'ān over the tomb. Ibn Baṭṭūṭa states that the Khātūn made a practice of going to the sanctuary on the eve of every Monday, and on that night the *kādīs*, the doctors of the law and *sharīfs* would assemble there. He was told by trustworthy persons that over 1,400 *sharīfs* (children and adults) were in receipt of stipends (313). The tomb-mosque of Aḥmad b. Mūsā was known locally as Shāh Čirāgh. It was rebuilt in 1506 and again later, but by then the *madrasa* and hospice no longer existed (313, 135 n.). Ibn Baṭṭūṭa also mentions the mausoleum of Rūzbihān Bakrī (316) and the tomb of Zarkūb (317).

In 754/1353 Mubārīz al-Dīn Muḥammad the Muẓaffarid [*q.v.*] captured Shīrāz. Abū Ishāk fled, but was captured and executed in 758/1357. Tīmūr invaded southern Persia in 789/1387 and placed the Muẓaffarid Shāh Yahyā in control of Shīrāz, but after Tīmūr's withdrawal Shāh Maṣṣūr wrested Shīrāz from him. In 795/1393 Shāh Maṣṣūr was killed in an encounter with Tīmūrid forces outside Shīrāz. There appears to have been a cultural revival under the Tīmūrids. Iskandar b. 'Umar Shaykh (r. 812-17/1409-14), made a number of new buildings (J. Aubin, *Le mécénat timouride à Chiraz*, in *SI*, viii [1957] 75-6), and during his government and that of Ibrāhīm b. Shāhrukh [*q.v.*], who was appointed governor of Fārs in 817/1414, a new style of painting flourished in Shīrāz (H.R. Roemer, *Persien auf dem Weg in der Neuzeit*, Beirut 1989, 172; B. Gray, in *Camb. hist. of Iran*, vi,

*Timurid and Safawid periods*, ed. P. Jackson and L. Lockhart, Cambridge 1986, 849).

The later Tīmūrids disputed possession of Fārs with the Kara Koyunlu [*q.v.*] and the Ak Koyunlu [*q.v.*]. During the reign of Uzun Ḥasan [*q.v.*], who eventually defeated Djahānshāh, the last of the Kara Koyunlu in 872/1467, and the Tīmūrid Abū Sa'īd in the following year, Shīrāz once more became a thriving city. Josafa Barbaro, the Venetian, whose travels spanned the years 1436-51, states that Shīrāz was a great city, full of people and merchants, with a population of 200,000, and that it had a prosperous transit trade. Large quantities of jewels, silks and spices were to be found there. The city had high mud walls, deep ditches and a number of excellent mosques and good houses. Security prevailed in the city (*Travels to Tana and Persia by Josafa Barbaro and Ambrogio Contarini*, London 1873, 74). Ludovico di Varthema (who set out for the east in 1502) also states that large quantities of jewels were to be found in Shīrāz (*Travels ... A.D. 1503-1508*, tr. J.W. Jones and ed. G.P. Badger, London 1863, p. iii).

In 909/1503 Shīrāz fell to the Ṣafawids (K. Röhrborn, *Provinzen und Zentralgewalt Persiens in 16. und 17. Jahrhundert*, Berlin 1966, 10). Under the early Ṣafawids, Shīrāz was ruled by Dhu 'l-Kadr governors. However, 'Abbās I appointed the *kullār akasi* Allāhwirdī Khān (d. 1022/1613) governor in 1004/1595-6. He was succeeded by his son Imām Kulī Khān. Under their rule Fārs enjoyed a considerable degree of independence, and Shīrāz prospered. Allāhwirdī Khān built the Khān Madrasa for Mullā Ṣadrā [*q.v.*], who returned to Shīrāz and taught there during the last thirty years or so of his life (Iskandar Beg and Muḥammad Yūsuf, *Dhayl-i Tārīkh-i 'Ālamāra-yi 'abbāsī*, ed. Suhayl Khānsārī, Tehran AHS 1317/1938, 299). Imām Kulī Khān built a palace in the *maydān* and walls round the city and planted cypress trees on both sides of the Isfahān road in imitation of the Čāhār Bāgh of Isfahān (Lockhart, *Persian cities*, London 1960, 46). He entertained the English envoy Sir Dodmore Cotton at Shīrāz in 1628. He was suspected by Shāh Ṣafī (1038-52/1629-42) of harbouring rebellious intentions, and was murdered on the latter's orders in 1042/1632. The administration of Shīrāz was then placed under the control of the central *diwān* under a *wazīr*, Mu'īn al-Dīn Muḥammad (Iskandar Beg and Muḥammad Yūsuf, *op. cit.*, 295; Röhrborn 37, 55).

Many European travellers passed through Shīrāz, which was on the direct line of communications from the Persian Gulf to Isfahān, the Ṣafawid capital, and recorded their impressions of the city. Among them were Della Valle (1612-21), Thomas Herbert (1628), Tavernier (1632-68), Thévenot (1663), Chardin (1666-9, 1672-7), Fryer (1676-8), Kaempfer (1683), and Cornelius de Bruin (1702-4). When Herbert passed through the city, part of the old walls were still standing, but they had disappeared by the time Tavernier and Chardin visited the city. In 1617 the English East India Company set up a factory in Shīrāz, but by the middle of the century trade had been much reduced as a result of the rivalry of the Dutch East India Company. A Carmelite house was established in Shīrāz in 1623. It was temporarily closed in 1631 and reopened in 1634 (*A chronicle of the Carmelites in Persia*, London 1939, i, 322, ii, 1056-7).

In 1630 and 1668 the city was partially destroyed by floods, which on the latter occasion were followed by pestilence, but when Fryer visited Shīrāz in 1676 the town had largely recovered (Lockhart, *op. cit.*, 47). Several European visitors to Shīrāz mention ceramic

manufactures in the 11th/17th century. Some wine was exported to Portugal. It was made mainly by Jews, of whom there were some 600 families in Shīrāz according to Tavernier (*Voyages en Perse*, repr. Geneva 1970, 309-10).

After the fall of the Safawids in 1722, Shīrāz suffered in the fighting between the Ghalzay Afghāns [see GHALZAY] and Nādir Kūlī (later Nādir Shāh [q.v.]). In 1723 an Afghān force marched on Shīrāz. The governor refused to yield. The city held out for nine months before famine compelled its defenders to surrender in 1136/1723. Nearly 100,000 persons are said to have perished during the siege (Muḥammad Shīrāzī, *Rūz-nāma*, ed. 'Abbās Ikbāl, Tehran AHS 1325/1946, 3; Hasan b. Hasan Fasā'ī, *Fārs-nāma-yi nāshirī*, lith. Tehran 1313/1895-6, i, 161. See also Lockhart, *The fall of the Safawī dynasty and the Afghan occupation of Persia*, Cambridge 1958, 203). In 1729 Nādir, who had driven the Afghāns out of Isfahān, defeated an Afghān force near Shīrāz, which then fell into his hands. He gave orders for the city to be restored, part of the city and practically all of the gardens having been destroyed in the course of the final struggle with the Afghāns. He contributed 1,500 *tūmāns* for the restoration of the Shāh Čirāgh mosque (Lockhart, *Nadir Shah*, London 1938, 46). In 1733-4 Muḥammad Khān Balūč rebelled in Fārs, declaring in favour of the Safawid pretender Tahmāsp. He was defeated by Nādir and escaped to Shīrāz and thence to Kays Island (*ibid.*, 72-8). Nādir reoccupied Shīrāz and appointed Mirzā Takī Khān Shīrāzī b. Hādjdjī Muḥammad, *mustawfi* of Shīrāz, as deputy governor of Fārs. His family had held in their possession from generation to generation the office of *mīrāb* of Kumīsha and Shīrāz (*ibid.*, 80, and see Fasā'ī, *Fārs-nāma-i nāshirī*, ii, 74-5). In January 1744 Takī Khān rebelled. A force sent by Nādir laid siege to Shīrāz, which fell after four months. The city was then sacked and many of the population put to the sword. Two towers of human heads were erected and the gardens round the town devastated. Plague broke out after the siege and allegedly carried off 1400 people (Lockhart, *op. cit.*, 241-2).

Nādir Shāh died in 1747. Between his death and the rise of Karīm Khān Zand [q.v.], Shīrāz was repeatedly plundered by the contending parties. By 1179/1765 Karīm Khān had emerged as the undisputed ruler of Persia apart from Khurāsān (see J.R. Perry, *Karīm Khan Zand*, Chicago 1979; and KĀDJĀR). In 1180/1766-7 he made Shīrāz his capital, which thus became the capital not simply of a province but of the kingdom, a position which it had not held since the death of 'Aḍud al-Dawla. Under Karīm Khān's rule, security, by all accounts, prevailed in Shīrāz. The city was repopulated and prosperity returned. Commerce and foreign trade were encouraged (*A chronicle of the Carmelites*, i, 665). Customs dues were paid on all goods coming into the city (Francklin, *Observations made on a tour from Bengal to Persia in the years 1786-7*, London 1790, 148-9). Provisions were cheap and their price regulated by the *dārūgha* [q.v.] (*ibid.*, 146). Glass was made in Shīrāz and great quantities exported to other parts of Persia (*ibid.*, 147-8). Wine was also made, chiefly by Jews and Armenians, and exported to the Persian Gulf for the Indian market (*ibid.*, 143).

Prosperity was temporarily interrupted by famine which affected southern Persia in 1775 (Perry, *op. cit.*, 241), and after Karīm Khān's death decay set in (Francklin, 147). According to Muḥammad Hāshim Rustam al-Hukamā', the price of wheat bread in Shīrāz rose during the famine to 250 *dīnārs* per Tabrīz *man*. The state granaries were not opened in Shīrāz

because it was thought wise to keep the stores for the army, but grain was brought to Shīrāz from *diwānī* granaries elsewhere. Although the cost of this is alleged by Rustam al-Hukamā' to have worked out at 1,400 *dīnārs* per Tabrīz *man*, Karīm ordered the wheat to be sold for 200 *dīnārs* per Tabrīz *man* and barley for 100 *dīnārs*. All livestock were sent to Ray, Kāzwīn and Ādhārbāydzjān because of lack of fodder (Rustam al-tawārīkh, ed. Muḥammad Mushīrī, Tehran AHS 1348/1969, 421-2).

Karīm Khān undertook a massive building programme in his capital, to take part in which craftsmen and workmen came from all over Persia (*ibid.*, 414). He built a new wall and a dry ditch round the city. William Francklin, who was in Shīrāz in 1786-7, shortly after Karīm Khān's death, states that the wall was 25 ft. high and 10 ft. thick with round towers at a distance of 80 paces from each other and that there were six gates (*op. cit.*, 52-3). According to Rustam al-Hukamā', 12,000 labourers were employed in digging the ditch (*op. cit.*, 420). Karīm Khān also built, or repaired, the fortress (*kal'a*) of the city and built a citadel (*arg*), in which his successor Dja'far Khān resided (Francklin, 54-5; Fasā'ī, i, 216), a *diwān-khāna*, artillery park (*tūp-khāna*) and a magnificent brick-built covered bazaar, known as the Wakīl Bazaar, the shops of which were rented to merchants by the Khān at a monthly rent (Francklin, 56-9). The foundations for a splendid mosque and associated buildings were laid but not finished before Karīm Khān died (*ibid.*, 64-4). Karīm Khān also built several thousand houses for the Lurs and Laks who belonged to his army (Fasā'ī, i, 216). The city had eleven quarters, five of which were Haydarī quarters and five Ni'matī (*ibid.*, ii, 47). The eleventh quarter was inhabited by the Jews, who had grown in number. The Armenians, who were mainly engaged in the wine trade, had also increased in number (Perry, 240).

On the death of Karīm Khān, Ākā Muḥammad Khān Kādjar [q.v.], who had been held hostage in Shīrāz, escaped. In 1204/1789-90 he made an expedition to the south. Luṭf 'Alī Khān Zand [q.v.], who had succeeded Dja'far Khān in 1203/1789, fled to Shīrāz, where he was besieged. After three months, Ākā Muḥammad Khān raised the siege, his attention being required to deal with disorders by the Yamut and Goklan Turkmens. In 1205/1791 Luṭf 'Alī Khān made an abortive attempt to recover Isfahān, leaving Hādjdjī Ibrāhīm, the *kalāntar*, in charge of Shīrāz. During Luṭf 'Alī Khān's absence, Hādjdjī Ibrāhīm seized the city and entered into negotiations with Ākā Muḥammad Khān to surrender the city to him.

The government of Fārs under the Kādjar, as that of other major provinces, was for much of the time in the hands of Kādjar princes. Shīrāz remained the provincial capital, but the governors were frequently absent on military expeditions or visits to the court. The administration was largely in the hands of the *wazīrs* of Fārs (see appendix in H. Busse, *History of Persia under Qajar rule translated from the Persian of Hasan-e Fasā'ī's Fārsnāma-ye Nāserī*, New York 1972, 422-5 for a list of governors and *wazīrs* of the province of Fārs under the Kādjar). The distance from Tehran made control by the central government precarious and intermittent. In Djumādā II 1209/December 1794-January 1795, Faṭḥ 'Alī Mīrzā (Bābā Khān) [see FAṬḤ 'ALĪ SHĀH] was appointed governor of Fārs, Kirmān and Yazd by Ākā Muḥammad Khān. He proceeded to Shīrāz. On the murder of Ākā Muḥammad Khān in 1797, he returned to Tehran. Having established himself as shāh, he appointed his brother Husayn

Kulī Mīrzā governor of Fārs. The latter arrived in Shīrāz in Rabi' I 1212/September 1797. In the following year he rebelled, but submitted almost immediately. The governorship of Fārs was then conferred upon Muḥammad 'Alī Khān Kādījār Koyunlu. He was succeeded in 1214/1709 by Fath 'Alī Shāh's son Husayn 'Alī Mīrzā Farmān-Farmā, who was accompanied to Fārs by 800 riflemen (*tufangchīs*) from Nūr in Māzandarān. They were joined two years later by their families and took up residence in the Murdistān district of Shīrāz (which had been inhabited by Laks in the time of Karīm Khān and then destroyed by Ākā Muḥammad Khān). They were unpopular and committed many disorders, and in 1244/1828-9 were ordered to return to Tehran (Fasā'i, ii, 55).

Scott Waring, who was in Shīrāz in 1802, states that at least a fourth part of the city was in ruins (*A tour to Sheeraz by the route of Kazroon and Ferozabad*, London 1807, 33); Sir William Gore Ouseley, who passed through the city in 1811 on his way to Tehran, also notes its apparent decay (*Travels in various countries of the East, more particularly Persia*, etc., London 1819, ii, 17). James Morier estimated, with reservation, the population of Shīrāz in 1810 to have been not more than 19,000 (*A second journey through Persia, Armenia and Asia Minor to Constantinople, between the years 1810 and 1816*, London 1818, 110-11).

Husayn 'Alī Mīrzā's governorship of Fārs, and the 19th century in general, were marked by natural disasters, the spread of family and tribal rivalries and financial maladministration. Pestilence (*wabā*) broke out in 1237/1822, and Fasā'i alleges that, in the space of five or six days, 6,000 people died in Shīrāz (i, 368). Outbreaks of cholera were frequent. In 1247/1830-1 Shīrāz suffered famine as a result of locusts, which ravaged southern Persia, and plague (*ṭā'ūn*) (Ahmad Seyf, *Iran and the great plague of 1830-1*, in *SI*, lxxix [1989], 151-65). Severe famine again set in 1860 and continued until 1871-2 (see C.J. Wills, *In the land of the Lion and the Sun, or Modern Persia*, London 1893, 251-5). On this occasion, Muḥammad Kāsim Khān, who was appointed governor of Fārs in 1288/1871, prepared a number of workhouses (*gadākhāna*) in Shīrāz, each with a capacity of 50-60 persons. He undertook responsibility for six of these himself and made several others the responsibility of the great men of Shīrāz (Fasā'i, i, 331).

Farhād Mīrzā Mu'tamid al-Dawla, who was appointed governor of Fārs for the second time in 1293/1876, made an attempt to regulate the building trade in Shīrāz. At the beginning of the year the brickmakers, stucco workers and cement workers were assembled, and the number of bricks, their cost and the amount of cement needed, and the due of the master bricklayer (*ustād*), were fixed (Fasā'i, i, 33). In 1299/1881-2, on the orders of Fath 'Alī Shāh Dīwān, *wazīr* of Fārs, the streets of the city were stone-paved, and on the orders of Kawām al-Mulk a brick roof was made for the coppermiths' bazaar and the shops from the Isfahān gate to the Wakīl Bazaar.

By the beginning of the Kādījār period, Hādjdjī Ibrāhīm had become the leading man of Shīrāz. He became Ākā Muḥammad Khān's first minister. When he was seized and put to death with many of his family by Fath 'Alī Shāh in 1215/1801, the family suffered a temporary setback. However, in 1226/1811-12, his son Mīrzā 'Alī Akbar was made *kalāntār* [q.v.] of Fārs and in 1245/1829-30 given the *lakab* Kawām al-Mulk. He and his descendants, who became the leaders of the Khamsa tribal federation, played a major role in provincial and city politics. Their main

rivals were the *ilbegis* and chiefs of the Kashkāt tribe [see KASHKĀY]. The 'ulamā' also played an important part in city politics.

Morier mentions that there was great discontent in Shīrāz in ca. 1811 over the price of bread, which had risen because of the cornering of grain by an official believed to have been acting together with the prince governor's mother. The populous had recourse to the Shaykh al-Islām and expressed their grievances in a tumultuous way. The price of bread was lowered for a few days and the bakers were publicly bastinadoed (*Second journey*, 102-3).

A variety of tolls and dues was levied in the city by different officials. Scott Waring states that the commander of the citadel (*kutwāl*) levied a toll on every beast of burden which entered the city carrying a load (*op. cit.*, 80). Binning, who was in Shīrāz in the middle of the century, states that each craft and trade paid a lump sum in taxation to the government, which sum was apportioned among the members of the craft by mutual agreement (*A journal of two years' travel in Persia, Ceylon, etc.*, London 1857, i, 278-9). He also gives a list of prices of commodities in Shīrāz ca. 1857 (*ibid.*, 328-9). Consul Abbott, writing in the middle of the 19th century, states that the bazaars of Shīrāz contained about 1,200 shops. A few articles of hardware and cutlery guns, swords, daggers and knives, and *khātām* work were produced (*Cities and trade. Consul Abbott on the economy and society of Iran, 1847-1866*, ed. A. Amanat, London 1983, 88).

Irregularity in the collection of the provincial taxes gave rise to frequent disputes with the central government. In 1244/1828-9 Fath 'Alī came to Shīrāz to look into the question of arrears. He accepted 200,000 *tūmāns* from Husayn 'Alī Mīrzā in settlement. In 1247/1831-2 a remission of taxes was given on account of ravages by locusts and plague. Failure to remit the provincial taxes, however, continued and in 1834 Fath 'Alī again set out for Shīrāz to collect arrears. He fell ill in Isfahān and died there on 23 October 1834. Husayn 'Alī Mīrzā thereupon read the *khutba* in his own name in Shīrāz and marched on Isfahān. His forces were defeated near Kumīsha. Rioting broke out in Shīrāz. Husayn 'Alī Mīrzā surrendered and later died. Muḥammad Shāh meanwhile appointed his brother Fīrūz Mīrzā governor of Fārs.

During the 19th century, there were frequent outbreaks of disorder in Shīrāz. An insurrection, provoked in part by the conduct of the Ādharbāyджānī Turkish soldiers in Shīrāz and fomented by Shaykh Abū Turāb, took place in 1254-5/1839 and led to the dismissal of Fīrāydūn Mīrzā Farmān-Farmā, who had been appointed governor in 1252/1836 (Fasā'i, i, 296. See also Great Britain. Public Record Office. F.O. 60: 74. Sheil to Palmerson, no. 42. Erzerum, 24 August 1840 and enclosures). In 1261/1845 Sayyid 'Alī Muḥammad declared himself to be the Bāb. He was arrested and expelled from the city [see BĀB]. Consul Abbott remarks on the unruly nature of the population of Shīrāz, and states that during the government of Bahrām Mīrzā (1264-6/1848-9) the city was often the scene of riot and bloodshed. He also notes that the Haydarīs and Ni'matīs indulged in frequent factional strife (*Cities and trade: Consul Abbott on the economy and society of Iran 1847-1866*, 88, 175-6; see also Binning, *op. cit.*, i, 273 ff.). In 1853 there were reports that the venality and oppression of the local authorities were alienating the sympathy of the people from the shāh and his government (F.O. 60: 180. Thompson to Clarendon, no. 63. Camp nr. Tehran, 13 July 1853). Communications with the capital were

improved when the Indo-European telegraph line from Tehran to Bushire, which passed through Shīrāz, became operational in March 1865 (W.K. Dickson, *The life of Major-General Sir Robert Murdoch Smith*, London 1901, 225).

Zill al-Sultan, who had been made governor of Isfahān in 1874, was given the government of Fārs in 1881 also, and until he was deprived of all his governments except Isfahān in 1887, most of southern Persia, including Fārs, was virtually independent of the central government. He continued to have his seat in Isfahān and governed Fārs and Shīrāz through subordinate officials. According to the census made in 1301/1883-4, there were 6,327 houses in Shīrāz, and the population of the eleven quarters numbered 25,284 men and boys and 28,323 women and girls (Fasā'ī, ii, 22-3). In 1891, at the time of the Tobacco Régie, there was violent opposition to the Régie in Shīrāz (see Lambton, *The Tobacco Régie, a prelude to revolution*, in *SI*, xxii [1965], 127, 131-2, also in eadem, *Qajar Persia*, London 1987, 230-1, 234).

The movement for constitutional reform at the beginning of the 20th century spread to Shīrāz as to many other cities, though Shīrāz did not become one of the major centres of the movement. There were disturbances there in 1906 and riots in March 1907. Much of Fārs was in a state of turmoil, and during the First World War disorders continued. The officers of the Swedish gendarmerie were favourably disposed towards the Central Powers; and in the autumn of 1915 the Kashkā'ī and mutinous gendarmerie seized the British consulate, the offices of the Imperial Bank of Persia (which had been opened in May 1891) and the Indo-European Telegraph Company in Shīrāz, and took members of the British community prisoner (Sykes, *A history of Persia*<sup>3</sup>, London 1969, ii, 445-7, C. Skrine, *World War in Iran*, London 1962, pp. xx-xxi). In 1916 and 1917 order was to some extent restored in Fārs, and the Southern Persian Rifles were formed and officially recognised by the Persian Government in March 1917 (Sykes, ii, 476). By May 1918 the situation had again deteriorated, and in the summer of that year the Kashkā'īs invested Shīrāz but were defeated in October (*ibid.*, ii, 499 ff.). In the influenza epidemic of 1918 10,000 persons in Shīrāz lost their lives (*ibid.*, ii, 515). In the 1920s the tribal areas in Fārs were in a state of turmoil until Rīdā Shāh [q.v.] reduced them. During his reign Shīrāz did not have a major share in the industrial developments which took place in some parts of Iran, but in the years after the Second World War there was considerable development. By 1961-2 the population of the city of Shīrāz had risen to 129,023 (*Farhang-i dūghrāfiyā'-i Irān*, ed. Husayn 'Alī Razmārā, Tehran AHS 1330/1961-2, vii, 148) and to ca. 325,000 by 1972.

(ANN K.S. LAMBERTON)

**SHĪRĀZĪ**, the *nisba* of the Sultans of Kilwa [q.v.], in frequent use by Africans and Europeans to perpetuate a myth of a "Shīrāzī" period of history and of "migration" into East Africa.

The *nisba* is first recorded in Barros' translation of a dynastic history of Kilwa of ca. 1506, and in the independent Arabic *Kitāb al-Suhva fī akhbār Kuhwa* (ca. 1550; B.L. Or. ms. 2666); and on two seals, in a treaty between the Sultan of Kilwa and a French slave-trader, 4 November 1776. Various Swahili histories collected in the 19th century and after, on the coast and as far as the Comoro Islands, repeat it. These all claim that the Kilwa dynasty originated from Shīrāz in Persia, albeit they situate Shīrāz on the coast. Members of the family were still using the *nisba* in 1958.

A "Shīrāzī" colonisation of East Africa has been postulated by European archaeologists and historians, by Justus Strandes (1899), A.C. Hollis (1900), Pearce (ca. 1920), and elaborated by W.H. Ingrams (1931). It was popularised by L. Hollingsworth's *Short history of the East African Coast* (1935), an official school textbook translated into Swahili. They claimed that "Shīrāzīs" introduced stone buildings, Shī'ism (albeit the people are Sūnnīs), manufacture of lime and cement, woodcarving and weaving cotton. Krumm (1940) went further to claim that Swahili contains numerous Persian words; nevertheless, such borrowings can be shown to have been transmitted through Arabic. One might expect Persian inscriptions: only two mention Persians in Mogadishu among numerous Arabic inscriptions; a Persian inscription, a fragment only of a tile, was recorded by Burton on a tomb at Tongoni, Tanzania, but is now lost. It has also been claimed, in Zanzibar [q.v.], in Pemba [q.v.], and on the mainland coast, that the celebration of Nau Ruzi [see NAWRŪZ. 2.] proves Persian origin, whereas the Naw Rūz calendar was used by seamen throughout the Indian Ocean. At Manda [q.v.] H.N. Chittick claimed to have excavated what was originally a colony of the 9th century from Sīrāf [q.v.]. Subsequent excavations nearby and in Zanzibar and Pemba by M.C. Horton, while showing Sīrāfī influences in architecture, have produced no evidence for any connection with Shīrāz.

In addition, certain institutions connected with the royal houses of Pate, Malindi, Mombasa, Vumba and

Kilwa have been attributed to the Shīrāzī. They include royal drums and trumpets, and ceremonial chairs. There is nothing identifiable in these with Shīrāz more than a possibly-connected *nisba*.

The popular legend of a "Shīrāzī" period was widely believed by one and all in colonial times. It was used in contradistinction to "African" to demonstrate a civilised historical past. This usage has since largely disappeared. In Zanzibar, in the 1950s, and in Pemba, "Afro-Shīrāzī" became the name of a political party opposed to the 'Umānī sultanate and to colonial rule. It was successful in the revolution of 1964 which ended the 'Umānī dynasty [see ĀL BŪ SA'ĪD]. There were then numerous persons who claimed "Shīrāzī" descent, whereas in the time of Ingrams (1931) the number had been negligible. On the coast between Fundi Island, Kenya, and Tanga, in Tanzania, a distinct tribe of fishermen and mangrove cutters emerged at an unknown time. Among recent historians, Trimmingham used the term for the 13th to 17th centuries, and Pouwels for the tenth to 16th centuries. Other than legitimately as a *nisba*, it may be doubted whether the term has any value at all or ever did.

**Bibliography:** See those to the arts. MALINDI, MAKDISHŪ, MOMBASA, KILWA and NAWRŪZ. 2. J. de V. Allen, *The "Shirazi" problem in East African coastal history*, in *Paideuma*, xxviii (1982), has an exhaustive bibl.

(G.S.P. FREEMAN-GRENVILLE)

**SHĪRĀZĪ**, the *nisba* of a family of prominent Shī'ī 'ulama' active in Persia and 'Irāk over the last century and a half.

1. Mīrzā Muḥammad Ḥasan b. Maḥmūd, called Mīrzā-yi Shīrāzī-yi buzurg and al-Mudjaddid (1230-1312/1815-95).

Born in Shīrāz, he studied in Isfahān and Nadjaf, and after Murtaḍā Anṣārī's [q.v. in Suppl.] death in 1281/1864, became the leading Shī'ī scholar and sole *marja' al-taklīd* [q.v.]. He is best known for his opposition to the Tobacco Régie in Persia (1891) [see NĀSIR AL-DĪN SHĀH], and it seems that his famous *fatwā* was in part provoked by Djamāl al-Dīn al-Afghānī's [q.v.] letters to him against the Persian government's policy over concessions. Mīrzā Ḥasan's intervention began with a telegram to the Shāh in July 1891 protesting against disrespect shown to another scholar, Sayyid 'Alī Akbar, expelled to Nadjaf after voicing opposition to the Régie. Shīrāzī tried to prove that the concession of any monopoly to foreigners was against God's command. In December, a nation-wide protest culminated in a boycott of tobacco, with a *fatwā* attributed to Shīrāzī against the use of tobacco in any form. He had already shown hostility to the Kādjārs, having refused to receive the Shāh when he visited the Holy Shrines in 'Irāk in 1870. Only in January 1892, when the concession had perforce to be abandoned, was the ban on tobacco lifted by Shīrāzī.

He was also important for having organised the teaching of *fiqh* on lines which have continued till today, founding his own school at Sāmarrā' and making it a major centre of Shī'ī learning. He was also active there in social and charitable activities, acting as a mediator in sectarian conflicts and appealing for Islamic unity under the banner of the Ottomans, despite religious differences. He wrote no book of note, but was the teacher of the most prominent scholars of the next generation, such as Akhund Kḥurāsānī (d. 1911), fervent supporter of the Constitutional Movement of 1905-11, and several others. He died at Sāmarrā'.

Momen, *An introduction to Shi'i Islam*, New Haven-London 1985, index; Muḥammad Sharīf Rāzī, *Gandjīna-yi dāniṣṭmandān*, Tehran 1352-4 *Sh*/1974-6, v, 427-9; *al-Shadjiara al-tayyiba. Usrat al-Shirāzī. Ta'rikh, fikr wa-ḥijāh*, Beirut n.d. [ca. 1983], 14 ff. 2. Mīrzā al-Sayyid Ismā'il b. Sayyid Raḍī (1258-1305/1842-88).

Born in Shīrāz, he studied under no. 1 above, his cousin and brother-in-law, and worked with him in establishing the new centre at Sāmarrā'; he was considered to be the successor of Mīrzā Ḥasan, but died before his teacher. He wrote in Arabic and Persian, including poetry.

*Bibliography*: Amīnī, 262; Tihirānī, i/1, 156-6; Ḥirz al-Dīn, i, 109; Rāzī, i, 277 ff., v, 424-5; *al-Shadjiara al-tayyiba*, 53.

3. Mīrzā 'Alī Āghā (1287-1355/1870-1936).

Son of no. 1, went, about 25 years after his father's death, to Kāzimayn and finally, to Nadjaf. After the death of Muḥammad Taḳī (no. 6), he became *mardja'*. His son Muḥammad Ḥasan is one of the contemporary 'ulamā' of Nadjaf.

*Bibliography*: Amīnī, 264; Ḥirz al-Dīn, ii, 138-40; Rāzī, v, 434; *al-Shadjiara al-tayyiba*, 54.

4. Maḥdī b. al-Sayyid Ḥabīb Allāh al-Ḥusaynī (1304-80/1887-1960).

Related by birth and by marriage to several other members of the Shīrāzī family, he was born and died in Karbalā', and was educated there and at Sāmarrā' and Kāzimayn. His elder sons Muḥammad (see below) and Ḥasan (no. 7) played a leading role in the Shī'ī opposition to Ṣaddām Ḥusayn's régime, and his two younger sons Ṣādiq and Muḍṭabā are active today as religious scholars in Persia. After the First World War, he took part in the rebellion against the British, and later, during 'Abd al-Karīm Kāsim's [q.v.] régime, he was one of the 'ulamā' who attacked the Communist Party in a barrage of *fatwās*, declaring that the prayers and fasting of Muslims who had embraced Communism were unacceptable to God, that Muslims could not buy meat from a Communist butcher and that a Communist son could not inherit from a Muslim father (cf. Hanna Batatu, *The old social classes and the revolutionary movements of Iraq*, Princeton 1978, 954).

His son, Āyatullāh al-Sayyid Muḥammad (b. 1347/1928-9, still living), has been active in 'Irāk as spiritual leader of an opposition group there, the Islamic Task Organisation (*Munazzamat al-'Amal al-Islāmī*); expelled from 'Irāk in 1979, now teaching in Kum, he is a prolific writer, see Kūrkīs 'Awwād, *Mu'djam al-mu'allifīn al-'irāqīyyīn*, Baghdād 1969, iii, 247-50.

*Bibliography*: Amīnī, 265; Ḥirz al-Dīn, iii, 166; Rāzī, v, 451; *al-Shadjiara al-tayyiba*, 66 ff., 143; J.N. Wiley, *The Islamic movement of Iraqi Shi'as*, Boulder, Col.-London 1992, 36-7, 53, 78.

5. Mīrzā 'Abd al-Hādī (1305-82/1888-1962).

Son of no. 2, he was brought up by nos. 1 and 3 after his father had died shortly after his birth, and studied at Nadjaf and Sāmarrā'. He took part, with Mīrzā Muḥammad Taḳī (no. 6) in Karbalā', in the Shī'ī anti-British movement, and after its failure, devoted himself to *fikh* and eventually announced his readiness to be considered as *mardja' al-taklīd*. He was prominent in the Shī'ī campaign against Kāsim and the 'Irākī Communist Party, and visits to Persia multiplied his following there. After the death of Burūdjirdī in 1961, he inherited a considerable number of his followers and was already seen as his successor, but died shortly afterwards. His three sons, as well as sons-in-law, are all religious scholars in Nadjaf, Tehran or Kum. His writings include several *fikh* treatises as well as some poems in both Arabic and Persian.

*Bibliography*: Amīnī, 265; Tihirānī, i/3, 1250-5; *Elr*, art. s.v. (H. Algar); Ḥirz al-Dīn, ii, 77-81; Kaḥḥāla, *al-Mustadrak 'alā Mu'djam al-mu'allifīn*, Beirut 1985, 444; Momen, 248; Rāzī, i, 276, v, 432-3, vii, 271; *al-Shadjiara al-tayyiba*, 58.

6. Muḥammad Taḳī b. Muḥibb 'Alī Ḥā'irī, called Mīrzā-yi Shīrāzī-yi kūčik and Za'im al-thawra al-'irāqīyya (1269-1338/1853-1920).

Distantly related to nos. 1 and 4, he was born in Shīrāz and studied at Karbalā' and Sāmarrā', where he became *mardja'*. He is particularly associated with the struggle against the British occupation of 'Irāk [see 'Irāk, at vol. III, 1258a]. In 1914 he had issued a *fatwā* calling for *ḥijāh* against the British, and in 1918 moved to Karbalā' and became involved in setting up an anti-British secret society, the *Ḍjam'iyya waṭaniyya islāmīyya*. His *fatwās* of 1919 and 1920 certainly precipitated the 1920 revolt against the British Mandate. One in 1919 proclaimed that "no Muslim should elect or choose any non-Muslim as his ruler", and its wide circulation made it difficult for the occupying power to use a plebiscite for installing a British governor in 'Irāk. It enhanced Shīrāzī's prestige and led to his official recognition as *mardja' al-taklīd* after Yazdī's death in 1919. In 1919 he endeavoured to mediate between and unite the tribes and to appeal for foreign backing, writing to the Sharīf Ḥusayn in Mecca and the latter's son Amīr Fayṣal in Damascus. President Wilson of the U.S.A., whose "Fourteen Points" had impressed the Shī'ī religious leaders, was even contacted (see Luizard, 377 ff.). In late 1919, resistance to the British was still peaceful, but the situation deteriorated after the arrest and temporary exile of six scholars and prominent citizens. In spring 1920 Shīrāzī tried to unify 'ulamā', *sayyids*, *sharīfs* and tribal chiefs for a general insurrection, and appealed also to Sunnīs; military conflict broke out in June, continuing till the movement was crushed in January 1921. Karbalā' was the centre for the organising of the revolt during Shīrāzī's lifetime until he died in August 1920, after which Nadjaf became the rebellions' centre.

Amongst Muḥammad Taḳī's writings is a famous treatise on *fikh*, *Hāshiya 'alā 'l-makāsib* (Tihirānī, *Ḍharī'a*, vi, 218), and he was the teacher of many famous scholars.

*Bibliography*: 'Āmilī, xlv (1960), 121-2 = (1986) ix, 192; Amīnī, 263-4; Tihirānī, i/1, 261-4; Abdul-Hadi Hairi, *Shi'ism and constitutionalism in Iran*, Leiden 1977, 122 ff.; Ḥirz al-Dīn, ii, 215-18; Kaḥḥāla, ix, 133; Luizard, index, esp. 374 ff.; Dja'far al-Shaykh Bakir Āl Maḥbūba, *Mādī 'l-Nadja wa-ḥādīrūhā*, Nadjaf 1955-8, i, 358-62; Momen, index; Wiley, 16-7, 122.

7. (Āyatullāh) Ḥasan b. al-Mahdī al-Ḥusaynī (1354-1400/1935-80).

As the younger brother of Muḥammad b. al-Mahdī (see no. 4, at end), he was also an opponent of the Ba'th régime in 'Irāq, and was imprisoned in 1969 and exiled to Lebanon in the next year. He was especially active in setting up mosques and institutions for religious education, welfare and social affairs, and at three of the *hawzas* for religious education, in Damascus, Beirut and Sierra Leone, he taught personally for a while. He likewise founded an Islamic publishing house, Dār al-Šādīk, to propagate *da'wa*, and wrote numerous books on religion and ethics before he was assassinated in Beirut in May 1980, just after he had denounced the execution in 'Irāq of Āyatullāh Bakīr al-Šadr and his sister.

*Bibliography:* *al-Šaḍi'ara al-tayyiba*, 157 ff.; Wiley, 46, 53, 55, 78, 80.

(ROSWITHA BADRY, shortened by the editors)

AL-SHĪRĀZĪ, ABU 'L-ḤUSAYN 'ABD AL-MALIK B. MUḤAMMAD, mathematician, who flourished about the middle of the 6th/12th century. He studied Greek mathematics and astronomy. In his time, there was already available a good Arabic version of the *Conic sections* (χωνικά) of Apollonius of Perga by Hilāl b. Abī al-Ḥimšī (d. 270/883-4) and Thābit b. Qurra al-Harrānī (211-88/826-901 [q.v.]). With the help of this he prepared a synopsis of the contents of the χωνικά, the Arabic version of which is in Oxford (Bodl. 913, 987, 988); it was translated into Latin by Ravius (publ. Kiel 1669). There is also attributed to him a compendious version (*Mukhtaṣar*) of the *Almagest* of Ptolemy, from which Kuṭb al-Dīn al-Shīrāzī (633-711/1236-1311 [q.v.]) prepared a Persian translation of the *Madjīstī*. The Arabic versions of the *Conic sections* of Apollonius are of great value for the history of mathematics because the three last of the seven books of this important work only survive in Arabic, while the eighth book of the χωνικά (Ar. *Makhrūṭiyāt*) had already disappeared from knowledge by the time of the Arab translator.

Ver Eecke, *Les Coniques d'Apollonius de Perge*, Paris 1959, p. xlviii; G.J. Toomer, *Apollonius' Conics, Books V to VII, the Arabic translation of the lost Greek original in the version of the Banū Mūsā*, New York 1990, i, pp. xviii, xxiii-xxiv.

(C. SCHÖY-[J.P. HOGENDIJK])

AL-SHĪRĀZĪ, al-Shaykh al-Imām ABŪ IŠHĀK IRRĀHĪM B. 'ALĪ b. Yūsuf al-Firūzābādī, eminent jurist whose work constitutes one of the major reference sources of the Shāfi'ī school [see AL-SHĀFI'ĪYYA].

#### 1. Biography

Of decidedly humble origins, Abū Ishāk al-Shīrāzī ("al-Shaykh Abū Ishāk" in classical Islamic literature) was born in Persia, at Firūzābād in the vicinity of Shīrāz, in 393/1003. Regarding the early years of his life, the biographers have nothing to say. From 410/1019 to 415/1024 he pursued a legal education—which he had begun at Firūzābād—at Shīrāz and at Basra as pupil of various Shāfi'ī masters (an article is devoted to each one of them by al-Shīrāzī himself in his *Tabakāt al-fukahā'*, Beirut n.d., 133 and 140-1). In 415/1024 he was in Baghdad, where he attended classes given by al-Kāzinī (d. 440/1048, cf. *Tabakāt al-fukahā'*, 137), the jurist and proponent of the legal thinking developed by al-Bākillānī [q.v.], and where, more significantly, he became the leading disciple of the *Kāfi* Abū 'l-Tayyib al-Ṭabarī (died at one hundred years of age in 450/1058 [q.v.]) and

his accredited assistant (*mu'īd*).

In 428/1036, al-Shīrāzī's long career in teaching began: first in various *masjids* of Baghdad and subsequently, from 459/1066 onward, in the prestigious Nizāmiyya *madrasa*, constructed in his honour by the Saljuqid minister Nizām al-Mulk (d. 485/1092 [q.v.]) (an honour which initially al-Shīrāzī had refused to accept, possibly for political reasons, although this is by no means certain).

The biographers depict al-Shīrāzī as endowed with a gentle, refined and affable personality and leading a life of asceticism, a personality which did not prevent him, in 469/1077, from demonstrating great firmness of character, doubtless with the aid of his political supporters, against the Hanbalis under the leadership of the *Sharīf* Abū Dja'far (d. 470/1078), a cousin of the caliph, at the time of the episode involving Abū Naṣr al-Kushayrī (the son of Abū 'l-Kāsim al-Kushayrī [q.v.], the renowned author of *al-Risāla al-kushayriyya*). The Hanbalis of Baghdad attempted forcibly to prevent al-Kushayrī, passing through Baghdad and a guest of al-Shīrāzī at the Nizāmiyya, from publicly manifesting the Ash'arī doctrines, and violent riots ensued. At the end of the affair, al-Shīrāzī gained the upper hand by means of the restrained support of Nizām al-Mulk to whom he had complained, with other scholars of Baghdad, about the fanaticism of the Hanbalis.

The political role played by al-Shīrāzī is further illustrated by a remark of al-Subkī, stating that his intervention was decisive in the accession to the caliphate of al-Muqtadī bi-Amr Allāh (r. 467-87/1075-94) (*wa-kāna al-shaykh Abū Ishāk sabab<sup>m</sup> fi dī'ālhi khalīfat<sup>m</sup>*; al-Subkī, *Tabakāt al-shāfi'īyya al-kubra*, Cairo n.d. iv, 223). As a general rule, the Shāfi'ī biographers firmly insist on the legitimacy of al-Shīrāzī (*wa-huwa khadām min khuddām al-khalīfa*, al-Subkī writes, iv, 219), doubtless because this legitimacy could seem to be compromised (Hanbalī authors openly allege this) on account of al-Shīrāzī's favourable relations with the Saljuqs, the real holders of political power at the expense of the 'Abbāsids.

Although principally of sedentary habits (according to the biographers, he lacked the means to make the Pilgrimage), towards the end of his life al-Shīrāzī undertook a highly successful journey to Khurāsān, negotiating on the caliph's behalf with the Saljuq authorities. This was an opportunity for Shaykh Abū Ishāk to assess his popularity among the common people and in Sūfī circles, and his influence with the intellectual élite. At Nishāpūr, he was to encounter his colleague Abū 'l-Ma'ālī al-Djuwaynī (d. 478/1085 [q.v.]), the other great Shāfi'ī jurist of the period, and likewise the director of a *madrasa* constructed in his honour by Nizām al-Mulk, with whom he conducted several sessions of judicial controversy (the text of these *disputations* is preserved in al-Subkī, iv, 252-6).

In Baghdad, al-Shīrāzī maintained cordial links with numerous scholars of enduring renown, such as the Hanbalī jurist Abū 'l-Wafā' Ibn 'Aqīl (d. 513/1119 [q.v.]) and the Shāfi'ī historian al-Khaṭīb al-Baghdādī (d. 463/1071 [q.v.]). The number of his disciples and pupils was immense (the most important are listed in M.H. Hütü, *al-Imām al-Shīrāzī*, Damascus 1980, 136-57). Al-Shīrāzī died on Wednesday, 24 Djumādā II 476/November 1083.

#### 2. His work and his thought

Mostly extant and published, the work of al-Shīrāzī extends to all the legal disciplines cultivated in the 5th/11th century, the golden age, in part as a result of his efforts, for these sciences. Al-Shīrāzī's youthful

works all belong to the realm of judicial controversy envisaged from a point of view which is either practical (*al-ikhtilāf*), or theoretical (*al-djadal* and *ikhtilāf* in matters relating to *uṣūl al-fikh*). One should not be too surprised at the extent to which the pedagogy of the time accorded an essential role to controversy in the training of tyro jurists and, according to the biographers, al-Shīrāzī showed particular brilliance in this field (al-Subkī relates that he was “a lion of the *disputatio*”: *ghadanfar fi 'l-munāzara*). These youthful texts, composed between ca. 425/1034 and ca. 450/1058 are: (1) The *K. fi Masā'il al-khilāf fi 'l-furū'* (ms. copied during the author's lifetime, in 466/1073, preserved in Istanbul under the title *Ikhtilāf al-fukahā'*; the section of this text devoted to transactions (*al-mu'āmalāt* [q.v.]) has been the subject of an unpublished thesis by al-Misrī); (2) *al-Mulakhkhas fi 'l-djadal* (ms., apparently edited by Niyāzī but not published, dated 590/1194, Istanbul); (3) The *K. al-Ma'ūna fi 'l-djadal* (ed. 'A.-M. Turki, Beirut 1988) is a summary of the preceding, possibly composed after 450/1058; (4) The *K. al-Kiyās* (lost) is not mentioned by the biographers, but al-Shīrāzī refers to it several times in *al-Mulakhkhas*; and (5) *al-Tabṣira fi 'l-khilāf* (ed. under the title *al-Tabṣira fi 'l-uṣūl* by M.H. Hitū, Damascus 1982) is the first work of *uṣūl al-fikh* composed by al-Shīrāzī. It approaches only the controversial aspects of this science.

The works of al-Shīrāzī's mature period testify to a change in direction: the brilliant controversialist is replaced by a genuine *muḍtāhid* anxious to establish his own doctrine. It was principally the works of this phase, and more specifically his two treatises on practical law (*fikh*) which were to confer upon him the prestigious status within the Shāfi'ī school which he still enjoys today. These two treatises on *fikh* are: (1) The *K. al-Tanbīh fi 'l-fikh* (Cairo 1929; French tr. G.-H. Bousquet, *Le Livre de l'Admonition*, i-iv, Algiers n.d.), a summary composed between 452/1060 and 453/1061 which has been the object of more than seventy commentaries (see Hitū, *op. cit.*, 169-77); and (2) *al-Muḥadḍḥab* (2 vols. Beirut n.d.), written between 455/1053 and 469/1076, which may be considered as al-Shīrāzī's crowning achievement and which has, like the aforementioned, been the object of a vast amount of critical apparatus (including the *Maḍimū' fi sharḥ al-muḥadḍḥab* of al-Nawawī, 18 vols. Cairo n.d.). These two texts belong to a group of five key works of reference of the Shāfi'ī *madhhab* (al-Nawawī (d. 676/1277 [q.v.]), *Tahdhīb al-asmā' wa 'l-lughāt*, Beirut n.d., i, 3).

In terms of legal theory *uṣūl al-fikh*, the influence of Shīrāzī was no less important, principally on account of his summary *al-Luma' fi uṣūl al-fikh* composed ca. 450/1058 (numerous editions since Cairo 1908; critical ed. and French tr. E. Chaumont forthcoming) and his own commentary on it (ed. by 'A.-M. Turki, partially under the title *al-Wuṣūl ilā masā'il al-uṣūl*, Algiers 1979, and in entirety, *Sharḥ al-luma'*, 2 vols. Beirut 1988).

The *Index of jurists* (*Tabakāt al-fukahā'*), composed ca. 452/1060, is one of the oldest examples of its genre which has been preserved. It is interesting in that it is also the last which fulfils the original function of this literature: recording the *totality* of jurist-*muḍtāhids*, irrespective of schools, whose advice should be sought for the purpose of constituting a unanimous agreement (*idjma'* [q.v.], the third source of *fikh*) (see *Tabakāt al-fukahā'*, 13). Subsequently, the literature of *Tabakāt*, within each *madhhab*, would be confined to the evocation of jurists of one and the same allegiance (a sure sign of serious malfunction, predictable and long

foreseen by Mu'tazilī scholars, in the exercise of *idjma'* as theoretically defined).

Furthermore, al-Shīrāzī is also the presumed author (the mss. attribute them to him formally) of two small texts of *uṣūl al-dīn*: the *K. al-Ishāra ilā madhhab ahl al-ḥaqq* and the *Akīdat al-salaf* (ed. M. Bernand, *La Profession de foi d'Abū Ishāq al-Shīrāzī*, IFAO, Cairo 1987; ed. 'A.-M. Turki in respectively *Sharḥ al-luma'*, *op. cit.*, 91-116 (incomplete text) and *K. al-Ma'ūna*, *op. cit.*, 91-102). The question of al-Shīrāzī's theological opinions has always posed problems—was he an Ash'arī or closer to the creed of the Hanbalīs?—among mediaeval Muslim writers as well as his modern interpreters; the question seems to be resolved, and his Ash'arism confirmed, with the appearance of these two texts, if they are authentic (not one of the biographers mentions them, not even Ibn 'Asākir (d. 511/1175) who was determined to prove the Ash'arism of al-Shīrāzī, see *Tabayn kadhib al-muftarī*, Beirut 1979; on this question, see Cl. Gilliot, *Deux professions de foi ...*, in *SI*, lxxviii [1988], 170-86, and, in response to the latter, Chaumont, *Encore au sujet ...*, in *SI*, lxxiv [1991], 168-77).

Other minor texts are attributed to al-Shīrāzī, including an *Epistle on ethics* (*Risālat al-Shīrāzī fi 'ilm al-akhlāq*, Cairo 1901; possibly the *Advice to the scholars* (*Nuṣṣa ahl al-'ilm*) which is attributed to him by al-Subkī, *op. cit.*, 215, and Ibn 'Asākir, *op. cit.*), *al-Nukat*, a list of 555 points of divergence between Abū Ḥanīfa and al-Shāfi'ī (probably a summary of the *K. fi masā'il al-khilāf fi 'l-furū'* (see above), the *Book of Definitions* (*K. al-Hudūd*, lost) and the *Mulakhkhas fi 'l-hadīth* (ms. B.N., Paris) which is of very dubious authenticity.

Fundamentally, the legal thinking of al-Shīrāzī expresses a radical insistence on the autonomy of the sphere of the legal sciences in relation to theology. In his treatises on *uṣūl al-fikh* (and it has to be assumed *a priori* that his writings on *fikh* represent the practical interpretation of its principles), al-Shīrāzī demonstrates unusual rigour in recognising the precise nature of the revelation of the Law as legal discourse (the *Kur'ān*, ultimate expression of the *Shari'a*, is in fact a text). Furthermore, this discourse needs to be envisaged, according to the *Kur'ān* itself (logically, al-Shīrāzī invokes verses XII, 2, and XLI, 44), as a *common* discourse, in other words one that was immediately comprehensible to Arabic speakers at the time of the revelation (who, according to al-Shīrāzī, had perfect knowledge of their language and its nuances but were not born to be theologians). Thus the science of the basic comprehension of the Law borrows in his writing the form of a strict “grammar” of legal discourse, always attentive to the modes of the “speech of the Arabs” and consciously indifferent to the “thinking of the theologians” who, according to all indications, were at this time only too eager to intervene in debates belonging to the domain of the legal sciences (on this point, see G. Makdisi, *The juridical theology ...*, *SI*, [1984], 5-47 and, in a different perspective, Chaumont, *Bāqillānī ...*, in *SI*, lxxix [1994], 79-102).

**Bibliography:** The long article devoted to al-Shīrāzī by al-Subkī in his *Tabakāt* constitutes the principal source of information regarding his life and work. The book by M.H. Hitū (*al-Imām al-Shīrāzī ...*, *op. cit.*), is a compilation of everything which ancient literature has to say about al-Shīrāzī, and a study of the evolution of his legal doctrine. Al-Shīrāzī's milieu is studied by Makdisi in *Ibn 'Aqil et la résurgence de l'Islam traditionaliste au XI<sup>e</sup> siècle*, Damascus 1963, but too much credence is given

here to Ḥanbalī sources. Al-Shīrāzī's theory of *idghāḥ* is tackled in Chaumont, *La théorie classique ...*, in *SI*, lxxv [1992], 105-39. (E. CHAUMONT)

**SHĪRĀZĪ**, RAḤīm AL-DĪN (ca. 947-1030/1540-1620), historian of the 'Adil Shāhī dynasty of Bidjāpūr [q.v.]. A native of Shīrāz, he travelled to India as a merchant, and from the age of twenty served Sultan 'Alī 'Adil Shāh, and later Sultan Ibrāhīm, in various capacities, including as ambassador to Ahmadnagar [q.v.], the capital of the Nizām Shāhīs [q.v.], governor of the Bidjāpūr fort, and treasurer. While he wrote abridgements of Mīr Khān's *Rawḍat al-safā*, Khān's *Amīr's Ḥabīb al-siyar*, and a *Farhang-nāma*, he is best known for his *Tadhkirat al-mulūk*, history of the 'Adil Shāhī dynasty and contemporary Indian and Persian régimes, begun in 1017/1608-9 and completed three years later (for mss., see Storey, i, 743, to which add Sālār Djang, i, 406, no. 362 [Hist. 142] and Āṣafiyya, handlist 5280). The *Tadhkirat al-mulūk* is divided into an introduction and ten *fāṣṣ* (expanded to twelve in some mss.), with a supplement on Indian temples, jewel mines, rivers, and wonders of the region. Raḥīm al-Dīn Shīrāzī has been neglected as an historian, partly due to the canonisation of Firishta [q.v.] by the British, but the *Tadhkirat al-mulūk* remains an important, independent source of Indo-Persian history.

**Bibliography:** *Tadhkirat al-mulūk*, partial ed. H.S.S. Qādirī, *Tārīkh* [Hyderabad] iii/9, Suppl. (Jan.-Mar. 1931), 2-41, complete ed. A.N.M. Khālidī, rev. C. Ernst, forthcoming; partial tr. J.S. King, *The history of the Bahmanī Dynasty, founded on the Burhān-i Ma'āsir* [and the *Tadhkirat al-mulūk*], London 1900. See also V.R. Natu, *A history of Bijapur by Rafiuddin Shirazi*, in *JBBRAS*, xxii (1905-8), 17-29; N.B. Roy, *Some interesting anecdotes of Sher Shah from the rare Persian Ms. of Tazkirat-ul-Muluk*, in *JASB, Letters*, xx/2 (1954), 219-26; I.A. Khan, *The Tazkirat al-Muluk by Rafiuddin Ibrahim Shirazi as a source on the history of Akbar's reign*, in *Studies in History*, ii (1980), 41-56. (C. ERNST)

**AL-SHĪRĀZĪ**, ŠADR AL-DĪN [see MULLĀ ŠADRĀ SHĪRĀZĪ].

**AL-SHIRBĪNĪ**, YŪSUF B. MUḤAMMAD B. 'Abd al-Djawād b. Khidr, an 11th/17th-century Egyptian author best known for a work with the punning title of *Hazz al-kuhūf bi-sharḥ kaṣīd Abī Shādūf*, "The shaking of skull-caps (or: the stirring of yokels) in commenting the poem of Abū Shādūf." It mentions that he went on Pilgrimage in 1075/1664-5, that the work was undertaken at the behest of the Imām Aḥmad b. 'Alī al-Sandūbī, and that among his teachers was Shihāb al-Dīn Aḥmad b. Aḥmad b. Salāma al-Qalyūbī (d. 1069/1659).

The work is in two parts. The first abounds in anecdotes, often more scatological than witty, on the grossness of manners and tastes of the peasants (*fallāḥīn*) of the Nile valley and their teachers' misunderstandings of the Law. It also pokes fun at spurious examples of folk poetry and at pretentious poets of the past. It ends with a 193-line *urduza* in literary Arabic in which he summarises the customs and ways of the peasants whom he has just depicted. Part II is devoted almost entirely to a fictitious peasant poet, Abū Shādūf, and his monorhyme poem of 47 lines in colloquial Arabic. It parodies with verve classical commentaries, and is studied with precious social and linguistic information.

Throughout, the peasant is depicted as irredeemably brutish. To read this—as do Shawkī Dayf and al-Baklī (see below)—as a disguised condemnation of his oppressors is far-fetched.

There are lithographed editions (Cairo n.d. and Alexandria 1289), and printed ones (Bulāk 1274 and 1308, and Cairo 1322). A bowdlerised version was published by Muḥammad Qandīl al-Baklī (Cairo 1963).

The author mentions another work of his on peasant weddings. Manuscripts attributed to him (Brockelmann, S II, 987) appear to be of a single moralistic text.

(M. BEN CHENEB-[P. CACHIA])

**SHIRE**, the Turkish name of the Aegean Greek island of Syros, vernacular Syra, Ar. Shīra, an important island of the Cyclades lying south of Andros/Andire and northwest of Para.

Mentioned by al-Idrīsī (tr. Jaubert, ii, 127) when it was under Byzantine control, it was captured by the Venetians after the Fourth Crusade and became part of the Archipelago Duchy after 1207. Renamed Lasudha (la Souda), it experienced a long Latin period, and over the centuries, the majority of the population became Latin Catholics (see G. Hoffmann, *Vescovadi catolici della Grecia. III. Syros*, Rome 1937; A. Sigalas, *I nomi e cognomi veneto-italiani nell'isola di Sira*, in *Studi Bizant. e Neoellen.*, viii/3 [1921], 194-200). Throughout the Latin and Turkish period, it retained the densest westernised population of the area, the *Frankosyrianoi* or "Frankish Syriots", becoming a bastion of Catholicism in the Aegean.

Sultan Mehemmed I in 1419 recognised it as a Venetian possession, but in the 16th century, Shire suffered both Ottoman Turkish and Italian corsair raids, including those in 1515 by Kurtoghlu and in 1537 by Khayr al-Dīn Barbarossa [q.v.] (cf. Uzunçarşılı, *Osmanlı tarihi*, ii<sup>2</sup>, 375, 479, iii/2<sup>4</sup> 101-2). These caused depopulation and famine, and only under Joseph Nasi's rule (1566-79) [see NAKŞHE; PARA] was there relative prosperity. In 1566 the island received a favourable *'ahd-nāme* or treaty of dependence from the Ottoman government, renewed in 1580 and 1648, giving the local Greek authorities self-government; these last maintained representatives in Istanbul, the Syriot *kapukalyas*, 31 of whose letters are extant, giving valuable information on contemporary administrative and economic issues. On Nasi's death, Shire, with Andros, Nakşhe, Para, Santorin and Melos were leased by the Porte to Süleymān Beg (1579-82) and later, to the Greek Comnenus-Choniates (1598-1601). But corsair raids continued, and in 1617 the *kapudan paṣha* 'Alī Çelebi hanged the Latin bishop and abducted 300 captives. After then, the Syriots and Meliots paid *kharaḍj* to Istanbul. Roman Catholicism grew in importance after the 1630s, with the arrival of Jesuit missionaries, and in 1700 the French traveller Tournefort mentions a Latin bishop and forty priests, but only a few Turks with their *kādī*. In the Russo-Turkish War of 1768-74, Shire was occupied by the Russian fleet, but in 1774 sultan 'Abd ul-Ḥamīd I had the local Beg beheaded and granted the island as a *tīmār* to Selīm III's sister Shāh Sulṭāna. By the end of the 18th century, the island's population had reached 5,000, with a commerce based on its cotton, figs and wine.

Because of the dominance of Roman Catholicism, neither Shire nor Nakşhe were fervent participants in the 1821-9 Greek War of Independence, but the modern capital of Syros, Ermoupolis, was founded by refugees from Sakiz/Chios and Psara at this time, becoming subsequently a major trading centre. In the Cretan outbreak of 1866-9, Syros sheltered Cretan refugees, and a naval engagement was fought off its

port between the Greek battleship *Enosis* and a Turkish squadron under the English admiral Hobart Pasha; it was in Ermoupolis harbour, too, that the Turkish cruiser *Hamidiye* sank the Greek battleship *Macedonia* during the First Balkan War of 1912. The population of Syros in 1981 was 19,794.

**Bibliography:** In addition to references in the article, see the *Bibls.* to NAKSHE, PARA and SANTORIN; also Pitcher, *Hist. geogr. of the Ottoman empire*, map XIV. On the Turkish and Latin corsairs, see A. Krantonelle, *History of piracy*, i-ii, Athens 1985-91, index.

**SHIRIN** [see FARHĀD WA-SHIRIN].

**SHIRIN MAGHRIBI, MUHAMMAD**, celebrated Persian Sūfī poet. His full name is given by Ḥāfiẓ Husayn Karbalā'ī Tabrizī (*Rawḍāt al-djānān wa djānnāt al-djanān*, ed. Dja'far Sulṭān al-Kurrā'ī, Tehran 1344/1965, i, 367, 566), as Abū 'Abd Allāh Muḥammad b. 'Izz al-Dīn b. 'Adil b. Yūsuf Tabrizī. In literary and Sūfī circles, however, he is better known as Mullā Muḥammad Shīrīn Maghribī.

According to Djāmī (*Nafahāt al-uns*, ed. M. Tawhīdīpūr, Tehran 1336/1957, 613), he was born in the village of Ammand near Lake Urūmiya and died aged 60 in 809/1406-7. But a chronogram composed by 'Abd al-Raḥīm Khalwatī (d. 859/1454; "Mashriki"), which Ibn Karbalā'ī cites (*Rawḍāt*, i, 73-5), commemorates Maghribī's death as 810/1407-8, and this is probably more correct.

Maghribī should be accounted as the most important Persian Sūfī poet—after 'Irākī (d. 688/1289), Kāsim-i Anwār (d. 837/1433 [q.v.]) and Maḥmūd Shabistārī (d. ca. 740/1339-40 [q.v.])—of Ibn 'Arabī's school in the late 13th/early 14th century. The primary theme of his poetry (see *Diwān-i Muḥammad Shīrīn Maghribī*, ed. L. Lewisohn; Tehran-London 1993, containing 1223 lines of Arabic poetry, 199 Persian *ghazals*, two *tarjī'bands*, and 35 *rubā'īyyāt*) is the "Unity of Being" (*wahdat al-wuḍūd*). Although the imagery of romantic Persian poets such as Salmān Sāwadjī (d. 778/1376) and Humām Tabrizī (d. 714/1314) also fills his verse, lending it a particular brilliance and graceful beauty, it is as an exponent and exegete of the theomistic doctrine of Ibn 'Arabī that his poems achieved their principal fame. In his own introduction to the *Diwān* (*ibid.*, iv, 15-16) the poet admits that "the composer of this type of poetry in accordance with true visionaries and visionary men of Truth says the same thing which the author of the *Tarjūmān al-ashwāk* [= Ibn 'Arabī] says." Since both Djāmī (*Nafahāt*, 613) and M. Nūrbakhsh (*Silsilat al-awliyā'*, ed. M.T. Dānish-Pazhūh, in S.H. Nasr (ed.), *Mélanges offerts à Henri Corbin*, Tehran 1977, no. 60) customarily referred to Ibn 'Arabī as "Ibn al-Maghribī", it is apparent that the poet adopted "Maghribī" as his *takhalluṣ* in honour of the Shaykh al-Akbar. Thus, when Ibn Karbalā'ī (*Rawḍāt*, i, 367)—citing a certain 'Abd al-Raḥīm Bizzāzī, one of the poet's disciples—speaks of him as *al-Maghribī madhhab* ("Maghribī in religion"), it is obvious that he is alluding to the poet's Akbarian persuasion; and it is to this same connotation that Riḍā Kulī-Khān Hidāyat in the *Maḍīma-i fuṣṣahā* (Tehran 1339/1965, iv, 57-8) alludes in stating that "Maghribī's creed is the Unity of Being and his particular mystical sensibility is the enjoyment of contemplative vision (*madhhabish wahdat al-wuḍūd-ast wa mashrabish laḥḥat al-shuhūd*").

After his celebrated *Diwān*, Maghribī's other works listed by Ibn Karbalā'ī include: (1) *Asrār-i fātiḥa* (not extant); (2) *Risāla-yi djām-i dhān-namā* (consisting mainly of selections from Farghānī's commentary on

Ibn Fāriḍ's *Tā'iyya* entitled *Mashārik al-darārī*, ed. Dj. Aṣṭūyānī, Tehran 1979; this *Risāla* has been published by Mīr-'Abidīnī in his edition of Maghribī's *Diwān*, Tehran 1979); (3) *Durr al-farīd fī ma'rīfat al-tawḥīd* (a work still extant, see *Fihrist-i Kūtab-khāna-yi Sīpāhsalār*, ii, 682, wherein it is said to be in Persian, treating in 3 chapters the divine Unity, Actions and Qualities); (4) *Nuḥḍat al-sāsāniyya* (evidently not extant and not listed in Munzawī's *Fihrist-i nakḥahā-yi fārsī*, Tehran 1979). Other works ascribed elsewhere to Maghribī include a *Nasīḥāt-nāma* (mentioned in Munzawī's *Fihrist*, ii, 1706) and *Irā'at al-dakā'ik fī sharḥ-i Mī'rāt al-ḥakā'ik*, on which see H. Ethé, *Catalogue of Persian manuscripts in the India Office Library*, i, no. 2914, fols. 94b-113b).

Maghribī had five *silsila* affiliations according to Ibn Karbalā'ī (*Rawḍāt* i, 67-9) as follows: (1) Bahā' al-Dīn Hamadhānī; (2) Ibn 'Arabī; (3) Sa'd al-Dīn; (4) Ismā'īl Sīsī and (5) 'Abd al-Mu'mīn al-Sarāwī, although his principal master was Sīsī (for a detailed study of the other masters, see Lewisohn, *A critical edition of the Diwān of Maghrebi: with an introduction into his life, literary school and mystical poetry*, diss., London 1988, i, 60-83), who counted among his protégés and disciples three of the greatest Sūfī poets of the 8th/14th century, sc. Kamāl Khudjandī (d. 803/1400), Kāsim-i Anwār, and Muḥammad 'Aṣṣār Tabrizī (d. 792-3/1390-1). Sīsī was a Kubrawī shaykh, having been a disciple, either directly or indirectly, of 'Alā' al-Dawla Simnānī (d. 736/1336). Maghribī was said to have experienced an illumination during an *arba'in* held under Sīsī's direction, and recorded his enlightenment in a *ghazal* (on which, see Lewisohn, *Mohammad Shirin Maghrebi*, in *Sufi*, i, [1988], 33). Sīsī's other important disciples include Zayn al-Dīn Khwāfī (d. 838/1435), whose connection with Maghribī is discussed by H.T. Norris, *The Mir'at al-tālibīn of Zayn al-Dīn Khawāfī of Khurāsān and Herat*, in *BSOAS*, liii (1990), 57-63; and Lewisohn, *A critical edition*, 75-9.

As a poet of the Akbarian school, Maghribī follows very closely the imagery and thought of Shabistārī and Sa'd al-Dīn Farghānī. Maghribī's poetic style was imitated by Shāh Nī'mat Allāh (d. 834/1431) and Muḥammad Lāhīdjī ("Asrī", d. 912/1506-7 [see LAHIDJĪ, SHAMS AL-DĪN]), the latter author quoting extensively from Maghribī's *Diwān* throughout his famous *Mafāṭīḥ al-iḍḡāz fī sharḥ-i Gulshan-i rāz* in order to illustrate Shabistārī's symbolism and doctrine (see Lewisohn, *Beyond faith and infidelity: the Sufi poetry and teachings of Maḥmūd Shabistārī*, London 1995, ch. 7). Many of the images and expressions of Maghribī's poetry have become proverbs in Persian (cf. 'A.A. Dihkhudā, *Amṭhāl wa ḥikam*, Tehran 1984, iii, 1242, 1319, 1343, 1347), and his influence can be seen in the writings of many of the Persian *Ishrāqī* philosophers up to the present day. Quotations from his poetry, for instance, can be found scattered throughout the writings of the 19th-century ḥakīm Mullā Ḥādī Sabzawārī (d. 1289/1873).

For fuller details, and a fuller discussion of the problems involved, including analysis of the historical and literary evidence, see L. Lewisohn, *A critical edition* ...

**SHIRK**, a term from the religious vocabulary, of Kur'ānic origin, which signifies the act of "associating" with God, in other words, accepting the

presence at His side of other divinities; it may be translated either literally, by *associationism* or, in more explicit fashion, by *polytheism*. In numerous instances in the Qurʾān there is criticism of the “associators” (*al-mushrikūn*, 42 occurrences; also encountered nine times is the phrase *alladhīna ashraḳū*), defined as those who invoke (*yadʿūna*), adopt (*yattakhidhūna*) and worship (*yaʿbudūna*), besides God (*min dūni ʾllāh*), other gods (*āliha*), give Him “associates” (*ḍiʿalū li ʾllāhi shurakāʾ*) and equals (*andād*).

It may be noted that the actual word *shirk* features seldom in the Qurʾān (five occurrences in all), and that in fact it is used only twice in this sense of “associationism” (XXXI, 13, XXXV, 14). Originally, *shirk* signifies “association” in the passive, not the factitive sense of the term. It is this sense which it has in XXXIV, 22; XXXV, 40; XLVI, 4, where it is denied that false gods would have been associated [with the true God] (*lahum shirk*<sup>m</sup>) in the creation of the heavens and of the earth. The proper term for “associationism” would normally be *ishrāk*, corresponding to the diverse forms of the verb *ashraḳa* which are extensively used, in this sense, in the Qurʾānic text. Clearly, it is *ḥadīth* which has imposed the usage of *shirk* in the factitive (and religious) sense of the term: certain practices (for example sorcery, ornithomancy) are denounced here as *shirk*; there is reference to the *ahl al-shirk* (as opposed to the *ahl al-islām*), to the *ard al-shirk*, etc. (cf. Wensinck, *Concordance*, iii, 114-16). Furthermore, in *ḥadīth* itself, certain uses of the word in its primary signification, i.e. as an equivalent of *shirka* or *sharika*, “association”, appear occasionally: with reference to the common ownership of land (cf. Muslim, *musākat* 135), of a slave (Bukhārī, *sharika* 14; Muslim, *uḥ* 47-48), or even to participation in a sacrifice (*shirk fī dam*, al-Bukhārī, *ḥaḍīḍ* 102).

To return to the Qurʾān, it is quite dangerous to claim to determine, even approximatively—as was attempted by Björkman in his article for *ET*—at what point in time words from the root *sh-r-k* first entered the text. If Björkman is to be believed, they do not appear in “the most ancient sūras”. But which are the most ancient sūras? In verse LXVIII, 41, the text reads: “Do they have associates (*shurakāʾ*)? Then let them come with their associates, if they are truthful!” Now, according to the chronology traditionally accepted in Islam, sūra LXVIII would be the second in the order of revelation (and v. 41 would not be among the Medinan additions). Without going so far as this, Weil and Nöldeke likewise dated this sūra in the “early Meccan period”. It is true that, in the verse in question, the identity of the said “associates” is controversial (cf. al-Rāzī’s commentary). But there is also LII, 43, which is considerably more explicit and where it is said, in conformity with numerous other passages in the Qurʾān, *subḥāna ʾllāhi ʾammā yushrikūn* “how God is above that which they associate [with Him]!” Now, while the traditional chronology places this other sūra among the last revealed at Mecca, Blachère, Weil and Nöldeke agree in locating it on the contrary in the “early Meccan period”. All that can be said with certainty in this context is that in fact, in those sūras *unanimously* accepted as the earliest, the terms in question do not feature, and that those where they appear most often are, in descending order, VI (28 instances), IX (12) and XVI (11).

Who precisely are these “associators” of whom the Qurʾān speaks? It would normally be anticipated that they would include all those who, in one way or another, accept the existence of gods other than the one God. It would therefore be logical to expect to

find the Christians described as such, seeing that, according to the Qurʾān, the Christians make of God “the third of three” (V, 73), they deify Christ (V, 72), and “take for two gods beside God (*ilāhaynī min dūni ʾllāh*)” Jesus and his mother (V, 116). However, this is not the case. The Christians belong to the “People of the Book” (*ahl al-kitāb*), and the Qurʾān takes care to distinguish—even if they are considered comparable to disbelievers (*kuffār*)—between “associators” and the people of the Book (or “those to whom the Book has been given”), cf. in particular, II, 105; III, 186; V, 82; XXII, 17 (with reference not only to Jews and Christians, but also “Sabeans” and Mazdaeans); XCVIII, 1, 6. The same distinction, as al-Rāzī points out (on Qurʾān, IX, 29), is drawn implicitly in the first quarter of sūra IX: God first prescribes the treatment to be applied to “associators” (IX, 5), then that to be applied to “those to whom the Book has been given” (IX, 29). In other words, the Qurʾānic term *mushrikūn* does not in fact denote all those who, in some manner, practise a form of associationism, but only a minority among them—those among whom this associationism is most flagrant—i.e. the worshippers of idols (*ʿabadat al-awṭhān*). Admittedly, in the eyes of the commentators this distinction between “associators” and “people of the Book” is not always valid. With regard to IX, 30, where it is said that Jews and Christians proclaim ‘Uzayr/Esdras and Jesus respectively the sons of God, al-Rāzī comments that God thus shows that Jews and Christians are also “associators”, since, he says, “there is no difference between him who worships an idol and him who worships Christ or any other; the word *shirk* signifies nothing other than the man giving himself someone to worship in addition to God (*an yattakhidha ʾl-insānu māʾa ʾlah maʾbūd*<sup>m</sup>); therefore, wherever anything of this sort is practised, there is associationism” (*Tafsīr*, ed. Tehran n.d., xvi, 33). And on XCVIII, 1, al-Ṭabarī mentions an exegesis according to which “associators” and “People of the Book” are indistinguishable (cf. moreover, al-Ṭabarī himself on XCVIII, 5).

For the Qurʾān, in any case, it is evident, in view of the clear distinction indicated above, that the “associators” represent a category of disbelievers other than that of the “People of the Book”, i.e. the category of committed polytheists, these polytheists being identified at the time with idolators. Of the pseudo-divinities which they worship, it is said in fact, in numerous instances, that they do not hear, that they do not answer (VII, 194; XIII, 14; XXXV, 14; etc.), that they are incapable of inflicting harm or of being useful (V, 76; VI, 71; X, 18; etc.). In the time of the Prophet, the “associators” are those who, at Mecca or elsewhere, worship al-Lāt, al-Uzzā and Manāt (in sūra IX, which is historically dated, the *mushrikūn* evidently denote the Meccan polytheists, recently vanquished). In the past, they were predominantly the idol worshippers of the time of Abraham (the words *asnam*, *awṭhān*, or even *tamāthīl* being designedly used, cf. VI, 74; XIV, 35; XXI, 52, 57; XXIX, 17, 25), Abraham of whom it is said that he was not, for his part, counted among the associators (*mā kāna min al-mushrikīn*, cf. II, 135; III, 67, 95; VI, 79, 161; etc.).

*Shirk* is the worst form of disbelief. The treatment to be applied in this world to the “associator” is that prescribed in IX, 5 (the “verse of the sword”, *āyat al-sayf*): death, at least if they do not become Muslims (whereas the “People of the Book” are, for their part, allowed to maintain their religion, so long as they pay the *ḡizya*, IX, 29). In the next world, they will be assuredly consigned to damnation; the Qurʾān

states in fact, twice, that God can pardon all sins save one, that of associationism (*inna 'llāha lā yaghfiru an yushraka bihi wa-yaghfiru mā dūnā dhālika li-man yashā'*, IV, 48, 116). The Qur'ān relates furthermore how, in the next world, these alleged "associates" of God who are worshipped by the *mushtrikūn* will then disown their worshippers (VI, 94; X, 28-9; XVIII, 52; XXVIII, 62-3; etc.).

*Shirk*, by definition, is contrary to Islam, since the first article of faith of the Muslim is precisely the denial of all associationism, the affirmation of the single God: *lā ilāha illā 'llāh*. In the formula of the *tal-biya* [q.v.] recited particularly during the Pilgrimage, it is said and repeated, *lā sharika laka* "You have no associate".

In theological polemic, accusations of *shirk* are rife. With regard in particular to the status of the voluntary human act, the Sunnī theologians charge their Mu'tazilī adversaries with associationism, on the grounds that the latter attribute to man a creative power comparable to that of God (cf. al-Bakillānī, *Tamhīd*, ed. McCarthy, Beirut 1957, §§ 523, 540; D. Gimaret, *Théories de l'acte humain en théologie musulmane*, Paris 1980, 297-8); the Mu'tazilīs, for their part, level the same accusation at the Sunnīs, on the grounds that, for the latter, the voluntary human act would result from an association between God, who creates it, and man, who "acquires" it (cf. Gimaret, *op. cit.*, 292).

(D. GIMARET)

**SHĪRKŪH**, ABU 'L-ĤARITH B. SHĀDĪ, Asad al-Dīn al-Malik al-Manṣūr, one of Nūr al-Dīn Maḥmūd's [q.v.] generals and statesmen, and the penultimate vizier of Fātimid Egypt.

His family was Kurdish (of the Rawādiyya clan) from Dvin in Armenia, where Shādī, his father, had served the Shaddādīd dynasty [q.v.]. Later "noble" genealogies are fanciful. Ibn Abī Ṭayyī' says, "None of the Ayyūbid family knows any ancestor beyond Shādī" (quoted in *Rawḍ*, ii, 534-5). Shīrkūh served in the Salḡūk state, where his elder brother Ayyūb was governor of Takrīt. Because of assistance given to Zangī [q.v.] in 526/1132, and perhaps also because Shīrkūh had killed a Christian in the service of Bīhrūz, the *shūhna* of 'Irāq, the brothers fled to Mawṣil, where Zangī gave them *iktā's* in his Mesopotamian lands, and Shīrkūh fought in Zangī's Syrian campaigns.

After Zangī's death, Shīrkūh and his brother served Nūr al-Dīn. Shīrkūh became commander of his armies and held Hims and Raḥba as *iktā's*. Ibn al-Kalānisi documents Shīrkūh's military activities in Syria on behalf of Nūr al-Dīn in the years 549-54/1154-9. In 556/1161 Shīrkūh performed the *ḥaḍīdī* in great magnificence.

In Dhu 'l-Ka'da 558/October 1163 the ousted Fātimid vizier Shāwar [q.v.] came to Damascus seeking aid towards his restoration and promising a third of the resources of Egypt to help the *qihād* in Syria. Shīrkūh was appointed commander of the Syrian force by Nūr al-Dīn (in various accounts each had doubts about the undertaking), and he set out in Djumādā I 559/April 1164 on the first of three expeditions. Shāwar was restored as vizier (Radjab/May) but refused to fulfil his promises and turned for support to the Kingdom of Jerusalem, which was already receiving annual tribute from Cairo, and now embarked on a period of direct intervention in Egyptian affairs. Shīrkūh chose Bilbays as a defensive base and after a siege of several months he agreed on 15 Dhu

'l-Hiḍḡja/3 November to a settlement and the withdrawal of both external parties, being ignorant of Frankish anxiety at Nūr al-Dīn's successes in Syria.

Now convinced of the opportunities offered in Egypt, Shīrkūh persuaded Nūr al-Dīn to sanction a second expedition, which set out in Rabī' I 562/January 1167. Shāwar again sought aid from the Franks. Shīrkūh crossed the Nile at Atfīh and spent 50 days or so at Gīza, facing the combined enemy, before they effected a river crossing and pursued Shīrkūh south as far as Aḡmūnayn. At a place called al-Bābayn, Shīrkūh won a hard-fought victory on 25 Djumādā I/18 March. He returned north and left his nephew Saladin [see ṢALĀḤ AL-DĪN] and part of the army in Alexandria, with the Sunnī notables of which he had already made contact. Shīrkūh kept his mobility and ranged widely in Upper Egypt, while Saladin sustained a siege of four months. Eventually a new settlement was reached in Shawwāl/August, which allowed for an indemnity of 50,000 dinārs for the Syrian force and, in principle, the withdrawal of both armies. By Dhu 'l-Ka'da/September Shīrkūh was back in Damascus.

About a year later, the Franks made another attack on Egypt, prompted by exiled enemies of Shāwar and hoping to exploit Nūr al-Dīn's absence in northern Syria. Besieged in Cairo, Shāwar appealed again to Nūr al-Dīn for assistance. Unwilling to abandon Egypt to the Franks, Nūr al-Dīn and Shīrkūh responded energetically. By Ṣafar 564/December 1168 a force of 5,000 had been enlisted and reviewed near Damascus. Nūr al-Dīn added 2,000 of his own troops with several of his *amirs*. By Rabī' II/January 1169 Shīrkūh was at Cairo and the Frankish invaders had fled back to Palestine without a battle.

According to some versions, Shīrkūh established good relations with Shāwar, but on the other hand there are hints of secret negotiations with the caliph al-ʿAdīd li-Dīn Allāh [q.v.] to remove Shāwar, who had certainly shown himself unreliable enough in the past. Shīrkūh, however, is even said to have warned Shāwar of plots against him by the Syrian officers. ʿIzz al-Dīn Djurdīk, one of Nūr al-Dīn's *mamlūks*, played a leading part in the coup, although later ideas of what was fitting also assigned a major role to Saladin. At all events, Shāwar was led into a trap and assassinated on Saturday 17 Rabī' II 564/18 January 1169. The caliph "by the custom of the Egyptians" demanded his head and issued a document appointing Shīrkūh as vizier with the title *al-malik al-manṣūr amīr al-djuyūsh* (for text, see al-Kāḡashandī, *Ṣubḥ al-a'shā*, x, 80-90). Shīrkūh possibly entrusted the management of affairs generally to Saladin (but for a decree dated Djumādā II 564/March 1169 said to be issued by Shīrkūh, see S.M. Stern, *Fatimid decrees*, London 1964, 80-4). However, he did not long enjoy this new responsibility. He died suddenly on Sunday 22 Djumādā II 564/23 March 1169. He was buried first in Cairo, but after several years his body was transferred to the *ribāʿ* in Medina, which according to a mutual pact he had built as a last resting-place for himself and his friend, already deceased, the Mawṣilī vizier al-Djawād al-Isfahānī [q.v.].

Shīrkūh's personal *mamlūks*, the Asadiyya, played a significant role in subsequent Ayyūbid history. His son Naṣīr al-Dīn Muḥammad established a princely line in Hims. Foundations attributed to Shīrkūh include a *ḡāmi'* and a *madrassa* at Aleppo, a *madrassa* at Raḥba, a *madrassa* for the Shāfi'īs and Ḥanafīs outside Damascus and a *ribāʿ*, two *masḡūds*, a Ṣūfi *khankāh* and possibly a *ḥammām* within the city.

**SHĪRWĀN**, **SHIRWĀN** or **SHARWĀN**, a region of eastern Caucasia, known by this name in both mediaeval Islamic and modern times.

Shīrwān proper comprised the easternmost spurs of the Caucasus range and the lands which sloped down from these mountains to the banks of the Kur river [q.v.]. But its rulers strove continuously to control also the western shores of the Caspian Sea from Kuba (the modern town of Kuba) in the district of Maskat (< \*Maskut, Mashkut, to be connected with the ancient Eurasian steppe people of the Massagetes) in the north, to Bākū [q.v.] (modern Baku) in the south. To the north of all these lands lay Bāb al-Abwāb or Derbend [q.v.], and to the west, beyond the modern Gök Çay, the region of Shakkī [q.v.]. In mediaeval Islamic times, and apparently in pre-Islamic Sāsānid ones also, Shīrwān included the district of Layzān, which probably corresponds to modern Lāhīj (the two names must be etymologically connected), often ruled as a separate fief by a collateral branch of the Yazīdī Shīrwān Shāhs [q.v.]. These boundaries of Shīrwān were substantially the same in Il Khānīd times, according to Hamd Allāh Mustawfī, *Nuzha*, 92-3, tr. 93-4. The plains and lowlands of Shīrwān were exposed to attack, and the Shāhs had to face aggressive neighbours: the Alans and the Hāshimīd rulers of Bāb al-Abwāb from the north, the Rūs [q.v.] from the Caspian Sea, and rival Muslim powers like the Daylamī Musāfirids and Kurdish Shaddādids [q.v.] from the south.

Among the mediaeval towns of Shīrwān are mentioned Bākū; Shāwarān Shābarān, the ancient capital, in the southern part of the Kuba district; and Shammākhi or Shammākhiyya (modern Russian Shemakha), said to have been named after a ruler of Shīrwān, al-Shammākhi b. Shudjāʾ, contemporary with Hārūn al-Rashīd's governor of Arrān, Armenia and Ādharbaydjān, Saʿīd b. Salm b. Kutayba (al-Balādhurī, *Futūh*, 210; cf. al-Yaʿkūbī, *Taʾrikh*, ii, 517 ff., and al-Ṭabarī, iii, 648). When Shammākhi became the capital of the Yazīdī Shāhs, it was probably this same town which was temporarily re-named Yazīdiyya (306/918), but it is the old name which has survived till today, with Shemakha an administrative and manufacturing centre of some importance (see below).

After the ending of the Shīrwān Shāhs by the Ṣafawīd Shāh Tahmāsp I [see SHĪRWĀN SHĀH], Shīrwān formed a province of Persia and was usually governed by a Khān, who is often called Beylerbey or Amīr al-Umarāʾ. The inhabitants several times rebelled against the Shīʿī dynasty, and as Sunnis appealed for help to the Ottoman sultan of Turkey. With other

Caucasian lands, Shīrwān was taken by the Turks in 1578, held after a series of battles with varying results, and finally ceded to the Ottoman sultan by the peace of 1590. Under rule, Shīrwān was divided into fourteen *sandjaks*; it included Shakkī in the north-west and Bākū in the south-east, i.e. practically the whole of mediaeval Shīrwān. Derbend, which had long been separated from Shīrwān, formed a separate governorship. Persian rule was not definitively restored till 1607. In the 17th century, Kuba and Sālyān were given as a separate principality to the Kaytak, who had migrated southwards. In 1722 the Khān of Kuba, Husayn ʿAlī, submitted to Peter the Great and was confirmed in his dignity. By the treaty between Russia and Turkey of the year 1724, the coast territory with Bākū, now occupied by the Russians, was for the first time politically separated from the rest of Shīrwān, which was left to the Turks with Shemākha as capital. This division was retained as regards administration even after both parts were reunited to Persia. By the treaties of 1732, the coast lands north of Kura still remained to the Russians and the other parts of Shīrwān and Dāghistān to the Turks; it was only after Nādir Shāh [q.v.] had taken their conquests from the Turks by force of arms (capture of Shemākha, 22 October 1734) that the coast lands were ceded to him voluntarily by the Russians (treaty of Gandja, 10/21 March 1735). After the death of Nādir Shāh, Persian rule could no longer be enforced in these regions; several independent principalities arose; the name Shīrwān was now limited to the territory of the Khān of Shemākha, which was later under Russian rule divided into three administrative districts (Shemākha, Gökçay and Djawād). Fath ʿAlī Khān of Kuba (1758-89) succeeded in bringing Derbend as well as Shemākha under his sway, so that, as Dorn observed, "a true Shīrwān Shāh arose in him". During the last years of his reign, Fath ʿAlī flattered himself with the idea of bringing Persia itself under his sway and ascending the throne of the rulers of Persia. When the Kādījars had succeeded in restoring the unity of Persia, the sons of the Khān were no more able to maintain their independence than the other Caucasian chiefs and had to choose between Russia and Persia. General Zubov, who had been despatched by Catherine II, had already reached the Kura below Djawād (1796) when he and his army were recalled by the Emperor Paul. The Khān of Shīrwān (Shemākha), Muṣṭafā, who had already entered into negotiations with Zubov, submitted to the Russians in 1805, who occupied Derbend and Bākū next year (1806), but soon afterwards he made overtures to the Persians and sought help from them. By the peace of Gulistān (12/24 October 1813), Persia gave up all claim to Derbend, Kuba, Shīrwān and Bākū. Nevertheless, Muṣṭafā continued to have secret dealings with Persia. It was not till 1820 that his territory was occupied by Russian troops; the Khān fled to Persia and Shemākha was incorporated in Russian territory. The outbreak of hostilities again in 1826 was taken advantage of by Muṣṭafā and by an earlier Khān of Bākū, Husayn, for an attempt to stir up their subjects against Russia, but without success. After 1840 the former territory of the Khān of Shīrwān was united with Kuba and Bākū to form one administrative area (at first the "Caspian territory"; from 1846 the "government of Shemākha"; from 1859, after the destruction of Shemākha by one of the earthquakes frequent there, the "government of Bākū"). The old capital of Shīrwān, as late as the middle of the 19th century, had a larger population than Bākū; according to Ritter's *Geographisch*

*statistisches Lexicon*<sup>5</sup>, 1864-5, *Shemākha* had 21,550 and Bākū 10,600 inhabitants. In the 1880s, the relationship was reversed (E. Weidenbaum, *Putevoditel' po Kavkazu*, Tiflis 1888, 342-396: Bākū 45,679, *Shemākha* 28,545).

After the Bolshevik Revolution of 1917 and the consequent upheavals in the Caucasus region, the old *Shīrwān* and *Shemākha* fell within the Azerbaijan S.S.R., and *Shemākha* (lat. 40° 38' N., long. 48° 37' E.) became the chef-lieu of a *rayon* or district. It is now (1994) within the independent Azerbaijan Republic. It is also a significant processing centre for local fruit and agricultural produce, including the making of wine. Numerous Islamic buildings, including mosques and mausolea, remain, though damaged by the earthquakes endemic to the region. In 1970 *Shemākha* had an estimated population of 17,900, still well below the 19th century level.

The older name of the district gives its name to the locally-woven *Shīrwān* woollen rugs, similar to the Dāghistān ones produced to the north of the Caucasus but slightly coarser in texture and with a longer pile.

**SHĪRWĀN SHĀH**, **SHĀRWĀN SHĀH**, the title in mediaeval Islamic times of the rulers of *Shīrwān* [q.v.] in eastern Transcaucasia.

The title very probably dates back to pre-Islamic times. Ibn al-Khurrādādhbih, 17-18, mentions the *Shīrwān* Shāh as one of the local rulers who received his title from the Sāsānid emperor Ardashīr. Al-Balādhurī mentions the *Shīrwān* Shāh, together with an adjacent potentate, the Layzān Shāh, as amongst those encountered by the first Arab raiders into the region; he further records that *Shīrwān* and other principalities of the eastern Caucasus submitted during 'Uthmān's caliphate to the commander Salmān b. Rabī'a al-Bāhilī (*Futūh*, 196, 203-4).

Yazīd b. Usayd al-Sulamī, governor of the north-western Persian lands of the caliphate for al-Manṣūr, took possession of the naphtha wells (*naffāṭa*) and salt workings (*mallāhāt*) of *Shīrwān*; the eastern part of the land was therefore at that date of greater importance than the western part, as the situation of the ancient capital, *Shābarān*, in the eastern part and north of the southeastern-most spur of the Caucasus, implies (cf. what is said concerning this in *SHĪRWĀN*). From the end of the 2nd/8th century, *Shīrwān* was ruled by members of the Arab family of Yazīd b. Mazyad al-Shaybānī (d. 185/801) as part of his vast governorship of Ādharbaydjan, Arrān, Armenia and the eastern Caucasus region. His great-grandson Haytham b. Muḥammad is said to have assumed, during the troubled times in 'Irāk consequent on the murder of al-Mutawakkil in 247/861, the ancient title of *Shīrwān* Shāh, beginning a line of Yazīdī or Maz-yadī Shāhs which lasted up to Timūrid times.

For the earlier history of this dynasty, we have the anonymous *Ta'rikh Bāb al-Abwāb*, preserved in the later Ottoman historian Münedjdjim Bāshī [q.v.], the last date of which concerning the Shāhs is 468/1075. We know from this that the history of the Shāhs was

closely bound up with that of the Hāshimids in Bāb al-Abwāb or Derbend [q.v.], with intermarriage between the two Arab families and with Yazīdīs often ruling for various periods in the latter town. By the time of the anonymous *Hudūd al-'ālam* (372-982), the *Shīrwān* Shāhs, from their capital of Yazīdiyya (very probably the later *Shamākha*), had absorbed neighbouring petty principalities north of the Kur river and thus acquired the additional titles of Layzān Shāh and Khursān Shāh (tr. Minorsky, 144, comm. 403 ff.). We can also discern the progressive Persianisation of this originally Arab family (a process parallel to and contemporary with that of the Kurdicisation of the Rawwādīs [q.v.] in Ādharbaydjan). After the Shāh Yazīd b. Aḥmad (381-418/991-1028), Arab names give way to Persian ones like Manūčīhr, Kūbādīh, Farīdūn, etc., very likely as a reflection of marriage links with local families, and possibly with that of the ancient rulers in *Shābarān*, the former capital, and the Yazīdīs now began to claim a *nasab* going back to Bahrām Gūr or to Khusrāw Anūshīrwān.

These Shāhs buttressed their power, like other Eastern Islamic dynasties of the time, with professional slave troops (*ghulāms* [q.v.]), for it was necessary for them, *inter alia*, to maintain an army to ward off incursions by non-Muslim peoples like the Alans and Georgians. Fear of the Oghuz [see *GHUZZ*] led the Shāh Kūbādīh b. Yazīd in 437/1045 to build a stone wall with iron gates round Yazīdiyya and to fortify other towns; by 458/1066, Farīburz b. Sallār (455-ca. 487/1063-ca. 1094) had to pay an indemnity to deter the Turkmens under Karatigin, who devastated the regions of Maskat and Bākū. In 459/1067 Farīburz submitted to the Saldjūk sultan Alp Arslan, undertaking to pay an annual tribute of 70,000 dinārs, eventually reduced to 40,000; coins later issued by Farīburz acknowledge Malik Shāh as well as the 'Abbāsīd caliph.

Farīburz's diplomatic and military abilities enabled the Yazīdīs to survive in *Shīrwān*. Under sultan Maḥmūd b. Muḥammad (511-25/1118-31 [q.v.]), *Shīrwān* was occupied by Saldjūk troops. The sultan was invited by local leaders to come there himself; after his arrival, the Shāh (probably Manūčīhr III b. Farīdūn) went to him to obtain justice, but was imprisoned. The people of *Shīrwān*, with whom the prince was very popular, tried to procure his release, but without success. This state of affairs encouraged the Georgians to invade *Shīrwān*, but they were driven out by Maḥmūd. The population suffered very much from the occupation of their country and these events became known as the "devastation" (*takhrīb*) of *Shīrwān*. The campaign took place in the first and last years of office of the vizier Shams al-Mulk, who was put to death by the sultan's orders in Rabī' I 517/May 1123 in Baylaḳān (probably on the way back to Persia from *Shīrwān*).

The same campaign appears in quite another light in Ibn al-Athīr, x, 433-4. The campaign is said to have been caused by the invasions of the Georgians and the complaints of the people, especially of the town of Derbend. Soon after the arrival of the sultan in *Shamākha*, a large Georgian army appeared before the town, which terrified the sultan; soon afterwards, however, a quarrel broke out between the Georgians and their allies the Kīpčak Turks, as a result of which the enemy had to retire "as if defeated" (*shibh al-munhazimīn*; they had therefore not actually been defeated). The sultan remained for some time in *Shīrwān* and returned in Djumādā II 517/August 1123 to Hamadān.

The middle years of the 6th/12th century were flourishing ones for the Yazīdids, although the succession and genealogy of the Shāhs from this time onwards becomes somewhat confused and uncertain. Münedjdjīm Bāshī, for instance, gives only a skeletal list from Manūcihr III b. Farīdūn I (whom he calls Manūcihr b. Kasrān; the name of Kasrānids now appears in some sources for the subsequent Shāhs) onwards (translated by Minorsky, *A history of Sharvān and Darband*, 129-38, including a commentary which brings in the information from recent numismatic work). Manūcihr III not only used the title of Shīrwān Shāh but also assumed that of Khākān-i Kabīr ("Great Khākān"), from which was taken the *takhalluṣ* or pen-name of the Persian poet Khākānī [q.v.], a native of Shīrwān and the Shāh's eulogist in the earlier part of his life. During these decades, the Shāhs appear on their coins simply as vassals of the Great Saldjūks, and only after the death of the last of that dynasty, Toghrīl III b. Arslan (590/1194) does the name of the 'Abbāsīd caliph as overlord re-appear on their coins.

Shīrwān at that time was actually completely dependent on the Georgian kings, who took the title Shīrwān Shāh themselves. Matrimonial alliances were several times concluded between the Kasrānids and the Georgian royal house. The son and successor of Manūcihr III, Akhsitān I (ca. 544-ca. 575/ca. 1149-ca. 1179), no doubt owed to his powerful relative, ally and suzerain, king George III, his victory over a Russian fleet at Bākū and the reconquest of Shīrwān and Derbend. On the other hand, the lands of Shakkī, Kabala and Mūkān were later taken from the Shīrwān Shāh by the Georgians (al-Nasawī, *Strat Sultān Djalāl al-Dīn*, ed. Houdas, 146, 174). Political conditions in the first half of the 7th/13th century are not quite clear; neither the Shīrwān Shāh Rashīd mentioned by Ibn al-Athīr under the year 619 (xii, 264-5) nor the Shīrwān Shāh Farīdūn b. Farīburz mentioned by al-Nasawī (175) under 622 A.H. are known from coins; in place of these we find on coins as contemporary of the caliph al-Nāṣir (575-622/1180-1225) Farīburz II b. Farīdūn II b. Manūcihr, and following him under the same caliph, Farrukhzād b. Manūcihr II and Garshasp I b. Farrukhzād I. In contradiction to the above accounts, al-Nasawī says that the Shīrwān Shāh had paid sultan Malik Shāh a tribute of 100,000 dīnārs; the Khārazm Shāh Djalāl al-Dīn therefore demanded the same sum from the Shīrwān Shāh when he appeared in Ādharbaydjān. According to al-Nasawī, the reply given him was that conditions were no longer the same as before, as a large part of the country was now in the possession of the Georgians. It was agreed to pay 50,000 dīnārs, but even of this 20,000 were remitted. Shortly before this time, the Khārazm Shāh had driven the officers of the Shīrwān Shāh out of the land of Guštāspī at the junction of the Kura and Aras and farmed out this territory for 200,000 dīnārs; on the other hand, he restored to prince Sultān Shāh, Mūkān [q.v.], which had been ceded by his father to the Georgians (on the occasion of the marriage of the prince with a Georgian princess, daughter of Queen Rusudan, 1223-47). After the subjection of Shīrwān by the Mongols, coins were struck in the name of the Mongol Great Khān; the name of the Shīrwān Shāh also appears, but without a title. Under the rule of the Ilkhānids, no coins were struck in Shīrwān; the country belonged sometimes to their empire and sometimes to that of the Golden Horde. As a province in the empire of the Ilkhānids Shīrwān brought the state treasury 11 *tūmāns* (the

*tūmān* was 10,000 dīnārs) and 3,000 dīnārs (the dīnār was not now a gold coin, but a silver coin of 3, later 2 *mūḥkāl*s; cf. W. Barthold, *Persidskaya nadpis na stenyeh Aniyskoi mečeti Manuče*, St. Petersburg 1911, 18-19, repr. in *Sočineniya*, iv, Moscow 1966, 313-38). Guštāspī had remained separate and paid 118,500 dīnārs. The Kasrānid dynasty remained in existence; under the successors of the Ilkhānids, the Shīrwān Shāh Kay Kubādī and his son Kāwūs were again able to play the part of independent rulers (their coins were anonymous, like the coins of several dynasties of this period); but soon afterwards, Kāwūs had to submit to the Djalāyrids [q.v.] and strike coins in their name. Kāwūs is said to have died, according to Faṣṭīḥ (in Dorn, 560) in 774/1372-3; his son Hūshang was murdered by his subjects after reigning ten years, and with his death the dynasty of the Yazīdids/Kasrānids came to its end.

Control of Shīrwān passed to a remote connection of the Yazīdids/Kasrānids, Shaykh Ibrāhīm of Derbend (784-820/1382-1417), at first ruling as a vassal of Tīmūr and then, after the latter's death in 807/1404, as an independent prince. The long reigns of his successors Khalīl Allāh I (820-66/1417-62) and Farrukh Yasār (866-900/1462-1501) were decades of peace and prosperity for Shīrwān, with many fine buildings erected in Shamākha and Bākū. The history of the last Shīrwān Shāhs now becomes entwined with that of the Shaykhs and then Shāhs of the Safawid family. The head of the Safawīyya order Djunayd b. Ibrāhīm [q.v.] was killed in 864/1460 during a raid on Shīrwān from Ādharbaydjān. His son Haydar [q.v.] was likewise killed in 893/1488 at Tabarsān to the southwest of Derbend by a coalition of Farrukh Yasār and the Aq Koyunlu sultan Ya'kūb b. Uzun Hasan, who was apprehensive at the growing power of the Safawids. After his seizure of power over Persia, Shāh Ismā'īl I Safawī avenged these killings by an invasion of Shīrwān in 906/1500-1, when he killed Farrukh Yasār and made Shīrwān a Safawid dependency (see *Camb. hist. of Iran*, vi, 209-9, 211-12). Further Shāhs, descendants of Farrukh Yasār, continued in Shīrwān for nearly 40 years until the Safawid Shāh Tahmāsp I in 945/1538 incorporated Shīrwān fully into the Safawid kingdom, reducing it to a governorship. A son of one of the last Shīrwān Shāhs, Burhān 'Alī Sultān b. Khalīl Allāh II, and his son Abū Bakr attempted with Ottoman help to regain their former kingdom, but without lasting success.

(W. BARTHOLD-[C.E. BOSWORTH])

**SHĪTH** (Hebr. *Shēth*), Seth the third son of Adam and Eve (Gen. IV, 25-6, V, 3-8), regarded in Islamic lore as one of the first prophets and, like his father, the recipient of a revealed scripture. He is not mentioned in the Kur'ān, but plays a considerable role in the subsequent *Kiṣaṣ al-anbiyā'* [q.v.] literature (see below). He is said to have been born when his father was 130 years of age, five years after the murder

of Abel. When Adam died, he made him his heir and executor of his will. He taught him the hours of the day and of the night, told him of the Flood to come and taught him to worship the divinity in retirement at each hour of the day.

It is to him that we trace the genealogy of mankind, since Abel did not leave any heirs and Cain's heirs were lost in the Flood. It is said that he lived at Mecca, performing the rites of pilgrimage until his death; that he collected the leaves revealed to Adam and to himself (numbering fifty) and regulated his conduct by them; and that he built the Ka'ba of stone and calf. On his death, he left as his successor his son Anūsh (Enoch); he was buried beside his parents in the cavern of Mount Abū Qubays; he had attained the age of 912 years. According to Ibn Ishāq, he married his sister Ḥazūra.

Later traditions. Adam having fallen ill, desired to have olives and oil from Paradise; he sent Shīth to Mount Sinai to ask God for them, and God told him to hold out his wooden bowl; it was filled in a moment, with what his father had asked for, and he rubbed his body with the oil, ate a few olives and was cured. Adam was beardless; Shīth was the first to have a beard. He is also called the first *ūriyā* (a Syriac word signifying "teacher", cf. Hebr. *or* "light, teaching"). He was exactly like his father physically as well as morally. He was the favourite child. He spent the greater part of his life in Syria, where one tradition says that he was born. From his time, man was divided into two categories; those who obeyed him and the others who followed the children of Cain. As a result of his counsels, a few of the latter entered into the right path, but the others persisted in their rebellion. Maxims said to have been left behind by him are quoted (Mīrkhānd, *Rawḍat al-safā*, lith. Bombay 1272, i, 12 ff.).

Above all, Shīth is described as the one who fought his brother Cain, as the murderer of Abel [see HĀBĪL wa-KĀBĪL]. He defeated Cain in battle, delivered him in fetters to the avenging angels and enslaved all his progeny. He then built over 1,000 cities and filled the earth with peace and justice.

Al-Ṭabarī, *Annales*, writes Shāth and Shāth (i, 153), and says that Shīth is a Syriac form (*sūryānī*). The name signifies "in place of, gift (of God)" because he was given in place of Abel (Gen. IV. 26).

Al-Mukanna' [q.v.] held that the spirit of God was transferred from Adam to Seth (Muṭahhar b. Ṭāhir al-Makdisī, *Libre de la Création*, vi, 96). This idea comes from a Gnostic sect, the Sethites, who were found in Egypt from the 4th century, and who possessed a *Paraphrase of Seth*, to be more precise, seven books by this patriarch and seven others by his children, whom they called the "Strangers" (Epiphane, *Haer.*, xxxix, 5). The Gnostics possessed the books of Jaldabaoth, the Demiurge, attributed to Seth (Epiphane, *op. cit.*, xxvi, 8). The Ṣābi'ūn of Ḥarrān [see ṢĀBĪ'Ā] had several writings attributed to Seth, and the latter was associated with Adam by the Manichaeans (P. Alfariq, *Les Écritures manichéennes*, Paris 1918, 6, 9, 10). Seth is always associated with Adam by the Druzes (P. Wolff, *Die Drusen*, Leipzig 1845, 151, 193, 372).

(CL. HUART-[C.E. BOSWORTH])

**SHIVĀDĪ** [see MARĀTHĀS].

**SHĪZ**, the name of a very old Persian fire-temple, a place or district to the south-east of Lake Urmīya in Ādharbāyḍjān, said to be the native place of Zoroaster. According to A.V.W. Jackson, the name is said to be derived from the Avestan name of Lake Urmīya, Čaēčasta; according to Yāqūt, it is an Arabic corruption of *Djāzn* or *Gazn*, i.e. *Kanzaka* or *Gazaca* of the classical writers or *Gandjak* of the Pahlavi texts.

The older geographers correctly consider the two places and names to be distinct. The Arab traveller Abū Dulaf [q.v.] visited Shīz en route for Daylam and then Ādharbāyḍjān and Arrān in the mid-4th/10th century. According to him, the town lay among hills in which gold, quick-silver, lead, silver, arsenic and amethyst were found. Within the walled town was a pond of unfathomable depth, the water of which turned everything to stone. There was also a large ancient fire-temple there, which was held in great honour and from which all the sacred fires in Persia were lit. The fire had already burned 700 years without leaving ashes. The Persian kings used to bestow gifts on the temple, so that it collected vast treasures. Abū Dulaf went there specially to find hidden treasure. Sir Henry Rawlinson's photographs of Takht-i Sulaymān show the pond in the centre of the walls and the ruins of the temple.

Takht-i Sulaymān lies some 140 km/80 miles from the southeastern corner of Lake Urmīya, whereas the great Greek city of Ganzaka, where the fire temple originally stood, is only about 14 km/8 miles from this corner of the lake. What seems to have occurred is that the Sāsānid emperor Khusrāw Anūshirwān (531-79 [q.v.]) transferred the sacred fire and the temple treasures from Ganzaka near Lake Urmīya to a more inaccessible place in the mountains of southern Ādharbāyḍjān in order to protect it from Byzantine attack (Ganzaka was in fact twice occupied by Heraclius, on the second occasion in 628; see the detailed discussion in V. Minorsky, *Roman and Byzantine campaigns in Atropatene*, in *BSOAS*, xi [1944], 248-53, 256-60).

The fire temple at Shīz continued to be important for the local Zoroastrians during early Islamic times. According to al-Balādhurī, *Futūḥ*, 326, the caliph 'Umar agreed with the *marzbān* of Ādharbāyḍjān to leave the fire temple undisturbed and to allow the people of Shīz to continue their dancing and other festivities. It seems doubtful, however, whether it was still functioning in Abū Dulaf's time, three centuries later, for his account did not convince his contemporaries.

**SHKODRA** [see ISHKODRA, in Suppl.].

**SHLUH** [see TASHLĪHĪT].

**SHOGHI EFFENDI** [see SHAWKĪ EFFENDI RABBĀNĪ].

**SHĪLĀPUR**, the name of a District and of

its administrative centre, in the western Deccan of India. In British Indian times, these fell within the Bombay Presidency; within the Indian Union, they are now on the southeastern fringe of Maharashtra State.

The town (lat. 17° 43', long. 75° 56' E.) was an early centre of the Marāthās [q.v.]. In 718/1318 it came finally under the control of the Dīhlī Sultans, being governed from Deogīr or Dawlatābād [q.v.], then under the Bahmanīs, then oscillating between the 'Adīl Shāhīs of Bīdġāpur and the Nizām Shāhīs of Ahmadnagar before being incorporated by Awrangzīb into the Mughal Empire in 1078/1668. After possession by the Nizāms of Haydarābād, it passed towards the end of the 18th century to the Marāthās, but was conquered from the Peshwā [q.v.] by General Munro in May 1818. The town still has some of its walls, which had eight gates, and still has an impressive fortress within their perimeter, begun in the late 8th/14th century by the Bahmanīs, but now dilapidated. In the early 20th century, the population of Shōlāpur town was roughly one-third Muslim and two-thirds Hindu; according to the 1971 census, the total population of the town was 398,361, but it is unclear what proportion of these were Muslims.

**SHU'AYB**, a prophet mentioned in the Qur'ān, who, on the basis of XI, 91, was understood to have come after Hūd, Sāliḥ and Lot (Lūt) [q.v.]. According to XXVI, 176-91, Shu'ayb was sent to the "People of the Thicket", *ashāb al-ayka*, a group which is also mentioned in XV, 78, XXXVIII, 13, and L, 14. Furthermore, Shu'ayb is spoken of as sent to Madyan in VII, 85, XI, 84, 94-5, and XXIX, 36. This location is also mentioned in IX, 70, XX, 40, XXII, 44, and XXVIII, 22-3, 45. On the historical and geographic identity of these people and places, see MADYAN SHU'AYB. As a result of the mention of Madyan in the context of Moses in Qur'ān, XX, 40, and esp. XXVIII, 22-8, the explanation arose in Islamic narratives (see al-Ṭabarī, i, 365, and most later exegetes) that Shu'ayb should be identified with (or be seen as the uncle of) Jethro (Yithrūn, Yathrā), the father-in-law of Moses mentioned in the Bible (Exod. iii, 1, iv, 18, xviii, 1-12) and referred to, but unnamed, in the Qur'ān.

The story of Shu'ayb, especially as told in Qur'ān, VII, 85-93, XI, 84-95, and XXVI, 176-91, follows the standard Qur'ānic narrative outline of prophetic history (see the analysis of the three versions in J. Wansbrough, *Qur'anic studies: sources and methods of scriptural interpretation*, Oxford 1977, 21-5). After his call by God, Shu'ayb preached monotheism, honesty in commerce and the necessity for order in the world and not hindering those who believe in God. The leaders of the community rejected him and threatened to expel him and his followers; they also considered stoning him, restrained only because he was one of them. An earthquake (so *radīfa* is commonly glossed; *ṣayha*, "shout" and *zulla*, "overshadowing" are also mentioned) destroyed their homes and the community, but Shu'ayb and his followers survived.

**SHU'BA B. AL-ḤADJĪDĪ** b. al-Ward, Abū Bistām al-'Atakī, a *mawla* from Baṣra with the honorific *shaykh al-islām*, was an eminent scholar and collector of *ḥadīth* [q.v.]. Born during the years 82-6/702-7, his death from the plague is generally taken to have occurred in 160/776. Originally from Wāsiṭ, he came to live in Baṣra, where he sought out al-Ḥasan al-Baṣrī [q.v.]. Shu'ba is recorded to have studied *masā'il* (= juridical problems) with him, so if that is historical he may be assumed to have arrived there in or before 110/728, the year in which Ḥasan died. About Shu'ba's personal circumstances very little is recorded. He is said to have had a speech defect. He wore dirty, dust-covered clothes, and his ascetic lifestyle was highly praised; his generosity towards the poor is lauded in many reports.

Early in life Shu'ba was allegedly fond of poetry and he associated with the poet al-Ṭirmidhī (d. ca. 120/738 (?) [q.v.]), but the story goes that when he once heard the well-known *ṣakīh* and *ḥadīth* collector al-Ḥakam b. 'Uṭayba (d. 112-15/730-3) transmit traditions from various masters, he was supposedly so struck with this that he henceforth began to gather *ḥadīth* himself. In due course he developed into Baṣra's most outstanding *ḥadīth* collector, seen in the honorary title *amīr al-mu'minīn fī 'l-ḥadīth* awarded him by a colleague ten years his junior, Sufyān al-Thawrī [q.v.]. On the other hand, Abū Ḥanīfa [q.v.] is said to have referred to Shu'ba, probably pejoratively, as the *hashw al-miṣr* "the stuffing of the town".

Shu'ba is supposed to have heard traditions with large numbers of masters of whom al-Mizzī (*Tahdhīb*, xii, 480-6) records the names of more than 300, some 130 of whom are said to have hailed from Kūfa. The figure of 300 cannot be considered complete, for Ahmad Ibn Ḥanbal (d. 241/856 [q.v.]), *K. al-'ilal wa-ma'rīfat al-riḍā'*, ed. Ankara 1963, i, 126, 128, 160-3) mentions many others who are not even included in al-Mizzī's list. Upon inspection, more than half of these 300 turn out to be mere names of otherwise totally nondescript people, in other words, they may be thought of as *maḍhūlūn*.

Alongside his reputation as a great *ḥadīth* transmitter, Shu'ba's fame lies also in his expertise in *ḥarḥ wa-ta'dīl* [q.v.], the science of disparaging and declaring trustworthy *ḥadīth* transmitters, a science of which he is generally considered to have been the first exponent and which earned him the honorific *kabbān al-muḥaddithīn*, the steelyard of transmitters. There are numerous anecdotes in the sources describing him as particularly wary of *kadhīb*, mendacity, sc. in *ḥadīth*. Thus he reproached the *kusās*, the story-tellers [see *kāss*], for having "added" to traditions. He is even recorded as having expressed the desire to drag a notorious *ḥadīth* forger, one Abān b. Abī 'Ayyāsh (d. 138/755), to the court of the local *kādī*.

It is a curious paradox that arguably the most famous tradition, which according to Muslim mediaeval scholarship deserves the qualification *mutawātir* [q.v.] (i.e. broadly authenticated), is in all likelihood due to Shu'ba: *man kaḍhaba 'alayya mula'ammā* "fal-

*yatabawwa'* mak'adahu min al-nār (i.e. "he who deliberately puts false statements into my mouth must occupy a place in Hell"). In the few *isnād* bundles which support (versions of) this allegedly prophetic saying (see *Bibl.*), it is *Shu'ba* who is the oldest and at the same time best-attested common link. He is in fact what *ḥadīth* scholars have come to define as a *ṣāliḥ* [q.v.] transmitter. His saying reflects eloquently a general perception among 2nd/8th-century traditionists, namely that proliferating traditions whose moral or legal contents and/or underlying messages gain acceptance or popularity as from the time they emerge, as was the case with the *man kaḥḥaba* saying, is not to be seen as *kaḥḥib*, but rather seen as a practice fully condoned by Islam to codify its indispensable, extra-*Qur'*anic foundations. The list of traditions in whose *isnād* bundles he is the undeniable common link, and thus responsible for (part of) the (wording of the) texts, is huge; in many chapters of the Six Books there are sayings attributed to the Prophet that are definitely his. Among these there are several crucial ones such as the statement which may be considered as a cornerstone in the early theorising of the *aḥl al-sunna*: *man sanna fi 'l-islām sunnat<sup>am</sup> ḥasanat<sup>am</sup> fa-lahu aḍḡruḥa wa-aḍḡru man 'amila biḥā ba'dahu* (i.e. "he who introduces into Islam a good custom/norm will be given the ensuing merit and the merit accruing to all those who practice/adopt it after him").

Apart from all this, his fondness of poetry is alluded to on many occasions. As al-Aṣma'ī (d. 213/828 [q.v.]) stated: "We have never seen anyone more expert in poetry than he". Also concerning poetry and its position in society, he brought traditions into circulation in which he is observed trying his hand himself at making verses, some of which he then ascribed to the Prophet, cf. G.H.A. Juynboll, *On the origins of the poetry in Muslim tradition literature*, in W. Heinrichs and G. Schoeler (eds.), *Festschrift Ewald Wagner zum 65. Geburtstag*, Beirut 1994, ii, 182-207.

Among his ca. 300 alleged *ḥadīth* masters there is one for whose traditions *Shu'ba* was generally criticised, sc. *Djābir* b. Yazīd al-Djū'fī (d. 128-32/746-50 [q.v. in Suppl.], and J. van Ess, *Theologie und Gesellschaft*, i, 294-8), whose name is usually associated with extreme *Shī'ī* doctrines. Initially, *Shu'ba* was himself not free from *Shī'a*-related allegations: one source (al-Khaṭīb, ix, 260, 10) identifies him with *taraffud* (= harbouring moderate (?) Rāfiḍī ideas) which one of his pupils, Yazīd b. Zuray' (d. 182/798), imputed to him. Eventually *Shu'ba* seems to have abandoned these.

Among *Shu'ba*'s many alleged students two stand out as particularly important in that their transmission from their master is directly available in printed collections: 'Abd Allāh b. al-Mubārak (d. 181/797), *Kutāb al-Zuhd wa 'l-raḳ'ik*, Malagaon 1966, and Abū Dāwūd al-Ṭayālīsī (d. 204/819 [q.v.]), *Musnad*, Ḥaydarābād 1321. To these two may be added seven more pupils of *Shu'ba*, equally prolific, whose numerous traditions were allegedly personally recorded by Aḥmad Ibn Ḥanbal in his *Musnad*: Muḥammad b. *Dja'far Ghundar* (d. ca. 193/809), Yahyā b. Sa'īd al-Kaṭṭān (d. 198/814), 'Abd al-Raḥmān b. Maḥdī (d. 198/814), al-Naḍr b. Shumayl (d. 204/819), Yazīd b. Hārūn (d. 206/821), Mu'adh b. Mu'adh (d. 196/812) and Wakī' b. al-Djarrāh, while Bukhārī (d. 256/870 [q.v.]) has noted down in his *Ṣaḥīḥ* from his master Adam b. Abī Iyās (d. 220/835) much material on the direct authority of *Shu'ba*.

**Bibliography:** Ibn Abī Ḥatīm, *Takdīm al-ma'rifa li-ḳutāb al-ḥaḥḥ wa 'l-ta'dīl*, 132-57, contains a list of transmitters about whom *Shu'ba* is recorded to

have uttered criticisms; for further information on *Shu'ba*, see Fasawī, *Kutāb al-ma'rifa wa 'l-ta'rikḥ*, ed. A.D. al-'Umarī, ii, 283-5; Baḥshal, *Ta'rikḥ Wāsiṭ*, ed. Kūrīs 'Awwād, 120-1; Dhahabī, *Tadhkirat al-ḥuffāz*<sup>3</sup>, i, 193-7; idem, *Siyar a'lām al-nubalā'*<sup>2</sup>, vii, 202-28; Ibn Kḥallikān, *Wafayāt*, ed. I. 'Abbās, ii, 469-70 f.; al-Khaṭīb al-Baghdādī, *Ta'rikḥ Baghdad*, ix, 255-66; 'Abd Allāh b. 'Adī, *al-Kāmil fi du'afā' al-riḡāl*, Beirut 1988, i, 67-80; Ibn Ḥajjar, *Tahdhīb al-tahdhīb*, iv, 338-46; Ibn Radjab, *Sharḥ 'ilal al-Tirmidhī*, ed. S.S. Dj. al-Ḥumaydī, 159 ff. For a wide range of legal opinions which *Shu'ba* obtained from al-Ḥakam b. 'Uṭayba and/or Ḥammād b. Abī Sulaymān, cf. Ibn Abī Shayba, *Muṣannaf*, indices vol. iv, 2208; the *isnād* bundles supporting the *man kaḥḥaba* saying with *Shu'ba* as common link are detailed in Mizzi, *Tuhfa*, iii, no. 3623, iv, no. 4627, vii, no. 10087, viii, no. 11531. For more on the technical *ḥadīth* terms used in this article, such as *isnād* bundle and common link, see *al-Kantara*, x (1989), 343-83; *Arabica*, xxxix (1992), 287-314; *Le Muséon*, cvii (1994), 151-94; G.H.A. Juynboll, *Muslim tradition*, Cambridge 1983, index s.v., and idem, *Shu'ba b. al-Hajjāj (d. 160/776) and his role in ḥadīth proliferation in Baṣra*, forthcoming in *Le Muséon*.

**SHUBĀT** [see TA'RIKH].

**SHUBHA** (A., pl. *shubah*, *shubuhāt*), literally, "resemblance", a term that developed two distinct technical meanings.

In theology and philosophy, a *shubha* is a false or specious argument which "resembles" a valid one. In later scholastic treatises, positive arguments for a given view are often followed by a series of *shubah*, counter-arguments by opponents, and their refutations (see e.g. al-Āmidī, *Ghāyat al-marām fi 'ilm al-kalām*, ed. H.M. 'Abd al-Latif, Cairo 1971, 265-74, and for a logical controversy over *shubah*, see J. van Ess, *Die Erkenntnislehre des 'Adudaddīn al-Īrī*, Wiesbaden 1966, 353).

In law, a *shubha* is an illicit act which nevertheless "resembles" a licit one, and is relevant primarily to the *ḥadd* [q.v.] offences, those specifically forbidden in the *Qur'ān* and having fixed penalties, and especially to fornication (*zinā*). In attempting to avoid as much as possible imposition of the severe *ḥadd* penalties (stoning, amputation, and flogging), the jurists appealed to a prophetic *ḥadīth* instructing the believers to "avert the *ḥadd* penalties by means of ambiguous cases" (*idra'u 'l-ḥudūd bi 'l-shubuhāt*). Thus, in contradistinction to other areas of the law, commission of a *ḥadd* offence through ignorance is considered grounds for suspension of the prescribed penalty.

This principle is recognised by all schools of law, both *Sunnī* and *Shī'ī*, although with varying terminology and scope. The most elaborate discussions are those of the Hanafīs, who recognise three categories: 1. *Shubha fi 'l-maḥall* (also known as *shubhat mulk* or *shubha ḥukmiyya*), in which the act's status as forbidden is contravened by some outside indicator; the standard example is that of sexual intercourse with one's son's slavegirl, the indicator being the *ḥadīth* which states that "You and your property belong to your father". In such cases, the penalty is suspended even if the offender is aware that the act is forbidden. 2. *Shubha fi 'l-fi'l* (also known as *shubhat ishtibāḥ* or *shubhat mushābaha*), in which the offender claims to have believed, mistakenly but plausibly, that the act was licit; examples include sexual intercourse during her waiting period (*idda*) with a wife thrice divorced. In these cases, the offender's explicit claim of igno-

realpatidar.com

rance of the law is essential for suspension of the penalty. 3. *Shubhat al-ʿakd*, resulting from an invalid marriage contract, such as one without witnesses, or an incestuous one. Abū Hanīfa claimed that such a *shubha* obtains even when the offender admits to awareness of the invalidity of the contract (thus he refused to apply the *ḥadd* penalty for prostitution), but was opposed on this point by his pupils al-Shaybānī and Abū Yūsuf.

The Shāfiʿīs also recognise three categories of *shubha*, but define them rather differently: 1. *Shubha fi 'l-maḥall*, such as intercourse with a foster relative. 2. *Shubhat al-fā'il*, as when another woman is substituted for the bride on the wedding night. 3. *Shubhat al-tarīk* or *al-djāha*, in cases where the schools disagree, such as Shīʿī *mut'a* [q.v.] marriage or Hanafī marriage by an adult woman without a guardian (*walī*). With less systematisation, Mālikīs and Hanbalīs, as well as Imāmī Shīʿīs, generally accord *shubha* status to the same situations as the Shāfiʿīs. Some other cases of illicit intercourse not subject to the *ḥadd* penalty, such as intercourse with one's wife during her menses and intercourse under coercion, are sometimes also labelled *shubha*.

**SHUBRĀ** [see DAMANHŪR].

**SHUDJĀ' AL-DAWLA**. Mīrza Djalāl al-Dīn Haydar b. Ṣafdar Djang (1732-75), was the third *Nawwāb*, or ruler, of the North Indian, post-Mughal successor state of Awadh [q.v.] (Oudh) from 1754 until his death. One of the most capable statesmen of 18th-century India, he made his realm into the major indigenous power in North India, fighting the British almost to a standstill at the Battle of Baksar in 1764. Realising his value as an ally, the East India Company reinstated him in 1765, and for the next decade a process of mutual testing and political experimentation occurred. Under the subsidiary alliance system, in which he paid for the internal use of British-officered Indian troops, the way was opened for increasing Company intervention during subsequent reigns. Shudjā' al-Dawla nonetheless modernised his army during this period, closed Awadh to the disruptive effects of European trade, secured the treasury in the custody of his main consort Bahū Begam, and made large annexations, including Itāwā and Rāmpūr [q.v.]. The Governor-General, Warren Hastings, treated him formally as an equal, but after Shudjā' al-Dawla's death, the realm was further undermined by expansive British military, commercial, and diplomatic ambitions. See further **AWADH**.

**AL-SHUDJĀ'Ī**, Shams al-Dīn, Mamlūk historian and contemporary of the sultan al-Malik al-Nāṣir Muḥammad b. Kalāwūn [q.v.] and his successors.

In the only surviving fragment of his chronicle *Ta'rikh al-Malik al-Nāṣir Muḥammad b. Kalāwūn al-Sāliḥ wa-awladhihi* (ed. and tr. Barbara Schäfer, *Die Chronik al-Nāṣir al-Malik al-Nāṣir... wa-awladhihi*, Wiesbaden 1977; *Shams ad-Dīn al-Nāṣir... wa-awladhihi*, Wiesbaden 1985), the author's name appears both in the text and on the title page as Shams b. al-Shudjā'ī; however, in *Kaṣṣh al-zunūn*, ed. Flügel, ii, 153, Ḥādijī Khalīfa refers to the author as Shams al-Dīn al-Shudjā'ī al-Miṣrī. Although the editor and translator of the text correctly points out that "Shams" would not have occurred independently as an *ism* at this time and that the rendering "Shams al-Dīn" must therefore be correct, there is no explanation for her decision to follow Ḥādijī Khalīfa in dropping the "ibn" but to ignore his "al-Miṣrī". The *nisba* is, of course, important in establishing the author's identity as is, moreover, the *nasab*, since P.M. Holt has recently tried to find a *mamlūk* in the biographical literature who would combine the *laḳab* "Shams al-Dīn" with the *nisba* "al-Shudjā'ī", derived from the uncommon Mamlūk *laḳab* of Shudjā' al-Dīn (see *Shams al-Shudjā'ī: a chronicler identified?*, in *BSOAS*, forthcoming). On the basis of Mamlūk naming patterns, Holt assumes that the author was a *mamlūk* with the *ism* of Sunkur or Aḳsunkur in the service of an *amīr* Shudjā' al-Dīn known to have lived during the period 745-56/1345-56, dates for which there are personal references to the author in the text. The only suitable candidate is one Shams al-Dīn Aḳsunkur, *Amīr Djāndār*, of the household of Shudjā' al-Dīn Ghurlū. Although the date of Aḳsunkur's death is unknown, he is known to have been exiled to Tripoli in 748/1348 and thus could have been alive in 756/1356. But as ingenious as this identification may be, it loses some credibility by the suppression of "ibn", for if it is retained, there is the distinct possibility that Ibn al-Shudjā'ī was not a *mamlūk* at all but the son of one, and that his *ism* as a second-generation Muslim was probably Muḥammad, invariably associated with the *laḳab* Shams al-Dīn. Furthermore, since no references are to be found in any of the copious biographical dictionaries to a historian bearing any of these names, it is probably prudent to refer to him by the name cited in the text and on the title page of the manuscript, sc. Shams b. al-Shudjā'ī, or, following Ibn Kādī Shuhba's citations in his own history, simply al-Shudjā'ī (see Schäfer, 1985, 5). Besides the *terminus post quem* (756), we know only that the author made the Pilgrimage to Mecca in 745/1344-5 and that he was in the service of Sha'bān, presumably the sultan al-Kāmil Sha'bān (746-7/1345-6 [q.v.]). Furthermore, if Ḥādijī Khalīfa is correct, al-Shudjā'ī was associated in some way with Miṣr, either the town of that name or the country Egypt.

The question of the significance of al-Shudjā'ī's *Ta'rikh* is also fraught with difficulties. Although only a fragment for 737-45/1337-45 exists, it has been proved to be heavily indebted to al-Yūsufī's *Nuzhat al-nāṣir fi ta'rikh al-Malik al-Nāṣir*, for which there is only a fragment for mid-733 to mid-738 (ed. Aḥmad Fuṭayṭ, Beirut 1986). Comparison of the two texts for the one year, 737, which the two fragments have in common indicates that al-Shudjā'ī paraphrased al-Yūsufī's text with only a few additions, mainly precise dates (D.P. Little, *An analysis of the relationship between four Mamlūk Chronicles for 737-45*, in *JSS*, xix [1974], 252-68). Collation of al-Shudjā'ī's passages from other

years with those attributable to al-Yūsufī in al-Makrīzī's and al-Aynī's histories shows that the pattern of al-Shudjā'ī's indebtedness to al-Yūsufī (d. 759/1358) is compellingly consistent up to the annal for 741, when the evidence is not as forthcoming as for the previous years. However, even then and thereafter, the textual evidence suggests that al-Shudjā'ī was heavily indebted to another source, probably al-Yūsufī. Unfortunately, references in the *Ta'rikh* of Ibn Kādī Shuhba, the only historian to cite al-Shudjā'ī by name, are not helpful in this regard. But whether or not al-Shudjā'ī continued to borrow from al-Yūsufī consistently is not so important as the undisputed fact that the *Ta'rikh* contains many details, especially for the years 741-5, which cannot be found in other extant sources and is therefore of considerable importance for this period.

*Bibliography:* Given in the text.

(D.P. LITTLE)

AL-SHŪF, a district of Mount Lebanon, generally denoting the current districts of it south of the Beirut-Damascus road. However, names of geographical areas often follow political, demographical or administrative changes. From the early Islamic period until the end of the Crusades, "Mount Lebanon" (*Djabal Lubnān*) was applied only to the northern districts of Djabbat Bsharri, Batrūn and Djabayl, the original homeland of the Maronites, while the southern districts were known as Djabal al-Shūf, which at times also included Djabal Kisrawān. The Mamlūks [*q.v.*], who ruled Syria from 659/1261 till 921/1516, divided the entire region according to three administrative units: Tripoli—Djabal Lubnān; Damascus—Djabal Kisrawān, al-Matn, and al-Gharb; and Sidon—al-Shūf. However, in local usage, al-Shūf denoted, as it does today, al-Shūf proper, Iklim al-Shūf (a restricted area around Dayr al-Kamar) and, surrounding it, the Greater Shūf, the homeland of the Druzes [see AL-DURŪZ] from at least the 7th/13th century.

During the latter part of the Mamlūk era and at the beginning of the Ottoman period, Iklim al-Shūf was ruled by Druze *amīrs* of the Ma'n family—chroniclers of the 10th/16th century accordingly called it al-Shūf al-Ma'nī. The Druze chronicler Hamza b. Sibāt (d. 926/1520) speaks of al-Ashwāf (pl. of al-Shūf), referring probably to the internal subdivision of Iklim al-Shūf as known to the locals: al-Shūf al-Suydjānī, al-Shūf al-Haytī, and al-Shūf al-Bayādī.

In their efforts to bring the Druzes under their control the Ottomans launched a number of expeditions against al-Shūf al-Ma'nī, where Druze resistance was strongest. When these proved too expensive, they arrived in 1001/1593 at a compromise with the local chief, Fakhr al-Dīn al-Ma'nī [*q.v.*] II, whom they appointed *amīr al-tiwā'* of the Şayda [*q.v.*] *sandjak*. Soon Fakhr al-Dīn controlled not only the Greater Shūf, now often called Djabal al-Durūz, but also the Bikā' valley, the coastal area between Sidon and Tripoli, northern Palestine and areas in Transjordan. When, inspired by Druze-Marōnite unity and a period of economic prosperity, Fakhr al-Dīn tried to establish political autonomy, the Ottomans put an end to his rule in 1042/1633, and his successors controlled only a small part of al-Shūf.

In 1108/1697 the only candidate of the Ma'nī family for the *imāra* of al-Shūf preferred to serve in the Porte's bureaucracy, upon which, in order to maintain the political regime of the *imāra*, the Druze chiefs invited the Sunnī Shihāb family to rule as *amīrs*. Though the area continued to be called Djabal al-Durūz until the beginning of the 19th century, successive waves

of immigrants from the north since the time of Fakhr al-Dīn II transformed the demography of al-Shūf, so that by 1800 Christians made up the majority of the population. The conversion in the 1750s to Christianity of part of the Shihābīs and the Abu 'l-Lam'īs, the Druze rulers of al-Matn and al-Shūf al-Bayādī, meant the end of Druze supremacy and the rise of the star of the Maronites.

When, at the beginning of the 19th century *amīr* Bashīr Shihāb [*q.v.*] expanded his rule to Kisrawān, Djabayl, Batrūn and Djabbat Bsharri, the *amīr* of al-Shūf came to be called *amīr Djabal Lubnān*, i.e. *amīr* of the whole of Mount Lebanon. No longer the *primus inter pares* of the *muḳāṭa'ātīs* [see MUḲĀṬĀ'A] of al-Shūf, Bashīr took advantage of their factionalism in order to consolidate his own power. Demographic changes, Druze factionalism, increasing European trade with Mount Lebanon, a strengthening of the political position of the Maronite Church, and Djazzār's and Ibrāhīm Pasha's [*q.v.*] support for Bashīr are all factors which introduced a shift in al-Shūf's balance of power. In 1841, following the Egyptian withdrawal, sectarian strife broke out between the two communities—the Druze bent on regaining their former position of power, the Maronites seeking to maintain and even reinforce their new-found prosperity. In an effort to solve the conflict, the European Powers and the Ottomans imposed on Mount Lebanon a settlement based on the double *kā'immaḳāmiyya* [see KĀ'IM-MAḲĀM], whereby the districts north of the Beirut-Damascus road came under Christian, and those to the south, i.e. al-Shūf, under Druze administration. However, this settlement proved too fragile and recurring incidents set off a civil war in 1860. Though at first victorious, the Druzes were ultimately defeated because of French intervention—the Druzes left al-Shūf in large numbers to settle as immigrants in Djabal Ḥawrān, soon called Djabal al-Durūz. No longer a centre of political power, al-Shūf soon became integrated into the *mutaṣarrifiyya* [see MUTAṢARRIF] (1861-1918) and, subsequently, the state of Lebanon.

As a result of the civil war which broke out in 1975, by 1983 virtually the entire Christian population had fled from al-Shūf. Again a predominantly Druze area, al-Shūf has become a focal point in the efforts to resettle the refugees from the different regions and thus to find an overall solution for the Lebanese conflicts.

(KAIS M. FIRRO)

SHUF'A (A.), lit. "pre-emption", the right of the co-owner to buy out his partner's share which is for sale. Should the property be sold without his approval to a third party, the partner has the privilege to purchase the property, even against the will of the new owner, who should be reimbursed with the price paid. Both *Kur'ān* and *Hadīth* are cited by books of *fiqh* in support of the concept, though the former seems to provide only indirect reference. The Ḥanafīs grant this privilege to the owners of adjacent properties and make it valid not only to non-fungible properties but also to appendages of the property, such as access and water rights. The *Madjalla* definition (art. 950) gives the term the power of

session" (*ṭamalluk*). *Shuf'a*, according to the four schools, is restricted to non-fungible property. The *Zāhirīs* extend *shuf'a* to fungible property, including animals, on the basis of the prophetic tradition that *shuf'a* is in "everything". Ibn Kūdāma interpreted "everything" to mean only what cannot be divided, and he deprived both the *dhimmīs* and the *Rafidī* *Shī'a* from the right to *shuf'a*, unlike al-Shāfi'ī and some other scholars, who see the right as general and not affected by faith.

Muḥammad b. Ya'qūb al-Aṣamm (d. 957/347) completely rejected *shuf'a* on the grounds that it clashes with the individual's freedom to sell. This could result in the landowner's loss, since no-one would buy knowing that he might lose what he had purchased. Although al-Aṣamm's view is refuted in the *Mughnī*, his view would be better understood if the term were properly defined, for *shuf'a* is not a right but a reason that creates a right.

*Shuf'a* was retained in many secular laws introduced to Muslim countries, such as the Egyptian, French-based law of 1883. There has been a long-standing legal controversy over whether *shuf'a* is a personal (*ḥakk shakhsī*) or real right (*ḥakk 'aynī*). Al-Sanhūrī in seeking to resolve the controversy maintained that it is not a right at all, but a cause (*sabab*). He placed *shuf'a*, as a right-making "cause", on a parallel with other causes that create rights, like contracts and inheritance. Although al-Sanhūrī conveyed no opinion as to whether this cause creates a personal or real right, it is evident that Islamic law views *shuf'a* as both a personal and real right, if inheritance is used as a guide. Al-Zuhaylī, referring to the Ḥanafī school, maintained that the cause (*sabab*) for *shuf'a* "right" is the "adjacency" of the two properties. This adjacency would appear to be only a cause leading to *shuf'a*, which is the actual legal designation (*sabab*) for the right of ownership.

**SHUFURWA** or **SHAWARWA**, BANŪ, conventional readings for the name of a family of Ḥanafī clerics and men of letters in Iṣfahān during the 6th/12th century. The name has not been explained and should perhaps be read rather as (Persian) *Shaḥ-rō* "black-face". Although several members of the family are listed in biographical works, the only one about whom we have precise knowledge is Sharaf al-Dīn 'Abd al-Mu'min b. Hibat Allāh b. Muḥammad b. Hibat Allāh b. Ḥamza *al-ma'rūf bi-Shawarwa*, a religious scholar who spent time in Damascus and Cairo (where he met Ṣalāḥ al-Dīn) before returning, in 570/1175, to his native Iṣfahān. Al-Ṣafadī quotes a few of his Arabic verses. His name appears as that of the author in at least some of the manuscripts of *Atbāk al-dhahab*, a little moralising tract in Arabic, a poor imitation of al-Zamakhsharī's *Atwāk al-dhahab* (printed Būlāq 1864 and often; tr. O. Rescher, in his *Beiträge zur Maqāmen-Litteratur*, vii, 1914).

This Arabic writer is perhaps identical with Sharaf al-Dīn Shufurwa, the author of an extant, but unpub-

lished, poetical *diwān* in Persian, consisting largely of panegyrics to the *atabeg* Djahān-Pahlawān Muḥammad b. Eldügüz, the *de facto* ruler of the Saldjūk empire 571-82/1175-86 [see ILDEŪZIDS]; he also praises the Saldjūkīd Arslan b. Toghril (556-71/1161-76). The Persian anthologists from the time of Djādjarmī onwards give his personal name as 'Abd al-Mu'min, evidently identifying him with the above-mentioned cleric, but our earliest authority, Muḥammad 'Awfī, calls him Sharaf al-Dawla wa 'l-Dīn Muḥammad Shufurwa, implying that he was in fact a different member of the same family. The same author quotes a few poems by his cousin Ṣahīr al-Dīn 'Abd Allāh b. Shufurwa. The 7th/13th-century anthology compiled by Djamāl al-Dīn Sharwānī quotes a number of *rubā'īs* by Sharaf al-Dīn, Ṣahīr al-Dīn and 'Izz al-Dīn Shufurwa; the last is mentioned also by al-Kazwīnī.

**SHUGHNĀN**, **SHUGHNĀN**, a district on the upper Oxus, there known as the Pandj River, extending over both banks from where the river leaves the district of Wakhān [q.v.] and turns directly northwards before flowing westwards again. The left bank part of Shughnān now falls within the Afghān province of Badakhshān [q.v.] and the right bank one within the Pamir region of the former USSR, a division likewise reflected in the districts of Ghārān immediately to the north of Shughnān and Rawshān to its south. The whole district is extremely mountainous, with the lowest parts, the valley bottoms, at an altitude of 1,828 m/6,000 feet, and with the pass over the Shughnān range of mountains in the Pamir, which separates the Ghund (Russ. Gunt) valley on its northern edges from the Shakh-dara (Russ. Shakh-darinskiy) range (which rises to 6,726 m/22,060 feet) being at 4,267 m/14,000 feet. The Tadjik population is very sparse and confined to the valley bottoms.

The name of the region has various spellings in the medieval Islamic geographers, including Shik(i)nān, Shik(i)nān, Shikīna, Shikīna. The form *شكينة* "a large village" of the *Hudūd al-'ālam*, tr. Minorsky, 112, perhaps points to Shakhīna, which the translator thought was probably the later Ishkashim (see below). In the travel account of the Buddhist monk Hiuen-tsang (early 7th century A.D.) and in the T'ang dynastic annals, Shughnān appears as Shi-k'i ni (E. Chavannes, *Documents sur les Tou-kioue occidentaux*, St. Petersburg 1903, 152); in 646, envoys from Shughnān visited the Imperial court. In the period shortly afterwards of the Arab conquest of Central Asia, its ruler was a vassal of the Yabghu who ruled the whole upper Oxus region. The Arab geographers attach it administratively to Badakhshān or Tukhāristān [q.v.], and al-Ya'qūbī, *Buldān*, 292, tr. Wiet, 109, speaks of the local ruler as (?) Kh.mār Beg (cf. Barthold, *Turkestan down to the Mongol invasion*, 65; Marquart, *Erānsahr*, 223, com

225). In the late 13th century, Marco Polo mentions the mining of "Balas" rubies in the mountains of Syghinan, although it is actually in the adjacent district of Ghārān that the abandoned mines can be seen (Yule-Cordier, *The Book of Ser Marco Polo*, London 1902, i, 157).

Al-Ya'qūbī also mentions, 304, tr. 133, that the Barmakī al-Faḍl b. Yahyā conquered Shughnān in the caliphate of Hārūn al-Rashīd, but it is dubious whether Islam was permanently introduced there at this time. This seems more likely to have been the work of Nizārī Ismā'īlī dā'īs or propagandists, sent to Badakhshān by the Grand Masters in Alamūt, amongst whom is mentioned a Sayyid Shāh Malang Khurāsānī and, in the 7th/13th century, the Husaynid Sayyid Shāh Khāmūsh Shīrāzī. This brought about the permanent presence of Khōdjā Ismā'īlism in the upper Oxus region, and in Shughnān, Ismā'īlī pīrs and mīrs ruled hereditarily till the 19th century (see Farhad Daftary, *The Ismā'īlīs: their history and doctrines*, Cambridge 1990, 27, 441, 486-7, noting also the preservation there of Ismā'īlī works in manuscript, some of them brought back to Dushanbe by the Soviet research expedition to the region in 1959-63). The Amīrs of Kābul Shīr 'Alī Khān and 'Abd al-Rahmān Khān endeavoured to bring Shughnān under their sway, so that towards the end of the 19th century the local people appealed to the Amīr of Bukhārā and to the Russian Governor-General of Turkestan. In March 1895, after diplomatic negotiations in London involving Russia and Great Britain, the Afghāns agreed to evacuate the right bank of the Pandj river, whilst the Amīr of Bukhārā relinquished his possessions in Darwāz on the left bank to the north of Shughnān.

Russian authority in the district was exercised from 1895 onwards from Khārāgh (Russ. Khorog) where the Ghund and Shakh-dara rivers join the Pandj, but the shock waves of the Bolshevik Revolution were felt even in Shughnān, and Bolshevik forces took over the Pamir region in November 1920. Right-bank Shughnān eventually became part of the Gorno-Badakhshaya Autonomous Oblast in the eastern part of the Tadzhikistan SSR (now the Tadzhikistan Republic), whilst left-bank Shughnān remained part of the Afghān wilāyat or province of Badakhshān. Afghān Shughnān contains the settlement of Ishkāshim, on the left bank of the Pandj and commanding the only winter route between Badakhshān and the trans-Oxus districts of Shughnān and Wakhān; it was here that the English traveller John Wood crossed the Oxus ice in 1837 (*A journey to the source of the River Oxus*, London 1872, 204-6; see also C.E. Bosworth, *Elr* art. *Eškāsh(e)m*).

Finally, one should note the presence in Shughnān of speakers of the Modern East Iranian Pamir language, Shughni, with its component dialects of Shughni, Bajui, Khufi, Roshani, Bartangi, Oroshori and Sarikoli (see G. Morgenstierne, *Etymological vocabulary of the Shughni group*, Wiesbaden 1976; J.R. Payne, *Pamir languages*, in R. Schmitt (ed.), *Compendium linguarum iranicae*, Wiesbaden 1989, 417-44; IRĀN. iii. Languages, in Suppl.).

**SHUKĀ'Ā** or **SHUKĀ'** (A.) is the thistle.

The word is a collective term used to indicate various more or less spiny plants, comprising mainly species and types of the *Compositae*, but also of other families. Mention should be made above all of *Carduus* and *Cirsium*, each with numerous types, further *Sonchus*, *Onopordon*, *Centaurea*, *Cnicus*, *Carthamus* and others. The whitethorn of Dioscurides (ἀκανθα λευκή, *al-shawka al-baydā'*) is defined by Ibn Dījldjūl [q.v.] with *shukā'ā* (*Dioscurides triumphans*, iii, 13, see *Bibl.*), but this is hardly justifiable because the latter term simply indicates the thistle. The white acanthus therefore is mostly rendered with *bādhāward*, which in *Dioscurides triumphans*, iii, 14, should be the Arabic acanthus (ἀκανθα Ἀραβική, *al-shawka al-'arabiyya*), which in its turn appears just as often as *shukā'ā*. *Shukā'ā* and *bādhāward* are often "compared" with one another, not identified. Only tentatively may it be assumed that with the white acanthus *Onopordum acanthium* L., *Compositae*, is perhaps also meant *Cirsium ferox* L. and variants. This type spreads its leaves rosette-like, which fits the botanical description (*op. cit.*). As synonyms are also found Romance *tūb(a)* (from latin *tubus*), so-called because of its high stalk, with which fire is fanned (*op. cit.*, iii, 71), further *ibrat al-rā'ī* ("shepherd's needle") or *ibrat al-rāhib* ("monk's needle") because of the pointed thorns, and the Berber words *ayfd* and *ūfrūt*. It cannot be determined whether these and other words indicate synonyms or other types of the thistle; cf. Renaud's explanations on *Tuhfat al-ahbāb* no. 457, and those by Meyerhof on Maimonides' *Sharh asmā' al-'uḡḡār*, no. 362.

As for *shukā'ā* as a medicine, if put on children's pillows, the thistle stills the saliva which flows from their mouths. If applied as a compress, the thistle is good for hemiplegia (*fālūḡī*), and if pulverised, it helps against swellings which occur at the backside, and it cicatrises putrefying ulcers. Ashes of the thistle slow down chronic dyscratic moistures (*al-ruḡūbāt al-muzmina*), which flow from the womb.

**SHUKR** (A.), thankfulness, gratitude; acknowledgment (pl. *shukūr*); it also has the meaning of praise, which is gratefulness with the tongue.

1. As a religious and mystical concept.

As a Sūfī term for an internal state and its external expression, *shukr* is a station (*maqām*) of the wayfarer (*sālik*) and has all the above meanings when referring to human beings.

However, *shukr* on the part of God signifies the "requiting and commending [a person]" or the "forgiving" a man: or the "regarding" him "with content, satisfaction, good will", or "favour"; and hence, necessarily, the "recompensing", or "rewarding, him". The saying *shakara 'llāhu sa'yahu* signifies "May God recompense, or reward, his work or labour" (Lane).

In the Kur'ān, God is *al-Shakūr* (II, 158; IV, 147) and *al-Shakūr* (XXXV, 29-30; XXXV, 34; XLII, 23; LXIV, 17) the latter also being one of His Most

Beautiful Names, meaning "He who approves, or rewards, or forgives, much, or largely; He who gives large reward for small, or few works; He in whose estimation small, or few, works performed by His servants increase, and who multiplies His rewards to them" (Lane). God is *al-Shakūr* "in the sense of widely extending His favours, not (thankful) in a literal sense", giving thankfulness for thankfulness, "just as He has stated, 'The recompense for an offense is one equal thereto' (XLII, 40)" (al-Kushayrī, 384, tr. Von Schlegell, 132). "Only God ... is absolutely grateful, because His multiplication of the reward is unrestricted and unlimited, for there is no end to the happiness of paradise" (see LXIX, 24) (al-Ghazālī, tr. of *al-Maṣṣad*, 101) "The one who rewards a good deed manifold is said to be grateful for that deed, while whoever commends the one who does a good deed is also said to be grateful" (*ibid.*). So God's reward, His praise for a good deed is praise for His own work, "for their works are His creation" (*ibid.*).

As for human beings, whose qualities are derived from the divine qualities "the thankful one (*al-shākūr*) is he who is thankful for what is, and the very thankful one (*al-shakūr*) is he who is thankful for what is not" (al-Kushayrī, 385, tr. Von Schlegell, 134).

The importance of *shukr* is clearly expressed in XIV, 7: *And when your Lord proclaimed: "If you are thankful, surely I will increase you, but if you are thankless, my chastisement is surely terrible"*. It is called the key to Paradise on the basis of XXXIX, 74: *And they shall say: "Praise belongs to God, who has been true in His promise unto us, and has bequeathed upon us the earth, for us to make our dwelling wheresoever we will in Paradise! How excellent is the wage of those that labour!"*

Al-Ghazālī in his *Ihyā'* has a comprehensive chapter on *ṣabr* [q.v.] and *shukr*, which are characterised as the two parts of *imān* (which equals *yāqīn*, see al-Makkī, 421) which support and complement each other, *ṣabr* being the precondition for *shukr*. Since these are divine qualities and yield two of God's Most Beautiful Names (*al-Ṣabūr*, *al-Shakūr*), ignoring them means ignoring not only *imān* but also the qualities of God.

Since al-Ghazālī uses the material of the important Sūfī compendiums (mainly al-Kushayrī and al-Makkī; see Gramlich, *Stufen zur Gottesliebe*, 4 ff.), structuring it in a clear, logical order with many additions and clarifying similes of his own, this comprehensive chapter will be used here as a basis.

Although mentioned in different ways before, it was one of al-Ghazālī's most important original ideas to give a clear exposition of the three parts of *shukr*: (1) *ilm*, "knowledge", (2) *hāl*, "(the right) state" and (3) *ʿamal* "acting", and their interrelation with each other.

(1) Knowledge is the real understanding that nothing except God has existence in itself, that the whole universe exists through Him and that everything that happens to a person (including afflictions) is a benefaction from Him. This leads to knowledge of God and His acts, *tauhīd* [q.v.], and the ability to thank Him which also is a divine benefaction requiring gratitude. Constant awareness of this connects the term with invocation (*dhikr*), and those who have gratitude in every situation are those who give praise (*ḥamidūn*). *Shukr* as knowledge of the impossibility of really thanking God is expressed in the words of Moses: "O Lord, how can I thank you while being unable to thank you except with a second benefaction from you?" God's answer is: "If you know this, you have already thanked me" (*Ihyā'*, iv, 83, l. 16) Whoever has this knowledge in its absoluteness is a pure *shakīr*.

(2) Deriving from this knowledge is the second part of *shukr*, the state of joy in the benefactor (not in the benefaction or the act of grace), with the attitude of *khudūʿ* "humility" and *tawāduʿ* "modesty". Joy in the benefactor, not for Himself but for the caring that prompted Him to give is the state of the *ṣāliḥūn* [q.v.] who are grateful for fear of punishment and hope for reward. The highest degree of the state of joy lies in using the benefaction as a means to reach God's presence and gaze at His face eternally (al-Shiblī: "*Shukr* means vision (*ruʾya*) of the benefactor, not vision of the benefaction" [*Ihyā'*, iv, 81, l. 23]). Thus *shukr* is connected to *dhikr*, the only healthy state of the heart (sūra II, 152: *Therefore remember Me, I will remember you, give thanks to Me and reject Me not*).

(3) The action in accordance with the state of joy deriving from complete knowledge of the benefactor has three aspects: the (hidden) action of the heart which is intending the good; the (manifest) action of the tongue which is praise of God; and the action of the members of the body, which is using them in obedience for Him and as a means against disobedience as expressed in *shakawā* "complaint", which is thereby diametrically opposed to *shukr*.

Ignorance of the real meaning of *shukr* as explained above, and thus neglect and misuse of God's benefactions, is *kufṛ*. The increasing proximity to God through *shukr* and the increasing distance from God through *kufṛ* is expressed in sūra XCV, 4-6: *We indeed created man of the fairest stature. Then We restored him to the lowest of the low—save those who believe, and do righteous deeds; they shall have a wage unfailing*.

Understanding of the difference between *shukr* and *kufṛ*, which, ultimately, has to be an understanding with the heart, is based on knowledge of all the principles of the religious law brought about by hearing the verses/signs of God and relying on them, which cannot be done without the prophets sent by God. Through this, God's wisdom in all existing things and the true meaning of His benefaction and its different kinds can be understood, which leads to seeing with the eye of certainty.

(ALMA GIESE)

2. As a factor in public life and in the principles of law.

In earliest Arabic the term seems to refer to a public proclamation of gratitude or debt. In later Arabic, the term refers also to the affective state of feeling grateful, and is usually tied to the concepts of *niʿma* (benefaction) and *riḍāʾ* (contentment/satisfaction).

In the *Kitāb al-Aghānī*, the poet Huṭayʿa [q.v.] is spared by Zayd al-Khayl and "when al-Huṭayʿa returned to his people he began praising Zayd,

proclaiming (*shākir*<sup>m</sup>) his benefaction (*li-ni'matihi*...) (Cairo 1389/1970, xvii, 266 ll. 4 ff.). Here and elsewhere (e.g. *Nakā'id Djarir wa 'l-Farazdaq*, ed. Bevan, 671-2, 740, 1063) this complex of ideas suggests that sparing life, particularly, evoked a public declaration of gratitude to the benefactor; the relationship thus acquired required some sort of acknowledgment or repayment so that the benefactor was contented. Refusing to acknowledge this benefaction, ingratitude, in this context, was called *kufṛ*.

In the principles of jurisprudence (*uṣūl al-fikh*), the concept of thanking the benefactor (*shukr al-mun'im*) was an occasion for controversy: those who believed that the intellect (*ʿaql*) contains certain sorts of natural moral knowledge considered "thanking the benefactor" one of the indubitable items of *ʿaql* knowledge—like the value of equity (*al-ʿiṣāf*) or the reprehensibility of falsehood. Thanking is thus one of the items of moral knowledge known "before the arrival of the *sharʿ*" in the view of the Muʿtazila, some early Shāfiʿis, Hanbalis, and, even, later Hanafis. Ashʿaris and later Shāfiʿis and Hanbalis denied that such natural knowledge was possible, and al-Ghazālī, in his *Mustasfā* argues that God might have ordained indifference to benefactions, or might have seen feeble efforts to thank Him as impertinent (i, 61). Despite the disparagement of *shukr* as a piece of natural knowledge, all conceded that it was, after the arrival of the *sharʿ* or revelation, an important element of piety (see al-Kharāʿī, *Kitāb Fadālat al-shukr*, *passim*). It was also an important concept in the construction of artificial social relations, particularly of commander and soldiery (see Mottahedeh, *Loyalty and leadership*, index, s.v. "thanking the benefactor").

**SHUKRĪ**, ʿAbd al-Rahmān (1886-1958), Egyptian poet, writer, educator and critic of North African origin whose grandfather settled in Egypt. Shukrī was born in Port Said and graduated from secondary school in Alexandria in 1904. His grandfather as well as his father were nationalists active in Egyptian political life. Shukrī befriended his father's friend ʿAbd Allāh al-Nadīm [q.v.] and backed Saʿd Zaghlūl [q.v.]. He defended the Egyptian revolution with an anti-British poem which caused his expulsion from the Law College (1906). On the advice of Muṣṭafā Kāmil [q.v.], he joined the High School for Teachers, where he studied Arabic and English literatures. There he met the poet Ibrāhīm ʿAbd al-Kādir al-Māzinī [q.v.], who reviewed in *al-Dustūr* Shukrī's first romantic *diwān*, *Dawʿ al-faḍr* ("The light of dawn") (1909).

This *Diwān* contained narrative, romantic and meditative poems dealing with life, love and soul; one of its poems was written in blank verse (*shiʿr mursal*).

As a successful student, Shukrī was sent to study English Literature at Sheffield University, where he got his B.A. degree in literature and history, a period (1909-12) which left a great impression upon his personality and poetry. There he learnt to admire the English Romantics, whose influence upon Shukrī equalled that of the great poets of the ʿAbbāsīd period. After his return from England he published his second *diwān*, *Laʿālīʿ al-afkār* (1912), which reflected the same tendencies as his first one. In the introduction to his third *diwān*, *al-Kharāʿāt* ("Notions") (1916), he expressed his new understanding of poetry as a humanistic, spiritual and intellectual experience, and criticised the conventional judgement of poetry that it should resort to falsehood and fancy (*tawahhum*) as opposed to imagination (*takhayyul*).

Shukrī now worked as a teacher of English and Arabic literature. It was during that period that he, together with his friends al-Akkād [q.v. in Suppl.] and al-Māzinī, formed a group of poets and critics who defended the English Romantic trend of poetry and its critical views and was known as *Madrasat al-Diwan*. This group opposed what they considered as the bad influence of French literature because of its sentimentality, rhetorical tendencies and lack of organic unity. The group denounced composing poetry in conventional genres such as elegy, eulogy, panegyric and defamation, and strove against the *qasida*'s embellished style and stereotyped themes as revived by the neo-classical poets such as Aḥmad Shawkī and Ḥafiz Ibrāhīm [q.v.].

In 1916 the solidarity of this school was shaken when Shukrī accused al-Māzinī of plagiarism from English Romantic poetry in the introduction to *al-Kharāʿāt*. In 1921 al-Māzinī retaliated by charging Shukrī with plagiarism of ideas and metaphors from English poetry and by accusing him of tendencies to madness, as reflected in his *al-Iʿtirāfāt* ("Confessions") (1916).

Between 1909-19 Shukrī published seven *diwāns* and five books, but after 1919 there was a long interval of silence. It was only in 1936 that he started writing some articles on education, psychology and literature in periodicals such as *al-Risāla*, *al-Thakāfa*, *al-Hilāl* and *al-Mukhtaṭaf*. During 1934-8 Shukrī worked as a principal in a secondary school and an Inspector at the Ministry of Education, retiring in 1938 to Port Said and dying in 1958.

Shukrī experimented widely with the new forms of poetry, and composed unrhymed verses, using monometre and monorhyme, but did not notice the importance of using enjambement. The deviation of Shukrī's poetry from the neo-classical trend was in his narrative, romantic and meditative poems, in which he avoided using conventional images of classical Arabic poetry. His approach can be seen in his collected eight volumes of poetry published posthumously in Alexandria in 1960 in 666 pages.

**SHÜKRÜ** (i.e. **SHÜKRİ**) **BEY**, Ahmed (1875-1926), son of İbrâhîm, Young Turk politician, was born in Kastamonu, near the Black Sea, into a poor family.

Shükrü graduated from the teachers' training college in Istanbul and started out on a career in education, serving both as a teacher himself and as director of education. He joined the underground opposition movement of the Committee of Union and Progress (*İttihâd ve Terakkî Cem'iyyeti* [q.v.]) before the constitutional revolution of July 1908. After the revolution, he served as the district governor of Siroz [q.v.] and spent some time at the home office, but he came to the fore as Minister of Education from 1913 to 1918. During this time he was very successful in raising the number of schools (including those for girls) and enlarging and improving the University and the teachers' training establishments (from 1915 onwards, with the help of German specialists). He also devoted much attention to the publishing of teaching materials. He came into conflict with the Şeykh al-Islâm Khayrî Efendi when he tried to unify all education under the jurisdiction of his ministry and put an end to the independent status of the *Avkâf* schools, but gradually got his way. Some enlightened Ottoman educators such as Khâlide Edib (Adıvar) accused him of being interested in quantity, i.e. in raising the number of pupils, rather than in quality.

After the First World War, he was among the first prominent Young Turks to be deported by the British, first to Lemnos (May-September 1919) and thence to Malta, for internment there. Together with fifteen others, he escaped in September 1921 and made his way back to Turkey. After his return, he first served on the provincial council in Izmit and was then appointed governor of Trabzon province by the nationalist leadership in Ankara. In April 1923 he played a prominent role in the attempts of a group of former Unionists led by Kara Kemal, the former party boss in Istanbul, to revive the C.U.P., which had been disbanded in 1918. Nevertheless, in August 1923 he was elected to the second Grand National Assembly as representative of Izmit in the interest of Mustafa Kemal Paşa's People's Party (*Halk Fırkası*).

In November 1924 he resigned from this party to be among the founders of the opposition Progressive Republican Party (*Terakkiperver Cumhuriyet Fırkası*), which was closed down by the Kemalist government in June 1925. In 1926 he was among those accused of planning to assassinate the President of the republic. He was tried and convicted by the Independence Tribunal and hanged in Izmir on 13 July 1926.

**SHÜL**. 1. The name of a land and a city in China mentioned in the mediaeval Arabic geographer Kudâma b. Dja'far [q.v.], 264, here borrowing material from the lost part of his predecessor Ibn Khurradâdhbih [q.v.]. According to Kudâma, Alexander the Great, in company with the Emperor of China, went northwards from China and conquered the land of Shül, founding there two cities, Kh.mdan and Shül, and ordering the Chinese ruler to place a garrison (*râbita*) of his troops in the latter place.

Kh.mdan is well-attested in other Islamic sources (e.g. Gardizi; Marwazi, tr. Minorsky, 25-6, comm. 71,

84), and usually identified with the capital of the T'ang dynasty, Č'ang-an-fu, later Hsi-an-fu, lying on the Weiho, a right-bank affluent of the Huang-ho and already mentioned in a 6th century Byzantine source as Χουαδδάν or Χουβδδάν, cf. *Hudūd al-'ālam*, tr. Minorsky, 84, comm. 229, 231. Shül, however, has not been satisfactorily identified. Marquart, *Streifzüge*, 90, and *Erānshahr*, 316, saw in it Turkish *çöl* "steppe, plain, desert", a translation of Chinese *sa-č'u* "sandy settlement", the Sachi in Tangut of Marco Polo (Yule-Cordier, *The Book of Ser Marco Polo*<sup>3</sup>, i, 203, 206). But according to Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 420, *çöl* is a loanword from Mongolian not traceable in Turkish before the Čaghatay period. One might conceivably identify Shül with the Čülig of the Orkhon [q.v.] inscriptions, a country listed as one which sent representatives to the Kaghan Ishemi's funeral, and, if the list is in geographical order, Čülig lay between Korea and China (Clauson, *loc. cit.*). Finally, one may remark that the suggestion at the end of the *ET*<sup>1</sup> art. **SHÜL** that the Shül of the Arab geographers may refer to a colony of Soghdians is dubious; one might more pertinently mention that the town of Kāshghar [q.v.] in eastern Turkestan appears as Shu-lê in Chinese and Shulig in Tibetan (cf. Minorsky, *op. cit.*, comm. 280, who also notes at 225 various emendations that have been made of the reading *sh.w.l*). It seems impossible to reach any certainty regarding the whole question.

**Bibliography:** Given in the article.

(C.E. BOSWORTH)

2. A Lur tribe of southern Persia [see **SHÜLISTÂN**].

**SHÜLISTÂN**, literally, "land of the Shül" [see **SHÜL**. 1. above], a district, formerly a *bulūk*, in the southern Persian province of Fārs.

Three epochs must be distinguished in the history of the district: one before the arrival of the Shül, the period of their rule (from the 7th/13th centuries), and the period of its occupation by the Mamassanī Lurs about the beginning of the 12th/18th century.

During the Sāsānid period, the district was included in the *kūra* of Shāpūr-khūra. The founding of its capital Nawbandagan (Nawbandjān) is attributed to Shāpūr I. This important town situated on the road from Fārs to Khūzistān was taken by 'Uthmān b. Abi 'l-'Āṣ in 23/643 (Ibn al-Athīr, iii, 31); it is often mentioned by Arabic historians and geographers [see further, **NAWBANDADJĀN**]. The district is watered by the river system which finally forms the river Zohra, which flows through Zaydūn and Hindiyān. In the old *Fārs-nāma* (151) the river of Nawbandjān bears the name Kh'ābdān. The river system is described in detail in *Fārs-nāma-yi Nāṣiri*, ii, 326; the principal water-course comes from the direction of Ardakān and is now called Āb-i Fahliyān or Āb-i shūr.

The description of Fārs (*Fārs-nāma*) composed in the life-time of the Atabeg Čāwulī (early 6th/12th century) does not yet know the expression *Shūlistān*, that is to say, "the country of the Shül". This last tribe at first inhabited Luristān [q.v.], of which the half was under its rule about 300/912. The great chief (*pīshwā*) of the Shül was Sayf al-Dīn Mākān Rūzbihānī, whose ancestors had governed the district from the time of the Sāsānids. We may here mention that the Rūzbihānī figure among the Lur tribes. At the same time as this *pīshwā*, Hamd Allāh Mustawfī mentions a governor (*hākīm*) of the *wilāyat* of the Shül, who was called Naḍīm al-Dīn. From the year 500/1106, the Kurd tribes and others from Djabal

al-Summāk (in Syria) began to move into Luristān. From these Kurds the dynasty of the Atābegs of the Great Lur [see LUR-I BUZURG] is sprung. Under the Atābeg Hazārasp (600-50/1203-52) the newcomers drove the Shūl back into Fārs.

Towards the end of the 13th century, Marco Polo (Yule-Cordier, i, 83-5) mentions amongst the eight "kingdoms" of Persia, *Suoletan*, which may refer to the new territory around Nawbandjān occupied by the Shūl. The old Chinese map studied by Bretschneider (*Mediaeval researches*, ii, 127) marks a *She-la-tsz'* between Shīrāz and Kāzarūn, which must correspond to Shūlistān. Although the Muslim historians were ignorant of the Shūl dynasty, the tribe in the time of Mustawfī had hereditary governors, the descendants (*nawādakān*) of Nadjm al-Dīn Akbar. A new administrative centre replaced Nawbandjān: during the campaign of 795/1393 Tīmūr halted at Mālāmīr-i Shūl ("the estates") of the Amīr of the Shūl being thus distinguished from Mālāmīr = Idhadj [*q.v.*]; the position of this place between two water-courses, corresponds to Fahliyān which is now the capital of the district.

The Shūl must form an ethnically distinct unit. The history of the Kurds by Sharaf al-Dīn only mentions them incidentally perhaps because the author excluded them from his category of "Kurds". Ibn Baṭṭūta (ii, 88), who in 748/1347 met Shūl at Shīrāz and on his first stage on the road from Shīrāz to Kāzarūn (Dasht-i Ardjan?), calls them "a Persian tribe (*min al-a'ādīm*) inhabiting the desert and including devout people". The Persian dictionaries mention a peculiar dialect *Shūlī* (Vullers, ii, 481: "a kind of *Rāmandī* and *Shahrī* which is spoken in Fārs"). Shihāb al-Dīn Ibn Faḍl Allāh al-'Umārī (who died in 749/1348) states that the Shūl have very considerable affinities with the *Shabānkāra* [*q.v.*] and asserts their generosity and hospitality. Their warlike character is evident from the remark of Rashīd al-Dīn, who in speaking of the Tātārs, capable of killing one another "for a few words", compares them to the Kurds, the Shūl, and the Franks (ed. Bérézine, vii, 62). In 617/1220 the Atābeg of Luristān Hazārasp advised Muḥammad Khwārazmshāh to entrench himself behind the chain of Tang-i Talū (Balū? "oak") and to mobilise there against the Mongols, 100,000 Lurs, Shūl, the people of Fārs and *Shabānkāra* (Djuwaynī, 114, tr. Boyle, ii, 383). Rashīd al-Dīn (ed. Quatremère, 380) mentions amongst the valiant defenders of Mawsil in 659/1260 "the Kurds, the Turkomans and the Shūl".

Established on the great road, the Shūl nomads were themselves exposed to invasions; the Atābeg of Luristān Yūsuf Shāh (673-87/1274-88) attacked them and killed the brother of their chief Nadjm al-Dīn (*Tārīkh-i Guzīda*, 343); in 755/1354 the Muzaḥḥarīd Shāh Shudjā' chastised them severely when they attacked Shīrāz (*ibid.*, 660); in 796/1394 'Umar Shaykh marching in the rear-guard of his father Tīmūr pillaged on his way all the unsubdued "Lurs, Kurds and Shūl" (*Ẓafar-nāma*, 615).

The nomad (or semi-nomad) state and the warlike character of the Shūl, the similarity of their speech to Persian, the inroads of their neighbours, all these factors must have contributed on the one hand to the dispersion of the Shūl and on the other to their assimilation and final absorption.

In modern Persia, the only traces of the Shūl are to be found in the toponymy of Fārs, where there exist in the *shahrstāns* of Shīrāz and Būshahr several villages with Shūl as an element of their names (see Razmārā (ed.), *Farhang-i dīghrāfiyā-yi Irān-zamīn*, vii, 142-3).

At the time of the last Ṣafawids (*Fārs-nāma-yi Nāsiri*, ii, 302) or after the rise of Nādir (Bode, i, 266) Shūlistān was occupied by new invaders, the Mamassanī Lurs, after whom the district became called *bulūk-i Mamassanī*. Its extent was then about 100 by 60 miles, between the following boundaries: to the east Kāmfirūz and Ardakān; to the north and to the west Razgird and the country of the Kūh-Gālū'i (Kūh-Gīlūya) Lurs; to the south Kāzarūn and the mountain of Marra-Shigift (the northern slopes of the Marwak in Dasht-i Ardjan). Of the six cantons of the district four (*zar-bunīca*) bore the names of Mamassanī clans: Bakesh, Djāwīdī, Dushmanzinyārī and Rustam. In these cantons there were 58 villages and 5,000 families. The clans were governed by their hereditary *kalāntars*. The Mamassanī claimed to possess the annals of their tribe and said that they came from Sistān (J. Morier, in *JRGS* [1837], 232-42); this legend must have attached itself to the name of Rustam, the name of one of the four clans. The language of the Mamassanī is a Lurī dialect.

**SHŪMĀN**, a district of the upper Oxus region mentioned at the time of the Arab invasions. It lay near the head waters of the Kāfīmiḥān and Surkhān rivers, hence in the upper mountainous parts of Čaghāniyān and Khuttalān [*q.vv.*]. In Chinese sources such as Hiuen-Tsang, it appears as Su-man. In al-Tabarī, ii, 1179, 1181, where the conquests of the governor Kutayba b. Muslim [*q.v.*] in upper Khurāsān during 86/705 are being described, Shūmān is linked with Akharūn or Kharūn as being under a local prince, whose name seems to be the Iranian one \*Gushtāspān. By 91/710, however, he was in revolt against Kutayba (*ibid.*, ii, 1227-8, 1230), necessitating a punitive expedition by the Arabs.

It appears in the 4th/10th century geographers as

a town with a strong citadel and as supplied with well-endowed *ribāts* (presumably against the pagan Turks to the north and east) (see e.g. Ibn Hawkal, ed. Kramers, 455, 477, tr. 439, 459; *Hudūd al-‘ālam*, tr. 115, 120). It seems to be Shūmān which is mentioned in Tīmūrid sources, e.g. Sharaf al-Dīn ‘Alī Yazdī, as Ḥiṣār Shādmān, which Le Strange, *Lands of the Eastern Caliphate*, 439-40, took to be the later town Ḥiṣār.

*Bibliography*: See also Marquart, *Erānshahr*, 226, 236-7, 299; Barthold, *Turkestan*<sup>3</sup>, 74, 185.

(C.E. BOSWORTH)

**SHUMAYM**, ABU ‘L-ḤASAN ‘ALĪ b. al-Ḥasan b. ‘Antar al-Hillī, best known under his Sibylline surname of Shumaym, usually without the definite article, littérateur of mediaeval ‘Irāq (511-601/1117-1204).

Originally from the Mazyadid centre of al-Hilla [*q.v.*], he later moved to Baghdād where he studied and tried to earn his living, but we know very little of this period of his life. In any case, he did not stay there long but preferred to move to Syria and Diyār Bakr, where he found generous patrons whom he eulogised in return for substantial presents; finally, he settled at Mawṣil, where he died.

He had a certain talent, seen in both poetry and artistic prose, leaving behind an abundant and rather interesting œuvre. On the pattern of Abū Tammām, he composed a *Hamāsa* or poetical anthology, but this was largely made up of his own verses, with little regard for the great mass of poets and prose writers, including the best of these, apart from a few exceptions. He tried to rival Abū Nuwās, whose highly-appreciated wine poetry could not, he affirmed, stand comparison with his own; and Abū ‘L-‘Alā’ al-Ma‘arrī, for example, was nothing but a “blind dog” (see *Shadharāt*, v, 5). The only authors to find grace in his eyes were al-Mutanabbī, above all in regard to his eulogies, Ibn Nubāta for his sermons (*khutab*) and al-Ḥarīrī for his *Maḳāmāt*. Moreover, Shumaym al-Hillī, “who made out that he had surpassed all other literary works, conceded that, despite various attempts, he could not compose *maḳāmāt* better than those of al-Ḥarīrī, which stimulated him to write a commentary on them” called *K. al-Nukat al-mu‘jamāt fī sharḥ al-maḳāmāt*. Amongst numerous works attributed to him may be mentioned an *Anīs al-djālīs fī ‘l-tadjīs*, *Manāḳib al-hikam wa-maḥālib al-unam*, *al-Mukhlāra fī sharḥ al-Luma’* (of Ibn Djinnī), *al-Amānī wa ‘l-tahānī*, *al-Ta‘āzī wa ‘l-marāzī* and *al-Manā‘ih wa ‘l-madā‘ih*.

Apart from his boastful self-satisfaction, most of the biographers agree upon stressing his extravagant character. Yākūt went to see him in 594/1198 at Āmid [*q.v.*], the main city of Diyār Bakr; in the course of this meeting, he asked him to recite some of his own verses, which triggered off great praise on the part of Yākūt. But the latter was then scolded by Shumaym, who said to him, “Shame on you! Do you not know anything better than praise?”. “What more then should I do?”, replied Yākūt, which brought forth the reply, “Well, you should do this” (and he began to dance and clap his hands until he was exhausted).

Yākūt (*Irshād*, ed. Margoliouth, v, 129-39, ed. Cairo 1928, xiii, 50-72) gives in his section on the poet a somewhat unsavoury explanation of the poet’s *laqab* or nickname deriving it from *shamma* “to smell [something]”.

*Bibliography*: Yākūt, *Irshād*, Cairo 1928, v, 129-39, no. 62; Kifī, *Inbāh*, Cairo 1371/1952, ii, 243-6, no. 448; Ibn Khallikān, Cairo 1367/1948, ii, 36, no. 428; Dhahabī, *Siyar al-nubalā’*, Beirut

(A. BEN ABDESSELEM)

**SHUMAYṬIYYA** or Sumayṭiyya (also Shumatiyya or Sumatiyya), a Shī‘ī sect whose name is derived from that of one of its heads, a certain Yahyā b. Abi ‘l-Shumayṭ. The sect recognised as imām and successor of Dja‘far al-Šādiq [*q.v.*] his youngest son Muḥammad, who not only bore the name of the Prophet but also is said to have resembled him physically. After the failure in 200/815 of the Shī‘ī rebellion of Abū ‘l-Sarāyā [*q.v.*] in Kūfa against the caliph al-Ma‘mūn (al-Ṭabarī, iii, 976 ff.), Muḥammad b. Dja‘far, who then lived in Mecca as an old man, was urged by his followers to proclaim himself imām and caliph and was rendered homage in front of the Ka‘ba on 6 Rabī‘ I 201/2 October 816. But when he was defeated by ‘Abbāsid troops near Mecca and again near Medina, he surrendered and ceremonially abdicated in Mecca, in Dhu ‘l-Hijja 201/July 817; he was then deported to al-Ma‘mūn’s court at Marw (al-Ṭabarī, iii, 989-95). The Shumayṭiyya sect seems to have owed its existence to these events; it recognised the descendants of Muḥammad b. Dja‘far as imāms. The sect soon disappeared, however, according to the Shaykh al-Mufīd (d. 413/1022 [*q.v.*]), who confirms that in his time it had ceased to exist.

(H. HALM)

**SHUMAYYIL**, **SHIBLĪ** b. IBRĀHĪM (1850-1917), controversial Lebanese physician and social reformer. He began his studies of medicine in the Syrian Protestant College, completing them in Paris and Istanbul; he was to practise in Tanṭā and Cairo. He published *al-Shifā’* magazine (1886-91) to spread the new medical ideas, and, with Salāma Mūsā [*q.v.*], *al-Mustakbal* (1914), in order to build a society based upon modern scientific reasoning. His articles in the Arab press were published in *Madjmu‘at Makālāt al-Duktūr Shiblī Shumayyil* (Cairo 1910). The foremost populariser of Darwin’s theory of evolution in the Arab world, his commentary and translation of the German Ludwig Büchner’s lectures on Darwin, *Ta‘rīb li-sharḥ Bukhnir ‘alā madhhab Dārawīn* (Alexandria 1884), caused an uproar. He published *al-Hakika* (Cairo 1885), refuting Ibrāhīm al-Hawrānī’s criticisms of Darwin’s theory, and further set forth Darwin’s ideas in the second edition of his two books, *Falsafat al-nushū’ wa ‘l-irtikā’* (Cairo 1910). He was also one of the first proponents of socialist and secularist thought in Arabic.

Amongst his other works, he translated Hippocrates, wrote a commentary on Ibn Sīnā and published several medical works. His *Shakwā wa-āmāl marfū‘a ilā Djalālāt al-Sulṭān al-Mu‘azzam ‘Abd al-Ḥamid Khān* (Cairo 1895) and his *Les Méfaits de la domination turque et la responsabilité de l’Europe* (Cairo 1913) reveal what he felt was wrong with the Ottoman Empire, whilst his *Sūriyā wa-mustakbaluhā* (Cairo 1915) suggests how Syria should

respond to Ottoman tyranny. His literary works include a novel *al-Hubb 'alā 'l-fatra, aw kışsat Wanīs wa-Hakwā* (Cairo 1914), a play on the First World War *al-Ma'sāt al-kubrā* (Cairo 1915), a translation of Racine's *Iphigénie* and a philosophical poem, *al-Ruḍḥān* (Cairo n.d.).

**SHUMEN** [see **SHUMNU**].

**SHUMNU**, the most frequently-found Ottoman form (see below), Bulgarian **SHUMEN**, a town in north-eastern Bulgaria, at the foot of the steep slopes of the **Shumen** plateau, a situation which makes **Shumen** as beautiful from an artistic point of view as it is from a military one (Moltke). It is a crossroads for ways towards the Stara Planina passes, the Danube and the Black Sea. The small but turbulent river of Bokludža (Porojna), a major factor in the shaping of the town, originates from the karst springs. In the past, the spring water was conducted by pipes to mosques and by *wakīf* and *maḥalle* pipes to the numerous fountains and baths in the city. The climate is moderate, even mild.

The classical name was Myssionys, Myssiunus. The first occurrence of the name of **Shumen** is in the so-called Šišman inscription of the 14th century, written in Bulgarian. In the Ottoman period we find **Shumī**, **Shumnu**, **Shumna**, **Shumena**, **Shumlar**, **Shumla** and **Shumni**; after 1878, **Shumen**; and 1950-65, Kolarovgrad.

There have been settlements on the site for five thousand years, since Thracian times; there are numerous and considerable remnants of fortresses, settlements, churches, and monasteries in the region. **Shumen** came into being up on the plateau (today Hisarläka), where five fortresses have existed successively: a Roman one (4th century A.D.), a Byzantine (5th-6th centuries), two Bulgarian (9th-10th and 12th-14th centuries) and an Ottoman (15th century). During the Second Bulgarian Kingdom, a town outside the fortress walls emerged.

The fortress was conquered by the Ottomans in 1388, during the campaigns of Candarli 'Alī Pasha, Sultan Murād I's Grand Vizier, against Tsar Ivan Šišman. The fortified mediaeval town of **Shumen** was destroyed by the Crusaders during the Varna campaign of 1444 and was later abandoned. It was probably in the 15th-16th centuries that part of the population first settled down below the plateau, in the plain, founding a new settlement. This settlement (*kaşaba*), with a predominantly Turkish Muslim population, became **Shumen** in the second half of the 15th century.

The town acquired strategic importance during the Russian Turkish wars of 1768-74, 1806-12, 1828-9 and 1877-8, when it was part of the fortified quadrangle of Ruse-Varna-Silistra-**Shumen**. The Russians never succeeded in seizing it, while the Turks considered it impregnable. After the Congress of Berlin (1878), **Shumen** became part of the Bulgarian Principality.

Beginning from the 9th/15th century, **Shumen** was administratively dependent, as a *nāhiye* and a *kaḍā'*,

on the Nikopolis (sometimes the Silistra) *sandjak*, and from the 11th/17th century—on the *eyalet* of Ōzi; it was a *kāḥāṣṣ* of the Sultan, part of the *wakīf* of Yildirim Bāyezīd I (791-805/1389-1403). According to Ewliyā' Celebi and Ottoman records from the 11th/17th century, there resided in the *kaḍā'* of **Shumen** two *kādīs* (with daily salaries of 300 *aḳḳes*) a *nā'ib*, a *naḳīb ul-eshrāf*, a *subaşı*, a *kethkūdā*, a *sipāhī kethkūdāsi*, a *serdar* of the Janissaries, a *muhtesib*, and a *bādjdār*.

According to the Ottoman chronicler Wāṣil Efendi, at the time of the Ottoman conquest the population of **Shumen** amounted to 700-800 houses. Colonisation from Asia Minor and the Islamisation of the local population turned northeastern Bulgaria into a region with numerous Turkish population. The first Turkish colonisation comprised soldiers, Islamic religious functionaries and dervishes from Anatolia. *Yürüks* from the Tañrīda (Karagöz), Naldöken, and Kodjadjik groups were settled in the *nāhiye* of **Shumen**. In 1483-5 *Yürüks* were registered in **Shumen** proper; there are also data related to colonisation from the Arab territories of the Empire. In 1856 and 1864 Tatar colonists were settled in the town; by 1878 they numbered up to 150-200 houses, and had their own mosque with a religious school attached to it, a donation by Rif'at Pasha. There were also Gypsies in the town.

The Orthodox Christian Bulgarians lived in the eastern part of **Shumen**, in the *maḥalle* of Kilise, and beginning in the 17th century, in the *uvarosh* around the small church of the Holy Ascension (in the mid-17th century, Petār Bogdan spoke of a wooden church) and the large church of St. Elias built in the 19th century. During the Russo-Turkish wars of 1768-74 and 1806-12, and the Kärđzali conflict at the end of the 18th century, many villages around **Shumen** were ruined and new Bulgarian *maḥalles* emerged. **Shumen** has been from the 19th century till now an important cultural and educational centre. After the liberation of Bulgaria, its Orthodox Christian population increased, while the Turkish one stagnated or declined through emigration (see below). One of the important Armenian colonies in Bulgaria, with its own church, was established in the town in the 17th century. The Armenian community in the town expanded following the settlement of immigrants from Turkey in 1896 and after World War I. In the 16th-17th centuries there were permanently living in the town Ragusans (according to Petār Bogdan, 20 people). In the 19th century, a Jewish community and a synagogue were established. In 1849, for a short while, there settled in **Shumen** a group of Hungarian ex-revolutionaries led by L. Kossuth. Many Turks left **Shumen** immediately after the liberation of Bulgaria and the period up to the Balkan War in 1912, in 1928-9; in 1949-51 and in 1989. After World War II, the majority of the local Jews moved to Israel, and some Armenians to the Soviet Union.

The population registrations and censuses from 888-90/1483-5 onwards show an increase, fairly regular, in all the communities. In 1963, the town had 60,758 inhabitants (50,616 Bulgars, 4,545 Turks, 648 Armenians, 277 Gypsies). By 1972 the population had reached 79,134.

The centre of the town evolved around the religious complex of the Eski Djāmi' (constructed in 1480-90 by the *kādī* Sinān Celebi and incorporated by Yahyā Pasha in his foundation in Skopje of 1506; at the same time, a *medrese* was attached to it and repaired on the orders of Mahmūd II in 1837-8, according to an inscription written by the court poet Seyyid Mustafa Talib Efendi) and the Eski Hammām in the Eski

Maḥalle. Gradually, the town evolved as a trading centre towards the east. Its shopping centre consisted of a Bitpazārī situated around the Ćarṣhī Djāmi' and Sāḥat Djāmi' (built 1580) and the Eski Ćarṣhī, Sheytān Ćarṣhī and Yuḳarī Pazār, around the mosque preceding the Tombul Djāmi', where the two main lines of communication in the town crossed. Nearby is the *bezistān*, dating from the 16th century, which changed its functions many times and has been preserved until today. Shumen's importance as an urban centre increased, especially in the 18th century, when it grew north- and eastwards.

The growth of a large number of non-producing Muslims considerably contributed to the economic prosperity of the town. The *wakīfs*, some 50 to 60 of them, owning not only agricultural estates but shops and workshops as well, also had a clear rôle here. The *wakīf* of Hādīdjī Redjeb founded in 1671 to support the Şolaḳ Djāmi', drew its income from 41 shops. In the 18th century the town turned into a "distribution centre", supplying the whole region with goods; leather production was widely spread there; the town was famous for its coppersmiths, too. During the Crimean War, the main Turkish forces and a large English and French contingent resided in the fortress of Shumen. This fact, together with the growth of the town population, brought about the development of the network of markets. Shumen has preserved its position as an industrial, trading and railway centre until today.

The town had been systematically fortified in the 18th century by the Grand Viziers Muḥsin-zāde Paşa and Djezā'irli Ḥasan Paşa. During the Crimean War (1854-6) and the War of 1877-8, Shumen evolved into an Ottoman fortress of the first rank, with a large garrison, well-kept fortifications, barracks, military depots, sanitary premises, etc.

Shumen was recognised as a leading Islamic city in the European provinces of the Ottoman Empire, with significant monuments religious and military construction. The former are enumerated in detail by Ewliyā' Ćelebi and in the registers of various periods. With a peak of 63 up to 1872, there were in 1884, 47 Muslim religious centres (Jireček) and in 1965, some fifteen.

The most significant monument of Ottoman architecture in Shumen is the Yeñi Djāmi' or Tombul Djāmi', the largest Ottoman religious building in Bulgaria and a unique example of a well-preserved Ottoman *külliyeye* (a *medrese*, a library, a *mekteb*, a *sebil*, and a fountain) dating from 1744-5 and belonging to Sherif Khalil Pasha's foundation. It was built by an unknown architect of limestone and marble, and was inspired by the art of the Tulip Period [see LĀLE DEWR] in the capital, notwithstanding the fact that it was built a decade after the period. The exterior is still very Ottoman-looking, but on the interior, the decoration shows Baroque influence. It is included in a complex with a rectangular court on the west and a two-storeyed building on the north serving as a library. The minaret is 40 m/130 feet high. The inscription was composed by the poet Ni'met, himself born at Shumen in 1186/1772. During the campaign of destruction of Turkish buildings 1984-5, this complex was the sole one to be spared, and it still functions as a mosque.

Sherif Khalil Pasha (d. 1752) was born either in the village of Madara or in Shumen proper. He had a brilliant career as a statesman: a *ketkhüdā* of the Grand Vizier Dāmād Ibrāhīm Paşa [see DĀMĀD], to whom he dedicated several *kaşides*; *wālī* in Aydin,

Trebizond, Inebakhtī, Belgrade, Ağriboz, and Bosnia; and an educated person who wrote poetry and translated from Arabic and Persian. One of the outstanding representatives of the Ottoman ruling élite during the *Lāle Dewri*, he was also a member of the so-called learned society organised around Sultan Ahmed III's (1703-30) court, which translated and compiled commentaries on Arabic, Persian, Latin, ancient Greek, and other works.

Khalil Pasha's *wakīf-nāme* (preserved in Shumen) deals *inter alia* with the library at the *medrese*. Part of this book collection, together with other books from the town and the surroundings, and from other places in Bulgaria, has been preserved and is in the History Museum at Shumen; it contains 650 manuscripts and 1,400 old printed books.

The desire to modernise Shumen has led to the destruction of the architecture from the pre-industrial period, both Islamic and non-Islamic. Not a single place in the old town of Shumen was spared, apart from a few examples of Ottoman culture. The town Museum houses a collection of monumental and funerary inscriptions.

The Khalwetī Seyyid 'Othmān Atpazārī, author of works on religion and dogmatics (second half of the 11th/17th century; Fenali Muştafā, a Bektāshī and a poet (end of 17th-early 18th century); Mehmed b. 'Othmān, author of a mathematics treatise (second half of the 12th/18th century); Yūsuf Nakshibendī (19th century); the calligraphers Ḥāfiẓ Ibrāhīm, Hüseyin Waṣṣāf, Seyyid Ahmed Nāzifī, and the calligraphers of the Izārī family (18th-19th centuries) were all born in Shumen.

Towards the end of the 19th and in the 20th century, Shumen became one of the centres of Turkish education and of the Turkish intelligentsia in Bulgaria. K. Jireček noted in his *Pätwanija po Bālgarija* that "one is impressed by the vitality of the Turkish population, a rare phenomenon in Bulgaria; the Turks in this town have built a new school and private houses". The famous *Niwvāb* (under its statute of 1922, within the jurisdiction of the Grand Müftülük and of the Bulgarian Ministry of Foreign Affairs) began to function as a private school, where teachers for the primary Turkish schools were trained; a higher department was attached to it, where a three-year course for religious functionaries and teachers for Turkish junior secondary schools was taught; in 1948 it was transformed into a Turkish comprehensive school. Both before and after the World War II, a considerable part of the Turkish teachers were its graduates. It was closed down in mid-1950s. Today it is a secondary Islamic religious school, again called *Niwvāb*. After World War I and until the late 1950s, the specialised educational institutions in Shumen trained teachers for Turkish language education. After World War II, a Turkish National Theatre and a Turkish public library called after the Turkish Communist poet Nazım Hikmet [q.v.] functioned in the town. There were twelve Turkish newspapers, three with an Islamic trend, published there before the end of World War II, and four afterwards. Before World War II, the Turkish Publishing House *Teraki* had its seat in Shumen. At present, there are three mosques functioning in the town, and the regional Müftülük is also there.

**SHUNGWAYA**, the name of a harbour up a creek, Mcho [Mto] wa Hori, in Somalia, in 1° 15' S. and 41° 50' E., 260 miles north of Mombasa. The anonymous *Kitāb al-Zunūdj*, a 19th-century compilation from other local works, claims it as the epicentre for the dispersal of ten Bantu tribes in Kenya and Tanzania. Whereas a tradition of kingship and of Islam is alleged for Shungwaya, one would expect these to be reflected among those tribes. Only the Shambaa among them formed a kingdom 200 years after the alleged 16th-century dispersal and adopted Islam under Zanzibari influence in the 19th century.

Apart from the modern village known as Bur Gao, there are three ancient settlements. The central site is surrounded by a masonry wall, enclosing about seven ha. It contains a pillar tomb [see MANĀRA] and a rectangular building with no *mihrāb*. The local people allege that it is where a *Shaykh* Muhyī al-Dīn used to pray. It is domed, the northern wall being on the side of Mecca, which suggests an Ibādī origin. The northern site has a number of tombs, and a large building, so encumbered with overgrowth that H.N. Chittick was unable to determine whether it was a mosque or a house. The third site, down the creek, is on a hill (Somali *bur*) with a defensive wall round the summit; presumably it is this to which the modern name refers.

In 1912 Captain C.W. Hayward "caused his native servants to dig over the topsoil in places". In 1931 only he reported his finds to H. Mattingly as comprising coins of the Ptolemies: 1; Rome 1st to 2nd century: 5; uncertain: 1; Byzantium, 4th century: 79; Mamlūks of Egypt: 6; Egypt under the Turks: 7. The ensemble has been regarded with some scepticism, but, as Sir Mortimer Wheeler remarked, there is no reason why there should not have been a series of deposits over so long a period. Nevertheless, others, including Wheeler and Gervase Mathew (1955), Grotanelli (1955), and Chittick (1969), have reported no further coins. If genuine, the finds of so haphazard a nature can hardly be regarded as a hoard, but possibly as evidence of trade connections at different times. Hayward did not specify the find sites, nor has there been any excavation.

**SHUNKUB** (A.) (and variants *shukkub*, *shunkāb*) pl. *shānākīb*, masc. substantive denoting the common snipe (*Capella gallinago gallinago*). In the Maghrib and Egypt, it is known as *kannis*, *dadjādīat al-mā'* and *bikāsīn* (< Fr. *bécassine*), while in 'Irāk it is called *qūhlūl*, the same term as for the sandpiper (*Tringa*). In addition to the common snipe, the great or solitary snipe, *shunkub kabīr* (*Capella major* or *media*), the Jack snipe, *shunkub saḡhūr* (*Limnocyptes minimus*) and the painted snipe, *shunkub muzawwak* (*kḥawlī* in Egypt) (*Rostratula benghalensis*) are also found. Arabic naturalists do not make any mention of this bird and only al-Damīrī mentions it in passing.

Along with this very aloof, nocturnal marsh wader, *shunkub* is, with *shunkub al-bahr*, also used for the trumpet fish (*Centriscus*).

**SHŪRĀ** (A.), together with *mashwara*, *mashūra*, a nominal form connected with the form IV verb *aṣḥāra* "to point out, indicate; advise, counsel" (see Lane, s.v.), with the meaning "consultation".

1. In early Islamic history.

Here, *shūrā* is especially used of the small consultative and advisory body of prominent *Kurashīs* which eventually chose 'Uthmān b. 'Affān as the third caliph over the Muslim community after the assassination of 'Umar b. al-Khaṭṭāb [q.v.] in Dhū 'l-Hijja 23/ November 644. The practice of consultation by the *sayyid* or *shaykh* of a tribe with his leading men was known in pre-Islamic Arabia, as is set forth in *MASHWARA*; the *shūrā* on 'Umar's death was thus no innovation but in many ways a continuation of tribal practice.

The main accounts of the *shūrā* are in such sources as Ibn Sa'd, *Ṭabaqāt*, iii/1, 245, 247-50, etc., al-Balādhurī, *Ansāb al-aṣhrāf*, v, 15-25, and al-Ṭabarī, i, 2722-6, 2776-88; cf. Caetani, *Annali*, v, 79-110. Ibn Abi 'l-Ḥadīd, *Sharḥ Nahḍ al-balāgha*, preserves excerpts from a *Kitāb al-Shūrā wa-makṭal Ḥusayn* by al-Sha'bī [q.v.] and from a *K. al-Shūrā* by al-Wākidī [q.v.], see Sezgin, *GA*, i, 277, 297. The traditional account of the sources is that 'Umar on his death-bed wished in the first place to designate as his successor 'Abd al-Rahmān b. 'Awf (the original intended successor, Abū 'Ubayda b. al-Djarrāḥ [q.v.], having died in 18/639), but 'Abd al-Rahmān refused the burden of office, as did 'Abd Allāh b. 'Umar, so that 'Umar then nominated a *shūrā* of 'Abd al-Rahmān b. 'Awf, 'Alī b. Abī Ṭālib, 'Uthmān b. 'Affān, al-Zubayr b. al-'Awamm, Sa'd b. Abī Waqqās [q.v.], and the absent Ṭalha b. 'Ubayd Allāh [q.v.] if he returned to Medina within three days. All these were of course Meccans, and no Anṣār were included. They were, moreover, all prominent persons

Tombul **Djāmi'**, built by **Sherīf Khalīl Pasha** in 1157/1744, the largest Ottoman religious building in modern Bulgaria and a unique example of a well-preserved Ottoman *külliyye*, still functioning as a place of worship. Photograph taken in 1934.

realpatidar.com

in their respective clans; all were early converts to Islam, hence could claim *sābika*, with all except 'Uthmān having fought at Badr; all were either connected by kinship (*karāba*) and/or marriage (*sihr*) with the Prophet and/or each other; and, together with the first caliph Abū Bakr and 'Umar's brother-in-law Sa'd b. Zayd [q.v.], were counted amongst the ten to whom Paradise was assured (*al-ashara al-mubashshara* [q.v.]).

G. Rotter has discussed at length the difficulties and inconsistencies of the traditional accounts, noting at the outset the anti-Umayyad prejudice and pro-'Alid tendentiousness put into the mouth of 'Umar in the accounts of the nomination of the *ashāb al-shūrā* (very clearly seen in the papyrus fragment of Ibn Ishāk published by Nabia Abbott, as pointed out by M.J. Kister, *Notes on an account of the Shura appointed by 'Umar b. al-Khattab*, in *JSS*, ix [1964], 320-6). The number of *Muhādḡirūn* who had the requisite *sābika* as participants at Badr and who were of potential caliphal status was by the year 23/644 quite restricted. Exactly when 'Umar nominated the members of the *shūrā*, before or after receiving his death-blow, is uncertain. It is also unclear who precisely were the *ashāb al-shūrā*; Muḥammad b. Ḥabīb, *Muḥabbar*, 75-6, includes Sa'd b. Zayd amongst them, whilst al-Wākidī and al-Zuhri (in *Ansab al-ashraf*, v, 21) state that Sa'd b. Abī Waḡḡās did not take part in the *shūrā*. Rotter therefore surmised that the story of 'Umar's setting-up of the *shūrā* could be a fabrication and could in fact have been shaped by partisans of various interest groups in later struggles over the caliphate; the *shūrā* seems to him more like a continuation of the pre-Islamic *mala'* [q.v. in Suppl.] of the Meccan clan chiefs (*Die Umayyaden und der zweite Bürgerkrieg (680-692)*, Wiesbaden 1982, 7-16).

The final choice seems to have fallen on 'Uthmān because of his status of being twice the son-in-law of the Prophet, his age and experience, and his *sharaf* or nobility of lineage from 'Abd Shams b. 'Abd Manāf. 'Alī shared this *sharaf* as a Manāfi also, and had both *sihr* as Fāṭima's husband and *karāba* as Muḥammad's paternal cousin, but was (with the exception of Sa'd, whose membership of the *shūrā* is not altogether certain, see above) the youngest of the potential candidates amongst the *ashāb al-shūrā*, being in his mid-forties. It seems to have been 'Uthmān's superiority on the grounds of his early closeness to the Prophet, his *sihr* and his *sharaf*, rather than any choice of him as a safe, conservative, compromise candidate who would continue the heritage of Abū Bakr and 'Umar, that led to his being offered the caliphate (pace the view of e.g. M.A. Shaban in his *Islamic history A.D. 600-750 (A.H. 132)*, a new interpretation, Cambridge 1971, 61-3).

The idea of *shūrā* as a means of selecting caliphs and other great men in the state, i.e. the principle of election, seems to have been especially attractive during the Umayyad period for zealots, rebels and dissidents. Hence 'Umar II b. 'Abd al-'Azīz may have contemplated its use for his own successor; the rebel in the East al-Ḥārith b. Suraydj [q.v.] issued a manifesto urging that the governor of Khurāsān should be chosen by a *shūrā*; and the ephemeral Umayyad caliph Yazīd III b. al-Walīd in 126/744 endeavoured to rally support for his claim to the throne by appealing to the Book of God, the *sunna* of the Prophet and succession to rule by a *shūrā* (see P. Crone and M. Hinds, *God's caliph, religious authority in the first centuries of Islam*, Cambridge 1986, 63, 65, 68, 76, 127-8). Also, the concept must obviously have appealed to a sectarian group with egalitarian ideas such as the

Khāridjites (see E.A. Salem, *Political theory and institutions of the Khawārij*, Johns Hopkins Studies on History and Political Science, Ser. LXXXIV, no. 2, Baltimore 1956, 58-9).

## 2. In al-Andalus.

Practised in other Islamic lands, the *shūrā* of the *kādī* especially flourished in al-Andalus, where it was exercised by *mushāwarūn* from the first half of the 3rd/9th century. The first "advisers" of judges were celebrated *fukahā*, like Yahyā b. Yahyā (d. 234/848), Sa'd b. Ḥassān (d. 235/849) or 'Abd al-Malik b. Ḥabīb (d. 238/852), who had travelled to the East and studied with the great jurists of the age. At first the number of these *mushāwarūn* was very limited, but from the first half of the 4th/10th century they grew considerably and it became one of the career stages for 'ulamā', who exercised this function before becoming judges. This reflects the change within the *shūrā*, which was not considered, at the outset, as a *khuffa*, as the terminology for designating the first *mushāwarūn* shows: biographical sources uses such expressions as *kāna mushāwaran*, *shūwira fi 'l-ahkām*, etc., or more rarely, *wulīya 'l-shūrā*, *takallada 'l-shūrā*. Only in the Almoravid period does one find the phrase *khuffat al-shūrā*.

In the first stage of the *shūrā*'s evolution, the *kādī* consulted the *mushāwarūn* in his own *maḡlis*, which often provoked lively discussions when opinions differed amongst the counsellors. But it seems that, in the course of time, the *mushāwarūn* assumed the habit of giving their responses to judges from their own homes, which Ibn 'Abdūn, in his *hisba* treatise written at the end of the 5th/11th century or the opening of the next one, considered as an abuse which ought to be suppressed. The opinions of the *mushāwarūn* could be given in writing; Ibn Sahl's (d. 486/1093) *Ahkām* give numerous examples. The topics about which they were consulted covered all the possibilities of the law and dogma of Islam, from questions of legal procedure to accusations of heresy. Regarding this last point, there is a good example in the legal proceedings against Abū 'Umar al-Talamankī (d. 428 or 429/1036-7) in Saragossa. The town's *kādī* asked for an opinion on the case from six *mushāwarūn*, who rejected the accusation against Abū 'Umar. The functions of the *mushāwar* clearly approximated closely to those of the *muftī*, but were exercised exclusively for the *kādī*, who had to follow the opinions of his advisers. In this wise, one can say that the *kādī*'s sphere of responsibility was diminished by the existence of these counsellors, especially as it was the *amīr* (later, the caliph) who nominated the *mushāwarūn*. But the judge also had the possibility of dismissing certain of his counsellors if he found himself strongly at variance with them (thus the caliph al-Nāṣir dismissed from office Muḥammad b. Yahyā b. 'Umar b. Lubāba (d. 330/941) at the request of the *kādī* Aḥmad b. Muḥammad al-Ḥabīb, forbidding him moreover to give out *fatwās*) or of seeking the inclusion in the *shūrā* of a celebrated *fakīh* whom he wanted. After the end of the Umayyad caliphate, the nomination of *mushāwarūn* remained a prerogative of the holder of political power, but in periods when this was enfeebled, judges appointed their own counsellors. At Table

(Niebla) the people nominated Muḥammad b. 'Abd Allāh Ibn al-Djadd (d. 515/1121) for the town's *khuttat al-shūrā*, whilst at Murcia, the *kādī* Muḥammad b. 'Abd Allāh al-Khushanī Ibn Abī Dja'far, who assumed power in 539/1145, nominated the very young Muḥammad b. Aḥmad Ibn Abī Djamra (d. 599/1202); Ibn al-Abbār has preserved, in his *Takmila*, the nomination decree of Ibn Abī Djamra, who belonged to one of the leading families of Murcia and who went on to become, a year later, *kādī* of Valencia.

3. In the modern Arab world.

The idea and practice of consultation in government had an intermittent history in Islam prior to the 19th century [see above, 1 and 2, and MASHWARA]. In that century, as the Ottoman empire's encounter with Europe accelerated, the old principle was revived in a series of institutions established in the empire's centre and its Arab provinces, as part of the effort to modernise the political order (for the Ottoman practice of consultation prior to and during the *Tanzīmāt*, see MADJLIS AL-SHURĀ). Bodies with deliberative and advisory authority bearing the name *shūrā* (or *mashwara*, its interchangeable derivative) were set up by Muḥammad 'Alī in Egypt, in the 1820s; by his son Ibrāhīm in Egyptian-occupied Syria and Palestine, in the 1830s; and by his grandson, the Khedive Ismā'īl, in Egypt again. The latter assembled a "Consultative Council of Delegates" (*Madjlis shūrā al-nuwawāb*) in 1866, featuring the novel quality of being elective, though indirectly, which operated until the 1882 British occupation. These councils represented a dual phenomenon: an embodiment of the Islamic ideal of consultation in government, and an attempted emulation of European-type parliaments.

The use of the term *shūrā* reflected this dual import. From the early 19th century, the word was applied to every type of Western governmental body, including elective and representative parliaments. Thus Muḥammad 'Alī's official bulletin, *al-Wakā'i al-Misriyya*, applied the name in the 1830s to the British Parliament and the French *Chambre des députés*. The Egyptian *shaykh* Rifā'a Rāfi' al-Taḥṭāwī [q.v.], well acquainted with European politics, likewise used it for institutions such as the Swiss Federal Assembly and the United States Congress, as did other Arabic-speaking observers of Western politics throughout the century. At the same time, applied in a local context, *shūrā* connoted the newly-revived traditional idea of a ruler consulting with his chosen group of advisers. Such a twofold application of the word was a source of ambiguity, typical of the rapidly changing political concepts at the time. It made it possible, and convenient, for thinkers such as Muḥammad 'Abduh and Rashīd Ridā [q.v.] to justify the borrowing of parliaments—an alien idea—by associating them with the Islamic notion of consultation. This and similar attempts, during the formative phase of political modernisation, to equate

modern and traditional ideas facilitated the introduction of new concepts into the region but undoubtedly also contributed to their modification.

In the 20th century, parliamentary institutions were formed in the Arabic-speaking lands under different titles, often in response to public demand inspired by foreign example [see MADJLIS. 4. A.]. The political roles which they played differed with time and place, but on the whole they were more limited than those of their Western counterparts. Among these, bodies entitled *madjlis shūrā* (or *madjlis istishārī*) were particularly traditional in nature and had a markedly limited say in decision making. Such bodies appeared mostly in the Arabian Peninsula, where European influence was small and the tribal custom of consultation remained a vivid attribute of local government. In the Saudi state, an Organic Law establishing a *Madjlis shūrā* was announced in 1926, but the institution remained on paper for many decades despite repeated royal pledges to set it up. A Consultative Council Statute was promulgated by Saudi Arabia's King Fahd in 1992, again providing for establishment of an appointed *Madjlis shūrā* with advisory authority. In Qaṭar, the Amīr Aḥmad b. 'Alī Āl Thānī in 1970 enacted a constitution under whose provisions a *Madjlis shūrā* was established two years later, partly elected and partly nominated by him (but in practice consisting of the Amīr's disciples). In Yemen, a *Madjlis shūrā* was founded in 1971, as prescribed by the constitution of the previous year. Unlike other peninsular states, Yemen was at that point not a monarchy but a republic, and the *shūrā* was to offer advice to a three-man Presidential Council which actually ruled the country; both bodies were abolished following the 1974 coup. In 'Umān, a State Consultative Council (*al-Madjlis al-istishārī li 'l-dawla*) was established in 1981 by Sultan Qābūs as a first experiment in limited public participation. It was replaced in 1991 by a *Madjlis al-shūrā*, whose formation and political prerogatives were similarly limited.

Elsewhere, the term *shūrā* and its derivatives appeared occasionally in titles of governmental institutions, reflecting the essentially restricted role prescribed for them. Such, e.g., was Morocco's Consultative National Assembly (*al-Madjlis al-waṭanī al-istishārī*), appointed by King Muḥammad V in 1956 as an advisory forum to the monarch. A somewhat different role was assigned to the Consultative Council which President Anwar al-Sādāt set up in 1980 in republican Egypt to supplement the People's Assembly (*Madjlis al-sha'b*), the popularly-elected legislature. The Council, partly elected and partly nominated by the president, was to debate and express views on public matters as part of the country's pluralistic political order. Its definition as a *shūrā*, then, properly mirrored its merely deliberative and advisory power.

(A. AYALON)

**SHURAFĀ'** (A.), in Moroccan dialect, **SHORFĀ**, pl. of *sharīf* [q.v.] "noble".

This term denoted the persons belonging to the "house of the Prophet", *Ahl al-Bayt* [q.v.] and then became essentially reserved for the descendants of the Prophet Muḥammad by his daughter Fāṭima [q.v.], the wife of his cousin 'Alī b. Abī Ṭālib [q.v.]. Several children were born of the couple, of whom al-Ḥasan and al-Ḥusayn were the ancestors of all the so-called Hasanid and Husaynid *shurafā'*, both in the Middle East and in the Maghrib. These persons have always enjoyed great consideration as well as certain privileges granted by the rulers and the peoples of the lands where they lived. But one should note that, at the side of the authentic line of the Prophet, certain descendants of famous *murābiṭūn* have, improperly, claimed the title of *sharīf*.

#### 1. History.

'Alī had numerous sons by other wives than Fāṭima, forming an important line of descendants, these being the 'Alids [q.v.] in general, of whom the Hasanids and Husaynids are part, but only these last can claim Sharīfian descent. Whether from one or other of the two branches, they exist in several of the Islamic lands.

I. All the Hasanid *shurafā'* of the Middle East stem from the second son of al-Ḥasan, Ḥasan II: (a) From the latter's son 'Abd Allāh al-Kāmil there descend through Mūsā al-Djawn the Banū 'l-Ukḥayḍir of Mecca and Yemen (251-350/865-961), the Mūsawīs and the Hawāshim, then the Banū Katāda, *amīrs* of Mecca (these last from 598/1201-2 onwards), the Banū Fulayta, and finally the Banū Ṣāliḥ of Ḡhāna, as well as the so-called Sulaymānid *shurafā'*. (b) From Dāwūd, another son of Ḥasan II's, stem the Sulaymānids of Yemen and Mecca. (c) From Ibrāhīm, another of Ḥasan II's sons, stem the Rassid Imāms [q.v.] of Yemen, through al-Kāsim al-Rassī.

II. The Husaynid *shurafā'* of the Middle East have as their ancestor Dja'far al-Ṣādiq [q.v.] b. Muḥammad al-Bākir, al-Ḥusayn's grandson by 'Alī Zayn al-'Ābidīn. From these, the Fāṭimids [q.v.] or 'Ubaydids of Ifrīqiya and Egypt claimed descent, as also the Banū Muḥannā [q.v.], *amīrs* of Medina before 601/1204, and above all, the series of the Twelver Shī'ī Imāms which stops with the twelfth, Muḥammad al-Mahdī, son of Ḥasan al-'Askarī (d. 260/874).

The descendants of a brother of Ḥasan II, Zayd, from whom stemmed the Zaydids of Tabaristān (247-87/861-900), may be considered as *shurafā'*.

III. The *Shurafā'* (*Shorfā*) of the Maghrib. It is in the farthest extremity of North Africa, the Maghrib al-Akṣā, that the *Shurafā'* are most numerous. A century or so after the appearance of Islam in Morocco, this group had an extremely important political and religious role, since it was an 'Alid, the great-grandson of al-Ḥasan b. 'Alī, hence a *sharīf*, sc. Idrīs I [q.v.], son of 'Abd Allāh al-Kāmil and brother of the Mūsā al-Djawn mentioned above, who founded the first Sharīfian dynasty in Morocco.

The vast majority of the *Shurafā'* of the Maghrib are of Hasanid descent, since they descend from the above-mentioned Idrīs I and his son Idrīs II. This last had seven sons, five of whom had issue: (a) 'Umar, whose descendants reigned in the Djabal al-'Ālam and then in the region of Tlemcen; these are the Hammūdīd [q.v.] *Shurafā'*, whom one finds again in Spain, where for a few years (407-14/1016-23) they occupied the caliphate in Cordova, and were subsequently rulers in Malaga. (b) al-Kāsim, whose son Yahyā installed himself at Djūta, in the Ḡharb of Morocco, on the Wādī Sabū (Sebou) and was the progenitor

of all the Djūtid *Shurafā'* (the Djūtiyyūn) at Fās (see genealogical table). One should especially mention the 'Imrānids ('Imrāniyyūn) who functioned as *naḳībs* and were the opponents of the Marīnids (second half of the 9th/15th century). (c) 'Isā, founder of the Dab-bāghīyyūn *Shurafā'* who emigrated in the 4th/10th century near to Cordova with Ḥasan b. Gannūn, and then returned to Salé and Fās after the Christian reconquest. (d) 'Abd Allāh, from whom stemmed the Amghāriyyūn established in the north of Morocco, then to the south of Azemmour. (e) Muḥammad, who had two sons, Yahyā, ancestor of the Kattāniyyūn *Shurafā'* in Meknès and then in Fās (second half of the 10th/16th century) and 'Alī, from whom several Sharīfian branches descend (see WAZZĀN and the genealogical table).

'Abd Allāh al-Kāmil, Idrīs I's father, had had two other sons whose progeny came to Morocco later: (a) Dja'far, ancestor of the *Shurafā'* of Sūs. (b) Mūsā al-Djawn, from whom stem the Kādirid *Shurafā'* (Kādiriyyūn) through 'Abd al-Kādir al-Djilānī [q.v.], founder of the Kādirī Sūfī order; these *Shurafā'* settled at Fās at the end of the 9th/15th century. Finally, Muḥammad al-Nafs al-Zakiyya [q.v.], ancestor of the two Sharīfian dynasties which took power in Morocco after the fall of the last Berber dynasty, the Banū Waṭṭās [q.v.] (10th/16th century), sc. the Sa'did *Shurafā'* [q.v.]—whose Sharīfian descent was controversial—and their replacements in the following century, the 'Alawī *Shurafā'* from Sidjilmāsa in the Tafilalet [see 'ALAWĪS].

Certain members of the mystical *silṣila* of the Shādhiliyya mystical order [q.v.] are *Shurafā'*: 'Abd al-Salām b. Mashīḥ al-Ḥasanī (d. 625/1228), an Idrīsid *sharīf* of the Banū Muḥammad b. Idrīs, was their head towards the end of the Almohad dynasty. His successor, who gave his name to the order, Abu 'l-Ḥasan 'Alī b. 'Abd Allāh al-Shādhilī [q.v.], was likewise said to be an Idrīsid *sharīf*, like the majority of the *Shurafā'* of the Djabal 'Ālam.

IV. At the side of all these Hasanid *Shurafā'*, there existed equally in Morocco, especially at Fās, two groups of Husaynid *Shurafā'*, through Mūsā al-Kāzīm [q.v.] b. Dja'far al-Ṣādiq, son of Muḥammad al-Bākir, grandson of al-Ḥusayn. These are the Šikillīyyūn *Shurafā'*, the offspring of 'Alī al-Riḍā b. Mūsā, and the 'Irākiyyūn *Shurafā'*, descendants of a brother of 'Alī al-Riḍā, Ibrāhīm al-Murtaḍā.

#### 2. Literature of the *Shurafā'*.

Given the special importance of the *Shurafā'* in the Maghrib, it is not surprising that this has resulted in the florescence of a special literature dealing with genealogy and biography. The first notable works on these subjects were undertaken by a Kādirid Sharīf of Fās, Abū Muḥammad 'Abd al-Salām b. al-Ṭayyib al-Kādirī, born in 1058/1648 and died in 1110/1698 (see E. Lévi-Provençal, *Historiens des Chorfā*, 276-399). In addition to three monographs on hagiology, he wrote several works dealing with the Sharīfī groups of Morocco: first a general study of Sharīfism in the Moroccan capital, *al-Durr al-sanī fī ba'd man bi-Fās min ahl al-nasab al-ḥasanī*, which, in spite of its title, also includes the Husaynid branches; on account of the period in which he was writing, he deliberately left out the Sa'dians, who in any case were to disappear very quickly for lack of descendants. This work was lithographed at Fās in 1303 and 1308 A.H. Al-Kādirī's other treatises deal with (a) the Kādirī *Shurafā'* (*al-Urf al-āṭir fī man bi-Fās min abnā' al-shaykh 'Abd al-Kādir*), and (b) the *Shurafā'* 'Irākiyyūn (*Matla' al-ishrāk fī 'l-ashraf al-wāridīn min al-'Irāk*).

At the end of the 11th/17th century and beginning of the 12th/18th century, two other treatises on Sharīfī genealogy were compiled in Morocco; one devoted to the 'Alawid Shurafā' of Sijilmāsa was written by Abu 'l-'Abbās Aḥmad b. 'Abd al-Malik al-Sharīf al-Sijilmāsi, and entitled *al-Anwār al-saniyya fi nisbat man bi-Sijilmāsa min al-sharāf al-muḥammadiyya*; the other, entitled *Shudhūr al-dhahab fi khayr nasab*, was the work of a sharīf of the Djabal al-'Alam, al-Tihāmī b. Muḥammad b. Aḥmad Ibn Raḥmūn, who composed it in 1105/1603-4.

In 1127/1715 a descendant of the marabout family of the *zawiya* of Dilā' [see AL-DILĀ' in Suppl.], Abū 'Abd Allāh Muḥammad al-Masnāwī b. Aḥmad al-Dilā'i (d. 1136/1721), composed a new treatise on the Sharīfism of the Kādirids, *Natīdjat al-tahkik fi ba'd ahl al-sharāf al-wahhik* (publ. Tunis 1296 and Fās 1309, partially tr. T.H. Weir, *The first part of the Natījatu 'l-Tahqiq*, Edinburgh 1903).

A monograph was a little later devoted to the Shurafā' Šikilliyūn of Fās by a Kādirid, grandson of the author of *al-Durr al-sanī*, Muḥammad b. al-Tayyib al-Kādirī, d. 1187/1773: this is the *Lamḥat al-bahdīyat al-'āliya fi ba'd furū' al-sha'ba al-husayniyya al-sikilliyiyya*. The Shurafā' of Wāzzān had also several historians in the 12th/18th century; we may mention the *Tuhfat al-ikhwān bi-ba'd manāḥib shurafā' Wāzzān*, by Ḥamdūn al-Tāhirī al-Djūfī (d. 1191/1777), lithographed at Fās in 1324 A.H.

The composition of the *Kutāb al-Tahkik fi 'l-nasab al-wahhik*, which the genealogists of Fās consider apocryphal and attribute to Aḥmad b. Muḥammad al-'Ashmāwī al-Makkī, also dates from the end of the 12th/18th century: this work, which deals only with the Sharīfī branches that settled in Algeria, was translated in 1906 by Père Giacobetti.

A specialist in Sharīfī genealogy was Abu 'l-Rabī' Sulaymān b. Muḥammad al-Shafshāwanī al-Ḥawwāt, born 1160/1747, d. at Fās 1231/1816. He left among other works a monograph on the Shurafā' Dabbāghiyūn, called also from their quarter in Fās Shurafā' al-'Uyūn: *Kurrat al-'uyūn fi 'l-shurafā' al-kātinīn bi 'l-'Uyūn*, and a monograph on the Kādirid Shurafā', *al-Sirr al-zāhir*.

The Shurafā' 'Irākiyyūn had their historiographer, 'Abd Allāh al-Walīd b. al-'Arabī al-'Irākī, d. 1263/1849; this work, published in Fās, is called *al-Durr al-nafīs fi man bi-Fās min banī Muḥammad b. Naḥs*.

Finally, one may mention amongst more recent works, in addition to the information collected in the valuable *Sakwat al-ayfās* of Muḥammad b. Dja'far al-Kattānī [see AL-KATTĀNĪ], two works relating to the Sharīfī branches of Morocco. The first is the work of Muḥammad b. al-Ḥādīdj al-Madanī Gannūn, d. 1302/1885, *al-Durar al-maknūna fi 'l-nisba al-sharīfa al-masūna*; the other, more important, is entitled *al-Durar al-bahiyya wa 'l-djawāhir al-nabawiyya fi 'l-furū' al-ḥasaniyya wa 'l-husayniyya*, lithographed at Fās in 1314. This book, by Abu 'l-'Alā' Idrīs b. Aḥmad al-Fuḍaylī, d. 1316/1898-9, is an excellent repertory with much unpublished information, clearly presented.

(E. LÉVI-PROVENÇAL-[CH. DE LA VÉRONNE])

**SHURAHBĪL** b. **HASANA**, Abū 'Abd Allāh, early Meccan convert to Islam, prominent Companion of the Prophet and leading commander in the Arab invasions of Syria, d. 18/639.

Apparently of Kindī origin, he was known by his mother's name Ḥasana, but his patrilineal *nasab* was ... b. 'Abd Allāh b. al-Mutāḥ b. 'Amr. He is described as a *ḥalīf* or confederate [see *ḥilf*] of the Meccan clan of Zuhra but as also being connected, through another marriage of his mother, with Djamah. As an early convert, he took part in the second *ḥijra* or migration to Ethiopia (see Ibn Sa'd, iv/1, 94, vii, 118; Ibn al-Athīr, *Uṣd al-ghāba*, ii, 390-1). He became prominent in the Prophet's *ghazawāt* or raids, and in Abū Bakr's caliphate fought in the Ridda Wars under Khālīd b. al-Walīd. After the Muslim victory at 'Akrabā' or Yamāma, he was sent as one of the four commanders heading armies into Syria, in his case, into Jordan or Palestina Secunda, according to al-Madā'inī in al-Tabarī, i, 2107-8, with 7,000 warriors. He was probably at such places as Djarash, al-Fahl, Qadar, the Golan region, etc. (late 12-early 13/late 634-early 635), and also in northern Palestine, although firm information is lacking for most of these campaigns. He died, as did his fellow-commander Yazīd b. Abī Sufyān, in the Plague of 'Amwās (Emmaus) in 18/639, aged 67 (Ibn al-Athīr) or 69 (al-Balādhurī).

**Bibliography:** The primary sources for Shurahbīl's military career (Ibn A'tham, Balādhurī, Ṭabarī, etc.) are well exploited in F.McG. Donner, *The early Islamic conquests*, Princeton 1981, 114-16, 118-19, 129 ff., 152-3, 359, 361-2. See also M.J. de Goeje, *Mémoire sur la conquête de la Syrie*, Leiden 1900, 70 ff.; M. Gil, *A history of Palestine 634-1099*, Cambridge 1992, 33-4, 41, 44, 74. (C.E. BOSWORTH)

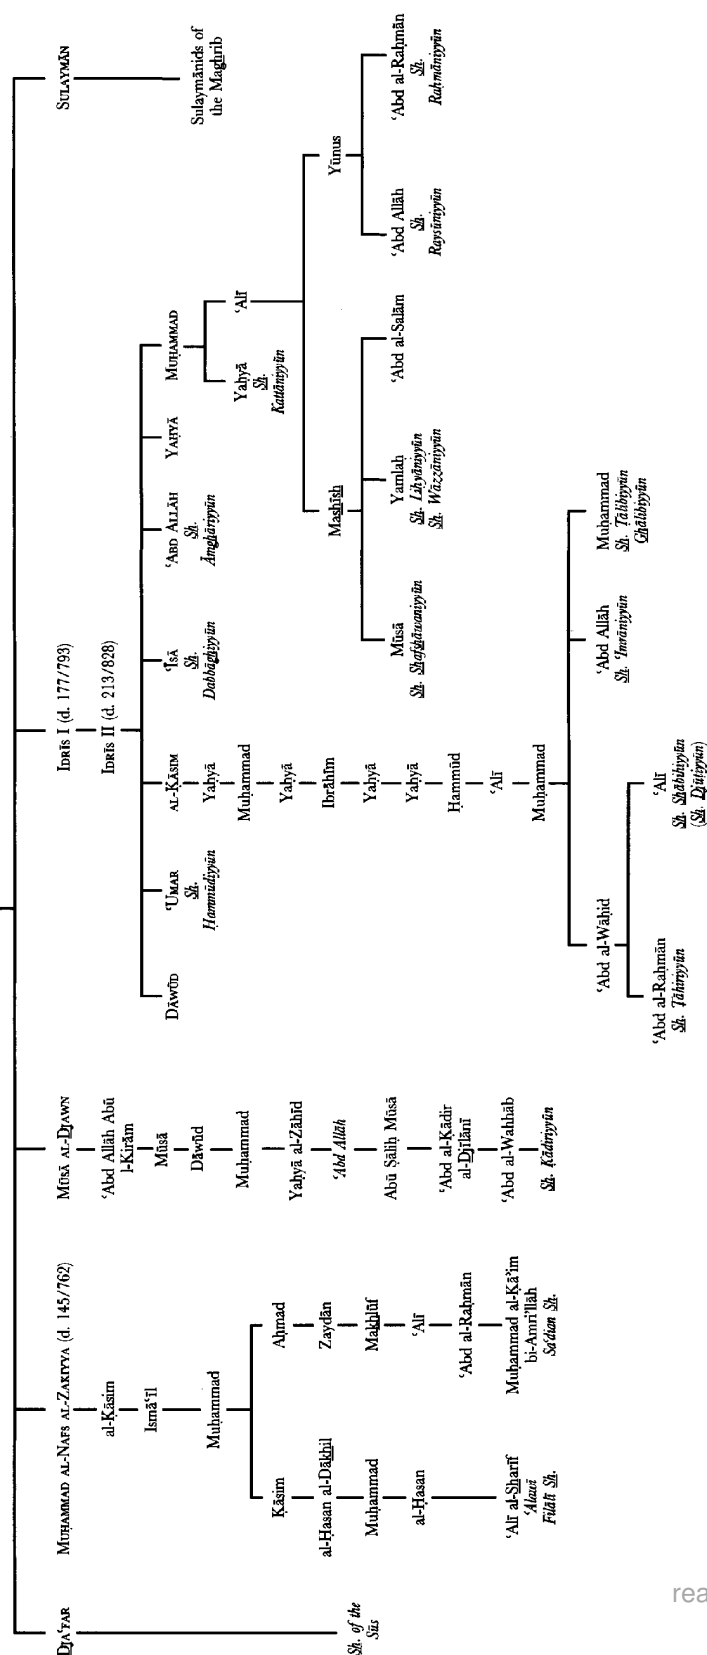

**SHURĀT** [see KHĀRIDJITES].

**SHURAYH** b. AL-ḤĀRITH (or b. SHURAHBĪL) b. KAYS, Abū Umayya al-Kindī, an early *kādī* of Kūfa. He was reportedly born in the Yemen to a family belonging to the Persian *abnā'* [q.v.]; his *nisba* is said to refer to his status as a *mawlā* of Kinda. There is disagreement as to whether he met the Prophet. According to a number of accounts (rejected by al-Shāfi'ī and others), he was first appointed judge of Kūfa by 'Umar (in 18/639 or 22/643); his appointment was allegedly confirmed by 'Uthmān, 'Alī and Mu'āwiya. 'Alī called him "the best judge among the Arabs" (*aḳdā 'l-'arab*) and provided him with a monthly stipend of 100 (or 500) dirhams. Their relationship appears, however, to have been uneasy: 'Alī upbraided him for handing down a wrong decision and even dismissed him, though he reinstated him a few months later.

Shurayh is said to have served as *kādī* of Kūfa for between 53 and 75 years, with two significant interruptions. The first occurred during the governorship of Ziyād b. Abīhi, who sent him as a judge to Baṣra, where he spent one year (or seven years); during that time Masrūk b. al-Aḳḳa' (d. 63/682-3) replaced him in Kūfa (or acted as his deputy there). The other largely coincided with the period during which Kūfa

was successively in the hands of al-Mukhtār and Muṣ'ab b. al-Zubayr (66-72/685-91) [q.v.], when Shurayh reportedly withdrew in order to avoid involvement in the *fitna*; others have it that he was forced to resign. He was reinstated by 'Abd al-Malik, who gave him 10,000 dirhams and some property in al-Fallūdjā [q.v.]. According to a report in al-Ṭabarī, al-Ḥadīdī [q.v.] in 79/698-9 acceded to the *kādi*'s request to be relieved of his duties and accepted his recommendation that Abū Burda b. Abī Mūsā al-Ash'arī [q.v.] be appointed as his successor. The most usual dates given for Shurayh's death are between 76/695-6 (a date which does not tally with al-Ṭabarī's report) and 80/699-700, though dates as early as 72/691-2 and as late as 99/717-8 are also recorded. Reports of his age at death range between 100 and 127 years; the statement that he was 180 years old is probably the result of a corruption of the number 108. These reports may reflect a wish to show that Shurayh was born sufficiently early to have met the Prophet (cf. Lammens, 79).

There are conflicting accounts of Shurayh's relations with the Umayyads. On the one hand he is portrayed as doing their bidding, as in the case of Ḥanī' b. 'Urwa [q.v.], when he obeyed 'Ubayd Allāh b. Ziyād by telling Ḥanī's supporters that their leader was still alive; and he was an adviser and confidant of Ziyād b. Abīhi. Yet he is also alleged to have privately made extremely unflattering remarks about some of his Umayyad superiors, and to have only followed their orders for fear of his own safety. The Kūfan Shī'īs accused him of having been among the signatories of a document charging Ḥudjir b. 'Adī [q.v.] with agitation against the authorities; yet Shurayh denied this, claiming that he had in fact testified to Ḥudjir's piety.

Shurayh is often described as the ideal judge. He held court in the mosque beside the *minbar*; on rainy days he would sit in judgment at home. His probity was such that he even found against his own son (or brother), who was then imprisoned. He is said to have followed earlier authorities in his legal pronouncements and to have refrained from issuing independent legal opinions (*fatwās*); others, however, claim that he applied *iqṭihād* when no answers to a particular problem were available. The pronouncements ascribed to him generally conform to the position of the old schools. They were transmitted mostly by Kūfan scholars, including al-Sha'bī, al-Ḥakam b. 'Uyayna and Abū Ishāq al-Sabī'ī, and some are cited by the Ḥanafīs as precedents. Shurayh is also remembered as a traditionalist and a poet.

The inconsistencies and implausible details in Shurayh's biography and the contradictory pronouncements attributed to him (e.g. on the exercise of pre-emption by non-Muslims; see Ibn Māza, 467) have led some scholars (notably Lammens, Tyan, Schacht and Pellat) to regard elements of his biography as legendary. Schacht in particular maintained that Shurayh was "merely a *hakam* of the old style" and that opinions and traditions ascribed to him were "spurious throughout" and "the outcome of the general tendency to project the opinions current in the schools of law back to early authorities". This view has since been challenged (see Sezgin, i, 402, Motzki, 152-3).

**SHŪRĪDA, MUḤAMMAD TAQĪ**, Persian poet, b. Shīrāz, according to most accounts, in 1274/1858, d. 6 Rabi' II 1345/14 October 1926.

His father 'Abbās was an artisan by trade. Shūrīda's ancestry, from what is known, reached back to the poet Ahlī Shīrāzī (d. 942/1535-6), author of the *mathnawī* *Sihr-i ḥalāl* "Legal magic". When he was seven years old he was struck blind by small-pox. Some two years later his father died, after which he came under the care of his maternal uncle. In 1288/1871-2 he accompanied his uncle in the pilgrimage to Mecca. On returning, he resumed his earlier studies, achieving a high standard in literary studies and Arabic. In 1311/1893-4 he travelled to Tehran, where he came into contact with Mīrzā 'Alī Asghar Khān Amīn al-Sulṭān (d. 1907), prime minister of Nāṣir al-Dīn Shāh. He was introduced to the monarch, who was impressed by his poetry, gave him his favour and eventually bestowed upon him the title of Faṣīḥ al-Mulk. He stayed in the capital till the accession of Muzaḥfar al-Dīn Shāh (1313/1896) after which he moved to Shīrāz permanently. He was treated as an important figure in official circles, and granted the revenues of a village. Towards the later part of his life, he held the custodianship of Sa'dī's resting place

in Shīrāz. He died at the age of sixty-eight, and was buried by the side of Sa'dī's tomb.

Shūrīda is credited with an astonishing memory which enabled him to know by heart many lengthy *qaṣīdas* of the old masters. He has left a number of works, most of them unfinished. His *diwān*, which comprises an estimated total of some 15,000 couplets, was published at Tehran in 1325/1946 by his son, Hasan Ihsān Faṣīḥī. It contains poems in conventional verse forms such as *qaṣīda*, *ghazal*, *musammat* and *kiṭ'a*. In his style of writing, Shūrīda was essentially a poet in the classical mould following the trends initiated by early masters from Khurāsān and Fārs. He wrote many panegyrics, the most notable being those in praise of the Qājār rulers. His themes, taken as a whole, are largely traditional.

(MUNIBUR RAHMAN)

**SHURṬA** (A.), a military-administrative term most conveniently translated as police. The basic meaning of the root *sh-r-ṭ* is "to separate or to distinguish something out of a larger entity", thus an élite force within an army or, according to some sources, criminals who separate themselves from the social order, and thence those whose function it is to bring them to book. An individual in such a unit is a *shurṭī*, plural *shurṭa* or more popularly *shurṭīyya*.

1. In the central lands of the caliphate.

The term *shurṭa* is among the earliest of the Arabic sources of the Muslim state applied to the élite units of the armed forces whose function was to impose law and order and to uphold the authority of the newly-established state. Its establishment is variously attributed to the caliphs 'Umar, 'Uthmān and Mu'āwiya, and there are several reports of units being involved in putting down revolts in the early Umayyad period. Into the early 'Abbāsīd period, the *shurṭa* and its commander, *ṣāhib al-shurṭa*, are reported as having played a significant role, firstly in enforcing the authority of the caliphs, and later in the course of the series of armed palace revolts which took advantage of a weakened caliphate.

The *shurṭa* remained primarily a pragmatic institution with no authority in the developing theoretical systems of the *Shari'a*, and with only a limited foundation in documents of appointment, such as those recorded by al-Kāḷashandī, and in the writings of al-Māwardī and Ibn Khaldūn. The institution combined the preventive and repressive functions of a police and security force with the judicial functions of a magistracy and summary court. In accounts of

government processes, it is often associated with the implementation of *siyāsa* [q.v.]. The historical records show that the *shurṭa* was in fact empowered with a wide and varying jurisdiction in different times and places. In Spain and during the later 'Abbāsīd period, its powers in the cities were not only territorially defined but also often specific to different classes of society. When the *ṣāhib al-shurṭa* was powerful he could trespass extensively on to the jurisdiction of both *ḥisba* and that of the *kādī*, taking charge of enforcing proper conduct in public places, dispensing criminal justice and supervising the implementation of retaliation or *kiṣās* [q.v.]. Among the duties often attributed to the *shurṭa* were riot control in the cities, protection of villages against brigandage, checking the quality of the work of artisans and support for tax enforcement. The *ṣāhib al-shurṭa* appears often in the early centuries as the head of the ruler's personal bodyguard, a function whose title and role is confused with that of the *ḥaras*. Among the earliest functions of the institution was also that of night watch (*al-tawāṣ bi 'l-layl*), and this was the one which it retained most consistently and for the longest time; in the Muslim West, its commander was often entitled *ṣāhib al-layl* in later centuries.

In the early centuries, the *ṣāhib al-shurṭa* was among the highest officials in both central and provincial government, but an indication of his gradually sinking rank is the change from his fourth placing under the 'Abbāsīds to the twenty-fifth one under the Mamlūks (according to al-Kāḷashandī, *Subh al-a'shā*, Cairo 1913-19, iv, 23, v, 450). This decline in rank is associated with the decline of the authority of central governments and the gradual redistribution of power between, on the one hand, foreign military castes (Mamlūks) which had control of repressive powers, and, on the other, with local urban quarters developing their local forms of collective defence and social discipline. By the late Mamlūk period, the term *shurṭa* is increasingly rare in the sources, as the *mamlūk* military units took over the functions of repression and imposition of public order. Many of the more local functions became vested in the local quarters, and the officials sank in status to become among the lowest in the community. The roles of night watch and rubbish collection tended to overlap, while officials responsible for crime prevention developed an ambiguous relationship with the petty criminal element.

2. In Muslim Spain.

The *shurṭa* in al-Andalus has always posed the problem of identification of its three categories: *ulyā*, *uṣṭā* and *sughrā*. In his history of Muslim Spain, E. Lévi-Provençal followed the interpretation of E. Tyan, who relied for his part on a text of Ibn Khaldūn. The *shurṭa 'ulyā* would be, according to the great North African historian, that concerned with misdemeanours committed by people belonging to the *khāṣṣa*, while the jurisdiction of the *shurṭa sughrā* was applied to the *'amma* (*Mukaddima*, Beirut 1981, 312). However, Ibn Khaldūn does not mention the *shurṭa uṣṭā*, established by 'Abd al-Rahmān III al-Nāṣir in 317/929-30. For their part, the historical sources are not clear regarding the competence of this "medium" *shurṭa*, just as they are not entirely clear about the two others.

and the subject remains shrouded in a degree of obscurity.

The earliest information regarding the *shurṭa* in al-Andalus dates from the reign of 'Abd al-Rahmān I (d. 172/788), who awarded this responsibility to al-Husayn b. al-Dajjīn al-Uḡaylī, commander of his cavalry at the battle of Muṣāra (this connection between the *shurṭa* and military activity is not always evident, but it becomes a stronger element under the Umayyad caliphate). During this early period, the function of the *shurṭa* could be exercised simultaneously with the *wilāyat al-sūk*, the *kaḏā'* or the prayer. It was al-Hakam I (180-206/796-827) who inaugurated the *shurṭa suḡhrā*, also ordering the construction of an enclosure in the gallery of the Great Mosque of Cordova, beside the position occupied by the *kaḏī*, for the submission of affairs subject to the jurisdiction of the *shurṭa*. Al-Hārith b. Abī Sa'd, son of a slave enfranchised by 'Abd al-Rahmān I, was the first to perform this function, initially under al-Hakam and then during the reign of his successor 'Abd al-Rahmān II (206-38/822-52) who, after the death of al-Hārith, appointed his son Muḥammad b. al-Hārith to take his place. It is interesting to note that under this last-named *amīr*, another descendent of slaves enfranchised by the founder of the Umayyad dynasty, Muḥammad b. Khālid Ibn Martanīl, was also appointed to the *shurṭa* (and to the inspection of markets). It could be said that, while retaining functionaries of Arab origin for this post, the *amīrs* were at pains to consolidate links of personal dependence (a cousin of Ibn Martanīl was responsible for the *shurṭa* under the *amīr* Muḥammad (238-73/852-86). As for the competence of the *shurṭa*, the intervention of al-Hakam I could be considered a deliberate effort to mark the existence of a jurisdiction separate from that of the judges, an effort which should perhaps be seen in the context of the *amīr*'s troubled relationship with the 'ulamā' of Cordova, which was to lead ultimately to the revolt of the *Rabad*. A new development in this evolution came about under 'Abd al-Rahmān II, who decreed the separation of the *wilāyat al-sūk* from the *ahkām al-shurṭa*, known as *wilāyat al-madīna*. The text of Ibn Hazm (quoted by Ibn Sa'īd in *Mughrib*, i, 46) on this question seems to associate the jurisdiction of the *shurṭa* with the *wilāyat al-madīna*. In his description of administrative systems in al-Andalus, Ibn Khaldūn (and Ibn Sa'īd quoted by al-Makkārī) confirms this possibility and, in fact, during the Umayyad caliphate references are found to the *shurṭat al-madīna*. But in other instances, it is clear that it was a case of two different functions, responsibility for which was incumbent on separate functionaries. The separation between *shurṭa* and *ahkām al-sūk*, introduced by 'Abd al-Rahmān II, poses similar problems, since it was not always respected, and under the *amīr* Muḥammad, successor to 'Abd al-Rahmān II, examples are already found of combination of the two functions, examples which are repeated throughout the Umayyad caliphate and the period of the Taifas. Cases are also known where appointment to the *shurṭa* was combined with that to the judgment of appeals (*radd*), this beginning under the reign of the *amīr* 'Abd Allāh (275-300/888-912). The *ashāb al-shurṭa wa 'l-radd* are classed, in the ceremonial of the Umayyad caliphate, with the senior judge of Cordova, judges of provinces and families of noble origin. They are considered equivalent to the *hukkām*, and they do not belong to the world of high-ranking officials (*ahl al-khūdma*).

The first *ashāb al-shurṭa al-ulyā* are recorded under the reign of the *amīr* 'Abd Allāh. One of them, Kāsim

b. Walīd al-Kalbī, was confirmed in his function by al-Nāṣir, and played an important military role in the pacification of the rebellions of Seville and of Carmona. In the early years of his reign (well documented in vol. v of Ibn Hayyān's *Muktabis*), al-Nāṣir appointed to this post members of families such as the Banū Abī 'Abda, the Banū Hudayr (who also fulfilled the role of the *shurṭa wustā*) and the Banū Shuhayd, as well as one of his maternal uncles and his *mawālī*, including Durri. At the same time, the caliph entrusted to him the command of numerous military expeditions. This link between the *shurṭa 'ulyā* and military responsibilities was maintained in the case of 'Ubayd b. Ahmad b. Ya'lā (appointed *ka'id al-dīna* in 343/954) and later, the admiral of the fleet 'Abd al-Rahmān b. Rumāhis. Descriptions of Umayyad ceremonial under al-Hakam II contained in vol. vii of the *Muktabis* show the privileged status of the *ashāb al-shurṭa al-ulyā wa 'l-wustā*, among the highest-ranking functionaries. This is not a question of a responsibility entrusted to a single person, and it is offered to people in conjunction with their appointment to the command of an army unit or the governance of a province. This evolution seems to indicate that the *shurṭa 'ulyā* (and the other categories) has become a kind of official rank or grade in the hierarchy of the caliphal administration, in close association with the army. Special missions are entrusted to holders of this title, such as the preparation of expeditions against Christian kingdoms and the reception of North African princes who are vassals of the caliph of Cordova. For their part, the biographical sources show us the continuity of the *hukkām* entrusted with the *shurṭa* (and frequently also with the *sūk*). Among these, the activity of Ahmad b. Naṣr under al-Hakam II is well described by the historical sources: he was concerned with the market as well as with the public distribution of the caliph's alms and with complaints against the governors (*ummāl*) of provinces, Ahmad b. Naṣr is ranked, in palace ceremonies, among the *ayyān al-khāṣṣa*, not among the senior functionaries.

With al-Manṣūr b. Abī 'Amr (who had himself been *ṣāhib al-shurṭa al-wustā* before exerting total control of caliphal power) references to the *ashāb al-shurṭa al-ulyā wa 'l-wustā* disappear from the sources (mention of the role of the *shurṭa 'ulyā* is not found until later, under the Zīrids of Granada, and then only once), while the *hukkām* continue to fulfil their functions, in this period as after the fall of the caliphate and in Cordova as in other cities. Al-Manṣūr had in addition a personal *shurṭa*, under the supervision of a *wāḥī*, and established in the palatine city which he had founded, al-Madīna al-Zāhira [q.v.]. In the period of disorder which saw the disappearance of the Umayyad caliphate, Ibn Wada'a, who was responsible for the *shurṭat al-madīna*, played an important political role, addressing the power vacuum which came into being. If Ibn Hayyān (quoted by Ibn al-Khaṭīb in *A'māl al-a'lām*) is to be believed, the *ashāb al-shurṭa* exercised despotic power during these years, and it was not until the seizure of power by the Banū Dhahwar that justice and order were to be established once more in Cordova.

(MANUELA MARÍN)

**SHUSHTAR**, **SHŪSHṬAR**, Arabic form **TUSTAR**, a town of southwestern Persia in the mediaeval Islamic province of Ahwāz [*q.v.*] and the modern one (*ustān*) of Khūzistān (lat. 32° 03' N., long. 48° 51' E.). It stands on a cliff to the west of which runs the river Kārūn [*q.v.*], the middle course of which begins a few miles north of the town. This position gives the town considerable commercial and strategic importance and has made possible the construction of various waterworks for which the town has long been famous. The main features of these constructions are: (1) the canal called Āb-i Gargar (in the Middle Ages, Masrūkān) which is led from the left bank of the river about 600 yards north of the town; it runs southwards along the east side of the cliffs of Shushtar and rejoins the Kārūn at Band-i Kīr, the site of the ancient 'Askar Mukram; (2) the great barrage called Band-i Kayṣar, which is thrown across the principal arm of the river (here called *Shutayt* or Nahr-i Shushtar) east of the town and is about 440 yards long; this barrage supports a bridge intended to connect the town with the west bank, but now a considerable gap is broken in it; (3) the canal called Mīnāw (from Mīyān-āb) which begins above the barrage in the form of a tunnel cut out of the rock on the western side of the town; the citadel is above this part; the Mīnāw turns southwards and is intended to irrigate the land south of the town.

Shushtar, along with these canals, was already in existence in pre-Islamic times. Pliny knows a town called Sostra (xii, 78) and it appears as Shōshtar in the *Liste géographique des villes d'Iran*, publ. by Blochet (*Recueil de travaux relatifs à la philologie et l'archéologie égyptienne et assyriennes*, xvii [1895], no. 46); it is found in Syriac literature as a Nestorian bishopric (cf. Marquart, *Erānshahr*, 27). Persian tradition also regards Shushtar as a very old town (e.g. Abu 'l-Fidā', ed. Reinaud, 315). This tradition is found in the Arab historians and geographers and most fully in the *Ta'rikh-i Shushtar* of 'Abd Allāh Shūshṭarī (see *Bibl.*). The story goes that the town was founded by the mythical king Hūshang after the foundation of Shūsh (Susa). Shushtar is said to be a comparative from Shūsh meaning "more beautiful", in reference to the site of the town (Marquart, *loc. cit.* also regards it as a derivative from Shūsh with the suffix *-tar* indicating direction). The Arabic form Tustar is generally explained as an Arabisation of Shūshṭar (e.g. by Ḥamza al-Isfahānī and Yāqūt, i, 848). Several sources record that the town was built in the form of a horse. Tradition also says that the Mīnāw canal, formerly called Nahr-i Dāriyān, was built by Darius the Great and that it was the Sāsānid Ardāshīr I who began to construct the barrage in the river below the mouth of the canal, after the latter had dried up because the bed of the river had sunk through erosion by the force of the current. The work was only completed, however, under Shāpūr II by his Roman prisoners under Valerian II (cf. also Tabarī, i, 827 and al-Mas'ūdī, *Murūdj*, ii, 184 - § 606). The Āb-i Gargar was first dug simply to divert the volume of water. The Band-i Kayṣar was next constructed and called after the emperor, and the bed of the river above the barrage was paved with huge slabs of stone bound with iron so as to prevent any further erosion. This paving was called *Shādirwān*, a term which was also applied to the barrage itself. Ultimately, a new barrage is said to have been built across the Gargar. From the 8th/14th cen-

tury, the Āb-i Gargar was called Dū-Dānig and the Nahr-i Shushtar Čahār-Dānig, because they contained respectively two- and four-sixths of the quantity of water in the Kārūn. Muslim authors number these great hydraulic constructions among the wonders of the world (e.g. Ḥamza al-Isfahānī and Ibn Baṭṭūta). Although the authenticity of the tradition quoted could be for the most part disputed, it is not improbable that Roman prisoners of war took part in the construction of the barrage (cf. Nöldeke, *Geschichte der Perser und Araber*, 37); local tradition further attributes to Roman colonists the introduction of a number of industries, e.g. the manufacture of brocade (*dībādī*) and certain popular customs.

In the caliphate of 'Umar, the town was conquered by al-Barā' b. Mālik, whose tomb used to be pointed out in the centuries following. Tradition also says that the coffin of the prophet Dāniyāl was found there, which later on was brought to Shūsh. In the Umayyad period, the town became one of the strongholds of the Khāridjīs; the Khāridjī Shabīb made it his capital, but after his death al-Ḥadīdjādī seized it; it was then that the great bridge over the barrage was destroyed. Under the caliphs, Shushtar was the capital of one of the seven provinces (sometimes a larger number is given, see al-Mukaddasī, 404), into which Khūzistān was divided. When Baghdad became the centre of the empire, Shushtar gradually became influenced by its proximity to the capital. One quarter of Baghdad, for example, in the 4th/10th century was called Maḥallat al-Tustariyyīn; it was the residence of the merchants and notables from Khūzistān. The oldest mosque was built under the 'Abbāsids; begun in the reign of al-Mu'tazz (252-5/866-9), it was only finished under the caliph al-Mustarshid (512-29/1118-35). There was, however, a fire-altar at Shushtar in the time of al-Ḥallādjī (Massignon, *La passion d'al-Hallāj*, i, 92).

Shushtar, along with Ahwāz, has always been the chief town in Khūzistān; Ḥamd Allāh Mustawfī calls it the capital of this province. It was conquered by Tīmūr, and remained in the hands of the Tīmūrids till the year 820/1514, when it fell to a Shī'ī dynasty of Sayyids under the suzerainty of the Ṣafawids and became a centre of Shī'a propaganda. Several governors have founded little dynasties there. The town enjoyed most prosperity in the reign of Wākhishtū Khān (1041-78/1632-67), whose descendants kept the governorship till the end of the Ṣafawids. At the beginning of the 19th century it was among the provinces governed by Muḥammad 'Alī Mīrzā, son of Fath 'Alī Shāh, who restored, for example, the barrage and the bridge. At this period, it is said to have had a population of 45,000, but the number has certainly diminished a great deal since, for Rawlinson in 1836 puts it at 15,000 and Curzon in 1890 at 8,000. The area covered by the town is out of all proportion to the population. Sykes also calls Shushtar the most ruined town in Persia; this description applies also to the irrigation works. The houses are built of stone and brick; they contain cellars [see *SARDĀB*], here called *shewādān*, in which the inhabitants shelter in the excessive heat of summer (Shushtar has the dubious distinction of having the highest mean maximum temperature for July in the whole country, 47.3° C.).

As to the inhabitants themselves, they are a mixture of Arab and Iranian or proto-Iranian elements. In the middle of the 19th century there were still a considerable number of Mandaeans here; Layard counted 300-400 families of them in 1840 (cf. also the description of them given by 'Abd Allāh al-

Shushtarī, 24). They have probably now disappeared. Travellers at the end of the 19th century (Curzon and Sykes) described the character of the present inhabitants as disagreeable and fanatical. Among the Persians, the devoutness of the inhabitants has earned the town the honorific title of *Dār al-Mu'minīn*. On the other hand, we find Shushtar included among the Persian towns celebrated for the stupidity of its inhabitants (Christensen, in *AO*, iii, 31).

In the early 20th century, the town was rent by feuding between the two factions of the Ni'matīs, supporters of the Bakhtiārīs and Constitutionalists, and the Haydarīs, pro-Arab and pro-monarchy. From the later 19th century, Shushtar had benefited commercially from being the farthest point on the Kārūn reached by the steamship service inaugurated in 1887 by Messrs Lynch [see Kārūn], for goods had to be landed there and sent forward by caravan. It grew to be the major retail centre of southwestern Persia, with a population reaching 28,000 in 1938 before the completion of the Trans-Persian Railway then. But since that line crossed the Kārūn at Ahwāz, on its way from Bandar Shāpūr on the Gulf to the interior plateau, Shushtar was bypassed; Ahwāz [q.v.] became a major city, eclipsing Shushtar, so that the latter's population began to decline. In 1971 it was still only 27,532, but has recently increased to 70,294 (1991 census figure).

(J.H. KRAMERS-[C.E. BOSWORTH])  
AL-SHUSHTARĪ, ABU 'L-HASAN 'ALĪ b. 'Abd Allāh al-Numayrī, Šūfī of Muslim Spain and resident of Malaga and Grenada (b. ca. 610/1212, d. at Tīna 668/1269 and buried at Damietta; his *nisba* derives from Shushtar, here a *ḡarya* or village of the Guadix district).

His masters included Ibn Surāka al-Shātibī and other disciples of Abū Ḥafṣ 'Umar al-Suhrawardī (d. 632/1234 [q.v.]), and he was in contact with the Šūfī poet al-Naḍīm b. Isrā'īl al-Dimashqī, whom he met in 650/1252. But most influential for al-Shushtarī was the philosopher and mystic Ibn Sab'īn [q.v.], whom he met at Biḍjāya in 646/1248 and five years later in Egypt and at Mecca.

His prose works include *al-Makālīd al-wuḍūdiyya fī asrār al-šūfiyya* (ms. Cairo, Taymūr, *taṣawwuf*, 149, fols. 413-43); *al-Marātib al-īmāniyya wa 'l-islāmiyya wa 'l-iḥsāniyya*; *al-Risāla al-'alāmiyya* (résumé by Ibn Luyūn); *al-Risāla al-baghdādiyya* (ca. M.-Th. Urvoy, in *BEtOr*, xxviii [1975], 259-61); *al-Risāla al-kudsiyya fī tauḥīd al-'amma wa 'l-khāṣṣa* (mss. Taymūr, *taṣawwuf* 149, see Urvoy, 259 n. 3, and Istanbul, Şehit Ali 1389/6); and *al-'Urwa al-wuthkā fī bayān al-sunan wa-iḥṣā' al-'ulūm...* But al-Shushtarī was best known for his poetry, with

a *diwān* of odes, *muwaṣṣṣahāt*, etc., commented on by 'Abd al-Ḡhanī al-Nābulusī (author of a *Radd al-muf-tarī fī 'l-ta'ān 'alā 'l-Shushtarī*), Ahmad b. Muḥammad al-'Adjība al-Ḥasanī and Zarrūk (mss. of the *diwān* listed in Massignon, *Investigaciones sobre Šuštārī*, 54). It has been edited by 'A.S. al-Nashshār, Alexandria 1960, and by F. Corriente, *Poesía estrófica (cējeles y/o muwaṣṣahāt) atribuida al místico granadino Aš-Šuštārī (s. XIII d.c.)*, Madrid 1988. In his *muwaṣṣahāt* and *azḡjāl* in dialectical Arabic, set to melodies, he followed the way traced by Muḥyī 'l-Dīn Ibn al-'Arabī, who had made the *zaḡjāl* a vehicle for mysticism (see Corriente, *La poesía estrófica de Ibn 'Arabī de Murcia*, in *Sharq al-Andalus*, iii [1986], 19-24).

Certain charismatic acts were attributed to him, and were gathered together by al-Ḡhubrīnī and reproduced by later biographers. As a disciple of Ibn Sab'īn, al-Shushtarī was considered to be of suspect orthodoxy and was allegedly an exponent of the doctrine of *ḥulūl*, although the reserves concerning him are less than those for his master.

(MARIBEL FIERRO)

AL-SHUSHTARĪ, SAYYID NŪR ALLĀH [see NŪR ALLĀH].

AL-SHU'UBIYYA (A.), a movement within the early Muslim society which denied any privileged position of the Arabs. The term Shu'ubiyya goes back to Qur'ān, XLIX, 13, where it is stated: "O Men, We have created you of a male and a female and have made you into peoples (*shu'ūb*) and tribes (*qabā'il*), that ye might know one another. Verily the noblest of you in the sight of God are they that do most fear Him."

The derivation of the term Shu'ubiyya from the word *shu'ūb* occurred before the movement of the same name appeared (Gibb, 66-7). The original Shu'ubiyya was the concept of extending the equality between the *shu'ūb* and the *qabā'il* to include equality among all Muslims, and was adhered to by the Kharijites [q.v.] in the early period of Islam. This idea countered the Quraysh's [q.v.] claim to leadership. The Shu'ubiyya movement, which appeared in the 2nd/8th century and reached its peak in the 3rd/9th century,

had other, more diverse goals. These ranged from a call for equality between non-Arabs ('ADJAM [q.v.]) and Arabs ('ARAB [q.v.]), whose advocates were also known as *Ahl al-taswiya* (al-Djāhiz, *Bayān*, iii, 5), to the claim of non-Arab supremacy which denied any significance, past or present, of the Arabs.

Most of the *Shu'ubīs* were Persians, although references to Aramaeans, Copts and Berbers, among others, are also found in the literature. (A unique example of non-Persian *Shu'ubiyya* is Ibn Waḥshiyya's [q.v.] *Nabataean agriculture*.) It seems that the term *Shu'ubiyya* was used by the *Shu'ubīs* themselves, and was not a discriminatory term used by their opponents. In contrast to the classical Arabian interpretation of the *Kur'ān*, where *shu'ub* and *kabā'il* were both based on the principle of genealogy, several Persian interpreters assigned different meanings to *shu'ub* and *kabā'il*, whereby *shu'ub* stood for a people whose identity was determined by territory, and *kabā'il* stood for a people whose identity was determined by genealogy (Mottahedeh, 167-70).

I. Goldziher was the first to study the *Shu'ubiyya* in depth; he identified two main forces behind the anti-Arab movement. First, he stated that the 'Abbāsids had been exercising strong discrimination against the Arabs. Second, the Persians, only superficially Islamised to begin with, re-discovered a national consciousness. This nationalism was further spurred on by autonomy movements taking place in the eastern part of the empire at the time (Goldziher, *Muhammedanische Studien*, i, 147-55). But Goldziher's supposition that the *Shu'ubiyya* was in contact with nationalistic separatist movements was contested by H.A.R. Gibb. He came to the conclusion that the *Shu'ubiyya* had not been a threat to the continued existence of the empire but rather to its future direction. "Their aim was not to destroy the Islamic empire, but to remold its political and social institutions and values, which represented in their eyes the highest political wisdom." (Gibb, 66.) In fact, it is difficult to find evidence of any sympathy on the part of the *Shu'ubīs* for revolts that took place against the central power. Furthermore, the *Shu'ubīs* primarily consisted of the educated, poets, and, above all, secretaries, who could only benefit from a strong and centralised state.

Over the course of their conquests, the Arabs adopted both the Sāsānid administration in place as well as its personnel, a group of highly professional civil servants with a strong sense of their status in society. Although the patron-client-relationship (*walā'* [q.v.]) bound the secretaries to their Arab conquerors, it also served their unique privileges. The secretaries remained faithful to the Sāsānid tradition; they translated literature such as the biographies of the kings of Persia, wrote epistles in the Sāsānid official style and produced works on practical knowledge about government. There is no evidence of any conflict between the civil servants and the Arabs well into the early 'Abbāsīd era. Even in the writings of a high secretary as Ibn al-Mukaffā' [q.v.], expressing his disgust for people of lower origins at the caliph's court, one detects no anti-Arab resentment between the lines (Goitein, 236).

The clash came after the former garrisons of Kūfa and Baṣra developed into urban and prosperous societies made up of Arabs and non-Arabs, merchants and artisans, scholars and educated. The foundations of Arab-Islamic scholarship were laid, and a new Arab style of poetry and prose began to circulate. As the literary production of the secretaries came under serious competitive pressure towards the end of the 2nd/8th

century, the initial indifference of the secretaries towards their Arab conquerors changed to hate, and the *Shu'ubiyya* movement came about (Gibb, 62-6).

Gibb's description of events is convincing, but it is also incomplete. It was not simply a question of the triumph of one cultural tradition over another; rather, it was a matter of status. At risk was not just the reputation of the Persian court literature but the social privileges of the secretaries who followed its tradition. Meanwhile, the Arab and Islamic literature was not simply a product of isolated philologists and jurists but reflected the world-view of the new citizens.

This development took place in an era of demilitarisation, expansion of trade relations and a general flourishing of the cities, whereby social status differences between Arabs, as well as between Arabs and non-Arabs, began to lose importance. These things added together made up the foundation of a society that offered its members an opportunity to raise their social position above the level assigned at birth.

At the beginning of the 'Abbāsīd era, the position of the secretaries in the state administration remained largely unchallenged, but soon thereafter members of the urban middle class began to appear in the highest positions of government. Two epistles by al-Djāhiz [q.v.], namely "Reproach of the character of the state secretaries" (*Dhamm akhlāk al-kuttāb*) and "Praise of the merchants and reproach of the public offices" (*Fī madh al-tuḡḡār wa-dhamm 'amal al-sultān*) are perhaps a good illustration of relations at the time, even though they may include anti-*Shu'ubī* exaggerations. According to these epistles, the secretary distributed pompous Persian maxims and criticised the Arab-Islamic tradition, while in truth he was completely dependent upon his masters and under an obligation to show utmost loyalty to them. The merchant, on the other hand, shared his knowledge of the *Djāhiliyya* and of Islam with others willingly and with composure, because his living was not dependent upon his erudition (*Dhamm*, 42-3; *Madh*, 157-8).

Some authors interpret the *Shu'ubiyya* less under its specific conditions but rather compare it with other movements of the same sort within the larger framework of Muslim history and society. The most recent publication on the topic, for instance, has largely removed the social and ideological context from the study of this movement and has instead portrayed it as a form of regional and ethnic antagonism. There it is seen in a line with its antecedents, the conflict of the Northern and Southern Arabs (Norris, 32).

Not only the meaning but also the importance of the *Shu'ubiyya* is open to various interpretations. On the one hand, there are preserved in mediaeval Arabic anthologies, literary works and historiographies a number of remarks by poets such as Bashshār b. Burd [q.v.] which seem to demonstrate that the making of pro-Persian or anti-Arab comments was a harmless literary fashion (Norris, 35). On the other hand, a passage by al-Djāhiz reveals deep concern that the *Shu'ubiyya* could grow to become a real threat to Islam. Hate breeds hate, according to his line of thinking, and it is only a short step from hating the Arabs to hating Islam. "The bulk of those who are sceptics in regard to Islam, at the outset, were inspired by the ideas of the *Shu'ubiyya*. Protracted argument leads to fighting. If a man hates a thing, then he hates him who possesses it, or is associated with it. If he hates [the Arabic] language then he hates the [Arabian] peninsula, and if he hates that peninsula then he loves those who hate it. Thus matters go from bad to worse with him until he forsakes Islam itself, because it is

the Arabs who brought it; it is they who provided the venerable forebears and the example worthy of imitation" (*Hayawān*, vii, 220).

The study of the *Shu'ubiyya* is made even more difficult by the fact that not one original tract has survived. One is forced to use the accounts of anti-*Shu'ubi* polemics in order to reconstruct the movement's arguments. The most complete examples of such a polemic are found in al-Djāhiz, *Bayān*, iii, and Ibn Qutayba's [q.v.] *K. al-'Arab* and a passage in Ibn 'Abd Rabbih. They are built upon the pattern of "virtues and vices" (*manāḳib, mathālib* [q.v.]) of the respective nations and recount the attacks of the *Shu'ubiyya* against the Arabs as well as their refutation. Arab warfare, described by the *Shu'ubis* in detail, was a technical, tactical and strategic disgrace in comparison to the warfare skills of the Sāsānids and Byzantines. The Arabian habit of gesticulating with a stick in hand while speaking, and other linguistic and non-linguistic habits of speech, served only to expose the emptiness of the Arabian claim to eloquence. Their rough language revealed the Arabs for what they really were, a people of camel-drivers. The Persians alone were capable of eloquence, delicacy and good conduct, and the arts and sciences were products of the Greek and Indian cultures, not the Arabian. Furthermore, the Arabs could rightfully claim just four prophets as their own, namely Hūd, Šālih, Ismā'il and Muḥammad [q.v.], and were said to be descendants of Ismā'il, the son of Ibrāhīm [q.v.] by his slave Hagar, and not of Ishāk, the son of Ibrāhīm by his legal wife Sarah.

But this crude form of anti-Arabism was not what made the *Shu'ubiyya* dangerous. The danger of the *Shu'ubiyya* lay in the scepticism it provoked among the educated. The seeds of the concept of free-thinking (*zandaqa* [q.v.]), sown in the pre-Islamic culture in 'Irāk, showed not only Manichaean tendencies but began to manifest itself as an anti-moral, frivolous and cynical attitude (*muḍjūn* [q.v.]).

The reaction was both Arabian and Islamic. Three developments laid the foundation for a final victory of the Arabian humanities in the period following al-Djāhiz. These developments were the concept of *adab* [q.v.], which joined pre-Islamic and Arabian traditions with religious tradition, the rise of the Mu'tazila [q.v.] with its strict monotheistic outlook, and the founding of the *Bayt al-ḥikma* [q.v.] which produced translations of Greek logic and philosophy that were effective instruments in the fight against dualistic heresies. In this context, Ibn Qutayba was able to compose a binding compendium that recognised Sāsānid tradition while at the same time reconciled it with the Arabian and Islamic scholarship (Gibb, 69-72).

About two hundred years after the *Shu'ubiyya* died out in the East, a new *Shu'ubiyya* appeared in the 5th/11th century in al-Andalus. This time it was not the Persians but the Berbers and the "Slavs" [see AL-ŠAḲĀLIBA. 3], understood to mean Galicians, Franks, Germans, Langobards and Calabrians, who made use of anti-Arab polemic. The epistle by Abū 'Āmir Ibn Gharsiya [q.v.], which earned no less than five rebuttals in the century following its writing, is considered to be the masterpiece of the Andalusian *Shu'ubiyya*. Ibn Gharsiya was a renowned poet and secretary with Christian and Basque origins, but his epistle does not differ substantially from those of his eastern predecessors. As with the earlier works, the epistle makes references to the pre-Islamic Arabs' low degree of civilisation and praises the Persian and Byzantines, without losing a word over the non-Arabs of al-

Andalus. Furthermore, as with the earlier writings of the *Shu'ubiyya*, the descent of the Arabs from Ismā'il is held up as a blemish upon the people. The epistle demonstrates Ibn Gharsiya's excellent command of the Arabic language and his familiarity with Eastern culture, two things that were also characteristic of his predecessors. In contrast to them, however, Ibn Gharsiya was not rooted in an old-established tradition whose preservation was his main task. "He was not a Christian Spaniard attacking the conquerors of his homeland but rather a neo-Muslim attempting to extend the benefits of Islamic civilization to those non-Arab peoples who formed a large segment of the Andalusian community" (Monroe, 12-13).

In the light of the resurgence of a new kind of *Shu'ubiyya* in al-Andalus, the question arises whether it should be viewed not only in its specific historical situation but also as a general phenomenon in Arab-Islamic history. Hanna-Gardner pursued this question; and they discovered not two or three, but many *Shu'ubiyyas*, beginning with the *Shu'ubiyya* of the Middle Ages, through Ottomanism and Westernisation in the 19th century to Internationalism, Regionalism and Socialism in the 20th century. According to the authors, these movements have one thing in common that permits grouping them together under the same heading. They appeared in the name of universalism in order to undermine Arab communal consciousness, and thereby automatically called forth an Arab particularism. In this sense, all of them were true to the original meaning of the term *Shu'ubiyya* "belonging to the people", while the Arabs continued to identify themselves with *kaumiyya* [q.v.] "belonging to a particular people", i.e. the Arabs (337).

The temptation is great to view the regular ebb and flow of *Shu'ubiyya* and Arabism in terms of century-to-century swings between universalism and particularism. Yet such a view would overlook two important facts. First, the term *Shu'ubiyya* fell out of use in the Middle Ages and did not become popular again until the time of Arab nationalism, where its use became inflated. The term then became a common denunciation of one's political opponents and was even projected back into history. Second, while the universalism-particularism-scheme may be true for the 20th century, it does not fit the *Shu'ubiyya* of the Middle Ages. For it was in the name of an Islamic universalism, and not of an Arab particularism, that writers like al-Djāhiz attacked the movement at that time.

(S. ENDERWITZ)

**SHUWA** (etymology of this name obscure), a group of Arabs, of nomadic origin, found by early modern times (the 19th century) in the central Sudan belt of Africa, now coming within the countries bordering on Lake Chad, sc. western Chad, north-eastern Nigeria, northern Cameroons and the south-eastern tip of Niger.

## 1. History.

Their origin was in Dārūr and Wādāy [q.v.], and they migrated westwards at an unknown date, perhaps as early as the 14th century; in the 17th century they were present in Bagirmi [q.v.] to the southeast of Lake Chad as that nation took shape. The earliest arrivals adopted the Kanuri language, but in the main they preserved their Arabic dialect, distinct from the Arabic of North Africa and the Western Sudan [see below, 2.]. A further impetus to their westwards migration was when, in the early 19th century, Shaykh Muḥammad al-Kānemī [q.v.] used them as aides against the eastwards advance of the Fulani. The Shuwa do not seem to have passed beyond Borno or Bornu [q.v.] in northeastern Nigeria, and only small numbers went southwards to the Mardawa and Adamawa regions. Some of the Shuwa remained pure camel nomads (the *abbāla*), but others converted to cattle nomadism (the *baḳkāra*) and some became agriculturists around the southern shores of Lake Chad, where there arose Shuwa villages, cultivation being done by Negro serfs or clients. They do not, however, seem ever to have formed towns or to have had a permanent home centre. Hence they were often in a dependent relationship with local potentates, such as the Kanembu *Mais* of Kanem. In 19th century Borno, many Shuwa held high court and administrative posts and the Shehu rulers took their womenfolk as wives.

The Shuwa were a significant factor in the Islamisation of the region. Two of the most important and

influential nomad groups in Bornu, the Awlād Sāra and the Awlād Muḥārib, claimed Sharīf [q.v.] status, and traditions of eastern Hausaland include the chiefs of the Shuwa amongst those allegedly receiving copies of the Kur'ān from the Prophet Muḥammad's own hands. According to Trimmingham, the Shuwa, unusually for the Muslims in this region, are Ḥanafī in madhhab.

Fisher in iv, 111; and see BORNŪ; KĀNEM; ČAD in Suppl. (Ed.)

## 2. Dialect.

The term Shuwa (شوى) refers to the spoken Arabic dialect and its approximately 2 million speakers who currently inhabit the former territories of Bagirmi [q.v.] and Kanem [q.v.]-Borno, today's Borno State [see BORNŪ], Northeast Nigeria, and parts of Cameroon and Chad. The largest concentration of Shuwa Arabs presently lives in and around Maiduguri. There is no consensus on the etymology of the word *Shuwa*. The people themselves favour a Kanuri [q.v.] (Nilo-Saharan) etymon *šwa* "beautiful"; however, much more probable is an Arabic source *šuwāh* "sheep" (sing. *šāh*), demonstrating that the Shuwas are part of Baggāra Arab culture.

Shuwa Arabic is but one micro-dialect of a distinct Sudanic macro-dialect spoken between Lake Chad and the Red Sea. A major characteristic of Shuwa Arabic is the preservation of Old Arabic (OA) short vowels, especially *a*, in unaccented open syllables (*kabīr* "big"), which have elided in the Maghrib and the Levant. Another is that it has no diglossia with Modern Standard Arabic.

Some principal features of the Shuwa dialect are:

- (1) the OA pharyngeals have become laryngeals or zero (OA *qā'd* > *gaat* "he stayed"; OA *'aḥmar* > *āhamar* "red")
  - (2) OA *ġ* > *q* (*qanam* "sheep")
  - (3) OA *m* > *b* in a few lexemes containing nasals (*bakān* "place")
  - (4) OA *ḡ* > *d* in a few lexemes containing sibilants (*šadar* "trees")
  - (5) the development of an inchoative-intransitivising prefix *al-* (*fākkar* "remind", *alfākkar* "remember")
  - (6) verbal reduplication (*lāmma* "gather", *lāmlam* "gather a lot")
  - (7) final stress in *-i* "my", *af'al* elatives, and singulative *-ā* (*bētī* "my house", *akbār* "bigger", *qanamā* "1 sheep")
  - (8) front and back vowel harmony (*biš'il* "he takes", *bugūl* "he says")
  - (9) syllable and word-final position devoicing (*tač* "you m.s. come", *mak'at* "place where one stays")
  - (10) many loanwords (including idioms) from non-Semitic African languages, such as Kanuri, Hausa (*rās alkalām* "topic", lit. "head of the talk", *dugó* "then, afterwards" < Kanuri *dugó* "first, before")
- Two major groups of Shuwa dialects can be distinguished, Eastern (E) and Western (W). The major E isoglosses are:
- (1) OA *θ* > *s* (E *sār* "bull", W *tār*)
  - (2) l. plural imperfect subject suffix is *-u* (E *nimšu* "we go", W *nimšī*)
  - (3) active participle with object suffix *-in* (E *kātūbha* "has written it, f.", W *kātūbha*)

realpatidar.com

(4) imperfect preformative vowel is *i* (E *tījī* "she comes", W *tījī ~ tājī*)

(5) Some lexical items (E with *h*, W with *x*; e.g., *hadda* "he put")

**SHUYŪ'YYA** (A.), Communism.

1. In the Arab world.

1. *Terminology*

This substantive and the noun-adjective *Shuyūʿī* were established after the First World War to denote the ideological positions and political organisations associated with the Third International, described as "communist", as distinct from the "socialist" Second International and the positions and organisations associated with it. References to socialism (*Iṣṭirākīyya*), as a theoretical basis, remain in current usage, although it tends to be qualified by "scientific".

While *Iṣṭirākīyya* has prevailed over the borrowed form *Sūsyālism* to denote socialism since the 1870s, terminology relating to "communist" tendencies of thought and action was fluctuating until the beginning of the 1920s. Derivations from the borrowed form *Kūmūn/Kūmīn* came into existence after the Paris Commune, but in 1883 Muḥammad ʿAbduḥ [q.v.] opted for the following definition of "naturalist" materialist trends in his Arabic translation of the *Risāla* of ʿJamāl al-Dīn al-Afghānī, entitled *al-Radd ʿalā al-dahriyyīn: al-Sūsyālism ʿal-Idjtimāʿiyyūn* wa ʿl-Nihīlism ʿal-ʿAdamiyyūn wa ʿl-Kūmūnist ʿal-Iṣṭirākīyyūn. In 1908, ʿDjirdjī Zaydān [q.v.] repeated this distinction, but in the same year Shibli Shumayyil [q.v.] preferred, while noting the equivalence with *Idjtimāʿiyya*, the global term *Iṣṭirākīyya* to denote European socialism in all its diverse forms; and it is this term which predominates in the more authoritative works of Salāma Mūsā (1913) [q.v.] and Muṣṭafā al-Manṣūrī (1915). After the adoption in 1918-19 of the distinctive qualificative "communist" (change in the name of the Bolshevik party, then foundation of the Third International), two pairs of terms are in competition: *Ibāḥiyya/Ibāḥī*, used especially, on account of its multiplicity of senses, by polemicists, although not exclusively so, since it denotes the common, collective appropriation of property, and in Palestine an early Arabic tract on the eve of 1 May 1921 is signed *al-Hizb al-Ibāḥī fī Filastīn*; the pairing *Shuyūʿiyya/Shuyūʿī*, derived from a root which expresses the same idea, and all the more so in that the *Mushāʿ* [q.v.] pattern is applied to a still-practised form of indivision, was to gain ascendancy. Since 1921, Tunisian communists have used these terms to describe themselves.

2. *The inter-war period: foundation of the first communist parties*

In the immediate post-war period, the Russian Revolution was viewed with particular interest in the Arab Orient, since it appeared to accord with the nationalist aspirations which motivated the revolutions of 1919 in Egypt, of 1920 in ʿIrāq, with movements of opposition to mandatory division in the Levant and in Palestine, and with the still embryonic, proto-nationalist, constitutional reformist movements of Tunisia and Algeria. The denunciation, after November 1917, of secret agreements for the sharing of the Arab

provinces of the Ottoman Empire (Sykes-Picot-Sazonov), entailing renunciation of the Russian claim, the echo of the Congress of Baku (September 1920), calling the Muslim peoples to *djihād* and, for the Pan-Islamists at least, support for Kemalist Turkey—all these contributed to this "anti-imperialist" alliance. The link with social aspirations was not absent, but it was interpreted according to different scales of priorities. The objective of the Bolsheviks was to establish a society based on the collective appropriation of social goods. A *fatwā* of the *muftī* of Egypt, in response to a question in *The Times*, having declared this contrary to religion, *al-Manār*, the periodical of Muḥammad Rashīd Riḍā [q.v.] (August 1919), taking up an idea of ʿAbd al-Raḥmān al-Kawākibī (*Ṭabāʿī al-istibdād*, 1902 [q.v.]) asserted that there was, neither in the ideas nor in the actions of Bolshevism, any contradiction with the principles of Islam. But this was a marginal opinion. Nationalist leaders were more aware of the dialectics of power; the weight of popular demonstrations and strikes consolidated the national cause, but needed to be kept under control. On the other hand, intellectuals, versed in socialism and its various forms, as well as trade unionist or pre-trade unionist workers, were more aware of the dialectics of society; to give an anti-capitalist class content to anti-imperialist national conflicts, thus paving the way for the acquisition of power by the workers, on the model of the Soviet "dictatorship of the proletariat".

Between 1920 and 1925, the first parties inspired by the Communist International made their appearance, although the modes of formation were diverse. In two cases, it was a matter of the evolution of European socialist formations which attracted few if any adherents in the countries concerned. In North Africa, under French domination, the decision was the result of the majority decision of the Congress of Tours (December 1920) of the Socialist Party (S.F.I.O., *Section Française de l'Internationale Ouvrière*) to accept the conditions of membership of the Communist International, and thereby to become the Communist Party (S.F.I.C., *Section Française de l'Internationale Communiste*). The federation of Tunisia and those of Algeria belonged to this majority. In Palestine, now under British mandate, the socialist movement in the pre-war period was concerned only with Zionist immigration: a slow crystallisation of the extreme left of the Palestinian branch of *Poʿalei Tzion* led to the formation of the *Mifletet Poʿalim Sotsialistim* (October 1919) which in April 1921 declared itself a communist party (P.C.P.). Its membership of the International, conditional upon the abandonment of any reference to proletarian Zionism and the obligation to become a party of the Arab masses, was finalised in March 1924. In two other cases, emergence was more complex. In Egypt, Coptic and Sunni intellectuals, followers of Salāma Mūsā in Cairo, small socialist groups of foreign or Ottoman origin based in Alexandria under the leadership of a naturalised Egyptian, Joseph Rosenthal, and in particular, a syndicalist revolutionary component constituting a *Confédération Générale du Travail* (C.G.T., February 1921), founded *al-Hizb al-Iṣṭirākī al-Miṣrī* in August 1921. The majority decision to join the International was taken in July 1922, this leading to the secession of the Salāma Mūsā group. The party was admitted to membership in January 1923, having undertaken an obligation to convoke a congress which formalised the acceptance of the 21 conditions, purged the party and changed its name. In Lebanon, under French mandate, the process was

more gradual: Fu'ād Shīmālī, a communist trade unionist expelled from Egypt in August 1923 for disseminating Bolshevik propaganda, made contact with Yūsuf Ibrāhīm Yazbek and the populist intellectuals who, since the end of 1922, had, in writing, romantically claimed association with the Communist International; priority was given to the creation of a trade union base. The visit of an envoy from the Communist Party of Palestine in October 1924 accelerated the formation of a party, known as the Lebanese People's Party (P.P.L.), the legal frame for a communist cell in liaison with the International. The celebrations of May Day 1925 revealed the existence of an Armenian group (Spartakus) which was rapidly absorbed into the L.P.P., henceforward organised in accordance with communist structures. It was independent of the French Communist Party.

The minimal base of consensus with the conditions of membership of the International was a matter of the link between class struggle and national struggle, the common denominator being opposition to capitalism in its imperialist phase, experienced in the form of colonialism. But this was part of the conception of a worldwide proletarian revolution, of which the International, dominated by the Party State of the Soviet mother country of the worldwide proletariat, determined the strategy and the tactics, these decisions being obligatory for affiliated parties. Leading members were trained at the University of Toilers of the East in the "Marxist-Leninist", in fact "Stalinist", ideological activism [see MĀRK(I)SIYYA]. For the next ten years, it was not so much the requirement for an organic link between Party and trade union which caused problems but rather it was the attitude towards the national bourgeoisie. The contribution of local communist parties to the dynamism of the trade union movement can be traced from this period [see NIKĀBA]. However, after Egypt's accession to formal independence, the Waḡd, given power by the electorate in 1924, suppressed strikes by the workers and dissolved the Communist Party and the C.G.T. which was associated with it. Arrests and a succession of trials forced the surviving militants into hiding, in a process of dispersion tantamount to the annihilation of the party.

In Algeria, the obligation imposed by the eighth condition of membership, requiring support for the actions of every movement of colonial emancipation, was regarded with reservations by communist federations affiliated to the French Communist Party, at least until their combination in a single "region" in 1925. Calls from the Communist International demanding the independence of Algeria (and of Tunisia) met no response in a movement which was still proto-nationalist, other than acquiescence in communal actions aimed at reform. Activity (1924-6) against the war of the Rif [q.v.] was to illustrate the difficulty of generalising the revolution in the Maghribī environment. The constitution of the North African Star (Paris, 1926) was supposed to fill this gap: the independence of the three countries of the Maghrib featured in its programme. But, until its proscription in 1929, it was active only in immigrant circles in France.

In the Near East, the national movement was a reality, although in the Levant it was Syrian rather than Lebanese, excluding the Jewish national nucleus in Palestine. The Syrian revolution (1925-7), beginning in the Djabal al-Durūz, while supported by the P.P.L./P.C.L. and the P.C.P., was relatively widespread only within the confines of Lebanon. From December 1925 onward, the P.P.L. was disbanded, and its leaders interned until 1928. Extended to cover

the whole of the Levant, it henceforward dubbed itself the Syrian Communist Party, under the leadership (1933) of Khālīd Bakdāsh. But its programme, bearing the imprint of the "class vs. class" policy adopted in 1928 by the sixth Congress of the International, contributed, here as elsewhere, to its isolation from the national movement.

Directives on "arabisation" [see TA'RIB] chiefly concerned Palestine, Algeria and Tunisia, being confined to the objective of a gradual homogenisation, to be maintained at the level of leadership when the two federations should accede, in 1936, to the status of autonomous communist parties independent of the P.C.F. Realisation of this requirement was rendered more problematical by the irresolution which characterised the interpretation of the events of August 1929 in Jerusalem: revolutionary movement or pogrom? A central committee with an Arab majority was constituted on the instructions of the International at the end of 1930. The detention of these leaders in 1931 contributed to changing the image of the P.C.P. in Arab circles, but Jewish militants, while supporting the claims of the Palestinian national movement, remained unconvinced in regard to the forms taken by the latter.

The return to a frontist line of action, undertaken at the seventh Congress of the Communist International (July-August 1935), took better account of the diversity of local conditions: to the European anti-fascist front corresponded an anti-colonialist front, the colonised territories of the Maghrib participating in both. In Syria, this approach had already been inaugurated in the form of periodicals aimed at revolutionary intellectuals (*al-Duhūr*, 1934, then *al-Talī'a*, 1935-9). The coincidence of the national struggles with the accession to power in France of the Popular Front, which in 1936 favoured the conclusion of agreements envisaging, after a period of transition, a form of independence for Syria and Lebanon, contributed to the success of the Communist Party, now divided (theoretically) into two national branches. The same applied in the Maghrib, despite the ambiguity of the co-existence of the two types of front. The demands of the Muslim Congress of Algeria (June 1936), co-signed by the communists, were of democratic and assimilationist direction. The North African Star, reconstituted in 1933 on a nationalist base, renamed the Algerian People's Party after its dissolution (1937), soon dissociated itself from this compromise. The divergence with the P.C.A. was not so much over the objective of independence as over questions of timing and priorities. In Palestine, the great strike of 1936 and the Arab nationalist movement of the ensuing years, led to secession on the part of the "Jewish section". Here too, the P.C.P. participated locally in guerrilla actions, and gained influence in intellectual circles.

A new Communist Party appeared in 'Irāk. It crystallised around groups and circles, in contact but without organic links (1929-34), active in a frontist cadre, within the Waḡanī Party, then the al-Ahālī movement, as well as in the syndicates. It supported the *coup d'état* of Bakr Ṣidqī (October 1936), which pushed 'Irāk into the fore of popular anti-colonialism. Two ministers belonged to the frontist organisation of the Left which was created at his instigation. But long before the counter-coup of August 1937, the political and trade union dynamism of this left-wing "front" had subjected its members to stern repression.

But these were also the years of the Spanish Civil War, launched from Spanish Morocco (July 1936),

with the active support of the "Fascist" powers (Germany, Italy, Portugal). The Communist International encouraged the formation of the International Brigades, in support of the Republic of the popular front. Some volunteers drawn from Arab communist parties participated. But for the first time, there was the prospect of inciting an insurrectional movement in the Franco-ist rearguard sector, in Morocco. Khālid Bakdāsh, on a mission for this purpose, taking advantage of the Moroccan contacts of a communist Jewish merchant of Oran, was obliged to familiarise himself with Maghribi "specifications".

On the eve of the Second World War, repression by the colonial authorities, direct or indirect, was applied both to radical nationalists and communists, the latter suffering to an even greater extent following the signing of the German-Soviet non-aggression pact (August 1939).

### 3. From the expansion of the 1940s to the "Cold War" period

Besides criticising the hopes reposed in the victory of the Axis Powers by the majority of the nationalist leaders, the Arab communist parties, until the German attack on the Soviet Union (June 1941), declared themselves neutral in a war hitherto defined as inter-imperialist. Being pro-independence, the 'Irāqī coup instigated by Rashīd 'Alī al-Kaylānī (April-May 1941) [q.v.], recognised by the U.S.S.R., was supported. From the summer of 1941 (Near East) and the autumn of 1942 (Maghrib), the region passed under Allied control. Communist parties now declared in favour of participation in the war effort, victory of the democratic camp being presented as the guarantee of a concerted emancipation of the Arab peoples; this expectation was corroborated by the war aims announced at this time by the Allies, and by the relative freedom of action already conceded to the labour and trade union movement, as to the national movement. The limitations were illustrated by the Franco-Levantine crisis of November-December 1943, when the newly-elected parliaments in Lebanon and Syria decided to suppress all references to the French mandate, with the unanimous agreement of the political constituents. However, under pressure from the Allies, a compromise favourable to the national movement was implemented. The credibility of the Communist Parties "of Syria and of Lebanon" (separated into two national parties in January 1944) was thereby enhanced. Elsewhere, manifestos or programmes revealed the claims that were supposed to be satisfied in the aftermath of the war. A new Communist Party was constituted in Morocco (1943), composed of pre-war study groups and trade unionists. The question of membership of the International, dissolved the same year, did not arise. A heterogeneous party, it co-ordinated its action, in the same manner as that followed by the Parties of Algeria and Tunisia, with the P.C.F., which participated in General de Gaulle's provisional government in Algiers, seeing liberation of the French mainland as the overriding priority.

But with the end of the war, determination to maintain imperial control, even with the concession of certain reforms, dashed these hopes. In the case of France, this was shown, in May-June 1945, by the suppression of the insurrection in the Algerian region of Constantine, the significance of which escaped the P.C.A., and then the bombardment of Damascus [see AL-SHAM. 2 (b)], the paradoxical effect of which was to be international recognition of the independence of Syria and of Lebanon. In the case of Britain, this was shown by pressure for the re-negotiation of treaties

limiting the sovereignty of Egypt and 'Irāq, and by the delays applied to the emancipation of her other possessions in the Near East. To this may be added the conditions in which the question of Palestine was to be resolved.

In Palestine, the Arab communists, bolstered by the recruitment of intellectuals and of workers, had in 1943 constituted their own organisation influential amongst trade unionists (*'Uṣbat al-Taḥarrur al-Waṭani*). In common with the Jewish-dominated P.C.P., and not without debate, they accepted, in opposition to other elements of the Palestinian national movement and to the Arab League, the principle of the solution of Partition, agreed by the United Nations in November 1947. But what remained of the territory devolved to Arab Palestine was annexed by Jordan and by Egypt in the aftermath of the disastrous war launched by the Arab League in 1948. The majority of communists henceforward belonged to the Communist Party of Israel, while the minority who remained in Cis-Jordan contributed to the creation (1951) of the Jordanian Communist Party.

In 'Irāq, the Communist Party consolidated its organisation and its links with the national movement. The strikes and nationalist demonstrations of May 1946, then of 1948, directed against the British military presence and the conclusion of a new treaty, provoked a campaign of repression in the course of which the militants were treated with particular severity: three leading figures, including the secretary-general, were hanged in 1949. But martial law, in force until 1954, could not prevent the periodic recurrence of demonstrations and strikes.

In Egypt, Marxist groups professing communism were re-established from 1942 onwards. But this was a result of the dispersion, the rivalry, most of all for the initiative and the control of the trade union movement. The principal poles were the HAMETHO (*al-Haraka al-Misriyya li 'l-Taḥarrur al-Waṭani*) of Henri Curiel and the group called *al-Faḍl al-Djādīd*. Their unanimity of action, together with the Left of the Waḍf, in the context of the National and Student Committee (February 1946) involved opposition to the re-negotiation of treaties with Britain. From the summer of 1946, repression was renewed. The state of emergency imposed by the Palestine war (1948-9) shackled a movement which, though still in existence, showed few signs of united purpose, with the single exception of projects concerning the trade unions. But the Free Officers, in power since July 1952, prohibited the holding of a congress which was supposed to address this issue.

Principally through the influence of students educated in Cairo and in Beirut, new workers' groups or parties appeared in the Near East. Setting aside the case of Saudi Arabia (National Reform Front, 1953, becoming the National Liberation Front in 1958, then the Communist Party in 1975), this involved the British colonial region: Bahrayn (*Djabbat al-Tahrir al-Waṭani*, 1955), Aden (*al-Ittihad al-Sha'bi al-Dimukrati*, 1961), as well as Anglo-Egyptian Sudan. Here there was a direct filiation with the Egyptian HAMETHO, the title of which was borrowed at first (1946), with the qualification of "Sudanese"; it was from the outset in liaison with the nascent trade union movement, and was later to find support among the cotton farmers of the Djazīra; soon dubbed the Communist Party, its frontist orientations favoured effective independence (achieved in 1956) over the union of Sudan and Egypt which had once been envisaged. At a later stage, simultaneously with the reconstitution of the

Egyptian Communist Party (1975), an *Ittihad al-Sha'b* appeared in Kuwait.

#### 4. The test of practical application

The trajectory of these parties since the 1950s was influenced as much by common traits as by differences caused by the variability of national conditions, themselves related to the variability of regional and international contexts.

Following the dissolution of the Communist International, there was no longer a centre for international co-ordination. The Information Bureau (*Kominform*), created in 1947 in response to the Truman Doctrine, was concerned, until its abolition in 1956, with the European communist parties. In the context of the Cold War, it nevertheless had an indirect influence outside Europe, in that it substituted for the theory of world revolution that of the campaign for peace, inseparable from the right of peoples to claim self-determination, to demand the removal of military bases installed in their territory and to denounce the military pacts binding their governments. While the extension of the "socialist system" in the world enlarged the field of reference, the Soviet Communist Party remained for Arab "communist and labour parties" the arbiter of "orthodoxies", to the point where the Stalinist "deviations", where they were acknowledged, were most often explained by the need to guard against the "intrigues" of the "imperialist camp". It was by this logic that in the "post-Stalinist" period the interventions in Hungary (1956), then in Czechoslovakia (1968) and in Afghanistan (1979) were to be supported and presented as a counter-balance to the interventions, rife at that time, of the other "camp" in the three "developing" continents. Finally, according to a tradition established from 1921 onwards, it was established that the diplomatic relations of the Soviet State, even when maintained with repressive Arab states, did not compromise the "proletarian internationalism" of the Soviet Communist Party, though it was a "Party-State". Among the conferences uniting elements of the "international labour movement" from 1957 onwards, that of 1960 had some significance for the region: it defined the "State of national democracy" as a form of progress towards socialism applicable to some of those countries which professed non-alignment and opted for a programme of economic and social development controlled by the public sector.

Arab communist parties definitely participated in national struggles for liberation, sometimes armed (Algeria, South Arabian Federation), in movements of democratic opposition, sometimes in the form of civil war (Lebanon), paved the way for coups d'état on the part of Free Officers claiming to represent national populism, while appealing to the ideology of Arab unity, or supported them once established. But, with the exception of Iraq (1958) and Sudan (1969), the alliance fronts were *de facto*. Trade union affiliations to the C.I.S.L. permitted pro-western régimes of the Near East, as well as nationalist movements and régimes, to control the type of organisation of the masses which, being pluralist, constituted the principal power-base of communist parties. In certain cases of frontist experience (Sudan, 1969-71; Iraq, 1958-63 and 1968-78), initial rivalry in the context of various forms of mass-organisation was followed by a seizure of political control by the dominant national party, corresponding to a renewal of repression, latent or violent, of the communist partners. In fact, phases of legality or semi-legality were to be brief. Only the experience of South Yemen (1967-90) avoided this pat-

tern: after a period of co-operation (1970 onwards), Arab nationalists in power, communists and Ba'athists, constituted a unified organisation (1975), preparatory to the creation of an "avant-garde" party (Yemeni Socialist Party, 1978), defined as an instrument of "national democracy with a socialist perspective".

Internal debates mainly concerned questions of the definition of the nature of régimes and the characterisation of the strata of the bourgeoisie which controlled the dominant parties, and thus addressed the tactics of alliance, in partnership or opposition. Disagreements sometimes led to schisms and/or exclusions, according to a conception of "democratic centralism" asserted by old and new communist parties and justified by the imperatives of self-preservation during phases of repression and secrecy. These schisms were of only limited significance, except in Syria. Under the leadership of Kh. Bakdash, an Arab prototype of the Stalinist ruler in his methods and his personal cult, the P.C.S., declaring the primacy of Syrian over Lebanese land, considered the P.C.L. a subsidiary force, with the result that the latter decided in 1968 unilaterally to assert its independence. The following year, in the context of the Israeli-Arab conflict, disagreements over tactics and the role of the party emerged within the P.C.S. itself. Despite phases of compromise, the result of this was the existence at the start of the 1980s of five competing organisations, if one includes the faction of Riyad al-Turk, the leaders of which were imprisoned by the Ba'ath. Agreement on a programme of reunification, initiated in 1986, between the four other elements, was put into effect the following year by only three of them; the supporters of Bakdash dissociated themselves.

Responses to the problem of relations with nationalist parties in power were different. Integration was sometimes envisaged, as a means of contributing towards the formulation and application of national charters. The Algerian Communist Party merged with the F.L.N. in 1964 and was subjected, with the Left of this party, to repression after the *coup d'état* of Hawwari Būmadyan (1965); it was relaunched in 1966 under the title of P.A.G.S. (*Hiżb al-Taḥi'a al-Ishṭirākī*) and in the 1970s its militants were once more associated with the dynamisation of the mass movement, resulting from the more radical evolutions of the F.L.N. The same development took place in Egypt, in 1965; freed from detention camps, the militants of the Communist Party (unified in 1957) merged with the Arab Socialist Union. But in Sudan, the attempt to impose this model on the Communist Party, and its counter-proposal of a democratic front based on parity, led from 1970 onward to a split which was further aggravated when the C.P. supported the coup by Free Officers of July 1971, more sympathetic to its views, but crushed within a few days; the execution of its secretary-general and other leaders forced it to go underground. In Syria, then in Iraq, it was the form of a progressive nationalist front under the hegemony of the dominant Ba'ath parties which was adopted. While it persisted in Syria, it remained a formal framework, whereas in Iraq it was shattered when Ba'athist control of the country was established; the repression which ensued, remarkable for its duration as well as the brutality of its measures, proved effective. Other types of front involved countries classed as pro-Western. In Morocco, the Communist Party, dissolved by judicial decree in 1960, twice changed its title (Party of Progress and Socialism since 1974); it shared, after 1975, in the consensus over the annexation of the formerly Spanish Sahara, opposed pend-

ing public consultations, by the United Nations; it was included among the frontist structures of the legal democratic opposition. Other forms related to the continuation of the Israeli-Arab conflict of 1967. In Lebanon, a national and progressive front, inspired by the Progressive Socialist Party (P.S.P.) and the P.C.L., constituted as the central Political Council of the National Movement at the height of the civil war, united all parties and organisations opposed to the Christian Phalangists and favouring alliance with the P.L.O. In the Palestinian territories occupied by Israel since 1967, the communists of the West Bank, independent of the Jordanian C.P. from 1970 onward, then united with those of Gaza to form the P.C.P. (February 1982) and contributed, in partnership with the P.L.O., to the organisation of the internal political resistance which produced the *Intifāda*, fighting to promote the preferred solution, that of a Palestinian state alongside that of Israel. But in both cases, this failed to be translated into concrete representation when legislative elections became possible.

Arab unitary ideology has caused fewer problems, other than to prefer, rather than the organic form typified by the Syro-Egyptian union (1958-61), federal models which would preserve the democratic achievements of each participant. Since 1967, inter-Arab fronts, of varying durability, or conferences, have rallied parties and organisations, in power or not, around common Arab causes. Nasserite, Ba'ṭhist, and "Arab nationalist" tendencies have competed all the more with the communists, whether during phases of opposition or of alliance, in that their structures, pyramidal and centralised, and their networks of mass-organisation are modelled on those of the Communist Party, with the difference that the first two of the above-mentioned tendencies constitute most often the party in power. The same applies to debate, populist in tone but borrowing from Marxist dialectic, in varying proportions, much of its vocabulary. Trotskyite elements are marginal, the Maoists ephemeral. "New left" tendencies are represented rather by "Arab nationalist" organisations, open to united action on specific objectives with the communist parties.

Compared with the pre-war period, when membership of Arab communist parties varied between a few hundred and a few thousand, recruitment over the last few decades has changed the position radically. Although figures for the Gulf Emirates are hard to acquire, elsewhere the total ranges from several thousand to several tens of thousands. In pre-war conditions, with the exception of brief texts, such as the *Communist manifesto* of Marx and Engels, translated in 1933 by K.h. Bakdāsh, few "classical" texts of Marxism were available in Arabic. From the 1940s onward, a sustained effort was begun in Egypt, giving precedence to the works of Stalin; this was later transferred to Lebanon and pursued in parallel with translations carried out in Moscow. The press was more regular, in its various forms of periodicity; in phases of illegality, cultural publications or the exploitation of more favourable conditions in neighbouring countries permitted the dissemination of journals, bulletins or reviews. Publishing houses, whether dependent on the communist parties or not, produced a growing number of works composed by Arab Marxists: memoirs of political or trade union leaders, but also works of economy, philosophy, history. It was around the theme of "patrimony" (*ṭurāṭh*) that questions relating to religion were addressed. While the Muslim Brotherhood [see AL-KHAWAN AL-MUSLIMUN] was the object of polemic, the Sudanese Communist Party

used references to the values of the past to encourage, against conservative prejudices, a militant and progressive Islam. In the same perspective, and especially after the Iranian Islamic revolution, forms of dialogue have been explored by the communist parties of the Near East with the object of establishing eventual convergences. These efforts have born little fruit. Political Islam, constituted on the basis of humanitarian associationism, encouraged in the 1980s by states as diverse as Egypt, Sudan, Algeria, Yemen and even Israel (in the case of Gaza) to compensate for suppressed democratic expectations, has become an implacable foe, not only of the communists, ostensibly those most affected, but of states themselves.

##### 5. *The implosion of the socialist system and since: revisions and redeployments*

During the second half of the 1980s, the evolutions of the socialist system, in particular of its Soviet "centre", were to demand reassessments of former theoretical and practical frameworks. In all parties the debate was vigorous, all the more so in that after a period of relative prosperity, the Arab world was experiencing an accumulation of crises: Egypt had abandoned the cause of confrontation with Israel; a new conflict had erupted between 'Irāk and Iran; the abrupt decline in the price of oil neutralised to some extent the developmental benefits which nationalisations of this asset had been supposed to provide, initiating or exacerbating cycles of debt; and the crisis of democracy made itself felt in all states professing "national democracy" as an ideal or pragmatic solution. The Yemeni Socialist Party was itself torn by fratricidal struggles (January 1986). Soviet *perestroika* and "new political thought" were approached primarily in terms of their consequences for the Arab world. The equation between socialism and humanism was interesting, but disturbing in the extent to which the connection with the "class" perspective seemed to be abandoned, more particularly in terms of international relations. The end of the Cold War, for some, presented the possibility of a resolution of the Israeli-Arab conflict. Others were especially attentive to the setbacks of "real socialism" in central Europe, to the internal problems of the Soviet Union. The inability of the latter to establish a diplomatic solution of the 'Irāk-Kuwait conflict and the scale of the resources mobilised by the military coalition in 1991, prefigured its implosion the same year. The new context, that of a new world order, unipolar and liberal, demanded that consideration of these issues, already embarked upon, should be made more systematic. The responses which emerged from the congresses held at this time, the products of open and contradictory debates, were to be diverse.

In South Yemen, the ruling P.S.Y. had begun its own *perestroika* in 1988. Unification with North Yemen (1990) was thereby facilitated, in the context of progress towards a market economy and a multi-party system, agreed upon by the two single parties. The second political force in the country following the elections of 1993, the P.S.P., in partnership with minor parties, succeeded in enforcing a democratic and decentralised conception of constitutional reform (February 1994). But conflict over the application of these measures, the postponement of the merging of the armies of the two former states, led to confrontations which ultimately resulted in civil war. In this context, even recourse to a secession by the South could not save the P.S.Y. from destruction.

In the majority of cases the "communist" label has been retained, the aspiration towards a society freed

from the exploitation of man by man maintaining, for these parties, the motivating force of a "realist" utopia. The long experience of "real socialism" and its downfall is a laboratory for the consideration of questions of strategy and tactics. These parties have, to varying degrees, democratised their structures and introduced new programmes more consistent with national, regional and international conditions. The principal objective is democracy, the target is "uninhibited liberalism", the instrument is frontist alliance. In the more repressive countries, alliances constituted in former times have been enlarged: within 'Irāk and in conjunction with 'Irākī Kurdistan as regards the P.C.I. and the P.C.K.I. which has derived from it (1993); and in the Sudan, in the context of a national democratic alliance which embraces the southern resistance, as regards the P.C.S.

Others have changed their titles and orientations. The decision of the Palestinian Communist Party to transform itself into a People's Party (P.P.P.) was rather premature (October 1991); it defined the realisation of a Palestinian state, the objective of an entire people and not of a class, as the central task. In Algeria, the P.A.G.S. became in January 1993 the *al-Taḥaddī* Party (of "challenge": an acronym of *Takaddum, Tahdītū and Dīmuqrāṭiyya*). In Tunisia, a party "of the Left", *al-Taḥdīd*, replaced the P.C.T. in April 1993. In these two countries, minorities dissociated themselves from these options, described by them as "social democratic".

A further indication of these redeployments and revisions, the significance of which (in 1996) remains to be determined: the *al-Nahḍ*, a periodical for the exchange of views among Arab communist parties (1983-91), then sub-titled *Review of Marxism-Leninism in the Arab world*, has appeared since 1994 under the subtitle *Contribution to the clarification and implantation of rationalism*. It is currently activated by an autonomous team of Near Eastern Marxists, some of them members of communist parties, others not.

2. Persia.  
The introduction of communist ideas in Persia was influenced by two events: the Constitutional Revolution of 1906-11 in Persia and the October 1917 Revolution in Russia. The first political party based on communist ideas was the Justice Party (*Firka-yi 'Adalat*), created in 1917 in Baku by a group of Persian workers. The Justice Party changed to the Communist Party of Iran (*Firka-yi Komunist-i Irān*) in its first Congress in 1920.

Communist activities were subdued during Riḍā Shāh's consolidation of power in the 1920s. The Party held its Second Congress only in 1927. Having moved closer to Moscow, the Congress described the 1921 coup as a British plot, denouncing Riḍā Shāh [q.v.] as their appointee. In confronting the communists, however, Riḍā Shāh passed a law in June 1931 banning all political organisations threatening the constitutional monarchy or advocating collectivist ideas using the Arabic term *ishtirākiyya* "socialism".

The next communist phase was in the 1930s-1940s. Dr. Takī Ārānī's Marxist group and the Tudeh (Tūda) Party were its most prominent features. The strategies of the first and second communist phases indicated some differences. The latter put greater emphasis on the spread of Marxist and communist ideology among the intellectuals, while the former focused on workers. Similarly, party activists of the second phase were predominantly Persian-speaking intelligentsia of Tehran in contrast to the first phase dominated by Persian immigrants in the Soviet Union. Open political activity came to a halt once again in 1937 with the arrest of the "fifty-three", including Ārānī. They were found guilty of forming a clandestine *ishtirāki* organisation outlawed by the 1931 law. realpatidar.com

World War II and Riḍā Shāh's abdication in 1941 helped create a more open political atmosphere. On their release in September 1941, a group of younger members of the "fifty-three" launched the *Hizb-i Tūdayi Irān* ("Party of the Iranian Masses"), which became one of the most significant political forces in Iran after its inception. The Party refrained from using "communist" in its title for several reasons, one of which was the 1931 law. Another reason was Soviet war-time interests, which discouraged the Party's open identification with communism. Furthermore, communism as an ideology was unknown to the masses whose support the party aimed for. In its manifesto, the Tudeh accordingly stood for democracy, independence from foreign imperialism and loyalty to the Constitution.

The Party produced its first provisional programme in February 1942. Unlike other secular movements, the Tudeh adopted a broad programme to attract a wider spectrum of supporters and avoid antagonising the clergy (*ulamā*). It rapidly established itself as the largest political party, with a structure, policy, and countrywide organisation. In 1943 it succeeded in having nine of its fifteen candidates elected to the fourteenth *Majlis*. Another Tudeh achievement was organising labour groups in industrial cities, including Ābādān, especially among its oil workers, Isfahān, Ahwāz and Rasht. In 1944-5, the party continued to grow, enabling it to gather crowds estimated as large as those of pro-constitution rallies in 1906. With these successes, the Tudeh held its First Party Congress in August 1944 to approve the party programme. The growth of the Party continued, reaching its peak in August 1946 when three of its members were given ministerial posts in the Prime Minister Kāwām al-Saltāna's cabinet. The Party's successes, at least in the northern regions, was at least in part due to the support of the occupying Red Army.

The Tudeh's fortunes began to change from the autumn of 1946 onwards, when Kāwām al-Saltāna's government limited party activities. This helped party dissidents to force changes, including a debate on the sensitive issue of relations with the Soviet Union. One of their criticisms was over the party's pro-Moscow policy (the Tudeh had organised a mass meeting in October 1944 against the government's refusal to grant an oil agreement to Moscow). Internal divisions, however, led to the moderate faction, including Khalīl 'Alīkī and other intellectuals, to leave the party in 1947. Although free from dissidents, the Tudeh was soon banned under the 1931 law after the declaration of martial law in 1948. This forced the party underground, only to re-emerge in 1951 at the height of the Prime Minister Mossadeq's campaign for oil nationalisation [see MUŠADDIḲ]. This phase also came to an end with the August 1953 coup against Mossadeq's government (the Tudeh's refusal to intervene has since been blamed as a factor helping the success of the coup).

Between 1953 to 1958, the re-installed Muḥammad Riḍā Shāh [q.v.] began dismantling the Tudeh by arresting and executing party members. By the mid-1960s, the Shāh completed the process of controlling the political arena to such an extent that no independent organisation survived. This, along with the experiences of China, Vietnam, Cuba and Algeria, encouraged the emergence of underground socialist and revolutionary movements. A distinct feature of these movements was their general support for armed struggle. Most prominent among these groups were the Marxist Fidā'iyyīn, the Islamic Muḍjahidīn, the

Kurdish Democratic Party Paykar (separated from Muḍjahidīn and adopting Maoist views), The Workers' Road, and the Kurdish Komoléh guerrillas. These organisations, rather than the traditional leftist or centrist opposition, represented the anti-régime opposition in the 1960s and 1970s.

The most effective organisations in influencing youth in the 1970s and in breaking the back of the state during the 1977-8 revolutionary process were the Marxist Fidā'iyyīn or the Iranian Peoples' Guerrilla Freedom Fighters, and the Islamic Muḍjahidīn or the Organisation of the Iranian Peoples' Freedom Fighters. The latter presented a revolutionary interpretation of Islam sometimes inaccurately referred to as "Islamic Marxism". The year 1978-9 was a watershed, since for the first time after the 1950s the left, including the Tudeh party, could organise and act openly.

Nonetheless, the era of revolutionary solidarity and political openness, or perhaps anarchy, was short lived. The first test came in March 1979 when the provisional government called a referendum on future political systems, limiting the choice between the monarchy and the "Islamic Republic". Having declared support for the clergy's leadership, the Tudeh participated in the referendum in favour of the Islamic Republic. The Muḍjahidīn also supported the referendum, but the Fidā'iyyīn boycotted it.

Despite the support from it, the régime targeted Tudeh activists in 1983, putting its leaders on public trial, where they confessed to the party's "betrayal" of the "Iranian masses". The other major revolutionary force, the Muḍjahidīn, went into open confrontation with the Islamic Republic from 1981 onwards, in collusion with the then president Banī Šadr. The régime succeeded in overcoming this threat, driving the organisation into exile in Paris. The régime's brutal confrontation and the Muḍjahidīn's decision to move its headquarters to Irāk in the midst of the Iran-Irāk war in the 1980s have helped discredit the organisation.

The Marxist Fidā'iyyīn went through a serious internal crisis after the revolution, leading to a split in 1981. One section, known as the Majority, adopted similar policies to the Tudeh and joined it. The other, known as the Minority, rejected dictatorship of the proletariat, insisting on nationalism and supporting coalitions within the framework of bourgeois pluralism.

The last prominent organisation to note is the Kurdish Democratic Party led by Dr. 'Abd al-Rahmān Kāsimlū. With its socialist orientation and support for Kurdish nationalist rights, the Party remains the most important political organisation among Iranian Kurds. From the late 1980s, the government began discussions with Kāsimlū. They were halted in 1989 with Kāsimlū's assassination in Geneva during their last round of negotiations.

The 1990s thus witnessed a general decline in the activities of the communist, socialist or Marxist groups. The absence of an open political arena and the diminished contemporary state of international socialism, have both contributed to this decline.

### 3. In Turkey.

Communism has been a far weaker force in Turkey than in several other Muslim countries. This may partly be explained by the Turks' attachment to Islam, but more particularly by their hostility to Russia (especially during the Cold War) and the constant infighting between rival leftist groups. Between 1918 and 1920 no less than three parties of Marxist orientation were set up in the nascent Turkish state. These were linked to an underground Communist Party, allied to Moscow, and led by Dr. Şefik Hüsnü [Değmer]. To add to the confusion, an official Communist Party was set up on the initiative of Mustafa Kemal [Atatürk] in October 1920, in which several of the leading members of his government were enrolled. However, all these groups were closed down in 1925, following the suppression of the Kurdish rebellion led by Şeyh Said. The Communist Party continued an underground existence, mainly abroad, under Değmer's leadership, until 1946, when two legal socialist parties were established, only to be officially dissolved at the end of the year. Leadership of the Turkish Communist Party was then taken over by Zeki Baştımar, who was succeeded by İsmail Bilen. During the Cold War, the party served as the orthodox voice of Soviet communism: it was based in eastern Europe and had virtually no support base in Turkey itself.

Within Turkey, leftist groups came out into the open again after the coup of 27 May 1960. Several more or less Marxist parties were established during the 1960s, of which the most successful was the Turkish Workers' Party (*Türkiye İşçi Partisi*), led by Mehmet Ali Aybar. However, this split apart in 1968, and was suppressed by the military-dominated régime of 1971-3. During the 1970s a plethora of revolutionary Marxist parties and terrorist organisations emerged, but these were all suppressed by the military government of 1980-3. Since then, Turkish communism has effectively withered away, except for sporadic terrorist attacks by small ultra-leftist organisations. With the collapse of the communist régimes of eastern Europe, the Turkish Communist Party has also ceased to exist.

**SIALKOT** [see SIYĀLKŪT].

**SIBĀK** [see FARĀS].

**SĪBWAYHI**, pioneer Arabic grammarian, the author of a single, untitled work, known only as *Kitāb Sībawayhi* and acknowledged as the founding text of Arabic grammatical science. All else, his name, origins, dates and originality, is uncertain, Sībawayhi having died too young and too far away from the cultural centres of 'Irāk to establish himself in the scholarly biographical tradition.

#### 1. Life and teachers.

(a) *Life*. Sībawayhi's name is usually given as Abū Bishr 'Amr b. 'Uthmān b. Kanbar, *mawla* of Banū Hārith b. Ka'b Sībawayhi. Humbert (1995, 3-8) discusses the many variants and argues persuasively that the full name arose from the need to fill the vacuum in the "onomastic chain". In practice, he is never

called anything but Sībawayhi, explained by folk etymology as Persian for "Apple fragrance" or even "30 scents", though actually a nickname, Sēbōe "Little Apple" (Nöldeke, *apud* Brockelmann, I, 100). He is said to have been born in al-Bayḍā', Shīrāz, of Persian parents, and to have died aged between 32 and "40-odd" years old, probably in Fārs. An approximate death date of 180/796 can be inferred: Sībawayhi died before Yūnus (182/798), and al-Khalīl died between 160/776-7 and 175/791, before the *Kitāb* was written down.

At some time, he came to Baṣra to study *āthār*, i.e. the *Ḥadīth*, or more explicitly jurisprudence (*fiqh*). This is important for the early history of grammar, and supplies the topos in which Sībawayhi is humiliated into studying grammar by his linguistic ineptitude in the presence of Hammād b. Salama [*q.v.*]. The other notorious incident in Sībawayhi's career also involves his humiliation, this time by al-Kisā'i [*q.v.*], in a debate called *al-Mas'alat al-zunburiyya* after its theme, the syntax of *kuntu azunnu anna 'l-akraba aṣḥabbu la'sat' min al-zunburi fa-idhā huwa hiya or idhā huwa iyyāhā*. Al-Kisā'i wins by bribing some Bedouin to support his position, and Sībawayhi goes off and dies of grief, consoled, some say, by a payment of 10,000 dirhams solicited for him by al-Kisā'i.

(b) *Teachers*. Nineteen names are mentioned: (i) seven traditionally identified by the biographers as teachers of Sībawayhi, and (ii) twelve connected with him in other ways. (i) (1) 'Abd Allāh b. Abī Ishāq [*q.v.*], also Sezgin, *GAS*, ix, 36-7, d. 117/735 or 127/745, cited 7 times (see Troupeau, *Lex.-index*). (2) 'Isā b. 'Umar [*q.v.*], also *GAS*, ix, 37-9, d. 149/766, 20 times. (3) Abū 'Amr b. al-'Alā', d. 154/771 (*GAS*, ix, 40-2), 57 times. (4) Hārūn al-Kāri' (*GAS*, ix, 43-4), d. 170/786, 5 times. (5) Abū 'l-Khaṭṭāb al-Akhfash [*q.v.*], also *GAS*, ix, 48-9, d. 157/773-4, 58 times. (6) Yūnus b. Ḥabīb (*GAS*, viii, 57-8; ix, 49-50) d. 183/799-800, 217 times. (7) al-Khalīl b. Ahmad [*q.v.*], also *GAS*, viii, 51-6, ix, 44-8], d. at the latest 175/791-2, cited by name 608 times.

(ii) Other names appearing in the *Kitāb* but not considered as teachers in the biographies (cf. Humbert, 1995, 9-14): (8) Abū Murhib, untraced, cited once. (9) Ibn Mas'ūd, the Companion [*q.v.*], d. 32/652-3, 3 times. (10) Muḍjahid [*q.v.*], also *GAS*, viii, 22], d. 104/722, once. (11) al-A'radj (*GAS*, ix, 34-5), d. 117/735, 3 times. (12) al-Ḥasan [al-Baṣrī] [*q.v.*], also *GAS*, ix, 44], d. 110/728, twice. (13) Abū Rabī'a (*GAS*, viii, 29), d. ca. 170/786, once. (14) Ibn Marwān, cf. Carter, in *REL*, xlv, 75, n. 2 (Troupeau has Ibn Marwān once as a grammarian and a Marwān al-Nahwī separately as a poet). (15) al-Aṣma'i [*q.v.*], also *GAS*, viii, 71-6, ix, 66-7], d. 213/828, twice. (16) al-Akhfash [al-Awsat] [*q.v.* and see below], once. The preface of a *Kitāb* manuscript recopied by Ibn Kharūf (d. 605-10/1206-13) lists twelve masters, the seven traditional names and five more, two already known, Ibn Marwān and al-Aṣma'i, and three new names. (17) Abū Zayd al-Anṣārī [*q.v.*], also *GAS*, viii, 76-80, ix, 67-8], d. 215/830. (18) Abū 'Ubayda [*q.v.*], also *GAS*, viii, 67-71, ix, 65-6], d. 207/822 or 213/828. (19) al-Lihyānī, who may be the one mentioned by Abū 'l-Tayyib, *Marātib*, 89-90 (Humbert, 12).

All but three can be eliminated on technical or historical grounds as possible influences on Sībawayhi (cf. Humbert, 10-12, Versteegh, 1993, 161-3). Only 'Isā b. 'Umar, Yūnus and al-Khalīl were close enough chronologically and intellectually to play a role in the creation of Sībawayhi's grammatical system. Of two works credited to 'Isā, nothing survives but a flat

tering reference by al-Mubarrad (Abu 'l-Tayyib, *Marātib*<sup>2</sup>, 46; Ibn al-Anbārī, *Nuzha*, ed. Amer, 15, says he has never seen a copy nor heard of anyone who has). 'Isā died well before Sībawayhi and is only a shadowy presence in the *Kitāb*, usually quoted indirectly; he may have furnished information in a similar way to Yūnus and al-Khalīl but on a much smaller scale. We return to Yūnus and al-Khalīl below.

## 2. Grammatical background and origins.

The only reliable source of information about primitive grammar or what we might call "proto-grammarians" is the *Kitāb* itself. Versteegh's invaluable survey of early *Tafsīr* (1993) demonstrates that no matter what was said about language in this period (and the subject could hardly fail to arise!), it did not reach the level of a mature theory of language with an appropriate scientific vocabulary and methodology.

(a) *Foreign origins.* There have been attempts to trace the origins of Arabic grammar to external influences, principally Greek, via Syriac [see NAHW]. The Greek hypothesis achieves a major restatement about every hundred years, beginning with the not very-widely consulted Hasse (1788), after which the baton passes to Merx (1889), then Rundgren (1976) and Versteegh (1977). All these assume that Arabic grammar could not have evolved out of the resources of Arab-Islamic culture and that various systematic and terminological features of Arabic grammar point to Greek models. There are no texts or circumstantial evidence for exchanges between Syriac scholars and early Arab grammarians, and the Greek case is essentially *post hoc ergo propter hoc*. The most important testimony, a logical work attributed to Ibn al-Muḳaffā' [q.v.], bears the taint of inauthenticity (it might be by his son), and contains almost nothing of relevance. The main weakness of the Greek hypothesis, however, is that it explains so little of the grammar in the *Kitāb*. An Indian origin has been proposed for phonological theory, argued confidently by Danecki and equally firmly refuted by Law. Lack of documents and circumstantial evidence again undermine the case, coupled with insufficient symmetry between the systems.

(b) *Indigenous origins.* The traditional narrative ascribing the invention of grammar to Abu 'l-Aswad al-Du'alī [q.v.], thence through generations of scholars up to and beyond Sībawayhi, has an inner coherence which corresponds well to the likely stages in the growth of linguistic consciousness, responding to the increasing volatility of Arabic and the need for a definitive form of the text upon which the new Islamic civilisation now depended. But this neither caused, nor can it explain, Sībawayhi's grammatical system. Extensive similarities between legal reasoning and the grammar of the *Kitāb* (cf. Carter, in *REI*, xlv, 86-91) encourage the hypothesis that Sībawayhi found his inspiration in law. We are not told how he got his legal training, but after the incident with Ḥammād b. Salama he "went off and attached himself to the *madjlīs* of al-Akhfash with Ya'qūb al-Ḥaḍramī and al-Khalīl and the rest of the *naḥwiyyūn*" (al-Zadjdjādī, *Madjālīs*, 155); in other words, of the leading authority on Arabic, a major Reader, sundry "grammarians" (if such they were, see below), and the older man who would later preserve his work. He thus remained within the philological tradition implied by the conventional histories: Qur'ān, secular language and early systematisation, with the future disciple al-Akhfash having the seniority to act as host for this astonishingly fertile gathering of minds.

(c) *Grammar before Sībawayhi.* The *Kitāb* reflects contemporary grammatical thinking very clearly though

not always precisely. Three themes are important here: (i) the *Kitāb* as evidence for early "Schools" of grammar, (ii) the "*naḥwiyyūn*" and (iii) the debt to specific masters named in the *Kitāb*.

(i) *Schools.* If you believe that grammar only reached its scientific perfection through Sībawayhi, then the existence of "Schools" before him is inconceivable. Darwinism is not found before Darwin. Baalbaki (*Stud. Ar. et Isl.*, 24) detects the roots of the famous "Baṣran" and "Kūfan" dichotomy already in the *Kitāb*, and Talmon (in *BSOAS*, xlviii) identifies a "Medinan School" on the basis of three references in the *Kitāb* and other later evidence, adding for good measure the names of two Meccan "grammarians" prior to Sībawayhi. Nothing is known about their grammatical opinions, however, except for Ibn Marwān, whose dispute with Abū 'Amr is reported in the *Kitāb* (Talmon, in *JAOS*, civ), and no significant interpretative benefits arise from reducing the inevitable conflicts of opinion among these early figures to a system of "Schools".

(ii) *The naḥwiyyūn.* This word (always plural) occurs 20 times in the *Kitāb* referring to an anonymous group of participants in the grammatical debate. Their anonymity is disputed by Talmon (in *ZAL*, viii), who also argues that the *naḥwiyyūn* were highly sophisticated thinkers. From the way Sībawayhi cites them, however, one must conclude that he regarded their grammatical reasoning as inferior; in most of the exchanges he either rejects or severely criticises them, e.g. [*\*a'tāhūnī*] is incorrect, not said by the Arabs, but the *naḥwiyyūn* have created it "by analogy (*kāsihu*)" (i, 383/i, 335). It seems unlikely that Sībawayhi saw himself as one of the *naḥwiyyūn*, which raises a delicate question: who, then, were the real "grammarians"? Sībawayhi had no name for "grammar" as such, which was eventually called *naḥw* on the assumption that this was what the *naḥwiyyūn* were doing in the *Kitāb*.

(iii) *Specific masters.* Sībawayhi drew directly and indirectly upon the knowledge of several informants and scholars, but only Yūnus and al-Khalīl were intimately involved with the creation of the *Kitāb* (see below on al-Akhfash).

Yūnus is mentioned 217 times, and although his exact role is difficult to pin down, Sībawayhi disagrees with him more often and more conspicuously than with al-Khalīl. For example, he is particularly severe on Yūnus's claim that *min kuddām*<sup>m</sup> should be vocalised *min kuddām*<sup>m</sup>: "that is one way of speaking, although no Arab actually ever says it" *hādha madhhab<sup>m</sup> illā annahu laysa yakūluhu aḥad<sup>m</sup> min al-'Arab* (ii, 47/ii, 43). Even though Sībawayhi occasionally sides with Yūnus against al-Khalīl (e.g. on the truncated vocative *yā kādi* against al-Khalīl's *yā kādī*, ii, 289/ii, 315), Yūnus tends to hold views which do not fit into Sībawayhi's scheme.

Al-Khalīl is quoted by name or by implication (*sa'altuhu*, etc.) on almost every page of the *Kitāb* and was clearly an inexhaustible source of data and theoretical inspiration for Sībawayhi. Reuschel confines Sībawayhi's role to merely organising what al-Khalīl taught him, a position which it is as difficult to refute as to accept. Fischer is at the other pole; having examined the discarded phonological terminology of al-Khalīl preserved by al-Khārazmī, he concludes that al-Khalīl was mainly a "morphophonologist" and may well have been unaware of the basic principles of Sībawayhi's grammar. Danecki even argues that al-Khalīl's phonological ideas were primitive in comparison with those of Sībawayhi. All this accords with

the biographical constant that al-Khalīl is usually titled "the Prosodist" (*Ṣāhib al-ʿarūd*) and also recognised as the founder of lexicography, while Sībawayhi's association with the creation of grammar is not seriously challenged. What stands out is al-Khalīl's interest in the following: (i) compound syntactic units functioning as single words (the terms *muntahā 'l-ism* and *tamām al-ism* are associated with al-Khalīl, e.g. i, 350/i, 306), (ii) the principle that a speaker who begins an equational sentence is obliged to finish it with a predicate (e.g. i, 394/i, 346), (iii) the role of the listener's knowledge (i, 453/i, 403), (iv) the relationship between frequency and elision (e.g. i, 143/i, 120). But Sībawayhi does not always agree with al-Khalīl, e.g. i, 181/i, 151, where *hādha raḍūl<sup>un</sup> akhū zayd<sup>un</sup>* intended to mean "this is a man [like] Zayd's brother" is labelled "incorrect and weak" (*kabīh wa ḍa'if*). A genius is known by the questions he asks, as has been said already of al-Khalīl (Bräunlich, in *Islamica*, ii, 61), and Sībawayhi's questions, no matter how much he depended on his teachers for the answers, were inspired by a concept of language that was at best only latent in al-Khalīl's intuitive and unsystematic perception.

### 3. The contents of the *Kitāb*.

The following is a summary of the repertoire of ideas which all subsequent grammar exploited and still exploits.

(a) *Arrangement*. Although a large work (printed editions are more than 900 pages), the order of the material and the internal cross-references reveal an unmistakable plan. The *Kitāb* begins with seven introductory chapters (probably the same as a *Risāla* attributed to Sībawayhi which forms the core of al-Zadjidjāḍi's *al-Idāh*), after which Sībawayhi deals with Arabic grammar in the order syntax, morphology, and phonology.

The "*Risāla*" is as close as we come to an orderly statement of Sībawayhi's linguistic presuppositions (or postulates, as Suleiman, in *JSS*, xxxv, 258 would have it). It is perhaps an exaggeration to say that "Sībawayhi never explicitly states the basic theoretical principles on which he works" (Bohas/Guill./Koul., 33), but he is certainly casual about it. Nevertheless it is from these introductory sections that we learn there are three parts of speech, two discrete sets of vowels and inflections, a number of internal hierarchies (see below), a fundamental subject-predicate structure, an assortment of lexical, semantic and phonological accidents such as synonymy, polysemy, elision and substitution, a group of formal and semantic criteria and a range of non-standard phenomena permitted only in poetry.

(b) *Data*. The object of study is *kalām* "speech", i.e. every speech act (including Qur'ān and poetry) which fulfils the criteria of structural and semantic adequacy. *Kalām* does not imply any particular length or number of constituents (cf. Talmon, in *ZDMG*, cxxxviii, 80-8), still less anything as specific as "sentence" (only later termed *qumla*), and may also denote "prose" in contrast with "poetry" but not exclusively (Iványi, *Proceedings*, 210-12). Data are of three kinds, the Qur'ān, poetry and the usage of the "Arabs", i.e. the Bedouin, and are adduced in one of these three forms or in the familiar symbolic representations of the type *zayd<sup>un</sup> qarabtuhu*. Iványi has tabulated the introductory formulae indicating Sībawayhi's estimate of the data's authenticity. Although the Qur'ān is stated to have been sent down "in the speech of the faithful" (*alā kalām al-ṣbād*, i, 167/i, 139) Sībawayhi did not give linguistic priority to Qur'ānic usage, nor is there any hint of a doctrine of *i'qāz* [q.v.] at this stage. He is aware of the various *kirā'āt* and not always in favour

of certain Readings (Baalbaki, in *ZAL*, xv; Brockett), but avoids embroiling himself in doctrinal implications.

Poetry (1,056 lines, *Djum'a*, 116, from 231 poets in 26 tribes, *ibid.*, 14) was originally quoted without attribution. Traditionally, it was al-Djarmī who counted 1,050 verses and added the names except for 50 he could not identify (but see *Djum'a*, 214). Only three contemporary poets, Abān al-Lāhikī, Bashshār b. Burd and Khalaf al-Aḥmar are quoted, and all three citations are suspect. As with the Qur'ān, poetic data have no priority over the Bedouin Arabic, but Sībawayhi acknowledges that poetic usage may differ from prose, usually dialect features which were not adopted into standard Arabic.

Proverbial expressions (*maṭṭal*) are recognised as non-productive (e.g. i, 24/i, 18). Surprisingly little *Ḥadīth* material is quoted in the *Kitāb*: there are a few fragments identifiable as *Ḥadīths*, and the famous *kullu mawlūd<sup>un</sup> yuladu 'alā 'l-fitrī*, etc. is found in i, 396/i, 348. But the Prophet Muḥammad is nowhere mentioned in the *Kitāb*, and even *Ḥadīths* are introduced as if they were part of ordinary speech, e.g. by *kawluhum* (cf. Uḍayma, 762; *Ḥadīthī* 1980, 59).

The ideal language is what Sībawayhi calls "good old Arabic" *al-lughā 'l-arabiyya 'l-kadīma 'l-djāyida* (ii, 424/ii, 474), i.e. *Ḥidjāzī (al-ḥidjāziyya hiya 'l-lughā 'l-ūlā 'l-kudmā* (ii, 41/ii, 37). Levin (in *JSAI*, xvii) shows that Sībawayhi made his own enquiries of the Bedouin as well as relying on second-hand evidence. It is also significant (*ibid.*, 235) that Sībawayhi contrasts the artificial constructs of the *naḥwīyyūn* with the natural usage of Bedouin informants and urges speakers to follow only the "Arab" way. His dismissal of some Bedouin usages as "incorrect" (*ibid.*, 236) has important theoretical implications, likewise the idea that the reasons for a usage can be lost, e.g. why some proper names have *alif-lām* (i, 268/i, 228, perhaps from al-Khalīl).

These three kinds of data and their representations in model utterances are the evidence for the "way" correct Arabic is spoken (writing is marginal, though the *Kitāb* does mention the formula for beginning letters, *ammā ba'du*, i, 470/i, 418). Sībawayhi's word for "way" is usually *naḥw*, e.g. *sa-tarā hādha 'l-naḥwa fi kalāmihim* "you will see this way [of speaking] in their speech" (i, 243/i, 207), but he also uses the synonyms *sabīl*, *ṭarīka*, *maḍḥhab*, *waḍīh*, *maḍjirā*, occasionally even *sunna* and *ṣhar'*. He therefore treats *kalām* as a set of acts judged pragmatically by motive, structure and communicative effectiveness, not as a set of logical propositions judged by semantic content and falsifiability. Truth and falsehood are irrelevant: *kalām* is evaluated (i, 7/i, 7) in terms of its structural correctness, as (ethically) "good" *ḥasan* or "bad" *kabīh*, i.e. well-formed or ill-formed (with synonyms *qamīl*, *raḍī'*, etc.), and by its communicative effectiveness, as (ethically) "right" *mustakīm* (compare *naḥw* with *ṣirāṭ*, *sunna*). Incomprehensible speech is "wrong" *muḥāl*, i.e. perverted. Communicative success or failure are absolute, but structural correctness may be graded, *aḥsan*, *aḍwāḍ* etc. Speech may even be *mustakīm kabīh*, i.e. making sense though structurally incorrect (especially in poetry), but is normally only "permissible", *qīā'iz*, if it is structurally complete, *yahsun al-sukūt 'alayhi*, and semantically self-sufficient, *mustaghni*.

(c) *General principles*. *Kalām* itself is segmented in two ways, into word classes and word positions. There are only three formal categories, *ism*, *fi'l* and *ḥarf* *qīā'a li-mā'nā* [q.v.]. Not too much distortion results from equating *ism* with "noun" and *fi'l* with "verb", although "verb" is far closer to the Greek *rhema* with its implications of "predicate" than the Arabic *fi'l* which

means simply "[word denoting] an act". But the definition of *ḥarf* *ḥā'a li-mā'nā* assumes a knowledge of Sībawayhi's concept of word position or *mawḍi'.*

*Mawḍi'* "place", more fully *mawḍi' fi 'l-kalām* "place in speech" is Sībawayhi's term for the position in which a speech element is used (cf. the notion of "function" in Western linguistics). In this sense, *mawḍi'* is simply taken over from ethical terminology, where it commonly denotes the "place" of an act as determining its goodness or badness (cf. Ibn al-Muḥaffa' and the early jurists). Each *mawḍi'* represents a specific linguistic act, thus *mawḍi' al-nidā'* is "the place for calling", realised by the word *yā* expressing the meaning *mā'nā* [q.v.] of that act, viz. *mā'nā 'l-nidā'* "the meaning of calling". This brings us back to *ḥarf*, which, unlike the noun or verb, is formally and semantically unclassifiable and can only be defined by what the speaker does with it, hence *yā* is *ḥarf nidā'* "a particle of calling", i.e. used to perform an act whose meaning is "calling". The general definition of *ḥarf* is implicitly *ḥarf ḥā'a li-mā'nā* "x", where "x" is one of the seventy or so linguistic acts identified by Sībawayhi as a *mawḍi'/'mā'nā*, all denoted by verbal nouns exactly as in *fikh.* Every particle is defined in this way: *lā* = *ḥarf [ḥā'a li-mā'nā] 'l-naḥw*, in = *ḥarf [ḥā'a li-mā'nā] 'l-sharḥ* and so on. It follows that Sībawayhi has little time for lexical meaning, since merely explaining one word by another leads to infinite regression (ii, 312/ii, 339).

The correlative of *mawḍi'* is *manzila*, and just as *mawḍi'* connotes function and syntagmatic features, so *manzila* represents status on the paradigmatic axis. Thus two elements from different form classes, if they have the same status, *manzila*, may occur in the same function, *mawḍi'*, e.g. the particle *mā* in Hijāzī usage has the status of the verb *laysa* (i, 27/i, 22). A third term in this set, *mawḍi'*, denotes simply the occurrence of an element in the string without regard to its function: compare *li-kāna mawḍi' ākhar* "kāna has another place" (i, 21/i, 16), i.e. "there is another way to use *kāna*", with *lam lā yaka'u ba'dahā fa'ala* "fa'ala never occurs after *lam*" (i, 457/i, 407, and cf. Versteegh, in *Arabica*, xxv).

Consequent on all this is the principle, often raised by al-Khalīl and fully exploited by Sībawayhi, that compound units may have the status of a simple element and so be substitutable for it. The *Kitāb* identifies a number of units with the *manzila* of a "single noun" (*ism wāhid*), such as noun + adjective, annexed nouns, demonstrative + noun, categorical *lā* + noun, *anna* + noun, relative clause and antecedent, *ayy* + relative clause, *an* + subordinate verb, *idhan* + verb, verb + agent pronoun suffix, and verb + preposition. Levin's suggestion (*Studies in Isl. hist.*) that *kalima* in the *Kitāb* is (with Levin's own reservations) partially equivalent to "morpheme" is illuminating, but the relationship between *kalima* and *ism wāhid* needs further exploration.

*Manzila* also implies a hierarchy, since the range of an element's forms and functions depends on its status. For instance, the verbal status of the "five particles" *inna*, *anna* etc., allows them to operate on nouns and give them dependent (*naṣb*) form in the same way as *'ishrūna* has verbal status and effect, but none of them have the paradigmatic freedom (*taṣarruf*) of verbs (i, 279/i, 241). The system accommodates several hierarchies, most of which are set out in the introductory paragraphs of the *Kitāb* and have been collected by Baalbaki (in *ZAL*, ii). They include the priority of nouns over verbs, singular over dual and plural, masculine over feminine, indefinite over definite, simpler word patterns over more complex, "lighter" vowels

over "heavier", *mahmūsa* consonants over *maḥḥūra*. Sībawayhi also regards time as closer to verbs and place to nouns (i, 16/i, 12). None of this violates the linearity of *naḥw*: a speech element can only occur in the "chaîne parlée" (Martinet), and its status determines its place(s) in the chain just as civil rank determines the place(s) of an individual in society.

The symmetry and coherence of Sībawayhi's grammar are assured by *kiyās* "analogy" [q.v.], which unifies linguistic practice through structural similarities and enables the generation of new utterances. Sībawayhi's use of *kiyās* has been compared with early juridical arguments and Baalbaki (*Misc.*) shows how the mechanisms of analogical reasoning are all there, even if the formal terminology is lacking. Gwynne has examined *a fortiori* arguments in the *Kitāb* and concluded that this kind of reasoning passed from law to grammar, then directly to theology. For Sībawayhi, it was the speakers who made analogies: "they sometimes liken one thing to another, even if they are not alike in all respects" (i, 93/i, 77, using *shabbaha*). His readers are told to do the same: *fa-'alā ḥādḥa fa-kis ḥādḥa 'l-naḥwa* "so make analogies on this for this way [of speaking]" (ii, 163/ii, 167, note *kāsa* in the context of *naḥw*), but he also warns against analogical extension of non-standard forms: *lā yanbaghī laka an takīsa 'alā al-shādhḥ* "you should not base analogies on anomalies", i, 398/i, 351.

There is a conspicuous pragmatism in Sībawayhi, no doubt inspired by al-Khalīl. As well as a speaker, *mutakallim*, there is always a listener, *mukḥāṭab*, who determines whether an utterance is "right", *mustakim*, or "wrong", *muḥāl*, though not its structural correctness. The listener's knowledge is a decisive factor in elision, and can also affect other choices of the speaker: as well as *marartu bi-rajulayni muslimin wa-kāfirin* a speaker may say *muslimin wa-kāfirin* "as if answering the question 'who were they?' ... even if the listener does not say anything, for the speaker's words will go according to what you might have asked him" (i, 214/i, 182). Psychological and contextual explanations are frequently offered (cf. Buburuzan) and there is even a hint at the concept of body-language (i, 279/i, 240).

(d) *Syntax.* The primary purpose of speech is the making of statements, and the grammarian's task is to account for "the actions performed by the speaker in order to construct a linguistic sequence appropriate to his specific intended meaning" (Guillaume, in *Hist. Ep. Lang.*, viii, 53). For Sībawayhi, each act is normally realised as a binary unit, with one active element, the *'amil* [q.v.] "operator" and one passive, the *ma'mūl fīhi* "operated on", and the effects of that *'amal* "operation" appear as an explicit or implicit variation in the word-ending *i'rāb* [q.v.]. Thus the act of *nidā'* is realised through an active operator, the *ḥarf nidā'* and a passive *munādā'*. Ultimately, the speaker is the operator (i, 166/i, 139), which is why in some units, e.g. *idāfa*, *badal* and *ibtidā'*, both parts are passive (*muḍāf/muḍāf ilayhi*, *mubdal/mubdal minhu*, *mubtada'* [*bihi*]/*mabni 'alayhi*). *Ibtidā'* is a special case, as the speaker's act of predicating has no morphological consequences (subject and predicate remain independent, *marfū'*) unless the statement is modalised by verbs such as *kāna*, *ẓanna* etc. (Guillaume, 60-1).

The division into only three word classes, nouns, verbs and particles, is not the whole story. Several subclasses of nouns and verbs are distinguished (like the *ḥurūf*) by their function, e.g. adjectival qualifier, *ṣifa* or *na't*, space/time qualifier, *ẓarf*, circumstantial qualifier, *ḥāl*, personal pronoun, *damir* or *muḍmar*, demonstrative noun, *ism al-ishāra* or *al-ism al-mubham*,

relative noun, *ism mauṣūl*, verbal noun, *maṣdar*, various verbal complements, *maf'ūl*, nominal verb, *ism al-fi'l* (including interjections), dependent phrase *ṣila* and verb of surprise, *fi'l al-ta'adīdīb*. Transitivity is described in detail, confirming that any similarity between the Arabic *muta'addī* and the Græco-Latin *transitivus* is coincidence, the nearest term in Sībawayhi to our sense of "transitive" being *waḳā'a/awḳā'a* (Levin, *Stud. or.*). A corollary of the substitution principle mentioned above is the separation principle embodied in the expression *'iṣhrūna dirham*<sup>m</sup>, which stands for all those units whose first element has obligatory *tanwīn* or the equivalent and whose second element is structurally and semantically detachable (Carter, in *BSOAS*, xxxv). Finally, Sībawayhi's treatment of *kāla*, *ḡanna*, etc., and their effect on predicative utterances, displays a degree of refinement we are only just beginning to appreciate.

(e) *Morphology*. The morphological section of the *Kitāb* occupies about half the work in sheer bulk. As well as enumerating all the known patterns for nouns, verbs and particles, Sībawayhi categorises them by number of radicals (minimum two, maximum five), carefully distinguishing these from augments. The relation between declinability, gender and word-pattern, and the connection between pattern and function, are investigated, including the unusual behaviour of proper nouns and foreign names. Derivation, *iṣṭikāk* [q.v.], is discussed in detail (Leemhuis shows that Sībawayhi analyses Stems II and IV much more delicately than later grammarians). Varieties of *tanwīn* are treated, and long chapters are devoted to the diminutive, the dual and sound and broken plurals. Pause, rhyme, exclamation and phonetic reduction (*tarkhīm*) are described, the last two in the syntax section, where they rightly belong as a feature of the vocative. In short, very little is left out, though al-Zubaydī proudly published a list of more than eighty forms Sībawayhi missed (*Kitāb al-Istidrāk*, see below).

(f) *Phonology*. This occupies the seven dense and laconic final chapters of the *Kitāb*. Although Sībawayhi refers to sounds by their graphic form, it is clear that (following al-Khalīl) he knew the difference between the name of a letter, the grapheme and the phoneme. He also knew that the set of Arabic sounds (our "phoneme inventory") was limited and distinctive, and he gives precise descriptions of their place and manner of articulation [see ḤURUF AL-HIḤḤĀ']. Dialectal and conditioned variants (allophones) are reviewed, also the Arabisation of foreign sounds, and the role of ease of articulation, proximity and frequency fully acknowledged; this includes vocalic allophones arising from *imāla*, *raum* and *iṣhmām*, processes not unlike umlaut. Assimilation is recognised as occurring not only within but between words. Phonological constraints on syllabic structure and the morphological results are treated, as are sound changes arising from metathesis, elision, substitution and conversion. Totally lacking is any mention of *taḍwīd*, though there are frequent references to the way individual Qur'ānic sounds or words are "read", i.e. textually rather than liturgically.

Sībawayhi's terminology applies uniformly at all levels; every syntactic, morphological and phonological unit has a *nahw* or way of use according to its status *manzila* and function *mauḍi'*, by which it is judged to be structurally correct, *ḥasan*, or incorrect, *kabīḥ*, with analogy, *kiyās*, as the controlling principle. For obvious reasons, there is no call for *muḥāl*, "incomprehensible", outside syntax, but we sometimes find "right", *mustakīm*, in a morphological context where the choice of a certain form affects communication

(ii, 60/ii, 55). Sībawayhi also understood the nature of metalanguage; with al-Khalīl he often tests the linguistic status of elements by artificially converting them into proper names, and he is alert to the problems of purely theoretical examples (Ayoub).

4. The text and editions of the *Kitāb*.

(a) *Composition*. The *Kitāb* survives because of al-Akhfash, a service for which he has not been given due credit. Sībawayhi died before he could bring his work into publishable form, and it was al-Akhfash who helped him write the first draft, so to speak, and he alone who gathered it up and later used it for his own teaching. Through this epistemological bottleneck passed a work of transcendent genius. After Sībawayhi's death, Yūnus was shown a book of some thousand pages which had emerged from this collaboration, and he certified it as an authentic digest of al-Khalīl's and Sībawayhi's knowledge, thus retrospectively defining the academic pedigree of the *Kitāb* and confirming its large size *ab initio*. There is something rather convincing about a story which so innocently avoids the pitfall of fabricating an *iqāza* when such mechanisms patently did not exist. The lack of precedent accounts better than Sībawayhi's premature death for the *Kitāb*'s unusual form (no title, no preface, no conclusion); if he had time for a thousand pages, the absence of literary formalities can only have been because there were no models. The *Kitāb* shows no trace of the well-established epistolary manner (still less of any dipping into translations from Greek or Syriac), and the originality of the work lies as much in its style as its content; it is one of the earliest "books" in Arabic at all, hence its default title *Kitāb Sībawayhi*.

(b) *Manuscripts*. Humbert 1995 lists 77 extant manuscripts, and a 78th has recently been found (Humbert, *Develop.*, 133). The oldest is a fragment from 351/962 (chs. 184-277, 288-312), and the earliest complete copy is dated 588/1192-3. Al-Mubarrad, who studied the *Kitāb* with al-Djarmī and al-Māzinī, two pupils of al-Akhfash, is responsible for the creation of a "vulgate", which included his own glosses, but there were alternative transmissions, notably of Abū 'Alī al-Fārisī (d. 377/987), who showed an outstanding interest in collecting *Kitāb* manuscripts. He represents a stage in the history of the *Kitāb* when scholars eagerly sought and collated manuscripts, culminating in the emergence of two "standard editions", an Eastern version associated with al-Zamakhsharī and an Andalusian version associated with al-Rabāḥī. The Zamakhsharī recension is easily recognised by the addition of *al-ḥā'iy* in the very first line and a haplogly in the last folio.

Completely outside these two dominant traditions is the Milan fragment, containing chs. 327 to 435, i.e. about one-sixth of the *Kitāb*. This manuscript, tentatively dated by Humbert to the 5th/11th century, exhibits enough textual and marginal divergences from the mainstream versions to point to a totally independent line of transmission. There is evidence, slight and tantalising, to connect this version directly with Tha'lab, the chief "Kūfan" grammarian and bitter rival of al-Mubarrad, and its forthcoming publication will greatly improve our knowledge of the *Kitāb*.

(c) *Editions*. (1) *Le livre de Sībawayhi*, ed. Hartwig Derenbourg, Paris 1881-9, repr. Hildesheim 1970. (2) *Kitāb Sībawayhi*, ed. Kabir-Uddin Ahmed Khan Bahadur, Calcutta 1887. (3) *Kitāb Sībawayhi*, Būlak 1898-1900, repr. Baghdad [1965]. (4) *Kitāb Sībawayhi*, ed. 'Abd al-Salām Muḥammad Ḥārūn, 5 vols., Cairo 1968-77, 2nd ed. 1977. (5) Beirut, 1967, German

translation, Gustav Jahn, *Sībawayhi's Buch über die Grammatik, übersetzt und erklärt*, Berlin 1895-1900, repr. Hildesheim 1969. See further Humbert, *Studies*, 179-82, 1995, 27-40.

(d) *Commentaries*. Of more than 80 ancillary titles listed in Sezgin, *GAS*, ix, 58-63, 242, only 21 are extant. Five have been published, viz no. 20, Ibn al-Nahhās, *Sharḥ abyāt Sībawayhi*, ed. Z. Gh. Zahīd, Beirut 1986; no. 29, al-Zubaydī (*GAS*, ix, 222), no. 37, Ibn al-Sirāfi, *Sharḥ abyāt Sībawayhi*, ed. M. A. Sulṭān, n.p. 1979, no. 39, Hārūn b. Mūsā, *Sharḥ 'uyūn Kitāb Sībawayhi*, 'A.R. 'A.L. 'Abd Rabbih, Cairo 1984; no. 48, al-Djawāliqī (*GAS*, ix, 242). Add al-Zadīdjādī, *Idāh* (*GAS*, ix, 94), translated by C.H.M. [Kees] Versteegh, *The explanation of linguistic causes. Az-Zağāgī's theory of grammar. Introduction, translation, commentary*, Amsterdam 1995. Partial editions: no. 25, al-Sirāfi, *Sharḥ Kitāb Sībawayhi*, ed. R. 'Abd al-Tawwāb, Cairo 1986 (2 vols.), no. 28, Abū 'Alī al-Fārisī, *al-Taṭlika*, ed. 'A. b. H. al-Kūzī, Cairo 1990 (1 vol.), no. 31, al-Rummānī (*GAS*, ix, 112). Extracts from al-Sirāfi in Jahn and Būlak, where also extracts from no. 43, al-'Alam al-Shantamari's *Tahṣīl 'ayn al-dhahab*.

(e) *Reference works*. Sezgin, *GAS*, ix, 51-63, 241-2, incorporating W. Diem, *Bibliographie/Bibliography, Sekundärliteratur zur einheimischen arabischen Grammatikschreibung*, in C.H.M. Versteegh, K. Koerner, H.-J. Niederehe (eds.), *The history of linguistics in the Middle East*, Amsterdam 1983, 195-250 (= *Historiographia linguistica*, viii (1981), 431-86), with supplements in *ŽAL*, x, xi, xii, xiv. Indispensable resources are: G. Troupeau, *Lexique-index du Kitāb de Sībawayhi*, Paris 1976; 'A. Kh. 'Udayma, *Fahāris Kitāb Sībawayhi wa-dīrāsa lahu*, Cairo 1975; A.R. Naffākh, *Fihris shawāhid Sībawayhi*, Beirut 1970; G. 'Awwād, *Sībawayhi imām al-nuḥāt fī athār al-dārīsīn khilāl iḥnay 'aṣḥar kam*, Baghdad 1978; Kh. 'A.R. al-Hadīthī, *Abniyat al-ṣarf fī Kitāb Sībawayhi*, Baghdad 1965; the index of Hārūn's *Kitāb* edition, also Schaade and Mosel.

5. Sībawayhi's pupils and the legacy of the *Kitāb*.

(a) *Pupils*. Sībawayhi only had two pupils that we know anything about, al-Akhfash and Kuṭrub [q.v.]. Three others are merely names: al-Nāshī, much admired by al-Mubarrad, al-Ziyādī, who apparently read the *Kitāb* with Sībawayhi and al-Māzinī (see Humbert 1995, 15, n. 35 on both) and one 'Utba al-Nahwī, described as *min aṣḥāb Sībawayhi, Aghānī*, xvii, 16, perhaps the same as al-'Utbī in al-Zubaydī, *Tabakāt*, 44.

Of the two recognised pupils, al-Akhfash is remarkable for his role in the composition and transmission of the *Kitāb*, and Kuṭrub is perhaps more remarkable for having had nothing to do with either, as he simply "studied the *Kitāb* with Sībawayhi". This is a problem, of course, since there was strictly speaking no *Kitāb* for him to study. He was about the same age as Sībawayhi and thus more of a fellow-student than a pupil; his reputation as a "dissenting grammarian", in Versteegh's phrase, makes it difficult to imagine him as a student of Sībawayhi and impossible to consider him a disciple. Since none of his works survive (nor any of al-Akhfash) there is no way to know the full technical basis for his unique grammatical position. For al-Akhfash, at least, we can hope to reconstruct his views from his numerous glosses on the *Kitāb*.

(b) *Grammar after Sībawayhi*. In the years after Sībawayhi's death, the *Kitāb* went into occultation. Bernards has explored this phase and shown how the *Kitāb* began to acquire prestige only with al-Mubarrad

(d. 285/898 [q.v.]), which fits nicely with Humbert's independent conclusion that it was al-Mubarrad who laid the foundations for a standard *Kitāb* text. Thus al-Yazīdī (d. 202/818, studied with al-Khalīl but not with Sībawayhi) can praise the "Baṣran" grammarians without even mentioning Sībawayhi. Al-Akhfash taught the *Kitāb* to only three disciples, al-Djarmī, al-Māzinī and 'Abd Allāh b. Hānī, though it was also known to al-Kisā'ī and al-Farrā' who play, however, no part in its transmission. Al-Djarmī and al-Māzinī both energetically promoted the *Kitāb*, and the latter admonished: "anyone who thinks they can do better than the *Kitāb* should show some humility!". When al-Djāhiz presented a copy as a gift to a *wazīr*, the work's fame was assured; by al-Mubarrad's time, the difficulty of the *Kitāb* was compared with riding on water and eventually it was crowned with the title "the Kur'an of grammar". The growing prominence of the *Kitāb* is linked also with the emergent "Baṣran" and "Kūfan" schools, with Tha'lab declaring that the *Kitāb* was the work of 42 scholars and he could very well do without it! But the *Kitāb* itself (*pace* Baalbaki, *Stud. ar. et isl.*) gives little support to the polemicists; Sībawayhi is so careful to balance systematic regularity *kiyās* against observed data, *samā'*, that he can hardly be claimed as a representative of either school.

Arabic grammar is not static, and although the *Kitāb* remained the reference point for all subsequent developments, the science itself moved on. Prescriptive needs were fulfilled, methodological theory elaborated, curricular requirements accommodated, and the relatively junior science of rhetoric was established.

Comparison of Sībawayhi's vocabulary with later grammar (Troupeau, *Lex.-index*, 18-25) makes the qualitative and quantitative changes plain. Absent from the *Kitāb* are, amongst others, *maqāz/hakika, naḥr/nazm, fā'ida/yfāda, ḡumla, maḡhūl, ḥukm, dābiḡa, iktādā, maḡall, rābiḡ, salb, nāsikh, basīḡ/murakkab, shamsī/kamari* and all abstract nouns of the type *ismiyya, fi'liyya*. Terms were created for many items Sībawayhi left unnamed, e.g. *tamyīz, kāna 'l-nāḡisa/'l-lamma, lā li-nafī al-ḡins, mā al-nāsikhā, mā al-daymima, af'al al-kulūb, alf'al al-mukāraḡa*, etc.

Troupeau's index also exposes the extreme rarity of many terms in the *Kitāb*. Abstractions such as *'arad, ḡawhar, ḡudḡā, sūra, ḡins, ṣinf*, occur in single figures, *naw'* only 11 times, with *mādda* and *ḡayūla* completely absent, suggesting that Sībawayhi was not greatly interested in categories, or rather that the expression of class membership was already catered for by the indigenous metaphor of *umma* (23 times) and its cognate notions "tribe", *kabil*, "mother", "sister" and "daughter". Two rare terms, *'illa* and *takḡir*, have been over-interpreted. Sībawayhi associated *'illa* principally with phonological "weakness", and on the few occasions when it seems to mean "cause" it also involves weak radicals or similar morphophonological factors; in short, there is not much evidence that Sībawayhi subscribed to any explicit theory of grammatical causality other than *'amal*. With *takḡir* the position is equally inconclusive; again, the term has primarily morphophonological import and occurs only once in a purely syntactic context. In i, 287/i, 247, *a-laysa ḡadhā zayd<sup>an</sup> munṡalik<sup>an</sup>* is said to be "like *ḡaraba 'abd Allāhi zayd<sup>an</sup> kā'im<sup>an</sup>* in *takḡir* but not in meaning", and the suspicion that this may be an interpolation is irresistible. The original sense of *takḡir* is seen in an incident where Sībawayhi is challenged to make up words with certain patterns and radicals (al-Zubaydī, *Tabakāt*, 72). Sībawayhi *kaddara wa-akḡta'a* "tried to fit the radicals into the patterns and got it wrong", where *kaddara*

still has the same morphological connotation as in the *Kitāb*.

As grammatical science evolved, elements of Sībawayhi's system were dropped or marginalised. Prescriptive grammar was not so concerned with the moral aspect of communication implied by *istakāma*, which became less common as the normative verb *qāza/yadūzu* increased in frequency. The concept of *sabab* [q.v.], which accounted for a wide range of syntactic phenomena, was restricted to the *na't sababī* construction, e.g. *marartu bi-radīlū hasanū abūhu*. The scope of *muḍāra'a* was drastically reduced. For Sībawayhi, it was part of a general theory of analogical pressure inseparable from *kiyās* and related (in ways not yet examined) to the analogies performed by speakers, but all that survives now is the name of the imperfect verb, still called *muḍāri'* to this day. Sībawayhi's analysis of appositional and coordinated qualifiers was tidied up; on structural grounds he called them both simply *'aḥf*, but his successors in their formalistic way subdivided them into *'aḥf bayān* and *'aḥf nasāk* respectively. Sībawayhi's terms for predication, where *musnad* = first part, *musnad ilayhi* = second part of any predicative structure whether nominal or verbal, were inverted by the 4th/10th century (Levin, in *JAOS*, ci) to *musnad* = predicate, *musnad ilayhi* = subject irrespective of word order.

(c) *The Kitāb in the West*. The interpretation of Sībawayhi's grammar in the West has always been implicitly or explicitly a comparative exercise, and has never resolved the dilemma that literal translations of the *Kitāb* are technically unconvincing and technical translations are historically misleading. Jahn opened up the work to a wider audience (de Saussure *could* have read it, though we will never know), but his vital warning that the German version is only for those who can compare it with the Arabic is mostly ignored. All too often the secondary literature fails to find a compromise between the type of translation represented by Jahn's "Über die Verben, von deren 1. Form das Passivum vorkommt, ohne daß das Aktivum gebräuchlich ist" and what Sībawayhi actually said, *bāb mā qāza fu'ila minhu 'alā ghayri fa'altuhu* (ch. 447). It is only useful to recast Sībawayhi's thought in some modern theoretical framework if the undertaking has real explanatory value. One may regret, now, the speculation that Sībawayhi belonged "somewhere between de Saussure and Bloomfield" (Carter, in *JAOS*, xciii, 157), lending new irony to the word Procrustean which has been applied to Arab linguistics.

Sībawayhi's vocabulary lacks many terms, among them "number", "gender", "tense", "person", "case", "mood", "syllable", "accent", "diphthong", but to focus on these perceived shortcomings diverts attention from the realities of the *Kitāb*. Even more damaging is the inaccurate rendering of the terms that Sībawayhi does use. No-one would be impressed by a writer on *fiqh* who consistently translated *fatwā* as "death sentence", yet similar distortions are common in works on Arabic grammar. The most unfortunate is the equation of *'amal* with "governing", but the imposition of Latin case and mood names runs a close second. We also find "copula" for *ḍamīr al-faṣl*, turning that which keeps apart into that which joins together, *fā'il* becomes "subject" despite the Arabs' careful terminological distinction between *fā'il* and *mubtada'*, *mabnī li 'l-maf'ūl* (in later grammar *maḍihūl*) are reproduced by "passive", obliterating the Arab theory of this form of verb, phonetic terms are squeezed into Western categories, and so on.

Yet Sībawayhi continues to inspire. Like all works

of genius, the *Kitāb* bears infinite re-reading, and all research into Arabic grammar must still begin with Sībawayhi, even if the science which he founded outgrew him and evolved into the scholastic grammar of the *madrasa*. The high intellectual calibre of the late grammarians is undeniable, but it seems less than perfect justice that as grammar sublimated itself into a dialogue with the *Kur'ān*, Ibn Khaldūn could say without incongruity that Ibn Hishām (d. 761/1360 [q.v.]) was "more of a grammarian than Sībawayhi" *anhā min Sībawayhi*.

**SIBĪ** (also spelt Sīwī in mediaeval Islamic sources, e.g. the *Hudūd al-'ālam*) a town and district of northeastern Balūčistān, lying on the plain below the entrance to the Bolān Pass and the route to Quetta [see kwāṭṭā], which is some 140 km/88 miles beyond Sībī town. The town is situated in lat. 29° 31' N. and long. 67° 54' E. Because of its strategic position between the mouths of the Bolān and Harnāi Passes, and on the way down to the Indus valley, it has always played a part in history.

In early Islamic times, Sībī was one of the towns of the district of Bālis(h) or Wālišān, although the residence of the amīr was at al-Ḳaṣr/Kūshk near another of the district's towns, Ispindjāy (see *Hudūd al-'ālam*, tr. Minorsky, 111, comm. 346). The district is mentioned in the *Bundahishn* as Bālist, presumably

meaning in Persian "highland". The Šaffārid Ya'qūb b. al-Layth [q.v.] brought Bālis(h) under his control in 253/867 (C.E. Bosworth, *The history of the Saffarids of Sistan and the Maliks of Nimruz*, Costa Mesa and New York 1994, 99). In Ghaznavid times, it formed part of the sultans' empire, and on their expeditions to India, they frequently marched from Bust and al-Rukhkhadj [q.v.] via Sībī to Multān and the Indus valley (see M. Nāzim, *The life and times of Sultān Mahmūd of Ghazna*, Cambridge 1931, 199; Bosworth, *The later Ghaznavids*, Edinburgh 1977, 7-8). The district of Sībī was held ca. A.D. 1500 by Arghun from Kandahār; then by the Mughals (in Akbar's time, it was a *maḥall* of the Bhakkar *sarkār* in the Multān *sūba*); in 1714 by the Kalhōras of Sind; and later in that century, by the Durrānī Afghāns. In the 19th century, Sībī and Pishīn formed the so-called "assigned districts" (any surplus revenue from which was to be refunded to the amīrs of Afghānistān) handed over to Britain by Ya'qūb Khān b. Shīr 'Alī under the Treaty of Gandamak in 1879.

In British India, only some two-fifths of Sībī District were directly administered, the rest being the Marī and Bugtī tribal areas and a part of Kalāt state [q.v.]. The strategic value of Sībī town was increased when the standard-gauge railway to Pishīn was constructed through it, with its also becoming subsequently the junction for the Quetta line. The ethnic composition of the District included 43% Balūč and 20% Pathāns. Sībī is now in the Balūčistān Province of Pākistān.

**SIBĪR**, the designation of Western Siberia first used in sources for the Čingizid era of the 13th and 14th centuries. From this the modern Russ. Сибирь (and thence "Siberia" in European and other languages) derives. The origins of this toponym are unclear. A connection with the Sabirs, a Turkic nomadic grouping which formed part of the Khazar state (cf. the Suwār in Volga Bulgaria) and who may have occupied some parts of this region before moving to the Volga zone in the early 6th century A.D., has been suggested (Patkanov, *Über das Volk der Sabiren*, 258-77). *Sabir* (*Sibir*), in turn, has been derived from the name Hsien-pi (\*siem-bi), a Proto-Mongolian tribal confederation of Inner Asia which overcame the Hsiung-nu for control of Mongolia in the 2nd century A.D. and from which the Jou-jan/Avans, among others, appear to have originated. The later toponym *Ibir-Sibir* (see below) has been conjectured as stemming from \**Abar-Sibir* (Quatremère, *Histoire*, 413 ff., Pritsak, *The origin*, 278-80). The evidence is conjectural at best. The Kimek Kaḡhanate, known to the mediaeval Islamic geographers (cf. *Hudūd al-'ālam*, ed. Sotoodeh, 85-6, tr. Minorsky, 99-100, and KIMĀK), from which the Kipčak confederation developed, was located in much the same territory.

The earliest reference to this name is found in the (ca. 1240) *Yüan-chao-pi-shih* (*Secret History of the Mongols*, tr. Cleaves, 173), in the form *Shibir*, where it is listed in a group of peoples extending from Central Siberia to the Urals. A Franciscan letter of 1320 records the form *Sibur* (Peliot, *Notes sur le 'Turkestan'*, 51-2). This is similar to the forms noted in the Pizzigani brothers' map of 1367 and a Catalan map of 1375: *Sebur*, located to the north of the *Pascheri* (Bashkirts, see

Egorov, *Ist. geograf.*, 130-1; Yule, *Cathay*, i, 307). A number of authors, beginning with Rashīd al-Dīn in the early 8th/14th century (*Ḍiāmi*<sup>4</sup>, ed. Alizade *et al.*, i/1, 72-3, and ed. Karīmī, i, 513), note a region termed "Ibīr Sibir". Al-ʿUmarī (ed. Lech, 77), writing ca. 741-9/1341-9, in his section on *Kh*ārazm and *Kh*ibchak, makes reference to the *bilād Sibir wa-Ibīr* which is adjacent to "Bashkir" and is a region in which "the ice does not depart from them for a period of six months". A contemporary of his, the anonymous Spanish Franciscan author of the *Libro del conocimiento* (van den Wyngaert, *Sinica Franciscana*, i, 572), mentions the largely uninhabited "lands of Albizibi" which encompass "Tartaria" from the north. The form "Ibir-Sibir" may also be seen in I-pi-rh Shi-pi-rh of the *Yüan-shih* (and a somewhat later Chinese map, see Bretschneider, *Med. researches*, i, 37; Pelliot, *Notes critiques*, 59). In the early 15th century, Johannes Schiltberger (*Bondage and travels*, ed. Telfer, 34-6, 49) took part in a campaign against *Ibissibur* while the region was still largely under Ostyak control. By that time, the "land of Sibir" appears in Russian sources (cf. *PSRL*, xi, 198; *Ustiužskiy*, 70, recording the death ca. 1406 or 1407 of Toktamish there). Later Islamic sources (e.g. the 10th/16th century *Ta'rikh-i Rashīdī*, tr. Ross, 282) continued to call the region "Ibīr-Sibir". As the name appears to be known only from the Čingizid era, it may derive from Mong. *siber/sibir* "dense forest, thicket" (Lessing, 695), but since the Mongols tended to use the existing ethnonyms and toponyms of the regions they conquered, this seems unlikely.

Sibir, never clearly defined in the sources, formed the north-eastern border zone of the *Djočid ulus*, extending, probably, to the *Irūsh* and *Čuliman* rivers, the Baraba and Kulunda steppes and southward toward the Altay and Lake *Balkhash* (Egorov, *Ist. geograf.*, 45, 54-5). The earliest Čingizid-era polity to emerge in this region (last half of the 8th/14th century?) was that of the *Tümen khānate* on the middle Tobol and Tura-Tavda mesopotamia with its centre at Čimgi-Tura. It comprised a number of *Kh*ipchak-Turkic-speaking Turko-Mongolian tribal groupings, stemming from the same milieu as the Noghay Horde, and was frequently fought over by opposing *Djočid* factions. It was to here that Toktamish fled following his defeat by *Timūr* in the late 8th/14th century, after which it was controlled by the Noghay *amīr* Edigü through Čingizid underlings. Although local Tatar traditions (preserved in oral form and in the Russian chronicles) present a welter of confusing accounts, the ruling house appears to have derived from (a probably Noghay chieftain) Taybugha (Miller, i, 189-3; Frank, *Siberian chronicles*, 8-10). Sometime before 1481, the *Shībānid* Ibak *Khān*, who together with the Noghays inflicted fatal blows on the "Great Horde", took control of the region from the Taybughids. Mamat (Muhammad), a Taybughid, killed Ibak in 1493 or 1495, regained control of the *khānate* and moved its capital to Sibir/Isker/Kashlik (*PSRL*, xxxvi, 47; Armstrong, 66-7 [Yesipov chronicle]). This now became the *Khānate* of Sibir, which soon subsumed the remaining *Shībānid* holdings in *Tümen* and expanded into *Bashkir* and *Ob Ugrian* (Ostyak) lands. The Taybughid prince Yediger and Bekbulat, troubled by internal problems (their father, Kasīy/Kāzīm, had been assassinated by members of his own entourage) and Moscow's conquest of Kazan [see *Kāzān*] (1552), submitted to Ivan IV in 1555. This did not prevent their defeat and death at the hands of Küčüm [q.v.], a descendant of Ibak (1563). Seydāk

(Сейдякъ < Arab. *sayyid*), Bekbulat's son, fled to *Bukhārā* and from there continued periodic resistance. Although Islam was clearly the religion of the Taybughids (who, in the absence of Čingizid credentials, stressed their Islamic legitimacy, Frank, *Siberian chronicles*, 23) and of the ruling strata of the *khānate* of Sibir, local tradition credits Küčüm with a concerted effort (occasionally forcible) to proselytise the local population. *Nakshbandī shaykhs* also appear to have played some role in the propagation of Islam on this northern frontier. Küčüm's successes were short-lived. In 1581, the Russians, under the Cossack Ermak Timofeev, began the conquest of Siberia, taking the city of Sibir in October 1582. Ermak perished in a Tatar ambush in 1585 and Küčüm continued to struggle against the Russians, their Tatar allies and Seydāk (who in 1587 was made prisoner by the Russians and taken off to Moscow, *Ist. Sibiri*, ii, 32; Armstrong, *Yermak*, 81-2), but without success. Following a defeat at Russian hands in 1598 (*Ist. Sibiri*, ii, 30-6), old and now blind, Küčüm fled to the Noghay Horde, where he died: *Manghit khalkining içige bardı. Hakk-i rahmanatige kıldı* (according to Abu 'l-Ghāzī, ed. Desmaisons, 177, this occurred in 1003/1594-5; the Yesipov and Remezov Chronicles, Armstrong, *Yermak*, 82, 237-43, report that the Noghays killed him). The Russians established their forts and urban settlements on or near the *khānate's* earlier towns. Tobol'sk (1587) was built near Tatar Sibir.

Sibir was an important link in trans-Siberian commerce, connecting the Volga-Ural region and Central Asia with the forests of the north so important to the fur trade. Little is known about the internal structure of the *khānate*. As non-Čingizids, the Taybughids appear, like the Noghays, to have used the titles *bey* (bey, beg) and *sultān*. The Tatar tribes were organised into *uluses*, headed by *mīrzās*, as were the subject peoples, often incorporated into one or another *ulus*, who paid the *yasak* (tribute collected in furs).

**SIBT** [see IBN AL-DJAWZĪ, IBN AL-TA'ĀWIDHĪ, AL-MĀRDĪNĪ. 3.].

**AL-SĪD**, Spanish el-Cid, the Cid, the name by which the most celebrated and the most popular of the heroes of Castilian chivalry is known; he played a preponderating political part in Muslim Spain of the second half of the 11th century, and we can now gain an idea of his real personality by removing all the legendary matter that has grown up around his life and his exploits. It was to the Dutch scholar R. Dozy that the honour was due of having established, as a result of his examination in 1844 of the manuscript of the *Dhakhira* of Ibn Bassām preserved in Gotha, that the story of the *Crónica General* of Alfonso the Wise relating to the Cid, which up till then had been considered a pure invention, was really translated from the Arabic, and probably from a work of the Valencian Muḥammad b. Khalaf Ibn 'Alqama (428-509/1037-1116 [q.v.]) called *al-Bayān al-wāḍiḥ fi 'l-milamm al-fāḍiḥ* (cf. also F. Pons Boigues, *Ensayo bibliográfico*, 176-7, no. 140) and that it is contemporary with the Cid.

This knight, who was called Rodrigo Díaz de Vivar, was descended from a noble Castilian family and was born at Burgos during the first half of the 11th century. It is known that in 1064 he distinguished himself, on the side of Sancho II of Castile in a war which this sovereign waged against Sancho of Navarre. He defeated at this time a knight of Navarre in single combat, and the success stood him in good stead in the Castilian army, whose commander-in-chief he became (or the "Standard-bearer of the King") with the title of Campeador (Latin *campeator*, written by the Arabs *الكنبيطير al-kanbiyātūr*, the equivalent of the Spanish Arabic *mubārīz* or *barrāz*, "the champion who comes out of the ranks, when two armies are ranged against one another, to challenge an enemy to single combat"). A short time afterwards thanks to the counsels of Rodrigo Díaz, Sancho II made himself master of the Kingdom of León by taking his own brother Alfonso prisoner at Burgos. The latter was able to flee to the Muslim king of Toledo al-Ma'mūn, of the dynasty of the Banū Dhū 'l-Nūn. In Muḥarram 465/7 October 1072, Sancho of Castile was killed before Zamora which he was besieging. The new king of Castile always secretly felt a grudge against Rodrigo Díaz for the humiliation of this oath, but in order to conciliate the knight, then very influential, and to attach him to him, he gave him his cousin Jimena (Chimène) Díaz, the daughter of the Count of Oviedo, in marriage (1074). Some years later, Alfonso VI sent him to the 'Abbāsīd dynast of Seville, al-Mu'tamid [q.v.], in order to collect the tribute, which this Muslim prince paid in return for a nominal alliance with

Castile. The Cid himself returned to Castile after successfully attaining the real aim of his mission. Alfonso VI, probably at the instigation of García Ordóñez, then accused the Cid of having appropriated a part of the presents which had been given to him at Seville to bring to the king, and he took advantage of the first opportunity—the expedition against the Muslims of Toledo undertaken without his consent—to disgrace him and to banish him from his dominions (1081).

It is from this time that the life of a "condottiere" led by the Castilian knight dates, and that he began to fight, as occasion arose, the Muslims or his own co-religionists, on behalf of a third person or on his own behalf.

After an unsuccessful attempt to enter the service of the Count of Barcelona, Rodrigo Díaz offered his services to the Hūdid ruler of Saragossa [see SARA-ḲUṢṬA], Aḥmad b. Sulaymān al-Muḥtadīr. The latter agreed to take him into his army with his mercenaries. He died in the same year and his son Yūsuf al-Mu'tamin succeeded him at Saragossa, while his other son al-Mundhīr received Denia, Tortosa and Lérida. The two brothers lost no time in going to war with one another. Rodrigo Díaz continued in the service of al-Mu'tamin, while al-Mundhīr made an alliance with the King of Aragon, Sancho Ramírez, and with the Count of Barcelona, Ramón Berenguer II. The Cid soon won a great victory over the enemies of his master, took rich plunder and made prisoner the Count of Barcelona, whose liberty he restored soon after. He made a triumphal entry into Saragossa, where the Hūdid ruler overwhelmed him with presents and with honours. He had acquired at one stroke prestige and an ascendancy without parallel among his Muslim soldiers who from this time began to call him "my master", *sayyidī*, vulg. Sp. Ar. *sīdī*, which was translated into Spanish in the form of "mio Cid" (the famous *Poem of the Cid* was originally called "El Cantar de mio Cid"); and soon this name prevailed (with or without the employment of the possessive). Rodrigo Díaz, thanks to his military talents, had become in the eyes of the Muslims of Spain a champion and an irresistible leader in war, el-Cid Campeador.

In 1084, after an ephemeral reconciliation with Alfonso VI, the Cid covered himself with glory once more in Aragon in the service of al-Mu'tamin. When this prince died in the following year, he passed into the services of his son and successor Aḥmad al-Musta'in II.

When the Almoravid Sulṭān Yūsuf b. Tāshfīn landed in Spain to fight against the Christians and put them to rout at Zallāka (12 Raddjab 479/23 October 1086), the Dhū 'l-Nūnīd Yahyā b. Ismā'īl al-Ḳādir had to appeal for help to the King of Castile and to al-Musta'in of Saragossa. The latter saw in this a good opportunity to deprive al-Ḳādir of his kingdom, and secretly entered into an agreement with the Cid to seize the town, all the booty to go to the condottiere. But the latter, mindful of the gifts which al-Ḳādir had bestowed upon him, refused to touch the town and sent a new token of his vassalage to Alfonso. Thereafter, with his army he made incursions into the whole district of Valencia, and in the year 1089, returned to Castile, where he was received with honour by his sovereign. Then he regained the Sharḳ al-Andalus [q.v.] with his army numbering 7,000 men.

Profiting by the absence of the Cid, al-Musta'in of Saragossa had made an alliance with Berenguer of Barcelona, who was besieging Valencia. The Count of Barcelona retreated before the Cid, who promised

al-Kādir, in return for a payment of 10,000 dīnārs a month, to defend his capital against all enemy attempts. A short time afterwards, Alfonso quarrelled with him once more. Then the Cid, like a regular independent bandit chief, ravaged with fire and sword the whole eastern country from Orihuela to Játiva, marched against Tortosa, defeated the Count of Barcelona, and concluded a treaty with him. At this time, besides the sums which he received from the Count of Barcelona and the Muslim princes of Tortosa and Valencia, the Cid had also amongst his tributaries the Arab lords of Albarracín (al-Sahla), of Alpuente (al-Būnt), of Murviedro (Murbaytar, today called Sagunto), of Segorba (Shubrub), of Jérica (Shārika) and of Almenara.

The King of Castile, in order to put an end to the growing influence of his too powerful vassal, decided to deprive him of Valencia. Strong in his alliance with the Pisans and the Genoese, he came to besiege the town by land and by sea, while the Cid was engaged in helping the Muslim king of Saragossa against the Christian King of Aragon. Informed of what was taking place, the Cid left Saragossa with his army and laid waste the county of Nájera and of Calahorra, the particular fief of his sworn enemy García Ordóñez. The town of Logroño in the Rioja was completely destroyed by him, and Alfonso VI had to raise the siege of Valencia without attaining any success.

During his absence, the Cid left at Valencia a Muslim lieutenant, Ibn al-Faradj, at the court of al-Kādir. The latter, in Shawwāl 485/November 1092, was killed after a rising of the population incited by the *kādī* Ibn Djahhāf, who placed himself at the head of the city as president of the Valencian republic (*djama'a*), with a purely nominal representative of the Almoravid government at his side. Some months later, in Djumādā II 486/July 1093, the Cid marched on the capital with the whole of his army, seized without difficulty the suburbs of Villanueva and of al-Kudya and agreed to make terms with Ibn Djahhāf, while maintaining a strict blockade of the town. The chief of the Valencian republic was forced to surrender the town to the Cid on 28 Djumādā I 487/15 June 1094. The Campeador did no harm to the population, but did not hesitate to burn alive a short time afterwards the former president, Ibn Djahhāt, as a punishment.

From this time the Cid was absolute master of Valencia. He had turned into a church the great mosque of Valencia and restored the bishopric of the town, which he gave to Jerome of Perigord. In the end, he was quite reconciled to his suzerain Alfonso of Castile, and he was allied to two royal houses of the Peninsula through the marriages of his daughters, Maria with Ramón Berenguer III, and Christina with the Infante of Navarre Ramiro. He then tried to take Játiva (Shāṭiba [*q.v.*]) from the Almoravids but his army was routed. The Cid, full of wrath and broken-hearted by this disaster, succumbed not long after in the middle of 1099.

After the death of the Cid, his widow Jimena resisted, for about two years, the incessant attacks of the Almoravids. Valencia was besieged at the beginning of 495/1101 by the Lamtūnī general al-Mazdālī. It sustained the siege for seven months but on the advice of Alfonso VI, who had come to relieve it, Jimena decided to evacuate Valencia, which she ordered to be burned on her departure. When the Almoravid troops entered it, on 15 Raddjab 495/5 May 1102, they found nothing but ruins. Jimena transported the body of the Cid to Castile; it was buried

near Burgos, in the convent of San Pedro of Cardeña. Jimena was herself buried there when she died five years later in the year 1104.

**Bibliography:** As noted above, a still valuable work on the life and historical career of the Cid is R. Dozy, *Le Cid d'après de nouveaux documents*, Leiden 1860, repr. in his *Recherches sur l'histoire et la littérature de l'Espagne pendant le Moyen-Âge*, <sup>3</sup>Paris-Leiden 1881, ii, 1-233. (R. HITCHCOCK)

**AL-ŠIDDĪK** (A.), a name applied to the first caliph Abū Bakr meaning "the eminently veracious" and "he who always confirms the truth". The lexicographical tradition understands the form of the word to be an intensive adjective (W. Wright, *Grammar*, i, 137-8) indicating the extremes of *ṣidq* [*q.v.*], truth.

The word appears in the Qur'an six times and has

a technical sense suggesting an etymology derived from the Aramaic-Hebrew *šaddik*, which has the meaning "pious" in Rabbinic literature. Those who believe are *šiddikūn* in Qur'an IV, 69 and LVII, 19 (both times in conjunction with being *shuhadā*, "witnesses" or "martyrs"), Abraham and Idris are called prophets as well as *šiddik* in XIX, 41 and 56 respectively, while Mary is called *šiddika* in V, 75, and Joseph's prison guard addresses him *ayyuhā 'l-šiddiku* in XII, 46.

The association of the word with Abū Bakr is explained in a number of anecdotes in classical sources. Abū Bakr, when faced with the sceptics of his community, said of Muḥammad and his night journey, "If he says it is so, then it is true (*šadaqa*)". Abū Bakr then requested that Muḥammad describe Jerusalem to prove the veracity of his account. In order that he could see the city, Abū Bakr was lifted up and he was then able to confirm for everyone the truth of Muḥammad's description. Each time an element was described, he said, "You are telling the truth (*šadaqia*). I testify that you are the messenger of God" and at the conclusion the Prophet said to him "And you, Abū Bakr, are *al-šiddik*", and from that time on he was called by this name (Ibn Hishām, 265).

Al-Ṭabarī does not provide the same post-*mi'rāj* narrative, but does follow up on his ascension story with an account of the first male to accept Islam, which according to some reports (al-Ṭabarī, i, 1165-7) was Abū Bakr who, according to the poem of Ḥassān b. Thābit (*Dīwān*, ed. Arafat, London 1971, i, 125) quoted by al-Ṭabarī, was the first to "declare the truth" (*šadaqa*) of the prophet. Once again, the attempt is made to explain Abū Bakr's name in terms of his devotion to Muḥammad.

The naming of Abū Bakr is also associated with Qur'an, XXXIX, 33, *alladhī dhā'a bi 'l-šidk wa-šaddaka bihi, ūlā'ika hum al-muttaḥūna*, "he who comes with the truth and he who confirms it; they are the God-fearing", which is sometimes understood to refer to Muḥammad and Abū Bakr respectively (see e.g. Abū 'l-Layth al-Samarkandī (d. 375/985), *Baḥr al-'ulūm*, Beirut 1993, iii, 151 and n. 1 for further references). Those claiming descent from Abū Bakr are frequently called al-Bakrī al-Šiddikī or al-Šiddikī for short.

The Šūfī ideal of sincerity (*sidk*) which can raise individuals to the level of the Prophet is demonstrated most fully by Abū Bakr, about whom Muḥammad is reported to have said: "Abū Bakr and I are like two race horses; if he had run faster than me, I would have believed in him; but I was the faster, so he believed in me." (al-Kāshānī, *Iṣṭilāḥāt al-šūfiyya*, Cairo 1981, 139).

(A. RIPPIN)

**ŞİDDİK ḤASAN KHĀN AL-KANNAWDJĪ** [see NAWWĀB SAYYID ŞİDDİK ḤASAN KHĀN].

**AL-ŞİDDİKĪ**, a *nisba* borne by members of the famed Egyptian family of *shaykhs* of the Bakriyya Šūfī order [see AL-BAKRĪ B. ABI 'L-SUR-BŪR and BAKRIYYA]; it related to their claimed descent from the first caliph Abū Bakr al-Šiddik [q.v.].

(Ed.)

**SIDHPŪR**, a place in the northeastern part of the mediaeval Indian province of Guḍjarāt [q.v.], lying to the east of modern Pāfan. It is mentioned in the history of the Muslim sultans of Guḍjarāt as a pilgrimage centre much revered by the local Hindus but sacked in ca. 816/1414 by Sultan

Aḥmad I b. Tātār Khān, who destroyed the temples there and imposed the *ḍjizya* or poll-tax on the inhabitants.

**Bibliography:** M. Habib and K.A. Nizami (eds.), *A comprehensive history of India. V. The Delhi Sultanate (A.D. 1206-1526)*, Delhi etc. 1970, 853-4.

(Ed.)

**SIDI**, the name of a servile African group in India, first reported by Sir Richard Burton. The term is used also for their language, which is related to Swahili. Burton locates them in Sindh, but reports small numbers in all parts of Guḍjarāt. Their women are called *sidiyani*. They were originally slaves imported into India "from Muscat and other harbours on the eastern coast of Arabia", where pockets of Swahili speakers still exist. Burton says that their importation "originated under the Ameer" of Sindh: the first such was recognised by the Mughal Emperor in 1738. Whitely found them distributed throughout Kathiawar State.

Burton distinguishes them from Habashī [see ḤABASH, ḤABASHĪ], slaves imported from Ethiopia, a commerce that certainly existed in the 13th century. For their ethnic origin he lists twenty-two African tribes. Nineteen of these can be identified with tribes in the present Tanzania. The remaining three have not been identified, but have Bantu names which cannot be connected with Ethiopia. He also mentions Lamu [q.v.] as a port of origin.

While he says that the Sidi used Sindhi words when they fail to recall words in their own tongue, his word-list of some 200 words, in an orthography that he admits to be faulty, corresponds sufficiently well as to be recognisable in terms of the dialects described by Sacleux in 1909.

(G.S.P. FREEMAN-GRENVILLE)

**SİDİ 'ALĪ RE'IS** (Seydī Ali Reis) (b. Istanbul, beg. 16th century, d. there *Djūmādā I* 970/December-January 1562-3), Ottoman mariner, administrator, author and poet, also known by his *takhalluṣ* Kātībī or Kātīb-i Rūm. He participated in Ottoman naval operations that included the conquest of Rhodes (1522), the battle of Preveza (1538), the sailings of Khayr al-Dīn Pasha Barbarossa [q.v.], and the conquest of Libyan Tripoli (1551); he also rose to the rank of *kethūdā* [q.v.] of the imperial arsenal (*tersāne-yi 'amire*) in Istanbul, following the careers of his father and grandfather.

Sidī 'Alī's historical importance, however, rests on his activities and events to the east of Suez. In 1553, while he was in Aleppo with the imperial army during Süleymān II's [q.v.] campaign against the Şafawids, he received an order to bring the Ottoman ships which Pīrī Re'is [q.v.], the ill-starred commander of the Ottoman "Suez fleet", had left in Baṣra, to Suez. Sailing out on 1 *Shā'bān* 961/2 July 1554, he failed to reach the Red Sea because of both Portuguese attacks and also storms; the latter deflected the course of the Turkish ships toward India. Fearing Portuguese warships patrolling the coast, and giving up hope of returning by sea, Sidī 'Alī disembarked at the port of Surat on 1 *Dhu 'l-Ka'da* 961/28 September 1554. He was welcomed by its Muslim governor, and was asked by Aḥmad III, the Sultan of Guḍjarāt, to assist him in the siege of Broach [see GUḌJARĀT; BHARŪČ]. Some 200 men from what had remained of the

Ottoman fleet joined Aḥmad, but Sīdī 'Alī, with 53 companions, set out on an overland trip to Turkey (beg. Muḥarram 962/end November 1554). They passed through Aḥmadabad, Dihlī, Lahore, Kābul, Samarkand, Bukhārā, Mashhad, Rayy and Kāzwīn, before reaching Ottoman-held Baghdād at the end of February 1557. Sīdī 'Alī then set out for Istanbul, and learning that Süleymān was at Edirne, he hurried there, arriving in May. His possible worries that a fate similar to that of Pīrī Re'īs was awaiting him proved unfounded, for the sultan received him kindly, and was the first to appreciate the seaman's story; moreover, Sīdī 'Alī's journey had also been a diplomatic feat, for he brought back 18 letters from various sovereigns addressed to the Ottoman sultan, including messages from the newly-enthroned Mughal Akbar I and from Shāh Tahmāsp I.

Sīdī 'Alī narrated his epic anabasis in an account known as *Mir'āt al-mamālīk*. His other works, also in Turkish, are chiefly translations from Persian or Arabic and deal with mathematics, astronomy and navigation in the Indian Ocean: (1) *Mir'āt-i kā'ināt* (Istanbul University library, T. 1824), a treatise on astronomical measurements and instruments chiefly applicable to the art of celestial navigation; (2) *Khulāṣat al-hay'a* (mss. Ayasofya 2951 and Nuruosmaniye 2911), a treatise on geometry and mathematics containing a translation of 'Alī Kuṣḥdjī's [q.v.] *Fathīyya*, enriched with excerpts from Čaḡhmīnī and Kaḏī-zāde-i Rūmī; and (3) *Kitāb ül-muḥīṭ fi 'ilm il-eflāk we-abhur*, better known as *Muḥīṭ*, still unpublished in its entirety; two mss. exist in Istanbul (Topkapı Sarayı, Revan 1643—possibly the autograph—and Nuruosmaniye 2948), one in Vienna (Flügel 1277), and one in Naples (Museo Borbonico). It is, after his travelogue, Sīdī 'Alī's most famous work, and is based on Arabic works dealing with navigation in the Indian Ocean, chiefly those by Ibn Mādjīd and Sulaymān al-Mahrī [q.vv.]. The *Muḥīṭ* consists of 10 sections; the fourth includes an account of "Yeñi Dunyā", the New World, and of Portuguese voyages of discovery, including Magellan's circumnavigation of the globe.

Sīdī 'Alī's account reveals the prestige of the Ottoman sultan among his coreligionists in India and Central Asia, the universality of the Turkic element there (in India, for example, he learned enough Čaḡhatay to write poetry also in that language), and the effectiveness of Ottoman Turkish soldiers who were in demand at every court. His scientific and navigational works, however, failed to stimulate the Turks toward a more aggressive policy in the Indian Ocean; the sailing of the fleet under his command was the last major Ottoman undertaking east of the Red Sea.

Sīdī 'Alī Re'īs spent his final years mostly in Istanbul (his appointment as *deftardār* of *timārs* of Diyārbakır at 80 *akḫes* per day may have been chiefly a financial arrangement), where his house became a centre of gathering for the intellectual elite. He became a minor legend among his compatriots, and the story of his adventures gave rise to a new Turkish proverb, *bāshīna Seydī 'Alī ḥālleri geldi* "You [or "He"] have been beset by adversities like those of Seydī 'Alī". His poetical talent, recorded only through examples found in the *Mir'āt al-mamālīk*, stood him in good stead on at least two occasions, when he was arrested on suspicion of spying but was released after having sent poems to the local governor at Mashhad and to Shāh Tahmāsp at Kāzwīn.

Lorch, *The Da'ire-yi Mu'addal of Seydi 'Ali Re'is*, Manchester 1976.

The *Mir'āt al-mamālīk* was published in Ottoman Turkish (1313/1895-6) and in a recent modernised version in *yeni yazı* (*Mir'at ül-memalik*, n.d.), as well as in several trs.: German (H.F. von Diez, *Denkwürdigkeiten von Asien*, Berlin 1815, ii, 133-267), English (A. Vambery, *The travels and adventures of the Turkish Admiral Sidi Ali Reis*, London 1899), Uzbek (Sh. Zumnunab, *Memleketter küzgüsü*, Tashkent 1963), and Persian. None of his other works has been published, but sections from the *Muḥīṭ* have appeared in English, Italian and German trs. (see Turan's and Adıvar's works). (S. SOUCEK)

**SİDİ BEL-ABBĒS** [see SİDİ BU 'L-'ABBĀS].

**SİDİ BU 'L-'ABBĀS**, conventional form SİDİ BEL-ABBĒS, a town of Algeria created in 1849 and deriving its name from the tomb of the saint Sīdī Abu 'L-'Abbās, whose *kubba* is on the left bank of the Mekerra river, the town itself being on its right bank (lat. 35° 15' N., long. 0° 39' W.). It lies in the centre of the Tell of Oran equidistant from Mascara and Tlemcen. The plain of the Mekerra (altitude 470 m/1,540 feet) is separated from maritime climatic influence by the Tessala mountain chain, giving Sīdī Bel-Abbās a continental climate parallel to that of the High central plateau, semi-arid, sudden rains often causing floods, and with frequently harsh winters. But the climate is healthy and water is available everywhere for irrigation by norias at only 3 or 4 m depth.

**Antiquity.** The Romans noted the fertility of the Tessala region, from which they dominated the course of the Mekerra (apparently from a Berber root *m-k-r* "great", according to A. Pellegrini), called by them Tasaccura (apparently "river of the partridge", Berber *tasekkurt*, because this bird favoured cereal fields), and the plain of Sīdī Bu 'L-'Abbās.

**The Islamic period.** The great Šufīrī Khāridjite Berber revolt of 122-4/740-2 [see ŠUFİRİYYA. 2.] freed the region from Arab domination through the battles of the *Ḡhazwat al-Aḡrāf* (122/740) and that of the Wādī Sebu (123/741). At the end of the 4th/10th century, it was dominated by the Berber Azdādja tribe, who exported foodstuffs, especially corn, via Oran (Wahrān, founded in 290/903 by the Andalusians and the Banū Mesgen, a branch of the Azdādja) to Murcia and Granada, according to Ibn Hawkal, and then in the next century by the Banū Rāshīd, Zanāta Berber nomads of the Maghrāwa confederation. In Almohad times, the ruler of Tlemcen Yaḡmurāsān b. Zayyān, founder of the 'Abd al-Wādids (r. 633-81/1236-83), developed irrigation and agriculture in the valley of the Mekerra, the Sīg (this name, < Berber *sik* with the idea of a group of primitive dwellings, having replaced the classical one of Tasaccura). He is also said to have brought in nomadic Arabs of the Banū 'Āmir, especially those of the Ma'kil [q.v.], to the southern frontier of his realm in order to close access to the Tell. The whole region played a notable role in the struggles between the 'Abd al-Wādids and the Marīnids; according to Marmol, the Marīnid sultan Abu 'l-Hasan in 732/1331-2 ravaged Tessala.

The Mekerra plain continued to supply grain to Tlemcen and elsewhere ca. 1500, and cattle- and camel-raising were also practised there, with the products exported from Oran (cereals, including to Italy; textiles, including the coverings called by the Por-

tuguese "hambels" (< *hanbal*). The Crusade which led to the occupation of Oran in 915/1509 neutralised a port useful for aiding the persecuted Muslims of al-Andalus and was also impelled by a desire to gain control of the riches of the region. It was the Banū 'Āmir who furnished most of the cavalry defending Tlemcen against Spanish attacks, though some groups of them were in a treaty relationship with the Spanish, *Moroz de la Paz*, paying a tribute called *rūmiyya* and furnishing noble hostages. Over the next three centuries, there was an equilibrium of tribes in the region, of whom the more exposed ones to Spanish attacks negotiated at times with the bey of Mascara, at others with the chief of the garrison in Oran.

Economic development in the plain of Sīdī Bu 'l-'Abbās at this period continued to be an extensive agricultural-pastoral one practised by a largely nomadic population living in tents and dominated by the Maghrāwa. It was connected with towns such as Mustaghānim to the north-east (quarter called al-Maṭmar, "of the grain silos") and Tlemcen to the south-west (also a quarter al-Maṭmar, traversed by a "way of silos", *Tīg al-Maṭmar*).

According to the local legend concerning Sīdī Bu 'l-'Abbās, he was the grandson of Sīdī Bū Zīdī, who had come from Mecca to Aflu in southern Algeria, probably in the 17th century, and the latter's *kubba* is extant in the village of Kṣar Sīdī Bū Zīd to the north-east of Aflu. His grandson died ca. 1780 and is buried on the hill of Sīdī 'Ammār, which dominates Sīdī Bu 'l-'Abbās, in a rectangular *kubba* with a cupola of glazed tiles. However, the hypothesis of a saint of Moroccan origin is possible through the spread in the central Maghrib of Abu 'l-'Abbās al-Sabtī [q.v.] and Almohad moves towards unity of the Maghrib, and this may have been favoured in the 17th century by anti-Spanish resistance and the economic and political leadership of the Banū 'Āmir favouring the substitution of a Moroccan for a local saint.

After the abandonment of Oran by the Spanish in 1206/1792, the port developed its exports of grain, meat and beasts to the British Mediterranean garrisons (Mahon, the Balearics, Gibraltar) and to Spain, and Arzew (al-Marsā) became one of the main markets for supplying British troops in the Peninsular War 1808-14. The Banū 'Āmir continued to be dominant, and joined 'Abd al-Kādir b. al-Sharīf in his revolt of 1220/1805 or 1221/1806 against the Bey of Oran, and after its suppression, the plain of Sīdī Bu 'l-'Abbās suffered devastating reprisals; although balanced between the Turkish Regency and the Spanish, the population there managed to preserve its independence.

*The colonial period.* On the French occupation of Oran on 4 January 1831, the Banū 'Āmir joined other local tribes in recognising as sultan 'Abd al-Kādir b. Muḥyī 'l-Dīn al-Ḥasanī (1808-83 [q.v.]). The plain was strenuously attacked and occupied by French forces and reduced to submission, with the sweeping-away of traditional chiefs and considerable depopulation. The encampment of Sīdī Bel-Abbès was founded in 1841, with a redoubt on the right bank of the Mekerra facing the *kubba* of the saint on the opposite bank. The town was created by decree on 5 January 1849 as centre of the future *arrondissement* of Sīdī Bel-Abbès. The cereal and livestock resources of the region were soon exploited, with an all-season carriage road built to Oran for exporting to France and flour mills established along the Mekerra. Orania, less populous than the other two provinces of the north of the

Regency, lent itself to colonisation and exploitation at modest expense, and the military occupation forces in Orania rose from 10,000 men in 1840 to 35,000 in 1845. The Muslim population tended to be forced up to the hill slopes, with the farms of colonists in the plain. After the revolt in Orania of 1864-6 by the Ulād Sīdī Shaykh and the Flīta, this process accelerated. Cereals, especially of the soft variety of wheat (*ṣārīna*), as opposed to the indigenous hard variety (*gemh*, *triticum durum*), and tobacco culture grew. By 1900, the Spanish colonists from Andalusia brought in from 1845 as workmen had become two-thirds of the colonist population of the *arrondissement*. After 1920, viticulture increased, as cereal production dropped owing to soil exhaustion. In 1939, Sīdī Bel-Abbès exported 15,000 sheep annually to France plus a tenth of the cereal production of Algeria. This period of agricultural expansion was accompanied by, until ca. 1940, sedentarisation of the remaining nomads, with the abandonment of tents for fixed dwellings (often the *gourbi* or shack); pushed into the mountain zones, they exploited the forests for charcoal production, and a rural as well as an urban proletariat grew up. Outside the town of Sīdī Bel-Abbès, a week-long regional festival took place annually in honour of the saint, on an area called "the Plateau" (*el-Blāto*), with tents erected there.

During the war of independence in the 1950s, the problems of employment and rural exodus were accentuated by bombardments and the depopulation of rural zones through the policy of regroupment of populations aimed at depriving the nationalist forces of material and moral support from the indigenous population (on the lines of the "cantonment" policy of the 19th century). The problems persisted after 1962, with economic regression of the plain of Sīdī Bel-Abbès due above all to the unequal distribution of resources in the colonial period, sc. by a minority of the European population.

(H. BENCHENEB, shortened by the Editors)

**SĪDJILL** (A.), one of the mysterious words of the Qur'ān, appearing in XI, 84/82; XV, 74; and CV, 4. The derivation in the Arabic sources from Persian *sang* "stone" and *gil* "mud" did not satisfy Horovitz. It seems to designate stones resembling lumps of clay, fired or sun-dried, since this is corroborated by LI, 33-4, "... That we may loose on them stones of clay, marked by your Lord for the prodigal". Some commentators add that these stones had been baked in the fire of Hell, and the expression "marked by your Lord" (XI, 84/82; LI, 34) would mean, so they assert, that the stones were marked with the names of those at whom they were destined.

There exist other interpretations, not unanimously admitted: what has been written or decreed (clearly derived from the term's likeness to *sidjill* [q.v.]; Hell or the lowest Heaven (the word being considered in this case as another form of *sidjīl* [q.v.]). It has also been associated with adjectives derived from the root *s-dj-l*. But a convincing account of the term and its background has now been given by F. Leemhuis in his *Qur'anic siġġil and Aramaic sġyl*, in JSS, xxvii (1982), 47-56: that it is in origin a non-Semitic, apparently Sumerian word, appearing in Akkadian as *sikillu* or *šigillu*, denoting a smooth kind of stone, now attested in the Aramaic of Hatra [see AL-HADR] as *sġyl* or *sġl* (probably for \**siġil*) with a specialised meaning of "altar stone" > "altar, sacrarium". From Mesopotamia, it must early have entered the Arabic dialects of adjacent parts of the Syrian Desert, becoming known in Central Arabia by the time of the Prophet with the meaning of "hard, flint-like stone".

Kommentar und Konkordanz*, Stuttgart, etc. 1971, 240. (V. VACCA-[Ed.])

**SĪDJĪN** (A.), one of the mysterious words of the Qur'ān, appearing in LXXXIII, 7-9: "Nay, but the book of the libertines is in *sidjīn*! And what shall teach you what is *sidjīn*? [It is] a book inscribed." The majority of commentators take this as a proper name. The word has attracted a dozen interpretations, which are grouped around two central concepts: (1) *Sidjīn* is the seventh and lowest earth, or a rock or well in Hell, or even the home of Iblīs; (2) It is the name of the record in which all human acts are set down. Without the definite article, *sidjīn* designates Hell Fire, or again, something painful, violent, hard, durable or eternal. These interpretations are influenced by the term's resemblance to *sidjīl* [q.v.], associated erroneously with the root *s-dj-l*.

Although al-Suyūṭī's *Itkān* classes it amongst the non-Arabic words, no generally-accepted etymology has been put forward. R. Dvořák, *contra* Jeffery, did not consider it as one of the *Fremdwörter*. The lexicographers, on the other hand, make it a synonym

of *sidjīn* "prison", which has influenced the most widespread interpretation of the commentators, who see it as the place where the record of the evildoers is kept rather than the record itself. The Qur'ān's text admits of both interpretations.

**SĪDJILL** (A.).

1. Qur'ānic and early Arabic usage.

*Sidjill* is an Arabic word for various types of documents, especially of an official or juridical nature. It has long been recognised (first, it seems, by Fraenkel) that it goes back ultimately to Latin *sigillum*, which in the classical language means "seal" (i.e. both "seal-matrix" and "seal-impression"), but which in Mediaeval Latin is used also for the document to which a seal has been affixed; it was borrowed into Byzantine Greek as σφύλλ(ι)ον, "seal, treaty, imperial edict", and then, via Aramaic (e.g. Syriac *sygyhyen*) into Arabic. It should, however, be noted that in Arabic *sidjill* never means "seal" (*khātam*), but always refers either to a document (*kitāb*) or to a scroll (*tūmār*, also a loanword from Greek) on which documents are written. The latter provides the most plausible explanation for the much-debated Qur'ānic verse XXI, 104, where God is represented as saying "We shall roll up the sky like the rolling-up of the scroll for the documents" (*ka-tayyi 'l-sidjilli li 'l-kutub*); the other explanations offered by the commentators (*sidjill* means "man" in Ethiopian, or it is the name of the Prophet's scribe, etc.) have nothing to recommend themselves. There is also a *ḥadīth* according to which, on the Day of Judgement, God will show the Muslim 99 scrolls (*sidjill*), each one extending as far as the eye can see, on which his sins are registered (see Wensinck's *Concordance*, ii, 431, where *al-sabr* is a misprint for *al-baṣar*).

In classical Arabic, *sidjill* is frequently used for a document containing the judgments of a *kāḍī*, and in various other technical senses. Al-Kh̲w̲ārazmī (*Mafāṭih al-ʿulūm*, 57) says that it designates a credit-note given to official messengers exempting them from the costs of their journey. From the Fāṭimid empire we have the *sidjillāt Mustansiriyya*, the official correspondence of the court of the caliph al-Mustansir with the Ṣulayhids [q.v.], vassal rulers of the Yemen.

Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 163-4; R. Paret, *Der Koran. Kommentar und Konkordanz*, Stuttgart etc. 1971, 346-7. (F.C. DE BLOIS)

2. In Mamlūk usage.

It is evident from Ibn Khaldūn's *Mukaddima* that during the Mamlūk period the term *sidjill* (pl. *sidjillāt*) must have been used for the judicial court registers kept by official witnesses (*ʿadala*) "which record the rights, possessions, and debts of people and other (legal) transactions." But the term is infrequently encountered with this general meaning in Mamlūk chancery (*inṣhāʿ*) and notarial (*shurūṭ*) manuals, which, after all, were designed for the use of professionals.

In his *Ṣubḥ al-a'shā*, for example, al-Kalākashandī used the term in reference to documents issued by Fātimid caliphs, either conferring *iqṭā'āt* on their subjects or appointing them to public office (*wilāyāt*). Otherwise, he used *sidjill* once to designate a document issued by a judge to certify (*isḡāl*) the legal integrity (*'adāla*) of his son. In *shurūṭ* works, designed to provide models to notaries for drafting legal documents, *sidjill* was also used with technical denotations and was defined in contrast to two other types of documents or records: *nuskha* (pl. *nusakh*) and *maḥḍar* (pl. *maḥāḍir*). According to two authors of Mamlūk notarial manuals—the Syrian Hanafī Najm al-Dīn al-Tarṣūṣī (d. 748/1348) and the Egyptian Shāfi'ī Shams al-Dīn al-Asyūṭī (b. 813/1410-11)—a *maḥḍar* was simply an official record of the minutes of a case or transaction conducted before a *kāḍī*; a *sidjill* was an official record of the case, based on and including the *maḥḍar*, plus the judge's decision or verdict. This notarial distinction did not originate with the Mamlūks, as J. Wakin's research demonstrates. Presumably, individual *sidjills* were compiled and kept in a *kitāb al-sidjillāt* or *diwān al-hukm* and constituted the official record of a *kāḍī*'s judgements, but no such compilation has been found earlier than the *sidjillāt* of al-Maḥkama al-Ṣālihiyya, which date to the second decade after the Ottoman conquest of Egypt. The closest approximation to a Mamlūk judicial archive is the Ḥaram collection, which consists of copies of documents associated with the court of a late 8th/14th-century Shāfi'ī judge in Jerusalem. But these documents contain no references to *sidjillāt*. Both al-Tarṣūṣī and al-Suyūṭī also distinguish between a *sidjill* and a *nuskha*. The latter is simply a certified verbatim copy of an original document, while the former contains an enumeration of attestations (*isḡālāt*) to the validity of the document and its contents, along with a copy of the document itself. It should be noted that the term *sidjillāt* was used in perhaps still another sense in the Mamlūk decrees issued to the monks of St. Catherine's Monastery at Mt. Sinai, namely as documents which, along with *marāsim*, *tawāḳīf*, *murabba'āt*, *'uhdāt*, and *mustanadāt*, attested to the Mamlūks' recognition of the legal status of the monks and their monastery. In two instances, *sidjillāt* is modified by the word *khalfatiyya*, which indicates that these may have been caliphal edicts. But the precise denotation of *sidjillāt* in this context of various kinds of decrees, contracts, and records is not yet clear; moreover, it should be recalled that *sidjill* was also a general term for "document" [see DIPLOMATIC], especially during the Fātimid period.

3. In Ottoman administrative usage.

The Ottomans used this general term for "regis-

ter" in a variety of contexts; thus Mehmed Thüreyyā's biographical encyclopaedia is known as the *Sidjill-i 'othmānī* (Istanbul 1308-11/1890-4). In the late Ottoman Empire, the personnel files of civil servants were known as the *sidjill-i ahwāl*. By the term *kāḍī sidjilleri* or *sher'iyye sidjilleri* are meant the registers kept in the courts of Ottoman *kāḍīs*. Documents were often, but not always, entered in chronological order, and every register normally covered one or two years. The oldest extant records date from the late 9th/15th century. We do not know when the practice of keeping these registers was first instituted, and can only speculate from which Muslim state the practice was copied. For while inheritance inventories have survived for Mamlūk Jerusalem, the bulk of Ottoman registers was not made up of such inventories, even though these latter items are found frequently enough. Pre-Ottoman *kāḍī* registers are extremely rare; but cf. R.S. Humphreys, *Islamic history, a framework for inquiry*, London and New York 1995, 219.

While registers dating from the 9th/15th century seem to have only been preserved for Bursa and Kayseri, *kāḍī sidjilleri* were instituted in the Arab provinces shortly after the Ottoman conquest. This indicates that at the beginning of the 10th/16th century, the compilation of such registers already formed part of established routine at least in the larger cities. From the second half of this century onwards, more and more towns and cities preserve at least minor collections of *sidjills*. While older registers are more likely to have been lost than more recent ones, the general lack of *sidjills* for rural settlements which we know to have possessed a *kāḍī* before the middle of the 13th/19th century, may indicate that in such places, the compilation and preservation of *kāḍī* registers was not the rule in older periods.

#### *The organisation of registers*

*Kāḍī* registers of the larger cities consist of two parts; one section begins where books written in the Arabic script normally begin. Here we find records of transactions in the local court, such as sales, loans, agreements concerning divorces or manumissions of slaves. These transactions were not contentious, and the parties in question had them recorded so that proof of the sale, divorce or manumission would be easily available; this aim explains why we normally find the names of three, four or five people under the relevant text (*shbhūd ul-hāl*). Proof provided by entry into the register was especially important to non-Muslims, who could not legally testify against Muslims; this fact may explain why non-Muslims frequently turned to the court. Some capitulations [see IMTIYAZĀT] even contained the clause that all contracts involving merchants of the relevant nation had to be registered by the *kāḍī*, or else later complaints against the foreign trader would be regarded as irreceivable (Suraiya Faroqi, *The Venetian presence in the Ottoman Empire*, in Huri Islamoglu-Inan (ed.), *The Ottoman Empire and the world economy*, Cambridge and Paris 1987, 340). Thus while in ordinary transactions recourse to the court was not obligatory, the sultan might legislate such an obligation in specific instances. The *kāḍī* registers also document cases of litigation, which might concern the division of an inheritance, but equally a complaint against a neighbour who had added a room to his house overlooking the plaintiff's court, thereby invading the privacy of the latter's family.

More serious matters such as rape, robbery and murder also occur in the *sidjill*, but not very frequently. Since the *sher'at* regarded murder without robbery as something which mainly concerned the

family of the victim, while on the other hand, the state demanded a share of the blood money (*öğür-i diyet*), there was some incentive to settle out of court. Many documents concerning cases which by present-day categories would be regarded as penal simply contain the "facts of the case" as established by the plaintiff's, defendant's and witnesses' depositions. Presumably the matter was then referred to the sultan's Council in Istanbul. But the Council, after having been apprised of such an affair, according to the evidence of the Registers of Important Affairs (*Mühimme Defterleri*) and the Complaint Registers (*Şikâyet defterleri*) often merely issued an order to the relevant *kādî* to judge the matter according to the *şer'i'at*. Thus in most cases, neither one nor the other type of register informs us of the judgements issued and the manner of their execution.

A second section of the register begins at what the scribes regarded as the last page of the volume in question. This second half is taken up with orders issued by the sultan's Council; some of these, similar to modern circulars, were issued to all governors and *kādîs* of a given region. Others are concerned with matters specifically assigned to the particular *kādî* and/or governor. These may include responses to complaints by local inhabitants, such as creditors unable to recover loans. Occasionally a rescript may occur both in the Registers of Important Affairs and in the local *kādî* registers. But that is fairly rare, as neither the registers of the *kādîs* nor those prepared in Istanbul have survived in their totality. In addition, we cannot be sure how great was the percentage of documents which, for one reason or another, escaped registration at either the central or the local end. In large cities such as Aleppo, there were separate registers for the orders emanating from the central administration (*awâmir sultânîyya*).

In the largest cities, such as Bursa or Cairo, separate registers for inheritance inventories were instituted. By this term we mean a list of the goods left by the deceased, including both movable property and real estate, but not state-owned agricultural land (*mîrî*). Debts and money owed to the deceased were also included, as well as clauses constituting the testament of the deceased, especially if there were slaves to be liberated. In Edirne and Istanbul, special inheritance registers existed covering the *askerîs*, that is the servants of the sultans (and sometimes their spouses) whose inheritances were liable to confiscation. However these registers were not the responsibility of the *kādî*, but were kept by a special official known as the *askerî kassâm* [see KASSÂM].

In cases where no children or absent people were involved, the heirs could divide up the inheritance without recourse to the *kādî* and, consequently, without the compilation of an inheritance inventory. Thus only a relatively small share of all inheritance cases was recorded. Merchants are probably over-represented in the *sîdjill*, as they often died while away from home, or, if older and sedentary, had sons who were away when their fathers died. Moreover, their goods and chattels were important enough to be worth recording, and given the existence of both creditors and debtors of the deceased, it was often imperative to make an official record of the manner in which the inheritance had been divided. By the same token, the inheritances of women and the poor are under-represented; when the inheritance was small, it was to the advantage of all heirs to avoid reducing it further through the fees charged by the court. The frequency of inheritance disputes shows that manipu-

lations to disinherit minors and women were common. It therefore makes sense to assume that some inheritances were not documented in order to deprive an heir of his/her fair share. Inheritances were also recorded when the temporary absence or non-existence of heirs resulted in the *beyt ül-mâl emîni*'s taking possession, temporarily or permanently, of the estate in question. Cases where only a few heirs were involved also were more likely to be included than others, for it was then necessary to demonstrate that the *beyt ül-mâl emîni* was not entitled to confiscate. When the inventory does not explicitly state that the inheritance was sold by public auction, the prices assigned to the individual goods in the register should be regarded with a degree of caution.

The *kādî*'s registers must have been kept in the court building of the district centre; there is no evidence that copies were ever sent to Istanbul. In the Aegean region, however, it is probable that the *kādî* registers were collected in one of the major towns already in the 13th/19th century, and then were lost when this provincial archive was destroyed, in all likelihood before the 1260s-70s/1850s. For, otherwise, it is hard to explain why to the south of Balıkesir and Edremit and to the north of Antalya, no *kādî* registers survive except for Manisa, apart from a number of İzmir volumes from the second half of the 13th/19th century.

It was the responsibility of the outgoing *kādî* to hand these registers over to his successor. Occasionally, we hear of *kādîs* who did not do this, presumably because of accidents or because they had something to hide. No Ottoman court buildings from before the mid-13th/19th century have survived, but casual references in the documents, as well as the traveller Ewliyâ Çelebi's descriptions of 11th/16th century Ottoman towns, prove that they existed at least in the larger cities. Without such a building, it is difficult to imagine how the often substantial series could have survived frequent changes of officiating *kādîs*. On the other hand, the all but complete absence of *kādî* registers relevant to the numerous small *kādî*'s seats of the 10th/16th century can probably be explained by the lack of a building to house these institutions. Presumably the court building resembled the residence of a well-to-do family, with structures surrounding two courtyards. In the first, corresponding to the men's part of a house (*selâmlık* [q.v.]), the business of the court must have been transacted, while the family dwelt in the second courtyard, the *harem* section. Outgoing *kādîs* must have moved out to make room for their successors.

Not all the cases recorded in the *sîdjill* were dealt with by the *kādî* in person. Disputes concerning land-holding were often resolved by delegating a (presumably junior) member of the legal establishment to the site in question; where houses needed to be divided up among several heirs, in the 11th/17th century the *kādîs* of larger towns could rely on the advice of the *mim'âr-başı*, a local master builder (not to be confused with the sultan's Chief Architect officiating in Istanbul). By contrast, the decisions of the *nâ'ibs*, adjunct *kādîs* who officiated in rural districts, have very rarely found their way into the *sîdjills*. In the late 12th/18th century, at least in the Bursa area, there also existed *sîdjills* which were not compiled for the local *kādî* but for an official in charge of sultanial *wakfs* answerable to the *dâr al-s'âdet aghası*. In terms of content, these *sîdjills* resemble those compiled for *kādîs*.

In the more important courts, the *kādîs* had a num-

ber of scribes at their disposal. Recruitment and training in the 9th/15th and 10th/16th centuries appear to have been less systematic than in later periods, for where these earlier centuries are concerned, we find evidence of scribes who evidently had difficulty handling the mechanics of registration. Thus in late 9th/15th century Bursa, a scribe who had produced a particularly garbled account of a succession explained the reason for the confusion in the margin, asking his readers to pardon him. Spelling errors and clumsy handwriting also are not rare in early registers. By contrast, from the 11th/17th century onward, scribes in the larger courts wrote in a relatively uniform hand. Presumably the senior scribes also put the claims of plaintiff, defendant and witnesses into the appropriate legal formulas. It is tempting to assume that the fragments of everyday speech which are often found among the formulaic language of the documents constitute residual traces of what the participants in the case actually said; but whether this is really true is not at all certain.

#### *Archives containing sijills*

Registers kept by Ottoman *kādīs* and preserved in Turkey are now located in the National Library (Milli Kütüphane) in Ankara, having been transferred to this place from the provincial museums in which they were previously housed. Registers prepared by the various courts of the city of Istanbul can be consulted in the office of the Chief Islamic Jurisconsult (Müftülük) in the Süleymaniye quarter of that city. A published guide is available, the newest version of which allows the prospective user to determine the years covered by each register in addition to the call number (Akgündüz *et alii*, 1988). Moreover, this guide contains a broad selection of reproduced documents. *Kādī* registers in the Ankara National Library deal with localities inside the borders of present-day Turkey. A few extant registers are, however, not covered by this catalogue: thus some museums failed to inform the catalogue compilers of their holdings, and a Çorum register (1004-5/1595-7), located in the Çorum Library, should be added as well.

Outside of modern Turkey, *kādī* registers, in larger or smaller numbers, are to be found in numerous successor states of the Ottoman Empire. Hungary has only a single *sijill*, concerning the district of Karánsebes-Lugos, dating from the late 11th/17th century (Magyar Tudományos Akadémia Könyvtára, Keleti Osztály, Török Kéziratok, Qu. 62). In Bosnia, the Oriental Institute, the Ghāzī Khosrew Beg Library and the Historical Archive, all located in Sarajevo, have separate collections of registers: in the Historical Archive we find six volumes concerning Livno, Visoko and Temeshwar, while the Ghāzī Khosrew Library holds 68 *sijills* of Sarajevo itself, spanning the period from the 10th/16th to the 13th/19th century. In the Oriental Institute, 66 registers existed at least until recently, concerning the region surrounding the city and covering the 11th/16th century. At present, we do not know for certain which of these registers have perished in the war accompanying the dissolution of Yugoslavia.

In Macedonia, the state archive in Skopje houses the *kādī* registers of Bitola (Monastir); the series consists of 185 volumes, beginning in 1015-16/1607 and ending in 1912. Certain volumes have been made available in print. As to present-day Albania, the oldest surviving *sijill* known to date is found in the Vatican Library: it covers Avlonya (974-6/1567-8). No other registers concerning this port seem to exist anywhere else. In Albania, there survive series of regis-

ters covering Berat (beginning in 1010-11/1602) and Elbasan (beginning in 988/1580, in copy only). All other Albanian towns, including Tirana, have at most a few *sijills* going back to the 13th/19th century.

*Kādī* registers located in present-day Bulgaria concern Sofia, Rusçuk (Ruse) and Vidin; the oldest known register (Sofia, 949/1542 to 957/1550) was lost during World War II. However, an edition containing the summaries of every individual document had been prepared just before the disappearance of the original, and was published in 1960. The extant *sijills* have been deposited in the National Library in Sofia. There is some coverage of the 11th/17th century, but the registers become much fuller and more informative for the 12th/18th one, when expanding commercial opportunities allowed an increasing number of townsmen to prosper. On Greek territory, a similar situation prevails, as the oldest known register in the Macedonian State Archive (Salonica) dates from 1107-8/1696. This institution contains the largest number of *sijills* in all of Greece: over 300 volumes covering the city of Salonica and the surrounding countryside, including the judicial districts of 'Awret-hişār, Pazārgāh, Volos and Katerin. From the 1240s and 1250s/1830s there survive a number of inheritance inventories covering the Muslim population of Salonica itself. *Kādī* registers preserved in Veroia begin in 1011/1602; they number about 130, while two volumes consisting of different fragments of Veroia *sijills* are owned by the Nahost Institute of the Ludwig-Maximilians-Universität, Munich. In the Municipal Library of Heraklion, Crete, there is a collection of 166 *sijills* beginning in the 1070s/1660s; the Ottoman history of this town is documented right from the time of its conquest.

In the Turkish part of Cyprus, the *kādī* registers of Lefkoşe go back to the late 10th/16th century, they are mostly located in the Evkaf Dairesi in Lefkoşe. Those *kādī* registers extant in Syria are for the most part concentrated in Damascus, where they can be consulted in the General Directorate of Historical Documents. Registers relating to the Arab provinces are for the most part in Arabic, although documents in Ottoman Turkish are not unknown. Damascus is covered for the period from 991/1583 to 1920 (1,658 volumes), while the extant documents for Aleppo (731 volumes) reach from 962-3/1555 to 1925. This archive also contains about thirty registers of sultans' commands directed at the authorities in Aleppo, in addition to some registers consisting exclusively of inheritance inventories. From the court of Ḥamā, 64 registers have been preserved, which begin in 942-3/1536 and reach to the year 1296-7/1879; some *kādī* registers also cover Ḥims. In the Sunnī *shar'at* court of Ṣaydā, the existence of eighteen registers, dating from the 13th/19th century, was noted in 1975 by Antoine Abdel Nour; these have probably been destroyed by fire in 1975-6. In the Old City of Jerusalem, the *mahkama shar'iyya* contains the *kādī* records of both Nablus and Jerusalem; while the former only cover the 12th/18th and 13th/19th centuries, the Jerusalem *sijill* go back to 937/1530-1, and thereby constitute one of the oldest series known. By contrast, the Haifa registers begin in 1286-7/1870 reflecting the relatively short history of this town. Some registers from the mid-13th/19th century are also available for Gaza.

A collection of 1851 *mahkama shar'iyya* registers has been preserved in Cairo; these volumes have been for the most part compiled in the numerous courts which existed in the second-largest city of the Ottoman
